

2009-10 GENERAL CATALOGUE

UNIVERSITY of CALIFORNIA • IRVINE

Academic Calendar

Consult the Registrar's Web site at <http://www.reg.uci.edu> and the *Catalogue* for detailed information on registration procedures and late charges. The registration process consists of two steps: payment of fees and enrolling in classes.

NOTE: The School of Law and the School of Medicine's M.D. program have their own academic calendars; information is available from those schools.

Fall Quarter, 2009

Quarter Begins	Sept. 21 (Mon.)
Academic Advising and Orientation	Sept. 21–23 (Mon.–Wed.)
Instruction Begins	Sept. 24 (Thur.)
Veterans' Day Holiday	Nov. 11 (Wed.)
Thanksgiving Holiday	Nov. 26–27 (Thur.–Fri.)
Instruction Ends	Dec. 4 (Fri.)
Final Examinations	Dec. 7–11 (Mon.–Fri.)
Quarter Ends	Dec. 11 (Fri.)
Christmas Holiday	Dec. 24–25 (Thur.–Fri.)
New Year Holiday	Dec. 31–Jan. 1 (Thur.–Fri.)

Winter Quarter, 2010

Quarter Begins	Jan. 4 (Mon.)
Academic Advising and Orientation	Jan. 4 (Mon.)
Instruction Begins	Jan. 4 (Mon.)
Martin Luther King Jr. Holiday	Jan. 18 (Mon.)
Presidents' Day Holiday	Feb. 15 (Mon.)
Instruction Ends	Mar. 12 (Fri.)
Final Examinations	Mar. 15–19 (Mon.–Fri.)
Quarter Ends	Mar. 19 (Fri.)

Spring Quarter, 2010

Quarter Begins	Mar. 24 (Wed.)
Academic Advising and Orientation	Mar. 24–25 (Wed.–Thur.)
Cesar Chavez Day Holiday	Mar. 26 (Fri.)
Instruction Begins	Mar. 29 (Mon.)
Memorial Day Holiday	May 31 (Mon.)
Instruction Ends	June 4 (Fri.)
Final Examinations	June 7–11 (Mon.–Fri.)
Quarter Ends	June 11 (Fri.)
Commencement.....	June 11–13 (Fri.–Sun.)

Summer Sessions, 2010

Session I	June 21–Jul. 28 (Mon.–Wed.)
10-Week Session	June 21–Aug. 27 (Mon.–Fri.)
Independence Day Holiday	July 5 (Mon.)
Session II	Aug. 2–Sept. 8 (Mon.–Wed.)
Labor Day Holiday	Sept. 6 (Mon.)

The information in this publication will be made available in alternative formats for people with disabilities, upon request. Requests should be directed to the Disability Services Center, telephone (949) 824-7494 (voice); 824-6272 (TDD). The campus and all buildings are accessible by wheelchair.

How to use the *Catalogue*: See page 13.

How to obtain the *Catalogue*: Copies of the 2009–10 *UCI General Catalogue* are available in person for \$6 (plus tax) at the UCI Bookstore. Catalogues are also available for purchase online: California, \$15; continental U.S., \$17; Alaska and Hawaii, \$20. Prices include tax and USPS, UPS Ground, or equivalent shipping. To order online, please visit the UCI Bookstore Web site at <http://www.book.uci.edu/>. For international orders (\$24), cashier's checks or International Money Orders, payable in U.S. dollars, should be made payable to UC Regents, and sent to the University of California, Irvine, UCI Bookstore, Attn: Customer Service Department, 210-B Student Center, Irvine, CA 92697-1550.

The *Catalogue* also is available for reference (1) on the World Wide Web at <http://www.editor.uci.edu/catalogue/>, (2) in most California public libraries, and (3) in the library or counseling center of most California high schools and colleges.

On the Cover: The UCI Science Library is one of the largest consolidated science, technology, and medicine libraries in the nation and includes material in the fields of astronomy, biology, chemistry, computer science, Earth system science, engineering, mathematics, medicine, and physics. The Science Library provides more than 2,000 individual study spaces, faculty and graduate reading rooms, 50 group study rooms, and a late-night study center. More information is available online at <http://www.lib.uci.edu/>.

Twelve marble sculptures by Nancy Doran line a pathway from the Science Library to the School of Medicine. Nancy and Phil Doran donated the prized artwork to UCI in 2005.

INTRODUCTION

THE UNIVERSITY OF CALIFORNIA

Mark G. Yudof, **President**

The University of California (UC) was chartered as the State's only Land Grant College in 1868. Today, UC is one of the world's largest and most renowned centers of higher education and has a combined enrollment of 220,000 students on 10 campuses—Berkeley, Davis, Irvine, Los Angeles, Merced, Riverside, San Diego, San Francisco, Santa Barbara, and Santa Cruz. Among the campuses there are five medical schools, a school of veterinary medicine, and professional schools of business administration, education, engineering, law, oceanography, and many others. The collections of the more than 100 UC libraries are surpassed in size on the American continent only by the Library of Congress collection.

The UC faculty is internationally noted for its distinguished academic achievements. UC-affiliated faculty and researchers have won 55 Nobel Prizes and 57 National Medals of Science. National Academy of Sciences membership exceeds 350 and Institute of Medicine membership exceeds 150. UC creates an average of three new inventions every day, and for 14 years in a row, has developed more patents than any other university in the country.

UC maintains a variety of research facilities, agricultural field stations, and extension centers in more than 100 locations throughout California. Public services include medical and dental clinics, information services for agricultural and urban populations, a broad program of continuing education, museums and art galleries, and more. Detailed information about the University of California's teaching, research, and public service mission is available online at <http://www.universityofcalifornia.edu/>.

THE IRVINE CAMPUS

Michael V. Drake, M.D., **Chancellor**

The University of California, Irvine (UCI) opened in 1965 with 116 faculty and 1,589 students. Since then, UCI programs, faculty and graduates have achieved distinction in virtually every discipline.

Two Nobel Prizes in 1995 for founding faculty F. Sherwood Rowland in Chemistry and the late Frederick Reines in Physics helped to secure UCI's position among the leading American research universities. In 2004, Irwin A. Rose, Department of Physiology and Biophysics, became UCI's third Nobel Laureate (chemistry). UCI has been ranked prominently along with much older universities for excellence in the arts and humanities, Earth system science, management, social sciences, technology, and information systems.

For quality of educational experience and caliber of faculty, UCI consistently ranks among the nation's best public universities, and among the top 50 universities overall. Election to the American Association of Universities (AAU), a group of 62 of the most distinguished research institutions, is another indication of UCI's stature in the academic community.

As a research university, UCI challenges students at every level, both academically and personally. While research is critical to graduate education, the research environment also opens up new educational experiences for undergraduates. Students have access to faculty at the forefront of their fields, and they also have opportunities to participate directly in faculty research projects. In addition, to empower students for the future in an information-focused society, UCI has integrated computer technology throughout the curriculum and campus life.

UCI is committed to the discovery and transmission of knowledge. It makes available to its 27,630 students (22,120 undergraduate, 120 post-baccalaureate, 4,280 graduate, and 1,110 health sciences graduate students, medical students, and residents) the education, skills, and credentials which provide the basis for lifelong personal and professional growth.

UCI's education and research missions are fulfilled in its academic units, which are described briefly below, and in its formal research units, which are described in the Office of Research section later in this *Catalogue*.

The Claire Trevor School of the Arts teaches the creative as well as the academic and critical dimensions of the arts. It is concerned with the vitality of the arts in society. Faculty energies are directed toward the refinement, enhancement, and encouragement of students' artistic and creative talents and toward the development of the students' understanding of related theory and history. The School offers programs which emphasize extensive studio and workshop experiences, essential theoretical and historical background studies, and exercises in criticism. There are 1,170 students in the School, including 1,010 undergraduate and 160 graduate.

The School of Biological Sciences is one of the campus's larger academic units, with 5,000 students (4,575 undergraduate and 425 graduate). Faculty research areas include neural plasticity and behavior (which in part encompasses the development of the nervous system, memory, response to injury, and degenerative brain diseases such as Alzheimer's); the nature of cell-cell interactions; pattern formation; the elucidation of ecological conditions and evolutionary histories that have been the driving forces in organism design and functional diversity; the organization and expression of genes; biomolecular structure; molecular pathogenesis; human mitochondrial genetics; and cell biology.

The Paul Merage School of Business faculty research and teach in the fields of accounting, economics, finance, health care management, information systems, marketing, operations and decision technologies, organization management, public policy, real estate and strategy. Based on a thematic approach throughout the curriculum, the School focuses on three critical drivers of business growth: strategic innovation, information technology, and analytic decision making. The Merage School enrolls 85 undergraduates, 235 students in the M.B.A. and Ph.D. programs; and 625 in the Fully Employed M.B.A., Executive M.B.A., and Health Care Executive M.B.A. programs.

The Department of Education, with 310 students, offers graduate degree programs and credential programs for current and prospective teachers and administrators in California's public elementary and secondary schools, and an undergraduate minor in Educational Studies, with 280 students. The Department integrates the themes of Learning, Cognition, and Development; Social Context and Educational Policy; and Language, Literacy, and Technology, across its programs. The faculty is multidisciplinary; their scholarly work arises from the common belief that education environments, both in and out of school, are the locus of change in the quality of life and the availability of productive life choices for learners of all ages.

The Henry Samueli School of Engineering, with 3,045 students (2,350 undergraduate, 695 graduate), focuses on the analysis and design of physical systems applying modern scientific principles to the development of technology for society. The major research disciplines are aerospace, biochemical, biomedical, chemical, civil, computer, electrical, environmental, materials science, and mechanical engineering. Research areas include biochemical

FROM THE CHANCELLOR

Welcome to the University of California, Irvine. As a UC student, you have access to resources that extend across our campus, throughout our state, and beyond. This catalogue will serve as an invaluable guide to enhancing your UC Irvine experience.

UCI combines the strengths of a major research university with the bounty of an incomparable Southern California location. Over four remarkable decades, we have become internationally recognized for efforts that are improving lives through research and discovery, fostering excellence in scholarship and teaching, and engaging and enriching the community.

UCI is among the fastest-growing campuses in the UC system. Increasingly a first-choice campus for students, UCI attracts record numbers of undergraduate applications each year and admits freshmen with highly competitive academic profiles.

Newly launched programs in public health and nursing science are expanding our educational role in these and other fields critical to California's health and prosperity. This year, under the leadership of renowned constitutional law scholar Erwin Chemerinsky, our new law school welcomes its first class this fall.

UCI is a center for quality education and is consistently ranked among the nation's best universities. Achievements in the sciences, arts, humanities, medicine, and management have garnered top 50 national rankings for more than 40 academic programs. Three UCI researchers have won Nobel Prizes—two in chemistry and one in physics.

UCI reaches beyond the classroom and laboratory to help solve societal issues and support human development. We are a hub for stem cell research, a trailblazer in understanding global warming, and a leader in the fight against breast cancer. Our nationally ranked medical center in Orange serves as Orange County's only Level I trauma center, and we recently opened a new state-of-the-art university hospital that will further strengthen medical care for the region's citizens.

A major intellectual and cultural center, UCI offers numerous public activities and events. The Chancellor's Distinguished Fellows Series brings renowned speakers to campus, including Dr. Richard Carmona, Seventeenth Surgeon General of the United States; Dianne Pinderhughes, expert on race relations in America; and Vicente Fox, former president of Mexico. The Claire Trevor School of the Arts and the School of Humanities produce engaging and entertaining cultural programs, while UCI's Anteater athletes have won more than two dozen national championships.

UCI is benefiting the community and the world in countless ways through its scholarly, scientific, creative, and economic contributions. Orange County's largest employer, UCI generates an annual economic impact on the county of \$4.2 billion. We have implemented a strategic plan that will ensure the campus continues to inspire excellence as it fulfills its research, teaching, and public service missions in the decades ahead.

These accomplishments depend on our commitment to a set of core values: respect, intellectual curiosity, commitment, integrity, empathy, appreciation, and fun. These values allow people to transcend limitations and create something greater than themselves. I am proud that—at UCI—we live these values every day.

I encourage you to take advantage of all that UCI has to offer. I look forward to seeing you on campus and to being a part of this very important time in your life.

Sincerely,

Michael V. Drake, M.D.
Chancellor

and bioreactor engineering, earthquake engineering, water resources, transportation, parallel and distributed computer systems, intelligent systems and neural networks, image and signal processing, opto-electronic devices and materials, high-frequency devices and systems, integrated micro and nanoscale systems, fuel cell technology, fluid mechanics, combustion and jet propulsion, materials processing, robotics, and modern control theory.

The **School of Humanities** faculty have been repeatedly honored for their teaching and scholarly excellence. Included in the faculty's more than 100 research specialties are literary criticism, film studies, media studies, philosophical analysis, historical inquiry, art history, and East Asian languages and literatures. The faculty also participate in programs that cut across disciplinary boundaries such as African American Studies, Asian American Studies, Latin American Studies, Religious Studies, and Women's Studies. At the core of the educational mission of the humanities is the goal of imparting to students critical tools of analysis, ways of seeing, knowing, explaining, describing, and understanding, that will allow them to comprehend the world around them. The School has 2,535 students, including 2,085 undergraduate and 450 graduate.

The **Donald Bren School of Information and Computer Sciences** (ICS) has 1,135 students (805 undergraduate and 330 graduate). Faculty are actively engaged in research and teaching in the design of algorithms and data structures; embedded computer systems; networked and distributed systems; systems software; mobile computing; artificial intelligence; data mining; multimedia; databases and information retrieval; computer graphics and visualization; large-scale data analysis; biomedical informatics and computational biology; urban crisis response; Internet and ubiquitous computing; advanced technology for software and information systems; computer-supported cooperative work and human-computer interaction; digital arts and embodied interaction; managerial and social aspects of computing technology; statistics and statistical theory; and business information management.

Interdisciplinary Studies programs provide students with opportunities to pursue subject areas which derive from the interaction of different disciplines such as Computer Science and Engineering, History and Philosophy of Science, and Transportation Science.

The **School of Law**, established by the University of California Board of Regents in November 2006, will welcome its founding class of students in fall 2009. The School will offer the J.D. (Juris Doctor) and expects in the future to offer the LL.M. (Master of Laws) and S.J.D. (Doctor of Juridical Science). Students will receive an education that includes traditional areas of legal doctrine but in an innovative context designed to prepare them for practice in the twenty-first century. Planned joint-degree programs will connect legal education with the wide range of academic and professional opportunities of a major research university.

The **School of Physical Sciences** has a student body of 1,650 (1,150 undergraduate and 500 graduate). Researchers in the School are conducting investigations in atmospheric chemistry (including the discovery of the adverse impact of human-made chlorofluorocarbon compounds on the earth's ozone layer), biogeochemistry and climate, synthetic chemistry, laser spectroscopy, condensed matter physics, elementary particle physics, plasma physics, and pure and applied mathematics and mathematical physics.

The **School of Social Ecology**, a multidisciplinary unit established in 1970, is unique to UCI. The School's central objectives are the application of scientific methods to the analysis and resolution of societal problems, and the development of theory and knowledge pertinent to social, behavioral, environmental, and legal phenomena. Among issues of long-standing interest are crime and justice in society, social influences on human development over the life

cycle, urban and community planning, and the effects of the physical environment on health and behavior. There are 2,480 students in the School, including 2,180 undergraduate and 300 graduate.

The **School of Social Sciences**, with 6,775 students (6,415 undergraduate and 360 graduate), is the largest academic unit at UCI. The faculty, many of whom are nationally recognized, have expertise in a wide range of specific social science topics. Research areas include mathematical modeling of perception and cognitive processes; economic analysis of transportation; examination of the impact of society's political system on its economy; study of social structure and values in different cultures through a rigorous scientific methodology; exploration of authority structures and inequality in society; and globalization and international affairs.

The **College of Health Sciences** has 620 undergraduate students in the Program in Nursing Science, the Department of Pharmaceutical Sciences, and the Program in Public Health; and 440 medical students and 650 residents in the School of Medicine. The School of Medicine is dedicated to advancing medical knowledge and clinical practice through scholarly research, physician education, and high-quality care. The School nurtures the development of medical students, resident physicians, and scholars in the clinical and basic sciences and supports the dissemination of research advances for the benefit of society. The new University Hospital at UC Irvine Medical Center has modern facilities for conducting medical research and training future and practicing physicians, allowing more opportunities for researchers and clinicians to collaborate on patient care.

Academic Goals

UCI offers programs designed to provide students with a foundation on which to continue developing their intellectual, aesthetic, and moral capacities. Programs and curricula are based on the belief that a student's collective University experience should provide understanding and insight which are the basis for an intellectual identity and lifelong learning.

An important aspect of UCI's educational approach is the emphasis placed on student involvement in independent study, research, and the creative process as a complement to classroom study. Independent research in laboratories, field study, participation in writing workshops, and in arts productions are normal elements of the UCI experience. In many departments, special programs and courses which involve students in original research and creative activities are integrated into the curriculum.

UCI provides an atmosphere conducive to creative work and scholarship at all levels, to exploring the accumulated knowledge of humanity, and to developing new knowledge through basic and applied research. Along with these objectives, UCI has a serious commitment to public service. The campus generates research expertise which may be applied to regional and national social issues, and provides humanistic understanding of the problems facing society.

Academic Structure

UCI's instruction and research programs focus on fundamental areas of knowledge, and at the same time provide for interdisciplinary and professional study through the Claire Trevor School of the Arts, School of Biological Sciences, The Paul Merage School of Business, Department of Education, The Henry Samueli School of Engineering, School of Humanities, Donald Bren School of Information and Computer Sciences, Interdisciplinary Studies, School of Law, School of Physical Sciences, School of Social Ecology, School of Social Sciences, and the College of Health Sciences, which includes the School of Medicine.

The Office of Academic Affairs has responsibility for all programs of instruction and research. Along with the Graduate Division and

the Division of Undergraduate Education, Academic Affairs reports directly to the Executive Vice Chancellor/Provost. Matters of educational policy, including approval of programs, courses, and grades, are the responsibility of the Irvine Division of the Academic Senate.

UCI Student Affairs supports the University's academic mission from outreach to alumni participation. Student Affairs offers comprehensive programs and services to advance co-curricular learning, foster student leadership, enhance the quality of student life, and promote the general welfare of the campus community.

The Division of Undergraduate Education provides leadership in developing policies and programs for the improvement of undergraduate education in such areas as general education, retention, advising, curricular development, undergraduate scholarship and research activities, international education, academic internship, grant proposals, assessment, improvement of instruction, and improvement of instructional space. Undergraduate Education also administers programs and services affecting undergraduate education which require campus-level attention and coordination and which do not come under the direct authority of the heads of academic units or the Irvine Division of the Academic Senate.

The Graduate Division serves as the campuswide advocate for the advancement of graduate education and oversees all master's and doctoral programs, postdoctoral training programs, and the post-baccalaureate teacher credential program. The Graduate Division has a leadership role with UCI's academic units and provides implementation guidelines and procedures related to University policy as it affects the interconnected aspects of graduate student education, including admissions, student financial support, enrollment and registration, academic standards, requirements for graduate degree programs, student services, and diversity programs.

Accreditation

UCI is a member of the Western Association of Schools and Colleges (WASC). The campus is fully accredited by the Senior Commission of WASC. This accreditation requires periodic review in accord with WASC policies and standards. Further information is available from WASC, 985 Atlantic Avenue, Suite 100, Alameda, CA 94501; telephone (510) 748-9001.

In addition, the undergraduate degree program of the Department of Chemistry is accredited by the American Chemical Society; the credential programs of the Department of Education are approved by the California Commission on Teacher Credentialing (CCTC); the undergraduate majors in Aerospace Engineering (AE), Biomedical Engineering (BME), Chemical Engineering (ChE), Civil Engineering (CE), Computer Engineering (CpE), Electrical Engineering (EE), Environmental Engineering (EnE), Materials Science Engineering (MSE), and Mechanical Engineering (ME) offered by the Departments of Biomedical Engineering, Chemical Engineering and Materials Science, Civil and Environmental, Electrical Engineering and Computer Science, and Mechanical and Aerospace Engineering are accredited by the Engineering Accreditation Commission of ABET, Inc.; the undergraduate major in Biomedical Engineering: Premedical (BMEP) is not designed to be accredited, therefore is not accredited by ABET, Inc.; the M.S. program in Genetic Counseling is accredited by the American Board of Genetic Counseling; The Paul Merage School of Business is accredited by AACSB International—The Association to Advance Collegiate Schools of Business; the M.D. program of the UCI School of Medicine is accredited by the Liaison Committee of the Association of American Medical Colleges and the American Medical Association; the undergraduate major in Nursing Science is approved by the Board of Registered Nursing; and the Master of Urban and Regional Planning program is accredited by the National Planning Accreditation Board.

Office of Equal Opportunity and Diversity

The Office of Equal Opportunity and Diversity (OEOD) provides consultation services and training programs to the UCI campus and the medical center on the interpretation and application of both UCI policies and Federal and State laws regarding sexual harassment, equal opportunity, and diversity. It also develops and monitors UCI's Affirmative Action Plan for staff and faculty as required by Federal regulations.

OEOD investigates and provides assistance to UCI students, faculty, and staff in resolving complaints of discrimination and sexual harassment. OEOD also offers a variety of staff and faculty career development programs and workshops on diversity, cross-cultural communication, sexual harassment prevention, and conflict resolution in a diverse workplace to promote awareness, create organizational change, and provide support for the University's commitment to diversity.

OEOD is located in 103 Multipurpose Science and Technology Building; telephone (949) 824-5594 (voice), 824-7593 (TDD). See the *Catalogue's* Appendix for UCI's Nondiscrimination Policy Statements and Sexual Harassment and Consensual Relationships Policies.

Office of the University Ombudsman

The Office of the University Ombudsman receives complaints, concerns, or problems that students, faculty, staff, and visitors may encounter on the UC Irvine campus. The Office is an informal resource. Users of the Office are provided a confidential place to explore options to make informed decisions. When appropriate, the Office will initiate an informal intervention with the goal of facilitating or negotiating a resolution that is acceptable to all parties involved.

The Ombudsman acts as an independent, impartial, and confidential problem solver. If a matter cannot be resolved through the Office, the appropriate referral will be made. The Office of the Ombudsman does not replace or substitute for formal grievance, investigative, or appeals processes made available by the University. The Office does not have the authority to make decisions or decide policy. However, the Office can elevate legitimate matters or concerns to decision makers when appropriate. In addition, the Ombudsman can make recommendations regarding policy review and change as appropriate.

The Office of the Ombudsman also manages the Campus Mediation Program which provides confidential mediation services to the campus and UC Irvine Medical Center community. The Office is located in University Tower, Suite 640; telephone (949) 824-7256; <http://www.ombuds.uci.edu> and <http://www.mediate.uci.edu>.

The Campus Setting

UCI's location combines the cultural and economic resources of an urban area with access to Southern California's spectrum of recreational, scenic, and entertainment venues.

Fifty miles south of Los Angeles, five miles from the Pacific Ocean, and nestled in 1,489 acres of coastal foothills, UCI lies amid rapidly growing residential communities and the dynamic international business environment of Orange County and the surrounding region.

The famed sailing and surfing beaches of Newport, Laguna, and Huntington are a short bike ride from campus, while hiking trails, desert camping, or mountain resorts for snow boarding and skiing are within two-hour's travel distance from Irvine. The campus itself is a natural arboretum of native species, as well as trees and shrubs from all over the world. Adjacent to the campus, the San Joaquin Marsh serves as a natural classroom or peaceful refuge, with trails for viewing the rich diversity of wildlife.

A full roster of intramural sports and recreation events helps to fill the daily fitness needs of students, along with UCI's Anteater Recreation Center. This 115,000-square-foot, state-of-the-art facility includes a pool, gymnasiums, racquetball courts, weight room, and jogging track. UCI is also an NCAA Division I campus that competes in men's and women's intercollegiate athletics.

Across Campus Drive, and linked by a pedestrian bridge, an area of shops and restaurants also features a movie theatre complex, post office, and other services. Complementing UCI on-campus sports and cultural events throughout the year is the vigorous Orange County arts and entertainment environment. It offers everything from small venues for bands and performers to galleries, museums, the Irvine Barclay Theatre, Orange County Performing Arts Center, and South Coast Repertory. And within a one- to two-hour drive are the metropolitan attractions of Los Angeles and San Diego.

With plenty of land for growth, UCI is building to accommodate greater numbers of students, as well as to provide the most updated classroom and laboratory space. Current projects include Engineering 3, with planned research, office, and lecture hall space; Humanities Gateway, the fifth building in the School of Humanities; and Social and Behavioral Sciences, serving the Schools of Social Sciences and Social Ecology. On the west campus, the 180-acre University Research Park is attracting private companies such as AOL, Broadcom Corporation, and Cisco Systems that agree to collaborate with UCI faculty and students on internships, research, and other programs.

Due to the high caliber of UCI faculty and scholarship, the campus is home to national organizations including the National Fuel Cell Research Center and the Western Center of the American Academy of Arts and Sciences, and is a major site for the nationwide cancer genetics research network. For its range of services and research, UCI's Chao Family Comprehensive Cancer Center is the county's only cancer facility designated "comprehensive" by the National Cancer Institute. UCI is noted in fact for its strengths in cancer and neuroscience research, much of which takes place at the University of California, Irvine Medical Center. Located in the City of Orange, 13 miles to the north, the medical center is the primary teaching and research hospital for the UC Irvine School of Medicine.

Bus transportation makes travel convenient between the campus, medical center, and major housing areas, shopping centers, and

recreation locales. In addition, the campus and surrounding communities are designed for bicycle traffic with trails connecting UCI with student housing and the coast.

CELEBRATE UCI

UCI's thirty-second annual open house, one of the campus's oldest and most festive traditions, will be held on Saturday, April 17, 2010, from 9 a.m. to 5 p.m. Celebrate UCI is a spring event that features an Earth Day celebration, academic information, classic car show, campus tram tours, Wayzgoose Medieval Faire with food booths, demonstrations, rides, games, and much more. General campus offices such as Housing, Admissions and Relations with Schools, and Financial Aid and Scholarships are also open. The event is an excellent opportunity to bring family and friends to see what's new at UCI and join the alumni, staff, faculty, and students to Celebrate UCI! Events and parking are free. For more information, call (949) 824-5182 or visit <http://www.uci.edu/celebrate>.

Instructional and Research Facilities

UCI LIBRARIES

Gerald J. Munoff, University Librarian

<http://www.lib.uci.edu/>
(949) 824-6836

Established in 1963 as one of the founding academic units on campus, the UCI Libraries bring people together to facilitate the creation and sharing of new knowledge in all disciplines across campus. The Libraries support the research information needs of students, faculty, staff, and community members through the Libraries' Web site and at four library facilities: the Langson Library, the Science Library, and the Libraries Gateway Study Center on the UCI campus, and the Grunigen Medical Library in Orange. The UCI Libraries offer in electronic and print formats over 3.2 million volumes, 48,000 serial titles, and substantial collections of manuscripts and visual materials.

ANTPAC (the Libraries' online catalog) provides information about electronic and print books, periodicals, and other library materials at UCI. My ANTPAC provides a wide variety of personalized electronic services such as automatic customized searches and online renewals. Document Delivery Service (DDS) is another popular personalized service for delivery and pickup of UCI Libraries and Interlibrary Loan (ILL) books at no charge and photocopies with the use of a recharge account. The MELVYL® Catalog, via the UCI Libraries Web site (<http://www.lib.uci.edu>) connects with the vast resources of the University of California library system. Expedited loans and digital desktop delivery services facilitate exchange of valuable research materials between the UC libraries, and traditional interlibrary loan services open the scholarly resources of the world to the campus community.

The UCI Libraries provide expert research assistance and conduct an active campuswide research consultation and instruction program to develop students' research and lifelong learning skills, and assist researchers to effectively utilize rapidly changing information resources and technologies. Nearly 73,000 personalized, one-on-one research consultations were conducted, and more than 18,500 students attended library training sessions last year. A series of online "LibGuides" recommend research resources for various subjects and courses (<http://libguides.lib.uci.edu/>).

Over 615 desktop and laptop computers are available for general use in the four library buildings, as well as wireless access. The Langson Library features a state-of-the-art Multimedia Resources Center (MRC at <http://mrc.lib.uci.edu>) with multimedia production software and video equipment, and a Technology-Enhanced Classroom (TEC) for hands-on learning. The Science Library features the Interactive Learning Center (ILC at <http://ilc.lib.uci.edu>) also

with a computer laboratory, an instruction center, and a digital media production laboratory. The Grunigen Medical Library provides two computer technology facilities featuring an instructional laboratory and an Information Technology Center (ITC at <http://itc.lib.uci.edu>). A copy card system is used for photocopies and printing from networked public work stations in all library buildings.

The newly remodeled Libraries Gateway Study Center, adjacent to the Langson Library, and the Science Library Study Center provide comfortable study space for late-night study until 3 a.m. during the quarter, and 24 hours a day during prefinals and finals weeks.

Reserve Services offers access to both supplemental electronic and print materials selected by the faculty for individual courses.

Langson Library supports research and instruction in the arts, humanities, social sciences, education, and business and management. Assistive technology and study aids for students are supported through UCI's Disability Services Center.

The Department of Special Collections and Archives in the Langson Library holds non-circulating collections of rare books, archives, manuscripts, photographs, maps, and pamphlets, including the Regional History Collections, emphasizing Orange County; the Southeast Asian Archive; the Critical Theory Archive; the Dance and Performing Arts Collections; the personal papers of distinguished UCI faculty, including Nobel Laureates; and the University Archives.

The Science Library supports research and instruction in science, medicine, and technology including astronomy, biology, chemistry, computer science, Earth system science, engineering, mathematics, medicine, and physics. More than 2,000 individual study spaces, faculty and graduate reading rooms, 50 group study rooms, and a late-night study center are available.

The Grunigen Medical Library is located at the UCI Medical Center in Orange, and serves the clinical information and research needs of the medical center and the teaching needs of the School of Medicine.

NETWORK AND ACADEMIC COMPUTING SERVICES

Network and Academic Computing Services (NACS) provides telephone, network, and computing services in support of research and education at UCI. NACS provides central computing services, computer laboratories, departmental and research-group support services, and campuswide technical coordination. The campus network infrastructure maintained by NACS provides connectivity on campus and to the Internet. Wireless and mobile wired network access is available in select areas of the campus as part of the UCInet Mobile Access project.

UCI's Electronic Educational Environment (EEE) is a campuswide collaboration including NACS, the Office of the Registrar, the UCI Libraries, and the Division of Undergraduate Education. As part of EEE, NACS provides Web-based course tools and resources for instructors and students including course Web site space, course mailing lists, and instructional technology training. NACS maintains the EEE Web site located at <http://eee.uci.edu/>.

NACS provides Educational Access (EA) accounts for all students. Faculty and staff are provided accounts on the server shell.nacs.uci.edu. These accounts are provided for e-mail and Internet access.

Approximately 70 MS-Windows computers are available 24 hours a day in computer laboratories on the first floor of the Engineering Gateway building. All common MS-Windows applications are available, as well as certain mathematical software and statistics packages. Computer peripherals including scanners and printers are available. While school is in session, NACS student consultants are on duty in Room E1140 to provide assistance to those using the facilities.

An additional 96 Windows computers are located in the Multipurpose Science and Technology (MST) Building, and are available for drop-in use when not scheduled for classes. NACS also operates "NACS@HIB," a drop-in instructional laboratory in the Humanities Instructional Building. This laboratory has 30 Windows computers and is open to students of any major. Forty-four stations are available for drop-in use at the Student Center, and a few more are in the Cross-Cultural Center. Finally, NACS co-administers computer labs in the Gateway Study Center, the Art-STECh laboratory in the Claire Trevor School of the Arts, and the Instructional Technology Center (ITC) in Social Sciences Tower.

NACS offers a variety of additional services. For more information see the NACS Web site at <http://www.nacs.uci.edu/>. Offices are located in 242 Multipurpose Science and Technology Building and in the University Research Park, 5201 California, Suite 150. The NACS Help Desk may be reached by sending e-mail to nacs@uci.edu or by calling (949) 824-2222.

UCI ECOLOGICAL PRESERVE

The 60-acre UCI Ecological Preserve consists of several small hills and surrounding flatlands bearing remnants of coastal sage scrub flora and associated fauna. The Preserve is located on the campus and is set aside for teaching, research, and use by the campus community. Additional information is available from the Office of Natural Reserves at (949) 824-6031. Publications and species lists are available at <http://nrs.ucop.edu>.

NATURAL RESERVE SYSTEM

The University of California manages and maintains a system of 34 Reserves that are representative of the State's habitat and geographic diversity. These serve as outdoor classrooms and laboratories for students, faculty, and staff, and are intended primarily for purposes of education and research. For further information about the Natural Reserve System, visit <http://nrs.ucop.edu>.

UCI has primary responsibility for two Reserves: the San Joaquin Marsh Reserve and the Burns Piñon Ridge Reserve. Additional information is available from the Manager at (949) 824-6031.

San Joaquin Marsh Reserve

The San Joaquin Marsh Reserve, one of the last remaining marshes in Southern California, is a 202-acre wetland adjacent to the UCI campus. The Marsh consists of a series of freshwater ponds and

their attendant aquatic flora and fauna, and is especially known for its rich bird life, both resident and migratory. Researchers and observers have recorded 263 species of birds in the Reserve, a major stopping point on the Pacific Flyway. For further information, visit <http://nrs.uci.edu>.

Burns Piñon Ridge Reserve

The Burns Piñon Ridge Reserve is located near the town of Yucca Valley in San Bernardino County. It is a 306-acre parcel of high-desert habitat representing an ecotone between montane and desert biota, with mixtures of Joshua tree, piñon pine, and juniper woodland. The Reserve has a dormitory and research station, as well as primitive camping facilities, and is used primarily for overnight field trips and research by faculty and students from the School of Biological Sciences. For further information, visit <http://nrs.uci.edu>.

UCI ARBORETUM

The UCI Arboretum is a botanical garden developed and managed by the School of Biological Sciences. It contains areas planted with floras adapted to climates similar to those of Southern California. The Arboretum maintains a large collection of plants native to Southern California and Baja California as well as South African monocots. The Arboretum provides materials and space for research and teaching needs and its collections are also used as an educational resource for the community at large. Volunteers and other interested parties are encouraged to participate in Arboretum activities. The Arboretum is open to the public 9 a.m. to 3 p.m., Monday through Saturday; call (949) 824-5833 for additional information.

LASER MICROBEAM AND MEDICAL PROGRAM

The Laser Microbeam and Medical Program (LAMMP) was established at UCI in 1979 as a national user facility providing a unique set of laser microbeam biotechnologies to individual researchers. LAMMP functions as a research, training, and service facility, and provides interaction between the laser industry and the academic biomedical optics community. LAMMP provides laser microbeam technologies for optical manipulation and functional imaging of living cells, and laser medical technologies for developing noninvasive systems for monitoring and imaging physiology in living tissue. The program is conducted in the Beckman Laser Institute and is funded through the Biotechnology Resources Program of the National Institutes of Health. Additional information is available from the LAMMP coordinator at (949) 824-5633 and online at <http://lammp.bli.uci.edu/>.

UNIVERSITY OF CALIFORNIA, IRVINE HEALTHCARE

UC Irvine Healthcare, the clinical entity of UC Irvine Health Affairs, is committed to providing the highest quality healthcare to Orange County and surrounding communities through UC Irvine Medical Center.

UC Irvine Medical Center is the only university hospital in Orange County with more than 400 specialty and primary care physicians. The medical center offers a full scope of acute- and general-care services including cardiac surgery, cancer, digestive disease, neurosurgery, and trauma. It is recognized in *U.S. News & World Report's* annual listing of "America's Best Hospitals" and was only the third hospital in California and the first hospital in Orange County to receive Magnet Designation for nursing excellence. The medical center has also been named one of the nation's top hospitals for quality and safety by the Leapfrog Group.

Located in the City of Orange, 13 miles from the UCI campus, UC Irvine Medical Center has 444 licensed beds and is the principal clinical facility for the teaching and research programs of the UC Irvine School of Medicine. As part of its focus on family and preventive health, the medical center has additional patient care locations in Anaheim, Irvine, the UCI campus, and Santa Ana.

UC Irvine Medical Center houses a 24-hour emergency department and is designated as Orange County's only Level I Trauma Center—the most comprehensive for the treatment of life-threatening injuries. Specialists at UC Irvine Medical Center are available for the expert management of high-risk pregnancies, and critically ill newborns are cared for in the county's most sophisticated Level III neonatal care unit.

The hospital is also home to the Chao Family Comprehensive Cancer Center, the only facility in Orange County designated as a comprehensive cancer center by the National Cancer Institute. It offers patients a full range of cancer therapies and research programs, including laser and radiation therapy, endoscopic ultrasound, and immunotherapy.

In February 2009, a new University Hospital opened at UC Irvine Medical Center. It includes modern facilities for conducting the latest medical research and training for future and practicing physicians. The seven-story hospital has 236 beds, 19 operating rooms, and interventional procedure rooms. Private patient rooms emphasize individualized patient care and allow family members to stay overnight. For more information about the University Hospital, visit <http://www.ucihealth.com/universityhospital>.

For additional information or to schedule an appointment, call toll free 1 (877) UCI-DOCS or visit <http://www.ucihealth.com>.

UCI CENTER FOR OCCUPATIONAL AND ENVIRONMENTAL HEALTH

In 1980 the University established occupational health centers in Northern and Southern California for the purpose of training occupational health professionals, conducting research on occupational health issues, and providing clinical evaluation of workers/patients for work-related disease. The Centers have strong ties to the UC Schools of Medicine and Public Health.

The Irvine Center is comprised of UCI health professionals. Faculty research is concerned with identification of causal association between disease and occupational exposure as a basis for prevention of occupational disease and injury. The Center's primary areas are occupational medicine, toxicology, epidemiology, and environmental health sciences, and it houses a referral clinic, facilities for research and teaching in industrial hygiene and toxicology, and study space for residents in occupational medicine and other graduate students. For additional information, call (949) 824-8641.

ADDITIONAL FACILITIES

Information about many other UCI research and instructional facilities and programs is available in the academic unit sections and the Office of Research section of this *Catalogue*, as well as online at <http://www.uci.edu/instruction.html>.

University Advancement

University Advancement is responsible for creating awareness, building relationships, and generating support for UCI's teaching, research, and public service missions. This is accomplished through strategic efforts made by University Advancement's "Centers of Excellence," which include marketing, alumni relations, community and government relations, development, and resource planning and administration. These combined efforts provide a bridge between the University and the community, promoting a climate of understanding, access, and support. For additional information, contact University Advancement at (949) 824-8696 or visit <http://www.uadv.uci.edu>.

The Office of Marketing supports and promotes the University's comprehensive campaign by significantly increasing the University's visibility and brand recognition on regional, national, and international levels. Through its efforts, the marketing office aims to increase engagement and private support for UC Irvine to help it

continue its advancement into the elite ranks of top universities nationwide. For additional information, contact the Marketing Office at (949) 824-6136.

The Office of Alumni Relations and the UCI Alumni Association are committed to enriching the lives of alumni and engaging them in lifelong advancement of the University. UCI's more than 110,000 alumni have had a tremendous impact within the spheres of science, art, literature, politics, business, education, and beyond. Notable alumni include creator of the http protocol, Roy Fielding (Ph.D. '91); Pulitzer Prize-winning author Michael Chabon (M.F.A. '87); four-time Olympic Gold Medalist Greg Louganis ('83); and educator Erin Gruwell ('91) who founded the Freedom Writers Foundation. Many alumni give their time and resources to their alma mater by providing financial contributions, returning to campus as speakers, and volunteering to serve on various boards and committees. For additional information, contact the UCI Alumni Association at (949) 824-ALUM.

The Office of Community and Government Relations is responsible for enhancing public understanding and support of UCI and the University of California. The program works to ensure that the University's mission and legislative and budgetary objectives are given due consideration by elected officials and the general public. Community and Government Relations provides leadership for building effective and enduring relationships with community leaders, public policy makers, and other members of the public to increase the visibility and prominence of UCI's research, teaching, and service mission. For additional information, contact Community and Government Relations at (949) 824-0061.

In an era of decreasing State support to the University of California, the importance of private support is greater than ever. The Office of Development, in conjunction with the University of California, Irvine Foundation, raises more than \$100 million in private funds annually from individuals, corporations, and foundations for the University. UCI's development program works hand-in-hand with UCI schools and units to secure philanthropic gifts to support the mission and vision of the University. In 2008, the campus launched a \$1-billion "Shaping the Future" campaign for this purpose. In addition, numerous support groups offer affiliation with academic units, athletics, and student programs. For additional information, contact the Office of Development at (949) 824-1113.

The Resource Planning and Administration office is the operations management arm of the University Advancement division. In addition to being responsible for a number of internal functions, this office oversees the advancement services functions of prospect research, prospect management, and gift administration, which provide operational support to all University Advancement program areas. This office is also responsible for the financial management of the University of California, Irvine Foundation's assets. For additional information, contact the Resource Planning and Administration office at (949) 824-4166.

University Communications

The Office of University Communications leads efforts to promote UCI's mission, priorities, and values; raise awareness of its achievements, accomplishments, and cultural events; and increase the involvement and support of its internal and external communities through regular communications to target audiences. Through partnerships with campus units designed to maximize University resources, University Communications spearheads an integrated strategic communications effort involving media relations, institutional communications, Web services, and visual communications, as well as UC Irvine Health Affairs marketing and communications. For general information, call (949) 824-6922.

Media Relations

Media Relations identifies high-impact news stories on UCI research, education, personalities, and events, and places them in regional, national, and global media. Through tipsheets, media advisories, and an online database, media relations staff connects reporters with UCI experts in areas of current news interest to enhance UCI's visibility. Media relations staff also provides editorial and writing assistance to the University, and represents University administration and faculty as spokespersons. For information, call (949) 824-1151.

Institutional Communications

Institutional Communications manages a comprehensive publications program, using both electronic and print media to inform internal and external constituencies of UCI's research and teaching programs; accomplished faculty, staff, students, and alumni; and beneficial role in the community. These efforts include the UCI home page (<http://www.uci.edu>), UC Irvine Today (<http://www.today.uci.edu>), the Chancellor's Web site (<http://www.chancellor.uci.edu>), *Zot!Wire* (<http://www.zotwire.uci.edu>), *UCi brief*, and *ZotZine* (<http://www.zotzine.uci.edu>). For information, call (949) 824-6490.

Web Services

Web Services designs, develops, selects, and supports technologies for Web sites and other electronic communications activities that promote University programs and services. Web Services builds and supports campus Web sites, applications, and back-end technologies in support of University priorities and collaborates with campus units to facilitate projects with broad campus impact. For information, call (949) 824-2751.

Visual Communications

Visual Communications creates video features that highlight significant campus news and events. Video production, direction, taping, and editing services are provided on a recharge basis, along with DVD authoring and duplication. A multimedia studio is maintained for video and still photography. Media training and on-camera coaching also are available at competitive rates. For information, call (949) 824-0343.

UC Irvine Health Affairs Marketing and Communications

UC Irvine Health Affairs Marketing and Communications manages all marketing and communications activities for health affairs at UCI, including marketing strategy, advertising campaigns, publications, Web sites, internal communications, and a speakers bureau. The office also provides advisory and consultative services to health affairs schools, departments, centers, and programs related to the creation and production of newsletters, announcements, brochures, Continuing Medical Education materials, patient education booklets, and other materials. For information, call (714) 456-3711.

UCI ACADEMIC SENATE DISTINGUISHED FACULTY

**KRISTEN R.
MONROE**

**Distinguished Faculty
Award for Research,
2008–09**

*Director of the Interdisciplinary
Center for the Scientific Study
of Ethics and Morality and
Professor of Political Science*

LINDA R. COHEN

**Distinguished Mid-Career
Faculty Award for Service,
2008–09**

*School of Social Sciences
Associate Dean for Graduate
Studies and Research and
Professor of Economics and Law*

**JOHN S.
LOWENGRUB**

**Distinguished Mid-Career
Faculty Award for Research,
2008–09**

*Department Chair of
Mathematics and Professor
of Mathematics and Biomedical
Engineering*

**ROGER F.
STEINERT, M.D.**

**Distinguished Faculty
Award for Teaching,
2008–09**

*Interim Department Chair of
Ophthalmology and Professor of
Clinical Ophthalmology and
Biomedical Engineering*

**KATHARINE N.
SUDING**

**Distinguished Assistant
Professor Award for
Research, 2008–09**

*Associate Professor of Ecology
and Evolutionary Biology*

**LORETTA
LIVINGSTON**

**Distinguished Assistant
Professor Award for
Teaching, 2008–09**

Assistant Professor of Dance

**WILLIAM H.
PARKER**

**Daniel G. Aldrich, Jr.
Distinguished University
Service Award, 2008–09**

*Department Chair and Professor
of Physics and Astronomy*

More information about the Academic Senate Distinguished Faculty is available at <http://www.senate.uci.edu>. Click on "Distinguished Faculty Awards." See the *Catalogue's* Appendix for a list of prior years' Distinguished Faculty.

PREADMISSION MATTERS

OFFICE OF ADMISSIONS AND RELATIONS WITH SCHOOLS

The mission of the Office of Admissions and Relations with Schools (OARS), a division of Student Affairs, is to (1) optimize UCI's undergraduate enrollments by implementing Academic Senate, universitywide, and campus policies for the selection and admission of new freshman and transfer students; and (2) stimulate and advance cooperative educational relationships between UCI and California schools and colleges. OARS works to improve the preparation of prospective students for higher education and to promote their access to and success at UCI.

Additional information about the services listed below is available online at <http://www.admissions.uci.edu/> or by calling OARS at (949) 824-6703.

Undergraduate Admissions

Staff are involved in monitoring applications and admission targets, in collecting and evaluating personal and academic data to select and admit new undergraduate students, in establishing students' permanent UCI academic record, and in evaluating for transfer credit course work taken in other colleges and universities by new and continuing students.

Intersegmental Relations

Staff are involved in (1) promoting liaison and curricular articulation between UCI and California community colleges; and (2) various educational organizations designed to facilitate regional cooperation (South Coast Higher Education Council, Southern California Intersegmental Articulation Council).

School and College Relations

Staff (1) advise prospective students, their parents, teachers, counselors, and school administrators regarding academic programs, admission requirements, and admission selection, and assist them with UC application and enrollment processes; (2) increase public awareness by making presentations to schools, colleges, and the community regarding UCI and the University of California, and by creating publications which explain admissions policies and procedures, academic options, housing, financial aid, and student life opportunities; (3) provide general information on UC admissions and programs for all UC campuses; (4) interpret University policies and procedures specific to undergraduate enrollment; (5) assist prospective transfer students and community college faculty and staff; (6) participate in activities and projects designed to enhance the academic success of students; and (7) sponsor an Academic Talent Search to identify gifted and high-ability sixth- through tenth-grade students and to design activities to prepare them for the University and promote their academic success.

On-Campus Services

Staff (1) host programs for prospective students and educational groups; (2) offer activities for applicants such as Discover UC Irvine; (3) maintain an honors outreach program for high-achieving prospective UCI students including the UCI Academic Talent Search; (4) inform UC and UCI administrators and faculty of developments in California schools and community colleges; and (5) provide consultative services to campus departments wishing to provide programs for schools and colleges or special recruitment for specific majors or programs.

Transfer Student Services

OARS' Transfer Student Services (TSS) provides advice and guidance to prospective UCI transfer students. Staff regularly visit California community colleges throughout the state and meet with prospective transfer students to discuss admission requirements, academic planning and preparation, and UCI lower-division major and general education requirements. Articulation agreements, which identify how community college courses may be used to fulfill lower-division UCI degree requirements, are facilitated through TSS. Articulation agreements are available online at <http://www.assist.org/>.

CAMPUS TOURS

Student-led tours of the campus are conducted weekdays at noon, except during academic recesses; Saturday tours are offered during October, November, and April only. Tours begin at the UC Irvine Visitor Center, located on the first floor of the Student Center, across from the Student Center parking structure. To confirm tour dates, times, and parking instructions and to arrange tours for school groups of 10 or more during the regular academic year, call (949) 824-4636 or visit <http://www.campustours.uci.edu>.

HOW TO USE THE CATALOGUE

Because the *UCI General Catalogue* must be prepared well in advance of the year it covers, changes in some programs and courses inevitably will occur. The selection of courses to be offered each quarter is subject to change without notice, and some courses are not offered each year. The *Schedule of Classes*, available on the Registrar's Web site at <http://www.reg.uci.edu> shortly before registration begins each quarter, provides current information about course offerings, instructors, hours, and more. Students should consult the appropriate academic unit for even more up-to-date information. (Admission to UCI does not guarantee enrollment in any particular course.)

Presentation of information in the *Catalogue* is divided into six main concepts, as detailed in the Table of Contents: (1) Introduction to UCI, (2) Preadmission Matters, (3) Information for Admitted Students, (4) Research, (5) Graduate Division, and (6) Academic Programs. Included in the academic program sections are the following kinds of information: (a) brief descriptions of the areas that are covered in each school or program and a brief statement of the educational philosophy and orientation of the unit; (b) lists of faculty members; (c) requirements for undergraduate majors, minors, and graduate degrees; (d) additional areas of study referred to as concentrations, specializations, or emphases; (e) advice about planning a program of study, and other information relevant to the academic progress and experience of students majoring in fields within each school or program; and (f) courses offered.

Course Listings

Undergraduate courses are classified as lower-division (numbered 1–99) and upper-division (numbered 100–199). Courses numbered 200 and above are graduate or professional courses. Lower-division usually refers to freshman-sophomore courses, upper-division to junior-senior courses. However, junior and senior students may take lower-division courses, and freshmen and sophomores may normally take upper-division courses when upper-division standing is not a prerequisite and when any other prerequisites have been met. A course has no prerequisites unless indicated.

Courses with sequential designations (for example, 1A-B-C) normally indicate multiple-quarter courses; *except as noted, each*

UNDERGRADUATE AND GRADUATE DEGREES

¹ Degrees: B.A. = Bachelor of Arts; B.F.A. = Bachelor of Fine Arts; B.S. = Bachelor of Science; B.Mus. = Bachelor of Music; Ed.D. = Doctor of Education; J.D. = Juris Doctor; M.A. = Master of Arts; M.A.S. = Master of Advanced Study; M.A.T. = Master of Arts in Teaching; M.B.A. = Master of Business Administration; M.F.A. = Master of Fine Arts; M.P.H. = Master of Public Health; M.S. = Master of Science; M.D. = Doctor of Medicine; M.U.R.P. = Master of Urban and Regional Planning; Ph.D. = Doctor of Philosophy. Titles of degrees may not correspond exactly with specific fields of study offered; see the Index and the academic unit sections for information.

² Emphasis at the graduate level is on the Ph.D. degree; the master's degree may be awarded to Ph.D. students after fulfillment of the requirements.

³ Admission to this program is no longer available.

⁴ Emphasis at the graduate level is on the Ph.D. degree; the M.S. degree may be awarded to Ph.D. students after fulfillment of the requirements. However,

students may apply directly to the M.S. concentration in Biotechnology and in Ecology and Evolutionary Biology.

⁵ In addition to the regular M.S. degree program, a program coordinated with the Department of Education leads to an M.S. degree and a Teaching Credential.

⁶ UCI, UCR, and UCSD joint program.

⁷ UCI and UCSD joint program.

⁸ UCI and CSU Fullerton, Long Beach, Los Angeles, and Pomona joint program; admission is no longer available.

⁹ Emphasis at the graduate level is on the Ph.D. degree; the M.A. degree may be awarded to Ph.D. students after fulfillment of the requirements. However, an M.A. in Social Science (concentration in Demographic and Social Analysis or in Mathematical Behavioral Sciences) is available.

NOTE: A list of inactive degree programs is available in the Appendix.

course in a sequence is prerequisite to the one following. The letter L following a number usually designates a laboratory course. The letter H preceding a number designates an honors course.

The (4) or (4-4-4) designation following the course title indicates the quarter unit credits toward graduation. Some courses give other than four units of credit; for example, two, five, or a range from one to 12. The notations F, W, S, and Summer indicate when the course will be offered: fall, winter, or spring quarter, or summer session.

When a course is approved for satisfaction of the UCI general education requirement, the general education category is indicated by a Roman numeral in parentheses at the end of the description. However, courses which have been approved to fulfill the upper-division writing requirement are *not* designated in this *Catalogue*. Rather, they are designated in the quarterly *Schedule of Classes* with a W following the number. Students should refer to the *Schedule of Classes* link on the Registrar's Web site, <http://www.reg.uci.edu>, for the approved upper-division writing courses offered each quarter.

UNDERGRADUATE MAJORS, MINORS, AND ASSOCIATED AREAS OF STUDY

Students are urged to become informed of and understand all requirements concerning their intended majors, minors, and associated areas of study. Special restrictions apply to some majors and minors; for example, some minors require formal application or declaration by students, others may be completed without such formalities. Information about the programs listed below may be found in the academic unit sections of the *Catalogue*.

Undergraduate majors are offered in all of the bachelor's degree programs on the list of degree titles; the degree programs are referred to as majors in the following list. In association with these majors, UCI offers a number of minors, concentrations, specializations, and emphases.

A **minor** consists of a coordinated set of courses (seven or more) which together take a student well beyond the introductory level in an academic field, subject matter, and/or discipline but which are not sufficient to constitute a major. An **interdisciplinary minor** consists of courses offered by two or more departments, schools, or programs. Generally, all minors are available to all students, with the following exceptions: (1) students may not minor in their major, and (2) students may not complete certain other major/minor combinations that are expressly prohibited, as noted in the *Catalogue*. Minors are listed on a student's transcript but not on the baccalaureate diploma.

A **concentration** is a program of interdisciplinary study consisting of courses offered by two or more schools or programs. Concentrations are similar to minors in that they require fewer units of work than majors do, and the area of concentration appears on the student's transcript but not on the baccalaureate diploma. Concentrations are taken in combination with a major in one of the schools or programs offering the concentration.

A **specialization** is a program of study which enables students to focus on courses in a particular field within a major. The area of specialization pursued appears on the student's transcript but not on the baccalaureate diploma.

An **emphasis** is a program of study within a major which emphasizes a specific area of the discipline. Emphases usually have a defined course of study and are not listed on the transcript nor on the baccalaureate diploma.

In addition, the Campuswide Honors Program, various major-specific honors programs, and Excellence in Research programs are available. See the Division of Undergraduate Education section for information.

CLAIRE TREVOR SCHOOL OF THE ARTS

Majors:

- Arts and Humanities
- Dance
 - Specializations (B.F.A. only):
 - Choreography
 - Performance
- Drama
- Music
 - Emphases (B.A. only):
 - Composition
 - Music History
 - Music Theory
 - Performance
 - Specializations (B.Mus. only):
 - Guitar and Lute Performance
 - Instrumental Performance
 - Bassoon
 - Clarinet
 - Double Bass
 - Flute
 - Horn
 - Oboe
 - Percussion
 - Trombone
 - Trumpet
 - Tuba
 - Viola
 - Violin
 - Violoncello
 - Jazz Studies
 - Bass
 - Percussion
 - Piano
 - Saxophone
 - Trombone
 - Trumpet
 - Piano Performance
 - Vocal Performance
- Music Theatre
- Studio Art

Concentration: Game Culture and Technology (available to currently enrolled students majoring in Studio Art, Computer Science, Informatics, or Information and Computer Science)

Minors:

- Digital Arts
- Drama
- Studio Art

Concentration: Medieval Studies (in combination with any major in the Claire Trevor School of the Arts or the School of Humanities)

SCHOOL OF BIOLOGICAL SCIENCES

Majors:

- Biochemistry and Molecular Biology
- Biological Sciences
- Developmental and Cell Biology
- Ecology and Evolutionary Biology
- Genetics
- Microbiology and Immunology
 - Specializations:
 - Immunology
 - Microbiology
 - Virology
- Neurobiology
- Pharmaceutical Sciences (coordinated for the College of Health Sciences)
- Plant Biology

Concentration: Biological Sciences Education

Minor: Biological Sciences

THE PAUL MERAGE SCHOOL OF BUSINESS

Majors:

- Business Administration
 - Specializations:
 - Accounting
 - General Management
 - Marketing
- Business Information Management (offered jointly with the Donald Bren School of Information and Computer Sciences)

Minors:

- Accounting
- Management

3-2 Program: Available to outstanding undergraduates in all majors*

*The Henry Samueli School of Engineering majors should contact their academic counselor.

DEPARTMENT OF EDUCATION

Minor: Educational Studies

THE HENRY SAMUELI SCHOOL OF ENGINEERING

Majors:

- Aerospace Engineering
- Biomedical Engineering
 - Specializations:
 - Biophotonics
 - Micro and Nano Biomedical Engineering
- Biomedical Engineering: Premedical
- Chemical Engineering
 - Specializations:
 - Biochemical Engineering
 - Environmental Engineering
 - Materials Science
- Civil Engineering
 - Concentrations:
 - Computer Applications
 - Engineering Management
 - Infrastructure Planning
 - Mathematical Methods
 - Specializations:
 - General Civil Engineering
 - Environmental Hydrology and Water Resources
 - Structural Engineering
 - Transportation Systems Engineering
- Computer Engineering
- Computer Science and Engineering (offered jointly with the Donald Bren School of Information and Computer Sciences)
- Tracks:
 - Algorithms
 - Artificial Intelligence

- Graphics/Vision
- Parallel and Distributed Computing
- Electrical Engineering
 - Specializations:
 - Electro-optics and Solid-State Devices
 - Power Electronics and Power Systems
 - Systems and Signal Processing
- Engineering
 - Environmental Engineering
 - Materials Science Engineering
 - Specializations:
 - Biomaterials
 - Electronics Processing and Materials
 - Materials and Mechanical Design
 - Mechanical Engineering
 - Specializations:
 - Aerospace Engineering
 - Energy Systems and Environmental Engineering
 - Flow Physics and Propulsion Systems
 - Design of Mechanical Systems

Minors:

- Biomedical Engineering
- Materials Science Engineering

SCHOOL OF HUMANITIES

Majors:

- African American Studies
- Art History
- Asian American Studies
- Chinese Studies
 - Emphases:
 - Chinese Culture and Society
 - Chinese Language and Literature
- Classical Civilization
- Classics
 - Emphases:
 - Greek
 - Latin
- Comparative Literature
 - Specialization: Cultural Studies
- East Asian Cultures
- English
 - Emphasis: Creative Writing
- European Studies
 - Emphases:
 - British Studies
 - Early Modern Europe
 - Encounters with the Non-European World
 - French Studies
 - German Studies
 - Italian Studies
 - Medieval Studies
 - The Mediterranean World: Past and Present
 - Modern Europe (1789–Present)
 - Russian Studies
 - Spanish-Portuguese Studies
- Film and Media Studies
- French
 - German Studies
 - Global Cultures
 - Emphases:
 - Atlantic Rim
 - Hispanic, U.S. Latino/Latina, and Luso-Brazilian Culture
 - Africa (Nation, Culture) and its Diaspora
 - Asias (Nation, Culture) and its Diaspora
 - Europe and its Former Colonies
 - Pacific Rim
 - Inter-Area Studies

⁹ The School of Social Ecology offers this concentration with participation from the Department of Epidemiology in the School of Medicine.

¹⁰ School of Medicine and The Paul Merage School of Business program.

MAJORS AND CAREERS

Choosing a Major

Many students select their University major, the field of study which represents their principal academic interest, at the time they fill out their *University of California Undergraduate Application for Admission and Scholarship*. Some students, however, are not ready to choose a major at the time they apply, and still others may wish to change to a different major after they have enrolled.

In preparation for choosing a major, students need to familiarize themselves as much as possible with UCI and its academic programs. Entering students are exposed to a wide range of areas of study, and it is not unusual for students to become enthusiastic about academic disciplines previously unfamiliar to them. At UCI a number of traditionally separate academic disciplines have strong interrelationships, so that the academic environment is influenced by broad interactions among disciplines. As a complement to classroom study, UCI encourages its students to become involved in a variety of educational experiences such as independent study, laboratory research, field study, writing workshops, computing, and arts productions. Such experiences can help students identify additional areas of interest.

The *UCI General Catalogue* is a good place to find specific information about programs available and requirements. Students are encouraged to talk to academic counselors and faculty advisors and to go to any department to learn more about its programs of study, its requirements for graduation, and possible enrollment limitations. (Some majors are impacted, that is, more students apply than can be accommodated. See the Undergraduate Admissions section for information.) While advisors may not be familiar with all fields, they can suggest ways to investigate other areas of study and be helpful in planning a lower-division program which will keep several options open. Courses and workshops designed to assist students in choosing a major are offered by the UCI Career Center, the Division of Undergraduate Education, and some of the academic units.

All students are required to choose a major by the time they reach junior status. It is important to look well ahead to this decision and to think about it carefully during the freshman and sophomore years. When considering possible majors, students should keep in mind that some major programs require quite specific preliminary study. At the same time, excessive early concentration could reduce a student's options and could cause the student to need more than four years to obtain the baccalaureate degree. Furthermore, courses required for graduation need to be considered. For these reasons, it is desirable for students to plan their programs carefully and thoughtfully, seeking a balance between exposure to a variety of academic areas and completion of courses which are prerequisite to a major under consideration. A qualified student interested in two areas of study may graduate with a double major by fulfilling the degree requirements of any two programs. Certain restrictions may apply; students should check with their academic advisor.

Each school has its own standards for change of major, and some majors are impacted, as indicated above. Once a student selects a major, or decides to change majors, the student should visit the academic counseling office for their prospective major to obtain current information about prerequisites, program planning, and policies and procedures. In addition, a form called the Undergraduate Petition for Change of Major must be completed. The form is available from academic counselors and the Registrar's Office. All schools with exceptional requirements have major-change criteria approved by the Academic Senate and published on the Division of Undergraduate Education Web site at <http://www.changeofmajor.uci.edu>. Students changing majors may meet the approved major-

change criteria of the unit they wish to enter that are in place at the time of their change of major or those in effect up to one year before.

Undecided/Undeclared Students

Students who enter the University as freshmen or sophomores, who are uncertain about their major, and who wish to explore, experiment, and then decide, participate in the Undecided/Undeclared Advising Program administered by the Division of Undergraduate Education. The Division is devoted to enriching the learning environment for lower-division students, especially those in the freshman year. Detailed information about the Undecided/Undeclared Advising Program is available in the Division of Undergraduate Education section of the *Catalogue*.

Preparation for Graduate or Professional Study

Undergraduate students should keep the possibility of future graduate or professional study in mind as they plan their academic programs, and they should discuss their career goals with their advisors. Students who have an idea of the direction in which they would like to go should familiarize themselves with the basic requirements for postbaccalaureate study and keep those requirements in mind when selecting courses. Furthermore, students should supplement their undergraduate programs by anticipating foreign language or other special requirements at major graduate schools and by intensive work in areas outside their major that are of special relevance to their intended graduate work. Students should consult the graduate advisor or academic counselor in the academic unit corresponding to their area of interest and visit the UCI Career Center which offers a number of services useful to those considering graduate or professional study.

General information for prospective graduate students is available on the Graduate Division Web site (<http://www.grad.uci.edu/>), while information about UCI's graduate education policies and procedures is available in *The Manual of the Irvine Division of the Academic Senate* (<http://www.senate.uci.edu>).

Preprofessional Preparation

LAW

Law schools want to produce lawyers to serve the entire legal spectrum (for example, tax, criminal, entertainment, or immigration law), and this requires a wide range of academic backgrounds. Law schools look less for specific areas of study than they do for evidence of academic excellence. A good record in physics or classics, for example, will be preferred over a mediocre record in history or political science. Most law schools give equal preference to students from all academic disciplines. Courses that help develop writing and analytical skills (logic, writing, mathematics, research methods, and statistics, for example) build skills that are the key to doing well on the Law School Admissions Test (LSAT) and succeeding in law school and the legal profession.

UCI offers a number of law-related courses that students in any major may take. The School of Humanities offers a Humanities and Law minor, emphasizing courses that require critical reading and analysis, and courses that focus on theoretical and applied analytical perspectives on ethical, political, and social issues relevant to the law. The School of Social Sciences offers courses in the study of law, international relations, and economics of law and recommends that students take some political science courses as well. The School of Social Ecology offers many law-related courses in both substantive law (such as environmental and criminal law) and in law and society and criminal justice, and offers its majors the

opportunity to apply theories learned in the classroom to actual problems through its field study program.

Students should know that law schools look closely at five aspects of a student's application: grades, LSAT results, the applicant's statement of purpose, in-depth letters of recommendation, and extracurricular activities and law-related work experience. Students should be aware that not everyone who applies is admitted to law school. One consideration in selecting an undergraduate major is alternative careers should one's goals change.

MEDICINE AND OTHER HEALTH-RELATED SCIENCES

Although health science educators strongly recommend that students obtain a bachelor's degree prior to admission to the health sciences, there is no preferred major. Many UCI students who plan to enter the health professions major in Biological Sciences because much of the basic course work for that major is also required for medical school admission; however, students may major in any academic field as long as they also take the prerequisite courses required by professional health science schools. In general, the minimum amount of undergraduate preparation required includes one year each of English writing/composition, physics, biology with laboratory, chemistry (to include inorganic, organic, and biochemistry), and mathematics (especially calculus and statistics). Courses in cell biology, developmental biology, genetics, molecular biology, physiology, and computer science are recommended. In addition, some health sciences schools have additional course requirements or recommendations, for example, English and/or a foreign language, in particular, Spanish.

Although many factors ultimately are considered when reviewing applicants for admission, admission committees look carefully at the undergraduate grade point average and the results of the Medical College Admission Test (MCAT); the student's personal essay and/or interview; letters of recommendation; clinical exposure; research experience, especially in a biological, medical, or behavioral science; and extracurricular activities which demonstrate the applicant's ability to interact successfully with others.

Since medical programs cannot accommodate all qualified applicants and competition for entrance is keen, it is important to keep in mind alternative career opportunities should one not be accepted to a health science school, or should one decide to pursue instead one of the expanding number of health-related programs now available.

BUSINESS/MANAGEMENT

The contemporary executive or manager must be a creative thinker, make complex decisions, and have the ability to perceive and participate in the full scope of an enterprise while understanding its role in the economy. Effective management requires leadership ability, strong problem-solving skills, the ability to successfully deploy and manage information technologies, effective oral and written communication skills, analytical skills, an understanding of global economic trends, and a basic knowledge of behavioral processes in organizations.

Although not required for preprofessional school preparation, The Paul Merage School of Business offers a major in Business Administration and a major in Business Information Management with the Bren School of Information and Computer Sciences. The Merage School also offers a minor in Management as well as a minor in Accounting as a supplement to any undergraduate major. The Management minor can provide students with a broad understanding of management theory and practice and may be helpful to students in determining whether they wish to pursue a career in business or management or undertake graduate-level study in management. The Accounting minor provides undergraduates with all accounting courses necessary to sit for the CPA examination. It also prepares students for careers in the accounting field or for graduate-level study.

Students can also supplement their major course work to develop the skills needed for business and management by taking electives such as calculus, statistics, economics, psychology, sociology, computer science, and political science, and are encouraged to take intensive course work in the culture, history, geography, economy, politics, and language of specific foreign countries.

For admission purposes, the majority of graduate schools of business look at five areas: grades, scores on the Graduate Management Admission Test (GMAT), the applicant's statement of purpose, in-depth letters of recommendation, evidence of leadership in school and community activities, and work experience. Substantive work experience is becoming an increasingly important prerequisite for many programs.

Students from a variety of undergraduate disciplines including liberal arts, social sciences, physical or biological sciences, computer science, and engineering are encouraged to apply to UCI's Paul Merage School of Business.

Career Opportunities

UCI's academic units which offer undergraduate education leading to the bachelor's degree provide students with opportunities to explore a wide range of interests leading to a career choice or to further education at the graduate or professional level. The lists which follow show the varied career areas pursued by UCI graduates. Any major can lead to a number of careers. Additional discussions of careers are presented in individual academic unit sections.

Arts Career Areas

Acting, Advertising, Animation, Arts Administration, Art Therapy, Broadcasting, Choreography, Composition, Conducting, Conservation/Restoration, Consulting, Criticism, Curating, Digital Arts Production, Direction, Environmental Design, Instrument Repair/Tuning, Interior/Industrial Design, Journalism, Librarianship, Lighting, Marketing, Medical Illustration, Performance, Photography, Physical Fitness, Printing, Production, Publicity, Public Relations, Publishing, Set/Stage/Costume Design, Stage Management, Teaching, Tourism, Visual Resources Management, Writing

The exceptionally talented Claire Trevor School of the Arts graduate may choose to become a professional actor, art historian, artist, dancer, or musician. However, there are many other careers to explore in numerous arts-related areas, or the graduate may wish to

combine part-time professional performance with supplemental work. The field of arts administration is an increasingly important career area, offering opportunities to work with opera and dance companies, repertory theatre companies, museums, state and local arts councils, community arts organizations, and arts festivals.

Biological Sciences Career Areas

Bioanalysis, Biochemistry, Biomedical Engineering, Cell Biology, Chiropractic Medicine, Dentistry, Developmental Biology, Dietetics, Environmental Management, Forestry, Genetic Engineering, Health Administration, Industrial Hygiene, Marine Biology, Medical Technology, Medicine, Microbiology, Nurse Practitioner, Occupational Therapy, Oceanography, Optometry, Osteopathy, Plant Biology, Pharmacology, Pharmacy, Physicians' Assistant, Physical Therapy, Podiatry, Public Health, Quality Control, Research, Sales, Speech Pathology, Teaching, Technical Writing and Editing, Veterinary Medicine

The health field is one of the fastest-growing career areas in the country. Work sites may include private corporations, educational institutions, hospitals, health care complexes, private foundations, city and county governments, state agencies, the federal government, and many others.

Engineering Career Areas

Aerospace, Biochemical, Biomedical, Biotechnology, Chemical Engineering, Communications, Computer Architecture, Computer Engineering, Computer Software, Control Systems, Digital Signal Processing, Earthquake Safety, Electric Power, Electronics, Electro-optics, Environmental Control, Environmental Engineering, Flood Control, Geotechnical, High-Speed Image Processing, Hydraulics, High-Frequency Devices and Systems, Land Development and Urban Planning, Manufacturing Engineering, Materials, Process Control, Propulsion and Power, Public Works, Reliability, Robotics, Structures, Traffic, Transportation, Water Resources, Water Supply

These are some areas for employment available to UCI engineering graduates. Career paths typically involve one or more of the following: design, research and development, manufacturing or construction, operations, consulting, applications and sales, management, or teaching. At UCI they will have had the choice of Aerospace, Biomedical, Biomedical: Premedical, Chemical, Civil, Computer, Computer Science and Engineering, Electrical, Environmental, Materials Science, or Mechanical Engineering, as well as a general program in Engineering. However, they will frequently find challenging positions in related areas such as industrial engineering, for which their general and specialty course work at UCI, followed by formal or informal, on-the-job training will qualify them. Approximately half of UCI's Engineering graduates obtain advanced degrees from UCI or other universities, and almost all engage in continuing education to keep abreast of advances in technology. Many Engineering graduates build on their engineering background and enter graduate programs to obtain degrees in the fields of administration, law, medicine, physics, or mathematics.

Humanities Career Areas

Advertising, Banking, Broadcasting, Business, Counseling, Communications, Diplomacy, Education, Film and Television, Foreign Service, Government Service, Human Resources, Insurance, International Relations, Journalism, Law, Library Science, Management/Administration, Marketing, Personnel, Politics, Public Administration, Public Relations, Publicity, Publishing, Research, Retail Sales, Screenwriting, Social Welfare, Teaching, Technical Writing, Tourism, Translating/Interpreting, Writing

Diverse career fields available to Humanities graduates include entry-level positions in both the public and private sectors or professional-level opportunities combining the degree with further specialization. Humanities graduates may also elect to enter professional programs such as law, library science, medicine (with proper prerequisites), or public administration. Business and industry utilize Humanities graduates for management training programs in banking, retail sales, and insurance. Graduates with special skills in oral and written communications may look to positions with newspapers, advertising agencies, public relations firms, radio and television stations, and publishing houses.

Technical writers are currently in demand, particularly those who have had some preparation in engineering, computer science, and the sciences. Opportunities for graduates fluent in languages other than English exist in government, business, social service, counseling, foreign service, and international trade, among others.

Information and Computer Science Career Areas

Applications Programming, Biomedical Computing, Computer-Aided Design, Computer Animation, Computer Architecture, Computer Networks, Computer Simulation, Computer Systems Design, Databases, Information Systems Design and Consulting, Embedded Systems, Management Information Systems, Multimedia Applications, Parallel and Distributed Systems, Software Design and Development, Software Management and Maintenance, Supercomputing, Systems Administration, Systems Analysis and Design, Systems Programming, Business Information Management

Graduates of the Donald Bren School of Information and Computer Sciences pursue a variety of careers. Many graduates specify, design, and develop a variety of computer-based systems comprised of software and hardware in virtually every application domain, such as aerospace, automotive, biomedical, consumer products, engineering, entertainment, environmental, finance, investment, law, management, manufacturing, and pharmacology. ICS graduates also find jobs as members of research and development teams, developing advanced technologies, designing software and hardware systems, and specifying, designing, and maintaining computing infrastructures for a variety of institutions. Some work for established or start-up companies while others work as independent consultants. After a few years in industry, many move into management or advanced technical positions. Some ICS students also use the undergraduate major as preparation for graduate study in computer science or another field (e.g., medicine, law, engineering, management).

Physical Sciences Career Areas

Actuarial Science, Aerospace, Analytical Chemistry, Applied Physics and Chemistry, Astrophysics/Astronomy, Bioscience, Computers, Energy Science, Electronics, Engineering Applications, Environmental Science, Food Chemistry, Forensic Chemistry, Geoscience, Inorganic Chemistry, Instrumentation, Laboratory Science, Lasers, Materials Science, Medicine, Nuclear Science, Optical Devices, Organic Chemistry, Pharmacology, Physical Chemistry, Plasma Physics, Quality Control, Radiation Science, Radiology, Solid State Devices, Space Science, Statistics, Teaching

Graduates of the School of Physical Sciences have backgrounds appropriate to a variety of areas in research, teaching, and management. Career opportunities for physical scientists are found in federal, state, and local government as well as in private industry.

Chemists may work in research and development and in jobs dealing with health, pollution, energy, fuel, drugs, and plastics. Water districts, crime labs, and major chemical and oil companies are also good resources for employment. Earth and Environmental Sciences majors will find employment in areas such as hazardous waste treatment, resource extraction, pollution remediation, and as consultants to government and high-technology fields. Mathematics graduates find employment in both government and the private sector in such technical fields as operations research, computer programming, marketing research, actuarial work, banking, retail management, and scientific research. Physics graduates find professional positions in education, research and development, and in the electronic and aerospace industries. Possible careers include science teaching and writing, computer and electrical engineering, device and instrumentation development, nuclear and reactor physics, environmental and radiological science, laser and microchip development, astronomy, and geophysics.

Social Ecology Career Areas

Administration, Architecture, Biostatistics, Clinical Psychology, Corrections/Probation, Counseling, Education Support Services, Environmental Design, Environmental Planning and Consulting, Epidemiology, Government Service, Health Service, Hospital Administration, Housing Development, Law, Management/Administration, Mental Health, Program Coordination, Psychology, Public Health Research, Public Relations, Real Estate/Development, Research and Research Design, Social Service, Teaching, Urban Planning, Water Quality Control

Graduates of the School of Social Ecology may hold positions as urban planners, environmental consultants, juvenile probation officers, counselors, elementary and secondary school teachers, legal aides, coordinators of juvenile diversion programs, social workers, mental health workers, special education teachers, or architectural consultants, to cite some examples of career choices. Many School of Social Ecology graduates have used their training to enter graduate programs and obtain degrees in the fields of law; clinical, community, social, developmental, and environmental psychology; public health; public and business administration; environmental studies; urban planning; social welfare; criminology; and the administration of justice.

Social Sciences Career Areas

Banking, Correction/Probation, Counseling, Environmental Analysis, Finance, Foreign Service, Government Service, Health Services, Human Services, Industrial Relations, International Affairs, Labor Relations, Law, Library Science, Management/Administration, Marketing, Personnel, Psychology, Public Relations, Publishing, Real Estate, Research, Sales, Statistical Analysis, Teaching, Writing

Business and industry often look to social science graduates to fill positions in management, finance, marketing and advertising, personnel, production supervision, and general administration. In the public sector, a wide variety of opportunities are available in city, county, state, and federal government. Teaching is a frequently chosen career at all levels from elementary school teacher to university professor. In addition, many graduates enter professional practice, becoming lawyers, psychologists, researchers, or consultants in various fields.

Health Sciences Career Areas

Patient Care, Provider Relations, Policy Analysis, Policy Development, Air Quality, Food Protection, Radiation Protection, Solid Waste Management, Water Quality, Noise Control, Housing Quality, Vector Control, Environmental Impact Assessment, Risk Assessment, Global Health, Consulting, Program Evaluation, Incident/Disease Investigation, Surveillance, Research Methodology, Data Analysis, Clinical Trials, Social and Economic Development, Health Policy and Law, Demography, Women's Health, Children's Health, Design of Health Care Systems, Pharmaceutical Production and Development, Biotechnology, Medicinal Chemistry, Medicine, Pharmacy, Health Promotion, Health Care Delivery Systems, Physical Restoration and Rehabilitation, Program Management and Design, Disease Prevention and Control,

Community Health and Outreach, Health Forensics, Health Insurance and Management, Information Technology, Marketing, Public Relations, Facilities Management and Control

Graduates from the Health Sciences are prepared for a wide range of unparalleled career opportunities at the frontiers of many emerging and established health, industry, government, and research and education fields. Opportunities include working with private corporations, hospitals, medical clinics, health care agencies, pharmaceutical industry, biotechnical industry, local and state government agencies, the federal government, educational providers, court and probation systems, and many others. Health Science graduates can use their education and training to enter a rich variety of graduate programs and to earn professional degrees in related fields.

SPECIAL PROGRAMS

ACCESS UCI and Summer Session Enrollment

Exceptional high school students have two options for enrolling in UCI classes without formal admission to the University.

UC Irvine Extension's ACCESS UCI program is ideal for well-prepared high school seniors who have exhausted the curriculum available in high school and who are looking for advanced-level course work, or for students who are seeking an enrichment course or course work not available at their high school. For information, call (949) 824-5414; e-mail: unex-services@uci.edu; http://unex.uci.edu/courses/access_uci.

UC Irvine Summer Session is another option for highly qualified high school seniors to enroll in regular UCI courses. For further information, contact the UCI Summer Session Office at (949) 824-5493; e-mail: summer-session@uci.edu; <http://summer.uci.edu>.

Admission and enrollment in courses either through ACCESS UCI or UC Irvine Summer Session does not constitute admission to UCI as an entering freshman student. See the Undergraduate Admissions section of this *Catalogue* for information about applying to UCI and the formal admission process.

Educational Opportunity Program

The Educational Opportunity Program (EOP) is designed for students with promising academic ability and potential despite a low-income or educationally disadvantaged background. EOP is based primarily on family income level. All students served by the program must be California residents, with the exception of American Indian students.

Admission. Counselors in the Office of Admissions and Relations with Schools visit high schools and community colleges throughout California and meet with prospective students, parents, teachers, counselors, and school officials to discuss the admission and financial aid processes, housing, and the academic opportunities available at UCI.

Prospective students indicate their interest in being considered for EOP services on the UC undergraduate application for admission and scholarships and must provide the information requested. Application fee waivers are available for low-income applicants who meet the eligibility criteria.

Housing. UCI guarantees on-campus housing to all new single undergraduates under the age of 25 who meet the housing application deadline. For additional information, visit <http://www.housing.uci.edu>.

UCI Center for Educational Partnerships

The mission of the UCI Center for Educational Partnerships (CFEP) is to create collaborations that support preparation for and success in higher education. CFEP's focus is on equity and access for all students in order to achieve the University of California's goal of academic excellence. CFEP has three guiding principles: (1) diversity among students and faculty enhances the educational experience the University provides and the scholarship it produces; (2) collaboration promotes the exchange of ideas, leverages resources, and drives collective action; and (3) research guides practice, promotes accountability, and advances knowledge. In order to achieve its mission, CFEP builds lasting partnerships with individuals and institutions committed to improving education; facilitates faculty involvement; engages in K–12 academic preparation; provides teacher professional development; promotes college-going culture; supports undergraduate retention; enhances graduate school preparation; conducts research and evaluation; participates in the national dialogue about educational reform and collaboration; and fosters learning communities to support ongoing professional and intellectual development.

For additional information, contact the Center for Educational Partnerships at (949) 824-7482; <http://www.cfep.uci.edu>.

Student Academic Advancement Services

Student Academic Advancement Services (SAAS), a unit of the Division of Undergraduate Education, provides support services to students who are first-generation college students or low-income students, as well as disabled students (those with physical and/or learning disabilities). The goal of SAAS is to help students earn their University degree. See the Division of Undergraduate Education section of the *Catalogue* for additional information.

Graduate Diversity Programs

The University of California believes that a diverse student and faculty population is integral to academic excellence. It is critical to promoting the lively intellectual exchange and the variety of ideas and perspectives that are essential to advanced scholarly research. The University remains committed to expanding outreach, recruitment, and retention efforts. Through the Graduate Division's diversity programs, steps are taken to increase the participation of diverse groups of U.S. citizens and permanent residents who have been disadvantaged in obtaining graduate education in the United States. See the Graduate Division section of the *Catalogue* for additional information.

Medical Student Support Programs

The School of Medicine's Office of Admissions and Outreach is designed to meet the challenges of California's changing demographics and to contribute to the School's goal of achieving a

broad spectrum of diversity in the student population, and ultimately, in the medical profession. The office plays a major role in the recruitment and retention of targeted socioeconomically disadvantaged students who have the potential of service to the medically underserved communities in California. See the School of Medicine section for additional information.

EXPENSES AND FEES

Estimated Expenses

The range of estimated nine-month expenses, including projected fees, books and supplies, room and board, and miscellaneous expenses for California-resident students attending UCI during the 2009–10 academic year are shown in the following chart; fees are subject to change without notice, and the University may impose additional fees. As of press time for the *Catalogue*, fee levels for 2009–10 have not yet been finalized.

Expenses for students living off campus vary depending upon number of roommates, location of apartment, amenities, and other factors. Graduate student expenses assume two students sharing a two-bedroom apartment. All other on- and off-campus estimates are based on two students sharing a bedroom. Figures are based on annual surveys and are intended only as a guide in computing average expenses.

California-Resident Student Status	Living Arrangement	Estimated Nine-Month Expenses
Undergraduate	On campus	\$ 24,818
	Off campus	24,930
	At home	19,203
Graduate	On campus	28,440
	Off campus	34,430
	At home	28,440

Fees

All fees, tuition, and charges are subject to change without notice, and the University may impose additional fees. As of press time for the *Catalogue*, the 2009–10 University Registration Fees, Educational Fees, Undergraduate Nonresident Tuition, and Professional School Student Fees were not yet finalized. Consult the Registrar's Web site at <http://www.reg.uci.edu> for the most up-to-date information.

NOTE: The fee levels shown in the following charts are for 2008–09 and have not been updated to reflect anticipated increases for 2009–10.

Undergraduate Student Fees for Academic Year 2008–09¹

	Resident	Nonresident
University Registration Fee	\$ 864.00	\$ 864.00
Educational Fee	6,262.00	6,849.00
Associated Students Fee	54.00	54.00
UCI Student Center Fee	409.50	409.50
Bren Events Center Fee	69.00	69.00
Recreation Center Fee	264.00	264.00
Campus Spirit Fee	99.00	99.00
Measure S Fee	24.00	24.00
UG Student Health Insurance Fee	729.00	729.00
Nonresident Tuition	—	20,021.00
Total	\$ 8,774.50	\$ 29,382.50

¹ Student fees are based on three quarters of attendance.

Graduate Student Fees**for Academic Year 2008–09** ^{1, 2, 3}

	Resident	Nonresident
University Registration Fee	\$ 864.00	\$ 864.00
Educational Fee ⁴	7,122.00	7,434.00
Associated Graduate Students Fee ⁵	27.00	27.00
UCI Student Center Fee	409.50	409.50
Bren Events Center Fee	69.00	69.00
Recreation Center Fee	264.00	264.00
Grad. Student Health Insurance Fee	2,506.00	2,506.00
Nonresident Tuition	—	14,694.00
Total	\$11,261.50	\$ 26,267.50

¹ Student fees are based on three quarters of attendance. Second- and third-year medical students attend four quarters; summer 2008 quarter fees of \$2,325.50 for these medical students are not included in this table.

² The fee level shown does not include the Professional School Student Fees. The 2008–09 fee for M.B.A. students was \$17,456 for residents and \$16,345 for non-residents; for M.S. in Nursing Science students, \$3,685 for residents and nonresidents; for M.P.H. students, \$4,541 for residents and nonresidents; for M.D. students, \$14,984; M.D. students pay an additional \$61 fee for Medical Student Disability Insurance. The proposed Professional School Student Fee for the J.D. program is \$24,408 for residents and \$22,803 for nonresidents.

³ These fees are not applicable to self-supporting programs such as the Executive, Health Care Executive, and Fully Employed M.B.A. programs and the M.A.S. in Criminology, Law and Society in the School of Social Ecology. Contact the respective School for fee information.

⁴ The 2008–09 Educational Fee was \$6,204 for students in The Paul Merage School of Business, M.D. students, and M.S. in Nursing Science students. The fee for M.P.H. students was \$7,122 for residents and \$7,434 for nonresidents.

⁵ The Associated Graduate Students Fee is \$42 for students in The Paul Merage School of Business and \$57 for M.D. students.

Payment of Fees

Fees for each quarter are due and payable in advance within deadlines published in the Quarterly Calendar with Deadlines on the Registrar's Web site at <http://www.reg.uci.edu>. A student will not be officially registered in classes until fees are paid in full, with the exception of students who are participating in the PACE Plan.

Information about fee refunds and appears later in this section.

The **University Registration Fee** is required of all students regardless of the number of courses taken, unless otherwise noted. This fee is a charge to each student for services which benefit the student and which are complementary to, but not a part of, the instructional programs. No part of this fee is refundable to students who do not use all or any of these services. Graduate students studying out of the State may be eligible to pay one-half of the Registration Fee. Continuing and returning students are required to pay all outstanding fines and other debts, in full, before they pay their Registration Fee for an upcoming term. M.D. students are required to pay the full Registration Fee for each fall, winter, and spring quarter, and a reduced Registration Fee of \$80 for each summer quarter.

The **Educational Fee** provides general support for the University's operating budget, including costs related to instruction, and funds student financial aid and related programs, counseling and career guidance, academic advising, tutorial assistance, social and cultural activities, and overhead associated with student services activities. M.D. students are required to pay the full Educational Fee for each quarter in which they enroll, including the summer quarter. The summer quarter Educational Fee level for M.D. students will be the same as that of the previous spring quarter.

The **Associated Students Fee** is administered by the Associated Students of UCI, the Associated Graduate Students, The Paul Merage School of Business Student Association, and the Associated Medical Students. These funds provide social activities, lectures, forums, concerts, and other activities at either a reduced charge, or no charge, to UCI students. The fees are required of all students.

The **UCI Student Center Fee** is required of all students regardless of the number of courses taken. The fee is used to pay the debt service on revenue bonds sold to finance the construction costs of the UCI Student Center.

The **Bren Events Center Fee** is required of all students regardless of the number of courses taken or units carried. The fee is used to pay the debt service on revenue bonds sold to finance the construction costs of the Bren Events Center.

The **Recreation Center Fee** is required of all students regardless of the number of courses taken or units carried. The fee is used to pay the debt service on revenue bonds sold to finance the construction costs of the Student Recreation Center and Athletics facilities improvements.

The **Campus Spirit Fee** is required of all undergraduate students regardless of the number of courses taken or units carried. The fee is used to support Athletics and Campus Spirit Programs.

The **Measure S Fee** is required of all undergraduate students regardless of the number of courses taken or units carried. The fee is used to support, upgrade, and expand the ASUCI Express Shuttle.

The **Undergraduate Student Health Insurance Fee** is charged over three quarters (fall, winter, and spring) to provide 12-month coverage from September through August. The fee is required of all undergraduate students regardless of the number of courses taken or units carried. The fee is used to provide undergraduate students with health insurance. If students provide evidence of comparable coverage from another source, participation in the mandatory plan may be waived. This fee is subject to change pending the outcome of negotiations with insurance carriers.

The **Graduate Student Health Insurance Fee** is charged over three quarters (fall, winter, and spring) to provide 12-month coverage from September through August. The fee is required of all graduate and medical students regardless of the number of courses taken or units carried. The fee is used to provide graduate and medical students with health insurance. If students provide evidence of comparable coverage from another source, participation in the mandatory plan may be waived. This fee is subject to change pending the outcome of negotiations with insurance carriers.

The **Medical Student Disability Insurance Fee** is required of all medical students. The entire annual fee is charged for the fall quarter.

The **Professional School Student Fee** is required of all students in the M.D., M.B.A., M.P.H., J.D., and M.S. in Nursing Science programs, regardless of the number of units taken.

A \$1,000 advance deposit on the Professional School Student Fee is required of all new M.B.A. students upon their acceptance of admission. This deposit is nonrefundable.

Miscellaneous Fees (subject to change without notice)

Application Fee ^{1,2}	
Undergraduate	\$ 60.00
International Undergraduate	70.00
Graduate ³ and Medical	70.00
International Graduate ³ and Medical	90.00
Application Fee for Readmission ¹	
Undergraduate	\$ 60.00
International Undergraduate	60.00
Graduate	70.00
International Graduate	70.00
Advancement to Candidacy for Ph.D.	90.00
Duplicate Diploma	22.00
Duplicate Diploma, School of Medicine	125.00
Filing Fee (graduate programs; one-half registration fee) .	144.00
Graduate Special Library Borrowing Privileges ⁴	50.00
(per year, nonrefundable, renewable)	
Master's Thesis Submission Fee	55.00
M.B.A. Acceptance of Admissions Deposit ¹	1,000.00
Transcript of Record (per copy)	10.00
Undergraduate Acceptance of Admission Fee ¹	100.00
(applied toward University Registration Fee)	
Verification of Student Status (per copy)	10.00

¹ Nonrefundable in all cases.² The fee entitles an applicant to apply to one UC campus. Applicants who are applying to more than one campus must pay the fee for each campus selected.³ The Application Fee for The Paul Merage School of Business is \$150.⁴ This fee entitles graduate students on Official Leave of Absence or Filing Fee Status to keep their library privileges.**Service Charges** (subject to change without notice)

Changes in Class Enrollment after Announced	\$ 3.00
Dates (each transaction)	
Credit by Examination (each petition)	5.00
Late Payment of Registration Fees	50.00
Late Enrollment in Classes	50.00
Returned Check Collection	25.00
Student Parking Permits ¹	
Commuter, quarterly	150.00
Resident, quarterly	225.00

In addition, students may be assessed a course materials fee. Consult the online *Schedule of Classes* for courses requiring the fee and the fee level.

¹ In accordance with Regents policy, UC parking systems are self-supporting auxiliary enterprises receiving no State appropriations. See <http://www.parking.uci.edu/> for fee levels of other types of parking permits. Prices shown are for 2008-09 and are subject to change for 2009-10.

SPECIAL FEE PROGRAMS, WAIVERS, AND EXEMPTIONS**PACE Plan**

The PACE Installment Plan allows students to spread the quarterly costs of fee payment over a three-month period. A fee is charged for this privilege. Information about PACE is available from Campus Billing Services, 109 Aldrich Hall; telephone (949) 824-2455.

Reduced-Fee Part-Time Study Program

Part-time study for credit leading to an undergraduate or graduate degree is available in some academic units. To take advantage of reduced fees for part-time status, quarterly course enrollment is limited to 10 units or fewer for undergraduate students and to eight units or fewer for graduate students. Students enrolled in excess units after Friday of the third week of instruction are liable for full fees.

The same admissions standards that apply to full-time students apply to part-time students. Under University policy, academic deans (the Dean of the Division of Undergraduate Education, for undecided/undeclared students; the Dean of Graduate Studies, for graduate students) may approve Petitions for Part-Time Status *only* for reasons of occupation, family responsibilities, or health.

Undergraduate and graduate students on approved part-time status pay the full University Registration Fee and one-half the Educational Fee. Those part-time students who have been determined to be nonresidents of the State of California are assessed one-half the Nonresident Tuition, in addition to the full Registration Fee and one-half the Educational Fee. Part-time students pursuing a professional degree are assessed one-half the Professional School Student Fee, the full Registration Fee, and one-half of the Educational Fee.

Part-time status lapses at the end of each academic year; therefore, a student must reapply each year that part-time status is desired. See the Registrar's Web site at <http://www.reg.uci.edu> for more information.

Undergraduate petitions are available from academic counselors or the Registrar's Office; graduate students may obtain further information and petitions from the Graduate Division. All students are encouraged to consult with the Office of Financial Aid and Scholarships regarding minimum unit requirements.

Fee Reduction for Staff and Academic Employees

Students who are career employees at UCI or the University of California, Irvine Medical Center are eligible for a two-thirds reduction of the University Registration Fee, the University Educational Fee, and campus-based fees. This applies for up to nine units or three regular session University courses per quarter, whichever is greater. For staff employees, additional information and the Employee Application for Reduced Fees is available from Human Resources. Academic employees should contact the Office of Academic Personnel.

Exemptions from the Nonresident Tuition Fee

See the California Residence and the Nonresident Tuition Fee section below for information about exemptions from the Nonresident Tuition Fee.

Exemptions from Fees

A student who is a child, spouse, or registered domestic partner of a resident law enforcement officer or fire fighter killed in active duty shall be exempted from nonresident tuition and fees in accordance with Section 68120 of the Education Code of the State of California.

In accordance with Section 66025.3 of the Education Code of the State of California, a resident student may be exempted from mandatory systemwide fees if (a) the student is the child or dependent of a veteran of the United States military who has a service-connected disability or who has been killed in service; (b) the student is the dependent of a member of the California National Guard who, while in active service of the State, has acquired a service-connected disability or has been killed in service; or (c) the student is the surviving spouse (who has not remarried) or registered domestic partner (who has not married or registered as a domestic partner) of a member of the California National Guard who, while in active service of the State, has acquired a service-connected disability or has been killed in service.

A nonresident student who meets the requirements of Section 68130.5 of the Educational Code of the State of California regarding attendance and graduation from a California high school shall be exempt from paying nonresident tuition.

CALIFORNIA RESIDENCE AND THE NONRESIDENT TUITION FEE

All students who have not lived in California with the intent to make California their permanent home for more than one calendar year prior to the residence determination date for each quarter or semester they propose to attend the University must pay the Nonresident Tuition Fee. The residence determination date is the day instruction begins at the last of the University of California campuses to open for the quarter, and for schools on the semester system, the day instruction begins for the semester.

Laws Governing Residence

The rules regarding residence classification for tuition purposes at the University of California are governed by the California Educational Code and implemented by the Standing Orders of The Regents of the University of California. Under these rules adult citizens and certain classes of non-citizens can establish residence for tuition purposes. There are particular rules that apply to the residence classification of minors.

Who Is a Resident?

Adult students (at least 18 years of age) may establish residence for tuition purposes in California if they are a U.S. citizen, a permanent resident or other immigrant, or a nonimmigrant who is not precluded from establishing a domicile in the U.S. This includes nonimmigrants who hold valid visas of the following types: A, E, H-1, H-4, I, K, L, O-1, O-3, R, or V.

To establish residence a student must, immediately prior to the residence determination date:

1. Be physically present in California for more than one calendar year, *and*
2. Must have come to California with the intent to make California the permanent home. For example, physical presence within the state of California solely for educational purposes does not constitute the establishment of California residence regardless of the length of stay.
3. Students under 24 years of age whose parents are not residents of California will be required to meet the Financial Independence requirement in order to be classified as a resident for tuition purposes.

Residence cannot be derived from a spouse or parents.

Requirements for Financial Independence

The financial independence requirement will not be a factor in residence determination if the student meets one of the following criteria:

1. The student's parents upon whom the student is financially dependent, are residents of California.
2. At least 24 years of age by December 31 of the calendar year of the term for which resident classification is requested.
3. Veteran of the U.S. Armed Forces.
4. A ward of the court or both parents are deceased.
5. Has legal dependents other than a spouse or registered domestic partner.
6. A married or registered domestic partner student, a graduate student, or a professional student who was not claimed as an income tax deduction by parents or any other individual for the tax year immediately preceding the term for which resident classification is requested.
7. Financial independence is not a factor in residence status for graduate student instructors, graduate student teaching assistants, research assistants, junior specialists, postgraduate researchers, graduate student researchers, and teaching associates who are employed 49 percent or more of full time in the term for which resident classification is requested.
8. An unmarried undergraduate student, not claimed as an income tax deduction by parents or any other individual for the two tax years immediately preceding the term for which resident classification is requested, who can demonstrate self-sufficiency for those years.
9. Reached the age of majority in California while his/her parents were residents of this state *and* the California resident parents leave the state to establish a residence elsewhere *and* the student continues to reside in California after the parents' departure.

Establishing Intent to become a California Resident

Relevant indicia that contribute to the demonstration of a student's intent to make California the permanent home include, but are not limited to, the following: registering to vote and voting in California elections; designating a California permanent address on *all* records (i.e., school, employment, military); obtaining a California Driver License or California Identification Card; obtaining a California vehicle registration; paying California income taxes as a resident (including taxes on income earned outside California from the date California residence was established); maintaining a California residence in which personal belongings are kept; licensing for professional practice in California; and the *absence* of these indicia in places other than California during any period for which residence in California is asserted.

General Rules Applying to Minors

The residence of the parent with whom an unmarried minor (under the age of 18) lives is the residence of the unmarried minor. When the unmarried minor does not live with either parent, the residence of the unmarried minor is that of the parent with whom the unmarried minor last lived. An unmarried minor may establish his or her own residence when both parents are deceased and a legal guardian has not been appointed unless the unmarried minor is a minor non-citizen who is precluded by the Immigration and Nationality Act from establishing domicile in the U.S. *The residence of an unmarried minor who has a parent living cannot be changed by the unmarried minor's own act, by the appointment of a legal guardian, or by the relinquishment of a parent's right of control.*

Specific Rules Applying to Minors

1. **Parent of Minor Moves from California.** If the California resident parent(s) of an eligible minor moves from California, the minor will be entitled to resident classification as long as the minor enrolls full-time in a California public postsecondary institution within one calendar year of the parent's departure, and remains physically present in California. This classification will continue until the minor has attained the age of majority and has resided in California for the minimum time required to become a resident. The Financial Independence requirement does not apply to this situation.
2. **Self-Supporting Minor.** Minor students who are U.S. citizens or eligible non-citizens may be eligible for resident classification if documentation of physical presence, intent to be a California resident, and self-support through the student's own employment or credit is provided for the entire calendar year prior to the residence determination date.
3. **Two-Year Care and Control.** Minor students who are U.S. citizens or eligible non-citizens may be eligible for resident classification if they have lived with and been under the continuous care and control of an adult or series of adults other than a parent for not less than two calendar years. The adult or series of adults must have been responsible for care and control for the entire two-year period and must be California residents for 366 days prior to the residence determination date of the term for which resident classification is requested.

Exemptions from the Nonresident Tuition Fee

Students for whom any of the following conditions apply may be eligible for an exemption from the Nonresident Tuition Fee.

1. **Member of the Armed Forces, dependent spouse, registered domestic partner, or child.** A student on active duty as a member of the Armed Forces of the United States stationed in California, and their spouses or registered domestic partner, and dependent children. An undergraduate who is the natural or adopted child, stepchild, spouse, or registered domestic partner who is the dependent of a member of the U.S. Armed Forces, stationed in California on active duty, may be entitled to an exemption from the nonresident tuition. Graduate and professional school students are entitled to this exemption for two years, during which time the student must fulfill the UC residence requirements in order to maintain residency status.
2. **Child, spouse, or registered domestic partner of a faculty member.** To the extent that university funds are available, a student who is the *unmarried, dependent child under the age of 21 or the spouse or registered domestic partner of a University of California faculty member who is a member of the Academic Senate.*
3. **University employee or dependent child, spouse, or registered domestic partner of a University employee.** A student who is a full-time University employee who is permanently assigned to work outside the State of California or the unmarried, dependent child under the age of

21 or the spouse or registered domestic partner of a full-time employee of the University of California who is permanently assigned to work outside the State of California (i.e., Los Alamos National Laboratory).

4. **Child, spouse, or registered domestic partner of a deceased public law enforcement or fire suppression employee.** A student who is the child, spouse, or registered domestic partner of a deceased public law enforcement or fire suppression employee, who was a California resident and was killed in the course of law enforcement or fire suppression duties.
5. **Dependent child of a California resident.** A student who has not been an adult resident for more than one year and is the natural or adopted, dependent child of a California resident who has been a resident for more than one year immediately prior to the residence determination date. The student must also maintain full-time attendance in a California public postsecondary institution.
6. **Graduate of a California school operated by the Federal Bureau of Indian Affairs (B.I.A.).** A student who is a graduate of a California school operated by the B.I.A. (i.e., Sherman Indian High School) and who enrolls at the University of California.
7. **Employee of California public school district.** A student holding a valid credential authorizing service in California public schools and employed by a school district in a full-time certificate position.
8. **Student athlete in training at U.S. Olympic Training Center, Chula Vista.** An amateur student athlete in training at the U.S. Olympic Training Center in Chula Vista, until the student has resided in California the minimum time necessary to become a resident.
9. **Graduate of California high school.** A student who attended high school in California for three or more years (9th grade included) and graduated from California high school (or attained the equivalent).
10. **Congressional Medal of Honor recipient.** An undergraduate student under age 27 who is the recipient of the Congressional Medal of Honor or a child of a recipient who at the time of his or her death was a California resident.
11. **Surviving dependents of 9/11 terrorist attacks.** Undergraduate students who are the surviving dependents of a California resident who was killed in the 9/11/01 terrorist attacks of the World Trade Center, the Pentagon Building, or the crash of United Airlines flight 93.

Temporary Absences

If a nonresident student is in the process of establishing a domicile in California and returns to his or her former home during noninstructional periods, the student's presence in California will be presumed to be solely for educational purposes and only convincing evidence to the contrary will rebut this presumption. *Students who are in the State of California solely for educational purposes will not be classified as residents for tuition purposes regardless of their length of stay in California.*

If a student who has been classified as a resident for tuition purposes leaves California temporarily, the absence could result in the loss of California residence. The burden of proof is on the student to demonstrate through documentation that he or she (or the parents if the student is a minor) did nothing inconsistent with a claim of continuing California residence during a temporary absence. Steps that should be taken to retain California residence include, but are not limited to:

1. Continue to use a California address on all records (educational, employment, military, among others).
2. Continue to satisfy California tax obligations. A student claiming California residence is liable for payment of income taxes on his or her total income from the date he or she begins to establish residence in California, including income earned in another state or country.
3. Retain a California voter's registration and vote by absentee ballot.
4. Maintain a California Driver License, California Identification Card, and vehicle registration in California. If it is necessary to change the driver's license or vehicle registration, it *must* be changed back to California in the time prescribed by law.

Change in Resident Classification

Continuing students who are classified as nonresidents for tuition purposes, and who believe that they will be eligible for resident status for an upcoming quarter, must submit a Petition for Resident Classification to the Office of the Registrar in order to have their residence status changed before they submit

their registration fee payment for the applicable quarter. Students must initiate all changes of status before the registration deadline of the quarter for which they want to be reclassified. (Specific deadline dates are listed on the Registrar's Web site at <http://www.reg.uci.edu>.) Students are strongly encouraged to submit their petition at the earliest possible date in order to expedite the review process. As long as submission deadlines are met, students may be allowed a period of time no later than the end of the quarter to provide any additional documentation required for residence determination.

Incorrect Classification

Any student found to be incorrectly classified as a resident is subject to nonresident classification and to payment of all previously unpaid Nonresident Fees. If a student has concealed information or furnished false information, and was classified incorrectly as a result, the student is also subject to University discipline. Resident students who become nonresidents of California must immediately notify the UCI Residence Officer.

Inquiries and Appeals

Inquiries regarding residence requirements, determination, and/or recognized exceptions should be directed to the University of California, Irvine, Residence Officer, Registrar's Office, 215 Aldrich Hall, Irvine, CA 92697-4975, telephone (949) 824-6129, or to the Principal Legal Analyst, Residence Matters, 1111 Franklin Street, 8th Floor, Oakland, CA 94607-5200. *No other University personnel are authorized to supply information relative to residence requirements for tuition fee purposes.*

This summary is *not* a complete explanation of the law regarding residence classification. Additional information is available from the Office of the Registrar. Changes may be made in the residence requirements between the publication of this statement and the relevant residence determination date. Any student, following a final decision on residence classification by the Residence Officer, may appeal in writing to the Legal Analyst within 30 days of notification of the Residence Officer's final decision.

Fee Refunds

Student Fee Refunds

Students who pay fees for a regular academic quarter and then decide to withdraw from the University must submit a Withdrawal form to the Registrar's Office after obtaining the signatures of their academic dean. Medical students must submit the form to the Curricular Affairs Office in the School of Medicine. This form serves two purposes: (1) a refund of fees, if applicable; and (2) withdrawal from classes:

The effective date of withdrawal is used in determining the percentage of fees to be refunded. This date is normally the date that the student submits the form to the appropriate Dean for approval. It is presumed that no University services will be provided to the student after that date. Registration fees are refunded as follows.

Students should bear in mind that the "first day of the quarter" often is several days prior to the "first day of instruction."

Through the first day of instruction, fees are refunded in full, except for (1) a \$10 service charge for continuing and readmitted students, or the \$100 Acceptance of Admission Fee for new undergraduate students, or the applicable deposit fee for new health sciences and MBA students, and (2) the Student Health Insurance Fee. (The Student Health Insurance Fee is refunded only if the Withdrawal form is submitted *prior to the first day of the quarter*.)

A refund of the Medical Student Disability Insurance Fee (if applicable) may be requested.

After the first day of instruction, the fee refund is prorated as shown (with the exception of the Health Insurance Fee).

Calendar days, beginning with the first day of instruction	Refund
1	100 percent
2–7	90 percent
8–18	50 percent
19–35	25 percent
over 35	no refund

Claims for a refund of fees must be presented during the fiscal year (July 1 to June 30) in which the claim is applicable. Refund checks are issued by the Accounting Office approximately three weeks after the official notice of withdrawal is initiated.

Financial Aid Recipients

Financial aid recipients should see the UCI Office of Financial Aid and Scholarships Student Withdrawal Policy on page 31, or consult the Web site at <http://www.ofas.uci.edu>.

Housing Refunds

UCI Housing Contracts provide students with complete housing refund policies.

FINANCIAL AID

Lack of funds need not be a barrier to attending UCI; over 60 percent of UCI's enrolled students receive some form of financial aid. Students who demonstrate that they need financial assistance in order to attend may be eligible for scholarships, grants, loans, and/or work-study awards through the Office of Financial Aid and Scholarships. In addition to awarding aid on the basis of financial need, some scholarships are awarded on the basis of academic excellence. Information regarding the application process, deadlines, and financial aid programs for undergraduate, graduate, and medical students may be found online at <http://www.ofas.uci.edu/>.

Free Application for Federal Student Aid (FAFSA/Renewal Application and FAFSA on the Web). To obtain financial aid, new and continuing students must file the FAFSA or FAFSA on the Web (FOTW) and submit the necessary supporting documents each year. The FAFSA is available at <http://www.fafsa.ed.gov/>, and paper forms are available by calling (800) 4-FED-AID. Renewal notifications are mailed to current financial aid recipients starting in mid-January. Students are encouraged to apply as early as possible after January 1. The priority deadline to file the FAFSA/FOTW for loans, work-study, and most grants is March 2. All other supporting documentation should be submitted to the Office of Financial Aid and Scholarships by May 1 for priority consideration.

The University expects the student and the parent (or spouse) to contribute toward the educational costs to the extent possible. For dependent students, an analysis of the FAFSA and supporting documents determines the amount a student and the student's parents can be expected to contribute toward the cost of the student's education. For independent students, the analysis determines the amount a student and, if applicable, a spouse, can contribute to the cost of the student's education. Income, assets, size of family, and the number of family members in college (excluding parents) are the major factors considered in the analysis. Assets include, but are not limited to, equity in real estate other than family residence; stocks, bonds, and other securities; business equity; and cash, savings, and checking accounts. Income includes wages, salaries, interest, dividends, and nontaxable income such as Social Security, Veterans' benefits, and foreign income.

All undergraduate financial aid applicants are required to apply for a Pell Grant, and eligible California residents are required to apply for a Cal Grant. The application deadline for Cal Grants is March 2 for the following academic year.

Special Expenditures. Financial aid recipients who are in need of money for special expenditures (beyond the cost of books and basic supplies associated with certain courses of study) may make an appointment to see a financial aid counselor to explore the possibility of a budget extension, based on the availability of funds. Examples of such special expenditures include special equipment for students with disabilities and computer purchases.

Eligibility Requirements

Federal financial aid programs are subject to regulations that define the criteria students must meet to qualify and maintain eligibility for those programs.

The regulations state that a student must (1) be a U.S. citizen or an eligible noncitizen of the U.S.; (2) be accepted for admission to the University; (3) be enrolled in good standing at the University; units taken through the University Extension program are not counted toward half- or full-time enrollment; (4) demonstrate financial need (except for William D. Ford Federal Direct Unsubsidized Loans and Federal PLUS loans); financial need is the difference between the reasonable, approved expenses of attending UCI and all available resources, including the expected contribution from parents, the student, and any outside aid; (5) maintain satisfactory academic progress for financial aid, as outlined below; (6) be registered with the Selective Service if the student is a male at least 18 years old, born after December 31, 1960, and not on active duty with the armed forces; (7) not owe a refund on a federal grant or be in default on a federal educational loan.

Once a student meets the above criteria, disbursement of financial aid funds is made only if the student does not have outstanding debts owed to UCI.

UCI POLICY ON SATISFACTORY ACADEMIC PROGRESS FOR FINANCIAL AID

Undergraduate and Graduate Students

In defining student eligibility for financial aid, the Higher Education Act Amendments of 1986 state that a student must maintain "satisfactory progress in the course of study the student is pursuing, according to the standards and practices of the institution at which the student is in attendance." Federal regulations of May 1982 state that each institution shall establish, publish, and apply "reasonable standards" for assuring that every student receiving need-based financial aid should maintain "satisfactory progress in his/her course of study." Final Federal regulations, published October 6, 1983, state that "in order to receive student financial aid under the programs authorized by Title IV of the Higher Education Act, a student must be maintaining satisfactory progress in the course of study he or she is pursuing according to the standards and practices of the institution in which he or she is enrolled."

Satisfactory Academic Progress Requirements for Financial Aid

The following requirements for satisfactory academic progress for receipt of financial aid apply to all applicants for any financial aid awards administered by the UCI Office of Financial Aid and Scholarships who entered fall 2006 or thereafter. These requirements are separate and distinct from UCI's policy regarding satisfactory academic progress. (Students who entered *prior to fall 2006* are subject to a different set of satisfactory academic progress requirements and should consult <http://www.ofas.uci.edu> for details.)

1. **Grade Point Average (GPA).** All financial aid recipients must be in compliance with the following minimum cumulative GPA requirements at the conclusion of the spring quarter of each academic year: undergraduates: first year, 1.85; second year, 1.90; third year, 1.95; fourth year, 2.0; fifth year, 2.00; graduate students: 3.0; medical students: academic performance requirements to pass course.

2. **Units (Undergraduate and Graduate) and Clock Hours (Medical Students).** All financial aid applicants must comply with the following minimum cumulative unit or clock-hour requirements.

Undergraduates:

Quarters of Attendance	Minimum Units/Quarter*	Progress End of Year Total	Requirements Cumulative Total	Normal Cumulative Total
1	8		8	15
2	9		18	30
3	9	27	27	45
4	10		41	60
5	11		56	75
6	12	72	72	90
7	12		88	105
8	15		105	120
9	13	124	124	135
10	14		141	150
11	14		159	165
12	13	164	164	180

Students admitted as Advanced Standing

UCI Quarters of Attendance	Minimum Units/Quarter*	Progress End of Year Total	Requirements Cumulative Total	Normal Cumulative Total
1	12		88	100
2	15		105	115
3	13	124	124	131
4	14		141	147
5	14		159	163
6	13	164	164	180

Part-time Students: Completion of at least 6 units per quarter.

*These requirements are separate from enrollment requirements for specific financial aid programs. Contact the Office of Financial Aid and Scholarships for more information.

Graduate Students: Completion of at least 8 units per quarter.

NOTE: Undergraduate and graduate students who enroll in more than the minimum number of units required per quarter in the first and second years will have the additional units carried forward for the cumulative total.

Medical Students—Regular Curriculum Clock-Hours:

Year	End of Year Total	Cumulative Total
1	783	783
2	740	1,523
3	2,080	3,603
4	1,540	5,143

Medical Students—Extended Curriculum Clock-Hours:

Year	End of Year Total	Cumulative Total
1	392	392
2	391	783
3	740	1,523
4	1,040	2,563
5	1,040	3,603
6	1,540	5,143

3. **Quarter Limits for Eligibility.** All financial aid applicants exceeding the following quarter limits will be ineligible for financial aid consideration. Students will not be granted additional quarters of eligibility solely by reason of changing their field of study or pursuing more than one major.

Undergraduate students:

1. Entering freshmen are eligible for all types of financial aid for a total of 15 quarters of academic year attendance.
2. Advanced standing transfer students are eligible for all types of financial aid for a total of nine quarters of academic year attendance after UCI matriculation.

3. Students acquiring a second bachelor's degree will have up to six quarters of additional financial aid eligibility for a maximum of 21 quarters of undergraduate attendance.

Graduate students:

1. California educational credential students: four quarters of academic year attendance.
2. Master's degree students are eligible for financial aid for up to nine quarters of academic year attendance following completion of their baccalaureate degree. Exceptions are as follows:

Twelve quarters for students in Drama and Theatre; Software; Interactive and Collaborative Technology; Classics; Comparative Literature; East Asian Studies; English; French; German; History (with language requirement); Philosophy; Spanish; Mathematics; Criminology, Law and Society; Planning, Policy, and Design; Psychology and Social Behavior.

3. Doctoral students may be eligible for financial aid for up to 21 quarters of academic-year attendance following the completion of their baccalaureate degree (whether or not they received financial aid during the 21 quarters). Exceptions are as follows:

Eighteen quarters for students in Economics or Psychology.

Twenty-four quarters for students in East Asian Studies, French, German, History (without language requirement), Spanish, Visual Studies, Anthropology, or Sociology.

Twenty-seven quarters for students in Comparative Literature, English, History (with language requirement), or Philosophy.

Medical students:

1. Incoming students in their first year of attendance will be eligible for financial assistance for a total of four years.
2. Students who have been approved for Extended Curriculum will be eligible for financial assistance for a total of six years.

Unit Evaluation

1. **Remedial courses.** Required remedial courses will count toward the undergraduate, graduate, and medical student minimum unit/clock-hour requirement of the satisfactory academic progress policy for financial aid.

2. **Grade evaluation.** As defined below, units for the following grades will not be counted toward meeting the minimum unit/clock-hour requirement.

Undergraduate and graduate students: F (Failure), I (Incomplete), NP (Not Pass), U (Unsatisfactory), W (Withdraw), NR (No grade reported), Repeat courses (Repeat of a D grade or higher; repeat of an advanced standing or high school course). *Medical students:* F (Failure), NR (No grade reported), Repeat courses (Repeat of a D grade or higher).

3. **Incomplete courses—medical students.** Clock-hours for a grade of Incomplete (I) will be counted toward satisfactory academic progress for the quarter/quintile during which the student took the course. If the student fails to meet the requirements for removing the I and the I becomes a grade of F, the clock-hours for that course will be deleted retroactively from the student's satisfactory academic progress record.

4. **Courses in progress—medical students.** Clock-hours for courses In Progress (IP) will be counted toward satisfactory academic progress during the first quarter/quintile of a course requiring more than two quarters/quintiles for completion. Should the student fail to receive a passing grade, after the course has been completed the clock-hours for that course will be deleted retroactively from the student's satisfactory academic progress record.

Deficiencies in Satisfactory Academic Progress and Their Effect on Receiving Financial Aid

The requirements for undergraduate and graduate student satisfactory academic progress stated above are monitored each quarter and at the end of each academic year. Students who fail to maintain satisfactory academic progress will have their financial aid eligibility affected in the following manner.

1. Quarterly totals—unit and GPA
 - a. Cumulative GPA below the minimum required total:

Students are placed on Satisfactory Academic Progress probation for the remainder of the academic year. They are able to receive financial aid funds for that academic year but the GPA deficiency must be cleared by the end of

spring quarter of that academic year or the end of summer session. Eligibility for the following academic year will be dependent upon clearing the GPA deficiency. Note: GPA deficiencies must be cleared at a University of California campus.

b. Unit deficiencies:

i. Enrolled in less than the minimum units required but at least six per quarter. Students are placed on Satisfactory Academic Progress probation for the remainder of the academic year. They are able to receive financial aid funds for that academic year but the unit deficiency must be cleared by the end of spring quarter of that academic year or the end of summer session. Eligibility for the following academic year will be dependent upon clearing the unit deficiency.

ii. Enrolled in less than six units per quarter. Students are placed on Satisfactory Academic Progress probation for the remainder of the academic year. They are able to receive campus-based financial aid funds for that academic year but the unit deficiency must be cleared by the end of spring quarter or the end of summer session. Eligibility for the following academic year will be dependent upon clearing the unit deficiency.

2. Academic year totals—units and GPA. The Office of Financial Aid and Scholarships will verify the cumulative totals for units and GPA after the conclusion of spring quarter. Students who have unit and/or GPA deficiencies will be required to make up the deficiency prior to receiving any future financial aid funds, including funds that would be used for payment of fees.

3. Quarter limits of eligibility. At the end of each quarter students will be notified by the Office of Financial Aid and Scholarships if they are nearing the quarter limit of eligibility for financial aid. The notice will indicate how many quarters of eligibility remain. Students also will be notified when they have completed the maximum number of quarters of eligibility for financial aid.

Satisfactory Academic Progress Appeals

After failure to maintain satisfactory academic progress, a student will be considered for financial aid only when one of the following conditions has been met: (a) sufficient units/clock-hours have been completed and/or the minimum cumulative GPA requirement has been satisfied, or (b) it is established through the financial aid appeals process that the student encountered some type of extenuating circumstances during the quarter(s) in question which hindered academic performance (e.g., prolonged hospitalization, death in the family).

Appeals Procedure

Students wishing to appeal must submit the UCI Financial Aid Appeal Request Form (available from the Office of Financial Aid and Scholarships); a letter to the Office of Financial Aid and Scholarships stating their reasons for failing to meet the unit, clock-hour, or GPA progress requirements, and whether or not they have solved their difficulties; and any other requested documents. Undergraduate and graduate students may seek the assistance of the University Ombudsman in the preparation of appeals. Medical students may seek the assistance of the Associate Dean of Student and Resident Affairs in the preparation of appeals. They may also be required to submit a degree check, course plan, or letter from their dean.

Undergraduate Students—All relevant material will be presented to the Financial Aid Appeals Board (the Board is composed of Financial Aid professional staff and Academic Counseling staff). Once material has been reviewed, the Board will decide whether eligibility for aid will be reinstated. In the event the Board decides not to accept an appeal, the student will be given the right to a personal interview with the Board. If the student decides to exercise this right, a final recommendation based upon the interview and written material will be made by the Board and forwarded to the Director of Financial Aid and Scholarships for a final decision.

Graduate Students—Appeals are reviewed by (1) the Graduate Advisor of the student's advanced degree program and (2) the Dean of the Graduate Division, who will make the final recommendation to the Director of Financial Aid and Scholarships for a final decision.

Medical Students—All relevant materials will be presented to the Committee on Promotions and Honors. If the Committee, after consideration of the appeal, determines that the appeal should be approved, its decision will be forwarded to the School of Medicine Director of Financial Aid, and aid will be reinstated. In the event the appeal is denied by the Committee, the student will be given the right to a personal interview with the Committee. The Committee will forward the final decision to the School of Medicine Director of Financial Aid for implementation.

UCI OFFICE OF FINANCIAL AID AND SCHOLARSHIPS STUDENT WITHDRAWAL POLICY

Students who withdraw from UCI prior to completing 60 percent of the period for which they received federal financial aid will be subject to both the UC Fee Refund Policy and the Federal Return of Title IV Funds policy. Title IV Funds are federal funds awarded to a student to meet educational expenses. Examples of Title IV Funds include Pell Grants, Federal Supplemental Educational Opportunity Grants (SEOG), Academic Competitiveness Grants (ACG), Natural Science and Mathematics Access to Retain Talent (SMART) Grants, Federal Direct Loans, and Federal Perkins Loans.

Cancellation of Enrollment. Students who cancel their registration or have their registration cancelled by the University prior to the first day of classes will be invoiced for all financial aid disbursed on their behalf.

The full text of this official policy is available on the Office of Financial Aid and Scholarships Web site at <http://www.ofas.uci.edu/>.

Any student contemplating withdrawing from the University should contact the Office of Financial Aid and Scholarships to speak with a financial aid counselor concerning the financial ramifications of withdrawing.

Students who are receiving a Cal Grant should also contact the Office of Financial Aid and Scholarships to discuss the ramifications of withdrawing on their Cal Grant status. Students should check with their financial aid counselor on how they may be able to re-establish a quarter of eligibility for their Cal Grant.

Scholarships

Scholarships are awarded on the basis of academic ability, achievement, and promise. They do not require repayment. Although a few honorary scholarships are awarded on the basis of academic excellence alone, many also require that an applicant demonstrate financial need. UCI offers students with proven high academic achievement and leadership potential two top honors awards: Regents' Scholarships and Alumni Association Scholarships.

Entering Freshman and Transfer Students

Students who are entering UCI in the fall must complete the *UC Application for Undergraduate Admission and Scholarships* and submit the application by November 30. The Office of Financial Aid and Scholarships automatically collects information about applicants' scholarship qualifications. Applications that meet the requirements are reviewed by the Board on Undergraduate Scholarships, Honors, and Financial Aid. Information about the Alumni Scholarship is available in the *UC Application for Undergraduate Admission and Scholarships*, however separate application is required for the Alumni Scholarship.

Restrictive Endowment Scholarships

Eligibility requirements for Restrictive Endowment Scholarships vary greatly and are restricted in terms of such student characteristics as geographic location, family background, academic major,

and career goals. For the most part, these scholarship awards are based on the student's established financial need. All UCI students will be considered for Restrictive Endowment Scholarships based upon information from the *UC Application for Undergraduate Admission and Scholarships* and their current academic records.

Regents' Scholarships

Regents' scholarships, among the highest honors conferred upon UC students, are awarded on the basis of academic excellence and exceptional promise. Undergraduate students are eligible upon graduation from high school or transfer from community college. Medical students are eligible during any year of their study in medical school. The scholarship is awarded both as an honorarium and a stipend. It may be renewed for an additional one or three years depending on the year of appointment, provided the student completes an average of 12 units per quarter and maintains a grade point average of at least 3.25. The honorarium is awarded without reference to financial need. The amount of the stipend will vary depending on the student's established financial need.

Grants

Grants are awarded on the basis of financial need. There is no repayment requirement. A student's financial aid award includes grant funds whenever regulations, UCI policies, and funding levels permit.

Federal Pell Grant is the largest federally funded grant program and provides up to a maximum of \$4,731 for the 2009–10 academic year. To be eligible, applicants must be U.S. citizens or eligible noncitizens, be enrolled as undergraduates, have not previously received a bachelor's degree, and demonstrate financial need. Students must use the FAFSA to apply for this grant.

Academic Competitiveness Grant (ACG) is a federally funded grant program which provides \$750 for first academic year and \$1,300 for the second academic year. To be eligible, applicants must be U.S. citizens, be enrolled in the first or second year of undergraduate study, be enrolled full time, have completed a rigorous program of study in high school, and have a Pell Grant for the 2009–10 academic year. Students must use the FAFSA to apply for this grant.

SMART Grant (National Science and Mathematics Access to Retain Talent Grant) is a federally funded grant program which provides \$4,000 to third and fourth year undergraduates. To be eligible, applicants must be U.S. citizens, be enrolled in the third or fourth year of undergraduate study, be enrolled full time, and have a Pell Grant for the 2009–10 academic year. Students must be pursuing an approved major as listed on the Financial Aid Web site at <http://www.ofas.uci.edu/content/TypesOfAid.aspx?nav=3&id=smartgrant> and must maintain a cumulative grade point average of 3.0. Students must use the FAFSA to apply for this grant.

Cal Grant A is a State-funded scholarship program which currently provides awards to be applied to the payment of University fees. In 2009–10 Cal Grant A awards are estimated to pay up to \$7,542. To be eligible, applicants must be California residents and demonstrate financial need. Students must use the FAFSA and GPA Verification Form to apply for Cal Grant A. The filing deadline for new applicants is March 2 for the following year.

Cal Grant B is a State-funded grant program which provides awards up to a maximum of \$1,551 in 2009–10 during the student's first year and \$1,551 plus an estimated \$7,542 toward fees during subsequent years. To be eligible, applicants must be California residents, demonstrate financial need, and be entering college or not have completed more than one quarter of college work. Students must use the FAFSA and GPA Verification Form to apply for Cal Grant B. The filing deadline for new applicants is March 2

for the following year. *NOTE: Students may not receive both Cal Grant A and Cal Grant B.*

Federal Supplemental Educational Opportunity Grant (FSEOG) provides grant aid for U.S. citizens and eligible noncitizens who are undergraduate students and have demonstrated financial need. These federal grants range from \$100 to \$4,000 per year, depending upon financial need.

UCI Grant is funded by The Regents of the University of California and by the State of California and provides grant aid for full-time students who demonstrate financial need. The amount awarded depends upon financial need and funding levels.

Loans

Loans are often part of a financial aid award. They provide recipients with an opportunity to defer the cost of their education by borrowing when needed and paying later. However, loan recipients must pay interest on the amount borrowed. The deferment and cancellation provisions for the loans listed below are contained on the promissory note each recipient must sign and also may be obtained from the Office of Financial Aid and Scholarships.

A student's loan responsibility, prior to acceptance of the loan, is to understand the terms of the loan. After accepting the loan, the recipient must repay the loan in accordance with the repayment schedule, advise the Office of Financial Aid and Scholarships upon leaving UCI; participate in an exit interview; and provide the Financial Services Office with a current address after leaving UCI. In case of death or total disability, outstanding loan obligations may be canceled upon presentation of official confirming documents.

Federal Perkins Loan provides long-term federal loans for U.S. citizens and eligible noncitizens. The amounts awarded vary, depending on financial need, but cannot exceed \$5,500 annually for undergraduates and \$8,000 annually for graduate students. Cumulative totals for the full term of college attendance may not exceed \$27,500 as an undergraduate and \$60,000 as a graduate student. No interest is charged nor is repayment required while the borrower is enrolled in at least one half of the normal academic load. Interest of five percent a year begins nine months after the borrower ceases to be enrolled or is enrolled less than half-time, and repayment must be completed within a 10-year period.

University Loan, funded by The Regents of the University of California, provides long-term loans to full-time students who demonstrate financial need. The maximum amount for an academic year is \$3,000. Interest of five percent a year begins six months after the student ceases to be enrolled at least half-time, and repayment must be completed within ten years. Two cosigners are required.

William D. Ford Direct Loan Program

Subsidized William D. Ford Federal Direct Loan, processed through the U.S. Department of Education and UCI, is available to undergraduate, graduate, and medical students who are U.S. citizens or eligible noncitizens, and who demonstrate financial need. During an academic year, the maximum a student may borrow is: \$3,500, freshmen; \$4,500, sophomores; \$5,500, juniors and seniors; \$8,500, graduate and medical students. Both a guarantee and origination fee will be deducted from the amount of the loan prior to issuing the check.

Interest rate: The federal government pays interest during the deferment period for Subsidized Direct Loans. See <http://www.ofas.uci.edu/> for current as well as historic loan rates and fees.

Unsubsidized Federal Direct Loans have the same terms and conditions as the Federal Direct Loan, including the aggregate loan limits, interest rate, and repayment. During an academic year the maximum a dependent student may borrow is \$5,500, freshman; \$6,500, sophomore; \$7,500, juniors and seniors. Independent students may borrow an annual maximum of: \$9,500, freshmen;

\$10,500, sophomores; \$12,500, juniors and seniors; \$20,500, graduate and medical students. These maximum amounts include any amount borrowed under the Subsidized William D. Ford Federal Direct Loan program. However, the loan is not based on need. Students may borrow an amount equal to the cost of attendance less any estimated financial assistance up to the annual loan limits in effect at the time the loan is disbursed. Students must first apply for the Federal Direct Loan prior to consideration for the Unsubsidized Federal Direct Loan. There is no interest subsidy for this loan; students pay the interest charged while enrolled at UCI. Students may receive both subsidized and unsubsidized Federal Direct loans but the total may not exceed the loan limits. Borrowers with both types of loans may have a single repayment schedule.

Interest rate: See <http://www.ofas.uci.edu/> for current as well as historic loan rates and fees.

Cumulative maximum: Dependent, undergraduate, \$23,000; independent, undergraduate, \$46,000; graduate and medical students, \$138,500 (includes undergraduate loans). Deferment period before repayment: Subsidized: six months after ceasing to be enrolled at least half-time. Unsubsidized: Interest accrues immediately and may be paid monthly or quarterly. Students also may request that the lender add the interest to the principal balance. Repayment of principal begins six months after ceasing to be enrolled at least half-time. Full repayment: Up to 10 years. Minimum payment: \$50 per month.

Graduate PLUS Loans are available to graduate and professional-level students. Students may borrow up to the cost of education for the academic year less any estimated financial aid. The loan is limited to students who do not have adverse credit histories as defined by regulation.

Interest rate: See <http://www.ofas.uci.edu/> for current as well as historic loan rates and fees.

Federal Direct Parent Loans for Undergraduate Students (FPLUS) are designed to assist parents of dependent undergraduate students who are unable to demonstrate financial need for campus-based funds. Parents are eligible to borrow up to the cost of education for the academic year less any estimated financial aid each academic year on a student's behalf. The loan is limited to parents who do not have adverse credit histories as defined by regulation.

Interest rate: See <http://www.ofas.uci.edu/> for current as well as historic loan rates and fees.

Cumulative maximum: None. Deferment period before repayment: 60 days from day of final check disbursement for loan period. Full repayment: Up to 10 years.

Loans for Disadvantaged Students and Primary Care Loans are available to medical students. Contact the School of Medicine Financial Aid Office for information.

Emergency loans are made from an emergency student loan fund made possible through various philanthropic individuals and organizations. Undergraduate, graduate, and medical students who have experienced unanticipated financial problems of a temporary nature may borrow up to \$300 without interest or service charge. Emergency loans must be repaid within 30 days after disbursement or by the end of the academic quarter, whichever occurs first. Applications are available in the Office of Financial Aid and Scholarships or at the School of Medicine Financial Aid Office. This loan is not based on demonstrated financial need.

Federal College Work-Study

The Federal College Work-Study Program offers eligible students who demonstrate need an opportunity to pay for their living and educational expenses as they occur. By participating in the Federal College Work-Study Program, students can reduce the amount of the loan to be repaid after leaving school. Medical students must obtain the approval of the Associate Dean of Student and Resident Affairs prior to obtaining work-study employment. Students awarded work-study have the choice of obtaining a work-study job

either on campus or off campus at an approved nonprofit agency. A variety of work opportunities are available, and such part-time work experience can be a valuable asset when seeking employment after graduation. Students eligible for work-study will be notified as such via their UCI Financial Aid award notification. Specific information regarding the terms and conditions of work-study employment will be available with the award notification.

Veterans Work-Study Program is available only to U.S. military veterans and their eligible dependents, and members of the Selected Reserve and National Guard. Positions are limited. Separate applications and detailed information are available from Veteran Services, telephone (949) 824-8045.

Additional Aid for Graduate and Medical Students

Most graduate fellowship programs are administered by the Graduate Division, 102 Aldrich Hall, telephone (949) 824-4611. Medical students should contact the School of Medicine Financial Aid Office, 106 Berk Hall, telephone (949) 824-6476.

Aid for Students with Disabilities

All forms of student financial aid are available to eligible students with disabilities. Interested students should follow the regular financial aid application procedures and should notify the Office of Financial Aid and Scholarships of any additional expenses they may incur because of a disability. Supporting documentation must be provided.

Student Employment

The UCI Career Center, located in the Student Services I building, assists UCI students in obtaining part- or full-time employment during the academic year and summer vacation. Financial aid recipients who have been awarded work-study also may obtain on-campus or off-campus job referrals in the Center. Students may easily access all job listings using their student ID number via ZotLink on the Career Center's Web site at <http://www.career.uci.edu/>.

UNDERGRADUATE ADMISSIONS

The UCI Office of Admissions and Relations with Schools (OARS) is responsible for the admission of new undergraduate freshman and transfer students. Inquiries may be addressed to UCI Office of Admissions and Relations with Schools, 204 Aldrich Hall, University of California, Irvine, CA 92697-1075; <http://www.admissions.uci.edu/>. OARS is open from 8 a.m. to 5 p.m., Monday through Friday; telephone (949) 824-6703.

The information on admission to UCI presented below is organized as follows:

- Categories of Application
 - Admission as a Freshman Applicant
 - Admission as a Transfer Applicant
 - Nonresident Admission Requirements
 - Admission of International Students
 - Advanced Placement and International Baccalaureate Credit Application Procedures

Categories of Application

An **undergraduate** applicant is a student who wishes to complete a program of study leading to a Bachelor of Arts, Bachelor of Music, or Bachelor of Science degree.

A **freshman** applicant is a student who has graduated from high school or has completed a California Certificate of Proficiency, an equivalent proficiency examination from another state, or the General Educational Development (GED) Certificate, but has not enrolled in a regular session of any collegiate-level institution. Summer sessions immediately following graduation are excluded in the determination of freshman status.

The University considers a **transfer** applicant as a student who has completed high school and who has been a registered student in a regular session at another college or university. Students who meet this definition cannot disregard their college record and apply as freshmen. To be considered as a **California community college transfer** applicant to UCI, a student must have completed at least 30 semester units/45 quarter units at one or more California community colleges.

A **nonresident** applicant is a student whose legal permanent residence (as determined by the University) is outside of the State of California. Nonresident applicants are generally required to pay Nonresident Tuition and must also present a higher grade point average than is required of California residents. Refer to the Nonresident Admission Requirements section for further information.

An applicant for **readmission** is a student who was formerly registered and enrolled at UCI and who has interrupted the completion of consecutive quarters of enrollment. See Readmission: Undergraduate and Graduate Students.

A **second baccalaureate** applicant is a college graduate who because of a change of objective wishes to obtain a second bachelor's degree in a major different from that of the first degree.

An **international** applicant is a student who holds or expects to hold a student, exchange, visitor, or diplomatic visa and who wishes to attend school in the United States.

Admission as a Freshman Applicant

The undergraduate admissions policy of the University of California is guided by the University's commitment to serve the people of California and the needs of the State, within the framework of the California Master Plan for Higher Education.

The University's eligibility requirements follow the guidelines set forth in the Master Plan, which specify that the top one-eighth of

the State's high school graduates be eligible for admission to the University of California. These requirements, described in detail in the Minimum Admission Requirements for Freshmen section, are designed to ensure that all eligible students are adequately prepared for University-level work. Meeting eligibility requirements entitles an applicant to be considered for admission but does not constitute an offer of admission.

In recent years, the number of freshman applicants to UCI has exceeded the number of spaces available. Since the campus cannot admit all eligible applicants, it must use standards that are more demanding than the minimum UC requirements to select students. These standards, which the University calls selection criteria, are used to identify applicants who have demonstrated the highest academic achievement and who have a variety of other qualities that can contribute to the strength and diversity of the campus community.

In the case that UCI is unable to accommodate all qualified applicants in their first-choice major, those students who indicate a valid alternate major may be offered admission in that major. Students who wish to change their major after enrolling at UCI must submit an Undergraduate Petition for Change of Major to the academic counseling office in the school or program of their prospective major.

ADMISSIONS SELECTION

UCI seeks to select students who have a demonstrated record of academic and personal achievement. The primary criterion for admission to UCI is academic excellence, including the number of college preparatory courses completed; the level of achievement in these courses, including honors, Advanced Placement, International Baccalaureate, and college courses completed; and the quality of the senior-year program as measured by the type and number of academic courses in progress or planned. Also considered are the high school grade point average (GPA) calculated on UC-specified subjects (UCI uses a maximum of eight honors grade points in determining the UC GPA) and the required standardized national examinations.

The level of performance needed to gain admission varies from year to year depending on the size and the academic quality of the applicant pool and the number of enrollment spaces.

A secondary criterion in UCI's selection process is personal achievement outside the classroom. A range of pursuits is considered, including academic activities, the creative and performing arts, community service and leadership, athletics, participation in pre-collegiate programs that develop academic ability, and other extracurricular activities. Persistence counts more than scattered involvement, while initiative and curiosity are also important.

The admissions process at UCI is also sensitive to individual circumstances and the effect these may have had on the resources available to and the experiences of applicants. While all applications receive careful consideration, reviewers take note of any extenuating circumstances and/or a variety of cultural and economic situations, including students who are the first in their families to attend college, who have a low family income, or who have worked in support of their family during high school. The emphasis, however, is less on the personal circumstances of the applicant and focuses instead on how the applicant has responded to challenges while achieving academic success.

Each application is read at least once and many are read twice. Every attempt is made to become familiar with the unique accomplishments of each applicant.

Students interested in the majors below should be aware of the following provisions.

Dance and Music: Applicants to either Dance or Music must audition and be selected by faculty. NOTE: Freshmen may not apply directly to the B.Mus. degree program.

Engineering: Applicants to any of the Engineering majors must complete four years of high school mathematics through pre-calculus or math analysis and are advised to have completed one year each of physics and chemistry.

Computer Science and Engineering (offered jointly by the Donald Bren School of Information and Computer Sciences and The Henry Samueli School of Engineering): Applicants must complete four years of high school mathematics through pre-calculus or math analysis and are advised to have completed one year each of chemistry and physics. One year of programming course work is also advised. (This requirement does not apply to other majors offered by the Donald Bren School of Information and Computer Sciences.)

Nursing Science: Admission to the Nursing Science major is limited and selective. Applicants must complete two years of laboratory science providing fundamental knowledge in two of these three core disciplines: biology, chemistry, and physics. Advanced laboratory science classes that have biology, chemistry, or physics as prerequisites and offer substantial additional material may be used to fulfill this requirement. The final two years of an approved three-year integrated science program (ISP) may be used to fulfill this requirement. Students must earn Cs or higher in order to fulfill their subject requirements. Students with the highest combination of overall grade point average, grade point average in science courses, and scores on the SAT or ACT examinations will be given priority.

MINIMUM ADMISSION REQUIREMENTS FOR FRESHMEN

The University defines a freshman applicant as a student who has graduated from high school or completed a California Certificate of Proficiency, or the General Educational Development (GED) examination, and who has not enrolled in a regular session of any collegiate-level institution. Summer sessions are excluded in the determination.

Freshman applicants who are not residents of California should refer to the Nonresident Admission Requirements section.

Applicants who do not meet the requirements for admission at the time of high school graduation may be considered for admission after they meet the requirements for admission as a transfer applicant (see Admission as a Transfer Applicant). Transfer credit will be granted for an acceptable course from an accredited college or university taken while still in high school if reported on a valid transcript issued by the college which conducted the course.

The requirements described below represent the minimum academic standards students must attain to be eligible for admission to the University. Meeting minimum eligibility requirements does not guarantee admission. Admission to UCI and the program of choice often requires students to meet more demanding standards.

California Residents

There are three paths to satisfying the University's minimum admission requirements for freshmen students: Eligibility in the Statewide Context, Eligibility in the Local Context (ELC), and Eligibility by Examination Alone.

Eligibility in the Statewide Context

Eligibility in the Statewide Context is the pathway by which most students attain UC eligibility. To be Eligible in the Statewide Context, students must receive a high school diploma or equivalency and satisfy the Subject, Scholarship, and Examination Requirements described below.

UC Subject Requirement

To satisfy the UC Subject Requirement, students must complete the 15 yearlong high school courses described below. These courses are also known as the "a-g" subjects. (A one-year course is equal to one unit; a one-semester course is equal to one-half unit.) At least seven of the 15 yearlong courses must be taken during the last two years of high school.

California High School Students: Courses taken to satisfy the Subject Requirement must be certified by the University as meeting the requirement and must be included on the UC-certified course list of the school the student attended. The high school counselor or principal will have a copy of this list. In addition, the lists are available online at <http://www.ucop.edu/doorways>.

The UCI Office of Admissions and Relations with Schools will review and accept courses that meet the requirements for applicants graduating from out-of-state schools.

Required "a through g" Courses

- a. **History/Social Science: 2 years required.** Two years of history/social science, including one year of world history, cultures, and geography; and one year of U.S. history or one-half year of U.S. history and one-half year of civics or American government.
- b. **English: 4 years required.** Four years of college-preparatory English that include frequent and regular writing, and reading of classic and modern literature. No more than one year of ESL-type courses can be used to meet this requirement.
- c. **Mathematics: 3 years required; 4 years recommended.** Three years of college-preparatory mathematics that include the topics covered in elementary and advanced algebra and two- and three-dimensional geometry. Approved integrated math courses may be used to fulfill part or all of this requirement, as may math courses taken in the seventh and eighth grades that are accepted by the high school as equivalent to its own math courses.
- d. **Laboratory Science: 2 years required; 3 years recommended.** Two years of laboratory science providing fundamental knowledge in two of these three core disciplines: biology, chemistry, and physics. Advanced laboratory science classes that have biology, chemistry, or physics as prerequisites and offer substantial additional material may be used to fulfill this requirement. The final two years of an approved three-year integrated science program may be used to fulfill this requirement.
- e. **Language Other Than English: 2 years required; 3 recommended.** Two years of the same language other than English. Courses should emphasize speaking and understanding, and include instruction in grammar, vocabulary, reading, composition and culture. Courses in languages other than English taken in the seventh and eighth grades may be used to fulfill part of this requirement if accepted by the high school as equivalent to its own courses. (Students are strongly encouraged to complete three or four years of one language in preparation for the UCI Language Other Than English and/or the International/Global Issues general education requirements.)
- f. **Visual and Performing Arts (VPA): 1 year required.** A single yearlong approved arts course from a single VPA discipline: dance, drama/theatre, music, or visual arts.
- g. **College Preparatory Electives: 1 year required.** One year (two semesters), in addition to those required in "a-f" above, chosen from the following areas: visual and performing arts (non-introductory-level courses), history, social science, English, advanced mathematics, laboratory science, and language other than English (a third year in the language used for the "e" requirement or two years of another language).

Courses Satisfying the “g” Requirement

History: All history courses should require extensive reading and writing. Courses should enable students to establish a breadth of understanding of history (for example, world history, political history, or economic history) and should provide an understanding of the human past, including its relation to the present. Courses should develop a student’s critical thinking, ability to evaluate historical data, and ability to analyze and synthesize evidence.

Social Science: Courses should be in one of the social sciences: anthropology, economics, geography, political science, psychology, or sociology, or, alternatively, courses should be interdisciplinary, drawing knowledge from two or more of these fields. Course objectives should include as many of the following as are applicable to the field: (1) to understand the development and basic features of major societies and cultures, (2) to examine the historic and contemporary ideas that have shaped the world, (3) to understand the fundamentals of how differing political and economic systems function, (4) to examine the nature and principles of individual and group behavior, and (5) to study social science methodologies.

In order to develop a student’s critical thinking, ability to evaluate ideas and information, and ability to analyze and synthesize qualitative and quantitative evidence in the laboratory and in the field, a social science course must include a body of basic knowledge, extensive reading, and written and oral exposition.

Courses which are designed to meet state-mandated social studies graduation requirements are acceptable provided that they meet the above criteria. Courses of an applied, service, or vocational character are not acceptable social science electives.

English: All English courses should require substantial reading with frequent and extensive practice in writing which is carefully evaluated and criticized. A course in creative writing, journalism, speech, or debate is acceptable if it meets the general requirements in reading and writing stated above. An advanced-level course in English as a Second Language (ESL) or English Language Development (ELD) may be acceptable provided it meets the standards outlined under the “b” requirement.

Advanced Mathematics: Acceptable electives are courses in mathematics with second-year algebra as a prerequisite such as trigonometry, linear algebra, precalculus (analytic geometry and mathematical analysis), calculus, and probability and statistics.

A computer science course is an acceptable mathematics elective if it fulfills the following objectives. The course should enable each student to express algorithms in a standard computer language such as C++, Pascal, Java, BASIC, FORTRAN, or COBOL. By the end of the course, each student should complete substantial programming projects in the language used. The course should also involve the study and mastery of various aspects of computer science: how computers deal with data and instructions, the internal components of a computer, and the underlying computer logic.

Laboratory Science: Acceptable courses should cover topics from the biological or physical sciences in which students make their own observations and measurements and analyze these data to obtain further information.

An introductory science course normally offered in the ninth grade, (such as earth science or physical science) is an acceptable science elective provided it is designed to prepare students for laboratory science courses in the tenth grade and beyond. The course must provide an introduction to the fundamental principles of physical and/or biological science. Laboratory activities as defined above shall be included. (A terminal course designed only to meet graduation requirements is not an acceptable science elective.)

Language Other Than English: It is recommended that elective courses be in the same language used to satisfy the language other than English “e” subject requirement. Elective courses in this

language must have at least two years of the language as a prerequisite. In order for a second language to qualify as an elective, at least two years of this language must be completed.

Visual and Performing Arts: Courses in this area consist of instruction in dance, drama/theatre, music, and visual arts. Courses should enable students to understand and appreciate artistic expression and, where appropriate, to talk and write with discrimination about the artistic material studied.

Courses devoted to artistic performance and developing creative artistic ability should have prerequisites (either one year of introductory course work or experience approved by the instructor) and should assume proficiency beyond the introductory level.

Courses must require on average the equivalent of a five-period class per week. Work outside of class must be required; for example, portfolio/performance preparation, reading, writing, research projects, and/or critical listening/viewing.

Dance courses offered for physical education credit or under any other departmental arrangement are acceptable provided they include content satisfying the above criteria.

Courses which are primarily athletic or body conditioning are not acceptable visual and performing arts electives.

College Preparatory Electives: The general objectives of the “g” requirement are to improve students’ analytical abilities, promote artistic development, and strengthen oral and written skills. The requirement is intended to encourage prospective University students to fill out their high school programs with courses that (1) strengthen general study skills, particularly analytical reading, expository writing, and oral communication; (2) provide an opportunity to begin work that could lead directly into a major program of study at the University; (3) experience, at some depth, new areas of academic disciplines that might form the basis for future major or minor studies at the University.

Courses that fulfill the “g” requirement should allow students to prepare for college-level work in the subject area, so that the level attained at the end of such courses would be well beyond the introductory or survey level. Courses that have narrow objectives aimed at meeting specific societal or personal lifestyle goals are not acceptable.

Examination Requirements

All freshman applicants must submit examination scores as described below. *Students applying for admission for fall quarter should complete their examination requirements during May or June of their junior year or during their senior year, but no later than the December test date. (Typically, this means that students will take either the SAT Reasoning Test or the ACT Assessment plus Writing Test in October or November, and will take the SAT Subject Tests in November or December.)* Scores earned prior to March 2005 will not be accepted. Applicants must ensure that reports for all scores have been submitted directly to the UCI Office of Admissions and Relations with Schools.

Each applicant must submit scores on an approved core test of mathematics, language arts, and writing. This requirement can be satisfied by taking *either* of the following:

1. the ACT Assessment plus Writing Test*, or
2. the SAT Reasoning Test* (critical reading, mathematics, and writing).

* The critical reading, mathematics, and writing scores must be from the same sitting. Students who take the ACT will be asked to report scores on each section of the test as well as their composite score.

In addition, all applicants must complete two SAT Subject Tests in two different areas: English, history and social studies, mathematics (Level 2 only), science, or language other than English. More information about these examinations is available online. For the

SAT Reasoning and Subject Tests, see <http://www.collegeboard.com>. For the ACT Assessment plus Writing, see <http://www.act.org>.

Do not use the score choice option to withhold reporting of SAT Subject Test scores. UC considers only a student's highest SAT Subject Test scores so there is no advantage to withholding scores. **NOTE:** The Henry Samueli School of Engineering recommends that freshmen applicants in Engineering majors (including the joint CSE major) take the SAT Subject Test in math Level 2 as one of their required subject examinations.

Scholarship Requirement

The Scholarship Requirement defines the grade point average (GPA) students must earn in the required "a-g" subjects and the SAT Reasoning Test (or ACT Assessment plus Writing Test) and SAT Subject Test scores students must earn to be eligible for admission to the University.

The University uses an Eligibility Index—a combination of GPA and test scores—to determine if an applicant meets the Scholarship Requirement. The Eligibility Index is available in a section below as well as online at <http://www.universityofcalifornia.edu/admissions/scholarshipreq>. **The minimum GPA is 3.0 for California residents and 3.4 for nonresidents.**

The University calculates the GPA in the "a-g" subjects by assigning point values to the grades a student earns, totaling the points, and dividing the total by the number of "a-g" course units. Points are assigned as follows: A = 4 points, B = 3 points, C = 2 points, D = 1 point, and F = 0 points.

Only grades the student earns in "a-g" subjects in grades 10–11, including summer sessions, are used to calculate the GPA. Courses taken in the ninth grade can be used to meet the Subject Requirement if the student earns a grade of C or better, but they will not be used to calculate the GPA.

Students can see whether they meet the Scholarship Requirement by referring to the UC Eligibility Index or using the eligibility calculator located at http://www.universityofcalifornia.edu/admissions/undergrad_adm/paths_to_adm/freshman/scholarship_reqs.html.

Honors Courses: The University assigns extra points for up to eight semesters of University-certified honors-level and Advanced Placement courses taken in the last three years of high school: A=5 points, B=4 points; C=3 points. No more than two yearlong UC-approved honors level courses taken in the tenth grade may be given extra points. A grade of D in an honors or Advanced Placement course does not earn extra points.

The courses must be in the following "a-g" subjects: history/social science, English, advanced mathematics, laboratory science, language other than English, and visual and performing arts. Also, they must be certified as honors courses by the University. In these subjects, as well as in computer science, acceptable honors-level courses include Advanced Placement courses, Higher Level and designated Standard Level International Baccalaureate courses, and college courses that are transferable to the University.

D and F Grades: If a D or F was earned in an "a-g" course, the course must be repeated with a grade of C or better. The original D or F grade will not be included in the GPA calculation, and the new grade will be used. If a student repeats a course in which a grade of C was initially earned, the second grade will not be used.

Eligibility in the Local Context

Under the Eligibility in the Local Context (ELC) pathway, the top four percent of students at each participating California high school are designated UC-eligible and guaranteed admission to one of UC's nine general campuses.

To be considered for ELC, students must complete 11 specific yearlong courses of the Subject Requirements by the end of the

junior year and, with the assistance of each participating high school, the University will identify the top four percent of students on the basis of GPA in the UC-approved course work completed in the tenth and eleventh grades.

The 11 units include one year of history/social science, three years of English, two years of mathematics, one year of laboratory science, one year of language other than English, and three years chosen from among the other subject requirements.

The University will notify ELC students of their status at the beginning of their senior year. Students designated UC-eligible through ELC must submit the University's application for admission during the November filing period and complete remaining eligibility requirements—including the Subject and Examination Requirements—to enroll.

Applicants confirmed as Eligible in the Local Context (ELC) will be considered along with multiple factors for admission selection during comprehensive review.

Comprehensive information about ELC is available online at <http://www.ucop.edu/sas/elc/>.

UC Score Total

To determine whether a student has met the Scholarship Requirement for Eligibility in the Statewide Context, use the calculator at <http://www.universityofcalifornia.edu/admissions/scholarshipreq>. Alternatively, use the translation table below to find equivalent "UC Scores" for each of the student's SAT or ACT scores, then follow the instructions below the table.

Test Score Translation Table

ACT Score	SAT Score	UC Score	ACT Score	SAT Score	UC Score
36	800	100	21	500	50
	790	98		490	48
35	780	97	20	480	47
	770	95		470	45
34	760	93	19	460	43
	750	92		450	42
33	740	90	18	440	40
	730	88		430	38
32	720	87	17	420	37
	710	85		410	35
31	700	83	16	400	33
	690	82		390	32
30	680	80	15	380	30
	670	78		370	28
29	660	77	14	360	27
	650	75		350	25
28	640	73	13	340	23
	630	72		330	22
27	620	70	12	320	20
	610	68		310	18
26	600	67	11	300	17
	590	65		290	15
25	580	63	10	280	13
	570	62		270	12
24	560	60	9	260	10
	550	58		250	8
23	540	57	8	240	7
	530	55		230	5
22	520	53	7	220	3
	510	52		210	2
			1-6	200	0

If a student took the SAT Reasoning Test: The University uses a student's highest scores in critical reading, math, and writing from a single sitting and adds them to the student's two highest SAT Subject Test scores from two different subject areas and converts them to UC Scores (see the translation table above). The total of

all five exam components (critical reading + math + writing + subject test 1 + subject test 2) equals the student's test score total.

If a student took the ACT plus its Writing examination: The University takes the student's highest math, reading, science, and combined English/writing score from a single sitting and converts them to UC Scores (see the translation table above). To give the ACT writing component equal weight to the SAT writing exam, the University multiplies the sum of the student's converted math, reading, and science scores by two-thirds, then adds the converted English/writing score. This subtotal is then added to the student's two highest SAT Subject Test scores from two different subject areas to reach the score total ($[\text{math} + \text{reading} + \text{science}] \times 0.667 + \text{English/writing} + \text{subject test 1} + \text{subject test 2}$).

The following table lists the combinations of GPA and test score totals that meet UC's minimum requirements.

UC Eligibility Index

CALIFORNIA RESIDENTS

"a-g" GPA	Minimum UC Score Total	"a-g" GPA	Minimum UC Score Total
< 3.00	ineligible	3.25–3.29	165
3.00–3.04	223	3.30–3.34	157
3.05–3.09	210	3.35–3.39	152
3.10–3.14	198	3.40–3.44	147
3.15–3.19	187	3.45 and above	143
3.20–3.24	175		

NON-CALIFORNIA RESIDENTS

< 3.40	ineligible
3.40–3.44	147
3.45 and above	143

Eligibility By Examination Alone

A student who does not meet the requirements for Eligibility in the Statewide Context, or ELC, may be able to qualify for admission to the University by examination alone. To qualify this way, a student must satisfy the same examination requirements as students who are eligible in the statewide context, achieving a UC Score Total, calculated according to the UC Eligibility Index instructions above, of at least 410 (425 for nonresident students). Additionally, students must earn a minimum UC score of 63 on each component of the ACT or SAT Reasoning Test and on each SAT Subject Test.

Admission as a Transfer Applicant

The University defines a transfer applicant as a student who has completed high school and who has been a registered student in another college or university or in college-level extension classes other than a summer session immediately following high school graduation. UCI considers a California community college transfer applicant as a student who has completed at least 30 semester units/45 quarter UC-transferable units at one or more California community colleges. A transfer applicant may not disregard the college record and apply for admission as a freshman. (Transfer applicants who are not residents of California should also refer to the section on Nonresident Admission Requirements.)

Transfer Admission Guarantee: UCI's Transfer Admission Guarantee (TAG) program offers on-the-spot provisional admission to well-qualified students from participating California community colleges. Although admission to UCI is selective in most majors, through TAG, admission can be guaranteed for transfer students who meet the selection criteria (see TAG Selection Guidelines later in this section).

SELECTION CRITERIA

UCI attempts to accommodate as many qualified transfer applicants as possible. Priority consideration for admission of transfer applicants is given to junior-level applicants (with a minimum of 60

semester/90 quarter units of transferable credit) from California community colleges and is based upon: (1) GPA in transferable courses; (2) depth of preparation toward general education and major requirements; and (3) participation in the TAG (Transfer Admission Guarantee) program, which requires early completion of one transferable English composition course, and one transferable course in mathematical concepts and quantitative reasoning. Applicants with the strongest academic performance will be the most competitive for admission. Junior transfers from four-year colleges, including other UC campuses, and lower-division transfers will be considered as space permits. *Applicants for fall quarter admission must complete required English composition and mathematics courses by the end of the spring term. Applicants for winter or spring quarter must complete required English composition and mathematics courses by summer or fall terms, respectively.*

In the case that UCI is unable to accommodate all qualified applicants in their first-choice major, those students who indicate a valid alternate major may be offered admission in that major. Students who wish to change their major after enrolling at UCI must submit an Undergraduate Petition for Change of Major to the academic counseling office in the school or program of their prospective major. This is of particular importance to those who apply in majors which are subject to additional course prerequisites and/or have a limit placed on the number of applicants admitted into the major. (See the following list.)

Some transfer applicants are selected based upon consideration of the academic criteria in conjunction with the following personal achievement criteria: an exceptionally challenging curriculum; outstanding accomplishments relevant to academic aims; hardships or unusual circumstances the applicant has faced, and the ways in which the student has responded to these challenges; a strong, thoughtful match between UCI's programs and the student's academic and career objectives, preparation, talents, and skills; and potential contributions to the campus. The level of performance needed to gain admission varies from year to year depending on the size and the academic quality of the applicant pool and the number of enrollment spaces.

Transfer applicants to the majors listed below must complete prerequisite courses for the major as specified.

Biological Sciences: Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the Biological Sciences major. All applicants must complete one year of general chemistry with laboratory with grades of B or better; one year of biology courses equivalent to Biological Sciences 93, 94, and 100L at UCI with a grade of C or better in each course; and have a cumulative GPA of 3.0 or higher.

Business Administration: For fall 2010, junior-level applicants with the highest grades overall (minimum cumulative GPA of 3.0) and who satisfactorily complete lower-division courses equivalent to UCI's calculus (Mathematics 2A-B), economics (Economics 20A-B), and statistics and accounting (Management 7, 30A, 30B) will be given preference for admission. Management 10 may be completed at UCI. Admission to the major will be competitive due to limited space availability.

Business Information Management: Junior-level applicants with the highest grades overall (minimum cumulative GPA of 2.8) who satisfactorily complete the following requirements will be given preference for admission: (1) one year of discrete mathematics if available; if not, first-year-calculus; (2) one year of UC-transferable computer science courses, including at least one course involving the concepts of object-oriented programming (e.g., in Java) or functioning programming (e.g., in Scheme)*; and (3) courses equivalent to Economics 20A-B (basic economics) and Management 30A, 30B (accounting principles). Students who transfer to UCI in need of

completing any part of this sequence may find that it will take longer than two years to complete their degree.

*Additional courses beyond the two courses required for admission are strongly recommended, particularly courses that focus on topics such as data structures, algorithms software design, software engineering, human-computer interaction, and programming language concepts, if such courses are available. It is strongly recommended that transfer students enter UCI with knowledge of Java since it is used in many of the required courses.

The Business Information Management major is offered jointly by the Donald Bren School of Information and Computer Sciences and The Paul Merage School of Business.

Chemistry: Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the Chemistry major. All applicants must complete the following required courses: one-year of general chemistry with laboratory, and one year of approved calculus.

Computer Science and Engineering: Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer, including one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one year of programming with at least one course in object-oriented programming (Java recommended), and one additional approved transferable course for the major (an approved math, science, or CSE course). Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact the Donald Bren School of Information and Computer Sciences at (949) 824-5156 or The Henry Samueli School of Engineering at (949) 824-4334.

Criminology, Law and Society: Applicants may be subject to additional screening.

Dance: Applicants must audition and be selected by faculty.

Earth and Environmental Sciences: Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the Earth and Environmental Sciences major. All applicants must complete the following required courses: one year of calculus and one year of *either* general chemistry with laboratory or calculus-based physics with laboratory.

Earth and Environmental Studies: Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the Earth and Environmental Studies major. All applicants must complete the following required courses: one year of *either* general chemistry with laboratory or biology with laboratory.

Ecology and Evolutionary Biology: Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the Ecology and Evolutionary Biology major. All applicants must complete one year of general chemistry with laboratory.

Economics: Transfer applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the majors in Economics, Business Economics, and Quantitative Economics. All applicants must complete the following required courses: one course in microeconomics, one course in macroeconomics, and one semester or two quarters of approved calculus.

Engineering: Applicants must select either Aerospace Engineering, Biomedical Engineering, Biomedical Engineering: Premedical, Chemical Engineering, Civil Engineering, Computer Engineering, Electrical Engineering, Engineering (a general program of study which is open to upper-division students only), Environmental Engineering, Materials Science Engineering, Mechanical Engineering, or

Engineering Undeclared (option for freshmen only) as their major on the application. Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission. All applicants must complete the following required courses: one year of approved calculus, one year of calculus-based physics with laboratory for engineering and physics majors, additional courses as specified by the major, and completion of lower-division writing. Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. See The Henry Samueli School of Engineering section of this *Catalogue* for information on courses required for each major.

See also the listing for **Computer Science and Engineering**, a major jointly administered by the The Henry Samueli School of Engineering and the Donald Bren School of Information and Computer Sciences.

Humanities (all majors in the School): Applicants must have completed the UC Entry Level Writing requirement.

Information and Computer Sciences: Applicants must select either Computer Science, Informatics, or Information and Computer Science as their major on the application. Junior-level applicants who satisfactorily complete course prerequisites will be given preference for admission. CS and ICS majors must complete one year of discrete mathematics if available, if not, first-year calculus; Informatics majors must complete one year of college mathematics and at least one year of college-level courses in English composition, academic writing, research writing, or technical writing. All applicants must complete one year of UC transferable computer science courses, including at least one course involving the concepts of object-oriented programming (e.g., in Java) or functional programming (e.g., in Scheme). It is strongly recommended that transfer students enter UCI with knowledge of Java since it is used in many of the required courses. See the Donald Bren School of Information and Computer Sciences section of this *Catalogue* for information on preferred courses and specific requirements for transfer applicants to each major.

See also the listing for **Business Information Management**, a collaborative major between the Donald Bren School of ICS and The Paul Merage School of Business, and the listing for **Computer Science and Engineering**, a major jointly administered by the Donald Bren School of ICS and The Henry Samueli School of Engineering.

Mathematics: Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the Mathematics major. All applicants must complete one year of approved calculus.

Music: Applicants must audition and be selected by faculty. NOTE: Second-year transfer students may not apply directly to the B.Mus. degree program.

Nursing Science: Admission to the major is limited and selective. Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the Nursing Science major. All applicants must complete the following with grades of B or better: (1) one year of general chemistry with laboratory and one quarter/semester of organic chemistry, and (2) one year of biological sciences course work in addition to a course in DNA and a course in genetics equivalent to UCI's Biological Sciences 93 and 97. Applicants must have a cumulative GPA of 3.0 or higher to be considered.

Physics: Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the Physics major. All applicants must complete the following required courses: one year of calculus-based physics with laboratory for engineering and physics majors, and one year of approved calculus.

Psychology and Social Behavior: Applicants may be subject to additional screening.

Public Health: Junior-level applicants with the highest grades overall and who satisfactorily complete lower-division requirements will be given preference for admission to the Public Health majors. All applicants to the B.S. degree in Public Health Sciences must have a minimum overall GPA of 3.0 and a minimum GPA of 3.0 in required courses, must complete one year of general biology and one year of general chemistry with laboratory, and complete one year of courses equivalent to UCI's Biological Sciences 93 and 97. All applicants to the B.A. degree in Public Health Policy must have a minimum overall GPA of 3.0 and a minimum GPA of 3.0 in required courses, and complete one year of courses in anthropology, economics, sociology, and/or psychology.

TRANSFER STUDENT ADMISSION REQUIREMENTS

The University of California requirements for admission as a transfer applicant vary according to the high school record. Transfer applicants who have completed a California Certificate of Proficiency or the equivalent must also meet regular University entrance requirements.

Transfer applicants should also refer to the section on Information for Transfer Students: Fulfilling Requirements for a Bachelor's Degree.

The transcript submitted from the last college attended must show, as a minimum, that the student was in good standing and had earned a GPA of 2.0 or better in all transferable course work.

A transfer applicant must also meet **one** of the following conditions:

1. Students who were eligible for admission to the University when they graduated from high school—meaning they satisfied the Subject, Scholarship, and Examination Requirements or were identified by the University during their senior year in high school as eligible under the Eligibility in the Local Context (ELC) program—are eligible to transfer if they have a C (2.0) average in their transferable college course work and have met the prerequisites for their major.
2. Students who met the Scholarship Requirement but did not satisfy the Subject Requirement must take transferable college courses in the subjects they are missing, earn a grade of C or better in each of these required courses, and earn an overall C (2.0) average in all transferable college course work to be eligible to transfer.
3. Students who were not eligible for admission to the University when they graduated from high school because they did not meet the Scholarship Requirement must:
 - a. Complete 60 semester (90 quarter) units of transferable college credit with a grade point average of at least 2.4 (no more than 14 semester (21 quarter) units may be taken Pass/Not Pass), and
 - b. Complete the following course pattern requirement, earning a grade of C or better in each course:
 - i. Two transferable college courses (3 semester or 4–5 quarter units each) in English composition; and
 - ii. One transferable college course (3 semester or 4–5 quarter units) in mathematical concepts and quantitative reasoning; and
 - iii. Four transferable college courses (3 semester or 4–5 quarter units each) chosen from at least two of the following subject areas: the arts and humanities, the social and behavioral sciences, and the physical and biological sciences.

NOTE: For UCI, in fulfilling items i and ii, the courses in English and mathematics should be completed no later than the following term:

Applicants for:	Courses must be completed by:
Fall	Spring term
Winter	Summer term
Spring	Fall term.

TRANSFER ADMISSION GUARANTEE (TAG) REQUIREMENTS

Highest admission priority is extended to California community college applicants who will have completed 60 transferable semester (90 quarter) units by the quarter they intend to enter UCI (fall or winter). A TAG community college applicant is defined as a student: (1) who was enrolled at one or more California community colleges for a least two terms, excluding summer sessions; (2) for whom the last college attended before admission to a UC campus was a California community college, excluding summer sessions; and (3) who has completed at least 30 semester (45 quarter) UC-transferable units at one or more California community colleges.

A student may be eligible for admission to UCI through TAG if they meet **all three** of the following requirements: (1) completion of 60 transferable semester (90 quarter) units by the end of the quarter prior to enrolling at UCI and attainment of at least the minimum GPA specified by the major. Selection Guidelines are available online at <http://www.admissions.uci.edu/tag.html>; (2) completion of the minimum UC transfer eligibility requirements in English (two courses) and transferable mathematics (one course). The first English and mathematics courses must be completed at the time of the preliminary admission notification. The second English course must be completed by **spring 2010 for fall 2010, and by summer 2009 for winter 2010**; and (3) completion of all course prerequisites for the student's prospective major (s) at UCI, prior to enrolling at UCI.

NOTE: The majors in Arts and Humanities, Dance, Humanities and Arts, Humanities Interdisciplinary, Music, Nursing Science, and Pharmaceutical Sciences do not participate in the TAG program for fall 2009 and winter 2010. Business Administration will not participate in the TAG program when the major becomes available in 2010.

ADMISSION FOR A SECOND BACHELOR'S DEGREE

A student whose educational objective has changed substantially after receiving the bachelor's degree may be considered for admission to a program for a second degree. Admission as a candidate for a second bachelor's degree requires that the applicant be fully eligible for admission to the University and have strong promise of academic success in the new major. All such admissions are subject to the approval of the dean or director of the UCI school or program in which the second degree will be earned.

Students who have *not* attended UCI as undergraduates during a regular academic quarter should complete the undergraduate application for admission and scholarships, available online at <http://www.universityofcalifornia.edu/apply>. Students who want a copy of the application mailed to them can e-mail their request to ucinfo@ucapplication.net, and include their name and address, the term for which they are applying, and whether they are a freshman or transfer applicant. Students who have attended UCI as undergraduates during a regular academic quarter should obtain and complete a Second Baccalaureate Application form through the Registrar's Office.

Nonresident Admission Requirements

Admission requirements for applicants who are not California residents vary slightly from requirements for California residents. However, all nonresident freshman and transfer applicants are subject to the same selection criteria as California residents, as explained in a previous section. Refer to the Expenses and Fees section for information regarding residence classification for tuition purposes and the Nonresident Tuition Fee.

NONRESIDENT FRESHMAN APPLICANT

A nonresident freshman applicant must (1) graduate from a regionally or state-accredited high school, or complete an appropriate proficiency examination; (2) complete satisfactorily the "a-g" pattern of subject requirements listed under requirements for California residents; (3) earn a grade point average of at least 3.4 or higher in the required high school subjects (3.0 is equal to a B average); (4) meet the examination requirement: either the ACT Assessment plus Writing Test *or* the SAT Reasoning Test (critical reading, mathematics, and writing). In addition, all applicants must complete two SAT Subject Tests in two different areas: English, history/social science, mathematics (Level 2 only), science, or language other than English; and (5) meet the Eligibility Index for nonresidents.

NONRESIDENT TRANSFER APPLICANT

The minimum admission requirements for nonresident transfer applicants are the same as those for residents, except that nonresidents must have a grade point average of 2.8 or higher in all transferable college course work.

ADMISSION OF INTERNATIONAL STUDENTS

The credentials of an international undergraduate applicant—a student who holds or expects to hold a student, exchange, visitor, or diplomatic visa and who wishes to attend school in the United States—are evaluated in accordance with the general regulations governing admission. The application should be submitted to the University of California Undergraduate Application Processing Service early in the appropriate application filing period. This will allow time for exchange of necessary correspondence and, if the applicant is admitted, will help the student in obtaining the necessary passport visa. Official certificates and detailed transcripts of records should be submitted directly to the UCI Office of Admissions and Relations with Schools only when requested.

International applicants whose native language is not English will be required to demonstrate their English proficiency. This is most often accomplished by achieving a minimum score of 550 (paper-based) or 213 (computer-based) or 80 (Internet-based) on the Test of English as a Foreign Language (TOEFL), or with a score of 7 (academic module) on the International English Language Testing System (IELTS) examination. Arrangements to take the TOEFL may be made by writing directly to TOEFL/TSE Services Educational Testing Service, P.O. Box 6151, Princeton, NJ 08541-6151, USA; (609) 771-7100; <http://www.toefl.org/>. For information about the IELTS test, see <http://www.ielts.org/>. Students must ask the Educational Testing Service or IELTS to forward results of their tests to the UCI Office of Admissions and Relations with Schools. Completion of an *acceptable* English composition course (as determined by the Office of Admissions and Relations with Schools) with a grade of C or better will also clear the English proficiency requirement for international applicants.

Students who wish to improve their English proficiency to meet the TOEFL or IELTS requirement may enroll in the intensive Program in English as a Second Language sponsored by UC Irvine Extension. Information is available from English and Certificate Programs for Internationals, UC Irvine Extension, P.O. Box 6050, Irvine, CA 92616-6050; (949) 824-5991.

In addition to achieving a minimum TOEFL or IELTS score, all international students whose native language is other than English must take an Academic English/English as a Second Language Placement Test upon arrival and prior to registration. Based upon the results of this test, students may be required to improve certain language skills by enrolling in Academic English/English as a Second Language courses during their first year, with other major course work being adjusted accordingly.

Generally, financial assistance and scholarships from the University are not available to the nonimmigrant-visa student. International students must provide proof that sufficient funds will be available to meet their educational commitments while studying in the United States. International undergraduate students are considered as nonresidents of California and are required to pay nonresident tuition in addition to fees paid by legal residents of California.

Please direct all inquiries regarding the undergraduate admission of international students to the Office of Admissions and Relations with Schools.

ENGLISH LANGUAGE PROFICIENCY OF PERMANENT RESIDENT, REFUGEE, AND INTERNATIONAL (F-1 VISA) STUDENTS: ACADEMIC ENGLISH/ENGLISH AS A SECOND LANGUAGE

Any student (a) whose first or native language is not English, (b) whose verbal scores on the Writing section of the SAT Reasoning Test fall below a set level, (c) who has not satisfied the UC Entry Level Writing requirement, *and* (d) who has received a letter from the AE/ESL Program requiring them to take the AE placement test, or any such student without a verbal SAT Reasoning Test score, must take the AE placement test prior to the first quarter of enrollment, regardless of the student's TOEFL (Test of English as a Foreign Language) score, IELTS (International English Language Testing System) score, or TSWE (Test of Standard Written English) score. Also, any student who is identified as an ESL student through the UC Analytical Writing Placement Examination must take the AE placement test. The test is given prior to the beginning of each quarter, during Welcome Week prior to the beginning of fall quarter instruction, and on dates to be announced. Information is available from the Academic Testing Center, telephone (949) 824-6207, and the Office of Academic English/English as a Second Language, telephone (949) 824-6781.

College Board Advanced Placement

Advanced Placement Examination	AP Score	Unit Credit	Credit Allowed Toward Degree
Art			
Art History	3	8	One course toward Art History major, minor, category IV of the UCI GE requirement from the Art History 40 or 42 series, and satisfaction of category VIII, plus 4 units of elective credit; may not replace School of Humanities requirements.
	4 or 5	8	Two courses toward Art History major, minor, category IV of the UCI GE requirement from the Art History 40 or 42 series, and satisfaction of category VIII; may not replace School of Humanities requirements.
Studio Art ¹			
Drawing	3, 4, or 5	8	Elective credit only.
Two-Dimensional Design Portfolio	3, 4, or 5	8	Elective credit only.
Three-Dimensional Design Portfolio	3, 4, or 5	8	Elective credit only.
Biology	3, 4, or 5 (Non-Biological Sciences Majors)	8	One Biological Sciences course toward category II of the UCI GE requirement.
	3 (Biological Sciences Majors)	8	Elective credit only.
	4 or 5	8	Elective credit only.
Chemistry	3	8	Elective credit only.
	4 or 5	8	Chemistry 1A plus 4 units of elective credit.
Chinese Language ²	3	4	Course credit awarded following placement examination.
	4 or 5	8	Course credit awarded following placement examination.
Computer Science ³			
A Exam	3, 4, or 5	2	ICS/CSE 21.
AB Exam	3	4	ICS/CSE 21.
	4 or 5	4	ICS/CSE 21 and 22.
Economics			
Macroeconomics	3	4	Elective credit only.
	4 or 5	4	Economics 20B. May not replace School of Social Sciences requirements for the bachelor's degree.
Microeconomics	3	4	Elective credit only.
	4 or 5	4	Economics 20A. May not replace School of Social Sciences requirements for the bachelor's degree.
English ¹	3 (on either or both exams)	8	Elective credit only. Fulfills UC Entry Level Writing requirement.
English Composition and Literature	4 or 5 (on either exam)	8	One course toward category IV of the UCI GE requirement from the English 28 series plus 4 units of elective credit; may not replace Literary Journalism major, English major, minor, or School of Humanities requirements.
English Language and Composition	4 or 5 (on both exams)	8	Two courses toward category IV of the UCI GE requirement from the English 28 series; may not replace Literary Journalism major, English major, minor, or School of Humanities requirements.
Environmental Science	3	4	Elective credit only.
	4 or 5	4	Environmental Analysis and Design E8 or Earth System Science 1 or 25.
French			
French Language	3	8	French 1A-B-C. Satisfies category VI of the UCI GE requirement.
	4 or 5	8	French 2A-B-C. Satisfies categories VI and VIII of the UCI GE requirement.
French Literature	3	8	French 1A-B-C. Satisfies category VI of the UCI GE requirement.
	4 or 5	8	French 2A-B-C. Satisfies categories VI and VIII of the UCI GE requirement.
Geography			
Human Geography	3, 4 or 5	4	Elective credit only.
German Language	3	4	German 1A-B-C. Satisfies category VI of the UCI GE requirement.
	4 or 5	8	German 2A-B-C. Satisfies categories VI and VIII of the UCI GE requirement.
Government and Politics			
American Government	3, 4, or 5	4	Elective credit only.
Comparative Government	3, 4, or 5	4	Elective credit only.
History			
European	3, 4, or 5	8	Elective credit only.
United States	3, 4, or 5	8	Elective credit only.
World	3, 4, or 5	8	Elective credit only.
Italian Language	3	4	Italian 1A-B-C. Satisfies category VI of the UCI GE requirement.
	4 or 5	8	Italian 2A-B-C. Satisfies categories VI and VIII of the UCI GE requirement.

Advanced Placement Examination	AP Score	Unit Credit	Credit Allowed Toward Degree
Japanese Language ²	3 4 or 5	4 8	Japanese 1A-B-C. Satisfies category VI of the UCI GE requirement. Japanese 2A-B-C. Satisfies categories VI and VIII of the UCI GE requirement.
Latin	3 (on one exam)	4	Elective credit only.
Virgil	3 (on both exams)	8	Latin 1A-B-C. Satisfies category VI of the UCI GE requirement.
Literature	4 or 5 (on one exam) 4 or 5 (on both exams)	4 8	Satisfies categories VI and VIII of the UCI GE requirement. Course credit toward the Classics major awarded upon petition. Satisfies categories VI and VIII of the UCI GE requirement. Course credit toward the Classics major awarded upon petition.
Mathematics ¹			
AB Exam	3 4 or 5	4 4	Elective credit only. Mathematics 2A.
BC Exam ⁴	3 4 or 5	8 8	Mathematics 2A. Mathematics 2A-B.
Music Theory	3 4 or 5	8 8	Elective credit only. Elective credit only and eligibility to take the placement exam.
Physics ¹			
Exam B	3, 4, or 5	8	Elective credit only.
Exam C, Part I or II	3 4 or 5	4 4	Elective credit only. Physics 7A/7LA or Physics 2.
Exam C, Part I (Mechanics)	5	4	Physics 3A.
Exam C, Part II (Electricity and Magnetism)	5	4	Physics 3B.
Psychology	3, 4, or 5	4	Elective credit only.
Spanish ²			
Spanish Language	3 4 or 5	8 8	Spanish 1A-B-C. Satisfies category VI of the UCI GE requirement. Spanish 2A-B-C. Satisfies categories VI and VIII of the UCI GE requirement.
Spanish Literature	3 4 or 5	8 8	Spanish 1A-B-C. Satisfies category VI of the UCI GE requirement. Spanish 2A-B-C. Satisfies categories VI and VIII of the UCI GE requirement.
Statistics	3, 4, or 5	4	Statistics 7/Mathematics 7 or Management 7 or Social Ecology 13.

¹ Maximum credit 8 units.

² Students who wish to enroll in any Chinese, Japanese, or Spanish course at UCI are still required to take the placement examination (and oral interview, if necessary). Students, however, cannot earn units or grade points in courses from which they have been exempted on the basis of Advanced Placement credit, even if placement results require enrollment in such a level.

³ Maximum credit 4 units.

⁴ Students who take the Calculus BC examination and earn a subscore of 3 or higher on the Calculus AB portion will receive credit for the Calculus AB examination, even if they do not receive a score of 3 or higher on the BC examination.

NOTE: All students should refer to the information about Duplicate Credit on page 44.

Based upon the results of the test, students may be required to enroll in AE/ESL courses prior to enrolling in any other required writing courses. Students required to enroll in AE/ESL courses must begin satisfying their AE/ESL requirements within their first or second quarter at UCI. They must take these courses in consecutive quarters. The AE/ESL requirements are to be completed within the first six quarters at UCI. Students who have not satisfied the AE/ESL requirements by the end of their sixth quarter will be ineligible to enroll for a seventh quarter at UCI. The UC Entry Level Writing requirement must be satisfied during the quarter following the completion of AE/ESL requirements. If the AE/ESL requirements are completed during the first quarter of enrollment, the UC Entry Level Writing requirement must be satisfied before the beginning of the fourth quarter of enrollment.

AE/ESL courses, offered by the School of Humanities and listed in the School's section of this *Catalogue*, include classes in writing, speaking and listening, and reading and vocabulary development.

CREDIT FOR AE/ESL COURSE WORK

Students whose first language is not English may receive up to 12 baccalaureate credits for AE/ESL course work. Students may receive workload credit for courses taken beyond this 12-unit limit but will not receive additional credits applicable to the bachelor's degree.

CREDIT FOR NATIVE LANGUAGE

Students whose first language is not English may receive credit for course work in their native language and literature, provided such courses were completed at the college level in the country of the vernacular, or at the upper-division or graduate level at UCI or another accredited English-speaking institution. Some restrictions apply; see the School of Humanities section for information.

Advanced Placement and International Baccalaureate Credit

Advanced Placement (AP). Students who earn scores of 3, 4, or 5 on the College Board AP examinations will receive credit toward graduation at UCI. The unit and subject credit allowed toward degree requirements assigned to each test are shown in the accompanying chart.

International Baccalaureate (IB). Students completing the IB diploma with a score of 30 or above will receive 30 quarter units (20 semester units) total toward their UC undergraduate degree. The University grants 8 quarter units (5 1/3 semester units) credit for certified IB Higher Level examinations on which a student scores 5, 6, or 7. The University does not grant credit for Standard Level examinations. Some higher-level examinations may be used to fulfill course requirements in lower-division major or general

education requirements. For detailed information see the UCI Office of Admissions and Relations with Schools' Web site at http://www.admissions.uci.edu/ib_chart.html.

The units granted for IB examinations are not counted toward the maximum number of credits required for formal declaration of an undergraduate major or the maximum number of units a student may accumulate prior to graduation from the University. Students who enter the University with IB credit do not have to declare a major earlier than other students nor are they required to graduate earlier.

Duplicate Credit. Students should be aware that AP examinations, IB examinations, and college courses taken prior to or after enrolling at the University may be duplicative. In these cases, the University will award credit for only one of these. Students cannot earn units or grade points at UCI in courses from which they have been exempted on the basis of AP or IB credit. Students who elect to enroll in courses for which they have already received AP or IB credit will have those courses specially coded on their transcript without unit or grade credit. However, some examinations exempt the student from a greater number of UCI units than the number of AP or IB units earned. In such cases, the student may elect to take the final course in the series for credit.

Application Procedures

The University prefers that students applying for admission use the online application which helps students file a more accurate and complete application by using error messages to highlight common mistakes and missing information before submission of the application. Additionally, privacy guards help ensure information stays secure. Apply online at <http://www.universityofcalifornia.edu/apply>.

Students who do not have easy online access may request a paper application by e-mailing ucinfo@ucapplication.net. Students must include their name, mailing address, the term for which they are applying, whether they are a freshman or transfer applicant, and the reason why they can't use the online application. Applications must be postmarked by the last day of the filing period. A nonrefundable application fee of \$60 (\$70 for international students) must accompany the application. This basic fee entitles the applicant to be considered at one campus; for *each* additional campus selected, an additional \$60 fee is required. Applicants concerned with admission or application procedure questions *specific to UCI* should

communicate directly with the Office of Admissions and Relations with Schools, University of California, Irvine, CA 92697-1075; <http://www.admissions.uci.edu/>. Office hours are 8 a.m. to 5 p.m., Monday through Friday; (949) 824-6703.

WHEN TO APPLY FOR ADMISSION

To ensure that applications will be considered for admission by both UCI (or other UC campuses) and the student's choice of major or program of study, the completed application and the application fee should be submitted during the priority filing period. Each campus accepts for consideration all applications it receives during this period. Additionally, students required to fulfill the examination requirements for freshman admission should make arrangements to take the standardized tests early. Completing the examination requirement (SAT Reasoning Test or ACT Assessment plus Writing Test and two SAT Subject Tests) no later than the December testing date of the senior year of high school is required for students applying for the fall quarter.

Quarter to be Admitted at UCI	Priority Application Filing Dates
Winter quarter, 2010	File July 1–30, 2009
Spring quarter, 2010	File October 1–30, 2009
Fall quarter, 2010	File November 1–30, 2009
Winter quarter, 2011	File July 1–30, 2010
Spring quarter, 2011	File October 1–30, 2010

After the priority filing period has ended, campuses will accept applications only if they still have openings for new students. Most campuses are unable to accept applications after the formal filing period closes.

Students are advised to check with the UCI Office of Admissions and Relations with Schools to find out if applications are being accepted for winter or spring terms.

TRANSCRIPTS

The UCI Office of Admissions and Relations with Schools (OARS) requires complete, accurate, and up-to-date information about a student's academic program and work in progress in order to process and respond to the application in a timely manner. The transcript and other documents submitted as part of the application become the property of the University; they cannot be returned or forwarded in any form to another college or university.

Freshman Applicants. *Applicants will be notified if a preliminary high school transcript is required.* Applicants are also responsible for asking testing agencies to report examination scores for either the SAT Reasoning Test or ACT Plus Writing Test and two SAT Subject Tests to OARS. Once students are admitted and decide to enroll at UCI, *an official final high school transcript showing an official graduation date must be forwarded to OARS even if a student attends summer session.* Official final transcripts should arrive in OARS by July 15 for those students admitted for fall quarter. Those students entering in the winter or spring quarters must have their transcripts sent to OARS within one month of the completion of the term of the school from which they entered. A California Certificate of Proficiency, the results from a proficiency test from any state, or a General Educational Development (GED) Certificate can be accepted in place of a high school diploma. Delays in receiving official transcripts will disadvantage students in the academic advising process and can affect enrollment in appropriate courses.

Transfer Applicants. *Transfer students should not send transcripts unless requested to do so.* It is essential that applicants accurately complete the self-reported college credit information in the application because it will be used for initial admission screening. *Once*

students are admitted and decide to enroll at UCI, an official transcript from each college attended and the high school from which they graduated must be sent to OARS even if a student attends summer session. Final official transcripts should arrive in OARS by July 15 for those students admitted for the fall quarter. Summer-session transcripts must be submitted by September 15. Students entering UCI in the winter or spring quarters must have their final official transcripts sent to OARS within one month of the completion of the term of the school they are currently attending. Delays in receiving official transcripts will disadvantage students in the academic advising process and can affect enrollment in appropriate courses.

EXAMINATION ARRANGEMENTS

Students should make arrangements to take the SAT Reasoning Test and SAT Subject Tests with the College Board at <http://www.collegeboard.com>. For the ACT Assessment Plus Writing, students should contact the American College Testing Program at <http://www.act.org>. (Test fees should be paid to the testing services, not to the University.) At the same time the test is taken, students should request that their scores be reported to the UCI Office of Admissions and Relations with Schools. To prevent confusion or unnecessary delay, it is important to use precisely the same form of the student's name on both the application for admission and the test materials.

In 2009–10 the SAT Reasoning Test and SAT Subject Tests are proposed to be offered concurrently on the following Saturday mornings: October 10, 2009; November 7, 2009; December 5, 2009; January 23, 2010; March 6, 2010 (SAT Reasoning Test only); May 1, 2010; and June 5, 2010.

In 2009–10 the ACT Assessment Plus Writing Test is offered on the following dates: September 12, 2009 (this test date is not available in the U.S. territories, Puerto Rico, or Canada); October 24, 2009; December 12, 2009; February 6, 2010 (no test centers are scheduled in New York for this date); April 10, 2010; and June 12, 2010.

Detailed information, including confirmation of test dates, is available from the College Board, the American College Testing Program, and from most high school counseling offices.

NOTIFICATION OF ADMISSION

Most fall quarter freshmen applicants are notified of their status between March 1 and 31. Transfer applicants are usually notified by May 1. In some cases for transfer applicants, complete transcripts of course work and/or a mid-term progress report are required before a final decision can be made; such records will be requested by OARS. Note that these target dates apply only to those applicants who submitted their applications during the fall priority filing period (November 1–30). Those students who apply after the priority period will be notified as soon as possible after March 31.

Statement of Intent to Register

Students who wish to attend UCI must return a Statement of Intent to Register (SIR). The SIR serves to notify UCI of the student's decision to accept or not accept its offer of admission. Before completing and returning their SIR, students who have applied to more than one campus are advised to take as much time as is appropriate in considering their response to each campus. However, it is essential that students allow enough time to meet the stipulated deadline. Once they have decided which campus to attend, students should submit their positive SIR and nonrefundable \$100 deposit (if applicable) either electronically or by mail. (This deposit, known as the Undergraduate Acceptance of Admission Fee, is applied to the Registration Fee when the student registers.)

Students must submit their SIR by the following deadline:

Freshmen entering fall 2010: May 1, 2010

Transfers entering fall 2010: June 1, 2010

Freshmen and transfers entering winter 2011: October 15, 2010

Freshmen and transfers entering spring 2011: refer to the specific date on their admit letter. (UCI seldom accepts applicants for a spring term.)

Electronic Filing: Students are encouraged to return their SIR electronically by accessing the Office of Admissions and Relations with Schools Web site at <http://www.admissions.uci.edu/> and link to "MyAdmissionsApplication@UCI." Students submitting an SIR electronically are required to pay their \$100 Acceptance of Admission Fee by credit card. Fee waivers are also available online.

Filing by Mail: Students who are unable to submit their SIR online may download and print an SIR from the OARS Web site. Students must return the printed SIR along with the \$100 Acceptance of Admission Fee (if requested), made payable to UC Regents, to the Office of Admissions and Relations with Schools, 204 Aldrich Hall, University of California, Irvine, CA 92697-1075. Students who are not able to either submit their SIR electronically or download an SIR from the OARS Web site should contact OARS at the address listed above and/or call (949) 824-6703.

Admission to UCI is not an assurance of receiving financial aid nor does it guarantee assignment to University housing. Separate applications are required of applicants desiring financial aid and/or University housing, and receipt of communications from the Office of Financial Aid and Scholarships, the Housing Office, or any office other than the OARS does not imply that eligibility for admission has been established.

Student Records Access and Disclosure

At UCI, an "applicant" becomes a "student" at the time of submission of the SIR. Information regarding access to student records and disclosure of student record information (both public and confidential) may be found in the Appendix.

INFORMATION FOR ADMITTED STUDENTS

ORIENTATION

Each May information about UCI's orientation programs, sponsored by the Office of the Dean of Students, is made available to admitted students who plan to enroll in the fall.

Summer Programs—Student Parent Orientation Program (SPOP). Freshmen are required to attend an orientation program (except for Summer Bridge and CAMP participants). SPOP provides the opportunity for freshmen and their parents to attend a comprehensive orientation program. Each program includes academic advising, program planning, and registration for fall classes. In addition, information on housing, financial aid, campus resources, student life, and more is included. **Transfer Success** is a unique one-day program geared to the needs of transfer students. Held in early September, the program provides information on campus resources, student life, and tours.

Winter Quarter Orientation is held each January for new incoming transfer students. This program includes information on campus resources, student life, and "What's Next" for transfer students.

For more information about all of the orientation programs, visit <http://www.dos.uci.edu/orientation>; telephone (949) 824-5182; or send e-mail to orientation@uci.edu.

Welcome Week is held each fall a few days prior to the beginning of classes. A variety of academic and social activities for new and returning students are held during this time. For more information, visit <http://www.dos.uci.edu/welcomeweek>.

DIVISION OF UNDERGRADUATE EDUCATION

The core mission of the Division of Undergraduate Education is to provide campus leadership, programs, and services which enhance the quality of undergraduate education at UCI. An advocate and steward for educational excellence, the Division works with all academic units, programs, and members of the UCI community to foster a climate of learning, discovery, and engagement for every undergraduate student. Through its diverse and innovative programs and services, the Division provides support for student academic achievement, for a rich and coherent curriculum, and for outstanding teaching through the integration of teaching and research activities and the facilitation of effective pedagogy.

The Division of Undergraduate Education is responsible for the following programs and services: the Campuswide Honors Program, which also administers the Scholarship Opportunities Program; the Center for International Education, which includes the Education Abroad Program and the International Opportunities Program; the Peer Academic Advising Program and academic advising for Undecided/Undeclared students; the First-Year Integrated Program; the Undergraduate Research Opportunities Program; the Learning and Academic Resource Center; Student Academic Advancement Services; the Academic Testing Center; the Teaching, Learning & Technology Center; Transfer Student Services; classroom technology support; administration of the UCDC Academic Internship Program and the UC Center Sacramento Scholar Intern Program; and the organization of the campus' student orientation programs in cooperation with the Division of Student Affairs. The Division is also responsible for the Freshman and Transfer Seminar Program where students are introduced to the research university and encouraged to become active participants in intellectual interactions with their peers and professors. The Division's programs and services are described in detail below.

The Division is responsible for the administration of the Academic Honesty Policy (approved by the UCI Academic Senate; see the Appendix) as it relates to undergraduates, and for implementing the Student Recommended Faculty Program, initiated at UCI in 1969. This is the only such program in the U.S. that affords undergraduates the opportunity to identify, select, and propose recruitment of nonrenewable faculty appointments in curricular areas of particular interest not represented at UCI. Call (949) 824-1955 for information.

Additionally, the Division's Assessment and Research Studies supports excellence in undergraduate education through assessment of student learning outcomes and a comprehensive program of research and evaluation studies related to the undergraduate experience and curriculum. The office provides information, data, and analyses to support campus decision-making related to the undergraduate curriculum, programs, and policies. It also provides consultation and technical advice for faculty and staff on assessment of student learning, program evaluation, survey research, and statistical analysis of student data.

Academic Advising

At the time of admission to UCI every undergraduate student is assigned to the school that offers the student's selected major. Students who have indicated "Undecided/Undeclared" as a major on their UC application for admission and scholarships receive assistance from the Undecided/Undeclared Advising Program until they select an academic major.

Jurisdiction over all questions of academic regulations and academic standing rests with the dean of the school to which a student is assigned or, in the case of undecided/undeclared majors, with the Dean of the Division of Undergraduate Education. Each academic unit provides academic advising for its students and processes requests to add or drop courses, waive or change graduation or other requirements, or change majors. Students are responsible for knowing the governing regulations of the school or program to which they are assigned.

While each academic unit is responsible for maintaining a system which provides academic advising, these systems differ from unit to unit. In some, all of the faculty serve as advisors; in others, only certain members of the faculty are designated as advisors. All advising offices include academic counselors, professionals who assist students in planning their program, selecting a major, and making progress toward a degree. Peer academic advisors (trained upper-division students) assist students in many of the same areas as academic counselors. In addition, they are able to answer questions relating to student life issues, providing a student perspective. Responsibility for informing students of the names of their advisors rests with the dean of the appropriate academic unit. This is done normally by letter; however, students may obtain information by telephone from the office of the appropriate dean. Telephone numbers for academic advising offices are listed in the academic unit sections of the *Catalogue*.

New students are encouraged to plan their academic programs with an academic counselor shortly after being admitted. The optimum time to initiate contact with an academic counselor is before the student enrolls in classes. The academic counselor can help the student determine whether the classes the student wishes to take are appropriate to the student's level of preparation, whether the proposed classes fit within the student's educational goals, and whether the classes will help meet some of the requirements for graduation.

In some schools, consultation between students and their faculty advisors is mandatory. Regardless of whether or not consultation between student and advisor is required, students are responsible for initiating and maintaining periodic contact with their assigned faculty advisor. The actual frequency of these meetings will be determined by the desires of the student, the advisor, and the unit's governing regulations.

Each quarter, new students are required to go to the appropriate academic dean's office prior to registration for advice concerning class enrollment.

Finish-in-Four Advising

Many UCI entering freshmen graduate in four years, with appropriate planning. Students who wish to be assured of earning their degree in a timely manner should contact the academic counseling office for their major to receive information about Finish-in-Four Advising and assistance in developing a detailed curricular plan.

Undecided/Undeclared Students

Students who enter the University as freshmen or sophomores may be uncertain about which major they should choose and may not feel ready to declare their major or even to identify their interests with a particular school. Such students participate in the Undecided/Undeclared Advising Program which is administered by the Division of Undergraduate Education. This program is located in 256 Aldrich Hall; telephone (949) 824-6987. The goal of the Undecided/Undeclared Advising Program is to help students make the best informed and most rational choice of a major that is possible. All students at UCI are required to choose their major by the time they reach junior status.

To make a good decision about which major to declare, students should know the range of programs UCI offers and have some experience with them, have a good knowledge of their own abilities and interests, have clear educational goals, and have a sense of their vocational goals and of the academic programs at UCI that will provide appropriate preparation. Students in the Undecided/Undeclared Advising Program meet with faculty and receive quarterly individualized staff counseling that helps them explore the variety of course offerings on campus, become more aware of their own interests and abilities, formulate sound educational goals, and learn how to prepare for graduate education and/or possible careers.

To assist students in choosing a major, the program has created a required course designed to expose undecided/undeclared students to a variety of opportunities and resources available to them, and to introduce students to each of the schools and majors offered. In addition, students learn about research and career opportunities within different disciplines.

Courses in University Studies

University Studies 2 UCI—Majors (2). A systematic exploration of UCI's undergraduate majors. Required of Undecided/Undeclared freshmen, but open to all freshmen as space permits.

University Studies 3 Mini-Seminars (1). Designed primarily for freshmen as an introduction to scholarly inquiry. Each section is taught by a faculty member from one of the academic disciplines and presents interesting and challenging topics representing the instructor's interest. Students participate in discussions, presentations, and projects. Some sections may be graded Pass/Not Pass only. May be taken for credit three times.

University Studies 4 Transfer Student Seminars (1). Designed primarily for transfer students during their first year at UCI. Each section is taught by a faculty member from one of the academic disciplines as an introduction to scholarly inquiry in their discipline. Students participate in discussions, presentations, and projects. Open to new students only; upper-division only until first week of classes. May be taken for credit two times.

University Studies 5 Freshman Seminar (2). Same description as University Studies 3.

University Studies 6 University Studies International Village Seminar (1). Seminars held in International Village that are specifically designed to either (a) introduce visiting international students to the U.S. and/or local area and institutions or (b) engage both international and U.S. students in discussion of topics of international interest.

University Studies 7 UTeach: Student-Taught Seminar (0). Student-taught seminar on selected topics. Topics vary each year according to the interest of the students teaching the classes. *One unit of workload credit only.* Pass/Not Pass only. May be taken for credit two times.

University Studies 40 Personal Success and Global Perspective (0). Further students' understanding of crucial personal and global issues and develops skills necessary for success in applying for prestigious scholarships and in graduate/professional studies. Seminar course with oral presentations, discussions, and written statements receiving particular emphasis. Two units of workload credit only. Prerequisites: minimum 3.7 GPA, sophomore standing; must submit writing sample and receive consent of instructor. Pass/Not Pass only.

University Studies 50 International Opportunities Program Study Abroad (12). Approved study at a foreign institution through the International Opportunities Program. To enroll, a student must submit a completed and approved International Study Advance Contract to the Center for International Education (CIE). Contact CIE for complete information. May be taken for credit four times.

University Studies 81 University Success (0). Survey of attitudes and skills necessary for University success. Designed primarily for new students who are first generation and/or low income students. Focus on specific tools and proven methods to improve academic performance. Two units of workload credit only. Open only to students in Transfer Summer Bridge Program or Freshmen Summer Bridge Program. Pass/Not Pass only. University Studies 81 and ICS 92 may not both be taken for credit.

University Studies 82 Computer Literacy (0). Survey of computer skills and tools necessary for University success. Designed primarily for new students who are first generation and/or low income students. Focus on specific tools and resources used widely in academic programs. Two units of workload credit only. Open only to students in Transfer Summer Bridge Program or Freshmen Summer Bridge Program. Pass/Not Pass only.

University Studies 108 Introduction to Research (4). Introduces new transfer students to research culture of the University. Students learn about the importance of research and creative activities as they are framed in a broad range of disciplines and are introduced to general research methods and approaches. Open only to students in Transfer Summer Bridge Program.

University Studies 175 Methods and Application in Small Group Instruction (4). Explores various theories and methods of learning and development and their practical application in small group settings. Peer tutors receive instruction in the design, implementation, and evaluation of an effective learning environment for undergraduate students. Prerequisite: employment as a tutor for the Learning and Academic Resource Center. Formerly University Studies 198.

University Studies 184 UC Center Sacramento Research Seminar (4). Develops an understanding of policy analysis and the policy and political process in California. Students write a research-based policy analysis on a topic related to their areas of academic interest and/or issues addressed at their internship sites in Sacramento. Corequisite: University Studies 185. Prerequisite: selected for UC Center Sacramento Program. May be taken for a total of eight units.

University Studies 185 UC Center Sacramento Internship (4 to 8). Supervised internship (24–40 hours per week) in Sacramento government, nonprofit, or private institution consistent with student's interest. Corequisite: University Studies 184. Prerequisite: selected for UC Center Sacramento Program. Pass/Not Pass only. May be taken for a total of 16 units. (IX)

University Studies 186 Sacramento Elective (4). Elective course offered by the UC Center Sacramento Program. Topics vary each quarter. Prerequisite: selected for UC Center Sacramento Program. May be taken for credit twice.

University Studies 190 Teaching Seminar: Theory and Practice (2). For students selected to be discussion leaders for University Studies 1 and 2. Models of teaching, developmental theory applied to college freshmen, curriculum development. Practice of teaching techniques and group management skills. May be taken for credit twice.

University Studies 192 Group Project for Discussion Leaders (4). For discussion leaders for University Studies 1 and 2. Weekly discussion group training for leading effective groups in addition to evaluations of weekly discussion sections and completion of a special project on issues of freshman development. Prerequisite: consent of instructor. (IX)

University Studies 194 The Washington Seminar (4). Interdisciplinary seminar examines and explores unique aspects (e.g., governmental, cultural, political, the arts, historical, media related) of Washington, D.C. Core course mandatory for all participants in Washington D.C. Center Program. Prerequisite: selected for Washington D.C. Center Program. Same as Social Science 192.

University Studies 195 Washington D.C. Center Internship (4 to 8). Supervised internship (20–40 hours per week) in Washington, D.C. government, nonprofit, or private institution consistent with student's interest. Corequisite: University Studies 194. Prerequisite: selected for Washington D.C. Center Program. May be taken for a total of 16 units. (IX)

University Studies 197A UTeach Special Study (2). Students accepted to teach a UTeach course in spring quarter enroll in Special or Independent Study with their faculty mentor during the preceding fall quarter to develop their detailed course syllabus. Prerequisites: consent of instructor; must be accepted to UTeach Program.

University Studies 197B UTeach: Teaching Theory and Practice (2). Students accepted to teach a UTeach course in spring quarter enroll during the winter to develop their teaching skills in preparation for teaching the following quarter. Prerequisites: University Studies 197A or approved 199 class with faculty mentor; consent of instructor; must be accepted to UTeach Program. Pass/Not Pass only.

University Studies 197C UTeach: Teaching Practicum (2). Students selected to teach in the UTeach Program teach their courses and meet weekly in a seminar to continue to develop and enhance their teaching skills. Prerequisites: University Studies 197B; consent of instructor; must be accepted to UTeach Program. Pass/Not Pass only.

University Studies 197D Study Abroad Experiential Learning (1). Study abroad on an approved program and complete a critical reflection (written paper, blog, etc.) which must be submitted no later than the end of the quarter following the completion of the study abroad program. Enroll while studying abroad or the quarter immediately following return. Pass/Not Pass only. (IX)

First-Year Integrated Program (FIP)

University Studies 11–15 are three-quarter multidisciplinary sequences for freshmen only. These integrated courses are designed to introduce students to the ways different disciplines approach similar problems and to provide a freshman learning community experience. Successful completion of all three quarters will satisfy four courses toward partial fulfillment of different general education (GE) requirement categories. These courses are designed to have a capstone research writing component in the third quarter which will satisfy the second quarter of the lower-division writing requirement—one of the four courses toward partial fulfillment of GE categories. To satisfy the second quarter of the lower-division writing requirement with an FIP sequence, students must concurrently enroll in Writing 39B either the fall or winter quarter and pass it with a grade of C or better, and also complete the FIP sequence with a grade of C (or Pass) or better in the third quarter of the sequence.

NOTE: Undecided/Undecided students enrolling in an FIP sequence are not required to take University Studies 2.

University Studies 11A-B-C Persuasion and Social Change I, II, III (5-5-5) F, W, S. Introduces students to the history, theory, and practice of rhetoric: the art of persuasion. Rhetoric is the faculty of creating and analyzing effective communication in any medium, including speech, writing, visual arts, and others. The emphasis of this course is rhetoric for direct social change. Students read historical and contemporary texts about rhetoric and read and view noteworthy examples of rhetorical practice in a variety of forms: confessions, speeches, manifestos, films, and electronic texts. Students from any discipline will become critical consumers of rhetoric, learning how to recognize the tools of persuasion in everyday life, and will use rhetoric themselves for interpretation and research. The issue of effective speech will be approached from several different disciplines of the Humanities. Prerequisites: for 11A: satisfaction of the UC Entry Level Writing requirement; for 11B: 11A and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C) or concurrent enrollment in Writing 39B; for 11C: 11B and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C). (One course toward category I-equivalent of Writing 39C, and three courses toward category IV.)

University Studies 12A-B-C Computer Games as Art, Culture, and Technology I, II, III (5-5-5) F, W, S. An introduction to the study of computer games as art objects, cultural artifacts, gateways to alternate realities, and complex software. Students learn vocabularies, perspectives, tools, and skills from multiple disciplines necessary to create and critique computer games. Exposure to contemporary art practices utilizing game metaphors, design principles, and technologies is emphasized. Students design and create games by programming and utilizing content creation software. Prerequisites: for 12A: satisfaction of the UC Entry Level Writing requirement; for 12B: 12A and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C) or concurrent enrollment in Writing 39B; for 12C: 12B and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C). **(One course toward category I-equivalent of Writing 39C, one course toward category III, one course toward category IV, and one course toward category V.)**

University Studies 13A-B-C Environmental Studies I, II, III (5-5-5) F, W, S. Introduces students to the Earth as a system, the physical and biological resources on the planet, and the impact of humanity on those resources. Students become aware of the unique features of Earth that allowed the origin and evolution of life, the intrinsic values as well as the resource values of species and ecosystems, the extent of damage from historical and current overexploitation, efforts to restore endangered species and ecosystems, and the difficulties of reaching a sustainable relationship with the resources available in the face of increasing human population numbers compounded by increasing economic activity. Intended to help students become more informed citizens and decision makers, and will be ideal preparation for participation in relevant majors in the natural sciences, social sciences, and humanities. Prerequisites: for 13A: satisfaction of the UC Entry Level Writing requirement; for 13B: 13A and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C) or concurrent enrollment in Writing 39B; for 13C: 13B and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C). **(One course toward category I-equivalent of Writing 39C, two courses toward category II, and one course toward category III.)**

University Studies 14A-B-C Natural, Cultural, and Social Conditions of Music I, II, III (5-5-5) F, W, S. A multidisciplinary approach to the study of the complex phenomena of music focusing on thought processes, social organization, and understanding. The disciplines involved take a variety of perspectives including: music conceptualization, sociohistorical models of music, and empirical physical models and methods used to produce, propagate, and detect music. Prerequisites: for 14A: satisfaction of the UC Entry Level Writing requirement; for 14B: 14A and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C) or concurrent enrollment in Writing 39B; for 14C: 14B and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C). **(One course toward category I-equivalent of Writing 39C, one course toward category II, one course toward category III, and one course toward category VII.)**

University Studies 15A-B-C Consciousness I, II, III (5-5-5) F, W, S. Introduces students to the theory of consciousness in the disciplines of cognitive science, philosophy, literature, psychoanalysis, and fine arts as represented in the genres of poetry, fiction, and film. Students are introduced to debates about the mind-body relationship and how it figures in discourse about the nature of consciousness. Students will become better skilled in analyzing scholarly works in the represented disciplines and genres, and in writing and revising analytic essays. Additionally, provides students with new concepts and vocabulary with which to understand their own experience of consciousness. Prerequisites: for 15A: satisfaction of the UC Entry Level Writing requirement; for 15B: 15A and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C) or concurrent enrollment in Writing 39B; for 15C: 15B and completion of Writing 39B with a minimum grade of C (or a Pass or Credit grade equivalent to C). **(One course toward category I-equivalent of Writing 39C, one course toward category III, and two courses toward category IV.)**

Placement Testing

UCI's Academic Testing Center administers placement tests to new and continuing students to ensure correct placement in selected introductory courses and to help students assess their readiness for University-level work. These tests are selected or developed by UCI faculty who also determine the grading criteria for each test.

Results from placement tests are used by students and their academic counselors to formulate a plan of study which is best suited to the students' learning needs and career goals and to determine enrollment in introductory courses. Additional information, such as entrance examination scores, Advanced Placement (AP) scores, and high school work, also may be used to determine course placement.

Placement tests are given in the areas of chemistry, physics, calculus, mathematical analysis, Chinese, French, German, Japanese, Korean, Spanish, Vietnamese, and Academic English/English as a Second Language.

1. Chemistry Placement Test. Students who plan to enroll in an introductory chemistry course (Chemistry 1A or H2A) are required to take this test unless otherwise exempt.
2. Physics Placement Test. Students who plan to enroll in an introductory physics course (Physics 2, 7A, or 7C) are required to take this test unless otherwise exempt.
3. Calculus Placement Test. Students who plan to enroll in Mathematics 2A are required to take this test unless otherwise exempt.
4. Mathematical Analysis Test. Students who plan to enroll in Mathematics 1A or 1B, or who have not had a prior course in precalculus and who plan to enroll in mathematics courses at UCI are strongly encouraged to take this test.
5. Chinese Placement Test. Students who plan to enroll in Chinese 1A, 1B, 1C, 2A, 2B, 2C, 3A, 3B, or 3C are required to take this test. The score from this test and completion of a faculty oral interview will place students in the appropriate course.
6. French Placement Test. Students who plan to enroll in French 1A, 1B, 1C, 2A, 2B, 2C, or 3A are recommended but not required to take this test unless otherwise exempt.
7. German Placement Test. Students who plan to enroll in German 1A, 1B, 1C, 2A, 2B, 2C, or the 100 series are recommended but not required to take this test unless otherwise exempt.
8. Japanese Placement Test. Students who plan to enroll in Japanese 1A, 1B, 1C, 2A, 2B, 2C, or 3A are required to take this test. The score from this test and completion of a faculty oral interview will place students in the appropriate course.
9. Korean Placement Test. Students who plan to enroll in Korean 1A, 1B, 1C, 2A, 2B, 2C, 3A, 3B, or 3C are required to take this test. The score from this test and completion of a faculty oral interview will place students in the appropriate course.
10. Spanish Placement Test. Students who plan to enroll in Spanish 1A, 1AB, 1B, 1C, 2A, 2AB, 2BZ, 2MD, 2B, 2C, 3A, or 3B must take this test.
11. Vietnamese Placement Test. Students who plan to enroll in Vietnamese 1A, 1B, or 1C are required to take this test, unless otherwise exempt, followed by an oral interview. Students who plan to enroll in 2A, 2B, or 2C are required to take this test, unless otherwise exempt, followed by an oral interview.
12. Academic English (AE) Placement Test. This test is required of students (a) whose native language is not English, (b) whose scores on the Writing section of the SAT Reasoning Test fall below a set level, (c) who have not satisfied the UC Entry Level Writing requirement, and (d) who have received a letter from the AE/ESL Program requiring them to take the AE Placement Test. Scores from the Test of English as a Foreign Language (TOEFL) and the Test of Standard Written English (TSWE) are not considered. The AE Placement Test also is required of students referred to the AE/ESL Program on the basis of their score on the UC Analytical Writing Placement Examination. See the section on Admission of International Students for additional information.

All newly admitted freshmen will be directed to information about summer orientation, placement testing, and registering for courses. Participation in summer orientation and advising is required of new freshmen. Freshmen will register for their fall quarter courses at orientation. Students are strongly advised, therefore, to take any required placement tests *before* their orientation program. Students may consult the Academic Testing Center's Web site at <http://www.testingcenter.uci.edu> for further information on placement testing and summer testing dates.

The Academic Testing Center also administers other language tests for exemptions from general education categories VI and VIII, and is responsible for the campus-based administration of the UC Analytical Writing Placement Examination.

Further information on placement and language testing may be obtained by calling (949) 824-6207 or by visiting the Center's Web site at <http://www.testingcenter.uci.edu/>. The Center is a unit of the Division of Undergraduate Education.

UC Analytical Writing Placement Examination

Results from the UC Analytical Writing Placement Examination, formerly known as the Subject A Examination, are used to place students in UCI writing courses. There is a nonrefundable administrative fee associated with the examination. The fee payment process and waiver information are explained in materials students receive in April from Pearson's Government Solutions. Students who receive admission application fee waivers will automatically have this examination fee waived. Refer to the section on Requirements for a Bachelor's Degree for complete information on the UC Analytical Writing Placement Examination and the UC Entry Level Writing requirement.

Learning and Academic Resource Center

The Learning and Academic Resource Center (LARC) is a campuswide academic support unit that provides programs designed to help students acquire the skills needed to develop intellectually, become successful learners, and achieve their academic and professional goals.

LARC staff and programs provide students with personal contact and support necessary for academic success on a large and diverse campus where students need to enroll in many large lecture courses. The Center works closely with faculty to develop programs that meet both curricular objectives and the changing needs of students. LARC programs stress the development of academic abilities that all university students need regardless of major: effective study strategies, critical reading, and analytical writing. Other programs focus on specific disciplines and offer students the opportunity to improve their academic skills in such areas as biology, chemistry, mathematics, humanities, social sciences, and computer sciences, among others.

The Center offers adjunct classes, workshops, individual counseling, small peer tutoring groups, and support in all forms of academic writing. Students may enroll in LARC programs by calling (949) 824-6451 to make appointments. Additional information including schedules for adjunct classes, workshops, and tutorials may be obtained online at <http://www.larc.uci.edu/>.

Student Academic Advancement Services

Student Academic Advancement Services (SAAS) provides individual counseling and academic support for students who are first-generation college students or low-income students, as well as disabled students (those with physical and/or learning disabilities). SAAS sponsors several major projects and a variety of workshops.

A primary responsibility of SAAS is to monitor the academic progress of its students. To best assist students who are having difficulty with their course work, professional counselors maintain a close liaison with academic departments. When needed, referrals to other campus support services are provided. In conjunction with these academic and service units, a variety of workshops are offered throughout the year by SAAS, as well as a graduate school preparatory course for those students whose career interests require graduate study.

SAAS also sponsors and conducts the Summer Bridge at UCI for underprepared students who demonstrate the potential to succeed at the University. Summer Bridge is designed to provide and refine basic academic skills necessary for students to successfully complete their course work during the regular school year.

Students are encouraged to make appointments with Student Academic Advancement Services; telephone (949) 824-6234. Additional information is available online at <http://www.saas.uci.edu/>.

Transfer Student Services

The primary role of the Transfer Student Services (TSS) program is to help transfer students quickly locate appropriate sources of advice and other services relevant to their educational and student life needs. Within TSS the Transfer Student Center and Lounge provides a comprehensive resource center for new and continuing transfer students. Transfer students have a "home away from home" at UC Irvine where they can take advantage of the assistance provided by the Transfer Services counselors and the transfer student mentors within the Keys to Transfer Success mentor program. The Transfer Student Center and Lounge is also the headquarters for the Tau Sigma National Honor Society for transfer students and the Transfer Student Organization (TSO). TSS counselors visit eight local community colleges to assist prospective transfer students with specialized academic and student life advising prior to their transfer to UC Irvine.

For more information, contact TSS, 2200 Student Services II, telephone (949) 824-1142; email: transfer@uci.edu; World Wide Web: <http://www.transfercounseling.uci.edu>.

Honors Opportunities

UCI offers many challenging and enriching honors opportunities to its most accomplished and motivated students. These include a comprehensive Campuswide Honors Program, which enrolls outstanding students from all majors from the freshman through senior years; a variety of major-specific honors programs at the upper-division level; the Humanities Honors Program, also offered at the upper-division level, but open to all majors on campus; and several Excellence in Research programs.

These programs offer some of the advantages usually associated with selective liberal arts colleges: rigorous, small, personalized classes and the intellectual exchange that creates a community of scholars. The difference, however, is that UCI's programs have the support and benefit of the resources of a major research university, including a renowned faculty, research opportunities, and the 34-million-volume University of California Library system (of which UCI Library collections number some 3.2 million volumes).

Honors students are also encouraged to participate in the UC Education Abroad Program, the International Opportunities Program, the UCDC Internship Programs, or the UC Center Sacramento Scholar Intern Program during their junior or senior year. Qualified students are also encouraged to take advantage of resources available in the Scholarship Opportunities Program (SOP) and the Undergraduate Research Opportunities Program (UROP). These programs are described in other sections of this *Catalogue*.

Campuswide Honors Program

Founded in 1988, the Campuswide Honors Program (CHP) is available to selected high-achieving students in all academic majors from their freshman through senior years. It maintains an active roster of approximately 650 students. Many CHP students have continued their studies after graduation from UCI at the most prestigious graduate and professional schools in the country.

The CHP provides talented and successful UCI students with a special honors curriculum consisting of small, seminar-style classes, close interaction with peers, mentorship by UCI's top faculty, and the opportunity to participate in undergraduate research. Enhanced advising support provides students with assistance in applying for prestigious scholarships, internships, graduate and professional schools, and education abroad. Completion of the Campuswide Honors Program is noted on the student's transcript and baccalaureate diploma.

Admission. Admission to the program as an incoming UCI freshman is by invitation only; all eligible candidates are reviewed and selected by faculty representatives from each academic unit. Transfer and other students are eligible to apply for admission to the CHP up until the end of the first quarter of their junior year, if they have a minimum grade point average of 3.5. Qualified transfer students may also apply prior to matriculation. The CHP seeks to admit students who have a demonstrated passion for learning, a willingness to explore and take risks, and an interest in pursuing academic excellence in a range of disciplines outside of their major area.

Curriculum. CHP students pursue three, year-long interdisciplinary Honors core courses (one course per quarter), satisfying various categories of the general education requirement. Many of these courses provide an interdisciplinary approach to major subjects and issues. Faculty from a variety of disciplines are chosen especially for their teaching ability and scholarship. Participants pursue original research under the direct supervision of faculty members, culminating in the production of an honors thesis, creative project, or publication-quality paper. Many CHP students also participate in major-specific honors programs. The senior honors thesis that is developed and produced through these programs satisfies the CHP research and thesis requirement. Transfer students who have successfully completed an honors program in community college are not required to take an Honors Core course, but must complete research and the senior honors thesis or creative project.

Freshmen CHP students begin their course of study by taking honors sections of the Humanities Core Course (Humanities H1A-B-C). Team-taught by professors from various disciplines in the School of Humanities, the Humanities Core Course is organized around major themes. Faculty from a wide range of disciplines exemplify the ways in which humanists approach issues from philosophical, historical, and cultural perspectives. In small discussion sections, students put those perspectives into practice in their own writing and in classroom conversations and debates designed to engage each student intellectually.

The Critical Issues in the Social Sciences sequence (Social Sciences H1E-F-G or Social Ecology H20A-B-C), usually taken in the sophomore year, is team-taught by professors from the Schools of Social Sciences and Social Ecology. Topics have included human vision; authority (dis)obedience, and human society; decisions and compromises and their rewards and penalties; human language and its disablement; and exotic societies (including our own).

The Idiom and Practice of Science interdisciplinary sequence (Chemistry H90, Earth System Science H90, Physics H90) explores the role science plays in addressing socially significant problems. Students develop the ability to understand scientific models and to judge the content, merit, and limitations of many issues of science in the modern world. The development of analytical and writing

skills is emphasized. Topics have included earthquakes, chemistry in the environment, radiation/radioactivity, evolution/aging, the mathematics of power, biodiversity/conservation, genetic plant engineering, the physics of music, and calculus.

CHP students are eligible to participate in other lower-division Honors courses on the campus, along with other qualified students. These include the following courses:

Honors General Chemistry covers the same material as Chemistry 1A-B-C, but in greater depth. Honors General Chemistry Laboratory is also offered. The small class size enhances access to outstanding faculty and peers.

Honors Organic Chemistry, designed for Chemistry and Biology majors and anyone else interested in a research career, offers a smaller class size and the opportunity for interactions and experiences not possible in the larger Chemistry 51 series. It is usually taken in the sophomore year, after completion of the General Chemistry lecture and laboratory sequence.

Honors Calculus, especially recommended for prospective Mathematics majors and others with a particular interest in mathematics, covers the same material as Mathematics 2D-E, but with greater emphasis on the theoretical structure of the subject matter.

The Honors Introduction to Computer Science sequence (ICS H21, H22, H23) is open to CHP students majoring in Information and Computer Science and other students by consent. The first course introduces basic concepts, fundamental laws and principles of software and hardware organization, program construction, applications, and policy and social issues. The second course covers in-depth concepts of programming and mathematical tools for analyzing programs. The third builds on this background with respect to mathematical tools and analysis.

Extracurricular Activities. CHP students are invited to participate in many social and cultural activities, including weekly special programs and socials, beach bonfires, poetry readings, faculty lectures, movie nights, trips to museums, concerts and plays, and a camping retreat. Honors students also produce a quarterly creative writing and arts journal, and continuing Honors students may volunteer for the Peer Mentor Program, providing assistance to incoming Honors students.

On-Campus Housing. CHP students are guaranteed on-campus housing, as long as they meet the Housing procedures and deadlines and remain in good standing with the honors program. Freshmen may choose to live in Middle Earth in "The Shire," or in Mesa Court in "Loma" or "Arroyo." Sophomores and upper-division students who wish to live in Honors housing may also select one of the Honors houses in Arroyo Vista. Other non-honors housing is available in Greek or other theme houses in Arroyo Vista, and in apartment-style living in Campus Village or Vista del Campo. Honors housing offers a valuable living/learning experience with other Honors students and the community spirit that is a special feature of the CHP. Students bring to the living experience their vitality, creativity, and dynamic dedication to learning. Activities have included get-togethers with Honors faculty, staff, and students; international potlucks; off-campus retreats; study breaks; and other events such as workshops and special speakers geared toward the interests of the residents.

Other benefits include extended library borrowing privileges, honors study rooms in the Langson and Science Libraries, leadership and service opportunities, honors academic advising services with faculty, honors advisors and peer counselors, and close interaction with faculty and peers.

Additional information is available from the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

Major-Specific and School Honors Programs

Honors programs for qualified junior- and senior-level students also are available to Drama majors and Music Theatre majors in the Claire Trevor School of the Arts; to all majors in the School of Biological Sciences; to students from all schools regardless of their majors, through the School of Humanities; to Asian American Studies majors in the School of Humanities; to all majors in the School of Physical Sciences; to all majors in the School of Social Sciences; to all majors in the Donald Bren School of Information and Computer Sciences; and to all majors in the School of Social Ecology. The focal point of each of these programs is the development of analytical and research skills through the pursuit of research under faculty supervision. An honors-level thesis/creative project is required by most of the programs. CHP students are encouraged to participate in these programs as well as the Campuswide Honors Program. The honors-level thesis/creative project that is developed and produced through these programs also satisfies the CHP research and thesis requirement. Additional information is available in the specific academic unit sections of this *Catalogue*.

Excellence in Research Programs

The School of Biological Sciences and the Departments of Cognitive Sciences and of Psychology and Social Behavior offer students the opportunity to pursue research through their Excellence in Research Programs. Students work on their research projects under faculty supervision and have the opportunity to present their results to peers and faculty and, in certain instances, to have their research papers published. Additional information is available in the specific academic unit sections of this *Catalogue*.

Honors Recognition

Students who graduate during the academic year with academic honors, and those who receive special school awards, are honored in school-based ceremonies. Some Honors societies may also hold special ceremonies for selected students. Of the graduating seniors, no more than 12 percent will receive academic honors: approximately 1 percent *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*. The criteria used in selecting candidates for these honors are available at the counseling office of each school. One general criterion is that students must have completed at least 72 quarter units in residence at a University of California campus. The student's cumulative record at the end of the final quarter is the basis for consideration for awarding Latin Honors. Students who have on file recorded acts of academic dishonesty, as defined in *University of California Policies Applying to Campus Activities, Organizations, and Students*, may be excluded by the Associate Deans from consideration for academic honors at graduation. For further information contact the academic counseling office of each school.

Phi Beta Kappa

Phi Beta Kappa founded in 1776, is the oldest and most respected undergraduate honors organization in the United States. It supports and recognizes academic excellence and scholarly achievement in the liberal arts and sciences, and promotes the principles of freedom of inquiry and liberty of thought and expression. UC Irvine's Phi Beta Kappa Chapter (Mu of California) was founded in 1974. Phi Beta Kappa is UCI's most selective honorary society, with only 5 percent of graduating seniors and 1 percent of juniors invited to become members each year. An annual initiation ceremony for new members is held in June. For additional information, including selection criteria, visit <http://www.phibetakappa.uci.edu/>.

Scholarship Opportunities Program

UCI encourages high-achieving students to learn how they can compete successfully for the most prestigious scholarships, grants, and graduate fellowships available, and to begin learning about the process as early as possible. The Scholarship Opportunities Program (SOP) organizes and disseminates information about these awards. It also facilitates the campus review process for many of them, provides individual and group counseling, presents workshops, assists students with curriculum vitae, and provides guidance on statements of purpose and project proposals.

Winner Tips. SOP staff help connect students with past UCI scholarship winners, who can share their experiences about the process and insider tips on becoming a successful candidate.

Comprehensive Workshops. SOP's two-day annual Merit Scholarships seminars present practical information and tips on applying for prestigious scholarships as well as firsthand experience from past UCI student winners and faculty. Additionally, the staff presents workshops in response to requests from academic units, clubs, and other campus groups.

Individual and Group Scholarship Counseling is available by appointment.

Resource Materials. The SOP office maintains a library of past scholarship winners' applications; descriptions and selection process information for merit scholarships; examples of successful CVs, recommendation letters, Statements of Purpose, and research and project proposals; books on interview preparation; and videotapes of previous winners.

SOP Services. The names and photos of students who have been awarded the prestigious national and regional scholarships and fellowships are featured on the SOP Web site at <http://www.scholars.uci.edu>. Plaques bearing the names of winners are displayed in the Student Center outside the entrance to the Crystal Cove Auditorium. Additional information is available in the SOP office, 1200 Student Services II; (949) 824-5461; rharris@uci.edu or sklrship@uci.edu.

Undergraduate Research Opportunities Program

The Undergraduate Research Opportunities Program (UROP), in the Division of Undergraduate Education, encourages and facilitates research and creative activities by undergraduates. Research opportunities are available not only from every discipline, interdisciplinary program, and school, but also from many outside agencies, including national laboratories, industrial partners, and other universities. UROP offers assistance to students and faculty through all phases of the research activity: proposal writing, developing research plans, resource support, conducting the research and analyzing data, and presenting results of the research at the annual spring UCI Undergraduate Research Symposium. Calls for proposals are issued in the fall and spring quarters. Projects supported by UROP may be done at any time during the academic year and/or summer, and the research performed must meet established academic standards and emphasize interaction between the student and the faculty supervisor. In addition, all students participating in faculty-guided research activities are welcome to submit their research papers for faculty review and possible publication in the annual *UCI Undergraduate Research Journal*.

UROP also sponsors the following programs.

The Summer Undergraduate Research Program (SURP) provides funding for UCI undergraduates from all disciplines who are conducting summer research projects or creative activities under the guidance of UCI faculty members. The program offers students

the opportunity to become immersed in a research topic for a full-time 10-week period or the equivalent of 400 hours. SURP is open to all non-graduating UCI undergraduates who are in good academic standing and who have been involved in a faculty-mentored research project or creative activity for at least one quarter.

The **Inter-Disciplinary Summer Undergraduate Research Experience (ID-SURE)** provides funding for continuing UCI undergraduates from all disciplines who are conducting interdisciplinary summer research projects or creative activities related to health promotion and disease prevention under the guidance of UCI faculty members. Students work on their projects full-time for eight weeks.

The **Integrated Micro/Nano Summer Undergraduate Research Experience (IM-SURE)** provides an opportunity for non-graduating science and engineering juniors and seniors to become immersed in biomedical, physical, and engineering micro/nanotechnology research projects under the guidance of UCI faculty members. Students work on their projects for 10 weeks.

The **Summer Undergraduate Research Fellowship in Information Technology (SURF-IT)** provides the opportunity for non-graduating UCI juniors and seniors to become involved in information technology-related research under the guidance of UCI faculty members. Students work on their projects full-time for 10 weeks.

The **Chemistry Summer Undergraduate Research Fellowship (Chem-SURF)** provides an opportunity for non-graduating science juniors and seniors to become immersed in cutting-edge research projects in the fields of chemical biology, chemical physics, and analytical atmospheric, bioinorganic, bioorganic, computational, inorganic, materials, organic, physical, polymer, surface, and theoretical chemistry under the guidance of UCI faculty members. Students work on their projects for 10 weeks.

For more information about UROP and complete details about any of the programs it sponsors, contact UROP, 2300 Student Services II; telephone (949) 824-4189; fax (949) 824-1607; urop@uci.edu; <http://www.urop.uci.edu/>.

UCDC Academic Internship Program

The UCDC Academic Internship Program supervises and supports students who pursue internships, elective courses, research, and creative activities in the nation's capital. This UC systemwide program, situated in the exciting environment of Washington, D.C., is open to students in all majors. Students may enroll for fall, winter, or spring quarter. While living in Washington, D.C., students are enrolled at UCI and earn 12–16 units of credit. Financial-aid eligibility is maintained. Students who meet financial need and other eligibility criteria are also considered for a President's Washington Scholarship to help cover costs associated with participation in the program.

Students live in the new Washington, D.C. Center building together with students from all of the participating UC campuses, which provides a social and intellectual community throughout the quarter. The Program also offers a unique opportunity for UCI faculty members and graduate students to teach and pursue research in the Washington, D.C. area.

Interested students with strong academic records are encouraged to apply; visit 1100 Student Services II; (949) 824-5400; dccenter@uci.edu; <http://www.dccenter.uci.edu/>.

UC Center Sacramento Scholar Intern Program

The UC Center Sacramento (UCCS) Scholar Intern Program supervises and supports students who pursue internships, elective courses, research, and creative activities in the state capital. This

UC systemwide program is open to students in all majors, and is currently available for the fall, winter, spring, or summer terms. While living in Sacramento, students are enrolled at UCI and earn 12–16 units of credit. Financial aid eligibility is maintained. Internship opportunities are available for students in many different settings including the offices of Assembly Members, Senators, and the Governor, as well as with State agencies, nonprofit organizations, and lobbying organizations.

Interested students with strong academic records are encouraged to apply; visit 1100 Student Services II; telephone (949) 824-5400; dccenter@uci.edu; <http://uccs.universityofcalifornia.edu/>.

Teaching, Learning & Technology Center

The Teaching, Learning & Technology Center (TLTC), a unit of the Division of Undergraduate Education, provides instructional support through a variety of services and programs to the UCI teaching community. This support includes teaching development, skills training, and instructional technology assistance.

Teaching development includes consultation with teaching professionals regarding instructional strategies, methods, and learning theory. Faculty members and Teaching Assistants (TAs) may request consultations, and *all services are free and confidential*. Consultation can be further enhanced by videotaping the teacher in the classroom. Additionally, instructors can access a midterm feedback form through the Electronic Educational Environment's "Instructors' Toolbox" (<http://www.eee.uci.edu/>) in order to obtain feedback from students before the end of the term. To schedule an appointment for a consultation or other service, call TLTC at (949) 824-1150.

Other programs and services include the Pedagogical Fellows Program; a two-day TA Professional Development Program during Welcome Week; quarterly Teaching Colloquies; workshops specifically for new faculty, experienced faculty, and graduate students; and workshops and individual assistance with the compilation of Teaching Portfolios. TLTC also co-hosts the annual "Celebration of Teaching" which honors teaching excellence and innovations.

TLTC provides services related to computerized presentation technology, video-conferencing, distance learning, and video and multimedia production. TLTC hosts a video teleconference center for distance learning and a media center where instructors can produce

multimedia resources for their courses. Technicians and instructional specialists are available to advise instructors. Additionally, TLTC has an experimental training room called the Learning Studio (Anteater Instruction and Research Building, room 1030) which is equipped with both Mac and PC computers, four screens that display four different images, as well as Wacom Boards. To book the rooms for courses and/or events that require additional media, call (949) 824-1150.

TLTC is located in the Anteater Instruction and Research Building on the corner of East Peltason and Anteater Drives, third floor, room 3000. Hours are from 8 a.m. to 5 p.m., Monday through Friday. Staff is available after hours and on weekends by special appointment. For general information, call (949) 824-1150 or visit <http://www.tluc.uci.edu/>.

TLTC offers the following courses:

University Studies 390A-B-C Advanced Pedagogy and Academic Job Preparation (variable units). Service learning course for graduate students who serve as teaching mentors for other TAs. Satisfactory/Unsatisfactory only. Prerequisite: must have a concurrent appointment as a Pedagogical Fellow with TLTC.

390A (2 to 4). Introduction to principles of good course design and instructional development. Students design and implement an integrated curriculum in the context of the fall TA Professional Development Program.

390B (2 to 4). Introduction to the Scholarship of Teaching and Learning literature within the students' respective disciplines. Students select or create several teaching methods stated or implied by the literature and translate these findings into workshops for other TAs.

390C (2 to 4). Prepares students for their future roles as faculty members and the academic job search. Covers job search skills; creation of CV, cover letters, statement of teaching philosophy; job interview and negotiation skills; types of higher educational institutions and professorial responsibilities.

Classroom Technology Support

The Classroom Technology Support unit supports excellence in undergraduate teaching and learning by providing instructional equipment and related services for faculty teaching in the General Assignment Classrooms. For information, call (949) 824-5128; <http://www.classrooms.uci.edu>.

Center for International Education

The Center for International Education (CIE) includes the Education Abroad Program (EAP) and the International Opportunities Program (IOP). CIE is a comprehensive resource and counseling center which helps students take advantage of the many worldwide opportunities that exist for study, work, internship, volunteering, research, and non-credentialed teaching which relates to their degree programs at UCI.

Studying abroad is an important resource for achieving the skills, knowledge, and understanding that will make today's undergraduates effective citizens and leaders in local, national, and global affairs once they depart the University. In today's political and business environment, college graduates must be informed decision-makers with a capacity to reflect on their own values while understanding the complex identities, histories, and cultures of others. Studying abroad provides students with the language skills and cultural competence necessary to meet the current demands of business, government, and educational institutions.

Professional staff and international peer advisors, who have returned from an IOP or EAP experience, are available to guide students in making appropriate choices of international programs for their educational goals. Group and individual advising is available every day that UCI is in session. All EAP and IOP participants are provided with pre-departure and reentry orientations.

CIE, EAP, and IOP are located in 1100 Student Services II; (949) 824-6343; cie@uci.edu; <http://www.cie.uci.edu/>.

EDUCATION ABROAD PROGRAM

The Education Abroad Program (EAP) of the University of California offers students the opportunity to experience a different culture while making progress toward degree objectives. EAP is an overseas study program which operates in cooperation with about 150 host universities and colleges in 35 countries throughout the world. Programs are available for students in every major. The wide variety of programs includes those offering general curriculum, intensive language study, and programs focusing on a specific academic subject area. Participation in EAP satisfies category VIII and can satisfy category IX of the UCI general education requirement. A summary of EAP opportunities is shown in the accompanying chart.

Students are advised to plan early in their academic career in order to best match studying abroad with their major to graduate on time. Preliminary guidance is available at the EAP Academic Planning Web site (<http://www.cie.uci.edu/academics/academicplanning.html>).

The cost of studying abroad through EAP is often comparable to the cost of studying at UCI. Participants pay the same education and registration fees normally paid for a similar period at UCI, plus room, board, books, round-trip transportation, on-site orientation, intensive language program expenses (when applicable), and any other personal expenses. All UC financial aid (other than work-study), including grants, scholarships, and loans, is available to EAP students who qualify. Both need-based and merit-based scholarships specifically for study abroad are also available. Information is available at <http://www.cie.uci.edu/finaid.html>.

On-site abroad, a UC professor frequently serves as the EAP Study Center Director. The Study Center Director oversees local operations, including in-country orientation, student academic advising and grade assessment, and serves as UC's liaison to the host institution. In some countries, the duties of a Student Center Director are performed by a local faculty liaison officer or administrative coordinator. Students interested in EAP should visit the Web site (<http://eap.ucop.edu/>) to review program options and visit the CIE Web site (<http://www.cie.uci.edu/>), or come to the CIE office for advising and to obtain an application. UCI EAP deadlines are available at <http://www.cie.uci.edu/DeadlinesByCountry.html>.

2009-10 UC EAP Summary of Opportunities

Country	Terms of Participation	Language of Instruction
Australia*	F, S, Year	English
Barbados	F, Year	English
Brazil*	F, S, Year	Portuguese, English
Canada	F, Year	English
Chile*	F, S, Year	Spanish
China	Summer, F, S, Year	Standard Chinese, English
Costa Rica*	F, S	Spanish, English
Denmark	Summer, F, Year	English, Danish
Egypt	Year	English
France	Summer, F, S, Year	French, English
Germany	F, S, Year	German, English
Ghana	F, S, Year	English
Hong Kong	F, S, Year	English, Cantonese, Putonghua
Hungary	F, S, Year	English
India	F	English
Ireland	Year	English
Italy	Summer, F, S, Year	Italian, English
Japan	F, S, Year	English, Japanese
Republic of Korea	Summer, F, S, Year	English, Korean
Mexico	Summer, F, S, Year	Spanish
Netherlands	F, S, Year	English, Dutch
New Zealand*	S, Year	English
Russia	F	Russian
Singapore	F, S, Year	English
South Africa*	F, S, Year	English
Spain	Summer, F, S, Year	Spanish, Catalan
Sweden	Summer, F, Year	English, Swedish
Taiwan	F, S, Year	Standard Chinese, English
Thailand	Summer, F, S, Year	English
Turkey	F, S, Year	English
United Kingdom	Summer, F, S, Year	English
Vietnam	F	English

*The academic year begins in January or February instead of in the fall.

NOTE: Information may be subject to change. Updates and program details are available at <http://eap.ucop.edu>. Programs in Israel and the Philippines are currently on hold.

INTERNATIONAL OPPORTUNITIES PROGRAM

UCI's International Opportunities Program (IOP) is the link between UCI students and any international educational experience that occurs outside the boundaries of the U.S. and is not a part of the UC Education Abroad Program (EAP) nor the UCI Summer Session Travel-Study program. Any UCI student (undergraduate, graduating senior, or graduate) in good academic standing, regardless of major, class level, or foreign language ability, may participate in IOP.

CIE staff provide information and counseling to assist students in finding an appropriate program to meet their needs and interests. Students may choose from academic study (with transferable credit), paid work, paid or unpaid internships, unpaid or compensated volunteer service, field research, and paid teaching opportunities in nearly every country in the world. This includes all academic programs sponsored by U.S. institutions that occur on foreign soil or water (as in the case of the Semester at Sea program), direct enrollment at foreign institutions, summer session abroad programs through other UC campuses, and study abroad programs offered by private providers.

With careful planning IOP students participating in study programs can make progress toward their UCI degree by fulfilling major, minor, or general education requirements. Students may apply for transfer credit and UCI financial aid by completing the IOP Credit Contract. Many scholarships are also available.

To acquaint students with opportunities abroad, IOP sponsors the annual Go Abroad Fair and periodic informational presentations. CIE also maintains a listing of opportunities abroad on its Web site. Interested students should visit <http://www.cie.uci.edu/> or come into the CIE office for assistance.

REQUIREMENTS FOR A BACHELOR'S DEGREE

There are four groups of requirements that must be met to earn a baccalaureate degree from UCI: general UC requirements, UCI requirements, school or program requirements, and degree-specific requirements. UC and UCI requirements are described below. School or program and major-specific requirements are described in full in the academic unit sections.

Students with identified learning and/or physical disabilities, including language-acquisition problems, are eligible to receive support through the Disability Services Center; telephone (949) 824-7494 (voice), 824-6272 (TDD). Staff can assist students from the time they are admitted to UCI until they graduate.

Catalogue Rights

Students enrolled at UCI from their freshman year may elect to meet as graduation requirements (UC, UCI, school, and major): (a) those in effect at the time of entrance; or (b) those subsequently established after entrance.

A readmitted student who has not been enrolled at UCI for three or more consecutive quarters (excluding summer sessions) must adhere to the graduation requirements: (a) in effect for the quarter in which the student is readmitted; or (b) those subsequently established.

Students transferring from other collegiate institutions may elect to meet as graduation requirements either: (a) those in effect at the time of enrollment at UCI; (b) those subsequently established; or (c) those in effect at UCI when the student first entered a previous, accredited collegiate institution, provided that the student has been continuously enrolled in a collegiate institution and that entry was not more than four years prior to the time of enrollment at UCI.

A transfer student who has had a break of enrollment of two consecutive semesters or three consecutive quarters (excluding summer sessions) may follow the requirements in effect at UCI: (a) at the time of enrollment at UCI; (b) those subsequently established; or (c) those in effect at the time of reentry into a previous, accredited collegiate institution, provided that reentry was not more than four years prior to enrollment at UCI.

A transfer student who has been continuously enrolled in college for more than four years prior to transfer may use: (a) the requirements in effect at the time of enrollment at UCI; (b) those subsequently established; or (c) those in effect at UCI four years prior to enrollment at UCI.

All students, whether enrolled at UCI from their freshman year, readmitted, or transfer, may elect to fulfill general education requirements as specified above, independent of how they choose to meet all other graduation requirements (UC, UCI [with the exception of general education], school, and major).

Students choosing to complete a minor, whether enrolled at UCI from their freshman year, readmitted, or transfer, may elect to fulfill minor requirements as specified above, independent of how they choose to meet all other graduation requirements (UC, UCI, school, and major).

Transfer students who complete one of the following options will be considered to have met the total UCI general education requirement except the upper-division writing requirement: (a) students who transfer from a four-year institution and who have completed the general education requirements of that college, upon approval of petition; (b) students who transfer from another UC campus and provide official documentation that they have met the general education requirements of that campus; (c) students who transfer from another UC campus and are in the process of completing the general education requirements of that campus, upon approval of petition, and who subsequently complete the remaining requirements

of that campus at UCI; or (d) California community college transfer students who have completed the Intersegmental General Education Transfer Curriculum. Transfer students may also elect to complete the UCI general education requirement.

University Requirements

ENGLISH (UC ENTRY LEVEL WRITING)

Every undergraduate must demonstrate upon entrance to the University a proficiency in writing. The Entry Level Writing Requirement (previously known as the Subject A Requirement), may be satisfied *before entrance* in any of the following ways:

1. Score 3 or higher on the College Board Advanced Placement Examination in English (Language or Literature); *or*
2. Score 5 or higher on the International Baccalaureate Higher Level Examination in English (Language A only), or score 6 or higher on the IB Standard Level Examination in English (Language A only); *or*
3. Score 680 or higher on the Writing section of the SAT Reasoning Test, or score 30 or higher on the ACT Combined English/Writing test; *or*
4. Prior to enrolling in the University, complete with a grade of C or better a transferable college course in English composition worth four quarter or three semester units. (Once a student enrolls at a UC campus, courses from institutions other than UC may not be used to satisfy the Entry Level Writing Requirement.) Students who meet the University's basic requirements for minimal transfer eligibility, which include two transferable college courses in English composition, satisfy the Entry Level Writing Requirement; *or*
5. Achieve a passing score on the UC Analytical Writing Placement Examination (previously called the Subject A Examination).

Those students who have not met the requirement before entrance must satisfy the requirement before the beginning of their fourth quarter at UCI. Students who have not satisfied the requirement by that time will be ineligible to enroll for a fourth quarter.

Students enrolled in Essentials of Academic Writing (Humanities 20A-B-C-D) must enroll in Fundamentals of Composition with Computer Lab (Writing 39AP and Lab) immediately after they are authorized to do so by the Academic English/English as a Second Language Program. Students with a score of 2, 3, or 4 from the UC Analytical Writing Placement Examination are also required to enroll in Writing 39AP with Computer Lab.

The UC Entry Level Writing requirement may be met *after admission* by one of the following options:

1. Passing the UC Analytical Writing Placement Examination given in mid-May (and on subsequent dates) to all entering freshmen admitted for fall quarter, 2009 (see Placement Testing). Transfer students who have not satisfied the UC Entry Level Writing requirement should contact the UCI Composition Program Office, 420 Humanities Instructional Building; telephone (949) 824-6717.
2. Enrolling in sections of the Humanities Core Course designated "S/A." (NOTE: Students held for UC Entry Level Writing and enrolled in the Humanities Core must enroll in a S/A section of the Core Course during their first quarter. Successful completion of the writing component of these sections of this course with a letter grade of C or better will satisfy the requirement. Students who do not receive a letter grade of C or better in Humanities 1A S/A in fall quarter and who continue to be held for UC Entry Level Writing must enroll in Humanities 1B S/A during the

winter quarter and satisfy the requirement by earning a letter grade of C or better.)

3. Taking Writing 37, 39A, or 39AP with Computer Lab and receiving a letter grade of C or better in that course.

The Pass/Not Pass grade option may not be used to satisfy the UC Entry Level Writing requirement.

Students enrolled at UCI may take only UCI courses in satisfaction of the UC Entry Level Writing requirement. Continuing UCI students may not take summer courses at another institution to satisfy this requirement.

AMERICAN HISTORY AND INSTITUTIONS

This requirement may be met by one of the following options:

1. Completion in an accredited high school of one year of United States history with grades of C or better, *or* one semester of United States history and one semester of United States government with grades of C or better; *or*
2. Achieving a score of 3, 4, or 5 on the College Board Advanced Placement Examination in United States History; *or*
3. Achieving a score of 550 or better on the SAT Subject Test in United States history; *or*
4. Presentation of a certificate of completion of the requirement at another California institution; *or*
5. Completion at UCI or another U.S. institution of one year of college-level United States history with grades of C or better, *or* one course in United States history and one in United States government with grades of C or better. Acceptable UCI courses: United States history—History 40A, 40B, 40C; United States government—Political Science 21A.

UCI Requirements

UNIT REQUIREMENT

Credit for a minimum of 180 quarter units, earned by examination, by other evaluation, or course work is required. A course normally offers four quarter units of credit.

GRADE REQUIREMENT

A minimum grade average of at least C (2.0) is required (1) overall, (2) in all of the courses required for the major program, and (3) in the upper-division courses required for the major program. Higher averages than this may be required only in honors programs. Students who fail to attain a C (2.0) average in courses required in the major program may, at the option of the major unit, be denied the privilege of pursuing a major program in that unit. In this context, "the courses required in the major program" are defined as the courses required for the major and offered by the program of the student's major (or programs, in the case of an interdisciplinary or interdepartmental major). A major can include additional courses required for the major in this set, with the approval of the Council on Education Policy. In this case, the list of additional courses is published in the *Catalogue* with the requirements for the major.

RESIDENCE REQUIREMENT

At least 36 of the final 45 units completed by a student for the bachelor's degree must be earned in residence at the UCI campus. Exceptions to this rule may be allowed, with prior departmental approval, to students enrolled in the Education Abroad Program, the UCDC Academic Internship Program, the UC Center Sacramento Scholar Intern Program, or the International Opportunities Program with International Study Advance Contract.

GENERAL EDUCATION REQUIREMENT

UCI is committed to the values of a liberal education. One component of that commitment is the requirement that all undergraduates complete a set of general education (GE) requirements. General education courses introduce students to a range of ideas and intellectual activities that engage UCI scholars, providing both scope and balance to a University degree beyond the study of a specific major.

The general education requirements are intended to help undergraduates place the specialized study undertaken in the major within a broader context. They are designed to cultivate the skills, knowledge, and understanding that will make students effective contributors to society and the world. The general education requirements should enable UCI undergraduates to apply the abilities developed in their studies to identify significant issues, gather and evaluate available evidence, analyze alternatives, reach conclusions, communicate the results effectively, and take considered actions.

The general education requirement is a *graduation* requirement and, with the exception of the lower-division writing requirement, need *not* be satisfied during only the lower-division years. To satisfy the general education requirement, courses are required in each of the following categories:

- I. **Writing** (two lower-division plus one upper-division course)
- II. **Science and Technology** (three courses)
- III. **Social and Behavioral Sciences** (three courses)
- IV. **Arts and Humanities** (three courses)
- V. **Quantitative, Symbolic, and Computational Reasoning** (three courses)
- VI. **Language Other Than English** (one course)
- VII. **Multicultural Studies** (one course that may also satisfy another GE requirement)
- VIII. **International/Global Issues** (one course that may also satisfy another GE requirement)
- IX. **Laboratory or Performance** (one course that may also satisfy another GE requirement)

The specific courses in each area that students may use to satisfy the requirements are listed below. When a general education course is cross-listed with another course, that course also is available for fulfillment of the requirement. Students should refer to the *Catalogue* descriptions of the courses to determine which are cross-listed.

A course qualifies for a particular GE category based on its content rather than on the academic unit that offers it. However, to increase students' exposure to a variety of disciplinary approaches, students are encouraged to choose GE courses from a wide range of schools and departments outside of the student's major.

NOTE: The following list of courses approved for GE is effective for the 2009–10 academic year only. Because changes occur each year, students should consult the GE list annually to ensure that the courses they enroll in are on the list. GE credit is awarded for a course only if it appears on the list during the academic year when it is taken. The GE list also is available online at <http://www.reg.uci.edu/registrar/index.html>. To check the GE course offerings in a particular quarter, students should consult the *Schedule of Classes* on the Registrar's Web site at <http://www.reg.uci.edu>.

GENERAL EDUCATION CATEGORIES

I. Writing. Because of the importance of visual, oral, electronic, and written communication in every academic discipline, in the professions, and in public life, the University is committed to developing a variety of communication abilities in students at all levels and in all areas. The Writing Requirement expresses this broad commitment, but the concern for and attention to rhetorically effective, accurate writing is expected in all courses.

The Writing Requirement consists of two courses at the lower-division level beyond the UC Entry Level Writing requirement and one upper-division course in a discipline.

Except where otherwise noted below, students must satisfy the UC Entry Level Writing requirement prior to fulfilling the UCI writing requirement.

Students who have not completed the lower-division writing requirement before the beginning of their seventh quarter at UCI will be subject to probation. Students transferring to UCI normally should have satisfied the lower-division writing requirement before entering UCI; if, however, they have not, they must complete it within their first three quarters of enrollment or they will be subject to probation. Academic English/English as a Second Language students must complete the lower-division writing requirement before the beginning of the seventh quarter following the completion of their AE/ESL courses or they will be subject to probation.

The third course must be an upper-division writing course, and it must be taken only after the successful completion of the lower-division requirement.

Students enrolled at UCI may take only UCI courses in satisfaction of the lower-division and upper-division writing requirements. Continuing UCI students may not take summer courses at another institution to satisfy lower-division or upper-division writing requirements.

After completing this GE requirement, successful students should be able to do the following:

Lower-division writing: demonstrate rhetorically effective, accurate academic writing and communication across a variety of contexts, purposes, audiences, and media using appropriate stance, genre, style, and organization; develop flexible strategies for generating, revising, editing, and proofreading texts; develop abilities in critical reading across a variety of genres and media; and demonstrate information literacy skills by locating, evaluating, and integrating information gathered from multiple sources into a research project.

Upper-division writing: demonstrate rhetorically effective, discipline-specific writing for appropriate academic, professional, and public audiences; demonstrate, at an advanced level of competence, use of discipline-specific research methods, genres, modes of development, and formal conventions; and demonstrate advanced information literacy skills by locating, evaluating, and integrating information gathered from multiple sources into discipline-specific writing.

Lower-Division Requirement: The two courses taken to fulfill the lower-division requirement must be completed with a minimum grade of C (or a Pass or Credit grade equivalent to C). Students may select from the courses specified below:

1. Writing 39B (Critical Reading and Rhetoric) and 39C (Argument and Research).
2. Writing 37 (Intensive Writing) and 39C (Argument and Research). Recommended students only.
3. Two quarters of the writing component of the Humanities Core Course (Humanities 1A-B-C) beyond satisfaction of the UC Entry Level Writing requirement. **NOTE:** Students held for the UC Entry Level Writing requirement and enrolled in the Humanities Core must enroll in a section of the Core Course designated S/A during their first quarter. Successful completion of the writing component of these sections of this course with a letter grade of C or better will satisfy the UC Entry Level Writing requirement. (The Pass/Not Pass grade option may not be used to satisfy it.) For these students, the UCI lower-division writing requirement may be satisfied only in the second and third quarters of the Humanities Core Course. Students who do

not receive a C or better in Humanities 1A S/A in fall quarter and continue to be held for the UC Entry Level Writing requirement must enroll in Humanities 1B S/A during the winter quarter and satisfy the requirement by earning a letter grade of C or better. The lower-division writing requirement will be satisfied in the second and third quarters of the Humanities Core Course for these students.

- Students who complete Writing 37 or 39B with a grade of B (3.0) or better may substitute as the second course of the lower-division writing requirement one of the following courses in creative writing or nonfiction and journalism: Writing 30, 31, or 38.
- Writing 39B and completion of a First-Year Integrated Program (FIP) sequence, with a grade of C (or Pass) or better in the third quarter of the sequence.

Upper-Division Requirement: The course taken to fulfill the upper-division requirement must be completed with a minimum grade of C (or a Pass or Credit grade equivalent to C). The requirement may be satisfied by completing any one of the following:

- An upper-division course designated on a list of approved courses in the quarterly *Schedule of Classes* on the Registrar's Web site at <http://www.reg.uci.edu>. NOTE: All courses approved to fulfill the upper-division writing requirement should have a "W" suffix. Students are encouraged to consult the *Schedule of Classes* or their advisor to determine the current upper-division writing requirement course offerings. If a course on the approved list is offered without the "W" suffix, it does not satisfy the upper-division writing requirement.
- Writing 139W.
- Writing 109, 110, 111, or 113. Consent of instructor is required. Students may not use such a course to satisfy the requirement unless they have attained a B or better in both courses taken to satisfy the lower-division writing requirement.

Students who fail to attain the required grades in the courses taken in fulfillment of the writing requirement should refer to the Academic Regulations and Procedures section for further information.

II. Science and Technology. Understanding the nature of scientific inquiry and the operation of the biological, physical, and technological world is essential for making personal and public policy decisions in a technological society.

After completing this GE requirement, successful students should be able to do the following: demonstrate a broad understanding of the fundamental laws of science, the principles underlying the design and operation of technology, and the interrelations among science and technology disciplines; demonstrate a broad understanding of various natural phenomena that surround and influence our lives; describe how scientists approach and solve problems; solve problems and draw conclusions based on scientific information and models, using critical thinking and qualitative and quantitative analysis of data and concepts; and explain the scope and limitations of scientific inquiry and the scientific method.

Students must complete three courses from the following list:

Biological Sciences 1A-B, 5, 6, 8A, 9A, 9B, 9C, 9D, 9E, 9F, 9G, 9J, 9K, 9M, 9N, 10, 11, 12A, 12B, 12C, 12D, 16, 20, 35, 36, 37, 38, 39, 45, 55, 65, 75, H90, 93, 94
Chemistry 1A[†], 1B[†], C[†], H2A[†], H2B[†], H2C[†], H90
Computer Science and Engineering (CSE) 21, 22 (NOTE: CSE21, CSE22 may be counted toward either category II or V but not both.)
Earth System Science 1, 3, 5, 7, 9, 11, 13, H90
Economics 11 (NOTE: Economics 11 may be counted toward either category II or III but not both.)
Environmental Analysis and Design E1, E3, E5

Informatics 41, 42 (NOTE: Informatics 41, 42 may be counted toward either category II or V but not both.)

Information and Computer Science (ICS) 5, 11, 21, H21, 22, H22, 51 (NOTE: ICS 11 may be counted toward either category II or III but not both. ICS 21, H21, 22, H22 may be counted toward either category II or V but not both.)

International Studies 16

Logic and Philosophy of Science 40

Physics 3A, 3B, 3C, 7A[†], 7B[†], 7C[†], 7D[†], 7E, 14, 15, 16, 17, 18, 19, 20A, 20B, 20C, 20D, 21, H90 (NOTE: Overlap restrictions apply to Physics 7A, 7B, and 7C; see course descriptions for details.)

Planning, Policy, and Design 45

Public Health 30, 60, 80, 90

University Studies 13A-B-C (two courses)*, 14A-B-C (one course)*

III. Social and Behavioral Sciences. Courses will focus on principles, sources, and interpretations of human behavior and on how people organize, govern, understand, and explain social life. This category includes the analysis of human behavior at all levels, from the individual to collective social, economic, and political life, and on the scientific methods used in the acquisition of knowledge and the testing of competing theories.

After completing this GE requirement, successful students should be able to do the following: demonstrate knowledge and understanding of principles, sources, and interpretations of human behavior and how people organize, govern, understand, and explain social life; demonstrate an understanding of contemporary and historical perspectives on human behavior; understand and explain the scientific methods used in the acquisition of knowledge and the testing of competing theories in the social and behavioral sciences; and critically evaluate methods, findings, and conclusions in the research literature on human behavior.

Students must complete three courses from the following list:

African American Studies 40A, 40B, 40C (NOTE: African American Studies 40A, 40B, 40C may be counted toward either category III or IV but not both.)

Anthropology 2A, 2B, 2C, 2D, 41A

Asian American Studies 60A, 60B, 60C

Chicano/Latino Studies 61, 62, 63, 64

Criminology, Law and Society C7

Economics 1, 11, 13, 17, 20A-B, 23 (NOTE: Economics 11 may be counted toward either category II or III but not both.)

Education 55

Engineering CEE60

Environmental Analysis and Design E8

History 15C

Information and Computer Science (ICS) 3, 11 (NOTE: ICS 11 may be counted toward either category II or III but not both.)

International Studies 11, 12, 13

Linguistics 3, 10, 20, 51, 68 (NOTE: Linguistics 3, 10, 20 may be counted toward either category III or V but not both.)

Philosophy 22

Planning, Policy, and Design 4

Political Science 6A, 6B, 6C, 21A, 31A, 41A, 44A, 51A, 61A, 71A

Psychology 7A, 9A, 9B, 9C, 21A, 46A, 56L, 78A

Psychology and Social Behavior 9, 11A, 11B, 11C

Religious Studies 17

Social Ecology H20A-B-C

Social Science 1A, H1E-F-G, 5A, 5C, 5D, 70B, 70C, 78A, 78B, 78C

Sociology 1, 2, 3, 23, 31, 62, 66, 78

University Studies 12A-B-C (one course)*, 13A-B-C (one course)*, 14A-B-C (one course)*, 15A-B-C (one course)*

Women's Studies 60A, 60B, 60C

* Successful completion of all three quarters will satisfy four courses toward partial fulfillment of different GE categories. See First-Year Integrated Program on page 59 for details.

[†] Has a corequisite of a corresponding laboratory course, which may be used to satisfy category IX.

IV. Arts and Humanities. Study of the Arts and Humanities expands the student's sense of diverse forms of cultural expression, past and present. Students develop their critical capacity as they discover how meaning is created and experience variously interpreted.

After completing this GE requirement, successful students should be able to do the following: demonstrate knowledge and understanding of how visual and verbal communication is used in literature and film, art and music, and philosophy and history; communicate an understanding and appreciation of diverse forms of cultural expression, past and present; understand and explain the research methods used in the acquisition of knowledge and the testing of competing theories in the arts and humanities; and think critically about how meaning is created and how experience is variously interpreted.

Students must complete three courses from the following list:

African American Studies 40A, 40B, 40C (NOTE: African American Studies 40A, 40B, 40C may be counted toward either category III or IV but not both.)

Arts 1A

Art History 40A, 40B, 40C, 42A, 42B, 42C

Classics 36A, 36B, 36C, 37A, 37B, 37C, 45A, 45B, 45C

Comparative Literature 8, 9, 10, 40A, 40B, 40C, 60A, 60B, 60C

Dance 90A-B-C

Drama 15, 40A, 40B, 40C

East Asian Languages and Literatures 55 (three different topics)

English 28A, 28B, 28C, 28D, 28E

Film and Media Studies 85A, 85B, 85C

French 50 (three different topics)

German 50 (three different topics)

History 11, 12, 15A, 18A, 21A, 21B, 21C, 36A, 36B, 36C, 37A,

37B, 37C, 40A, 40B, 40C, 50, 60, 70A, 70B, 70C, 70D, 70E, 70F

Humanities 1A-B-C, 10

Music 3, 8, 9, 14A-B-C, 40B-C, 40D

Philosophy 1, 4, 5, 7, 9, 10, 11, 12, 13, 20, 21, 23

Religious Studies 5A, 5B, 5C

Russian 50 (three different topics)

Spanish 50 (three different topics)

Studio Art 1A-B-C, 9A, 9B, 9C or 11A

University Studies 11A-B-C (three courses)*, 12A-B-C (one course)*, 15A-B-C (two courses)*

Women's Studies 20, 50A, 50B, 50C

* Successful completion of all three quarters will satisfy four courses toward partial fulfillment of different GE categories. See First-Year Integrated Program below for details.

V. Quantitative, Symbolic, and Computational Reasoning. This requirement enables students to evaluate quantitative and symbolic arguments and to model and solve real-world problems using systems of abstract symbols.

After completing this GE requirement, successful students should be able to do the following: demonstrate competency in quantitative, symbolic, and computational reasoning; and demonstrate an ability to solve real-world problems using quantitative, logical, or computational approaches that are typical of mathematical thinking.

Students must complete three courses from the following list:

Anthropology 10A-B-C

Computer Science and Engineering (CSE) 21, 22, 23 (NOTE: CSE21, CSE22 may be counted toward either category II or V but not both.)

Informatics 41, 42, 45 (NOTE: Informatics 41, 42 may be counted toward either category II or V but not both.)

Information and Computer Science (ICS) 6, 6B, 6D, 21, H21, 22, H22, 23, H23 (NOTE: ICS 21, H21, 22, H22 may be counted toward either category II or V but not both.)

Linguistics 3, 10, 20 (NOTE: Linguistics 3, 10, 20 may be counted toward either category III or V but not both.)

Logic and Philosophy of Science 29, 30, 31

Management 7

Mathematics 2A, 2B, 2D, H2D, 2J, 4, 6B, 6D, 6G, 7, 67

Philosophy 29, 30, 31

Political Science 10A-B-C

Psychology 10A-B-C

Social Ecology 166A-B-C

Social Science 9A-B-C, 10A-B-C, 100A-B-C

Sociology 10A-B-C

Statistics 7, 8, 67, 100A-B-C

University Studies 12A-B-C (one course)*

VI. Language Other Than English. Study of a language other than English expands students' horizons by encouraging understanding of another culture through its language and heightens awareness of one's own language through the investigation of another linguistic system.

After completing this GE requirement, successful students should be able to do the following: demonstrate competency in reading, writing, speaking, and listening in a non-English language; demonstrate an understanding of another (non-English speaking) culture

* Successful completion of all three quarters will satisfy four courses toward partial fulfillment of different GE categories. See First-Year Integrated Program below for details.

First-Year Integrated Program (FIP)

University Studies 11–15 are three-quarter multidisciplinary sequences for freshmen only. These integrated courses are designed to introduce students to the ways different disciplines approach similar problems and to provide a freshman learning community experience. Successful completion of all three quarters will satisfy four courses toward partial fulfillment of different GE requirement categories. These courses are designed to have a capstone research writing component in the third quarter which will satisfy the second quarter of the lower-division writing requirement—one of the four courses toward partial fulfillment of GE categories. To satisfy the second quarter of the lower-division writing requirement with an FIP sequence, students must concurrently enroll in Writing 39B either the fall or winter quarter and pass it with a grade of C or better, and also complete the FIP sequence with a grade of C (or Pass) or better in the third quarter of the sequence. For complete information about the FIP sequences, including course descriptions and prerequisites, see page 48.

NOTE: Undecided/Undecided students enrolling in an FIP sequence are not required to take University Studies 2.

University Studies 11A-B-C Persuasion and Social Change I, II, III (5-5-5). GE: One course toward category I—equivalent of Writing 39C, and three courses toward category IV.

University Studies 12A-B-C Computer Games as Art, Culture, and Technology I, II, III (5-5-5). GE: One course toward category I—equivalent of Writing 39C, one course toward category III, one course toward category IV, and one course toward category V.

University Studies 13A-B-C Environmental Studies I, II, III (5-5-5). GE: One course toward category I—equivalent of Writing 39C, two courses toward category II, and one course toward category III.

University Studies 14A-B-C Natural, Cultural, and Social Conditions of Music I, II, III (5-5-5). GE: One course toward category I—equivalent of Writing 39C, one course toward category II, one course toward category III, and one course toward category VII.

University Studies 15A-B-C Consciousness I, II, III (5-5-5) GE: One course toward category I—equivalent of Writing 39C, one course toward category III, and two courses toward category IV.

through its language; and demonstrate an understanding of one's own language through the investigation of another, non-English linguistic system.

Students must demonstrate competency in a language other than English* by completing one of the following options:

- A. College-level course work equivalent to UCI's third quarter of study in a language other than English. UCI courses approved to satisfy this requirement are:
 Arabic 1C, S1BC; Chinese 1C, S1BC; French 1C, S1BC; German 1C, S1BC; Greek 1C, S1BC; Hebrew 1C; Italian 1C, S1BC; Japanese 1C, S1BC; Korean 1C, S1BC; Latin 1C, S1BC; Persian 1C, S1BC; Portuguese 1C; Russian 1C; Spanish 1C, S1BC; Vietnamese 1C, S1BC
For information on UCI's prerequisites, course placement policies, and the grade required to advance to the next level of instruction, consult the School of Humanities (Language Other Than English Placement and Progression) section in this Catalogue.
- B. Credit for three years of high school study or its equivalent in a single language other than English with a C average or better in the third year.
- C. A score of 3, 4, or 5 on a College Board Advanced Placement Examination in a language other than English. NOTE: Students who earn a 3, 4, or 5 on the AP Chinese Examination must take the UCI Chinese placement examination to determine course credit.
- D. A score of 570 or better on a College Board SAT Subject Test in a language other than English, with the exception of the test in Modern Hebrew for which a score of 500 or better is required.
- E. Completion of an approved course of study through the Education Abroad Program (EAP). Careful planning is required to ensure that this requirement is fulfilled. Check with an EAP counselor at the Center for International Education to determine the programs in countries that fulfill this requirement.
- F. The equivalent as determined by an appropriate and available means of evaluation. For information on availability of such examinations and testing schedules, consult the Academic Testing Center, 3043 Anteater Instructional and Research Building, (949) 824-6207. If an appropriate means of evaluating competence in a non-English language of instruction does not exist, satisfactory completion, with a C average or better, of one year of formal schooling at the sixth grade level or higher in an institution where the language of instruction is not English will meet the requirement. Appropriate documentation must be presented to substantiate that the course work was completed.

* Includes American Sign Language

VII. Multicultural Studies. This requirement develops students' awareness and appreciation of the history, society, and/or culture of one or more underrepresented groups in California and the United States.

After completing this GE requirement, successful students should be able to do the following: demonstrate knowledge of one or more historically underrepresented groups' culture, history, and development in California and the United States; demonstrate an awareness and appreciation of cultural differences and inequities; and demonstrate an understanding that cooperation and mutual understanding among all cultural groups is needed to interact successfully in a culturally diverse society.

Students must complete one course from the following list. In fulfilling category VII, students are encouraged to use courses that are also being used in fulfillment of other GE categories. For example, Humanities 1C simultaneously satisfies category VII and a portion of category IV.

African American Studies 40A, 40B, 40C, 111A, 111B, 117, 138, 151, 153
 Anthropology 85A, 125Z, 128B, 133A, 134D, 134M, 136K, 137A, 138R, 138T, 161T, 162B

VIII. International/Global Issues. Courses in this category focus on significant cultural, economic, geographical, historical, political, and/or sociological aspects of one or more countries other than the United States.

After completing this GE requirement, successful students should be able to do the following: demonstrate specific knowledge of the cultural, historical, social, economic, scientific, and political aspects of one or more foreign countries, and the connections among these aspects; develop a broader understanding of the formation of different cultures and countries through the world; and be prepared to engage in positive interaction with peoples of different cultures and nationalities.

Students must complete one course from the following list. In fulfilling category VIII, students are encouraged to use courses that are also being used in fulfillment of other GE categories. In addition, category VIII may be satisfied by one quarter's participation in the Education Abroad Program (EAP).

Anthropology 2A, 20A, 30A, 41A, 121A, 121D, 121G, 121J, 125A, 125B, 125F, 125P, 125X, 127A, 134A, 134G, 135A, 135I, 136A, 136D, 138O, 138P, 138Q, 138S, 162A, 163A, 163I, 163K, 164P, 174A
 Arabic 2A-B-C, S2AB-BC

* Successful completion of all three quarters will satisfy four courses toward partial fulfillment of different GE categories. See First-Year Integrated Program on page 59 for details.

Or, students may complete one of the following fourth-quarter language options:

- A. Credit for four years of high school study or its equivalent in a single language other than English with a C average or better in the fourth year.
- B. A score of 4 or 5 on a College Board Advanced Placement Examination in a language other than English. NOTE: Students who earn a 3, 4, or 5 on the AP Chinese Examination must take the UCI Chinese placement examination to determine course credit.
- C. A score of 620 or better on a College Board SAT Subject Test in a language other than English, with the exception of the test in Modern Hebrew for which a score of 540 or better is required.
- D. The equivalent as determined by an appropriate and available mean of evaluation. For information on availability of such examinations and testing schedules, consult the Testing Office, Student Services II, (949) 824-6207. If an appropriate means of evaluating competence in a non-English language of instruction does not exist, satisfactory completion, with a C average or better, of two years of formal schooling at the sixth grade level or higher in an institution where the language of instruction is not English will meet the requirement. Appropriate documentation must be presented to substantiate that the course work was completed.

IX. Laboratory or Performance. Every student at UCI should have at least one academic experience that goes beyond traditional classroom delivery. Examples include courses in which students conduct laboratory experiments, complete a performance in the fine arts, study abroad, participate in outreach efforts, or complete an academic internship, field study, or practicum. In satisfying category IX, students are encouraged to use courses that also satisfy another category's requirement.

After completing this GE requirement, successful students should be able to do the following: describe the connections between theory and practice as demonstrated within the context of the student's own experiential learning; and demonstrate enhanced development in at least two of the following areas: professionalism, communication skills, technology, interpersonal skills, working on a team, leadership, and problem-solving.

Students must complete one course from the following list:

Anthropology 161T, 176A
 Asian American Studies 118
 Biological Sciences 14, 101
 Chemistry 1LB, 1LC, 1LE, H2LA, H2LB, H2LC, M2LA, M2LB, M2LC
 Computer Science and Engineering (CSE) 21
 Dance 12A, 12B, 12C, 14, 30A, 30B, 30C, 34, 40A, 40B, 40C, 50A, 50B, 50C, 52A, 52B, 52C, 110, 132A, 132B, 132C, 142A, 142B, 142C, 152A, 152B, 152C
 Drama 30A, 30B, 30C
 Education 104D, 131, 132, 137, 160, 181B
 Film and Media Studies 111, 117C, 120A, 120B, 120C, 197, 198
 Humanities 195
 Information and Computer Science 6, 21, H21, 192
 Informatics 41
 Music 160, 161, 162, 164, 176, 178
 Nursing Science 170L
 Physical Sciences 5, 105
 Physics 3LB, 3LC, 7LA, 7LB, 7LC, 7LD
 Public Health 195
 Social Ecology 195
 Social Sciences 182A, 194A, 194B, 196, 197
 Sociology 114A
 Studio Art 20, 30A, 30B, 40, 51, 71A, 71B, 81A, 81B, 91
 University Studies 185, 192, 195, 197D

NOTE: Some of the category IX courses have required corequisites; see course descriptions for details.

School, Departmental, and Major Requirements

In addition to the University and UCI requirements listed above, each undergraduate student must satisfy the degree requirements for the major and, if applicable, the minor or concentration selected. UCI, school, and departmental or major and minor requirements may overlap; courses taken to fulfill a school or departmental requirement may also help fulfill the UCI general education requirement. Students are urged to make sure that they understand how many courses are permitted to satisfy more than one requirement. Information on specific degree requirements and courses is available in the academic unit sections of this *Catalogue*.

Students must declare a major by the time they reach junior status (90 units excluding college work completed prior to high school graduation), and should make certain that the background and the preparation prerequisite to junior and senior work in the major have been accomplished. Transfer students should read the section on Information for Transfer Students: Fulfilling Requirements for a Bachelor's Degree.

Students should note that with the exception of courses designated Pass/Not Pass Only, courses taken Pass/Not Pass may *not* be used to satisfy specific course requirements of the student's school and major, unless authorized by the appropriate dean. Additional information on grading is located in the Academic Regulations and Procedures section.

Minor Programs

For certification in a minor, a student must obtain a minimum overall grade point average of at least C (2.0) in all courses required for the minor program. No more than two courses applied to a minor may be taken Pass/Not Pass. Completion of the minor is noted on a student's transcript. (Students are *not* required to minor in a program in order to graduate from UCI.)

Application for Graduation

In order to receive a degree, an undergraduate student must submit an online Application for Graduation via the Student Access link at <http://www.reg.uci.edu> no later than the published deadline. Specific deadline dates for filing are established quarterly so that candidates' academic records can be reviewed to verify that all graduation requirements have been met. These dates vary among academic units. Students should contact their academic counseling office for deadline and degree audit information.

INFORMATION FOR TRANSFER STUDENTS: FULFILLING REQUIREMENTS FOR A BACHELOR'S DEGREE

This section provides a guide for transfer students in understanding how their course work from another collegiate institution applies to fulfilling UCI degree requirements. Transfer students should use this information in conjunction with the previous section, Requirements for a Bachelor's Degree. Transfer students are required to meet University, general education, school, department, and major requirements described in the *Catalogue*. The courses and descriptions in this *Catalogue* may be used by prospective transfer students as a guide for selecting courses of similar content and purpose in their own institutions. No student who has taken a course which is accepted for credit by the Office of Admissions and Relations with Schools (OARS) and which has been mutually determined with a community college as being acceptable toward completion of the UCI general education requirement shall incur any loss of credit in satisfaction of the requirement.

Transfer students are *strongly* advised to check with the academic counselor in their prospective major or OARS about courses that may be used to satisfy UCI requirements.

Transfer Students: Completion of the UCI General Education Requirement

Students transferring to UCI must satisfy the UCI general education (GE) requirement by completing either: (a) the current UCI GE requirement, (b) one of the options listed in the *Catalogue* Rights section, or (c) the Intersegmental General Education Transfer Curriculum.

Transfer students should not feel that the UCI GE requirement must be completed prior to matriculating to UCI. The GE requirement, which must be completed prior to graduation, may be satisfied by college-level courses appropriate to UCI offerings and may be met *at any time* during the undergraduate years, *except* in the case of the lower-division writing requirement, which must be completed within the first three quarters of residency at UCI.

NOTE: Transfer students should be aware that UCI is on the quarter system. For the purpose of counting courses for the UCI GE requirement, one semester course is equivalent to one quarter course, and two semester courses are equivalent to three quarter courses.

INTERSEGMENTAL GENERAL EDUCATION TRANSFER CURRICULUM

California community college transfer students may receive credit for the UCI GE requirement by completing the Intersegmental General Education Transfer Curriculum (IGETC). The IGETC consists of a series of subject areas and types of courses which will satisfy the general education requirements at any campus of the University of California. Fulfillment of the IGETC does not satisfy the UCI upper-division writing requirement.

Students who do not complete IGETC prior to transfer may be eligible for partial certification from their community college. Partial certification is defined as completing all but two (2) courses on the IGETC pattern. **Warning:** Students need to meet minimum UC transfer admission requirements. Therefore, partial certification that acknowledges a deficiency in Area 1 and/or Area 2 may also indicate a student does not meet minimum transfer requirements.

Please note: (1) IGETC must be completed in total or partial IGETC certification must be completed prior to enrolling at UCI; (2) students are responsible for requesting IGETC certification from their

community college; and (3) the IGETC certification should be submitted to the UCI Office of Admissions and Relations with Schools no later than the end of the first quarter of UCI enrollment.

Courses used to fulfill the IGETC must be completed with a grade of C or better. (Courses may also be taken on a Pass/No Pass basis provided Pass is equal to a letter grade of C or better.)

Lists of specific approved courses which may be taken in fulfillment of the IGETC are available from California community colleges and at <http://www.assist.org/>.

Intersegmental General Education Transfer Curriculum

Area 1. English Communication: One course in English composition and one course in critical thinking/English composition.

Area 2. Mathematical Concepts and Quantitative Reasoning: One course in mathematics or mathematical statistics which has a prerequisite of intermediate algebra.

Area 3. Arts and Humanities: At least three courses with at least one from the arts and one from the humanities.

Area 4. Social and Behavioral Sciences: At least three courses from at least two different disciplines.

Area 5. Physical and Biological Sciences: At least two courses, with one from the physical sciences and one from the biological sciences; one course must include a laboratory.

Area 6. Language Other Than English: Proficiency equivalent to two years of high school courses in the same language.

Transferability of Credit

The University is committed to serve as fully as possible the educational needs of students who transfer from other California collegiate institutions. The principles covering transferability of unit credit and course credit are explained below and, unless otherwise indicated, are much the same whether transfer is from a two-year or a four-year institution.

Duplicate Credit Prohibited. Students may not receive unit credit or earn grade points for college courses in which the content duplicates material of a previously completed course or examination for which the student has been granted college credit. See page 44 for exceptions related to Advanced Placement and International Baccalaureate credit. See page 68 for exceptions related to the repeat of deficient grades.

UNIT CREDIT FOR WORK TAKEN ELSEWHERE

The University of California grants unit credit for courses completed at other accredited colleges and universities when such courses are consistent with the functions of the University as set forth in the Master Plan for Higher Education in California. Equivalent advanced standing credit from institutions on the semester calendar may be determined at a ratio of one semester unit to one and one-half quarter units. (To graduate from UCI a minimum of 180 quarter units, equivalent to approximately 45 UCI quarter courses, are needed.)

Community Colleges

A student may earn a maximum of 105 quarter units (70 semester units) at a community college toward a University degree. No further unit credit may be transferred from a community college, although subject, major, or general education credit for courses taken will still be granted.

Students anticipating transfer to UCI are urged to consult with their community college counselors. The counselors, with the aid of that college's UC Transfer Course Agreement (UCTCA), can advise students about California community college courses and units which will transfer to the University. In addition, staff in the UCI Office of Admissions and Relations with Schools can advise

students about the transferability of courses. UCTCAs for all California community colleges are available at <http://www.assist.org/>.

Four-Year Institutions

Unit credit is granted for courses consistent with the University of California's functions and which have been completed in colleges or universities accredited by the appropriate agencies. While limitations of credit may be imposed in certain subject areas, these are consonant with the curricula for all students in the University of California. No defined maximum number of units which can be earned toward the degree is set for students transferring from four-year institutions. However, see the Residence Requirement in the UCI Requirements section.

University of California Extension

Extension courses prefixed by XB, XD, XI, XR, XSB, and XSD are granted unit credit on the same basis as courses taken in residence at any accredited collegiate institution.

Students intending to transfer Extension course credit for a degree at another college or university should verify acceptance of the course with that institution. Resident students of the University of California must obtain the consent of the dean of their school or college prior to enrolling for credit in an Extension course. Extension courses are not accepted as part of the residence requirements of the University. Grades earned in University Extension are not used in calculating the University grade point average.

Decisions regarding the acceptability of extension courses taken in institutions other than the University of California rest with the UCI Office of Admissions and Relations with Schools. Decisions regarding the applicability of such courses toward specific degrees and majors rest with the student's academic dean.

COURSE CREDIT FOR WORK TAKEN ELSEWHERE

The policies above refer only to the unit transferability of courses and are uniformly implemented on all UC campuses. Thus, courses which are determined by the University of California to be transferable are assured only of being granted elective course credit. The application of transfer work to specific course and major requirements is determined by the student's academic dean.

The Irvine campus makes every effort to eliminate all barriers to orderly progress from California community colleges into UCI's programs. To this end, courses from many California community colleges have been reviewed by UCI faculty and approved as acceptable toward meeting lower-division major or general education requirements. Although course equivalencies for the general education requirement may be liberally interpreted for purposes of transfer, courses to be applied toward school and departmental major requirements must be more precisely equated with UCI courses in unit value and in content.

All California community colleges have entered into articulation agreements with UCI so that the specific application of their courses to UCI's general education, school, and/or departmental major requirements may be readily communicated to prospective transfer students. By careful selection of courses, it is possible for students to satisfy some or all of the lower-division requirements of their intended program or school prior to transfer. It is recommended that transfer students complete as much of the lower-division general education, school, and major requirements as possible prior to transferring to UCI. Articulation agreements are available at <http://www.assist.org/>.

Students are urged to consult community college counselors or the UCI Office of Admissions and Relations with Schools for information on planning a program for transfer. Prospective transfer students with specific questions about course work in their major should contact the respective school or department at UCI.

REGISTRATION AND OTHER PROCEDURES

Except where noted, all information applies to both undergraduate and graduate students. Additional information concerning registration and academic policies applying only to graduate students is presented in the Graduate Division section later in this *Catalogue*.

SCHEDULE OF CLASSES AND REGISTRATION INFORMATION

The *Schedule of Classes* contains current class offerings including time, room, instructor, capacity, number of enrolled students and number of students on the waitlist, Web links, status (open, wait-listed, full), and more. Access the *Schedule of Classes* on the Registrar's Web site at <http://www.reg.uci.edu>. The *Schedule of Classes* is available just prior to the beginning of each quarter's registration period (six weeks before the end of the quarter).

The Registrar's Web site also includes registration and related information such as quarterly academic calendars, final examination schedules, and the Academic Honesty policy. The Registrar's Web site is the most timely source of information on new or changed policies, procedures, and fees that could not be included in the *Catalogue* because of the latter's annual publication schedule.

Registration Procedures

To receive academic credit for regular courses and other supervised instruction or research, a student must be officially registered prior to undertaking such activities. **Registration does not become official until all required fees have been paid, and the student enrolls in classes. Students are responsible for ensuring that their course enrollments are correct.**

A Quarterly Academic Calendar of dates for enrollment and payment of fees is available on the Registrar's Web site at <http://www.reg.uci.edu>.

The general procedures for registration are:

1. Consult the appropriate academic advisor to develop an approved program of study. Secure necessary authorizations for courses that require special approval.
New undergraduate students entering in the fall should attend one of the Student-Parent Orientation Program (SPOP) sessions during the summer for academic advising and enrollment.
2. Enroll in classes during the published registration period.
3. Pay required fees online or to the Central Cashier on or before the published deadline. Other outstanding obligations must be satisfied at this time also.

NOTE: Late fee payment and/or late enrollment in classes may require the student to enroll in classes using the Add/Drop/Change Cards.

ENROLLING IN CLASSES

Using WebReg, students may add and drop classes, inquire about open sections, change their grading option or units for a variable-unit class, put themselves on an official waiting list, and list their confirmed class schedule. Immediate feedback on the availability of a class and a student's eligibility to enroll is provided; schedule changes may be made during the registration period or the adjustment period. Complete information about WebReg is available on the Registrar's Web site at <http://www.reg.uci.edu>.

Students who do not enroll in classes during the published registration period are subject to a \$50 late enrollment charge. Students enrolled in zero (0) units at the close of business at the end of the second week of instruction are assessed a \$50 late enrollment charge.

PAYMENT OF FEES

Registration fees are assessed quarterly and appear on ZOT Account Online (<http://www.fs.uci.edu>). Students who do not pay all required fees online or to the Central Cashier by the published fee payment deadline are subject to a \$50 late payment charge.

LATE REGISTRATION

The student is subject to *both* late charges if fees are not paid online or to the Central Cashier and the student does not enroll in classes by the registration deadlines, published in the Quarterly Academic Calendar on the Registrar's Web site at <http://www.reg.uci.edu>.

Students who have not paid fees and/or have not enrolled in classes by 4:30 p.m. at the end of the third week of instruction will lose their student status. Visit the Registrar's Web site at <http://www.reg.uci.edu> for more information on the loss of student status.

To avoid the expense and inconvenience of late registration, students are urged to enroll and pay fees well before the published registration deadlines. Students with financial need should make advance arrangements with the Office of Financial Aid and Scholarships, or another source, to have funds available when fees are due.

Late registration (payment of fees and/or enrollment in classes) is permitted only in exceptional circumstances with the authorization of the student's dean. A student who is allowed to apply late and, as a result, must pay fees and enroll late, is required to pay both late charges.

CHANGE OF CLASS ENROLLMENT

After officially enrolling, a student may add or drop classes, change sections of a course, change units in a variable unit course, or change the grading option by obtaining the approval of the instructor and by completing an Add/Drop/Change Card, available from the student's academic advising office or the Registrar's Office. In the first two weeks of classes, instructors may also authorize the use of Electronic Add/Drops (EAD) through WebReg for adding, dropping, and changing the grade option.

An undergraduate student may not enroll in more than 20 units or fewer than 12 units of course work during a given quarter without the permission of the student's academic dean or, for undecided/undeclared students, the Dean of the Division of Undergraduate Education. Changes to Pass/Not Pass grading must not cause the student to exceed the limitations to Pass/Not Pass enrollment. See the Pass/Not Pass section on pages 67–68.

Graduate students may not enroll in more than 16 or fewer than eight units of graduate or upper-division credit without prior approval of the departmental graduate advisor and the Dean of the Graduate Division.

Students may add classes through the sixth week of classes with the approval of the instructor in charge of the class.

To change the grading option of a class during the first two weeks of instruction, students must obtain the signature of the instructor in charge. The Add/Drop/Change Card must then be submitted to the Registrar's Office no later than the end of the second week of instruction. Changes in the grading option from the third through the tenth week require approval of the instructor and the student's academic dean.

Students may drop classes from the first through the sixth week of a quarter, inclusive, with the signature of the instructor in charge.

After the sixth week of instruction, students may add or drop a class only with the permission of the instructor and the student's academic dean. Permission to drop after the sixth week can be granted only if the student is not failing the course and is not subject to

disqualification, and only if dropping the course would be to the educational benefit of the student, of the class as a whole, or both.

A W grade, indicating "withdrawal," will be recorded for each course dropped after the end of the sixth week of instruction. W grades carry no grade points and are not calculated in the UCI GPA. The effective date of a "drop" is the date the approved Add/Drop/Change Card is received in the Registrar's Office.

Students are responsible for their enrollments. They must officially drop classes they have ceased attending. Students cannot simply discontinue attendance in a class; an Add/Drop/Change Card must be filed before the last day of instruction for the quarter.

The Registrar's Office cannot accept Add/Drop/Change Cards after the last day of instruction of a particular quarter.

NOTE: Instructors and deans may have earlier deadlines than those mentioned above.

WITHDRAWAL FROM THE UNIVERSITY

Undergraduate students who pay fees for a regular academic quarter and then decide to withdraw from the University must submit a Withdrawal form to the Registrar's Office after obtaining the signatures of their academic dean (or the Dean of the Division of Undergraduate Education, for undecided/undeclared students). Medical students must submit the form to the Curricular Affairs Office in the School of Medicine. This form serves two purposes: (1) a refund of fees, if applicable (see Fee Refund section); and (2) automatic withdrawal from classes.

The effective date of withdrawal is used in determining the percentage of fees to be refunded. This date is normally the date that the student submits the form to the appropriate dean for approval.

A W grade, indicating "withdrawal," will be recorded for each course in which enrollment is withdrawn if the student's effective date of withdrawal is after the end of the sixth week of classes. (See W grade in the Grading System section.)

A graduate student in good academic standing who wishes to withdraw and intends to return within one year should submit both the Withdrawal form and an application for a Leave of Absence. Further information appears in the Graduate Division section.

New undergraduate students are encouraged to seek advice from their admissions or academic counselor to understand the consequences of withdrawal and their eligibility to return.

If an undergraduate student plans to leave the University after completing all academic work for the latest quarter of enrollment and has not paid fees for the next quarter, a formal notice of withdrawal is not necessary.

LAPSE OF STATUS

A student's status may lapse for the following reasons:

Failure to pay required student fees by the prescribed deadline; failure to respond to official notices; failure to settle financial obligations when due or to make satisfactory arrangements with Campus Billing Services; failure to complete the admission health requirements; or failure to comply with admission conditions.

Each student who becomes subject to lapse of status is given advance notice and ample time to deal with the situation. However, if the student fails to respond to initial notices, action will be taken without further notice. A "hold" will be placed on all of the student's records and the student will be entitled to no further services of the University except assistance toward clearing the hold. A student must satisfy the conditions which caused the lapse of status before the hold can be cleared.

ENROLLMENT AT OTHER INSTITUTIONS

Various programs exist that enable currently registered UCI students in good standing to take courses at other UC campuses, as well as at California State University and California Community College campuses. More information is available from the Registrar's Office and from the academic advising offices.

ENROLLMENT IN UC IRVINE EXTENSION (ACCESS UCI)

If a UCI student wishes to enroll in a UC Irvine Extension course concurrently with enrollment in regular courses, the entire program of study must be approved in advance by the dean of the student's school (the Dean of the Division of Undergraduate Education, for undecided/undeclared students; the Dean of the Graduate Division, for graduate students). Fee information is available from the UC Irvine Extension Registration Office.

Change of Major

Each school or program has its own standards for change of major, and some majors are impacted, that is, more students apply than can be accommodated. Once a student selects a major, or decides to change majors, the student should visit the academic advising office for their prospective major to obtain current information about prerequisites, program planning, and policies and procedures. Information also is available on the Registrar's Web site at <http://www.reg.uci.edu>. In addition, a form called the Undergraduate Petition for Change of Major must be completed. The form is available from academic counselors and the Registrar's Office.

All schools with exceptional requirements have major-change criteria approved by the Academic Senate and published on the Division of Undergraduate Education Web site (<http://www.changeofmajor.uci.edu>). Students changing majors may meet the approved major-change criteria of the unit they wish to enter that are in place at the time of their change of major or those in effect up to one year before.

Transcripts and Verifications

RETENTION OF STUDENT RECORDS

The Registrar's Office maintains a permanent record of academic work completed by each student. Support documents for the academic record are kept for one year.

Students are strongly advised to carefully check their academic record quarterly. (Student copies of the academic record are available from the Registrar's Office shortly after the close of each quarter.) Discrepancies in the academic record should be reported to the Registrar immediately. After one year, it is assumed that the student accepts the accuracy of their academic record, and supporting source documents are destroyed.

Student academic records may not be changed after one year or, in some cases, in less than one year if Academic Senate regulations specify a shorter time limit. For example, the notation "NR," which means that no grade has been reported, must be removed within one quarter of subsequent enrollment or it will automatically be converted to the grade "F" or "NP" (under Senate Regulation IR 345).

TRANSCRIPT OF RECORDS

The official transcript of a student's academic record will be released only upon receipt of a signed request from the student authorizing the release. All outstanding debts to the University (with the exception of long-term financial aid loans not yet due and payable) must be paid in full before a transcript will be released. There is a \$10 fee for each official transcript. See the instructions on the Registrar's Web site at <http://www.reg.uci.edu>.

Requests for transcripts by anyone other than the student whose transcript is being sought can be honored only (1) if the request is accompanied by a written authorization signed by the student whose transcript is sought, and (2) upon approval of the Registrar.

An unofficial transcript is available, free of charge, at the Registrar's Office, to students who present photo identification. Currently enrolled students can view their grades in StudentAccess at <http://www.reg.uci.edu>.

VERIFICATION OF STUDENT STATUS

The Registrar's Office provides verifications of student status. Verifications may be needed for reference checks, bank loans, applications for good-student-driver insurance rates, and social security payments. There is a \$10 fee for each verification, however verifications for the purpose of student loan deferments are free of charge. (See the instructions on the Registrar's Web site at <http://www.reg.uci.edu>.) For verification purposes, enrollment in 12 units or more in regular sessions is considered full-time status; enrollment in 6.0–11.9 units is considered half-time status; enrollment in 5.9 units or less is considered less than half-time status. Enrollment in eight units is considered full-time status for summer session.

Readmission

UNDERGRADUATE STUDENT READMISSION

Students are strongly urged to consider the readmission policy in formulating plans for leaving or returning to UCI. Every effort will be made to readmit UCI students who were in good academic standing at the time they ceased attending and who have filed readmission applications by the deadline. Former UCI students who wish to be readmitted should contact the undergraduate advising office of the school or program which offers their intended major.

Readmission is subject to dean's signature/approval and campus deadlines (August 1 for fall quarter, November 1 for winter quarter, and February 1 for spring quarter). To apply for readmission, a student must first pay a nonrefundable \$60 Application Fee at the Cashier's Office, and then file the Application for Readmission with the Registrar's Office. Remittance of this fee may be made by check or money order made payable to UC Regents.

New undergraduate students who cancel registration prior to the first day of the quarter must reapply to UCI; they are not eligible to file for readmission as described above.

If a student has been academically disqualified from the University or has left the University while on probation or is subject to disqualification, or has lost their student status, the student must apply for readmission. The application, however, is subject to the approval of the dean of the school which the student hopes to enter.

Transcripts for work taken at other institutions must be submitted as part of the application.

GRADUATE STUDENT READMISSION

A graduate student who withdraws and has not been granted a leave of absence approved by the Dean of the Graduate Division is considered to have lapsed student status (i.e., no longer has student status). A student whose status has lapsed must re-apply to a graduate program and can resume graduate study only if readmitted. The online *Application for Graduate Study*, including the nonrefundable application fee, must be submitted by the published deadline for graduate admission applications. Refer to the statement on readmission which appears in the Graduate Division section for additional information.

Commencement

UCI Commencement ceremonies are held each June for all students who graduate any quarter of that academic year. Additional information is available from the Commencement Office Web site at <http://www.commencement.uci.edu/>.

Application for Graduation. In order to receive a degree, an undergraduate student must submit an online Application for Graduation via the StudentAccess link at <http://www.reg.uci.edu> no later than the published deadline. Specific deadline dates for filing the application are established quarterly so that candidates' academic records can be reviewed to verify that all graduation requirements have been met. Students should contact their academic advising office for deadline and degree audit information.

Diplomas. Students are advised by mail when their diplomas are available, which is four months after the quarter in which the student graduated. Students may pick up their diplomas at the Registrar's Office or authorize the Registrar to send their diplomas by certified mail, or registered air mail to locations outside the United States. All outstanding debts due to the University, with the exception of long-term financial aid loans, must be paid in full before a student's diploma will be released.

ACADEMIC REGULATIONS AND PROCEDURES

Except where noted, all information applies to both undergraduate and graduate students. Additional information concerning academic regulations applying only to graduate students is included in the Graduate Division section.

Grading System

- A — Excellent (4.0 grade points per unit)
- B — Good (3.0 grade points per unit)
- C — Average (2.0 grade points per unit)
- D — Lowest passing grade (1.0 grade point per unit)
- F — Not passing (no grade points)
- I — Incomplete
- P — Pass (equal to grade C or better)
- NP— Not Pass (equal to grade C- or below)
- S — Satisfactory (equal to grade B or better; graduate students only in courses designated by the Graduate Council)
- U — Unsatisfactory (graduate students only in courses so designated by the Graduate Council)
- IP — In Progress (restricted to certain sequential courses, so designated by the Subcommittee on Courses or Graduate Council, for which the final quarter grade of a multiquarter course is assigned to the previous quarter(s) of the sequence).
- NR— No Report (given when an instructor does not submit final grades for a class or individual grades for students whose names appear on the official class roster; NR becomes an F or NP after one quarter of subsequent enrollment or at the end of the quarter immediately preceding award of the degree, whichever comes first. The instructor may replace an NR with a grade within one quarter of subsequent enrollment or may authorize the student to drop the class, which would result in the NR becoming a W).
- UR— Unauthorized Repeat. A UR notation is recorded for the grade when a student already has a passing grade for a nonrepeatable course and has taken it again.
- W — Withdrawal. A W grade is recorded on a student's permanent record for each course a student drops after the end of the sixth

week of instruction in a quarter. Courses in which a W has been entered on a student's record carry no grade points, are not calculated in the UCI GPA, and will not be considered as courses attempted in assessing the student's satisfaction of the normal progress requirement.

Plus and minus suffixes may be attached to the grades A, B, C, and D.

The academic record may not be altered except in those cases where a documented procedural or clerical error has occurred.

GRADE POINTS AND GRADE POINT AVERAGE

Grade points are assigned on a four point basis: A, 4 points per unit; B, 3 points per unit; C, 2 points per unit; D, 1 point per unit; F and I, zero points. Plus or minus suffixes modify the above by plus or minus 0.3 grade point per unit, with the exception of the A+ grade which is assigned 4 points per unit.

Requirements for a bachelor's degree include the accumulation of baccalaureate credit for a minimum of 180 quarter units with an average of at least C (grade point average of at least 2.0). A course at UCI normally offers four quarter units of credit, and, in the following text, the term "course" may be understood to carry four units. The grade point average is the sum of all accumulated grade points (grade points earned in a course taken for a letter grade times the unit value of the course) divided by the sum of all units attempted. P, NP, S, U, NR, IP, and I grades, as well as workload credit, are excluded in computing grade point average.

Baccalaureate credit counts toward degree requirements and is used to compute the grade point average. Workload credit is used to determine full-time status for financial aid, housing, student loans, and other purposes. For most courses at UCI, baccalaureate credit and workload credit are identical. Courses differing in this credit or "workload credit only" courses are identified in the course description.

It should be noted that final grades as reported by professors are normally permanent and final. A professor may not change a final grade except to correct a clerical or procedural error. Clerical or procedural errors should be corrected within one regular academic quarter after the grade is assigned. No grade may be revised by reexamination or, with the exception of I and IP grades, by completing additional work. If a student is dissatisfied with a grade, the student should review their work with the instructor and receive an explanation of the grade assigned. A grade may be appealed on any reasonable grounds to the instructor, the chair of the department, and the dean of the school. If the matter is not resolved, the student may go for counsel to the Office of the University Ombudsman.

Under circumstances explained in *The Manual of the Irvine Division of the Academic Senate* (Appendix II: Student Academic Grievance Procedures Relating to Nondiscrimination), a grade may be changed if the Academic Grievance Panel has determined that the grade was assigned on the basis of discrimination.

INCOMPLETE GRADES

An I or Incomplete grade is assigned to a student by an instructor when the student's work is of passing quality but is incomplete because of circumstances beyond the student's control, and when the student has been temporarily excused by the instructor from completing the quarter's work.

For currently enrolled students, the maximum time limit for making up an I grade is three quarters of enrollment. After this time the I grade can no longer be replaced and will appear permanently on the record. *The instructor is not obligated to allow the maximum three-quarter period.* The student should consult with the instructor to determine how the Incomplete may be made up. It is strongly recommended that the student and the instructor prepare a written agreement specifying how the Incomplete can be made up

and the deadline for doing so. Once the work is completed within the time agreed upon by the instructor, the student should ask the instructor to submit an Academic Record Change Request to the advising office of the school in which the course was offered. The student should *not* reenroll in the course to make up the Incomplete.

Students not currently enrolled at UCI have a maximum of one calendar year in which to replace an Incomplete grade. However, in exceptional individual cases involving the student's prolonged inability to pursue a course of study, extensions of up to two additional years may be granted by the instructor with the approval of the dean of the unit offering the course; students must petition for such an extension within one calendar year following the assignment of the Incomplete grade.

Courses graded I carry no grade points and are not included in computation of the grade point average which appears on the student's permanent record. Any I grade will remain permanently on the record unless the work is completed and a grade assigned as described above.

University of California regulations require a grade point average of 2.0 for all units attempted in order to receive a bachelor's degree. *Only when a check for satisfaction of graduation requirements is made are I's treated as F's.* If the student's overall average is at least a 2.0, including the Incomplete grades computed as F's, then the student may graduate. If the Incomplete grades computed as F's decrease the student's average below a 2.0, the student may not graduate until enough I grades have been made up to bring the average up to a 2.0 and this must be done within the time limits specified above.

PASS/NOT PASS

The Pass/Not Pass option is available to encourage students to enroll in courses outside their major field. Courses graded Pass or Not Pass are not included in computation of the grade point average which appears on a student's permanent record. However, if a student receives a Pass in a class, course and unit credit for the class is received, except as provided below. If a Not Pass is received, the student receives no credit for the class.

Some courses are designated by academic units as Pass/Not Pass Only. Students do not have the option of taking these courses for a letter grade.

The use of Pass/Not Pass is governed by all of the following provisions:

1. A student in good standing may take up to an average of four units per quarter on a Pass/Not Pass basis.
2. In addition, students may count a total of 12 units of courses designated Pass/Not Pass Only toward their graduation requirements.
3. A student who earns a grade of C (2.0) or better will have a Pass/Not Pass grade recorded as Pass. If the student earns a grade of C- or below, the grade will be recorded as a Not Pass, and no unit credit will be received for the course. In both cases, the student's grade will not be computed into the grade point average.
4. Courses taken under the Pass/Not Pass option may count toward the unit requirement for the bachelor's degree and toward the general education requirement. With the exception of courses designated Pass/Not Pass Only, courses taken Pass/Not Pass may not be used to satisfy specific course requirements of the student's school and major, unless authorized by the appropriate dean. No more than two courses applied to a minor may be taken Pass/Not Pass.

Graduate students may take one course (up to four units) per quarter on a Pass/Not Pass basis. However, such courses are not considered part of the student's graduate program, may not be applied to the requirements for an advanced degree, and do not

count toward the minimum number of units for which a graduate student must enroll.

5. Changes to or from the Pass/Not Pass option can be made during the enrollment period. No changes can be made after the first two weeks of classes without the approval of the dean of the student's school. No changes in the Pass/Not Pass option can be made after the last day of instruction of the quarter.
6. A student on academic probation may not enroll in a course with the Pass/Not Pass option unless the course is offered on that basis only.

SATISFACTORY/UNSATISFACTORY GRADES (GRADUATE STUDENTS ONLY)

Satisfactory/Unsatisfactory grading, unlike Pass/Not Pass, is not a student option. With the consent of the academic units involved, and upon approval of the Graduate Council, individual study and research or other individual graduate work undertaken by a graduate student may be evaluated by means of the grades S or U. Also, with the approval of the Graduate Council, certain graduate courses are graded S/U Only. Additionally, the grade S or U may be assigned provisionally in each but the last quarter of a graduate course extending over more than one quarter. Upon completion of the last quarter, letter grades (A to F) replace such provisional grades. When a grade of S or U has been assigned on a provisional basis and the student does not complete all quarters of the course sequence, the instructor may assign a final letter grade or the grade of I to replace the S or U, or let the grade of S or U stand as a final grade. The grade S is defined as equivalent to a grade of B (3.0) or better. No credit will be allowed for work graded Unsatisfactory.

NOTE: When adding a course via WebReg or add card, there is no option for S/U. In order to select S/U, students must first select the grade option and then, once the course has started, inform the professor of their preference for the S/U option, not a letter grade. (The Pass/Not Pass option does not correlate to the S/U option and should not be selected.)

GRADES IN PROGRESS

IP is a transcript notation, restricted to sequential courses which extend over two or more quarters, indicating that the final grade for the individual quarters will not be assigned until the last quarter of the sequence is completed. The grade for the final quarter is then assigned for all of the previous quarters of the sequence. No credit is given until the student has completed the entire sequence. IP notations may be given only for courses designated by the Academic Senate Subcommittee on Courses or Graduate Council for use of this notation. IP notations are not included in computations of the student's grade point average and do not contribute to the number of quarter units completed.

GRADES NOT REPORTED

A No Report (NR) is assigned when the student's name was on the official class roster but the instructor did not submit a final grade. A student who receives an NR must immediately contact the instructor and arrange for the removal or replacement of the NR. An NR becomes an F or NP after one quarter of subsequent enrollment or at the end of the quarter immediately preceding award of the degree, whichever comes first. NR transcript notations are not included in computations of the grade point average and do not contribute to the number of quarter units completed.

REPETITION OF COURSES

Undergraduate. Repetition of courses by undergraduate students not authorized by the Subcommittee on Courses to be taken more than once for credit is subject to the following provisions. Undergraduates may repeat courses only when grades of C-, D+, D, D-, F, or NP were received. (A C- earned before fall quarter, 1984, is

not repeatable.) Unit credit for courses so repeated will be given only once, but the grade assigned at each enrollment shall be permanently recorded. In computing the grade point average of an undergraduate with repeated courses in which a C-, D+, D, D-, F, or NP (if repeated for a letter grade) was received, only the most recently received grades and grade points shall be used for the first 16 units repeated. In case of further repetitions, the grade point average shall be based on all additional grades assigned. Repetition of a course more than once requires approval in all instances of the School (or equivalent) in which the student is enrolled.

All courses which were originally taken for a letter grade must be repeated for a letter grade. Courses originally taken on a Pass/Not Pass basis may be repeated for a Pass/Not Pass or for a letter grade if the course is so offered.

Information regarding the repetition of language other than English courses is available in the School of Humanities section.

Graduate. A graduate student may repeat only once a course in which a grade below B or a grade of U was received. Only the most recently earned grade shall be used in computing the student's grade point average for the first eight units of repeated work; thereafter both the earlier and the later grades will be used.

Duplicate Credit Prohibited. Other than the exceptions related to the repeat of deficient grades as noted above, and the exceptions related to Advanced Placement and International Baccalaureate credit (see page 44), undergraduate and graduate students may not receive unit credit or earn grade points for college courses in which the content duplicates material of a previously completed course or examination for which the student has been granted college credit.

If a student repeats a course for which a passing grade has already been received and the course is not approved as repeatable for credit, the student will receive a UR and no credit will be given.

SATISFACTION OF THE WRITING REQUIREMENT

Students enrolled at UCI may take only UCI courses in satisfaction of the lower-division and upper-division writing requirements. Continuing UCI students may not take summer courses at another institution to satisfy lower-division or upper-division writing requirements. The two courses taken to fulfill the lower-division writing requirement must be completed with a grade of C or better (or a Pass or Credit grade equivalent to C).

1. Students who fail to attain a letter grade of C or better in Writing 37 must repeat the course or enroll in the equivalent. It is recommended that these students enroll in Writing 39A or 39AP followed by 39B-C to assure completion of this requirement. Students who fail to attain a grade of C or better in Writing 39C must repeat the course.
2. Students who fail to attain a grade of C or better in one or both courses of the Writing 39B-C sequence must repeat the course or courses in question.
3. Students who fail to attain a grade of C or better in at least two quarters of the writing component of the Humanities Core Course after satisfying the UC Entry Level Writing requirement by attaining a grade of C or better in Humanities 1A S/A, should substitute Writing 39C if they need one quarter of additional work to complete the requirement, or Writing 39B-C if they need two quarters to complete the requirement. Students who fail to attain a grade of C or better in Humanities 1A S/A, enroll in Humanities 1B S/A and attain a grade of C or better, but fail to attain a grade of C or better in the writing component of Humanities 1C, should substitute Writing 39C to complete the requirement.
4. Students who fail to attain a grade of C or better in either Humanities 1A S/A or Humanities 1B S/A, should substitute Writing 39A-B-C to complete the requirement.

5. Students who fail to attain a grade of C (or Pass) or better in each quarter of a First-Year Integrated Program (FIP) sequence should see their academic counselor.

The course taken to fulfill the upper-division writing requirement must be completed with a grade of C or better (or a Pass or Credit grade equivalent to C). See the UCI Requirements section for further information.

Students who have not completed the lower-division writing requirement before the beginning of their seventh quarter at UCI will be subject to probation. Students transferring to UCI normally should have satisfied the lower-division writing requirement before entering UCI; if, however, they have not, they must complete it within their first three quarters of enrollment or they will be subject to probation. Academic English/English as a Second Language students must complete the lower-division writing requirement before the beginning of the seventh quarter following the completion of their AE/ESL courses or they will be subject to probation.

Credit by Examination

An enrolled student may obtain credit for course material previously mastered by taking a special examination administered by a faculty member who normally teaches that course. Detailed procedures for obtaining credit by examination may be obtained from the advising office of the school which offers the course. Approval of any petition for credit by examination must be obtained from the dean or designee of that school *before* the examination can be administered. After the dean has signed the petition, the student must have it validated by paying a \$5 Credit by Examination service charge at the Cashier's Office.

The instructor giving the examination retains the prerogative (1) to decide whether the course can be taken by examination, (2) to determine the form such an examination may take, and (3) to stipulate whether the grade will be reported as Pass/Not Pass or as a letter grade (e.g., A, B, C, etc.).

A student may take the examination for a particular course only one time. After receiving the grade, the student may accept it or reject it. If the student is not satisfied with the grade received on the examination, the student may choose not to receive credit or a grade. If the student does choose to accept the results of the examination, grades and grade points (if applicable) will be entered on the record in the same manner as those for regular courses of instruction.

Independent Study: Undergraduates Only

A unique class option is available primarily to upper-division students at UCI. The independent-study option allows the student to plan with the instructor a course having a clear relationship to the student's academic program. The plan for the course will include a reading list, a group of assignments, examinations, papers, or similar evidence of intellectual achievement on which academic credit will be based. A description of the course and of its requirements must be approved by the instructor responsible for it and by the department chair or dean. Independent-study credit for undergraduates is limited to five units per quarter.

Final Examinations

Final examinations, or their equivalent, are obligatory in all undergraduate courses except laboratory and studio courses, as individually determined by the Subcommittee on Courses. Normally each such examination shall be conducted in writing and must be completed by all participants by the time scheduled by the Registrar for the quarter in question. These examinations may not exceed three hours duration. Special arrangements may be made for disabled students.

Examinations normally are not required in laboratory and studio courses. At its option, the department concerned may require a final examination subject to prior announcement in the *Schedule of Classes* for the term.

Final grades from professors are due in the Registrar's Office within 72 hours after the final examination.

Student Copies of Quarterly Grades

After each quarter, a complimentary copy of the student's permanent record is available from the Registrar's Office. On the copy, the student will find grades for all the quarters taken at UCI, a computation of grade point average at the University of California, and a list of the University requirements completed (UC Entry Level Writing, American History and Institutions).

Declaration of Major

All students are required to declare a major by the time they reach junior status (90 units excluding college work completed prior to high school graduation) or they will become subject to disqualification from further registration in the University.

Undergraduate Scholarship Requirements

Requirements for a bachelor's degree include the accumulation of credit for a minimum of 180 quarter units with an average of at least C (grade point average of at least 2.0).

CLASS LEVEL

Undergraduate students are classified as freshman, sophomore, junior, or senior students, based on the total number of units completed, as follows:

Freshman	0 — 44.9
Sophomore	45.0 — 89.9
Junior	90.0 — 134.9
Senior	135 +

COURSE LOAD LIMITS

An undergraduate may enroll in as few as 12 units or as many as 20 units. To enroll for more than 20 units or fewer than 12 units, students must obtain the authorization of their dean or, for

undecided/undeclared students, the Dean of the Division of Undergraduate Education. Information about the Reduced-Fee Part-Time Study Program is available in the Expenses and Fees section of the *Catalogue*.

ACADEMIC STANDING

To remain in good academic standing a student must maintain a grade point average of at least 2.0 and make progress toward the degree at a satisfactory rate.

An undergraduate student normally is subject to academic probation if at the end of any quarter the grade point average for that quarter, or the cumulative grade point average, is less than 2.0.

A student whose grade point average falls below a 1.5 for any quarter, or who after two consecutive quarters on probation has not achieved a cumulative grade point average of 2.0 or a satisfactory rate of progress, is subject to disqualification.

NORMAL PROGRESS REQUIREMENT

Regular undergraduate students will become subject to probation or to disqualification from further registration in the University if they fail to make normal progress toward the baccalaureate degree, if they fail to declare a major by the time they reach junior status (90 units excluding college work completed prior to high school graduation), or after declaring a major, if they fail to follow the program of study required by the academic unit of their major. Students who have selected undeclared status within a school may be subject to probation or to disqualification if they fail to follow a program of study leading to completion of lower-division school requirements.

A. Normal progress for all regular undergraduate students is defined in the following table, in terms of quarter units completed at the end of quarters enrolled.

Quarter	Normal Progress	Subject to Probation	Subject to Disqualification
1	12–15	8–11	7
2	26–30	18–25	17
3	41–45	27–40	26
4	56–60	41–55	40
5	71–75	56–70	55
6	86–90	72–85	71
7	101–105	88–100	87
8	116–120	105–115	104
9	132–135	124–131	123
10	148–150	141–147	140
11	164–165	159–163	158
12	180	—	—

NOTE: This table is effective fall 2005. Students who began college prior to fall 2005 should consult their academic counselor.

B. Status Determination:

- Undeclared students who have completed the number of units specified in the given quarter of their enrollment, as shown in the table above, and are following a course of study prescribed by their school are making "Normal Progress."
- Students who have declared a major must follow the program of study required for their major, as well as complete the units specified in the given quarter of their enrollment, as shown in the table above, in order to make "Normal Progress." Students must declare a major by the time they reach junior status (90 units excluding college work completed prior to high school graduation).
- Students who fail to make Normal Progress as defined in (1) or (2) above are subject to being placed on probation by the faculty of their academic unit or its designated agent, or for first-year undecided/undeclared students, by the Faculty Board for Undecided/Undeclared Students or its designated agent.

C. Students who have completed two consecutive quarters on academic probation without having achieved at the end of that period at least the normal rate of progress specified under (A) and (B) above are subject to disqualification.

D. For purposes of calculating "Normal Progress," "Subject to Probation," and "Subject to Disqualification," students admitted to the University with advanced standing will be classified with respect to quarter of enrollment at entrance in accordance with the following table:

Quarter at Entrance	Advanced Standing Quarter Units at Entrance
1	0–14
2	15–29
3	30–44
4	45–59
5	60–74
6	75–89
7	90–104
8	105–119
9	120–134
10	135–149

- E. Units earned under the following two circumstances are not to be counted toward determination of the quarter at entrance under (D) above: (1) Advanced Placement Examination; (2) concurrent enrollment in college courses while in high school.
- F. UCI students will have the units and grade points of courses taken through Access UCI transferred to their record when they have been admitted or readmitted to regular student status. Units taken through Access UCI will not be counted toward determination of Advanced Standing Quarter Units at Entrance if they are taken under the circumstances cited in sub-section E.
- G. The quarter of enrollment at entrance of students (including baccalaureate degree candidates who already hold a baccalaureate degree) seeking admission to the University with 150 or more advanced standing units will be determined by the faculty offering the curriculum in which such students seek to enroll. This determination will be made consistent with the program required for such students to obtain the desired degree and with University residence requirements.
- H. For purposes of this regulation students will be understood to have declared a major when they have been formally accepted by the faculty of a degree-granting program or its designated agent to pursue a defined course of study leading to a baccalaureate degree.
- I. All undergraduate students are expected to graduate when they have completed the baccalaureate requirements of their declared major or majors.

The Normal Progress requirement described above is not to be confused with the Normal Academic Progress requirement for Financial Aid. The former has to do with academic standing, the latter with receipt of financial aid.

Probation is not a necessary step before disqualification. If a student becomes subject to disqualification, the complete record of grades and other accomplishments will be carefully reviewed by the responsible faculty authorities of the student's school or, for undecided/undeclared students, by a faculty authority designated by the Faculty Board for Undecided/Undeclared Students. If the record indicates little probability that the student will be able to meet the academic standards of the University of California, the student will be disqualified from further enrollment. Faculties of undergraduate-degree-granting units and the Faculty Board for Undecided/Undeclared Students are obliged by Academic Senate regulations to maintain a procedure under which a student may contest disqualification actions.

In order to transfer from one campus to another in the University of California or from one UCI school to another, a student who has been disqualified or who is on academic probation must obtain the approval of the appropriate faculty, or its designated agent, into whose jurisdiction the student seeks to transfer.

HONORS

Information about honors opportunities at UCI is found in the Division of Undergraduate Education section and the academic unit sections.

Quarterly Undergraduate Honors

Quarterly undergraduate honors are awarded in each school to students who achieve a quarterly grade point average of 3.5 or better in a minimum of 12 graded units.

Honors at Graduation

Of the graduating seniors, no more than 12 percent will receive academic honors: approximately 1 percent *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*. The criteria used by each school in selecting candidates for these honors are included in each school's section of the *Catalogue*. A general criterion is that students must have completed at least 72 units in residence at a University of California campus. The student's cumulative record at the end of the final quarter is the basis for consideration for awarding Latin Honors. See page 52 for additional information.

Graduate Scholarship Requirements

For a graduate student, only the grades A+, A, A-, B+, B, and S represent satisfactory scholarship and are accepted toward the graduate degree. Students are expected to maintain satisfactory academic progress at all times. Information concerning graduate student course load requirements and satisfactory academic progress is given in the Graduate Division section.

Credits From Other Institutions or University Extension: Undergraduate Students

UCI undergraduate students who plan to enroll in courses at another institution or University Extension in either a summer or regular session and to use such courses to satisfy any UCI requirements should first consult with and secure prior approval from the academic dean or chair of their major who will determine if the credits are applicable to major and general education requirements.

UCI undergraduate students *must* submit an official transcript of all course work earned at another institution or college to the Office of Admissions and Relations with Schools. If such courses are determined by the Office of Admissions and Relations with Schools to be transferable, do not duplicate other credit granted, and do not exceed limitations of credit, then the units earned may be applied toward the total required for graduation.

Credits From Other Institutions or University Extension: Graduate Students

In accordance with UC Academic Senate policy, graduate students may be granted unit credit (not grade credit) toward a master's degree for a limited number of acceptable graduate-level courses completed at another institution or through University Extension before enrollment in graduate study at UCI. To receive such credit, the student must submit a formal petition, including an original transcript, after enrollment in graduate study. Approval of the student's graduate advisor and the Dean of the Graduate Division is required. The petition may be downloaded from <http://www.grad/uci.edu/forms/>.

While enrolled at UCI a graduate student may receive unit credit for graduate-level courses completed at another institution or through UCI Extension only with the prior approval of the student's graduate advisor and the Dean of the Graduate Division.

See the Graduate Division section for further information about graduate transfer credit and the University's Intercampus Exchange Program.

SUPPLEMENTARY EDUCATIONAL PROGRAMS

Summer Session and UC Irvine Extension

Gary W. Matkin, Dean, Continuing Education

SUMMER SESSION

Several summer sessions are held on the Irvine campus. The summer 2010 schedule is: Session I, June 21–July 28; Session II, August 2–September 8; overlapping 10-week session, June 21–August 27. Those who enroll in these sessions and take an academic program equivalent to a regular quarter may accelerate their progress toward a degree.

Courses offered include a wide variety from the regular session, supplemented by experimental offerings available only during the summer, including courses offered online. Admission is open to all university students, high school graduates, community members, and qualified high school students who have completed their junior year. Admission to Summer Session does not constitute admission to a regular session of the University; therefore, official transcripts of educational records are not required.

In addition to the regular curriculum, Summer Session also coordinates summer travel-study programs providing students with a sampling of collegiate life abroad. Programs are available in the following countries: England, Italy, Chile, Costa Rica, Japan, Spain, and Switzerland.

Information is available from the Summer Session Office in the UC Irvine Extension Building; telephone (949) 824-5493. Application forms and course listings are available in March.

Freshman Summer Start Program

Incoming first-year students are invited to take part in the Freshman Summer Start Program (FSSP). Students begin college during the summer, when the campus is more accessible and relaxed. They will be part of a small, highly motivated group of incoming students and have an opportunity to become familiar with the academic rigor and social scene of UCI under ideal conditions of maximum opportunity and support. For more information, including FSSP fees and schedules, visit <http://www.summer.uci.edu/fssp> or call (949) 824-0234.

UC IRVINE EXTENSION

UC Irvine Extension serves the continuing education needs of the community by providing more than 2,000 credit and noncredit courses, certificate programs, specialized studies, seminars, workshops, and lecture programs annually. Call (949) 824-5414 for a free quarterly catalogue.

Individual courses promote career advancement and lifelong learning, while certificate programs offer the opportunity for a distinctive achievement in a wide range of fields. Certificate programs are a sequence of courses designed to develop in-depth expertise to improve career opportunities. Extension offers 42 certificates and 17 specialized studies programs in fields as diverse as information technologies, engineering, management and leadership, appraisal studies of fine and decorative arts, teacher education, medical product development, finance and investor relations, and paralegal.

To meet the specialized, in-house training needs of business and industry, UC Irvine Extension develops custom education and training programs. Free evaluations of training needs are available from the director of corporate training at (949) 824-1847.

In addition, Extension offers a wide variety of cultural enrichment programs in such areas as art and cultural appreciation, literature, creative writing, personal wellness, foreign language, film, screenwriting, and photography.

Most courses are held on campus in the evenings, on weekends, as well as online to accommodate the working professional locally, nationally, and internationally.

The general public also has an opportunity to take regular UCI courses without formal admission to the University, through Extension's ACCESS UCI Program (also known as concurrent enrollment). Courses are available on a space-available basis with the approval of the course instructor and/or academic department. Call (949) 824-5414 for more information.

Several unique programs complement UC Irvine Extension. The Women's Opportunities Center (WOC) provides resources and support for individuals who are in need of career and life planning programs and services; telephone (949) 824-7128. The Osher Lifelong Learning Institute offers a wide variety of educational and cultural programs for the retired or semi-retired intellectually active adult, all for one annual membership fee. Institute members are also eligible for a 30 percent discount on most Extension courses on a space-available basis. For more information, call (949) 451-1403.

UC Irvine Extension also is actively involved in OCTaNe@UCI, UCI's contribution to innovation-based economic growth in Orange County. OCTaNe@UCI designs and executes programs that connect Orange County companies, entrepreneurs, and investors with UCI researchers and their projects. These programs are specifically intended to benefit entrepreneurs and companies in the information technology and biomedical industries. OCTaNe@UCI provides a forum to exchange ideas to accelerate and foster innovation. Program attendees include entrepreneurs, venture capitalists, investors, large-company executives, UCI researchers, and students. For more information, visit <http://www.octane.uci.edu>.

UC Irvine is also a member of the OpenCourseWare Consortium (OCW). In joining the consortium, UCI has committed to strengthening the Open Educational Resource (OER) movement, placing UCI on a growing list of prestigious U.S. and international universities already members of the OCW Consortium, including the Johns Hopkins Bloomberg School of Public Health, Kyoto University of Japan, Massachusetts Institute of Technology, National Institute of Technology at Tiruchirappalli in India, Paris Tech Graduate School, The Open University of United Kingdom, Tufts University, University of Notre Dame, and Yale. UC Irvine's membership in the consortium is consistent with its public and land-grant missions and its desire to play a significant role in contributing to the social welfare of the state, the nation, and the world. OER showcases the University's top instructional efforts and makes course materials free for everyone in the world. Availability of the learning assets and course materials is significant for educators, students, and self-learners. For more information, visit <http://ocw.uci.edu>.

UC Irvine Extension English and Certificates for Internationals (ECI)

UC Irvine Extension's ESL and Certificate programs prepare international students to pursue their educational objectives in U.S. colleges and universities, as well as provide opportunities for professional development. An intensive English program offers core courses in grammar, writing, reading and vocabulary development. Other topics include conversation and discussion strategies, listening, note-taking, debate, and public speaking. Elective courses such

as TOEFL test preparation, business English, and idioms also are available.

Professional certificate programs for international students and professionals are offered in an accelerated full-time format. The fast-paced educational format helps individuals become more effective in their English communication skills, increasing their career potential in today's competitive global business environment.

Requests for information should be addressed to English and Certificates for Internationals, UC Irvine Extension, P.O. Box 6050, Irvine, CA 92616-6050; telephone (949) 824-5991.

An Academic English/ESL program is offered by the School of Humanities to students who have been admitted to UCI. Refer to the section on Admission of International Students in this *Catalogue* for information.

ROTC

Although actual ROTC courses are not taught on the UCI campus, a cross-town agreement allows qualified UCI students to participate in the Air Force Reserve Officers Training Corps (AFROTC) or the Army Reserve Officer Training Corps (Army ROTC). Academic units earned in these programs are counted as elective units toward fulfillment of UCI graduation requirements. Additional information is available from the Office of Admissions and Relations with Schools, 204 Aldrich Hall.

AIR FORCE ROTC

Through arrangements with the University of California, Los Angeles, Loyola Marymount University, and the University of Southern California, two- through four-year AFROTC programs are available to all qualified UCI students. Students interested in the two-year program must apply prior to January 15 of the calendar year they wish to enter the program. Successful completion of as little as four semesters or six quarters of AFROTC upper-division academic courses and leadership laboratories can lead to a commission as a Second Lieutenant in the Air Force.

AFROTC offers a variety of two-, three-, and four-year scholarships, many of which pay the full cost of educational instruction and fees. Four-year scholarships for incoming students must be applied for before December 1 in the year prior to entering college. Scholarships provide tuition and fee payments and a tax-free stipend of at least \$300 per month. More information is available from the Department of Aerospace Studies, University of California, Los Angeles, (310) 825-1742, e-mail: afrotc@ucla.edu, <http://www.sscnet.ucla.edu/afrotc>. Other detachments are located at Loyola Marymount University, (310) 338-2770, e-mail: det040@LMU.edu, <http://www.lmu.edu/afrotc>; and the University of Southern California, Colonel Scott Grunwald at (213) 740-2670, e-mail: afrotcdet060@rotc.usc.edu.

ARMY ROTC

Two-, three-, and four-year Army ROTC programs are available to all qualified UCI students. Successful completion of the ROTC program leads to a commission as a Second Lieutenant in the U.S. Army (Active, Reserve, or National Guard). Two-, three-, and four-year competitive scholarships which provide tuition and fee payments at UCI, payments for books, and stipends ranging from \$350–500 per month are available. Qualified students currently serving in any Reserve or National Guard unit may transfer to the Army ROTC program to complete their commissioning requirements.

More information is available from the Department of Military Science, California State University, Long Beach, (562) 985-5766 or -8108, e-mail: csulb@trojanrotc.org, <http://www.trojanrotc.org>.

LIFE ON CAMPUS

Student-Produced Media

UCI students publish the weekly campus newspaper entitled the *New University*; operate a radio station, **KUCI (88.9 FM)**; produce *Anthology*, the UCI yearbook; and produce various club and organization alternative news communications.

UCI Bookstore

The UCI Bookstore is owned and operated by the University of California to serve the students, faculty, and staff of UCI. Located in the UCI Student Center, the UCI Bookstore stocks all required or recommended textbooks, supplies, and exam materials that students need for their courses. The UCI Bookstore also has an extensive book collection to inspire, inform, and entertain the campus reader, from novels to technical and cultural reference books, to poetry, history, law, and medical books. UCI Anteater clothing and gifts are designed to boost school spirit. In addition, within the Bookstore, the UCI Computer Store carries computers, software, and accessories to fulfill technical dreams.

The UCI Bookstore is open Monday through Thursday from 8 a.m. to 7 p.m., on Friday from 8 a.m. to 5 p.m., and on Saturday from 10 a.m. to 4 p.m. The Web site is always open at <http://www.book.uci.edu>. Telephone: (949) UCI-BOOK (824-2665); e-mail: books@uci.edu.

UCI Career Center

Students are strongly encouraged to visit UCI's Career Center early in their academic career. The Center assists undergraduate and graduate students with career decision-making and career planning through individual counseling, workshops, career programs, career fairs, employment opportunities, and graduate and professional school information. Vocational interest inventories are also available on a fee-for-service basis. The Center provides students many opportunities to connect with employers, alumni, and professional and graduate schools. The Center assists students seeking part-time and full-time employment opportunities; teaches job search skills and interviewing techniques; and provides job listings and offers an on-campus interview program (OCI). Students may easily access all job listings using their student ID number via ZotLink on the Career Center's Web site at <http://www.career.uci.edu/>.

The Center's Internship Program provides UCI students with opportunities to obtain career-related work experience in business, industry, and government. The Center also sponsors the non-academic UCDC and Sacramento Internship Programs which select UCI undergraduate and graduate students for summer internships in Washington, D.C., and Sacramento, providing a behind-the-scenes look at the activities that shape and implement the nation's future course.

Another service the Career Center offers is an online letter of recommendation account. This service allows for managing the storage and mailing of letters of recommendation for graduate students who are seeking employment in higher education and undergraduates who are planning to apply to graduate and professional programs. This service is available for a fee. For more information, call (949) 824-6883.

In addition, the Center offers services and programs to meet specialized needs of specific student populations, including disabled, women, culturally diverse, and disadvantaged students. The Career Center is located on the Ring Mall across from the Student Center and is open from 8 a.m. to 5 p.m.; (949) 824-6881; <http://www.career.uci.edu/>.

Child Care Services

Child Care Services includes six Centers offering programs for children from three months to 12 years of age. The programs are open to children of UCI students, faculty, and staff, with priority enrollment and tuition subsidy available to students at three of the Centers. For information contact (949) 824-2100; <http://www.childcare.uci.edu/>.

Counseling Center

The Counseling Center is the primary counseling and mental health service for the University community. The Center offers a variety of programs through which students can learn cognitive, affective, and behavioral skills which will enable them to function more effectively in an educational environment. Individual, group, couple, and family psychotherapy are available to all students, as well as crisis intervention services when needed. Staff also provide students with a wide range of workshops and academic courses related to learning and interpersonal issues including stress reduction, assertiveness, coping with depression, human sexuality, cross-cultural interaction, and intimacy and friendships. Staff psychologists train student group leaders, student interns, resident assistants, peer academic advisors, and administrative personnel on topics including stress management, communication, listening, leadership, group dynamics, and crisis intervention skills. The Center's services are free of charge to currently enrolled students. The Counseling Center is located on the second floor of Student Services I; (949) 824-6457; <http://www.counseling.uci.edu>.

Campus Assault Resources and Education

Campus Assault Resources and Education (CARE) provides direct services and campus education for issues related to sexual assault, intimate partner violence, relationship health, and personal safety. The office provides consultation, individual and group counseling, and advocacy through legal and medical processes. CARE staff also provide awareness and prevention education through workshops and trainings, peer education programs, campuswide events, and passive educational campaigns. Annual events include Take Back the Night, Denim Day California, and the Clothesline Project.

CARE is located at 630 Aldrich Hall. All services are confidential and free of charge. For more information call (949) 824-7273 or visit <http://www.care.uci.edu>.

Campus Recreation

Campus Recreation provides UCI students, faculty, and staff with an opportunity to enhance their campus experience by developing and maintaining a physically active lifestyle through fitness and wellness, outdoor adventures, club sports, intramural sports, and activity classes. These programs are offered at the Anteater Recreation Center (ARC), ARC fields, and at other off-campus locations.

The **Anteater Recreation Center (ARC)** is a complete state-of-the-art sports and fitness facility. With the summer 2008 expansion, the ARC now features 20,000 square feet of strength and cardio space with 282 cardiovascular and weight machines, and more than 30 tons of free weights. In addition, there is a three-court gym, a rounded corner multi-use gym, an elevated running track, three racquetball courts, a rock climbing wall, lap and leisure pool, exercise testing, massage, five multipurpose rooms, babysitting, and a demonstration kitchen and classroom. Registered students have access to the facility with current UCI identification, and are not required to pay any additional membership fee. Faculty, staff, alumni, and UCI affiliates are welcome to purchase ARC memberships.

Fitness and Wellness provides an assortment of opportunities for participants to begin or improve their fitness program. The energetic ARC staff will provide assistance with equipment orientation and various program goals in the strength and cardio rooms. Personal training is available, as well as a diverse selection of fitness classes, which include step, body sculpting, and studio cycling. Campus Recreation also offers a variety of non-credit Activity Classes to students and ARC members that are fee based. These high-quality classes range from the classic sports of golf, tennis, and swimming to the dynamic styles of martial arts. A wide array of dance classes, such as hip-hop, salsa, breakdancing, and belly dance, are also available for a small fee. For those who are looking for certifications, the ARC offers open-water scuba diving and CPR/First Aid classes throughout the year.

The **ARC Sports Field Complex** includes 25 acres of field and court surfaces. The lighted fields include space for four softball fields and six soccer/flag football fields. There are six lighted tennis courts and a recreational-size roller rink that are available for Campus Recreation programs and drop-in use. The two lighted basketball courts add to the basketball opportunities on campus.

Intramural Sports are structured leagues which are designed for the "everyday athlete." All activities feature skill and competitiveness. Sports leagues include basketball, bowling, dodgeball, flag football, floor hockey, indoor and outdoor soccer, softball, volleyball, and many more. Special events and tournaments range from badminton, racquetball, and swimming, to table tennis, tennis, track, and wrestling. Registration begins on the first day of each quarter. Participants may sign up as a team or as individuals.

The **UCI Club Sports** program presents a wide variety of student-initiated and student-managed sports. Students are able to learn a new sport, or participate in one they have been involved with in the past. Club sports may be competitive or recreational in nature. Many clubs travel to compete against other universities across the southland area, and some travel nationally. There are more than 25 clubs to choose from including badminton, biking, hiking, lacrosse, roller hockey, rugby, soccer, tennis, and volleyball.

The **Outdoor Adventure** program provides the UCI community with a mixture of outdoor recreational prospects which include sailing, rock climbing, a 50-foot-high Odyssey challenge course, and seasonal trips for hiking and cross-country skiing. The sailing program includes both sailing classes and the sailing club, UCISA. The classes range from beginning to advanced, and are offered quarterly. The sailing club is available for individuals who are interested in sailing on their own, as well as participating in various social activities with other sailors. The rock climbing program

includes classes, wall membership, the use of all climbing equipment, and trained supervision. All students and ARC members are entitled to a free, first-time climb session, prior to signing up. Team Up! challenge programs are conducted on the Odyssey course, which is a team-building high ropes course located on the sports field behind the tennis courts. Customized team-building programs are accessible to groups or teams on a reservation basis. Team Up! programs, led by trained facilitators, teach communication, trust, and teamwork skills, while providing participants with the chance to be outside, to test their limits, and to have fun as a team. Team Up! is open to campus and community groups.

All UCI students and ARC members may register and participate in the preceding activities (Intramural Sports and Club Sports do have eligibility requirements). Up-to-date information including hours of operation, membership, and fitness class schedules are available on the Campus Recreation Web site at <http://www.campusrec.uci.edu/>. Equipment such as basketballs, volleyballs, racquets, gloves, towels, and other items may be rented or purchased from the ARC's Gear Up, (949) 824-6401.

Additional information is available from Campus Recreation Services (second floor, ARC), 680 California Avenue; (949) 824-3738.

Office of the Dean of Students

The Office of the Dean of Students offers a diversity of student services and programs which complement and enrich the educational and out-of-class life of UCI students. This is achieved through the provision of a comprehensive range of cultural, social, and intellectual opportunities which promote student learning and development. For additional information contact (949) 824-5181; deanstu@uci.edu; <http://www.dos.uci.edu/>.

CENTRAL OFFICES

The central office of the Dean of Students houses a number of services. More than 400 campus organizations with a combined membership exceeding 16,000 students serve a wide range of interests including academic, environmental, faculty/staff, international, multicultural, political, recreational, religious, service, social, and sports. Web site: <http://search.dos.uci.edu/organizations>.

The Greek community at UC Irvine is a diverse population comprised of over 40 fraternities and sororities that strive to uphold the oaths, values, and principles that they were founded upon. Over 2,100 undergraduate students, 10.5 percent of the undergraduate enrollment, make up the Greek population on campus and are active members in the UC Irvine and Greek communities. Fraternity and sorority members strive for high academic achievement and are honored by one of three Greek honor societies, Gamma Sigma Alpha, Rho Lambda, and Order of Omega. Throughout the year fraternity and sorority members raise money for philanthropic organizations and volunteer their time for service organizations. Greek life is a great way to be involved and engaged on campus, and membership in the fraternity or sorority lasts a lifetime. Web site: <http://www.dos.uci.edu/greeklife>.

To assist students in becoming more effective leaders, the Office of the Dean of Students offers a variety of leadership programs and opportunities. The **All-University Leadership Conference** is the cornerstone of UCI's leadership offerings. This annual weekend program occurs off campus and involves more than 240 emerging and established student leaders representing the full diversity of campus interest groups. The **Student Regent Recruitment Luncheon** is held during the winter quarter, prior to the application deadline. The current Student Regent informs interested candidates of the issues of the day and is available for questions and answers. The application for the Student Regent position is available online

at <http://universityofcalifornia.edu/regents>. Information about leadership development programs is available from the Dean of Students Office and online at <http://www.dos.uci.edu/leadership/>.

The **Administrative Intern Program** provides participating students with administrative and leadership experience designed to develop personal and professional skills as well as to increase their knowledge of complex organizational structures. Approximately 25 students annually are assigned to campus administrative departments where they develop programs and projects. Academic credit is earned through participation in a weekly seminar entitled Administrative Internship (Management 198A-B-C; 4 units per quarter for a maximum of 12 units). Information is available from the Office of the Dean of Students; telephone (949) 824-5182.

The **Passport to Leadership Program** serves the entire student body with one of the most comprehensive leadership experiences on campus. The Passport program is geared at giving students the one-stop shop for leadership education and experience. The Passport program includes three Leadership certificates concentrating on General Leadership, Community Engagement, and Organizational Skills, which are awarded by the Office of the Dean of Students. For additional information call (949) 824-5182.

The **University Affairs for Credit Course** (1A-B-C) offers students an opportunity to work on campus projects with a University department to enrich their academic growth and development as well as the academic growth and development of UCI. Each student spends a minimum of 30 hours per quarter working on a proposed project under the supervision of a designated faculty or staff member. Students are required to write a three-five page paper at the end of the course addressing the following: (1) description of the experience or project; (2) the impact of the experience or project upon the campus; and (3) the effectiveness (personally and externally) of the experience or project. Students may enroll in University Affairs for Credit for a maximum of three times (or 3.9 units), and the course is graded Pass/Not Pass only.

New Student Programs provides assistance and information to students who are in the process of transitioning to UCI from high school or transferring from another college, and coordinates a variety of orientation programs. The *New Student Handbook*, a handy resource guide to UCI, is available at <http://www.newstudents.uci.edu/>. New Student Programs is located in the Office of the Dean of Students, (949) 824-5182.

The Office of the Dean of Students also is responsible for the campuswide administration of **student discipline** for both graduate and undergraduate students. Information is provided in the booklet *University of California Policies Applying to Campus Activities, Organizations, and Students*, which is available from the Office of the Dean of Students; (949) 824-5590; http://www.dos.uci.edu/judicial/uci_policy.php.

A variety of other programs including the Welcome Week Anteatr Involvement Fair, Peter's Parade, and the Student Organization Recognition Night are coordinated through the Office. Additional information is available from the Office of the Dean of Students; (949) 824-5181; <http://www.dos.uci.edu/>.

RESOURCE CENTERS

The Office of the Dean of Students provides support for a number of campus resource centers.

The **Cross-Cultural Center (CCC)**, established at UCI in 1974, was the first multicultural center instituted at any of the UC campuses. CCC offers a friendly atmosphere and supportive environment for UCI's diverse student body. It provides meeting space and serves as "home" for more than 70 registered multicultural organizations. Center facilities include two conference rooms and an executive board room for group meetings, lounges for socializing, a study room, and a computer lab. The annual Martin Luther King Jr.

Symposium and the Rainbow Festival and Conference, both three-day programs that recognize and reinforce UCI's commitment to ethnic diversity, are major programs administered by CCC. The Center also supports a variety of annual special events such as African Consciousness Quarter, Asian/Pacific American Heritage Month, Mez de la Raza, Native American Heritage Month, and Pilipino American History Month. In addition, CCC sponsors the Faculty Colloquium designed to support the educational, cultural, and leadership development of UCI's ethnic and culturally diverse students. Involvement opportunities include the Reaffirming Ethnic Awareness and Community Harmony (R.E.A.C.H.) Program, Intern Program, and Volunteer Program. For additional information contact (949) 824-7215; <http://www.ccc.uci.edu/>.

The **Disability Services Center (DSC)** provides and coordinates accommodations and programs that enable UCI students with disabilities to maximize their educational potential. Students with varying disabilities, including those with mobility, visual, hearing, learning disabilities, and chronic health problems, may be eligible for reasonable disability-related accommodations through this program. Staff assist students from the point of their admission to UCI through graduation. Specialized services may include testing accommodations, priority registration, document conversion, adaptive equipment, readers, notetakers, interpreters, captionists, liaisons with faculty and campus departments, and information regarding disability advocacy in the university setting. A Center Computing Lab provides adaptive computer technology and training. There is no cost to the student for the support services or accommodations provided by the Disability Services Center. Students are responsible for fully acquainting themselves with the detailed procedures for use of accommodations. These procedures are available on the Center's Web site at <http://www.disability.uci.edu>.

Students with disabilities may qualify for reasonable accommodations based on disability-related needs. Students must provide appropriate documentation about their disabilities to the Center. Documentation provided to the Center is confidential. It is the responsibility of the applicant or student to provide this documentation and, if necessary, to cover the cost for such documentation. This includes the cost for professional assessments for such disabilities as learning disabilities, attention deficit disorder, and psychiatric disabilities. Contact the Center or visit the Web site for more information about disability documentation requirements. In some cases there is need for recent or detailed documentation about the disability and/or periodic documentation updates. UCI reserves the right to determine the most effective and timely accommodations after consultation with the student about the disability and previous use of accommodations. The provision or use of a disability accommodation does not guarantee or ensure a certain level of achievement for the student. Students with disabilities must meet the same academic standards as all other students. Some academic accommodations may require approval of the chair or dean of the student's academic unit.

Students with disabilities who need accommodations (in particular, reading assistance, textbook conversion including e-text and Braille, American Sign Language interpreting services, real-time captioning services, and adaptive computing technology in campus laboratories) that must be planned or arranged in advance of the start of classes should contact the Disability Services Center as quickly as possible after admission to UCI. Failure to do so may delay or in some cases preclude the Center's ability to provide certain accommodations. This advance notice also allows the Center to document needs, discuss service procedures and student responsibilities, and determine the appropriate accommodations.

Additional information is available from the Disability Services Center; (949) 824-7494 (voice), 824-6272 (TDD); dsc@uci.edu; <http://www.disability.uci.edu/>.

The **International Center** promotes and facilitates international education and exchange by providing services and information to the UCI international population, affiliated offices, and the general campus community. Services include immigration advising and workshops for international students and scholars; employment processing for all non-immigrant employees; and immigration advising and consulting for campus departments. The International Center offers a variety of programs to provide support and resource information to the campus including orientation, tutoring, and other outreach programs and workshops.

All UCI international students and scholars must be aware of their responsibility of maintaining non-immigrant visa status. International students and scholars on F-1 and J-1 visas are required to report to the International Center upon arrival on the campus. Additionally, these students and scholars must maintain updated records with the International Center for the entire time of their stay at UCI to be in compliance with immigration regulations. For additional information contact (949) 824-7249; <http://www.ic.uci.edu/>.

The **Lesbian, Gay, Bisexual, Transgender Resource Center (LGBTRC)** promotes an open, safe, and inclusive campus environment for UCI's diverse lesbian, gay, bisexual, transgender, queer, questioning, intersex, and ally communities. LGBTRC provides programs, resources, and support services to raise awareness about lesbian, gay, bisexual, transgender lives and topics; to eliminate heterosexism, homophobia, and gender identity oppression; and to support the academic mission of the University. LGBTRC sponsors campuswide events, student activities, student volunteer and leadership opportunities, ally development programs, workshops and seminars for campus courses and organizations, and consultation regarding matters of policy related to sexual orientation and gender identity.

The Center is open Monday through Friday, 9 a.m. to 5 p.m., and is located in G302 UCI Student Center; (949) 824-3277; e-mail: lgbtrc@uci.edu; <http://www.lgbtrc.uci.edu/>.

The **Center for Service in Action** is a resource center for students who are interested in volunteer and community service information. Resources and programs include Volunteer Placements, Quarterly Service Projects, Alternative Break, Service Learning, UCI Earth Day, MLK Day of Service, and the Community Service Funding Board. For additional information contact (949) 824-3500; <http://www.volunteer.uci.edu/>.

Veteran Services, located in G301 UCI Student Center, provides support services to veteran students, reservists, and eligible dependents of veterans. Assistance includes benefit certification, work-study, orientation, and outreach programs. For additional information, visit <http://www.dos.uci.edu/veteran> or call (949) 824-8045.

Policies Pertaining to Students Receiving Federal Education Benefits from the Department of Veterans Affairs

Veterans Affairs Academic Standing Requirement. All students receiving U.S. Department of Veterans Affairs educational

benefits must be in good academic standing. An undergraduate student with a cumulative GPA below 2.0 or a graduate student with a cumulative GPA below 3.0 for two consecutive academic quarters will have their VA benefits terminated. Benefits will be reinstated if and when the undergraduate student's cumulative GPA is 2.0 or above or the graduate student's cumulative GPA is 3.0 or above. (*This policy is separate and distinct from the UCI Normal Progress Requirement and the UCI Academic Standing Requirement. The Veterans Affairs Academic Standing Requirement has to do with the receipt of VA benefits.*)

Readmission for Disqualified Graduate Students. Graduate students who are academically disqualified may be readmitted to the University with a recommendation from their academic unit and the Dean of the Graduate Division. See "Academic Disqualification" in the Graduate Division section of this *Catalogue* for more information.

Health Education Center

The Health Education Center is dedicated to improving the health and well-being of students by promoting principles of wellness, prevention, and healthy life-style choices. The Center provides comprehensive information, educational programming, consultation, and timely referrals to students and the campus community about issues related to sexual health, alcohol and drugs, tobacco cessation, nutrition, eating disorders, suicide prevention, and mental health, among other topics. The Center offers student leadership opportunities through its Peer Health Leader program and many health-related volunteer initiatives. The Center offers a wide array of printed materials and electronic-based resources and is available to both students and the campus community. Anonymous HIV testing is offered weekly. Hours are 8 a.m. to 5 p.m., Monday through Friday. The Health Education Center is located in G319 UCI Student Center; (949) 824-9355 (UCI WELL); healthed@uci.edu; <http://www.health.uci.edu/>.

Housing

ON-CAMPUS HOUSING

Housing Administrative Services coordinates application procedures and contracts for on-campus housing. Approximately 41 percent of UCI's student body is housed on campus. For more information, including housing rates for the 2009–10 academic year, visit <http://www.housing.uci.edu/>.

Undergraduate Housing

Residence Halls. Approximately 3,500 undergraduates live in UCI's two residence hall communities—**Mesa Court** and **Middle Earth**—which are within walking distance from the center of campus. Each community houses single undergraduates who are primarily freshmen between 17 and 20 years of age. The communities are composed of clusters of small, mostly coed buildings housing 48–72 residents in suite-style layouts. Student rooms feature cable television and Internet connections. Each hall has group study rooms, a living room for meetings or informal gatherings, a small kitchen, and card-operated laundry facilities. Both communities offer recreation rooms with video games, TV, and game tables; volleyball and basketball courts; and staffed computer labs.

Mesa Court and Middle Earth have complete food service and dining commons. Students who live in the residence halls participate in a prepaid meal plan. Meals are served three times daily on weekdays (with limited late night hours) and twice daily (brunch and dinner on weekends). Menus offer a wide selection of foods, served cafeteria style, at self-serve cereal, deli, and salad bars, and at cook-to-order serving stations featuring cuisines from all over the world. For more information about meal plan options, visit <http://www.ucidining.com>. The halls close during the winter

recess, and although they remain open during the Thanksgiving holiday and the spring recess, no meals are served.

Both Mesa Court and Middle Earth maintain a comprehensive residence life program, designed to help freshmen transition to college. Each hall has a live-in Resident Advisor who provides resources and support to freshmen residents. In each community, special interest halls or hall clusters provide educational programs and informal opportunities to get together with other students who hold similar interests. Community-wide social programs are also offered.

Rates for the 2008–09 academic year (late September through mid-June) were \$12,347–\$12,665 for a single room, \$10,754–\$11,072 for a double room, and \$9,398–\$9,716 for a triple room. (Rates include room and board and vary by the meal plan selected.) Charges are paid in quarterly payments. Rates for 2009–10 will reflect an increase.

Campus Village, an apartment community for transfer and continuing students who are single undergraduates under the age of 25, offers 200 two-bedroom apartments, housing four students each. Most units are furnished; all include a bathroom, carpeting, draperies, a stove, and a refrigerator. All apartments provide cable television and Internet connections. The Campus Village Community Center offers a variety of facilities and programs including a fitness center, recreation rooms, study rooms, and a computer lab with Internet access. Rates for the 2008–09 academic year (September–June), including utilities, were \$4,769 per student for a furnished apartment and \$4,265 per student for an unfurnished apartment. Campus Village also offers year-long (12-month) contracts to continuing students. Rates for this option in 2008–09 were \$6,407 per student for a furnished apartment and \$5,729 per student for an unfurnished apartment. No meal plan is included in the housing contract, however students may purchase a voluntary meal plan through UCI Dining (<http://www.ucidining.com>). These rates also include utilities and reservation fees. Rates for 2009–10 will reflect an increase.

Arroyo Vista is a community of 38 academic theme, fraternity, and sorority chapter houses for single undergraduates under the age of 25. Each house contains 8, 12, or 16 furnished, mostly double-occupancy rooms (bed, desk, and wardrobe closet for each resident). Some houses also contain triple-occupancy rooms. Residents share bathroom facilities on each floor, a spacious living room with fireplace, a study room, a fully equipped kitchen with dishwasher and microwaves, and laundry facilities. All bedrooms in Arroyo Vista feature cable television and Internet connections. No meal plan is included in the housing contract. Students make their own meal arrangements, choosing to cook for themselves or to purchase a voluntary meal plan through UCI Dining (<http://www.ucidining.com>).

More than two-thirds of the houses are designated Academic Theme Houses, which are sponsored by academic programs and offer educational programs that advance both a student's academic interests and overall University experience. The remaining houses are available to fraternity and sorority chapter organizations; consult individual Greek chapters for information. The rate for the 2008–09 academic year was \$5,084 for a double-occupancy room, and \$4,022 for a triple-occupancy room. Rates for 2009–10 will reflect an increase.

Graduate/Family Housing

Two on-campus apartment communities serve full-time graduate and medical students, students with families (married, in a domestic partnership, and/or with custody of minor children). One of those communities, **Verano Place**, also serves undergraduates with families or who are single and 25 years of age or older. Verano Place offers 862 one-, two-, and three-bedroom apartments. All have carpeting, draperies, a stove, and a refrigerator and provide cable television and Internet connections. They are attractive and

considerably lower in rent than comparable units in the local communities. Monthly rents for 2008–09 ranged from \$333–\$531 for single students sharing an apartment and from \$850–\$1,062 for families. Rates for 2009–10 will reflect an increase.

Palo Verde offers 652 apartments for full-time graduate students (single students, students who are married or in a domestic partnership, and those with families). All apartments have carpeting, draperies, a stove, and a refrigerator and provide cable television and Internet connections. Monthly rents for 2008–09 ranged from \$586–\$959 for single students sharing an apartment and from \$729–\$1,758 for families. Rates for 2009–10 will reflect an increase.

To Apply

Housing information and application instructions are available online at <http://www.housing.uci.edu>. Undergraduates apply for housing online via the Admissions Web site after receiving admissions notification. Graduate applicants can also find housing information and an online application on the Housing Web site. A \$20 nonrefundable processing fee must accompany the housing application when it is submitted.

Two years of on-campus housing are guaranteed to all freshmen, and one year of on-campus housing is guaranteed to transfer undergraduate students who are single, under the age of 25, enrolling for fall quarter, and who meet the housing application and contract deadlines. To qualify for this guarantee, students must apply for housing and submit their *Statement of Intent to Register* (SIR) by the stated deadlines: May 1, 2009 for freshmen, and June 1, 2009 for transfer students. Applications received after these dates will be handled in the order received, as space becomes available.

The University of California, Irvine guarantees an offer of on-campus housing to newly admitted, full-time Ph.D., M.F.A., and J.D. students who enroll in fall 2009. For detailed information on this program, visit <http://www.housing.uci.edu/prospective/graduate/guarantee.asp>.

Alternative Housing on the UCI Campus

Vista del Campo and Vista del Campo Norte Apartments—two privately owned and managed on-campus communities—offer furnished apartments with individual leases for single undergraduate sophomores, juniors, and seniors, as well as single graduate students. Visit <http://www.vistadelcampo.com> or call Vista del Campo at (949) 854-0900 or Vista del Campo Norte at (949) 856-4600 for more information.

HOUSING OUTREACH SERVICES

Services are available to assist students looking for off-campus housing. *The Living Around UCI* guide contains a wealth of information about housing options in Irvine and other nearby communities, as well as a local directory for shopping, banking, utility companies, and other services. Students are encouraged to visit Housing Outreach Services, located in G465 Student Center, where off-campus housing listings and roommate listings are available. For more information, contact a Housing Advisor at (949) 824-7247, send e-mail to housing@uci.edu, or visit <http://www.housing.uci.edu/och/>.

UCI Dining & Catering

From a quick bite to eat to an elegantly served catered meal, UCI Dining & Catering offers a variety of residential and retail dining opportunities to fit one's palette. Dining locations are situated throughout the campus. The Student Center features two Food Courts, East and West, with dining options that include Quiznos, Wendy's, Rice Garden, Bene Pizza & Pasta, Organic Greens-to-Go, and Tortilla Express. Just outside the Student Center is a Starbucks and the Zot n' Go convenience store, which stocks items from

shampoo to sandwiches. The Phoenix Food Court between Social Science Lab and Engineering includes Einstein Brothers Bagels, Greens-to-Go, Grille Works, Tortilla Fresca, and various Grab n' Go items. Another convenience store is located by Social Science Lecture Hall. BC's Cavern Food Court, at Biological Sciences adjacent to Aldrich Park, offers salad, pizza, Mexican food, and more. Cyber A Café at the Claire Trevor School of the Arts features sandwiches. Café Med is located at the School of Medicine with Montague's Deli, Grill Works, and Tortilla Fresca.

Residential Dining commons include Pippin, Mesa, and Brandywine. All three locations have theme nights, award-winning chefs, made-to-order meals, and vegetarian and vegan options. Both Mesa and Brandywine have a late menu Monday through Wednesday.

UCI Catering provides a comprehensive list of items to choose from or the option to design a menu. To view the menus, visit <http://www.ucicatering.catertrax.com> or call (949) 824-1423.

For more information about UCI Dining & Catering, located at A311 Student Center, visit <http://www.ucidining.com> or call (949) 824-4182.

UCI Student Center

The UCI Student Center features two food courts, a Starbucks, a pub, and a convenience store, as well as 35 conference and meeting rooms, study spaces, 16 small-group study rooms, several lounges, and a computer lab. Outdoor space includes a permanent performance stage on the Terrace and a courtyard on the lower level. The UCI Student Center is one of the largest student centers in California. Access the Web site at <http://www.studentcenter.uci.edu> to learn about the UCI Student Center and to find your way around this wonderful facility.

Student Government

ASSOCIATED STUDENTS

All UCI undergraduate students are members of the Associated Students, better known as ASUCI. ASUCI is the student representative body that advocates to and is liaison between the UCI administration, faculty, and staff.

ASUCI is comprised of three branches of government: the Executive Officers (five elected at-large members), Legislative Council (20 elected members), and the Judicial Board (seven appointed members). Guided by their constitution and by-laws, these student representatives manage the \$18 per student quarterly fee that supports student life activities, advocacy programs, publications/communication, and professional support staff as well as essential campus services. For more information contact the Student Government offices at (949) 824-5547; ASUCI@uci.edu; <http://www.asuci.uci.edu/>.

ASUCI Student Life Activities include the annual Welcome Week Foam Party, Shocktoberfest, Homecoming, Wayzgoose, and Reggae festivals. On-going events include such programs as noon concerts, major concerts, comedy nights, and weekly movie screenings. In cooperation with Student Affairs and ASUCI, the award-winning *ANThology* yearbook publication hosts events such as Senior Information Day, Senior Portraits, and Senior Class Picnic.

ASUCI Advocacy programs include Elections (campus and local), Undergraduate Senate, UTeach, Anteater Mentorship Program, External Affairs, College Legal Clinic, Student Recommended Faculty Program, Campus Safety, and the Visions Leadership and Lobby core seminar courses (1.3 units).

ASUCI Publications/Communication includes the Columbia Press Association Award-winning UCI Yearbook, *ANThology*, and the ASUCI Web site at <http://www.asuci.uci.edu/>, which is a great source of information about the organization.

ASUCI Services include the following:

Club and Organization Accounting: The ASUCI Business Office provides banking and accounting services to registered campus organizations.

Express Shuttle: The Express Shuttle program run by Student Government provides alternative transportation service to all students, staff, and affiliated members of the UCI community, with fixed shuttle routes to 55 designated stops on and off campus. The Express Shuttle carried more than 1.3 million passengers last year and facilitates campuswide efforts to reduce traffic and improve air quality while helping the UCI community access the services available on the expansive campus. For detailed information regarding services, routes, and schedules, visit <http://www.shuttle.uci.edu>.

UCItems and UCI Photo ID: UCItems is the campus specialty store featuring UCI and Greek apparel, custom silkscreening, banners, awards, and special promotions that include discount tickets to Edwards/Regal cinema, Disneyland, Universal Studios, Magic Mountain, Sea World, Knott's Berry Farm, and more. UCItems is also the place where the official UCI Photo ID cards are issued. The store is located in G203 UCI Student Center near the Zot Zone and is open Monday through Friday from 9 a.m. to 5 p.m.; telephone (949) 824-7555.

ASSOCIATED GRADUATE STUDENTS

All graduate and professional school students are members of the Associated Graduate Students (AGS). AGS works to improve the graduate student quality of life and functions as a liaison between graduate students and the UCI administration, faculty, and staff by addressing concerns and working to resolve grievances.

AGS also provides graduate students with numerous social and cultural events of benefit to the graduate community. In addition to hosting quarterly social events designed to create a sense of community, the organization allocates funds toward graduate student development and special projects. AGS also pays campus registration fees for all graduate student groups, both departmental and school-affiliated, or those organized around a common interest. These funds are allocated on a rolling basis to petitioning clubs and organizations on campus.

The AGS Council nominates graduate students for positions on UCI administrative, Academic Senate, and ad hoc committees and ensures graduate students have a voice in policy and decision-making on the UCI campus. AGS also works on systemwide issues affecting graduate and professional students by membership in the UC Student Association (UCSA).

ASSOCIATED MEDICAL STUDENTS

The Associated Medical Students (AMS) Council, along with the AGS Council, represents the medical student body in all matters relating to the UCI campus, the UC Office of the President, and the community. Medical students are members of AGS and have access to those services. In addition, AMS utilizes a portion of the quarterly AGS fee to provide funding for medical student activities that benefit the School of Medicine community.

THE PAUL MERAGE SCHOOL OF BUSINESS STUDENT ASSOCIATION

The School's Council, along with the AGS Council, represents the graduate Business student body in all matters relating to the UCI campus, the UC Office of the President, and the community. Graduate Business students are members of AGS and have access to those services. In addition, the School's Council uses a portion of the quarterly AGS fee to provide funding for student activities that benefit The Paul Merage School of Business community.

Student Health Center

All fully registered students and students approved for part-time study are eligible to access services at the Student Health Center, located at the corner of East Peltason and Pereira Drive. Facilities and services include outpatient clinics staffed by certified, licensed medical professionals; nurses with expertise in college health; a clinical laboratory; radiology; and a pharmacy. General medical clinics are held from 7:30 a.m. to 5:30 p.m., Monday through Friday, during the academic year and are available by appointment or on an urgent-care basis. Summer hours are slightly adjusted. Specialty clinics are held at variously scheduled times by appointment and include optometry, dental, mental health, dermatology, women's health, orthopaedics/sports medicine, ear/nose/throat, and minor surgery. A nurse clinic is available to provide immunizations, health screening, and basic health education. Professional counseling, psychological, and psychiatric services are available through the Student Health's Mental Health Division for a fee; the cost varies based on the level of professional services provided.

Full health care services are available beginning on the first day of Welcome Week in the fall and continuing through the last day of finals week in June. Basic services continue in the summer as well. At Student Health, fees are generally lower than those of comparable services in the community. Students not using the Undergraduate Student Health Insurance Plan (USHIP) may submit a claim to their insurance plans for reimbursement. All students are encouraged to submit an updated physical examination record to Student Health (see Physical Examination and Health Clearance, below). Admission health requirement packets are mailed to new and readmitted students as their names become available to the Student Health Center. International students' packets are mailed by the Office of International Services with their initial registration forms.

All undergraduate, graduate, and medical students are required to carry adequate health insurance. Those students who have private insurance which is equal or superior to the policy provided through the University may be eligible to have the mandatory fee waived. Additional information is available in the Expenses and Fees section of this *Catalogue* and from the Student Health Insurance Coordinator at (949) 824-7748.

Physical Examination and Health Clearance. All new students and students returning to UCI after an absence of two or more quarters are required to file proof of tuberculosis screening, if indicated, and proof of mandatory immunizations with the Student Health Center. All students are encouraged to have a physical examination to screen for health problems. The examination may be performed by the student's own physician, but should be documented on the form provided by Student Health (downloadable from the Student Health Center Web site). The physical examination can also be performed at the Student Health Center for a fee. Students transferring from another UC campus where their medical records are on file should have the records transferred to the UCI Student Health Center.

For the most up-to-date information about the Student Health Center, visit <http://www.shs.uci.edu>.

INTERCOLLEGIATE ATHLETICS

UCI's Intercollegiate Athletic Program features 23 sports, with 11 men's teams, 11 women's teams, and one coed sailing team. Men's sports include baseball, basketball, crew, cross country, golf, soccer, swimming and diving, tennis, track and field, volleyball, and water polo. UCI's men's teams compete in the National Collegiate Athletic Association (NCAA) Division I, and the University is a member of the Big West Conference. UCI also competes in the Mountain Pacific Sports Federation (MPSF) in men's volleyball and water polo. UCI's sailing team competes in the Intercollegiate Yacht Racing Association (ICYRA), and crew competes in the

Pacific Coast Championships. The UCI women's teams also are members of NCAA Division I and the Big West Conference, competing in basketball, crew, cross country, golf, soccer, swimming and diving, tennis, outdoor track and field, volleyball, and women's water polo. Women's indoor track and field competes in the MPSF.

UCI has captured 25 national team championships in nine different sports since opening in 1965, with 63 individuals winning national titles and over 410 earning All-American honors. UCI has won 60 conference championships since 1977. Each spring, the University presents the Big West Scholar-Athlete Award to those student-athletes who maintained a 3.0 GPA over the previous three quarters. In the last 26 years, 3,082 UCI student-athletes have earned the award, including a school-record 188 in 2007-08.

The mission of UCI Intercollegiate Athletics is to facilitate and enrich the education and personal growth of its students through their participation in competitive NCAA Division I athletics. Intercollegiate Athletics is committed to the welfare of student-athletes and staff, and advocates an environment that promotes excellence in athletic and academic performance, sportsmanship, diversity, and gender equity. Intercollegiate Athletics also supports the University of California's mission of public service and serves to generate a unifying spirit among students, faculty, staff, and alumni that transcends communities, cultures, and generations.

The Intercollegiate Athletic offices are located in Crawford Hall; telephone (949) 824-6931.

ATHLETIC FACILITIES

On-campus facilities include the Bren Events Center, which seats 5,000 for intercollegiate basketball and volleyball. The Crawford Hall complex, in addition to housing the athletic administration offices, also includes sports medicine, strength and conditioning, and student-athlete academic support services. Crawford Court gymnasium has 760 chair-back seats for volleyball. Outdoor facilities include Anteater Stadium, a 2,500-seat facility for soccer and track; the 500-seat Anteater Tennis Stadium; Anteater Ballpark, home to the baseball program; and a five-acre multipurpose field complex.

UCI's Anteater Aquatic Complex houses the intercollegiate water polo, swimming, and diving teams. This 64-meter aquatics facility is designed with a movable bulkhead and is large enough to accommodate multiple activities simultaneously.

OFFICE OF RESEARCH

Susan V. Bryant, Vice Chancellor for Research

The mission of the Office of Research (OR) is to support, facilitate, and promote world-class research at the University of California, Irvine. As its primary activity, OR works with other campus units to foster an environment for research and artistic activity that facilitates the discovery and dissemination of knowledge in many forms to all levels of society.

OR provides central campus administrative support for UCI's research programs. It includes the Office of Research Administration (ORA), the Office of Technology Alliances (OTA), University Laboratory Animal Resources (ULAR), Research Development, Administrative Operations and Information Technology, and the Office of the Vice Chancellor. Each of these units contributes to the overall objective of facilitating campus research activities in a variety of ways.

The Office of Research Administration (ORA) consists of Sponsored Projects, Research Protections, Conflict of Interest, and export control. ORA is the office of record for extramural proposals and awards supporting research, education, and public service activities of UCI faculty, staff, and students. ORA staff members are expert resources for policy and program information and act as administrative contacts with external regulatory agencies, higher education organizations and professional societies, and other universities to discuss regulatory changes, institutional policy developments, and overall awareness of regulatory requirements and enhancements.

The Office of Technology Alliances (OTA) fosters research collaboration and transfers of technology between UCI and industry, striving for rapid commercialization of research results for the public benefit. It plays an important role in linking faculty and new technology with companies that can collaborate in both the further development of new inventions and the commercialization of research results.

University Laboratory Animal Resources (ULAR) manages the housing, feeding, and care of all research animals housed in UCI facilities. It fulfills four main functions: veterinary services, animal husbandry, transgenic mouse facility, and business and purchasing administration.

The Office of Research Development is complemented by research development professionals assigned to specific schools, departments, and research units, and contributes significantly to faculty success in securing research support from granting agencies.

Administrative Operations and Information Technology provides administrative and network and computing support to OR's core administrative units as well as over 30 Organized Research Units and Special Research Programs that report to OR.

The Office of the Vice Chancellor supports and coordinates the activities of the Vice Chancellor and the Associate Vice Chancellors, and represents OR in interfacing with campus management and the academic units.

Special Research Programs

Special Research Programs (SRPs) exist at UC Irvine to provide a structure for collaborative research activities that do not fit the definition and purpose of an Organized Research Unit, a Campus Center, or a School Center.

BECKMAN LASER INSTITUTE

The Beckman Laser Institute (BLI) was established in 1982 by Dr. Arnold O. Beckman and Dr. Michael W. Berns as an interdisciplinary center for the development and application of optical technologies in biology and medicine. Since the opening in 1986, Beckman Laser Institute has grown to include 18 faculty and their 130 affiliated students, postdoctoral fellows, technical staff, and administrative support. BLI is one of five national Beckman Institutes supported by the Arnold and Mabel Beckman Foundation. BLI is dedicated to cutting-edge interdisciplinary research and the interface of physical science, engineering, and biology. Because BLI also houses a medical clinic, it is unique in its capacity for conducting translational research that moves basic technologies rapidly from "benchtop to bedside." For more information visit <http://www.bli.uci.edu>.

CALIFORNIA INSTITUTE FOR TELECOMMUNICATIONS AND INFORMATION TECHNOLOGY (CALIT2)

Calit2 is a two-campus multidisciplinary research institute established by the State of California in 2000. One of four University of California Institutes for Science and Innovation, Calit2 is a partnership between academia and the business community. The Institute's unique research approach integrates academic intellectual capital across a wide range of disciplines with industry expertise. In collaboration with its sister division at UC San Diego, Calit2@UCI seeks innovative IT approaches that will benefit society and ignite economic development in the state and throughout the country.

More than 150 UCI faculty, 250 students, and 100 industry partners are actively engaged in Calit2 research areas that include the environment, transportation, emergency management, health care, education, and entertainment.

Calit2 also strives to prepare students for successful careers after graduation; the Institute's programs include SURF-IT, a summer undergraduate opportunity that immerses students in hands-on research, as well as a graduate fellows program that helps fund a select group of students doing multidisciplinary, IT-focused graduate work. For more information visit <http://www.calit2.net/>.

CENTER FOR HEALTH POLICY RESEARCH

The Center for Health Policy Research (CHPR) is an interdisciplinary faculty research organization dedicated to improving the quality of care and reducing the disparities in health care. Through research, its faculty and associates translate scientific findings into practice by uniting clinical sciences with the social and behavioral science fields of economics, psychology, anthropology, sociology, and business. This unique platform provides the basis for CHPR's research results to directly effect health policy and the health of the local community and the public.

CHPR is experiencing dramatic growth in personnel, grant support, and achievements, and is committed to building the Center into a nationally recognized focal point for health care research. CHPR has four principal functions: (1) to produce high-level health policy research in the areas of quality of chronic disease care (i.e., diabetes, cancer, nursing home care) and reduce health disparities and improve quality of care for ethnic minorities; (2) to disseminate research findings to UCI's faculty and students through seminar series, meetings, and publications; (3) to serve as the research center for UCI graduate and undergraduate students who have health interests; and (4) to support improvements in patient health and safety and organizational improvements in the UCI health care system.

CHPR's achievement of these goals begins with its faculty—an interdisciplinary group of national leaders representing health services research, health economics, clinical epidemiology, psychometrics, and behavioral sciences in medicine. The current research led by CHPR's members and its campuswide collaborators enhance UCI as one of the best research universities in the country.

ENVIRONMENT INSTITUTE: GLOBAL CHANGE, ENERGY, AND SUSTAINABLE RESOURCES

The UCI Environment Institute: Global Change, Energy, and Sustainable Resources was created in April 2008 as a new research institute dedicated to the study of interactions between the environment and society. The Institute will enhance the already internationally recognized work in environmental and related studies now occurring across UC Irvine, beginning with support of on-campus research projects and recruitment of new faculty. The overall goals are to strengthen and link academic programs in environmental studies across UCI's schools and departments, develop a coherent image of the breadth and quality of ongoing research in the environment and related fields, and enhance the rise of UCI as a leader in addressing the challenges of global change, energy, and sustainable resources. The Institute will also encourage organizational efforts directed at improving sustainable practices on the UCI campus. More information is available at <http://environment.uci.edu/>.

INSTITUTE FOR CLINICAL AND TRANSLATIONAL SCIENCE

The Institute for Clinical and Translational Science (ICTS) in the Office of Research is a uniquely transformative, novel, and integrative academic home for clinical and translational science with the resources to train and advance a cadre of well-trained multi- and interdisciplinary investigators and research teams. The Institute facilitates access to innovative research tools and information technologies to promote the application of new knowledge and techniques to patient care. ICTS assists basic, translational, and clinical investigators, community clinicians, clinical practices, networks, professional societies, and industry to develop new professional interactions, programs, and research projects. ICTS fosters a new discipline of clinical and translational science that is much broader and deeper than their separate components. The faculty associated with ICTS are instrumental in supporting students in related advanced degree programs via their grants and other sources of financial support. ICTS consists of several units: Pilot and Collaborative Translational and Clinical Studies; Translational Technologies and Resources; Development of Novel Clinical and Translational Methodologies; Biomedical Informatics (including the Center for Medical Informatics); Design, Biostatistics, and Clinical Research Ethics; Regulatory Knowledge and Support; Participant and Clinical Interactions Resources; Community Engagement; and Research Education, Training, and Career Development. More information is available at <http://www.icts.uci.edu/>.

REEVE-IRVINE RESEARCH CENTER

The Reeve-Irvine Research Center (RIRC) is a basic science research facility devoted to studying cellular and molecular mechanisms that underlie the response of the nervous system to injury, exploring innate and therapeutic regenerative capabilities and developing treatments for spinal cord injury. RIRC has four principal investigators whose laboratories are located in the Center and whose research focuses on the use of rodent models (rats and mice) and related cell culture systems to study how the spinal cord responds to injury. A major focus is on enhancing the regeneration of damaged nerve fibers (axon regeneration) and on the use of stem cells for cellular replacement therapy. There are also 23 associate investigators whose laboratories are located elsewhere in the University who study the response to injury, neural repair, regeneration, and stem cell biology. Some of the associate investigators

also carry out human subjects research focusing on advanced functional imaging techniques, novel rehabilitative strategies including the use of robotics, advanced prosthetics, and associated devices that are capable of recording signals from the nervous system.

There are a number of potential targets for therapy for spinal cord injury, and RIRC scientists address many of these. Importantly, some of the most promising strategies, and the ones that are closest to clinical application, involve interventions during the acute post-injury period (days to weeks after the injury). However promising these strategies are, the Center is committed to the long-term goal of developing treatments to promote nerve regeneration and repair for individuals with chronic injuries, and this is reflected in the research programs of each investigator. More information is available at <http://www.reeve.uci.edu/>.

SUE AND BILL GROSS STEM CELL RESEARCH CENTER

The vision of UCI's Sue and Bill Gross Stem Cell Research Center (SCRC) is to serve as a nexus for stem cell activities in Southern California, and throughout the state, country, and world, and to move forward the understanding of the basic biology of stem cells and therapies from stem cells. Several goals have been articulated to achieve this vision, including: (1) to expand the number of scientists working in the stem cell arena by providing support in the form of technical expertise and equipment, as well as a "federal free" area in which to undertake human embryonic stem cell (hESC) research; (2) to provide educational opportunities for researchers at all levels, and including corporate, medical, and academic scientists, thereby training the next generation of hESC researchers; (3) to support clinical translation of discoveries at the bench into therapies at the bedside through collaborative projects between researchers, clinicians, and the biotechnology sector; and (4) to engage in community outreach to create a dialogue with the public and other disciplines outside the basic and medical sciences.

Development of SCRC has built upon the campus's long-standing strengths in neuroscience, developmental biology, and pharmacology, and collaborations with several Organized Research Units and Centers such as the Reeve-Irvine Research Center, the Center for Mitochondrial Medicine, the Developmental Biology Center, and the Institute for Genomics and Bioinformatics. These partnerships bring expertise, techniques, and alternative perspectives that provide a strong foundation for the Center.

Faculty associated with the Center already have a depth of expertise in the field of stem cell research—the Center codirectors are pioneers in the field who have been working with human embryonic stem cells (hESC) for 10 years, and UCI faculty have published over 400 articles on stem cells in the past six years. The number of UCI faculty entering this field is also significant.

The Stem Cell Research Center currently is occupying leased space in the University Research Park adjacent to the campus. In addition to administrative space for the Center, this assignment includes a non-federally-funded Stem Cell Core research facility that is intended to be a regional resource for other academic institutions and for the private sector. This facility has been outfitted with many of the pieces of equipment critical to hESC research.

The establishment of the Core facility also has allowed SCRC to move forward with its educational goals, such as the Stem Cell Short Course (a five-day class on hESC cultivation, covering the basics of stem cell cultivation and handling); receiving a Stem Cell Training Grant supporting eight predoctoral and four postdoctoral scholars; UCI Community outreach through lecture series and Public Outreach through the Patient Advisory Committee, a group representing 10 diseases and disorders, whose mission is to inform the SCRC of patient need, to relay information about UCI stem cell research to patient groups and the public, and to raise support and

awareness of the potential benefits of stem cell research to society. Visit <http://stemcell.uci.edu/> for more information.

THESAURUS LINGVAE GRAECAE®

The Thesaurus Linguae Graecae (TLG)® is a research project that was established at UCI in 1972, thanks to a gift by UCI alumna Marianne McDonald. Its goals are to create a comprehensive digital library of Greek literature from antiquity to the present era; to conduct literary research using collected texts; and to apply technological innovation in these endeavors. The TLG® corpus currently contains more than 99 million words of Greek text and essentially all extant texts from Homer to the fall of Byzantium in A.D. 1453. Work is underway to include later periods of Greek literature.

TLG® research activities combine the traditional concerns and methodologies of philological and literary study with the most advanced features of computer technology. Included among current research foci are the identification of ancient Greek literary and documentary materials from various literary-historical periods; the conversion of these materials into digital form using modern methods of text encoding; the enhancement of automated text-correction routines; and the formulation of criteria for the lexical analysis and categorization of the texts in the corpus. The project also has established procedures to facilitate international access to its textual, bibliographical, and lexical resources online at <http://www.tlg.uci.edu/>.

TLG®'s library holdings enhance those of the UCI Langson Library, and TLG® conferences and scholarly visits afford faculty and students contact with eminent scholars in related fields. The Thesaurus Linguae Graecae® has made UCI a major source of Classics research activity.

UNIVERSITY OF CALIFORNIA HUMANITIES RESEARCH INSTITUTE

The University of California Humanities Research Institute (UCHRI), located at UCI, is a Multicampus Research Unit of the UC Office of the President. Founded in 1987, UCHRI's distinctive mission is to foster intellectual community, research, and public programs across campus boundaries; mobilize the strength of the University of California humanities faculty as a whole; and promote innovative collaborative and interdisciplinary research among humanities scholars and researchers in disciplines across the social sciences, sciences, technology, and medicine.

Residential research groups, historically at the heart of UCHRI's activities, bring together both UC and non-UC scholars, postdoctoral fellows, and advanced UC graduate students to work in collaboration on interdisciplinary topics of special significance. The groups are expected to communicate their findings following residency to a broader scholarly community or public. UCHRI's facilities for participating scholars include private offices with e-mail and Internet access, multimedia meeting rooms, and a reference library. Furnished apartments are provided by the Institute for use by fellows on an as-needed basis during their residencies. UCHRI also sponsors a wide range of conferences and seminars, as well as workshops and other research projects at all of the UC campuses. Two new programs have just been launched: short-term residencies for groups with pre-existing collaborative projects nearing completion; and partnership projects between UC humanities initiatives and community organizations. The UCHRI Advisory Committee, comprising a faculty representative from each UC campus, makes decisions on program proposals and fellowship applications.

UCHRI also administers the Kevin Starr Postdoctoral Fellowship in California Studies; the Andrew Vincent White and Florence Wales White Graduate Student Scholarship supporting dissertation research in the humanities or theoretical social sciences and medicine; the UC-University Utrecht faculty collaborative research

grants; and the annual summer Seminar in Experimental Critical Theory.

The Institute is engaged in an extensive digital humanities initiative in collaboration with researchers both within and beyond the University of California. Scholars interested in UCHRI programs now apply exclusively online via the Institute's FASTAPPS system, which is being adapted for use by other UC units. Virtual collaborative research environments are being implemented as an adjunct to the residential groups. The HASS Grid, developed by UCHRI with the Center for Information Technology Research in the Interest of Society at UC Berkeley and the San Diego Supercomputing Center at UC San Diego, is a major cyberinfrastructure initiative to strengthen research support for the humanities, arts, and social sciences. UCHRI has also led the development of the Humanities, Arts, Science, and Technology Advanced Collaboratory (HASTAC), a consortium of top-level humanities and science institutions in the U.S. and abroad, dedicated to new and productive partnerships across disciplines in order to create tools and databases that will allow for the production of new kinds of knowledge.

For additional information, contact the University of California Humanities Research Institute, 307 Aldrich Hall, Irvine, CA 92697-3350; (949) 824-8180; uchri@uci.edu; <http://www.uchri.edu>, and <http://www.hastac.org>.

Organized Research Units

Organized Research Units (ORUs) normally consist of an inter-departmental group of faculty, students, and other researchers engaged in a continuing program of multidisciplinary or interdisciplinary research, supported by both University and extramural funding. The work of some ORUs is directed toward the solution of complex contemporary problems, while others conduct basic research essential to the understanding of natural or social phenomena or of humanistic ideas and expressions. The following ORUs have been established on the Irvine campus.

AIRUCI

AirUCI is a research team based at UCI focused on probing a new type of chemistry that occurs in the atmosphere at the interface between air and water. Funded by the National Science Foundation (Divisions of Chemistry and Atmospheric Sciences), AirUCI began in August 2002 as a Collaborative Research in Chemistry (CRC) group and was accepted as an ORU in July 2008.

Chemical reactions that play key roles in the formation of smog, acid rain, and in global climate change are known to occur between gases, as well as inside liquid droplets that are present in the atmosphere in the form of airborne particles, fogs, and clouds. Only recently has it been apparent that chemical reactions also occur right at the interface between air and these atmospheric droplets. Both the speed with which these interface reactions occur and the manner in which they take place may be quite different from reactions in either the gas or liquid. AirUCI's scientific team combines theory, experiments, and computer modeling of air quality to provide new insights into how this chemistry at interfaces impacts the atmosphere. More information is available at <http://www.chem.uci.edu/airuci/Index.htm>.

CANCER RESEARCH INSTITUTE

The Cancer Research Institute provides leadership and support for researchers working toward understanding and controlling cancer. The Institute serves as a means of focusing, coordinating, and directing efforts of scholars in basic and clinical sciences from several departments in the Schools of Biological Sciences and Medicine. It provides a central source of information concerning cancer-related research, as well as a forum in which basic researchers and clinicians can assess advances that may be of immediate value in the diagnosis and treatment of cancer, and in the detection of

chemicals or conditions that cause cancer. Ongoing and projected research activities involve the regulation of cell function, viral carcinogenesis, immunology, and basic molecular processes relevant to cancer. The Cancer Research Institute administers Sprague Hall, a research facility in the Biomedical Research Complex dedicated to cancer and genetics. The Cancer Research Institute serves as the basic science arm of UCI's Chao Family Comprehensive Cancer Center, a National Cancer Institute-designated comprehensive cancer center. Other units of the center include the Chao Family Clinical Cancer Research Center and the Cancer Surveillance Program of Orange County. Additional information is available online at <http://www.cri.bio.uci.edu/>.

CENTER FOR EMBEDDED COMPUTER SYSTEMS

The Center for Embedded Computer Systems, established as an informal center in 1998, was recognized as an ORU in 2001. The Center provides the organizational and administrative structure for researchers at UCI, UCR, and UCSD to conduct leading-edge interdisciplinary research in embedded systems, develop innovative design methodologies, and promote technology and knowledge transfer for the benefit of the individual and society. The research program focuses on three application domains: (1) Communications, including infotainment, information appliances, multimedia, personal imaging, and wireless; (2) Automotive, including collision avoidance, control/sensors, entertainment, and emergency services; and (3) Medical, including diagnosis, drug delivery, imaging, implanted devices, and monitoring. Additional information is available online at <http://www.cecs.uci.edu/>.

CENTER FOR THE NEUROBIOLOGY OF LEARNING AND MEMORY

The Center for the Neurobiology of Learning and Memory (CNLM), founded at UCI in 1983, is a multidisciplinary research institute that fosters and supports collaborative research on the brain processes underlying learning and memory. CNLM's research teams consist of faculty, professional and postgraduate researchers, graduate and undergraduate students, and visiting scholars. They investigate the formation, maintenance, and retrieval of memory at several levels of analysis—from studies of molecular and cellular processes in the brain to studies of memory in animal and human subjects.

Current research projects include investigations of the role of specific genes in memory formation, how neurons organize and communicate to enable learning and memory, the way experience alters the structure and organization of the brain, how we acquire and retrieve short- and long-term memories, and emotional influences on memory formation and retrieval. State-of-the-art techniques, including computer modeling of neural processes and functional neuroimaging, are used. The Center's basic research has important implications for understanding and treating human memory disorders and the diseases that cause them.

CNLM organizes seminars and colloquia throughout the year, as well as periodic workshops and international conferences for the neuroscience community. In addition, the Center organizes and sponsors programs for local schools and the general community, including public lectures focusing on the research of the Center faculty and on health issues related to brain and memory.

CNLM members include faculty from the UCI Departments of Neurobiology and Behavior, Cognitive Sciences, Anatomy and Neurobiology, Neurology, Pharmacology, and Psychology and Social Behavior, as well as faculty from several other UC campuses, the University of Southern California, the Scripps Research Institute, and the California Institute of Technology. CNLM is located in the Bonney and Qureshey Research Laboratories of the Herklotz Research Facility. Visit <http://www.cnlm.uci.edu/> for more information.

CENTER FOR RESEARCH ON INFORMATION TECHNOLOGY AND ORGANIZATIONS

The Center for Research on Information Technology and Organizations (CRITO) is a multidisciplinary Organized Research Unit that conducts theoretical and empirical research into the social and economic impacts of information technology (IT) in organizations and society. CRITO focuses on the management, use, and impact of IT in the emerging global, competitive marketplace and on the policy issues raised by its use. CRITO researchers focus on the management of IT, the IT-enabled enterprise, technology-intensive user environments, and the increasingly global nature of IT use and production.

The CRITO Consortium, within CRITO, is the only NSF-supported Industry-University Cooperative Research Center (I/UCRC) on the UCI campus. Corporate sponsors of the Consortium have included, among others, the Boeing Company, the Department of Defense, IBM Corporation, Intel Corporation, International Data Corporation, and Microsoft.

CRITO and Consortium research projects include: nationwide study of computers and the Internet in the home; nationwide study of e-government; the payoffs from investments in IT; outsourcing and offshoring of IT and IT-enabled services; the impacts of IT on firm and industry organization; the impacts of computing on work groups and collaborations; IT structuring for e-commerce; the effects of IT on training, employee performance, and quality of work life; the global spread of production and use of computers; and the globalization of the Internet and e-commerce. For more information, see <http://www.crito.uci.edu/>.

Faculty from The Paul Merage School of Business, the Donald Bren School of Information and Computer Sciences, the School of Social Sciences, and the Department of Education conduct research through the unit. There are approximately 15 faculty associates and 20 students involved in CRITO and Consortium research.

CENTER FOR THE STUDY OF DEMOCRACY

The Center for the Study of Democracy (CSD) sponsors research and education to enhance our scientific understanding of both the democratic process in established democracies including the United States, as well as in expanding democracy around the world. The Center emphasizes five research programs: (1) *Democracy21* focuses on the democratic process in established democracies including the United States, as we enter the new century. This program examines ways to increase the citizens' ability to express their preferences and have these preferences represented within the democratic process; (2) *Democratic Transitions/Consolidation* supports research on the development of sustainable democracies in Eastern Europe, East Asia, and other new democracies; (3) *Social Movements and Collective Action* focuses on new forms of citizen participation and the use of collective action to expand the boundaries of democratic action; (4) *Race, Ethnicity, and Democracy* focuses on the representation and participation of minorities, and the institutional structures that may encourage democratic equality; and (5) *Economics of Governance* examines the intersection of economic and political worlds; how economic principles inform or should inform policy making and how economic factors enter into political decision making.

UCI's expertise in this area was recognized by the National Science Foundation, which selected UCI as a national center for the training of graduate students on democracy. The educational activities continue through CSD's Democracy Fellows program.

CSD hosts an active lecture program, organizes international research conferences, sponsors faculty research, publishes a research paper series, and facilitates research and teaching on democratic themes. The Center has a multidisciplinary faculty from four UC campuses and is one of the leading university-based

programs in America devoted explicitly to the study of democracy. Further information is available at <http://www.democ.uci.edu/>.

CENTER FOR VIRUS RESEARCH

The primary purpose of the Center for Virus Research is to stimulate significant interaction among UCI virologists and other UCI basic and clinical researchers across many disciplines.

Research on viruses has often provided a biological and technological foundation from which much has been discovered concerning the basic molecular processes of organisms. Indeed, this technology has had enormous impact on other areas. As such, the very foundations of molecular biology owe much to virus research. Virology continues to teach us much about normal and disease processes (including cancer) of living systems not only at the molecular and cellular level, but at the level of whole organisms and their populations as well. Viruses have long provided some of the most useful experimental models for disease, cancer, immunity, and genetic systems of gene control. In addition, viral-based technology is being vigorously pursued and developed in the context of gene therapy and is teaching us much about the control of cellular processes.

With the growing worldwide threat of emerging viral diseases, interest in virus research at all levels has intensified and taken on a new global perspective; thus, there is a need at the international level to become more knowledgeable about viruses and disease. As a consequence, previously separate disciplines such as molecular biology, pathogenesis, evolutionary biology, neurology, and radiological sciences can now be readily linked by virus research. Such research pathways provide a highly interdisciplinary character to the Center for Virus Research at UCI. Visit <http://cvr.bio.uci.edu/> for more information.

CRITICAL THEORY INSTITUTE

The Critical Theory Institute (CTI) provides a locus for the conduct and support of collaborative, interdisciplinary research that focuses on the theoretical underpinnings of such fields as history, literature, philosophy, art, anthropology, politics, and cultural studies. CTI's principal function is to create a forum for debate among competing movements in contemporary critical theory. CTI's work encompasses not only the application of theory to data but also a self-reflexive investigation of theoretical presuppositions in order to produce alternative theoretical models, methodologies, and research strategies.

CTI investigates problems according to three- to four-year research projects on announced topics, such as "The Forces of Globalization" (1995–99), "The Futures of Property and Personhood" (1999–2003), and "In Security" (2003–06). Research projects involve collaborations between CTI members and contemporary theorists from around the world. Contributors to each project present lectures in CTI's Irvine Lectures in Critical Theory series. Research programs are concluded with the publication of essay collections in CTI's project series with Columbia University Press. See, for example, *"Culture" and the Problem of the Disciplines*, edited by John Rowe, and *Accelerating Possession*, edited by Bill Maurer and Gabriele Schwab.

CTI additionally hosts the annual René Wellek Library Lectures, inaugurated in 1981. Every year, typically in the spring quarter, a distinguished scholar delivers three public lectures on a topic relevant to the field of critical theory. Lecturers have included Gayatri Spivak, Judith Butler, Homi Bhabha, Paul Gilroy, Angela Davis, Achille Mbembe, David Harvey, and Talal Asad. The Wellek Lectures also are published with Columbia University Press in CTI's ongoing series. Other activities sponsored by CTI include workshops, conferences, reading and discussion groups, one-time lectures by international scholars, and co-sponsorship of a number of other theory-related events.

In recent years, CTI has established broad connections to distinguished institutions and scholars around the world and has been planning collaborative international projects on a regular basis. The inaugural event, a conference entitled "The States of Theory: China and the West," took place in Beijing in the summer of 2000, and was co-organized by CTI and Beijing Language and Culture University. In April of 2002, CTI hosted another major conference, "Derrida/Deleuze: Psychoanalysis, Territoriality, Politics." The two-day event on connections between Derrida and Deleuze featured keynote lectures by Catherine Malabou and Jacques Derrida, and screenings of "D'Ailleurs Derrida" (Fathy, 2001) and "L'Abécédaire de Gilles Deleuze" (Boutang, 1996). In association with the Postcolonial Institute, CTI participated in another international conference in September 2003 in Melbourne, Australia.

Further information on CTI, including a calendar of events, is available at <http://www.humanities.uci.edu/critical>.

DEVELOPMENTAL BIOLOGY CENTER

The goal of the research conducted in UCI's Developmental Biology Center (DBC) is to understand the normal processes of development and homeostasis. Development begins with embryogenesis and culminates with formation of an adult animal. Homeostasis refers to the process whereby tissues, such as skin, are continuously rebuilt in adult animals. Abnormal development during embryogenesis is a common cause of birth defects, while abnormal homeostasis is commonly associated with cancer or degenerative disease.

The faculty in DBC use a wide range of experimental approaches to understand development. The current research areas fall into several themes. These include cancer biology, cell biology, cellular degeneration and regeneration, cellular signaling, growth, patterning and differentiation, and environmental impact.

Advances in research in these areas provide valuable basic information about how development and homeostasis are controlled. This information can then be used to develop tools for diagnosis and treatment of human disease associated with abnormalities in either process.

DBC facilitates this research by providing access to state-of-the-art instrumentation and by fostering events that spur the development of interdisciplinary research. The Center currently provides confocal microscopy, image analysis, flow cytometry and cell sorting, surface plasmon resonance molecular interaction equipment, and robotics. It also sponsors symposia, seminars, and other gatherings to discuss both science itself and implications of the science. Additional information is available at <http://dbc.bio.uci.edu/>.

GENETIC EPIDEMIOLOGY RESEARCH INSTITUTE

The Genetic Epidemiology Research Institute (GERI) was established in 2004 and brings together scientists from epidemiology, developmental and cell biology, molecular biology and biochemistry, evolutionary biology, genetics, immunology, statistics, bioinformatics, and environmental and behavioral sciences to answer complex questions that can best be explored through an interdisciplinary approach. GERI (1) combines epidemiologic approaches with basic science methods to test hypotheses related to genetic bases of the etiology and progression of disease; (2) facilitates research to apply newly discovered molecular biological processes and genetic characteristics in health and disease in well-characterized human populations; (3) provides epidemiological information that will influence the understanding of the basic processes leading to disease, such as environmental and lifestyle factors, and to test their effect as modifiers of genetic predisposition, thus providing the foundation for disease prevention; and (4) uses advances in information sciences and communication technology to allow for efficient data mining and pattern recognition for genetic epidemiological data.

INSTITUTE FOR BRAIN AGING AND DEMENTIA

The goal of the Institute is to mobilize and unify University resources to discover meaningful ways to prevent decline in brain function with aging prior to its inception and to reverse loss of function once it has occurred. The elusive, yet attainable goal of "successful aging," maintaining functionality in one's later years, is one of the great challenges facing the nation. While many individuals continue to maintain and even improve their intellectual and cognitive skills, others suffer a serious and seemingly irreversible loss of cognitive function and develop dementias, most commonly Alzheimer's disease. The Institute is a fully integrated basic science/clinical research program that operates a Dementia Assessment and Treatment Clinic; a Brain Imaging Acquisition/Analysis Unit; a Tissue Repository for cellular and molecular analysis of the aged and Alzheimer's brain; and a comprehensive database of clinical and research data. Research is multidisciplinary, employing the latest techniques in computer science, artificial intelligence, molecular biology, and neuroscience. The Institute also sponsors a specialized educational track in brain aging and dementia for advanced students who wish to develop a career opportunity in an exciting and expanding field. The Institute is the site of a National Institute on Aging Alzheimer's Disease Research Center and a State of California Department of Health Alzheimer's Disease Research Center.

Faculty from the Departments of Neurobiology and Behavior, Neurology, Radiology, Anatomy and Neurobiology, Molecular Biology and Biochemistry, Microbiology and Molecular Genetics, Cognitive Sciences, and Electrical Engineering and Computer Science; the Donald Bren School of Information and Computer Sciences; and the School of Social Ecology comprise the Institute's core group of investigators.

INSTITUTE FOR GENOMICS AND BIOINFORMATICS

The Institute for Genomics and Bioinformatics (IGB) provides an organizational structure for interdisciplinary research and training in genomics, proteomics, bioinformatics, chemoinformatics, and computational biology—emerging scientific disciplines that are revolutionizing biology, medicine, and society. IGB computational and life scientists are working together to pioneer fundamental processes for reverse engineering gene and protein networks to understand complex biological systems. Through these interdisciplinary collaborations, IGB scientists are creating new theoretical, algorithmic, and software advances in storing, retrieving, networking, processing, modeling, analyzing, navigating, and visualizing biological information. In turn, their computational and computer science accomplishments are providing methods, predictions, and new hypotheses that are driving biological research in previously unanticipated ways. This scientific cross-fertilization is enriching both fields and will continue to do so in the coming decades. More complete descriptions of the Institute's research and training programs are available at <http://www.igbuci.edu/>.

INSTITUTE OF GEOPHYSICS AND PLANETARY PHYSICS

The Irvine branch of the Institute of Geophysics and Planetary Physics (IGPP) was established in 2001. IGPP is a University of California Multicampus Research Unit (MRU) established in 1946, with existing branches at UCLA, UCSD, UCR, UCSC, and the Los Alamos and Livermore National Laboratories. The Institute's mission is to promote and coordinate basic research on the understanding of the origin, structure, and evolution of the Earth, the Solar System, and the Universe, and on the prediction of future changes, as they affect human life. The UCI branch's research goals complement the MRU in that the understanding of the Earth as a coupled system of atmosphere, land, and ocean is required to plausibly predict future changes in the Earth System. In order to assess the role

of human activities on present and future changes in the global environment, as well as the consequent effects on human life, the UCI branch intends to forge links to other UC campuses as well as the national laboratories. The core of the UCI branch is the Center for Global Environmental Change Research (CGECR), which was established in 1999.

IGPP promotes research at UCI by (1) supporting major research initiatives and facilities jointly with the School of Physical Sciences and the Department of Earth System Science; (2) by supporting research by graduate students; and (3) by supporting visiting scientists, seminars, and workshops that promote collaborative research. Facilities that receive IGPP support include the W. M. Keck Carbon Cycle Accelerator Mass Spectrometry Facility, the Stable Isotope in Atmospheric Trace Gas Facility, the Earth System Modeling Facility, and the Earth System Science (ESS) Analytical Mass Spectrometry Facility.

INSTITUTE FOR MATHEMATICAL BEHAVIORAL SCIENCES

The Institute for Mathematical Behavioral Sciences fosters research in the application of mathematical models and methods to describe and to better understand human behavior, both individual and social. Mimicking the successful interaction between mathematics and the physical sciences, a goal of the Institute is to generate successful interactions between mathematics and the behavioral and social sciences. The Institute sponsors specialized seminars and colloquia, a visiting scholars program, workshops, and focused research groups of faculty, students, and visitors, and it maintains a Technical Report Series. Participants include faculty from the Departments of Anthropology, Cognitive Sciences, Economics, Logic and Philosophy of Science, Political Science, and Sociology in the School of Social Sciences; the Department of Mathematics in the School of Physical Sciences; the Department of Electrical Engineering and Computer Science in The Henry Samueli School of Engineering; the Donald Bren School of Information and Computer Sciences; and The Paul Merage School of Business. Additional information is available at <http://www.imbs.uci.edu>.

INSTITUTE FOR SOFTWARE RESEARCH

The mission of the Institute for Software Research (ISR) is to advance software and information technology through research partnerships. ISR is dedicated to fostering innovative basic and applied research in software and information technologies. To achieve this goal, ISR works with established companies, start-ups, government agencies, and standards bodies to develop and transition technologies to widespread and practical application. The Institute also focuses on educating the next generation of software researchers and practitioners in advanced software technologies. It supports the public service mission of the University of California in developing the economic basis of the State of California.

Technical emphases of the Institute include software architecture, decentralized development and applications, event-based systems, open-source software development, game culture and technology, software processes, computer-supported cooperative work, human-computer interaction, user interface software, information visualization, privacy and security, ubiquitous computing, software understanding, requirements engineering, analysis and testing, extensible systems, configuration management, configurable distributed systems, Internet protocols and standards, and software engineering education.

Faculty members are drawn from throughout the University of California. Graduate research assistants, professional research staff, and visiting researchers complete the Institute's research body.

ISR supports research projects, sponsors professional meetings, and develops technology. To further its research agenda, the Institute

sponsors a distinguished speaker series, technical roundtables, workshops, symposia, and special events. Effective partnerships with industry are essential for ISR to achieve its goals of technology development and transition. Corporate and institutional sponsorships support ISR's research, activities, and professional meetings. Additional information is available at <http://www.isr.uci.edu/>.

INSTITUTE FOR SURFACE AND INTERFACE SCIENCE

The detailed understanding, control, and application of phenomena that occur at surfaces and interfaces requires expertise that cuts across the traditional boundaries of science and engineering. The increased activity in the nanosciences provides an excellent example. As structure sizes are reduced into the nanometer regime, the properties of surfaces and interfaces become dramatically more important as the surface-to-volume ratio increases. In this burgeoning new field, new understanding of surface chemistry becomes ever more important to the controlled synthesis of structures (e.g., wires, tubes, particles), new understanding of physics of surfaces and interfaces is required to understand and control the properties, and new engineering approaches are required to convert such structures into a broad range of new devices. The Institute for Surface and Interface Science (ISIS) at UCI exists to stimulate and foster scientific interactions between member faculty who share a common interest in molecular and atomistic-scale understanding and control of phenomena that occur on or at the interfaces between one or more phases of matter. A fundamental understanding of surfaces and interfaces provides a foundation for control of a myriad of technologically important phenomena including: lubrication, catalysis, corrosion, chemical sensing, semiconductor-based electronics, power generation in batteries, fuel cells, and solar cells. ISIS faculty have a diversity of training, experience, and research focuses related to surfaces and interfaces; interactions between members can be highly synergistic, and these interactions make possible a "vertically integrated" treatment of complex problems encompassing theory, fundamental experiments, engineering, and application.

INSTITUTE OF TRANSPORTATION STUDIES

The Institute of Transportation Studies (ITS), a University of California Multicampus Organized Research Unit with branches at Irvine, Davis, and Berkeley, was established by act of the State Legislature in 1947 to foster interdisciplinary research on contemporary transportation issues. ITS research at UCI involves faculty and students from The Henry Samueli School of Engineering, the School of Social Sciences, the School of Social Ecology, The Paul Merage School of Business, and the Donald Bren School of Information and Computer Sciences.

ITS has a long and rich history of providing both direct and indirect support to the UCI transportation graduate programs. It provides office and research space to virtually all of the students enrolled in UCI's four graduate transportation programs—the interdisciplinary Program in Transportation Science; the graduate concentration in Transportation Economics; the Transportation Planning option in the Department of Planning, Policy, and Design; and the Transportation Systems Engineering graduate focus in the Department of Civil and Environmental Engineering. ITS provides extensive computing resources to all of these students, together with state-of-the-art simulation and laboratory facilities. ITS subscribes to the major transportation research journals and offers a variety of computer-based information retrieval services.

Research at ITS covers a broad spectrum of transportation issues. Much of the research conducted by the Institute is organized around centers. The Institute is part of the **University of California Transportation Center (UCTC)**, a federally designated center for transportation research that focuses on research in transportation systems and policy. The **ITS Center for Activity Systems**

Analysis (CASA) supports research directed toward the development of activity-based approaches to travel behavior analysis. For more than 25 years, CASA research associates have been on the leading edge of research in travel demand analysis, establishing an international reputation in the study of complex travel behavior, activity-based approaches, agent-based models, microsimulation approaches, data collection technologies, and empirical modeling. The **ITS Center for Advanced Transportation Management Systems Research**, which is part of the Universitywide PATH (Partners for Advanced Transit and Highways) program, supports research directed toward the development of intelligent transportation systems. The ITS Advanced Transportation Management Systems (ATMS) Laboratories provide facilities for the teaching, research, and development of intelligent transportation systems. This major effort is complemented by the **ITS Center for Traffic Simulation Studies (CTSS)**, which features prototype systems for modeling and evaluating intelligent transportation systems and telematics. The **Center for Logistical Innovations in Freight Systems (CLIFS)** focuses on the development of optimization techniques for dynamic and stochastic freight and fleet management and investigation of the impacts of information technology on logistics operations. The **Center for Urban Infrastructure (CUI)** organizes and conducts research into the role of transportation in achieving and promoting sustainable community development. The Institute also plays a major role in the intelligent transportation and telematics research component of the **California Institute for Telecommunications and Information Technology (Calit2)**, one of the Institutes for Science and Innovation created by the Governor of California.

In addition to projects connected to these centers, ITS researchers are involved in many individual projects across several disciplines. ITS also hosts visiting scholars from the U.S. and abroad to facilitate cooperative research and information exchange, and sponsors conferences and colloquia to disseminate research results.

Campus Centers

A Campus Center provides a group of researchers with use of the "Center" title and a structure for its collaborative activities. The rationale for establishing a Campus Center may include attracting greater recognition and extramural support for a research program at UCI and/or providing an infrastructure that promotes synergistic interactions between a group of researchers within a school or across schools. Directors of campus centers typically report to the Dean of their respective schools. More information about the following Campus Centers may be found by clicking on the "Research Centers and Institutes" link at <http://www.research.uci.edu/>.

Center for Asian Studies
Center for Biomembrance Systems
Center for Demographic and Social Analysis
Center for Diabetes Research and Treatment
Center for Ethnography
Center for Global Peace and Conflict Studies
Center for Hearing Research
Center for Immunology
Center for Learning through the Arts and Technology
Center for Organizational Research
Center for Pervasive Communications and Computing
Center for Research on Immigration, Population, and Public Policy
Center for Unconventional Security Affairs
Center in Law, Society and Culture
Center on Inequality and Social Justice
Epilepsy Research Center
International Center for Writing and Translation
Newkirk Center for Science and Society
Tu and Yuen Center for Functional Onco-Imaging
UCI Interdisciplinary Center for the Scientific Study of Ethics and Morality
Urban Water Research Center

GRADUATE DIVISION

Frances M. Leslie, Acting Dean of the Graduate Division

With the exception of programs conducted by the School of Medicine for the training of physicians, and the J.D. program in the School of Law, the Dean of the Graduate Division administers graduate education in accordance with academic policies established by the University of California, the Irvine Division of the Academic Senate, and the UCI Graduate Council, a standing committee of the Irvine Division of the Academic Senate. Graduate education includes those students engaged in the pursuit of a master's degree, a doctoral degree, or a teaching credential, as well as individuals engaged in postdoctoral training at UCI. There is no separate graduate faculty at UCI; all graduate work is supervised by academic units and faculty members who have concurrent responsibility for undergraduate education.

Information about graduate education at UCI is published here in the *UCI General Catalogue*, on the Graduate Division Web site, and in individual graduate program publications. The staff of the Graduate Division and departmental academic advisors are prepared to answer questions about admission, academic policies and procedures, graduate programs and degrees, financial assistance, student services, and other matters of concern to applicants or graduate students. The Graduate Division is located in 120 Aldrich Hall; (949) 824-4611; <http://www.grad.uci.edu/>.

The University of California believes that a diverse student and faculty population is integral to the advancement of academic excellence and is critical to promoting the lively intellectual exchange and the variety of ideas and perspectives that are essential to advanced scholarly research and debate. The University is committed to expand student outreach, recruitment, and retention efforts. Through the Graduate Division's diversity programs, steps are taken to increase the participation of diverse groups of U.S. citizens and permanent residents who have been educationally or socioeconomically disadvantaged.

It is the goal of UCI's Graduate Division to award fellowships to many admitted students based upon merit or financial need. In addition, diversity fellowships for new and continuing Ph.D. and M.F.A. students are based on demonstrated scholastic achievement, full-time status, U.S. citizenship or permanent residency, and socioeconomic and educational limitations. Each academic department identifies those students whose scholarship, background, and life experiences can best enhance the level of diversity within a department or discipline.

Admission to Graduate Standing

Applicants for admission to graduate study at UCI must apply for acceptance into a specific graduate program to work toward a specific advanced degree. A general requirement for admission is that the applicant hold the degree of Bachelor of Arts, Letters, Philosophy, or Science (or an acceptable equivalent) from an accredited academic institution with degree standards equivalent to those of the University of California. A minimum undergraduate grade point average of at least B (3.0 on a 4.0 scale) is required.

Each applicant's file is comprehensively evaluated by the faculty admissions committee of the applicant's specific graduate program on the basis of such factors as academic subject preparation, scholarship, letters of recommendation, test scores, and examples of previous work. One critical evaluative question is whether the applicant's academic objectives can reasonably be satisfied by a particular

graduate program on this campus. Please note that the University of California does not have the capacity to accommodate/admit all applicants who meet the minimum admission requirements.

Application Procedures

HOW TO APPLY

Prospective students should apply online using the *Application for Graduate Study* available at <http://www.grad.uci.edu/>. Detailed instructions are included in the electronic application. For additional information, send e-mail to ogs@uci.edu or call (949) 824-4611.

The mandatory application fee is \$70 (\$90 for international students) and is not refundable under any circumstances. (Please note, however, that the application fee for M.B.A. programs offered by The Paul Merage School of Business is \$150.) Payment instructions are provided in the electronic application as well as on the Graduate Division Web site. Diversity program and/or financial-need-based application fee waivers may be available for a few domestic (U.S. Citizen or U.S. Permanent Resident) applicants.

WHEN TO APPLY

For all graduate programs, applications should be completed and submitted by January 15 to receive full consideration for any financial support. Some academic units may accept applications for winter or spring quarter admission for which deadlines are October 15 and January 15, respectively. In order to process applications in time for the applicant to receive full consideration, letters of recommendation, official transcripts, and official test scores must be received before the published deadlines. Some schools and departments have earlier or later deadlines for filing the application.

Applicants should consult their prospective department or school for more detailed information. Contact information for the schools and departments may be obtained by visiting their individual Web sites available at <http://www.uci.edu/academics.php>, or via the list of department and school contacts on the Graduate Division Web site at http://www.grad.uci.edu/contact/applicant_prgm_dir.htm.

Required Supporting Documents

LETTERS OF RECOMMENDATION

Applicants should arrange to have three letters of recommendation forwarded directly to their prospective academic department or program. Recommendation forms are available for downloading at <http://www.grad.uci.edu/forms/>. Only one set of three recommendation letters needs to be submitted in support of an application for admission and fellowship or assistantship consideration. It is important that letters of recommendation be completed primarily by professors or instructors in disciplines related to the proposed course of study who are in a position to analyze an applicant's abilities and academic promise.

GRADUATE RECORD EXAMINATION (GRE) SCORES

All applicants are required to take the Graduate Record Examination (GRE) General Test, with the following exception: The Paul Merage School of Business requires that M.B.A. applicants take the Graduate Management Admission Test (GMAT). Executive M.B.A. and Health Care Executive M.B.A. applicants are exempt from the test requirement. Several programs also require, or strongly recommend, that an applicant report the score of a GRE Subject Test. There is no minimum GRE score. Applicants should register for either the October or December test dates to ensure the

timely receipt of their score results for admission consideration. The GRE is administered by Educational Testing Services (ETS), <http://www.ets.org>. GRE scores that are more than five years old are not acceptable.

DOMESTIC ACADEMIC RECORDS

Domestic applicants should request that official transcripts be forwarded *directly* to their prospective academic department or program. Two complete sets of official records covering all post-secondary academic work attempted, regardless of length of attendance, are required. Two official sets of transcripts must also be submitted by applicants who attended or graduated from any University of California campus, including UC Irvine. Applicants with academic work in progress must expect to complete their undergraduate degree programs before the intended date of enrollment at UCI and must submit evidence of degree conferral before officially enrolling.

FOREIGN ACADEMIC RECORDS

Official records from overseas institutions should be sent *directly* to the prospective academic department or program at UCI. Records of academic study from foreign institutions must be official, bearing the original signature of the registrar and the seal of the issuing institution. Applicants should not send the original of an academic record which cannot be replaced; they should obtain instead properly certified copies. Unless academic records and diplomas are issued in English by the institution, the official records in their original language must be submitted with an authorized, complete, and exact English translation. Foreign academic records must be in duplicate and include all subjects or courses taken on a yearly basis, together with the units of credit or time allotted to each subject each term or year and the marks or ratings in each subject or examination passed. In all cases the institutional grading scale or other standard of evaluation, including maximal passing and failing marks and definition of grades between them, should appear on official records or as an official attachment. Official evidence of degree conferral must also be supplied, together with evidence of rank in class if available.

DEMONSTRATION OF ENGLISH LANGUAGE PROFICIENCY FOR ADMISSION

Applicants whose primary language is not English are required to demonstrate proficiency in English for admission consideration. A student may receive a waiver to the Test of English as a Foreign Language (TOEFL or TOEFL iBT) requirement for purposes of admission to a UCI graduate program if the student completed all of the requirements for their high school diploma, bachelor's degree, or an advanced degree in a country where the primary and/or dominant language is English, **and** where English was the language of instruction of the school where the requirements were completed. The TOEFL/TOEFL iBT requirement may be waived for **admissions purposes only**. In addition, this policy pertains to the minimum UCI campus admission policy for English Language proficiency. Individual departments may have stricter requirements than the minimum campus standard. Applicants should always consult the department in which they are interested for specific requirements.

Proficiency in English may be demonstrated by passing one of two standardized, internationally administered tests: TOEFL (the Test of English as a Foreign Language), or IELTS (International English Language Testing System). The applicant should take one of these tests at the earliest available date to ensure that the scores are reported in time to meet application deadlines. Applicants will not be admitted provisionally if they lack an acceptable proficiency score or have not yet taken an acceptable proficiency examination.

The TOEFL is administered by Educational Testing Service (ETS), <http://www.ets.org>. The minimum score required for admissions consideration is 550 for the paper-based test; for the TOEFL iBT, the minimum required overall score for admissions consideration is 80. Please note that the minimum score requirements for admission to programs within The Paul Merage School of Business are 600 for the paper-based test and 100 for the TOEFL iBT.

TOEFL and TOEFL iBT scores that are two years old or older are not acceptable. Results of institutional (non-ETS) administrations of the TOEFL or TOEFL iBT are not acceptable.

English language proficiency may also be demonstrated by passing the Academic Modules of the International English Language Testing System (IELTS) examination (<http://www.ielts.org>). The minimum requirements for admissions consideration are an overall score of 7, with a score of no less than 6 on any individual module. IELTS test scores that are two years old or older are not acceptable.

DEMONSTRATION OF ORAL ENGLISH PROFICIENCY FOR INTERNATIONAL TEACHING ASSISTANT/ASSOCIATE EMPLOYMENT

Many UCI degree programs require students to serve as a Teaching Assistant for training purposes and as a graduation requirement. UCI encourages (and some individual graduate programs require) prospective students to take and pass one of the accepted oral English proficiency examinations prior to application/admission. International and U.S. Permanent Resident graduate students who are not citizens of countries where English is either the primary or dominant language as approved by the UCI Graduate Council, who wish to be considered for appointment as a Teaching Assistant/Associate, must pass one of the following English proficiency examinations: Test of Spoken English (TSE), Test of English as a Foreign Language Internet-based Test (TOEFL iBT), International English Language Testing System (IELTS), or UCI campus Speaking Proficiency English Assessment Kit (SPEAK) test. TOEFL iBT is administered by the Educational Testing Service (ETS). IELTS, on the other hand, is administered through the partnership of the British Council, IDP: IELTS Australia and the University of Cambridge ESOL Examinations. Once a student is admitted to UCI, the

SPEAK test, which is administered by the UCI Humanities Instructional Resource Center (HIRC), is an option to satisfy this requirement. Achieving a minimum score of 26 on the speaking portion of the TOEFL iBT, a score of 8 on the speaking module of the IELTS, or a score of 50 on the SPEAK test satisfies the oral proficiency requirement and *may* establish eligibility for a Teaching Assistant/Associate appointment. Graduate students are responsible for ensuring that the UCI Graduate Division is notified directly of their scores by the testing centers. There is no exception to this requirement.

A full discussion of English proficiency options and links to the agency sites offering these examinations are available at http://www.grad.uci.edu/current/esl_tests.htm.

Students who are citizens of the United States (regardless of country of origin) and citizens of countries where English is either the primary or dominant language as approved by the UCI Graduate Council are exempt from the requirement of taking and passing the English language proficiency examinations. Non-U.S. citizens who are U.S. Permanent Residents or hold other non-citizen status and are residing in the United States, who have completed their undergraduate education in the United States, or have attended American schools abroad are *still* required to pass one of the English language proficiency examinations noted above in order to be eligible for an appointment as a Teaching Assistant/Associate. International and U.S. Permanent Resident graduate students whose native language is not English, who have completed *all years of their high school education* in the United States, are eligible to request an exemption by submitting a request and official high school transcripts to the Graduate Student Employment Analyst in the Graduate Division. No student is permitted to begin an appointment as a Teaching Assistant/Associate until the exemption has been approved in writing.

SPECIAL NOTE TO FOREIGN APPLICANTS

If admitted, foreign applicants will be required to certify that they possess sufficient funds to cover all fees, transportation, and living expenses for the first year of their studies at UCI. A Confidential International Applicant Questionnaire for the purpose of verifying the amount and source of funds available for graduate study will be forwarded to foreign applicants upon admission to graduate study. The required financial verification must be provided before a visa can be issued.

Admission and Registration

A formal notice of the admission decision is sent to each applicant as soon as possible after the application and complete records are received, and after the department has made a recommendation. The official notification will be mailed well in advance of the beginning of the quarter for which application has been made.

Admission to graduate standing does not constitute registration for classes. A student is not officially registered for classes until the entire registration procedure is completed each quarter, including payment of registration and other University fees and enrollment in courses. Information on registration dates and procedures will be mailed to new applicants prior to the registration cycle. Extensive information for newly admitted students is available online at <http://www.grad.uci.edu/newadmits/>.

If an applicant wishes to defer admission to a later academic quarter (up to a maximum of three quarters after the original quarter of admission), the Graduate Division must be notified of the request in writing. After formal admission has been offered, the request for deferral must also be approved by the academic program to which the applicant was admitted.

Academic Advising

In each academic unit with an advanced degree program, there is at least one formally appointed faculty graduate advisor or director of graduate studies. The graduate program advisor is a regular faculty member responsible for supervising graduate study in that unit, for monitoring the academic progress of graduate students, and for seeing that each graduate student is assigned a faculty advisor. The graduate student's research advisor is responsible for mentoring the student, which includes meeting with the student at least once during each quarter of enrollment and providing an annual assessment of each student's timely academic progress. The graduate program advisor plays a key role in the academic lives of graduate students, advising students and other faculty members about program requirements and the academic policies pertaining to graduate students, approving study lists, and evaluating academic petitions. In many academic units the graduate program advisor is instrumental in the nomination of students for fellowship support, the selection of students for assistantship and fellowship appointments, and in the supervision of graduate student teachers. In most schools there also is an associate dean for graduate studies who coordinates many of the functions which affect graduate students within that school. Both graduate advisors as well as deans are important links between the student and the Dean of the Graduate Division.

Most graduate students also will have an individual faculty advisor or advising committee after the first year of graduate study. When a student is advanced to candidacy for the Ph.D., the doctoral committee becomes the primary source of academic guidance; however, student academic petitions still must be approved by the faculty graduate program advisor.

Academic Policies

The academic policies described here apply to students enrolled in study leading to graduate degrees and California education credentials. Other regulations and procedures are covered in the Academic Regulations and Enrollment and Other Procedures sections, and in the description of each graduate program.

ACADEMIC HONESTY

It is essential that all members of the academic community subscribe to the ideal of academic honesty and integrity and accept individual responsibility for their work. Students are urged to become familiar with the UCI Academic Senate Policies on Academic Honesty, available online at http://www.senate.uci.edu/9_IrvineManual/3ASMAppendices/Appendix08.html, and in the *Catalogue's* Appendix. The policies apply equally to electronic media and print, and involve text, images, and ideas.

SCHOLASTIC REQUIREMENTS

A graduate student is expected to make satisfactory progress toward an approved academic objective, as defined by the faculty of the program in accordance with policies of the Graduate Council, to maintain a satisfactory grade point average for all work undertaken while enrolled in graduate study, and to maintain academic progress within the required time to degree as established by the respective academic program. Satisfactory progress is determined on the basis of both the recent academic record and overall performance. A graduate student normally is expected to complete satisfactorily at least eight units of academic credit applicable to the graduate program in each regular academic session (unless on an approved leave of absence), and satisfy all requirements of the academic program according to an approved schedule. For a graduate student, only the grades A+, A, A-, B+, B, and S represent satisfactory scholarship and may be applied toward advanced degree requirements. However, a UCI course in which a grade of B- is earned may be accepted, via a formal petition process, in partial satisfaction of the degree requirements if the student has a grade

point average of at least 3.0 in all courses applicable to the degree. Graduate students may not apply courses graded Pass/Not Pass toward any degree or satisfactory progress requirements. A grade point average below the B level (3.0 on a 4.0 scale) is not satisfactory, and a student whose grade point average is below that level is subject to academic disqualification.

A student's academic progress ordinarily is evaluated on the basis of the academic record, time-to-degree, and the professional judgment of the faculty. A few weeks after the end of a quarter, an updated copy of each enrolled student's permanent academic record is available from the Registrar. This record lists all UCI courses for which a graduate student was enrolled (including courses taken through the Intercampus Exchange Program), the grades assigned, and the cumulative grade point average. This record also includes formal candidacy for an advanced degree, degrees conferred, certain examinations passed, unit credit accepted from other institutions, and other important academic information.

A graduate student who has not demonstrated satisfactory academic progress is not eligible for any academic appointment such as Reader, Tutor, Graduate Student Researcher, Teaching Associate, or Teaching Assistant, and may not hold a fellowship or other award which is based upon academic merit.

SATISFACTION OF DEGREE REQUIREMENTS

To graduate, students must satisfy the degree requirements outlined in the *Catalogue* that is in effect at the time they are admitted to a graduate program. If the degree requirements are subsequently revised, the academic unit may, where appropriate, give students the option to meet the new requirements instead. A student who withdraws from a program, or loses student status for other reasons for one or more quarters, will be bound by the degree requirements in effect at the time of readmission unless otherwise stipulated and agreed to in writing by the academic unit and approved by the Dean of the Graduate Division. A student who defers admission or who changes to another program will be held to the requirements in effect at the time of first registration.

GRADING

With the consent of the academic units involved, and upon approval by the Graduate Council, individual study and research courses at the graduate level may be graded Satisfactory or Unsatisfactory (S/U). Also, with the approval of the Graduate Council certain graduate courses are graded S/U only. A grade of S is assumed equivalent to a grade of B (3.0) or better. No course credit is given to a student for a course in which a grade of U is received.

Graduate students may take one undergraduate course (up to four units) per quarter on a Pass/Not Pass basis. However, such courses are not considered part of the student's graduate program and are not applied toward the requirements for an advanced degree.

The grade of Incomplete (I) may be assigned by an instructor when the student's work is of passing quality but is incomplete because of circumstances beyond the student's control. Ordinarily, incomplete grades do not affect a graduate student's grade point average, but they are an important factor in evaluating academic progress. Further, when computing GPA to determine whether the student meets the minimum GPA requirement for graduation (3.0), I grades are counted as F (i.e., zero grade points). The maximum amount of time that an instructor may allow for making up incomplete work is three quarters of enrollment but stricter limits may be applied. When work is completed within the time allowed, the student should ask the instructor to submit a change-of-grade notice to the Registrar, through the dean of the school in which the course was offered. If not made up within the time allowed, an I grade is recorded permanently. (Students who have not been continuously enrolled should contact their graduate advisor for information about completion of incomplete grades.)

IP (In Progress) is a transcript notation restricted to sequential courses extending over two or more quarters for which use of the IP notation has been approved. When the last quarter of the sequence is completed, the grade for the final quarter is assigned for all quarters of the sequence. No credit is given until the student has completed the entire sequence.

A student who received an NR (No Report) transcript notation must immediately contact the instructor and arrange for the removal or replacement of the NR. If no action is taken by the end of the first quarter following the quarter in which the NR was assigned, or by the end of the quarter immediately preceding award of the degree, whichever comes first, the NR becomes an F, U, or NP and will remain permanently on the student's record.

A graduate student may repeat once a course in which a grade below B (3.0) or a grade of U was received. Only the most recently earned grade is used in computing the student's grade point average for the first eight units of repeated work; thereafter both the earlier and the later grades are used.

Additional information about grading may be found in the Academic Regulations section.

LANGUAGE POLICY FOR EXAMINATIONS AND THESES/DISSERTATIONS

English is the language of instruction and examination for graduate courses at UCI, unless the subject matter includes foreign language content. Similarly, examinations that satisfy specific degree requirements, such as preliminary, comprehensive, qualifying/candidacy examinations and thesis/dissertation defenses shall be conducted in English, except for the portions of the examination where the subject matter makes a different language specifically appropriate. (Examples include foreign language literature, linguistics, and others.)

Students must seek permission to write their thesis/dissertation in a language other than English. To do so, immediately after advancement to candidacy, the candidate must submit to the Dean of the Graduate Division a letter approved by the thesis/dissertation chair, committee, and department chair. All members of the candidate's thesis/dissertation committee must have a reading knowledge of the language presented in the thesis/dissertation. There must be legitimate reasons for substituting English with a foreign language such as subject matter, special primary audience, publication arrangements, academic position in a foreign country, historical or literary value, or principal language(s) used in the documents to be analyzed and interpreted. **Inability to write in English is not a valid reason.** If the thesis or dissertation is approved to be written in a foreign language, the candidate must submit two abstracts. One must be in English. The other must be written in the language of the thesis or dissertation. Moreover, the thesis/dissertation defense will be conducted in English, except as determined by subject matter. See the *UCI Thesis and Dissertation Manual* for information about the preparation of manuscripts (http://www.lib.uci.edu/libraries/collections/special/uci_td/tdmanual.html).

ACADEMIC DISQUALIFICATION

After consultation with the student's academic unit, the Dean of the Graduate Division may disqualify a student for academic reasons, including, but not limited to, having a grade point average in graduate and upper-division courses below 3.0 for two or more successive quarters; or failing to pass (or not taking) a required examination or course within the time specified for that graduate program; or not maintaining satisfactory academic progress toward completion of an approved program of study.

Unsatisfactory academic progress may be determined on the basis of explicit requirements (as described above), but the professional judgment of the faculty upon review of all graduate work undertaken by the student is paramount. Ordinarily, a student whose

work does not meet academic standards may be given written notice and a reasonable period of time in which to make up all deficiencies.

Prior to taking final action to disqualify, the Dean of the Graduate Division ordinarily will notify a student who is subject to academic disqualification and will provide reasonable opportunity for the student to correct erroneous or outdated academic records, to submit other information or comments in writing, or to request a second review of his or her academic performance.

Upon final written notice of academic disqualification by the Dean of the Graduate Division, disqualification will be noted on the formal academic record of that student.

ACADEMIC RESIDENCE

A graduate student is considered to be in residence during an academic quarter if at least four units of academic credit are earned in regular upper-division or graduate courses. Credit for one academic quarter of residence may also be earned by completing at least two units of credit in approved courses in each of two six-week summer sessions, or four units of credit in an eight- or ten-week summer session. In the case of Ph.D. students, these must be consecutive sessions.

ENROLLMENT POLICY

Full-time academic enrollment is expected of graduate students at the University of California. Study for the Ph.D. requires a full-time commitment from the doctoral student. Full-time study is defined as enrollment in at least 12 units of upper-division or graduate academic credit per quarter, including credit for supervised research or teaching. Graduate students may enroll in lower-division courses with the approval of their academic advisors, but such courses are not considered to be part of any graduate program.

Graduate students ordinarily may not receive credit for more than 12 units per quarter in graduate courses, or 16 units in upper-division courses, or a proportionate number in combination. Course loads in excess of 16 units must be approved in advance by the student's Graduate Advisor and the Dean of the Graduate Division.

Although in most instances completion of an advanced degree at UCI requires full-time study, the University recognizes the legitimate need for part-time study opportunities and is committed to providing those opportunities wherever possible. Graduate degree programs may be opened to part-time students wherever good educational reasons exist for so doing. In general, part-time status is available in master's and credential programs where part-time study has been judged academically feasible by faculty and approved by the Graduate Council. However, on the recommendation of the academic unit, students admitted to a Ph.D. program may be approved by the Dean of the Graduate Division for part-time status on an *ad hoc* basis. Under this policy, part-time enrollment at the graduate level is defined as enrollment for eight units or less. Within the guidelines and limitations noted on the application form available on the Graduate Division Web site, graduate students may petition for part-time status for a maximum of three consecutive quarters and, if the petition is approved, shall pay the full University Registration Fee and student activities fees, one-half the Educational Fee, and if applicable, one-half the Nonresident Tuition Fee and one-half the Professional School Student Fee.

CONTINUOUS REGISTRATION

A graduate student is expected to register for each regular academic session (fall, winter, and spring quarters) until all requirements for an advanced degree or credential have been completed, including final examinations and the submission of an approved thesis or dissertation. Registration is not official or complete until all

required fees have been paid and the student has enrolled in classes. Students are responsible for ensuring that their course enrollment is correct and that their fees have been paid by the applicable deadlines.

A student engaged in study or research outside the State of California for an entire quarter ordinarily will be required to register in absentia. Unless an official leave of absence has been granted, or a petition to pay the Filing Fee in lieu of registration has been approved by the Dean of the Graduate Division, a student who does not register by the final deadline for any regular quarter will lose graduate standing (i.e., the individual's status as a graduate student will lapse), and candidacy for any advanced degree will lapse. Prior to resuming graduate study in the University, a former student must successfully apply for readmission. If readmitted, the student must satisfy the academic requirements in effect at the time of readmission and may be required to satisfy certain requirements a second time, including those for formal advancement to candidacy. A readmitted student must register and then be advanced to candidacy at least one quarter before receiving an advanced degree. A degree cannot be conferred earlier than the second quarter following readmission. Students must be registered or on approved Filing Fee status for the academic term in which the degree is conferred.

A graduate student who decides to leave the University after enrolling and paying fees for a quarter must file an official Withdrawal form with the Dean of the Graduate Division. A graduate student in good academic standing who wishes to withdraw temporarily from graduate study and intends to return within one year may submit an application for a leave of absence. A graduate student who wishes to apply for a leave of absence after enrolling and paying fees for a quarter must file both a Withdrawal form and an application for a leave of absence. If the leave is approved, the student remains in good standing and need not apply for readmission in order to enroll at the expiration of the leave period.

LEAVE OF ABSENCE

A graduate student who withdraws from the University with the intention of returning within one year and wishes to avoid a lapse of student status should request a leave of absence. A leave of absence of up to one year's duration may be granted by the Dean

of the Graduate Division upon the recommendation of the student's academic unit, subject to the following guidelines:

1. The student must have **completed** satisfactorily at least one quarter in residence and be in good academic standing. The leave must be consistent with the student's academic objectives.
2. Leave ordinarily is approved in cases of serious illness or other temporary disability, or temporary interruption of the student's academic program for other appropriate reasons.
3. A student on leave is not eligible for assistance from a University fellowship, research grant, or financial aid program, and may not hold an academic appointment or be employed by the University in any capacity. During a period of leave, a student may not take comprehensive or qualifying examinations or earn academic credit (except by a transfer of credit from another institution approved in advance by the Dean of the Graduate Division). University resources and facilities, including housing, are ordinarily unavailable to students on leave.
4. A student failing to register for the next regular academic session following the expiration of leave will lose graduate standing and will be subject to the following readmission policy.

READMISSION

A student who previously withdrew from the University, or whose student status has lapsed, may request readmission to graduate study by submitting online a new *Application for Graduate Study* with the nonrefundable \$70 fee (\$90 for international students). The Dean of the Graduate Division may grant readmission when recommended by the academic unit. If readmitted, a student's previous academic work will be applied toward the requirements for an advanced degree only with the approval of the graduate advisor and the Dean of the Graduate Division. A readmitted student must satisfy the academic requirements in effect at the time of readmission and may be required to satisfy certain requirements a second time, including those for formal advancement to candidacy. A readmitted student must register and then be advanced or reinstated to candidacy at least one quarter before receiving an advanced degree, which will be conferred no earlier than the second quarter following readmission. In exceptional circumstances, a student who has not registered by the end of the third week of classes may file a Readmission Petition with the Graduate Division upon approval of the student's department chair and the respective school's associate dean, and payment of a \$70 readmission fee.

INTERCAMPUS EXCHANGE PROGRAM

A graduate student in good standing who wishes to take advantage of educational opportunities available only at another campus of the University of California may do so through the Intercampus Exchange Program. Ordinarily, an exchange student will have demonstrated a high level of scholarship during at least one quarter of graduate study at the home campus and will have well-defined academic objectives. Approval of the faculty advisor, the host department(s), and the respective Deans of Graduate Studies is required. Direct arrangements between faculty members on the two campuses are encouraged so as to ensure that courses, seminars, or facilities will be available to meet the participating student's needs. Students may take courses on more than one campus of the University in the same academic session.

The exchange student enrolls and pays fees on the home campus and then enrolls at the host campus, following the procedures of that Registrar's Office. A report of academic work completed will be transferred to the student's academic record on the home campus after the term has ended. Although eligible for all normal student services, the exchange student is a visitor and is not formally admitted to graduate study at the host campus. Application forms for the Intercampus Exchange Program may be downloaded from

the Graduate Division Web site at <http://www.grad.uci.edu/forms/> and should be filed with the Office at least four weeks before the beginning of the quarter in order to avoid penalties.

TRANSFERS OF CREDIT

At least one-half of the course requirement for a master's degree must be completed while in residence as a graduate student at UCI. Credit for up to one-fifth of the minimum number of units required for a master's degree may be allowed for graduate-level work completed at another institution or through University Extension prior to first graduate enrollment at UCI. Such courses do not count toward the required number of units in 200-series courses. Up to one-half the units required may be accepted from another graduate division of the University of California. After enrollment, the student must initiate a formal petition for such credit and submit an original transcript. The acceptance of unit credit earned in another program must be recommended by the academic unit to which the student has been admitted and be approved by the Dean of the Graduate Division. No units of transfer credit will be given for any course in which a grade below B (3.0) or equivalent was assigned. Under no circumstances will grade credit be transferred.

A student currently enrolled in a master's degree program or on a leave of absence may receive unit credit (not grade credit) for graduate-level work completed at another institution or through University Extension only with the prior approval of the departmental graduate advisor and the Dean of the Graduate Division. No transfer credit will be given for any course in which a grade below B or equivalent is received.

A student who begins graduate study at UCI in the fall quarter will receive appropriate credit for courses taken in preceding UCI summer sessions, provided that the formal date of admission precedes summer session enrollment. Continuing graduate students will receive credit for courses taken in intervening UCI summer sessions.

Graduate Degrees

MASTER'S DEGREES

The master's degree is conferred at the end of the academic quarter in which all requirements have been satisfied, subject to the final approval of the Graduate Council. The student must be advanced to candidacy for the degree prior to the beginning of the final quarter of enrollment. Therefore, an application for advancement to candidacy, initiated by the student and approved by the academic unit, should be submitted to the Dean of the Graduate Division at least 30 days before the opening of the quarter in which the degree is expected.

The Master of Arts (M.A.) or Master of Science (M.S.) degree normally is attained by one of two routes: Plan I, the thesis option; or Plan II, the comprehensive examination option. Both require a minimum of one year in residence, satisfactory completion of prescribed course work, and an appropriate demonstration of achievement. Plan I includes a minimum of seven courses (28 units), 20 units or more of which must be at the graduate level; a thesis; and a general examination. Plan II requires at least nine courses (36 units), including 24 units or more at the graduate level, and a comprehensive examination covering a broad range of subject matter in the discipline. Only approved 200-series courses completed while in residence at the University satisfy the minimum graduate course requirement. Some programs will have course requirements exceeding the minimums cited above and may have additional or alternative degree requirements. Please refer to the description of the specific program for more information.

Master of Fine Arts (M.F.A.) degrees are awarded by the Claire Trevor School of the Arts (M.F.A. in Dance, Drama, Fine Arts, Music, or Studio Art) and by the Program in Creative Writing

(M.F.A. in English) upon successful completion of the equivalent of two years or more of full-time study with an emphasis upon creative expression and professional development. Special thesis or comprehensive examination requirements are established for these programs.

Master of Arts in Teaching (M.A.T.) degrees are awarded upon successful completion of programs designed for the professional development of elementary and secondary school teachers. A minimum of one year in residence is required, usually including summer session course work. A thesis project or other comparable evidence of professional attainment is part of each M.A.T. program.

Master of Business Administration (M.B.A.) degrees are awarded by The Paul Merage School of Business upon successful completion of the equivalent of two years of full-time study in the development of professional managerial skills.

Master of Advanced Study (M.A.S.) degrees are awarded by the School of Social Ecology in Criminology, Law and Society upon successful completion of 52 units of course work in the broad areas of criminal justice, including corrections, probation, criminal prosecution, defense, and civil law. The program is fully online with the exception of a required one-week in-residence course during the first fall quarter.

Master of Public Health (M.P.H.) degrees are awarded by the College of Health Sciences upon successful completion of 60 units of course work which include core courses, electives, and courses in the student's emphasis.

Master of Science (M.S.) in Nursing Science degrees are awarded by the College of Health Sciences upon successful completion of 68–71 units of course work, depending on the student's chosen area of specialization, as well as 720 hours of clinical practice in the student's area of emphasis to be eligible for certification.

Master of Urban and Regional Planning (M.U.R.P.) degrees are awarded by the School of Social Ecology upon successful completion of the equivalent of two years of full-time study in contemporary methods of planning and policy analysis.

DOCTOR OF PHILOSOPHY DEGREE

The Doctor of Philosophy (Ph.D.) degree is awarded on the basis of evidence that the recipient possesses knowledge of a broad field of learning and expert mastery of a particular area of concentration within it. The research dissertation is expected to demonstrate critical judgment, intellectual synthesis, creativity, and skill in written communication.

Students are required to advance to candidacy for the doctorate, and to complete all requirements for the doctoral degree, within the normative time specified by the individual graduate program. Students who fail to complete the degree within the normative time limit for their program shall be deemed as not making satisfactory academic progress, and will not be qualified to continue to receive non-instructional University resources (e.g., financial aid, teaching assistantships, student housing). Normative time-to-degree parameters for each doctoral program are indicated in the academic unit sections of this *Catalogue*.

The candidate for the Ph.D. is expected to be in full-time residence for at least six regular academic quarters. Four to six years of full-time academic work beyond the bachelor's degree typically is required to complete the degree. At the end of the first year or so of full-time study, many programs administer a preliminary examination on the student's mastery of fundamental knowledge in the discipline. Upon successfully demonstrating a high level of scholarship on this examination and after further study, the student will continue to a series of qualifying examinations which lead to formal advancement to candidacy for the Ph.D.

Graduate students ordinarily attain candidacy status for the Ph.D. degree when all preparatory work has been completed, when qualifying examinations have been passed, and when they are ready for the dissertation phase. Students are recommended for advancement to candidacy by unanimous vote of the candidacy committee nominated by the academic unit and appointed by the Dean of the Graduate Division on behalf of the Graduate Council. The Report of the Ph.D. Candidacy Committee (Form I) must be signed by the committee at the time the candidacy examination is concluded and submitted to the Dean of the Graduate Division. Following a unanimous favorable vote of the committee, the student will be advanced to candidacy upon payment of the \$90 Candidacy Fee. Candidacy for the Ph.D. will lapse automatically if the student loses graduate standing by academic disqualification or failure to comply with the University policy on continuous registration. A readmitted student who was a candidate for the Ph.D. must again advance to candidacy and thereafter enroll as a candidate for at least one academic quarter before the Ph.D. may be conferred.

Following advancement to candidacy for the Ph.D., a doctoral committee nominated by the academic unit chair and appointed by the Dean of the Graduate Division on behalf of the Graduate Council, supervises the student's program, approves the dissertation, and conducts the final oral examination if required. The chair of the doctoral committee is the member of the faculty responsible for providing primary guidance of the student's dissertation. Ordinarily, the final examination will be given just prior to completion of the dissertation and while the student is in residence during a regular academic session. The final examination, or defense, is open to all members of the academic community. All student committees must conform to policy approved by the Graduate Council in effect at the time of examination. Ph.D. degrees are conferred, subject to the final approval of the Graduate Council, as of the last day of the regular academic quarter in which all requirements have been satisfied.

THESES AND DISSERTATIONS

Candidates for the Ph.D., Ed.D., and certain master's degrees must conduct an extensive research project and submit a dissertation or thesis in order to fulfill degree requirements. Research expenses are not supported by the University, and the cost of preparing the dissertation or thesis ordinarily ranges from \$200 to \$1,000, but may be considerably more.

After approval by the doctoral or thesis committee appointed for each candidate by the Dean of the Graduate Division, on behalf of the Graduate Council, two copies of the dissertation or thesis must be filed for placement in the UCI Library and automatically become available for public access. The final copy must meet the University's requirements for style, format, and appearance before the degree can be conferred. A thesis and dissertation manuscript preparation manual is available online at http://www.lib.uci.edu/libraries/collections/special/uci_td/tdmanual.html. All doctoral students are required to submit an Exit Survey and a Survey of Earned Doctorates prior to the awarding of their degree.

Dissertations and theses must be filed by the deadline published on the Graduate Division Web site (http://www.grad.uci.edu/forms/students/filing_deadlines.pdf) in order for them to be reviewed and accepted in time for the degree to be conferred in that quarter.

Those students who complete requirements and submit theses/dissertations after the end of the tenth week of classes and prior to the start of the subsequent quarter will earn a degree for the following quarter, but *will not* be required to pay fees for that quarter. Please note that in order to avoid payment of fees, manuscripts, all forms, and degree paperwork must be submitted prior to the first day of the quarter in which the degree is to be earned.

THE FILING FEE

Under certain circumstances, a student who has advanced to candidacy for a graduate degree may be eligible to pay a Filing Fee equal to half of the Registration Fee in lieu of registration for any academic term including summer, subject to the approval of the Dean of the Graduate Division. International students who wish to go on Filing Fee status must, in addition, secure approval to do so from UCI's International Center. In general, all requirements for a degree must have been satisfied prior to the start of the quarter, except for the submission of the final version of the dissertation or thesis, or the completion of a final oral or comprehensive examination. A student on Filing Fee status may not make use of any University resource, hold any academic appointment, or receive any student service for which official registration and payment of regular fees is a requirement. A Filing Fee will not be accepted immediately following readmission nor immediately following a leave of absence except under exceptional circumstances. The date for payment of the Filing Fee is the same as that for the payment of other student fees. If all degree requirements are not completed during the academic term in which the Filing Fee is paid, the student must subsequently register and pay all applicable fees. Students may only utilize the filing fee option for one academic quarter during their graduate studies. Additional quarters are not allowed regardless of whether the student changes academic programs.

NONRESIDENT TUITION

Nonresident doctoral students who have advanced to candidacy are eligible for a 100 percent reduction in the annual nonresident tuition fee for a maximum of three consecutive calendar years including time on leave of absence. Reduced nonresident tuition begins with the first academic term following advancement to candidacy. Any nonresident student who continues to be enrolled, or who re-enrolls following the three-year maximum allowance, will be charged the full nonresident tuition rate that is in effect at that time of enrollment.

CONFERRAL OF GRADUATE DEGREES

Prior to the beginning of the quarter in which an advanced degree is to be conferred, the student must have advanced to candidacy for that degree and should have received formal notice confirming candidacy from the Dean of the Graduate Division. The student should consult the departmental faculty graduate advisor to determine which degree requirements, if any, have not yet been satisfied.

Students are advised by mail when their diplomas are available, which is approximately six months after the quarter in which the degrees are awarded.

Financial Assistance for Graduate Students

Several types of financial assistance are available to graduate students at UCI. These include fellowships, teaching and research assistantships, tuition fellowships for nonresident students, grants-in-aid, and student loans.

All domestic graduate students are encouraged to submit the *Free Application for Federal Student Aid* (FAFSA) each year to access state and federal grants and loans. It is available online at <http://www.fafsa.ed.gov> or in the Office of Financial Aid and Scholarships after January 1, with a submission deadline of March 2 each year. The Financial Aid section in this *Catalogue* and the Financial Aid Web site (<http://www.ofas.uci.edu/content/>) contain information about assistance based upon financial need that is administered by the Office of Financial Aid and Scholarships.

Applicants interested in assistantships or fellowships should so indicate on their application when applying for admission. The general campus deadline for completed graduate applications is January 15; however, many graduate programs have earlier, or later, deadlines. Students should contact the academic program to which they are applying for accurate deadlines, particularly to receive full consideration for fellowship and assistantship awards. Continuing students interested in an assistantship or fellowship should contact the graduate advisor for their academic program. The awarding of fellowships to incoming students for the following academic year begins in the winter quarter.

UCI subscribes to the agreement of the Council of Graduate Schools of the United States, under which successful applicants for awards of financial support are given until April 15 to accept or decline such awards. An award accepted from one of the member universities may be resigned at any time through April 15. However, an acceptance given or left in force after that date commits the student to not accepting another appointment without first obtaining formal release for that purpose from the awarding institution.

Regents', UCI Chancellor's Fellowships, and other merit-based fellowships are awarded by some schools to a number of promising students entering graduate study at UCI leading to the Doctor of Philosophy or Master of Fine Arts degree. Awards may include a stipend, all required student fees, and, if applicable, Nonresident Tuition. Other fellowships are offered, including tuition awards for outstanding applicants who are not residents of California. In many cases, fellowship stipends may be supplemented by partial assistantship appointments. Fellowship awards are typically made by the student's academic unit.

Entering or continuing graduate students may be awarded research or teaching assistantships for all or part of the academic year. The types of assistantships, number available, and required duties vary according to the activities of the academic unit. A graduate assistant who is not a California resident also may receive a tuition fellowship. While enrolled as a graduate student at UCI, students are limited in their employment with the University to no more than 50 percent time during each academic quarter. Fellowship support as well as research or teaching assistantships all require students to maintain satisfactory academic progress as defined by UC and UCI policy as well as by their academic units.

Through the Graduate Division's diversity programs, a number of diversity fellowships are awarded to entering and continuing domestic graduate students who may have been disadvantaged in higher education. Departments nominate candidates on the basis of their merit and contribution to the diversity of the department or discipline, as well as demonstrated scholastic achievement, full-time status, and U.S. citizenship or permanent residency. Individuals from diverse cultural, geographic, and socioeconomic backgrounds are especially encouraged to apply to UCI's graduate programs. In conformance with State law, applicants may not be given preferential treatment on the basis of race, ethnicity, gender, religion, or national origin.

CLAIRE TREVOR SCHOOL OF THE ARTS

Alan Terricciano, Acting Dean

Arts Student Affairs
101 Mesa Arts Building; (949) 824-6646
<http://www.arts.uci.edu/>

The Claire Trevor School of the Arts is dedicated to the study, creation, and performance of the arts within the context of their history and theory. Both undergraduate and graduate degree programs are offered and include extensive studio, workshop, and performing experiences; theoretical and historical studies; and work in arts technology and criticism. The School consists of the Departments of Dance, Drama, Music, and Studio Art; the undergraduate program in Arts and Humanities; a minor in Digital Arts; and a concentration in Game Culture and Technology.

The School's departments are located near each other, facilitating daily interaction among student and faculty in all Arts disciplines. Facilities include studios and classrooms, four theatres, a concert hall, the University Art Gallery, the Donald R. and Joan F. Beall Center for Art and Technology, the Visual Resources Collection, the Gassmann Electronic Studio, the Motion Capture Studio, the Arts Media Center, the Arts Computing Laboratory, the Digital Arts Teaching and Research Laboratories, a television studio, and professionally managed and staffed theatrical production shops and publicity and box offices supporting the School's extensive production and performance schedule.

Arts students regularly participate in choirs, instrumental ensembles, drama and dance productions, and art exhibitions. Qualified students from other academic areas also are eligible to participate in many of these activities and are encouraged to do so. Many of the School's productions take place in the Irvine Barclay Theatre, a fully equipped, 756-seat performing facility.

In addition to the artists, scholars, and performers who are members of the Arts faculty, visits by distinguished guest artists/teachers are a feature of the School's activities.

Students receive assistance with program planning and a variety of other support services from the professional staff in the Office of the Arts Student Affairs. The staff also assists the faculty in providing academic counseling to Arts students.

DEGREES

Arts and Humanities	B.A.
Dance	B.A., B.F.A., M.F.A.
Drama and Theatre	Ph.D. ¹
Drama	B.A., M.F.A.
Fine Arts	M.F.A. ²
Music	B.A., B.Mus., M.F.A.
Music Theatre	B.F.A.
Studio Art	B.A., M.F.A.

¹ UCI and UCSD joint program.

² Currently not admitting students.

Change of Major

Students who wish to change their major to one offered by the School should contact the Arts Student Affairs Office for information about change-of-major requirements, procedures, and policies. Additionally, students should refer to the information available at <http://www.changeofmajor.uci.edu>.

Special Programs of Study

CONCENTRATION IN MEDIEVAL STUDIES

The concentration in Medieval Studies allows undergraduate students in the Schools of the Arts and Humanities to augment their major by completing a coherent program of courses in the area of medieval studies. See the School of Humanities section for additional information.

MINOR IN DIGITAL ARTS

The minor in Digital Arts provides opportunities to explore creativity through digital media arts for students who want to acquire a working knowledge of how digital content is conceived, constructed, and performed. See page 96 for more information.

MINOR IN RELIGIOUS STUDIES

The interdisciplinary minor in Religious Studies focuses on the comparative study of religions in various cultural settings around the world. The curriculum seeks to provide a wide-ranging academic understanding and knowledge of the religious experience in society through study in the Schools of Humanities, Social Science, Social Ecology, and the Arts. See the School of Humanities section for additional information.

CAMPUSWIDE HONORS PROGRAM

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

EDUCATION ABROAD PROGRAM

Upper-division and, in some cases, graduate students have the opportunity to experience a different culture while making progress toward degree objectives through the Education Abroad Program (EAP). EAP is an overseas study program which operates in cooperation with host universities and colleges throughout the world. See the Education Abroad Program section for additional information.

3-2 PROGRAM WITH THE PAUL MERAGE SCHOOL OF BUSINESS

Outstanding Arts majors who are interested in a career in arts management may wish to apply for entry into the 3-2 Program with The Paul Merage School of Business. Students normally apply for this program early in their junior year. See The Paul Merage School of Business section for further information.

Honors

Students who have distinguished themselves academically will be considered for honors at graduation. General criteria are that students must have completed at least 72 units in residence at a University of California campus and must have a cumulative grade point average of 3.5 or better, including the grades from the final quarter. In keeping with the Academic Senate Resolution, no more than 12 percent of the graduating seniors may receive such academic honors. Other important factors are considered (see page 52). Individual departments may offer other special honors to students who have excelled in their major subject.

Creative Connections Opportunities

Creative Connections outreach programs provide exceptional opportunities for Claire Trevor School of the Arts students to earn valuable practical experience in K–12 classrooms while earning stipends. In K–6 classrooms scholars integrate their arts discipline into the core curriculum and are awarded \$1,500 per scholar, per project. A minimum of 25 classroom hours are required to complete a project and earn the stipend. At the middle and high school level artist/scholars, troupes, and ensembles perform, demonstrate, and present workshops. The stipend for a middle or high school scholar varies depending on project type and time commitment. All Claire Trevor School of the Arts students who hold a minimum 3.0 GPA have the opportunity to apply for these programs.

Scholarships

The Claire Trevor School of the Arts has some scholarship monies available to incoming and to continuing students on both the undergraduate and graduate levels. For complete information, please contact the Arts Student Affairs Office.

Edna Helen Beach Scholarship: Provides \$1,000 per year for two years for an incoming freshman student, and \$1,000 for one year for an incoming transfer student. Recipient must be gifted and talented, and will be selected from eligible students with special emphasis on those from underprivileged backgrounds who would not otherwise be able to attend a major research institution.

Kris and Linda Elftmann Scholarship: Up to \$3,000 awarded to an outstanding student.

Leo Freedman Graduate Fellowship: For outstanding applicants from Orange County, California, preferably from Anaheim; two fellowships of approximately \$7,000 each for the academic year.

Ann and Gordon Getty Foundation Music Scholarship: Up to \$500 awarded to a music student in any instrument or voice.

William J. Gillespie Foundation Scholarships: Several scholarships in varying amounts, awarded to outstanding Dance majors.

Alice Lowell Memorial Scholarship: For students majoring in Music.

Steve Lyle Memorial Scholarship: \$2,000 awarded to continuing students in Drama; selected by application and recommendation.

Margie McDade Memorial Scholarship: For students majoring in Music and studying piano.

Marjorie and Robert Rawlins Scholarship: For full-time students majoring in Music and studying piano, violin, viola, or cello.

Frederick Reines Music Scholarship: For students majoring in Music and studying voice.

Harry and Marjorie Ann Slim Memorial Scholarship: For students majoring in Music.

Winifred W. Smith Scholarship: For students majoring in Music and studying cello, violin, or piano (preferably cello).

Elizabeth and Thomas Tierney Scholarship: Up to \$3,000 awarded annually to an outstanding student.

UCI Town and Gown Music Scholarships: For students majoring in Music.

Phyllis Kovach Vacca Memorial Scholarship: For students majoring in Music and studying cello, piano, or violin.

Bette and Steven Warner Scholarship: For outstanding students in the Music Department's voice program and the Drama Department.

Undergraduate Program

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 56–62.

School Requirements: None.

Departmental Requirements: Refer to individual departments.

Graduate Program

The primary endeavor of the Claire Trevor School of the Arts is the creative act. Research activities are pursued both as an end in themselves and as a source that can inform both performance and the studio experience. The intellectual activity of theoretical, literary, and historical courses complements the practical work in studio workshops and performance. The aim of the M.F.A. programs in Dance, Drama, Music, and Studio Art is, thus, to produce artists literate in both traditional and digital media who are disciplined, responsive to intellectual stimuli, and capable of integrating existing knowledge into creative projects. The UCI-UCSD joint doctoral program in Drama and Theatre provides opportunity for significant crossover research and teaching between the two campuses in a wide range of areas in drama and the theatre. It is the strong belief of the UCI Claire Trevor School of the Arts that intellectual integrity and creative excellence cannot exist without each other.

ADMISSION TO THE PROGRAM

Applications are accepted for fall quarter admission only, and ordinarily must be completed by January 15 for the Ph.D. in Drama and Theatre, the M.F.A. in Dance, the M.F.A. in Music, and the M.F.A. in Studio Art. The number of graduate students that can be admitted to the Claire Trevor School of the Arts is limited. Applicants are advised to arrange for auditions, interviews, and the submission of portfolios, compositions, and dossiers by the appropriate deadlines. Students applying for scholarships and fellowships should do so by January 15, and are also encouraged to apply for financial assistance through the Office of Financial Aid and Scholarships. The Claire Trevor School of the Arts has a modest number of teaching assistantships available in all areas, and all candidates are automatically reviewed for teaching assistantship positions; the School informs successful candidates by June 1 for the following academic year.

Upon admission to the program the student is assigned an advisor. Students should discuss with their advisor the scope of undergraduate preparation to determine any areas which may need strengthening if full benefit from graduate study is to be derived.

Minor in Digital Arts

John Crawford, Director

The minor in Digital Arts provides opportunities to explore creativity through digital media arts. This program is open to students from all areas of UCI who want to acquire a working knowledge of how digital media content is conceived, constructed, and performed. In the studio, students receive hands-on experience with current software tools, creating and sharing digital media art projects, developing an appreciation of digital media aesthetics and conceptual design, and learning the fundamentals of desktop video, audio, and Web authoring software applications. Lectures and discussions examine how today's pervasive digital culture evolves through interdisciplinary collaborations among artists, engineers, scientists, and scholars. Course work considers relationships between digital media practices, touching on such areas as social networking, video/audio podcasting, interface design, digital music, telematic performance, intelligent agents, virtual realities, artificial life, and ubiquitous computing. The program investigates critical issues related to emerging technologies and the arts, and surveys recent works by leading digital media artists.

Prospective students should have basic proficiency with Web, e-mail, word processing, and presentation software. It is highly recommended that students have their own computer. Further information is available at <http://digital.arts.uci.edu>.

REQUIREMENTS FOR THE MINOR

The Minor in Digital Arts consists of a minimum of eight courses which fall into two categories: I. Required and II. Elective.

I. Required: Arts Interdisciplinary 1A, 11 (Digital Media: History and Foundations), 12 (Digital Media: Current Directions), 50 (Digital Media: Experience and Content), 60 (Digital Media: Video/Audio for the Web), and 70 (Digital Media: Interaction Design).

II. Elective. Choose two of the following: Dance 163 (Choreography and Digital Technology); Music 51 (Music Technology and Computers), 147 (Studies in Music Technology), 151 (Computer Music Composition), 152 (Interactive Arts Programming); Studio Art 65A (Introduction to Digital Imaging), 65B (Introduction to Digital Multimedia), 65C (Introduction to the Internet), 81 (Basic Video), 100 (when topic is related to digital arts), 106 (Interactive Digital Media: Sound and Video), 110 (Interdisciplinary Digital Arts), 130 (Projects in New Technologies), 143 (Projects in Computer Painting), 166 (Advanced Collaborative Project), and 175 (Digital Arts Aesthetics).

Each of these courses may be taken one time only for credit toward the minor (with the exception of topic-varies courses, e.g., Studio Art 100). No course in the requirements for the Minor may be taken Pass/Not Pass.

Courses in Arts Interdisciplinary

LOWER-DIVISION

1A Arts Core (4) F. An introduction to the arts in general, and to the arts at UCI: Concentration on (1) the interdisciplinary nature of the arts, and (2) the content of particular arts disciplines. (IV)

11 Digital Media: History and Foundations (4). An introduction to the historical and theoretical foundations of digital media art, tracing how information technologies seeded the growth of a new expressive medium. Considers how today's pervasive digital culture evolved through interdisciplinary collaborations between artists, engineers, scientists, and scholars. Formerly Arts 1D.

12 Digital Media: Current Directions (4). An overview of current practice and research in digital media art. Examines the effects of recent technological, scientific, cultural, and political developments. Addresses the increasing overlap of artistic and scientific practices and issues related to new and emerging technologies. Formerly Arts 1E.

50 Digital Media: Experience and Content (4). A project-based introduction to tools and approaches for creating and sharing digital media content within Internet-mediated social environments, with a particular emphasis on art-making and personal expression. Includes an overview of basic user experience and interaction design principles. Prerequisites: Arts 11 and 12.

60 Digital Media: Video and Audio for the Web (4). An overview of digital video and audio production for the Web, emphasizing art-making and personal expression. Includes digital media aesthetics and conceptual design, basic audio and video recording, and fundamentals of desktop video, audio, and Web authoring software applications. Prerequisites: Arts 11, 12, and 50.

70 Digital Media: Interaction Design (4). Principles and practices of interaction design for interactive digital media systems that provide for active involvement of the participant. Students gain experience with interaction design issues through a series of media art projects, emphasizing art-making and personal expression. Prerequisites: Arts 11, 12, 50, and 60.

UPPER-DIVISION

100A-B-C The Senior Thesis (4-4-4) F, W, S. Planning, drafting, writing, and presentation of an academic thesis. Open to Arts Interdisciplinary majors, who will interrelate two or more artistic disciplines, and to Campuswide Honors Program students, who will focus their thesis on one or more major areas in the Arts. Prerequisite for 100B: 100A. Prerequisites for

100C: 100B and satisfactory completion of the lower-division writing requirement.

199 Independent Study (1 to 4) F, W, S. Individual study or directed projects as arranged with faculty member. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

DEPARTMENT OF DANCE

301 Mesa Arts Building; (949) 824-7283

Lisa Naugle, **Department Chair**

Faculty

- David Allan, Choreographer/Former Soloist, National Ballet of Canada; Choreographer, ballet companies, operas, film, and television, *Associate Professor of Dance* (ballet, pas de deux, choreography)
- Mary Corey, M.A. University of California, Riverside, Certified Professional Labanotator, *Professor of Dance* (dance history, modern dance, notation and reconstruction, dance and digital technology)
- John Crawford, Media Artist and Software Designer, *Director of the Digital Arts Minor and Associate Professor of Dance* (dance film, interactive media, telematic performance, motion capture, digital arts)
- Diane Diefenderfer, Former Soloist, Los Angeles Ballet, Eglesky Ballet Company, Frankfurt Ballet Company, Technique, *Lecturer in Dance* (ballet, pointe)
- Jennifer Fisher, Ph.D. University of California, Riverside, *Associate Professor of Dance* (dance history and theory, ethnography, performance studies)
- Israel "El" Gabriel, Former Assistant Artistic Director, Bat Dor Dance Company of Israel, *Lecturer with Security of Employment* (ballet, modern, pas de deux, repertory)
- Jodie Gates, Choreographer; former Principal Dancer with The Joffrey Ballet, The Pennsylvania Ballet and Ballet Frankfurt; Director of the Laguna Dance Festival; *Assistant Professor of Dance* (ballet, choreography, pointe)
- Loretta Livingston, B.F.A. California Institute of the Arts; Certified Laban Movement Analyst; former principal with Bella Lewitzky Dance Company, *Assistant Professor of Dance* (modern dance, choreography, improvisation, Laban movement analysis, teaching of dance)
- Molly Lynch, M.F.A. University of California, Irvine; Pilates Certified; Choreographer/Artistic Director of the National Choreographers Initiative; *Assistant Professor of Dance* (ballet, pointe, repertory, partnering)
- Donald McKayle, Choreographer/Director, concert, theatre, film, television, *Graduate Choreography Advisor, Artistic Director of UCI Dance, and Claire Trevor Professor of Dance* (choreography, modern dance)
- Lisa Marie Naugle, Ph.D., New York University, *Department Chair and Professor of Dance* (modern dance, choreography, dance and digital technology, improvisation, motion capture)
- James Penrod, M.F.A. University of California, Irvine; C.M.A. Laban Institute of Movement Studies, *Associate Dean of the Claire Trevor School of Arts, Co-Director of the Arts and Humanities Major, and Professor Emeritus of Dance* (ballet, modern, dance notation, choreography, movement analysis)
- Janice Gudde Plastino, Ph.D. University of Southern California, *Professor Emerita of Dance* (kinesiology/anatomy, research methods, choreography, dance science/medicine)
- Jeffrey A. Russell, M.S. University of Arizona; Certified Athletic Trainer, National Athletic Trainers' Association, *Acting Assistant Professor of Dance* (dance medicine and science, dance kinesiology)
- Nancy Lee Ruyter, Ph.D. Claremont Graduate School, *Professor of Dance* (dance history, Spanish dance, bibliography and research)
- Alan Terricciano, M.A. Eastman School of Music, *Acting Dean of the Claire Trevor School of the Arts and Professor of Dance* (musical resources, music for dancers, dance accompaniment, composition, multimedia arts)

The Department of Dance fosters an educational environment in which performance opportunities, creative projects, and theoretical studies complement and reinforce each other, providing a foundation for careers in dance. The program focuses on the dance techniques of ballet, modern, jazz, tap, world dance, and dance and technology. Theoretical studies include dance history and theory; dance writing; Laban studies; dance pedagogy; dance ethnography; dance science; and aesthetics of digital media. Creative opportunities bridge the studio and theoretical work through performance and choreography for multiple contexts; creative applications of animation, motion capture, audio and video technologies; lecture demonstration; and critical, historical, ethnographical, and scientific writing.

The objective of studio work is to develop kinesthetic resources, precision, flexibility, creativity, and freedom in a coordinated and intelligently responsive dancer. The techniques of classical ballet, modern dance, and jazz constitute crafts and styles for the dancer that serve not only as a basis for the training of the body, but also as a basic language of movement for the choreographer.

The theoretical, historical, and scientific courses are designed both to broaden the perspective of those students whose first interest is performance or choreography, and to provide a foundation for those students who plan to pursue careers in the academic, scientific, technological, or administrative fields of dance.

The dance archives in the UCI Library Special Collections offer a rich source of research materials which enhance the Dance program. Among other special holdings, the archives include the extensive Ruth Clark Lert collection of dance books, journals, photographs, original costume sketches, and memorabilia of dance in Europe and the United States from pre-World War I to the present.

CAREERS FOR THE DANCE MAJOR

Careers in dance require excellent training and extraordinary discipline, tenacity, and dedication. Graduates of the Department have an excellent record of placement in the many fields of dance. Some have become professional dancers in ballet companies (including the Metropolitan Opera Ballet, San Francisco Ballet, Nashville Ballet, and Ballet Pacifica); in modern dance companies (including Hubbard Street Dance Company, MOMIX, and Martha Graham Dance Ensemble); in touring companies (including *The Lion King*, *Fame: The Musical*, *Carousel*, and *Cirque du Soleil*); and in films, television, and theatre.

In addition to training for professional dance performance and choreography, the major in dance serves as a basis for graduate study or job opportunities in fields such as dance history, dance science, dance pedagogy, dance reconstruction, dance criticism, dance video, and technology. Related fields, such as arts administration, law in relation to the arts, arts therapies, design and production, and music also offer positions for graduates. Students who are interested in a career in athletic training, physical therapy, or dance science will find a major in Dance, with related course work in chemistry, physics, biology, and mathematics, to be excellent preparation for further study.

THE UNDERGRADUATE PROGRAM

The Bachelor of Arts (B.A.) is designed for those who wish to obtain a broad undergraduate background as preparation for careers or graduate work and related fields. It offers students a dance education that stresses performance and choreography, and, at the same time, intellectual depth and scope. In addition to the core, 12 units of elective Dance courses are required. The remaining elective units required for graduation may be chosen from Dance or other disciplines in relation to a student's individual interest. While the program of study in Dance stresses technical proficiency and academic understanding in dance, the B.A. degree program also enables students to pursue elective subjects in their special areas of interest in other academic disciplines.

The Bachelor of Fine Arts (B.F.A.) degree program with specializations in Performance and Choreography, is designed for students who wish to prepare intensively for careers in those areas. The courses required in addition to the core are primarily in Dance. The B.F.A. program allows for a few free electives in other areas. Admission to the B.F.A. program with a specialization in Choreography is by faculty approval only.

The B.F.A. program with a specialization in Performance does not require additional faculty approval beyond the required audition for admission to the Dance major; students should declare their intention to pursue this specialization during spring quarter of their sophomore year.

Proficiency Levels

In addition to meeting the general requirements for admission to UCI, applicants must demonstrate technical/creative promise. The Department holds annual entrance auditions for potential freshmen and transfer students during winter quarter prior to the fall quarter when entrance is anticipated. First-year students wishing to major in Dance must be at technique level II in at least one of the three major genres (ballet, modern, jazz).

Placement auditions for admitted students are held during Welcome Week to determine levels of technical ability for placement in courses. It is suggested that transfer students wishing to pursue a B.A. degree in Dance complete, in addition to their general education requirements, one course in choreography, two courses in dance technique, and one course in music for dancers prior to transfer to UCI.

Previously admitted majors who wish to obtain a B.F.A. degree should contact the School of the Arts Student Affairs Office to obtain information about change of major requirements, procedures, and policies.

Transfer students wishing to pursue the B.F.A. degree must declare their intention in writing at the time of their entrance audition and demonstrate technique and/or choreography levels appropriate to their year. It is suggested that transfer students complete, in addition to their general education requirements, one course in choreography, two courses in dance technique, one course in music for dancers, and one course in dance performance prior to transfer to UCI.

Students deficient in level of performance or academic preparation should be prepared to extend their studies beyond the normal four-year program in order to meet the requirements for graduation.

REQUIREMENTS FOR THE B.A. DEGREE

University Requirements: See pages 56-62.

School Requirements: None.

Departmental Requirements for the Major

Dance 2 (Dance Health and Injury Prevention); Dance 21A (Music for Dancers); Dance 60A (Choreography); Dance 90A-B-C (Dance History); Dance 100 (Kinesiology for Dance); Dance 180A-B or A-C (Laban Studies); Dance 185 (Critical Issues in Dance).

Technique: Students must complete at least one Dance technique course (ballet, modern dance, jazz, Spanish, world dance, pointe, social dance, tap, or repertory) each quarter in residence. At a minimum, students must complete level II in Ballet, Modern, and Jazz (Dance 132A-B-C, Dance 142A-B-C, and Dance 152A-B-C) and level III in either Ballet or Modern (Dance 133A-B-C or Dance 143A-B-C). Students who place above level II in any technique must take a year of that technique at the level in which they are placed. All students must also complete one course chosen from Dance 12A, 12B, 12C (Spanish Dance), 14 (Social Dance), 52A, 52B, 52C (Tap I), 110 (World Dance), 138 (Character Dance), or 150A, 150B, 150C (Tap II). NOTE: Units earned in ballet, jazz, and modern technique courses beyond the required amount do not count toward departmental elective requirements but may count toward University requirements.

Performance: Two performances from any of the Dance 170 series.

Four units of Drama 101 (Theater Production) must be taken during the first year in residence.

Electives: 12 units of electives must be completed within the major.

REQUIREMENTS FOR THE B.F.A. DEGREE

University Requirements: See pages 56–62.

School Requirements: None.

Departmental Requirements for the Major

Students must complete the departmental requirements as listed for the B.A. degree in Dance. In addition, B.F.A. students must complete the requirements for either the specialization in Choreography or Performance.

Choreography Specialization: Dance 60B-C (Choreography I) or Dance 60B and 62 (Choreography and Music Theatre); Dance 127A (Costume Design for Dance); Drama 30A (Acting); Drama 50C (Lighting Design); any three quarters of courses chosen from Dance 162A-B-C (Choreography II) and Dance 164A (Video Choreography); two courses in Dance 165 (Choreographic Projects—one original choreographic work, approved by the faculty, must be presented in both the junior and senior years); four units (one or two courses) in Art History, Music, Studio Art, or Drama (in addition to Drama 30A, Drama 50C, and Drama 101 requirements).

Performance Specialization: Technique: Dance 134A-B-C (Ballet IV) or Dance 135A-B-C (Ballet V) or Dance 144A-B-C (Modern IV); Dance 153A-B-C (Jazz III); Dance 139 (Partnering).

Performance: Dance 137 (Repertory) or Dance 179 (Etude Ensemble); Dance 170 series: must be in three additional performances beyond the B.A. requirements, one of which must be Dance 170, 171, 172, or 174; Drama 30A (Acting) or a fourth additional performance in the Dance 170 series. Dance 171 and 172 may be repeated for credit. Students must demonstrate proficiency in at least two dance genres in these performances.

Sample Program for Freshmen (B.A. and B.F.A. Programs)

Fall	Winter	Spring
Writing 39B	Writing 39C	Dance 2
Dance 21A	General Education	General Education

	Drama 101 (2 units)	Drama 101 (2 units)

MASTER OF FINE ARTS PROGRAM

Degree Offered

M.F.A. in Dance.

General Information

The M.F.A. program is an intensive program requiring a core of courses in studio and academic areas. The student's individual area of interest is explored through the thesis project in the second year. Projects or written theses may be pursued in choreography, video choreography, dance training, dance history and theory, ethnography, dance science, dance reconstruction, and dance and digital technology.

Admission

Applicants for admission to the degree program must meet the general requirements for admission to graduate study and hold a B.A. or B.F.A. in Dance or the equivalent. Candidates must meet the minimum requirements for the B.A. degree in Dance at UCI. Proposals for three choreographic works that could be completed in the graduate program must be submitted. An audition in ballet and modern technique is required for admission and is held in winter quarter. At this audition, applicants must also present a prepared five-minute choreographed piece, which may be a solo performed by the applicant, or a videotape of the applicant's choreography. Interviews with faculty are conducted following the audition, and applicants are given a short writing exercise.

Teaching Assistantships

Graduate students are encouraged to apply for teaching assistantships in areas such as notation, dance science, history, music for dancers, choreography, world dance, dance video, critical issues, and all technique classes. Students with expertise in any of these areas are given special consideration.

General Degree Requirements

Normally two years of residence are required. Each candidate must enroll for three courses each quarter for six quarters, exclusive of summer sessions.

In the second year, satisfactory attainment must be demonstrated by a major thesis; in choreography this consists of the composition and production of a choreographic work; in other areas, such as dance history, dance training, or dance science, this consists of a written thesis or a comprehensive project in a chosen area of study. All theses must be defended in a one-hour oral examination which may also test the candidate's general knowledge in the area.

The normative time to degree for students in the M.F.A. program is two years. Residence is required. The normative time to degree can be extended to three years only when a student requests extra time for more involved thesis research through a petition to the Chair of the Department. The maximum time to degree is three years. Students who do not complete the degree in three years will be dropped from the program.

Specific Degree Requirements

Seventy-two quarter units in graduate or approved upper-division undergraduate courses must be completed with a grade of at least B in each course. No more than 20 units in upper-division courses may count toward the degree. Fulfillment of the technique course requirements must be approved by the faculty advisor.

Required Courses

Six courses chosen from any graduate or upper-division dance technique course; Seminar in Kinesiology for Dance (Dance 201); Musical Resources (Dance 222); Teaching of Dance Techniques (Dance 225); Costume Design (Dance 227); two courses in Graduate Choreography (Dance 261); Movement Analysis (Dance 282); Critical Issues in Dance (Dance 283); Bibliography and Research (Dance 284); Thesis (Dance 286); Proseminar in Dance History (Dance 296).

By the end of their first year, students will choose their area of study for their thesis. Students who wish to produce a choreographic thesis must apply to the graduate choreography advisor during winter of their first year. The faculty will review the applications and will consider the quality of the student's work in Dance 261, as well as the choreographic proposal, in making their selection.

Courses in Dance

LOWER-DIVISION

NOTE: Some courses are not offered every year. Please check with the department advisor.

2 Dance Health and Injury Prevention (2). An overview of factors that affect the health of dancers. Includes evaluation of general health measures and prevention and management of common dance injuries.

12A-B-C Studio Workshop in Spanish Dance (2-2-2) F, W, S. Principles of Spanish dance with focus on basic movement techniques, castanet work, and introduction to flamenco and other Spanish dance genres. May be taken for credit three times. (IX)

14 Social Dance (2). Contemporary and historical forms. Current ballroom, disco, and Western square dance forms; Latin ballroom dances; dances from the 20s, 30s, and 40s. Pass/Not Pass only. (IX)

21A Music for Dancers (4). Emphasis on the development of musical skills most pertinent to the dancer: vocabulary, notational literacy, rhythmic and melodic acuity, score reading, and fundamental analysis; working with live accompaniment.

30A-B-C Studio Workshop in Ballet I (2-2-2) F, W, S, (30) Summer. Fundamentals of ballet technique: principles of the Classical tradition developed from Noverre, Petipa, and Cecchetti. Pass/Not Pass only. May be taken for credit twice. (IX)

34 Men's Studio Workshop in Ballet (2) F, W, S. Emphasis on men's traditional ballet, techniques, and movements. Prerequisites: Dance 30A-B-C. May be repeated for credit. (IX)

40A-B-C Studio Workshop in Modern I (2-2-2) F, W, S, (40) Summer. Fundamentals of modern dance: principles of modern tradition developed from Graham, Humphrey, and Wigman. Pass/Not Pass only. May be taken for credit twice. (IX)

50A-B-C Studio Workshop in Jazz I (2-2-2) F, W, S, (50) Summer. Fundamentals of jazz: principles of jazz dance and contemporary forms incorporating the personal point of view of the instructor. Pass/Not Pass only. May be taken for credit twice. (IX)

52A-B-C Workshop in Tap I (2-2-2) F, W, S. Beginning tap: principles of rhythm and basic tap steps. Course sequence may be taken for credit twice. (IX)

60A-B-C Choreography I (4-4-4) F, W, S. Beginning-to-intermediate study of principles of dance composition. May include composition assignments for stage and video. By audition, works may be shown quarterly in public studio performances.

62 Choreography and Musical Theatre (4). A theoretical and practical examination of the craft of choreography for musical theatre. Students examine the history of choreographic expression in the musical theatre, and then stage songs and dances from the genre. Prerequisites: Dance 60A-B.

80 Introduction to Dance (4) F, W, S. Survey of nineteenth- and twentieth-century ballet, modern dance, and theatre dance. For non-majors only. Dance 80 and Dance 90A-B-C may not both be taken for credit. (VIII)

82 Topics in World Dance (4). Various topics in world dance studies focusing on historical, social, and cultural contexts. May be repeated for credit as topics vary. (VIII)

90A-B-C Dance History A, B, C (4-4-4) F, W, S. 90A: Global perspectives. Topics and histories of dance and movement practices from various parts of the world. **90B:** The history of dance in the western tradition from the Renaissance through the nineteenth century. **90C:** The history of dance in the western tradition: the twentieth and twenty-first centuries. Dance 90A-B-C and Dance 80 may not both be taken for credit. (IV, VIII)

UPPER-DIVISION

100 Kinesiology for Dance (4). The study of the production of dance movement or lack of dance movement by the muscles of the body. Anatomical and dynamic analysis of dance movement.

103 Pilates (2) F, W, S. Basics of technique emphasizing alignment, breath control, correction of muscular imbalances. Use of the Universal Reformer. Prerequisites: Dance 133A-B-C, 143A-B-C.

110 World Dance (2). Studio workshop of dances and movement sources of specified countries or areas. May be taken for credit six times as topic varies. (IX)

125A Teaching of Dance (4). Pedagogy. The methods and theory of teaching dance forms. Prerequisites: Dance 133A-B-C and 143A-B-C; upper-division standing.

127A Costume Design for Dance (4). Costume design and construction specific to the body in motion. Theoretical study and practical execution.

130A-B-C Pointe Class (2-2-2) F, W, S. Beginning and intermediate pointe work; principles of Classical tradition developed from Noverre, Petipa, and Cecchetti. Emphasis on basic pointe techniques and performance styles. Prerequisites: Dance 132A-B-C. May be taken for credit three times.

132A-B-C Studio Workshop in Ballet II (2-2-2) F, W, S, (132) Summer. Intermediate ballet: principles of Classical tradition developed from Noverre, Petipa, and Cecchetti. Prerequisites for non-Dance majors: Dance 30A-B-C or audition. May be taken for credit twice. (IX)

133A-B-C Advanced Studio Workshop in Ballet III (2-2-2) F, W, S, (133) Summer. Advanced ballet, pointe work, and performance style: principles of the Classical tradition developed from Noverre, Petipa, and Cecchetti. Prerequisites: Dance 132A-B-C or audition. May be taken for credit twice.

134A-B-C Advanced Studio Workshop in Ballet IV (2-2-2) F, W, S, (134) Summer. Advanced ballet, pointe work, and performance style: principles of the Classical tradition developed from Noverre, Petipa, and Cecchetti. Prerequisites: Dance 133A-B-C with a grade of B+ or better in 133C, or audition. May be repeated for credit.

135A-B-C Advanced Studio Workshop in Ballet V (2-2-2) F, W, S. Advanced ballet, pointe work, and performance style: principles of the Classical tradition developed from Noverre, Petipa, and Cecchetti. Prerequisites: Dance 134A-B-C with a grade of B+ or better in 134C, or audition. May be taken for credit three times.

137 Repertory (2) F, W, S. Rehearsal and performance of repertoire from established ballet, modern, or jazz dance choreographers. Prerequisites: Dance 133A-B-C or 143A-B-C or consent of instructor. May be taken for credit twice.

139 Partnering (2). Principles of partnering techniques in various dance performance styles. Prerequisites: Dance 133A-B-C, Dance 143A-B-C, or by audition. May be taken for credit four times.

142A-B-C Studio Workshop in Modern II (2-2-2) F, W, S, (142) Summer. Intermediate modern tradition developed from Graham, Humphrey, and Wigman, incorporating the personal point of view of the instructor. Prerequisites for non-Dance majors: Dance 40A-B-C or audition. May be taken for credit twice. (IX)

143A-B-C Advanced Studio Workshop in Modern III (2-2-2) F, W, S, (143) Summer. Advanced modern dance: principles of modern tradition developed from Graham, Humphrey, and Wigman, incorporating the personal view of the instructor. Prerequisites: Dance 142A-B-C. May be taken for credit twice.

144A-B-C Advanced Studio Workshop in Modern IV (2-2-2) F, W, S. Advanced modern dance. In-depth study of styles, performance elements and principles of modern dance developed from Graham, Horton, Humphrey, Wigman, and current influences incorporating the personal view of the instructor. Prerequisite: Dance 143A-B-C or consent of instructor. May be taken for credit three times.

150A-B-C Studio Workshop in Tap II (2-2-2). Intermediate tap: principles of beginning tap continued and developed. Prerequisite: Dance 52A-B-C or consent of instructor. May be taken for credit twice.

151A-B-C Studio Workshop in Tap III (2-2-2) F, W, S. An overview of tap concentrating on the development of various technique forms using intermediate and advanced principles. Prerequisites: Dance 150A-B-C and consent of instructor. May be taken for credit twice.

152A-B-C Intermediate Studio Workshop in Jazz II (2-2-2) F, W, S. Intermediate jazz: principles of jazz dance and contemporary forms incorporating the personal views of the instructor. Prerequisites for non-Dance majors: Dance 50A-B-C. May be taken for credit twice. (IX)

153A-B-C Advanced Studio Workshop in Jazz III (2-2-2) F, W, S. Advanced jazz: principles of jazz dance and contemporary forms incorporating the personal views of the instructor. Prerequisites: Dance 152A-B-C. May be taken for credit twice.

154A-B-C Advanced Jazz: Performance Techniques IV (2-2-2) F, W, S. Advanced jazz emphasizing performance techniques. Prerequisites: Dance 153A-B-C. May be taken for credit twice.

160 Improvisation (2). Structured and experiential improvisation to heighten the personal intuitive processes, the kinesthetic sense, spatial and temporal awareness, and to encourage insights into the potential movement resources of the individual for performance and choreography. Course encourages freedom of exploration. May be taken for credit two times.

162A-B-C Choreography II (4-4-4) F, W, S. Directed choreographic projects for stage or video integrating the elements of stagecraft. In process or completed works may be shown quarterly in public studio or stage performances. By audition only. Prerequisites: Dance 60A-B-C.

163 Choreography and Digital Technology (4). A process-oriented course exploring the use of digital technology and choreography. Students create performance pieces in the dance studio and in computer-mediated environments such as the motion capture studio, working individually and in collaboration. Prerequisites: Dance 60A-B or consent of instructor.

164A Video Choreography (4) F, W, S. Introduction and overview of video dance, choreography for the camera, and documentation of existing stage choreography. History and aesthetics of dance on video and basics of technical equipment, video techniques, and editing. A major final project is required.

165 Choreographic Projects (1 to 4) F, W, S. Supervised choreographic projects for workshop productions. By audition and approval of faculty. May be taken for credit twice.

170 Dance Performance (1 to 4). Rehearsal and performance in a faculty-choreographed production. By audition only. May be taken for credit twice.

171 Dance Workshop (1 to 4) F, W, S. Rehearsal and performance in a student-choreographed production. By audition only. May be taken for credit three times.

172 Master of Fine Arts Concert (1 to 4). Rehearsal and performance in a graduate student-choreographed production. By audition only. May be taken for credit three times.

174 UCI Dance Ensemble Performance (1 to 4). Performance with the UCI Dance Ensemble. Prerequisite: consent of instructor. May be taken for credit twice.

176 UCI Jazz Dance Ensemble (2 to 4). Rehearsal and performance experience in theatrical jazz dance, designed to provide an experience in assimilating various styles of jazz dance and in refining dance performance techniques. Students also master aspects of dance company promotion. Prerequisites: Dance 152A-B-C or consent of instructor. May be taken for credit six times.

177 UCI Spanish Dance Ensemble (1 to 4) F, W, S. Rehearsal and performance with the UCI Spanish Dance Ensemble. Flamenco and other Spanish dance genres are presented throughout the year for campus and off-campus events. Prerequisite: consent of instructor. May be taken for credit 12 times.

179 UCI Etude Ensemble (4) F, W, S. Repertory and performances by undergraduate Dance majors. Concert presentations on and off campus. Faculty directed, student/faculty choreographed. By audition only. May be taken for credit three times.

180A-B, C Laban Studies (4-4, 4) F, W, S. **180A:** Elementary Labanotation and motif writing. Prerequisite: Dance 21A. **180B:** Intermediate Labanotation and work with Laban Writer software. Prerequisite: Dance 180A or consent of instructor. **180C:** Laban movement analysis. Prerequisite: Dance 21A.

185 Critical Issues in Dance (4) F, W, S. Critical thinking and writing about dance, with a section on dance criticism and a major emphasis on persuasive writing about significant issues in the dance world. Prerequisites: satisfactory completion of the lower-division writing requirement and Dance 90A-B-C.

193 Selected Topics in Dance (1 to 4). Directed group studies of topics in dance. May be repeated for credit when topic changes.

197 Independent Study (1 to 4) F, W, S. Individual independent projects in experimental laboratory, library, field, performance, under instructor's direction. Students can receive conceptual, creative, and theoretical instruction in the successful completion of a written report or performance. Prerequisite: consent of instructor. May be repeated for credit.

199 Senior Thesis (4) F, W, S. Directed research or creative activity for senior Dance majors. Research consists of a substantial essay on dance history, research in dance science, or the creation of original or reconstructed choreography. Pass/Not Pass only. May be repeated for credit.

GRADUATE

NOTE: Some courses are not offered every year. Please check with the department advisor.

201 Seminar in Kinesiology for Dance (4) F. Introduction to the anatomical, biomechanical, and physiological principles of dance movement. Prerequisite: Dance 100 or consent of instructor.

210 Graduate Studio: World Dance (2) F, W, S. Principles, techniques, and styles of selected genres of world dance such as those of Mexico, Spain, Japan, or other cultures. Prerequisite: consent of instructor. May be taken for credit six times.

222 Musical Resources (4). Detailed study of music as it relates to dance. Historical overview of musical form, style, and other elements. Analysis of various affinities between music and dance. Practical applications. Prerequisite: Dance 221 or consent of instructor.

225 Seminar in the Teaching of Dance Techniques (4). Principles and theories of teaching dance techniques. Supervised presentation and teaching of technique class.

227A Costume Design for Dance (4) F. Overview of basic design elements, draping and drafting techniques, and costume construction.

231A-B-C Graduate Studio: Ballet (2-2-2) F, W, S. Advanced ballet, pointe work, and performance style: principles of the Classical tradition developed from Noverre, Petipa, and Cecchetti. By audition only. May be repeated for credit.

241A-B-C Graduate Studio: Modern (2-2-2) F, W, S. Advanced modern dance: principles of modern tradition developed from Graham, Humphrey, and Wigman, incorporating the personal view of the instructor. By audition only. May be repeated for credit.

251A-B-C Graduate Studio: Jazz (2-2-2) F, W, S. Principles of jazz dance and contemporary forms, incorporating the personal views of the instructor. By audition only. May be repeated for credit.

252A-B-C Graduate Studio: Tap (2-2-2) F, W, S. An overview of tap concentrating on the development of various technique forms using basic and intermediate principles. May be taken for credit four times.

261A-B Graduate Seminar in Choreography (4-4) F, W. Graduate work in dance composition emphasizing the individual aesthetic. Assignments in movement discovery, solo and group forms, with the main emphasis on independent work. May be repeated for credit.

264 Video Choreography (4). Directed choreographic projects for the video camera. Video techniques which create the hybrid art form called video dance. Production of an individual video choreography project. Prerequisites: Dance 164A-B-C.

265 Motion Capture (4). Projects in motion capture; the animation technique of measuring a dancer's position and orientation in three-dimensional space and recording that data in a computer. Individual and group choreography are developed and recorded with state-of-the-art technology.

276 CCAST Studio/Laboratory: Telematic Performance and Teleoperative Art (4) F, W, S. Art and performance projects utilizing real time and quasi-real time distance interaction. Synchronous performance and distributed choreography. Network technologies and protocols. Speed, bandwidth, latency. Web-based technologies. Video and sound. Teleoperation/remote machine control. Same as ICS 276.

281A-B Dance and Digital Technology (4-4) F, W. **281A:** Interactive multimedia. **281B:** Continuing work and more complex projects in interactive multimedia for dance.

282 Seminar in Movement Analysis (4) W, S. Theories of movement analysis and nonverbal communication applied to dance.

283 Critical Issues in Dance (4) F, W, S. Reading, writing, discussing, and presenting key issues that relate to dance studies. Basics of dance analysis and criticism. Special emphasis on effective ways of defining, clarifying, and arguing for points of view. Prerequisite: Dance 284.

284 Bibliography and Research (4) F. Understanding the field of dance studies, available resources, research methods, and academic formats in preparation for thesis writing.

285 Graduate Projects (4). Projects may be educational, choreographic, scientific, historical, or philosophical in scope and must have faculty advisor approval. May be taken for credit six times.

286 Thesis (4). Substantial research in a topic approved by the student's graduate committee. Results of the research must be written in approved thesis style. Prerequisite: consent of department. May be taken for credit six times.

287 Graduate Lectures in Dance (1 to 4). A series of lectures and discussions of announced topics in dance. Content may be from history, ethnology, notation, medicine, music, or other areas in the field. Prerequisite: consent of instructor. May be repeated for credit as topics change.

296 Proseminar in Dance History (4). Discussion seminar with emphasis on reading and thinking about problems in dance history; presentation of oral and written reports. Topics vary. May be taken for credit twice.

297 Directed Reading (1 to 4). Topic to be approved by instructor. Paper required. Prerequisite: consent of instructor. May be repeated for credit.

399 University Teaching (4). Limited to Teaching Assistants. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

DEPARTMENT OF DRAMA

249 Drama Building; (949) 824-6614

Eli Simon, **Department Chair**

Faculty

Lonnie Alcaraz, M.F.A. University of California, Irvine, *Associate Professor of Drama and Head of Design* (lighting design, digital imaging)
 Stephen Barker, Ph.D. University of Arizona, *Professor of Drama and Head of Doctoral Studies* (post-modern theatre, Beckett, critical theory)
 Cynthia Bassham, M.F.A. American Conservatory Theatre, *Lecturer with Potential Security of Employment, Drama* (voice, speech for actors, acting)
 Richard Brestoff, M.F.A. New York University, *Associate Professor of Drama* (film and television acting)
 Daniel Gary Busby, D.M.A. University of California, Los Angeles, *Assistant Professor of Drama* (music theatre, singing, conducting)
 Luke Cantarella, M.F.A. Yale University, *Assistant Professor of Drama* (scene design)
 Dennis Castellano, M.F.A. University of California, Irvine, *Senior Lecturer with Security of Employment and Head of Music Theatre* (music theatre)
 Robert Cohen, D.F.A. Yale University, *Claire Trevor Professor of Drama* (acting theory, acting, directing)
 Myrona DeLaney, M.F.A. University of California, Irvine, *Lecturer with Potential Security of Employment, Drama* (music theatre, singing, acting)
 Holly Poe Durbin, M.F.A. University of California, Los Angeles, *Associate Professor of Drama* (costume design)
 Clifford Faulkner, M.A. California State University, Long Beach, *Senior Lecturer with Security of Employment, Drama* (scenery design, history of design, gay theatre)
 Keith Fowler, D.F.A. Yale University, *Professor of Drama and Head of Directing* (directing, acting)
 Clayton Garrison, Ph.D. Stanford University, *Professor Emeritus of Drama* (opera, musical theatre, movement, dramatic literature)
 Douglas-Scott Goheen, Ph.D. University of Denver; M.F.A. Yale University, *Professor Emeritus of Drama* (scenery design, digital imaging)
 Cameron Harvey, M.F.A. University of California, Irvine, *Professor Emeritus of Drama* (artistic direction, producing, lighting design)
 Don Hill, M.F.A. University of Southern California, *Lecturer with Potential Security of Employment, Associate Producer, and Head of Stage Management* (stage management, directing, acting)
 Michael Hooker, M.F.A. California Institute of the Arts, *Professor of Drama* (sound design)
 Dudley Knight, M.F.A. Yale University, *Professor Emeritus of Drama* (voice, speech for actors, acting)
 Madeline Ann Kozlowski, M.F.A. Brandeis University, *Professor Emerita of Drama* (costume design)
 Anthony Kubiak, Ph.D. University of Wisconsin, Milwaukee, *Professor of Drama* (American and modern drama, modern poetry, critical theory, philosophy)
 Daphne Pi-Wei Lei, Ph.D. Tufts University, *Associate Professor of Drama* (Asian theatre, Asian American theatre, intercultural theatre, gender theory, performance theory)
 Annie Loui, *Associate Professor of Drama* (movement, directing, acting)
 David McDonald, Ph.D. Stanford University, *Professor Emeritus of Drama* (dramatic theory, Irish drama, theatre history, playwriting)
 Ian Munro, Ph.D. Harvard University, *Associate Professor of Drama* (European drama and performance, early modern popular culture, theatrical performance of wit)
 Vincent Olivieri, M.F.A. Yale University, *Assistant Professor of Drama* (sound design)
 Janelle Reinelt, Ph.D. Stanford University, *Professor Emerita of Drama* (British theatre, political theory, performance)
 Bryan Reynolds, Ph.D. Harvard University, *Professor of Drama* (Shakespeare, Renaissance drama, critical theory, feminist theory, performance theory, cultural studies)
 Thomas Ruzika, M.F.A. University of California, Irvine, *Lecturer in Drama* (lighting design)
 Eli Simon, M.F.A. Brandeis University, *Department Chair and Professor of Drama* (acting, directing)
 Jaymi Lee Smith, B.F.A. DePaul University, *Assistant Professor of Drama* (lighting design)
 Phil Thompson, M.F.A. University of California, Irvine, *Associate Professor of Drama and Head of Acting* (voice, speech for actors, acting)

Richard Triplett, Otis Art Institute, *Professor Emeritus of Drama* (scenery and costume design, history of design)

Christopher Villa, *Lecturer in Drama* (stage combat)

Robert Weimann, Ph.D. Humboldt University (Germany), *Professor Emeritus of Drama* (theory, criticism, literature)

Frank B. Wilderson III, Ph.D. University of California, Berkeley, *Assistant Professor of African American Studies and Drama* (film theory, Marxism, dramaturgy, black political theory)

Shigeru Yaji, M.F.A. California State University, Long Beach, *Lecturer in Drama* (costume design)

The Bachelor of Arts program in Drama combines broad liberal study and comprehensive training in several subdisciplines of drama. Each Drama major studies and practices in each of several mutually related areas of the theatre: performance, literature, history, criticism, design, stage management, and production. The curriculum is structured to relate studio practices, technical resources, and production techniques to the development of dramatic literature and current critical theory.

Students should especially note the division of upper-level literature courses into the following clusters—Theory and Criticism (103–109), Periods and Genre (110–119), and Performance and Culture (121–129). These clusters describe differing approaches to the material being presented, whether, for example, analysis and discussion is weighted toward a more strictly defined theoretical and philosophical context, a more traditional historical approach, or an approach that more emphasizes cultural frameworks and issues.

The program is designed for students who, while not necessarily planning to make the theatre their vocation, have a serious interest in the literature, theory, and practice of drama, as well as for students preparing to work professionally in the theatre, often after more specialized training at the graduate level.

The Drama Department also offers a specialized degree for students showing professional aptitude for a career as a musical theatre performer. The Bachelor of Fine Arts (B.F.A.) in Music Theatre offers the Department's most talented and motivated students the opportunity to train in acting, singing, and dancing for the stage. Students who begin their tenure at UCI as a freshman Drama major may audition for the program after their first year of residence. Transfer students may audition as early as their second quarter of residence. B.F.A. students are given priority when enrolling in all music theatre courses. In most cases, students can audition for the B.F.A. program once they have been accepted into the Music Theatre Workshop, Level III (Drama 143). All B.F.A. hopefuls are encouraged to audition for the Music Theatre Workshop, Level II (Drama 142) as soon as they arrive at UCI as Level II is a prerequisite to Level III. B.F.A. auditions are held three times per year: during Welcome Week and finals week of fall and winter quarters. A grade point average of 3.0 in musical theatre courses completed prior to the B.F.A. audition is required. Successful graduating seniors in the B.F.A. program will receive the "Honors in Music Theatre" notation on their official transcript if they maintain an overall GPA of 3.2 or higher with an overall GPA of 3.4 or higher in all musical theatre courses.

The Department of Drama is a member of the University/Resident Theatre Association (U/RTA).

CAREERS FOR THE DRAMA MAJOR

A degree in Drama may or may not lead to professional employment in theatre or film.

Graduates in Drama at UCI have performed in Broadway plays, regional and summer theatres, and in films and television. They

serve as artistic directors, designers, art directors, business managers, and performers at more than 100 theatre companies, and as faculty at more than 75 institutions of higher learning.

Not all Drama students become professional theatre artists. Many embark upon careers in law, business, arts management, advertising, and teaching; others pursue further study at UCI or elsewhere.

REQUIREMENTS FOR THE B.A. DEGREE IN DRAMA

University Requirements: See pages 56–62.

School Requirements: None.

Departmental Requirements for the Major

An introductory course in production theory (Drama 10); Performance Now (Drama 15); one year in acting (Drama 30A-B-C); one year survey in the development of drama (Drama 40A, B, C); three different courses chosen from Drama 50A, B, C, D, E; one year in the development of theatre (Drama 120A, B, C); in addition to the Drama 120 series, four more upper-division courses, which must include three courses from Drama 103–129; eight units of theatre production (Drama 101) of which four units must be completed during the first year of residence at UCI.

Students are strongly encouraged to take Performance Now (Drama 15) during their first year of residency at UCI.

Students are required to take Drama 40A, B, C in their sophomore year, after completion of the lower-division writing requirement.

Students entering the Department as freshman must complete the requirement of three courses chosen from Drama 50A, B, C, D, E by the end of their junior year. All other students must complete these courses within one year of entering the major.

Departmental Requirements for the Minor

Drama 10 (Introduction to Production Theory); Drama 30A-B-C (Acting); Drama 40A, B, C (Development of Drama); seven upper-division courses in Drama, each of which must be taken at UCI, including Drama 120A, B, C (Development of Theatre) and one course in Drama 101 (Theatre Production).

Sample Program for Freshmen

Fall	Winter	Spring
Drama 30A	Drama 30B	Drama 30C
Drama 15	Drama 50 or 10	Drama 50 or 10
Drama 101 (2 units)	Drama 101 (2 units)	General Education
Writing 39B	Writing 39C	General Education

REQUIREMENTS FOR THE B.F.A. DEGREE IN MUSIC THEATRE

University Requirements: See pages 56–62.

School Requirements: None.

Departmental Requirements for the Major

Introduction to Production Theory (Drama 10); Performance Now (Drama 15); Acting (Drama 30A-B-C); Development of Drama (Drama 40A, B, C); one of the following design courses: Introduction to Costume Design (Drama 50A), Introduction to Scenic Design (Drama 50B), Introduction to Lighting Design (Drama 50C), or Introduction to Sound Design (Drama 50D); University Theatre (a musical production) (Drama 100); eight units of Theatre Production (Drama 101); one Dramatic Literature course chosen from Drama 103–109, 110–119, or 121–129; Development of Theatre (Drama 120A, B, C); Music Theatre Acting (Drama 136); Music Theatre Workshop, Level II (Drama 142); Music Theatre Workshop, Level III (Drama 143A, B, C); Music Theatre Workshop, Level IV (Drama 144); Music Theatre Singing (taken three times) (Drama 145); The New York Satellite Program (Drama

146A-B); Music Theatre Dance (Drama 147); History of the American Musical Theatre (Drama 148A, B); Music Proficiency for Actors (Drama 149); Script and Score (Drama 176); plus each of the following courses when in residence in the New York Satellite Program: Studio in Acting (Drama 190), Project in Voice (Drama 199), Theatre Dance in Ballet, Tap, and Jazz (Drama 199); plus two ballet classes, one tap class, and one jazz class in Dance.

Application Process to Declare the Major: Students who begin their tenure at UCI as a freshman Drama major may audition for the program after their first year of residence. Transfer students may audition as early as their second quarter of residence.

DEPARTMENTAL HONORS PROGRAMS

Honors in Acting Program

Admission to the Honors in Acting Program requires both eligibility and a special audition. The eligibility requirements for sophomore-level transfer students and native UCI students are (1) at least one year in good standing as a UCI Drama major; (2) completion of Drama 130A-B and at least one section of either Drama 135 or Drama 142, all at UCI; (3) honors students must possess and maintain an overall GPA of at least 3.2, with a GPA of 3.4 or higher in all acting courses; (4) performance in at least three official Drama at UCI productions (including mainstage, stage 2, stage 3, workshop, or cabaret); (5) completion of all Drama 101 (Theatre Production) assignments; and (6) completion of the eligibility form.

The eligibility requirements for junior-level transfer students are (1) one year in good standing as a UCI Drama major; (2) completion of Drama 130A-B at UCI; (3) honors students must possess and maintain an overall GPA of at least 3.2, with a GPA of 3.4 or higher in all acting courses; (4) completed performance in at least one official Drama at UCI production (including mainstage, stage 2, stage 3, workshop, or cabaret); (5) completion of four out of eight units of Drama 101; and (6) completion of eligibility form.

A student's audition will determine final admission to the Honors in Acting program. Only truly exceptional students, no more than 10 to 20 percent of those eligible, will be admitted. The Honors auditions, for eligible candidates only, are held at the end of fall quarter and by special arrangement. Auditions will consist of a standard presentation.

Honors in Acting Program students receive (1) the "Honors in Acting" notation on their official transcript; (2) nomination and recommendation for national University/Resident Theatre Association (U/RTA) auditions; (3) eligibility, on a space available basis, for South Coast Repertory Theatre internships, currently available only to M.F.A. students; and (4) eligibility to audition at UCI-screened Shakespearean Festivals.

Honors in Design Program

The Honors in Design Program provides the opportunity for Drama majors to concentrate on the study and practice of scenery, costume, or lighting design. Honors in Design students study basic and advanced design techniques, participate in classes with graduate design students, serve as an assistant designer to a graduate student or faculty designer, and possibly design a production at UCI.

Eligibility requirements are (1) at least one year in good standing at UCI as a Drama major; (2) completion of Drama 50A, B, C, D or equivalent courses; (3) completion of at least two upper-division studio courses selected from Drama 150–162, 167–169, 171, including at least one from the design area in which the student is applying for honors; (4) possess and maintain an overall GPA of at least 3.2, with a GPA of 3.4 or higher in all design and production technique courses; (5) completion of four out of eight units of Drama 101 (Theatre Production); and (6) completion of the eligibility form.

Admission to the Honors in Design Program is competitive. Students may be admitted as early as the winter quarter of their sophomore year but no later than the spring quarter of their junior year. Upon completion of eligibility requirements, the student will schedule an informal portfolio review with a member of the design faculty appropriate to the student's specialty area(s).

The selected faculty mentor may recommend that (1) the student is ready to proceed with a formal portfolio review and presentation to the Design faculty via the Head of Design; (2) the student rework the content and/or presentation of the material for reconsideration by the faculty mentor; (3) the student is not ready or able to proceed with Honors in Design. Only truly exceptional students (no more than 10 to 20 percent of those eligible) will be admitted to Honors in Design as determined by the Design faculty via the Head of Design.

Honors in Design students receive (1) the "Honors in Design" notation on their official transcript; (2) nomination and recommendation for national University/Resident Theatre Association (URTA) interviews; (3) an assistant designer assignment with a graduate student or faculty designer; and (4) special consideration to design a budgeted and technically supported production.

Honors candidates meet with their faculty mentor at the beginning of every quarter to evaluate their progress and with the Head of Design to check that all grade and course requirements are being satisfied.

Honors in Directing Program

The Honors in Directing Program provides the opportunity for Drama majors to concentrate on the study and practice of stage direction. Honors in Directing students study basic and advanced directing techniques, participate in the Directing Laboratory with graduate Directing students, take a course in directorial themes and/or the history of directing, and direct two full plays in the Drama Workshop series. Honors students also have the opportunity to receive credit as the assistant director of a Stage 1 or Stage 2 Department show; as a production internship with a professional theatre company; or for production/direction responsibility with the Playwright's Workshop.

Admission to the Honors in Directing Program is competitive. Candidates must first complete Drama 170 (Directing) and receive instructor approval to enroll in Drama 185 (Advanced Directing). Candidates must apply, as a director, for Drama 198 (Drama Workshop) by submitting a proposal to direct a play in the Drama Workshop series. If the proposal is accepted, the candidate must declare to the Head of Directing that the production is to be counted as an audition for admission to the Honors in Directing Program. A committee of three Drama faculty members, including the Head of Directing, will then see and evaluate the production for clarity of interpretation, unity of style, strength of acting, and ensemble performance, and will examine the candidate's self-evaluation and the evaluations of the director by members of the cast. The Head of Directing will inform the candidate of the committee's decision as to whether or not the candidate is admitted to the Honors Program.

Undergraduate Drama majors can be admitted into the program as early as the winter quarter of their freshman year but no later than the spring quarter of their junior year. Students may be admitted to the program retroactively if all the requirements for Directing Honors have been met by their final year, but only if a faculty committee of three has seen their workshops and agrees to admit the candidate.

To achieve the Honors in Directing distinction, students must fulfill all the courses required of the regular Drama major, with an overall GPA of 3.2 or higher. In addition, students must complete the following courses with a GPA of 3.4 or higher:

1. Drama 170 (Directing).
2. Two courses in Drama 185 (Advanced Directing). In this course, undergraduate Directing students present work in the Directing Laboratory along with graduate Directing students.
3. Two Drama Workshops, one of which must be taken as Drama 198 (Drama Workshop) with the candidate serving as director. The candidate must stage a second Drama Workshop as Drama 199 (Projects in Theater), for which a letter grade is earned.
4. Four additional units to be satisfied by any of the following: Drama 199 (as a summer internship, approved by the Head of Directing, with the candidate serving a professional theatre company as director, assistant director, or production assistant); Drama 199 (as a production/directing project for Playwright's Workshop); Drama 100 (as assistant director to a faculty director); or Drama 199 (as assistant director to a graduate director's thesis production).

Honors candidates meet with the Head of Directing at the beginning of every quarter to evaluate their progress and to check that all grade and course requirements are being satisfied. Successful graduating seniors will receive the "Honors in Directing" notation on their official transcript and will receive a nomination and recommendation for national University/Resident Theatre Association (URTA) interviews.

NOTE: All of the above courses are open to all students even though they may not qualify for the Honors Program.

Honors in Dramatic Literature, History, and Theory Program

The Honors in Dramatic Literature, History, and Theory Program is designed to challenge superior students beyond the scholarly requirements of the Drama major. It provides them with the opportunity to advance their knowledge of dramatic literature, history, and theory and to further develop their writing, analytical, and research skills. An additional purpose of the program is to better prepare students for graduate study in not only dramatic literature, history, and theory, but in all fields in the humanities and social sciences, as well as in law.

Eligibility requirements are (1) completion of Drama 40A, B, C and two courses selected from Drama 103–129 (for upper-division writing credit), or equivalents to these courses from other institutions; (2) possess and maintain an overall GPA of at least 3.2, with a GPA of 3.4 or higher in all dramatic literature, history, and theory courses; and (3) completion of the eligibility form.

Admission to the Honors in Dramatic Literature, History, and Theory Program is competitive. Students must apply to the program prior to the spring quarter of their junior year. Upon completion of eligibility requirements, applicants must submit at least two critical essays, most likely written previously for courses, totaling no more than 30 pages. These essays will be used by the Honors Committee (comprised of the Head of Dramatic Literature, History, and Theory and two additional members of the Drama faculty) to determine admission. Only truly exceptional students (no more than 10 to 20 percent of those eligible) will be admitted.

Beyond fulfilling the regular requirements of the Drama major, honors students must take three additional upper-division courses in dramatic literature, history, and/or theory, one of which must be focused on theory. Upper-division courses in other departments may be used to fulfill these requirements, as long as the Honors Committee approves them.

Honors students must also write an honors thesis, a 30–40 page research paper written under the supervision of a faculty member on a topic chosen by the student. In consultation with the student, the adviser for this project is selected before the end of the fall quarter of the student's senior year. Students develop their projects

until the spring quarter when they enter the writing phase. It is only during the spring quarter that students achieve full course credit for their work on the thesis, in the form of an independent study course with their advisor. This independent study is the final course of the program.

Successful graduating seniors will receive the "Honors in Dramatic Literature, History, and Theory" notation on their official transcript.

Honors in Music Theatre

Successful graduating seniors in the B.F.A. program will receive the "Honors in Music Theatre" notation on their official transcript if they maintain an overall GPA of 3.2 or higher with an overall GPA of 3.4 or higher in all music theatre courses.

Honors in Stage Management Program

The Honors in Stage Management Program provides the opportunity for Drama majors to concentrate on the study and practice of stage management. Honors students study basic and advanced stage management techniques, participate in classes with graduate stage managers, work as assistant stage managers with the graduate stage managers on graduate student-directed and faculty-directed productions, and stage manage a graduate student-directed or faculty-directed production at UCI.

Eligibility requirements are (1) minimum one year in good standing at UCI as a Drama major; (2) completion of three of the following: Drama 50A, B, C, D or equivalent courses; (3) completion of Drama 50E; (4) possess and maintain an overall GPA of at least 3.2, with a GPA of 3.4 or higher in all stage management and production courses; (5) completion of eight units of Drama 101 (Theatre Production); and (6) completion of the eligibility form.

Admission to the Honors in Stage Management Program is competitive. Students may be admitted as early as the winter quarter of their sophomore year but no later than the spring quarter of their junior year. Only truly exceptional students (no more than 10 to 20 percent of those eligible) will be admitted to the program as determined by the Honors Committee. Upon completion of eligibility requirements, the student will submit to the Honors Committee: (1) two prompt books; (2) a resume including all stage management and production experience; (3) letters of reference from two directors with whom the student has worked; and (4) a written paper on the subject of stage management.

Students receive the "Honors in Stage Management" notation on their final transcript; nomination and recommendation for national University/Resident Theatre Association (U/RTA) interviews; assistant stage manager assignments working with graduate stage managers; and a stage management assignment on a graduate student-directed or faculty-directed production.

Honors candidates meet with the Head of Stage Management at the beginning of every quarter to evaluate their progress.

MASTER OF FINE ARTS PROGRAM

Degree Offered

M.F.A. in Drama, with emphasis in Acting, Directing, Design, or Stage Management.

A graduate emphasis in Feminist Studies also is available. Refer to the Department of Women's Studies section of the *Catalogue* for information.

Admission

Applicants for admission to the degree program must meet the general requirements for admission to graduate study and hold a B.A., B.F.A., or higher degree.

Applicants must submit dossiers of biographical information and theatrical experience, together with photographs, essays, reviews, production books, and portfolios, as appropriate.

Normally an audition is required for all applicants who intend to follow the curriculum in Acting. UCI coordinates its auditions with the University/Resident Theatre Association (U/RTA), and conducts auditions, both for U/RTA finalists and UCI applicants, in New York, Chicago, Las Vegas, and Irvine during January and February. Other U/RTA audition sites may be considered. Interviews for applicants in Directing, in Design, and in Stage Management also are required.

General Degree Requirements

Normally three years of residence is required. Each candidate must enroll for three courses each quarter for nine quarters, exclusive of summer sessions.

The normative time to degree for students in the M.F.A. program is three years. Residence is required. The maximum time to degree can be extended to four years only through petition to the Head of the Program for extenuating circumstances. Students who do not complete the degree in four years will be dropped from the program.

During the first year of residence each candidate will prepare, for credit, two graduate projects, in either acting, directing, design, stage management, theatrical research, or a combination of two of these. Satisfactory completion of these projects, as determined by the faculty, is prerequisite to entering the second year of the program.

The required thesis normally consists of directing, designing, stage managing, or playing a principal role in a major production, and collecting in essay form the evidences of research, analysis, and judgments which formed a part of the production experience.

Each graduate student is expected to participate in productions throughout residence at UCI.

A total of 108 quarter units in graduate or approved upper-division undergraduate courses must be completed with a grade of at least B in each course. Specific course requirements must be satisfied in one of the following four areas:

Acting

Nine graduate studios in acting (Drama 200), taken in tandem with nine graduate studios in voice (Drama 201), stage speech (Drama 202), stage movement (Drama 203) or dance (Dance 231, 241, 251, 150, or 151), and Voice/Movement Dynamics (Drama 206); three master classes in acting (selected from various topics offered in Drama 219); one seminar in script analysis and research (Drama 235); three courses in development of theatre (Drama 120A, B, C)—faculty program head may approve substitutions depending on student's prior academic experience; two seminars in dramatic literature, performance theory, criticism, history of theatre, or contemporary theatre (Drama 220–225, or 230); six graduate projects, of which two may be professional internships (Drama 240 or 295).

Design

Nine graduate studios in design, one of which is the thesis (Drama 255); seven courses in graduate projects, one of which may be a professional internship (Drama 295); two elective courses; three courses in development of theatre (Drama 120A, B, C)—faculty program head may approve substitutions depending on student's prior academic experience; two courses in production techniques (Drama 150–162, 167–171, 260–280); one course in conceptualization and collaboration (Drama 245, must be taken the first quarter in residence); one seminar in script analysis and research (Drama 235); two courses in dramatic literature, performance theory, criticism, contemporary theatre, or history of music theatre (Drama 220, 221, 223, 230, or 248).

Directing

Nine graduate studios in directing (Drama 211); three courses in development of theatre (Drama 120A, B, C)—faculty program head may approve substitutions depending on student's prior academic experience; two courses in acting (Drama 200); one seminar

in script analysis and research (Drama 235); one course in conceptualization and collaboration (Drama 245); two seminars in dramatic literature, performance theory, criticism, theatre history (Drama 220–223, 248); seven projects, of which one is the thesis, one is a project in theatre production, one may be a professional internship, and three must be directed (non-thesis) productions; two or three electives.

Stage Management

Seven graduate studios in stage management (Drama 254); one thesis project course (Drama 257E); seven courses in graduate projects (Drama 240); one professional internship course (Drama 295); two elective courses in graduate level (Drama 200+) or upper-division (100–199) as approved by the faculty advisor; three courses in development of theatre (Drama 120A, B, C)—faculty program head may approve substitutions depending on student's prior academic experience; two courses in production techniques (Drama 150–159, 162–164, 167–168, 170–171, 260–262, 265–266); one course in conceptualization and collaboration (Drama 245, must be taken the first quarter in residence); one seminar in script analysis and research (Drama 235); two courses in dramatic literature, criticism, contemporary theatre, or history of music theatre (Drama 220, 221, 230, or 248).

DOCTORAL DEGREE PROGRAM

Degree Offered

Ph.D. in Drama and Theatre.

This is a joint program offered by the UCI Department of Drama and the UCSD Department of Theatre and Dance.

Preparation

Students with a B.A. (minimum GPA of 3.5), M.A., or M.F.A. degree in Drama and Theatre are eligible for admission to the doctoral program. Students with training in literature (or another area in the humanities) will also be considered, provided they can demonstrate a background in drama or theatre. Experience in one of the creative activities of theatre (acting, directing, playwriting, design, dramaturgy) enhances a student's chances of admission.

All applicants are required to take the Graduate Record Examination and to submit samples of their critical writing.

While not required for admission, a working knowledge of a second language is highly desirable (see Language Requirement).

Course of Study

Students are required to take a minimum of 144 units, which is equivalent to four years of full-time study (full-time students must enroll for a minimum of 12 units each quarter). Forty of these units are taken in required seminars; the balance is made up of elective seminars, independent study and research projects (including preparing the three qualifying papers), and dissertation research. Students must take a minimum of one seminar per year in the UCSD Department of Theatre and Dance. The program of study makes it possible for students to take a significant number of elective courses and independent studies both with faculty in Drama and Theatre and in other departments.

Required Courses

Students must take a minimum of 12 units (three seminars) each of Drama 290 (Dramatic Literature and Theatre History Prior to 1900) and 291 (Dramatic Literature and Theatre History, 1900 to Present), and 16 units (four seminars) of 292 (Cultural and Critical Theory).

All graduate courses may be repeated when the topic varies. Descriptions of the topics to be treated in a given academic year are published by the Department in the fall. Enrollment in each

course requires the consent of the instructor. The courses are limited to registered doctoral students.

These 10 required seminars must be completed by all students, including those who have an M.A. or an M.F.A. degree, before the end of the third year. In addition, students must pass comprehensive examinations at the end of their first and second years.

Drama 293 (Directed Studies) and 294 (Dissertation Research) are also required.

Comprehensive Examinations

In the first year, students prepare for the Written Comprehensive Examination, which is based on a reading list of approximately 150 titles ranging from the Ancient Greeks to the present. Students take this examination at the beginning of the fall quarter of their second year. (Comprehensive examinations are scheduled at the beginning of fall quarter in order to allow students the summer to prepare.) Students who fail the Written Comprehensive may retake it no later than the first week of winter quarter of their second year. Students who fail the Written Comprehensive for a second time are dismissed from the program.

In their second year, students prepare for the Oral Comprehensive Examination. The reading list for this examination is designed to permit students to acquire a knowledge of their dissertation subject area, broadly conceived. The reading list is compiled by the student and the dissertation advisor, in consultation with other members of the faculty, as appropriate; the reading list must be established by the end of winter quarter of the second year. Students take the Oral Comprehensive at the beginning of the fall quarter of their third year. Students also submit a dissertation prospectus (approximately five pages) when they take this examination. Students who fail the Oral Comprehensive may retake it no later than the first week of winter quarter of their third year. Students who fail the Oral Comprehensive for a second time are dismissed from the program.

Advancement to Candidacy: Three Qualifying Papers

Students normally select a dissertation advisor during their second year and must do so before the end of spring quarter of that year. In consultation with the dissertation advisor and other faculty members, students develop topics for three qualifying papers, which are written during their third year. The three qualifying papers—one long (approximately 50 pages) and two short (approximately 30 pages each)—must be completed by the end of the third year; these completed papers provide the basis for the Oral Qualifying Examination. Students write the long paper under the direction of their dissertation advisor; it is understood that the long paper is preparatory to the dissertation. The short papers deal with other related topics, subject to the approval of the student's advisors; the two short papers are understood as engaging in exploring the larger contexts of the dissertation. The normative time for students to pass the Qualifying Examination and advance to candidacy is at the end of their third year; students must advance to candidacy no later than the end of fall quarter of their fourth year. Once advanced to candidacy, students write their dissertation which, upon completion, is defended in a final oral examination.

Students may select a dissertation advisor from either the UCI Department of Drama or the UCSD Department of Theatre and Dance. All UCI doctoral dissertation committees must include at least one faculty member from UCSD.

Language Requirement

Students are required to complete an advanced research project using primary and secondary material in a second language (materials may include live and/or recorded performance; interviews with artists, critics, and scholars; and other non-documentary sources, as well as more conventional textual sources). This requirement may be satisfied by writing a seminar paper or a qualifying paper (see Advancement to Candidacy above) that makes

extensive use of materials in a second language. The second-language requirement must be satisfied before the end of the third year. This requirement will not be waived for students who are bi- or multilingual; all students are required to do research-level work in more than one language.

It is assumed that students will have acquired a second language before entering the doctoral program, although second-language proficiency is not a requirement for admission. While students may study one or more second languages while at UCI or UCSD, language courses may not be counted toward doctoral program requirements.

Teaching

Students are required to teach a minimum of four quarters. No more than eight units of apprentice teaching may be counted toward the required 144 units.

Departmental Ph.D. Time-Limit Policies

Students must advance to candidacy by the end of the fall quarter of their fourth year. Departmental normative time for completion of the degree is five years; total registered time in the Ph.D. program at UCI or UCSD cannot exceed seven years.

Financial Support

Ph.D. students entering the program with a B.A. may be supported (either by teaching assignments or fellowships) for five years. Students who have an M.A. and have been given transfer credit may be supported for four years. Such support depends upon the funds available, the number of students eligible, and the student's rate of progress.

Courses in Drama

LOWER-DIVISION

10 Introduction to Production Theory (4). An introduction to modern production techniques as practiced in realizing scenic designs. Equipment, theories, techniques, and history of production practices in the technical theatre; class instruction integrated with practical applications.

14 Performing Rock 'n Roll (4). Explores major movements in the history of rock 'n roll in terms of performance, not virtuosity necessarily of the performers as musicians, rather as performances of aesthetics in modes of embodied ideology, iconoclastic spectacle, mixed media fashion, and subcultural formation.

15 Performance Now (4). Exposes students to what is most current in the world of performance and theatre. Begins with a series of lectures on the idea of performance, and the various theories that frame it. (IV)

30A-B-C Acting (4-4-4). A one-year course in basic acting technique and discipline. (NOTE: All acting classes require strict adherence to stage discipline; unexcused class absences, for example, are not permitted.) **30A:** Stage technique and stage discipline. Freeing vocal and physical movement and liberating emotional power. Elementary stage movement and voice. Elimination of regionalisms in speech. Overcoming stage fright. Readings in acting theory. **30B:** Improvisations and scenes. Rehearsal and presentation of at least two scenes with different partners. Developing stage contact with tactics in a "play" situation. Prerequisite: Drama 30A. **30C:** Characterization, scenes and auditioning. Development of character in at least three rehearsed scenes from different plays. Script analysis and performance technique. Preparation of audition pieces. The profession of acting. Prerequisites: Drama 30A-B. (IX)

34 Movement for Actors (4). Introduces the basics of stage movement for actors: the theory and practical application of physical relaxation, centering, focus, and balance. The body is trained to express a wide range of creative impulses for performance. May be taken for credit three times.

35 Speech for the Theatre (4). A course aimed at (1) improving natural, clear, unaffected speech and (2) eliminating negative habits and regional accents: exercises for physical tension, vocal support, tone production, vocal quality, and articulation. Open only to Arts majors. May be repeated for credit.

40A, B, C Development of Drama (4, 4, 4). A one-year lecture-discussion course (each quarter may be taken independently) in the development of Western Drama, concentrating on the drama's intellectual, social, and artistic foundations. About 10 plays and supplementary critical material are read each quarter. **40A:** Greek Drama through Shakespeare. Readings from Aeschylus, Sophocles, Euripides, Aristophanes, Marlowe, Shakespeare, and the anonymous playwrights of the medieval theatre. **40B:** Restoration Drama through Ibsen. Readings from Neoclassic, Romantic, and Naturalistic European playwrights in the eighteenth and nineteenth centuries. Molière, Racine, Congreve, Goethe, Ibsen, and Chekhov are included. **40C:** Contemporary Drama. Post Naturalistic theatre: Expressionism, Epic Theatre, Theatre of the Absurd, and Contemporary American Theatre. Among the playwrights studied are Stein, Shaw, Pirandello, Ionesco, Beckett, Williams, Brecht, Weiss, Albee, Churchill, and Duras. Same as Comparative Literature CL 40A, B, C. (IV, VIII)

50A Introduction to Costume Design (4). An introduction to the process and procedures employed by the costume designer for the theatre. The elements of design are discussed in the context of character development, historical period, and style. Exercises extend to drawing, rendering, and investigation of human proportions.

50B Introduction to Scenic Design (4). Introduction to the principles and practice of scenic design. Weekly problems include research into various periods and styles of production with an emphasis on the conceptual idea. Perspective drawing, rendering, and model building are covered in studio exercises and assignments. Prerequisite: Drama 10.

50C Introduction to Lighting Design (4). Introduction to the principles, theories, and equipment employed by the lighting designer for the stage. Areas of investigation include history, technology, and script analysis. Detailed studio attention is given to the theory and practice of design.

50D Introduction to Sound Design (4). Principles, theories, equipment use, and terminology employed by the sound designer for the stage. Areas of study include history, technology, and script analysis. Focuses on the theory and practice of design.

50E Introduction to Stage Management (4). A basic study of theatrical, dance, and opera stage management practices, forms, and methods, from first script reading to closing night. Opportunity to observe professionals at work in regional and touring situations as available. Formerly Drama 63.

65 Music Theatre Workshop I (2) F, W. For students new to singing or musical theatre. Basic vocal technique, characterization, and physicalization of music and lyrics introduced. May be taken for credit three times.

UPPER-DIVISION

100 University Theatre (4). Rehearsal and performance in a faculty-directed production. By audition only. May be repeated for credit.

101 Theatre Production. The production courses are offered to give students the opportunity to participate in departmental productions. Students engage in the production and construction of designed work as well as its applied execution during performance. Prerequisite: consent of instructor. May be taken for credit for a maximum of 24 units provided productions change.

101A Theatre Production: Costume (1 to 6). Pass/Not Pass only.

101B Theatre Production: Scenic (1 to 6). Pass/Not Pass only.

101C Theatre Production: Lighting (1 to 6)

101D Theatre Production: Stage Management (1 to 8)

101E Theatre Production: Audio (1 to 6). Pass/Not Pass only.

103-109: THEORY AND CRITICISM

103 Lectures in Dramatic Literature (4). Courses include Medieval and Tudor Drama, Elizabethan and Jacobean Drama, Shakespeare, Restoration and Eighteenth-Century Drama, Modern British Drama, Modern American Drama, Tragedy, and Comedy. Prerequisite when offered for upper-division writing: satisfactory completion of the lower-division writing requirement. May be repeated, provided topic changes.

105 Introduction to Theory and Criticism (4). Discusses the approaches and methodologies of critical and performance theory. Students are introduced to major figures in the field of philosophical and theoretical discourse. Prerequisite: satisfactory completion of the lower-division writing requirement.

109 Special Topics in Theory and Criticism (4). Discussion of recent major trends and ideas in critical theory, concentrating on in-depth readings and lectures in particular facets of theory and criticism: Derrida, Butler, Lacan, Deleuze, and others. Prerequisite: satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary.

110-119: PERIODS AND GENRES

110 Special Topics in Classical Dramas (4). Designed to introduce students to various classical traditions—early Greek and Roman theatres, to be sure, but also, by way of comparison, the classical traditions of non-European cultures. Prerequisites: Drama 40A, B, C and satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary.

112 Special Topics in Early Modern and Neoclassical Theatre (4). Investigates aspects of European theatre and culture in the sixteenth, seventeenth, and eighteenth centuries; individual courses may focus on specific topics within this broad expanse. Prerequisite: satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary.

116 Special Topics in Nineteenth-Century Dramas (4). Looks at the various trends and conventions of theatres in the nineteenth century, both Euro-American and beyond, paying special attention to the culture and political milieu within which these various traditions appeared. Prerequisites: Drama 40A, B, C and satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary.

118 Special Topics in Modern and Contemporary Drama (4). An investigation into the many forms and permutations of modern (1880-1945), and contemporary (since 1945) drama, paying special attention to the historical and philosophical interpretations of text and performance. Prerequisites: Drama 40A, B, C and satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary.

120A, B, C Development of Theatre (4, 4, 4). A one-year lecture course concentrating on the development of world theatre from a visual point of view, from the earliest storytelling rituals through international stage development to contemporary theatrical forms. Prerequisite or corequisite: Drama 40A, B, C. (VIII)

121-129: PERFORMANCE AND CULTURE

121 Introduction to Asian Theatre (4) W. An introduction to some of the major traditional theatrical forms and dramatic texts from India, China, and Japan. Other than dramatic texts (in English translation), attention is also paid to theory, history, and performance styles of traditional Asian theatre. Formerly Drama 140.

122 Asian American Theatre (4). An introduction to the history and development of Asian American theatre and drama. Besides play analysis, special attention is also paid to the history and politics of Asian American identity and experience, as well as to aspects of theatrical performance. Prerequisites: Drama 40A, B, C and 120A, B, C. Formerly Drama 141.

123 Multicultural Theatres (4). A study of the history, culture, aesthetics, and literature of various traditional performing arts and their connections to the contemporary multicultural society. May be repeated for credit as topics vary.

126 African American Film and Drama (4). A critical investigation of films and plays written by African Americans, with emphasis on dramaturgical and cinematic strategies, individual and collective representation, and the legacy of African American political struggle. Prerequisite: satisfactory completion of the lower-division writing requirement.

129 Advanced Topics in Performance (4). Addresses particular issues in theatre and performance that typically lie outside of regular course offerings. May address such issues as the theatre of the Avant Garde, performing gender, transversality and performance, body art, installation and performance art, among other possible topics. Prerequisite: satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary.

130A-B Intermediate Acting (4-4). **130A:** Rehearsal and presentation of at least five scenes from contemporary material. Exercises in developing relationship communication and character-to-character contact. Prerequisite: Drama 30A-B-C with a grade of B or better; for transfer students: one year of beginning acting with a grade of B or better. May be repeated for credit as topics vary. **130B:** Rehearsal and performance of four scenes developing characters in depth; examination of the credibility and theatricality of characterization and style. Prerequisite: Drama 130A. May be repeated for credit as topics vary.

132A-B-C Writing for Performance (4-4-4). **132A:** Completion of a full-length play or its equivalent; discussion of student writing and of relevant literary texts. Prerequisite: satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary. Formerly Drama 132. **132B:** Development of student work beyond what is normally produced in Drama 132A. The goal is to produce a polished, high-quality, stage-ready work through workshop exercises, revision, and rewriting. Prerequisites: Drama 132A, portfolio, and consent of instructor. **132C:** The goal is to produce work previously written in Drama 132A-B, under the supervision of instructor. Students, working under "real-life" conditions, may not rely on departmental resources to produce their work. Prerequisites: Drama 132B, portfolio, and consent of instructor.

135 Master Classes in Acting (1 to 4). Advanced acting in specialized areas including acting for the camera: film, situation comedy, commercials; auditioning and industry preparation; Shakespeare; Moliere; Chekov; improvisation; movement for the actor; self-starting; stage combat; repertory acting; singing; comedy; clowning; and masks. Prerequisites: Drama 30A-B-C (or equivalent transfer courses) and Drama 130A with a grade of B or better; Drama 130B. May be repeated for credit.

136 Music Theatre Acting (4) F. An acting class exclusive to the students in the B.F.A. in Music Theatre program. Prerequisites: Drama 30A-B-C.

142 Music Theatre Workshop II (4) F, W, S. A workshop in audition technique and song interpretation. Admission by audition only. May be taken for credit six times. Formerly Drama 165.

143A, B, C Music Theatre Workshop III (4, 4, 4) F, W, S. Scene study and song repertoire examined by era for the advanced music theatre student.

143A: 1900s-1930s: operetta, revue, and musical comedy. **143B:** 1940s-1960s: book musicals. **143C:** 1970s-present: new forms and Broadway opera. Prerequisites: Drama 142 and audition. May be taken for credit six times. Formerly Drama 166A, B, C.

144 Music Theatre Workshop IV (4) F, W, S. A performance class concentrating on role building and how an actor prepares for that role. Work culminates with an in-class performance of two abbreviated musicals from different time periods. Prerequisites: audition, Drama 143A, B, C, Drama 148A, B, or consent of instructor. May be taken for credit six times. Formerly Drama 174.

145 Music Theatre Singing (1) F, W, S. Private weekly voice lessons for the advanced musical theatre student. Corequisite: Drama 143 or 144. May be taken for credit nine times.

146A-B New York Satellite Program (4-4) W, S. An immersion experience in New York City for the musical theatre performer. **146A:** Class preparation. **146B:** Master class in New York. Prerequisites: Drama 30A and audition. May be taken for credit three times.

147 Music Theatre Dance (4) F, W. An exploration of various dance styles from different eras of the musical theatre stage. Prerequisite: Drama 65 or 142. May be taken for credit six times.

148A, B History of American Musical Theatre (4, 4) F, W. Discusses the composers, librettists, directors, choreographers, and performers in the American musical theatre. **148A:** 1700s-1940s: ballad opera, minstrels, vaudeville, burlesque, operetta, revues, and musical comedy. **148B:** 1940s-present: book musicals, concept musicals, Broadway opera, and new forms. Concurrent with Drama 248A, B.

149 Music Proficiency for Actors (2) F, S. A musicianship class introducing basic musical terminology, theory, and keyboard concepts. May be taken for credit twice.

150 Costume Production Techniques (4). Studio instruction in pattern making, draping, millinery, and construction techniques. Prerequisite: Drama 50A. May be repeated for credit.

155 Lighting Systems (4). A study of basic electrical practice used in theatrical lighting. Areas of investigation include control system design, system wiring, maintenance of equipment, and new developments in the field of lighting and illumination. Prerequisite: Drama 50C.

157 Lighting Composition (4). Provides an opportunity for students to pursue stage lighting composition in a studio atmosphere. Laboratory practice includes weekly exercises in style and genre. Emphasis is placed on the realization of conceptual ideas. Prerequisite: Drama 50C. May be repeated for credit.

158 Studio in Theatre Design (4). Examines the various functions of scenery and costume: locale, historical period, mood, and atmosphere, with special assignments in each area. Discussion of problems in scenic metaphors and visualization, with emphasis on techniques of planning and presentation (e.g., floor plans, models, and rendering). Prerequisite: Drama 50A or 50B, or consent of instructor. May be repeated for credit.

159 Proseminar in Theatre Design (4). Content varies. Prerequisite: consent of instructor. May be repeated for credit.

160 Light Plotting Techniques (4). A study of the development of theatrical lighting plots from initial conceptualization through final documentation. Areas of emphasis include script analysis, visual approaches, equipment selection and compositional qualities of light. Prerequisites: Drama 50C and 157.

164A-B History of Costume (4-4). A study of the development of dress and the influence of cultural factors on clothing. **164A:** From the time of Egyptians to Early Baroque. **164B:** From late Baroque to World War I.

167 Fabric Modification Techniques (4). Exploration of various dying, printing, painting, and texture modification techniques. Prerequisite: Drama 50A. Offered every other year.

168 Theatrical Mask Techniques (4). Design and construction of theatrical masks including paper mache, leather, plastics, and latex. Projects employ traditional and contemporary techniques. Prerequisite: Drama 50A.

169 Costume Rendering Techniques (4). Development of costume rendering skills and techniques. Explores collage, pastel, and ink and emphasizes watercolor. Prerequisite: Drama 50A.

170 Directing (4). The principles of stage directing, covering the director's functions in the areas of interpretation, composition, coaching, and styling a theatrical production. Directing exercises and projects; the final project is the preparation of a hypothetical proposal for a play production. May be repeated for credit.

171 Production Management (4). An examination of stage and production management. Areas of study include production organization, management practices, production scheduling, rehearsal and performance duties, union regulations, and production touring.

173A Theatre Orchestra (2)

175 Staging Shakespeare (4). A seminar in Shakespearean staging practice, both Elizabethan and contemporary. Students prepare a hypothetical production book for an assigned play as it could have been produced at the Globe Theatre in 1610, and a proposal to produce the same play in a contemporary manner today. Prerequisites: Drama 170 and consent of instructor. May be repeated for credit.

176 Script and Score (4). A form and analysis seminar discussing the libretto and score of landmark musicals. Prerequisites: Drama 148A, B. May be taken twice for credit.

179 Intermediate Sound Design (4). A project-based analysis of the principles of sound design for the theatre. Projects are executed in the sound design studio and may include sound manipulation and recording. Emphasis is placed on the realization of conceptual ideas. Prerequisite: Drama 50D.

180 Contemporary Dramatic Criticism and Theory (4). Reading and analysis of theories and critical approaches to contemporary theatre: Brecht, Artaud, and others who have contributed to the form and idea of the modern theatre. Writing of assigned exercises in dramatic criticism. Prerequisite when offered for upper-division writing: satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary.

181 Acting Theory (4). A study of the theory of acting, with readings in Plato, Aristotle, Quintilian, Shakespeare, Diderot, Stanislavsky, Brecht, Strasberg, Meisner, Grotowski, and other theorists, ancient to contemporary. Prerequisites: Drama 130A-B and junior standing. Concurrent with Drama 224.

185 Advanced Directing (4). A seminar in directorial organization and research. Student prepares a textual and dramaturgical analysis, a production timetable, and a hypothetical production book of an assigned play. Prerequisites: Drama 170 and consent of instructor. May be repeated for credit.

190 Studio in Acting (4). May be repeated for credit.

198 Drama Workshop (4). By audition or accepted proposal only. Consists of directing or acting in a regularly scheduled Drama Workshop production and submitting a final evaluation of all work performed. Workshop productions must be proposed by directors on departmental forms, and each project must be approved by the Workshop Committee. Pass/Not Pass only. May be repeated for credit.

199 Project in Theatre (1 to 4). Prerequisite: consent of instructor. May be repeated for credit.

GRADUATE

200 Graduate Studio: Acting (2) F, W, S. Work in graduate studio taken in tandem with graduate studios in stage voice (Drama 201), stage speech (Drama 202), and stage movement (Drama 203). May be repeated for credit.

201 Graduate Studio: Voice (1) F, W, S. Graduate studio in vocal production for actors. May be repeated for credit.

202 Graduate Studio: Speech (1). Graduate studio in speech for actors. May be repeated for credit.

203 Graduate Studio: Movement (2). Work in graduate studio: stage movement taken in tandem with nine graduate studios in acting (Drama 200), voice (Drama 201), speech (Drama 202), and voice/movement dynamics (Drama 206). May be repeated for credit.

206 Graduate Studio: Voice/Movement Dynamics (2) F, W, S. Daily conditioning exercises. May be repeated for credit.

211 Graduate Studio: Directing (4) F, W, S. May be repeated for credit.

212 Graduate Studio: Playwriting (4). Completion of a full-length play or its equivalent and production of a staged reading of the play at the end of the spring quarter. Discussion of relevant literary texts and student writings. May be repeated for credit.

219 Graduate Master Class (1 to 4) F, W, S. Various topics such as Shakespeare, comedy, Molière, improvisation, Kabuki, television acting. May be repeated for credit.

220 Seminar in Dramatic Literature (4) F, W, S. May be repeated for credit.

221 Seminar in Criticism (4). May be repeated for credit.

224 Acting Theory (4). A study of the theory of acting, with readings in Plato, Aristotle, Quintilian, Shakespeare, Diderot, Stanislavsky, Brecht, Strasberg, Meisner, Grotowski, and other theorists, ancient to contemporary. Concurrent with Drama 181.

225 Seminar on Theatre Pedagogy (4) F, W, S. A seminar on the major teaching systems in the dramatic arts with particular attention to professional arts training. Graduate students in Drama only; required prior to applying for Teaching Assistantships in studio areas. May be repeated for credit.

230 Seminar in Contemporary Theatre (4)

235 Script Analysis and Research (4) F. Analysis of dramatic scripts. Examination of dramaturgic structure, character intentions and interactions, historical and literary milieu, and potentials for theatrical realization. May be repeated for credit.

240 Graduate Projects (1 to 4) F, W, S, Summer. Various projects depending on student's concentration (acting, design, musical theatre, directing). May be repeated for credit.

245 Conceptualization and Collaboration (4) F. A study of the potential for directorial conceptualization and collaboration with designers in the areas of scenery, costume, lighting, and sound. May be repeated for credit.

248A, B History of American Musical Theatre (4, 4) F, W. Discusses the composers, librettists, directors, choreographers, and performers in the American musical theatre. **248A:** 1700s–1940s: ballad opera, minstrels, vaudeville, burlesque, operetta, revues, and musical comedy. **248B:** 1940s–present: book musicals, concept musicals, Broadway opera, and new forms. Concurrent with Drama 148A, B.

254 Graduate Stage Management (4). F, W, S. Studio exercises and projects in stage management. Open only to graduate students in the Stage Management emphasis. May be repeated for credit as topics vary.

255 Graduate Design (4) F, W, S. Student exercises and projects in costume, scenery, lighting, and sound design. Open only to graduate students in the Design emphasis. May be repeated for credit as topics vary.

257E Thesis Writing Project—Stage Management (4) F, W, S. Development of thesis topic with focus on organization, research, timeline, and execution. Prerequisite: 12 units of Drama 254. Satisfactory/Unsatisfactory only.

260 Digital Design: Image Compositing/Rendering (4) F. A studio course in scenic or costume rendering for the theatre using computer image manipulation and compositing techniques. May be taken for credit twice.

261 Digital Design: Drawing/Painting/Rendering (4) W. A studio course in scenic or costume rendering for the theatre using the computer for drawing/painting through the use of the digital pen/tablet. May be taken for credit twice.

262 Digital Design: 2D/3D Modeling (4) W. A studio course in CAD's 2D and 3D modeling capabilities for theatrical design. Instruction in state-of-the-art software for 2D and 3D object creation and theatrical presentation conventions.

263 Digital Design: 3D Rendering (4) S. A studio course in theatrical design through 3D modeling on the computer and use of state-of-the-art rendering software. Instruction emphasizes collaborative design process through the use of scenic designer/lighting designer teams for all projects. Prerequisite: Drama 262.

264 Lighting Graphics (4) S. A studio course in the various graphic methods employed by lighting designers in the theatre. Projects include manual and CAD techniques for Light Plot and Paperwork creation. Prerequisite: Drama 262.

265 Digital Design: 2D CAD (4) S. A studio course in theatrical design and architectural lighting design on the computer. Instruction in state-of-the-art software for 2D object creation. Theatrical and architectural standards implemented in performance design. Prerequisite: Drama 262.

266 Digital Design: Digital Audio Systems (4) F. Comprehensive tutorial on digital audio including hard disk recording, editing, data compression, and ethernet audio distribution. Focus is on recording, editing, and delivery of audio as used by the sound designer in the digital domain. Prerequisite: Drama M.F.A. students only, or consent of instructor.

267 Digital Design: Creating Sounds from Scratch (4) S. The process of analyzing sounds for their core timbral components and using that data to create new sounds—from realistic to fantastic—by means of digital manipulation. Prerequisites: Drama 266; Drama M.F.A. Sound Design students only, or consent of instructor.

271 Conceptual Sound Design (4) W. An intensive, project-based seminar for exploring relationships between sound and sight. Synesthesia, creative intent vs. audience perception, and sound/movement are typical of the many topics to be explored. A series of creative projects are assigned and critiqued in peer review. Prerequisites: Drama 266; Drama M.F.A. Sound Design students only, or consent of instructor.

272 Musical Theatre Sound/Concert Sound (4) S. A concept-to-opening study of the process of designing sound systems for musicals and live/touring sound. Special attention given to the paperwork and documentation required to package, build, and mix these shows. Prerequisite: Drama M.F.A. Sound Design students only, or consent of instructor.

277 Critical Listening (4) F. Exploration of the many variables that affect (and effect) the audio chain. Perceiving and understanding these parameters unlocks the art of controlling sound and stylizing cues. Also includes the process of equalizing/aligning sound systems and the art of audio mastering. Prerequisites: Drama 266; Drama M.F.A. Sound Design students only, or consent of instructor.

279 Advanced Sound Design (4) F, W, S. An in-depth investigation into sound design for the theatre. Special emphasis is placed on text analysis, design conception, content creation, content delivery, and design organization. Class projects include creating paper designs and paperwork for different texts.

290 Dramatic Literature and Theatre History Prior to 1900 (4) F, W, S. Prerequisite: consent of instructor. May be repeated for credit.

291 Dramatic Literature and Theatre History, 1900 to Present (4) F, W, S. Prerequisite: consent of instructor. May be repeated for credit.

292 Cultural and Critical Theory (4). F, W, S. Prerequisite: consent of instructor. May be repeated for credit.

293 Directed Studies (4 to 12). F, W, S. Prerequisite: consent of instructor. May be repeated for credit.

294 Dissertation Research (4 to 12) F, W, S. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory. May be repeated for credit.

295 Professional Internship (1 to 8) F, W, S, (1 to 12) Summer. An arranged internship at the South Coast Repertory Theatre, or other equity theatre company, for qualifying M.F.A. students. A stipend and equity points are provided by the theatre company. May be repeated for credit.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory only.

DEPARTMENT OF MUSIC

303 Music and Media Building; (949) 824-6615
David Brodbeck, **Department Chair**

Faculty

- Kei Akagi, B.A. International Christian University, Tokyo, *UCI Chancellor's Professor of Music* (improvisation, composition, jazz studies, piano)
Amy Bauer, Ph.D. Yale University, *Assistant Professor of Music* (music theory, critical theory)
Haroutune Bedelian, Associate of the Royal Academy of Music, London, *Professor of Music* (violin)
David Brodbeck, Ph.D. University of Pennsylvania, *Department Chair and Professor of Music, and The Robert and Marjorie Rawlins Chair in Music* (nineteenth- and twentieth-century music, popular music studies)
Rae Linda Brown, Ph.D. Yale University, *Professor Emerita of Music* (music history)
Robin Buck, M.M. University of Southern California, *Associate Professor of Music and Director of the UCI Opera* (vocal arts)
Patricia Cloud, M.M. University of Southern California, *Lecturer in Music* (flute)
Jonathan Davis, D.M.A. The Juilliard School of Music, *Lecturer in Music* (oboe)
Michael Dessen, Ph.D. University of California, San Diego, *Assistant Professor of Music* (composition and improvisation)
Russell Dicey, B.F.A. California Institute of the Arts, *Lecturer in Music* (French horn)
Theresa Dimond, D.M.A. University of Southern California, *Lecturer in Music* (percussion)
Christopher Dobrian, Ph.D. University of California, San Diego, *Professor of Music and Informatics* (composition and technology)
Nohema Fernández, D.M.A. Stanford University, *Professor of Music* (Latin American musics, piano)
Bernard Gilmore, D.M.A. Stanford University, *Professor Emeritus of Music* (composition, theory)
Frederick Greene, M.Mus. Ed. University of Southern California, *Lecturer in Music* (tuba)
Lorna Griffitt, D.M. Indiana University, *Lecturer with Security of Employment, Music* (piano)
Matthew Hare, D.M.A. University of Iowa, *Lecturer in Music* (double bass)
Jason Harnell, *Lecturer in Music* (percussion, jazz studies)
Robert Hickok, B.Mus. Yale University, *Professor Emeritus of Music* (choral conducting)
Joseph B. Huszti, M.Mus. Northwestern University, *Professor of Music and Director of the UCI Choirs* (choral conducting, vocal arts)
Jerzy Kosmala, D.M. Indiana University, *Lecturer in Music* (viola)
Kevin McKeown, M.M. University of California, Los Angeles, *Lecturer in Music* (wind conducting)
George McMullen, *Lecturer in Music* (trombone, jazz studies)
Elliott Moreau, M.M. University of Southern California, *Lecturer in Music* (bassoon)
Margaret Murata, Ph.D. University of Chicago, *Professor of Music* (music history)
Derek Oles, B.A. California Institute of the Arts, *Lecturer in Music* (bass, jazz studies)
Hossein Omoumi, Ph.D. University of Florence, *Maseeh Professor in Persian Performing Arts* (Persian music)
Charles M. Owens, B.M. California State University, Los Angeles, *Lecturer in Music and Director of the UCI Jazz Orchestra* (jazz studies)
Margaret Parkins, D.M.A. State University of New York at Stony Brook, *Lecturer in Music* (cello)
Colleen Reardon, Ph.D. University of California, Los Angeles, *Associate Dean of the Claire Trevor School of the Arts and Professor of Music* (music history)
Bobby Rodriguez, D.M.A. University of California, Los Angeles, *Lecturer in Music* (trumpet, jazz studies)

John Schneiderman, B.Mus. University of California, Irvine, *Lecturer with Security of Employment, Music* (guitar, lute)
 Nina Scolnik, B.Mus. Oberlin Conservatory, Performance Diploma, The Juilliard School, *Lecturer with Security of Employment, Music* (piano)
 H. Colin Slim, Ph.D. Harvard University, *Professor Emeritus of Music* (music history)
 David Stetson, B.M. University of Southern California, *Lecturer in Music* (trombone)
 Darryl Taylor, D.M.A. University of Michigan, *Associate Professor of Music* (vocal arts)
 Stephen Tucker, D.M.A. University of California, Los Angeles, *Assistant Professor of Music and Director of the UCI Symphony* (orchestral conducting)
 Kojiro Umezaki, M.A. Dartmouth College, *Assistant Professor of Music* (improvisation and technology)
 Amanda Walker, M.F.A. University of California, Los Angeles, *Lecturer in Music* (clarinet)
 David Washburn, M.M. New England Conservatory of Music, *Lecturer in Music* (trumpet)
 Frances Young, B.Mus. University of California, Irvine, *Lecturer in Music* (vocal arts)

UNDERGRADUATE PROGRAM

The Department of Music offers the degrees of Bachelor of Arts in Music and Bachelor of Music. Both provide a secure foundation in the academic and applied study of music. This does not necessarily mean, however, that all undergraduates will go on to become professional musicians or musicologists. A good number do indeed continue to further study at the graduate level. However, many also use their degrees in Music as a more general educational qualification. Music is perhaps unique among the arts and humanities in terms of the wide range of transferable skills developed in the undergraduate curriculum. Musicians learn how to think, to write, to present themselves in public, and to work collaboratively in different kinds of teams. They have intellectual, technical, and social skills that tend to be widely admired by employers in many fields. They have also demonstrated over the long term a determination and commitment, and a desire to succeed, often beyond the norm. With a degree in Music, students will find that many career paths lie before them.

The **Bachelor of Arts (B.A.)** degree program enables students to study music history, music theory, composition, or performance within a curriculum that is flexible enough to allow for a second major, study abroad, and other curricular options. A senior thesis or project is required.

The **Bachelor of Music (B.Mus.)** degree program offers students the opportunity to specialize in piano performance, vocal performance, instrumental performance (flute, oboe, clarinet, bassoon, horn, trumpet, trombone, tuba, percussion, violin, viola, violoncello, and double bass), jazz studies (piano, saxophone, trumpet, trombone, bass, and percussion), and guitar and lute performance. Students in this program receive weekly private instrumental or vocal instruction, and present a public solo recital during their senior year.

Undergraduate Admissions. Undergraduate applicants who wish to major in Music must meet the entrance requirements for the University of California and must also pass the Department's entrance audition. For information about audition dates and requirements, see the Department's Web site at <http://music.arts.uci.edu>.

All first-year applicants and second-year transfer students apply to the B.A. degree program. Admission to the B.Mus. degree program, for those continuing students who wish to pursue a pre-professional track, is by a second audition (the B.Mus. audition), typically taken during winter quarter of the second year. Third-year transfers may apply and audition for admission to either the B.A. or B.Mus. program. Third-year transfer applicants who are offered

admission into the B.Mus. degree will normally be expected to perform on their instrument at the level of other third-year students in the B.Mus. program and will be expected to complete their degrees in two years. Third-year transfer applicants who are offered admission into the B.A. program will likewise be expected to complete their degree requirements within two years.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 56–62.

School Requirements: None.

Departmental Requirements—Common Curriculum

Music 15A-B-C (Musicianship)

Music 16A-B-C (Music Theory)

Music 16D (Theory/Musicianship)

Music 40B-C (History of European Music: Josquin to Wagner)

Music 40D (Twentieth-Century Music)

Six quarters of instrumental or vocal instruction (Music 165–170)

Additional Requirements for the Bachelor of Arts Degree

In addition to completing the common curriculum, students in the B.A. program must pass the departmental piano proficiency examination or take three quarters of Music 10 (Piano for Majors) with a grade of C or better and complete the following course requirements:

1. Three courses in Theory, Composition, and Technology, selected from Music 51 (Music Technology and Computers), Music 131 (Post-Tonal Theory), Music 132 (Jazz Theory), Music 136 (Instrumentation), Music 147 (Studies in Music Technology), Music 150 (Composition), Music 151 (Computer Music Composition), Music 152 (Interactive Arts Programming), Music 155 (Topics in Music Analysis), Music 157 (Advanced Study in Composition), Music 189 (Accompanying for Plucked Strings: Continuo and Changes).
2. Three courses in Music and Culture (including at least two upper-division courses) selected from Music 8 (The Beatles and the Sixties), Music 9 (Rock: The Early Years), Music 78A-B (History of Jazz), Music 82A-B-C (Pish Radif: Introduction to Classical Persian Music), Music 140 (Studies in Medieval Music), Music 141 (Studies in Renaissance Music), Music 142 (Studies in Baroque Music), Music 143 (Studies in Classical Music), Music 144 (Studies in Romantic Music), Music 145 (Studies in Twentieth-Century Music), Music 146 (Studies in Jazz Music), Music 148 (Studies in Ethnomusicology), Music 180 (Music Criticism), Anthropology 138M (Music as Expressive Culture), Anthropology 138T (Africa and Afro-American Music), Chicano/Latino Studies 115A (Latino Music), Chicano/Latino Studies 115B (Music of Greater Mexico), Chicano/Latino Studies 115C (Afro-Latin Music), African American Studies 143 (Topics in African American Music), African American Studies 144 (Fire Music: Jazz and the Black Arts Movement).
3. Six courses in Performance and Practice (no more than four of which may be selected from Music 160, 161, 162, 171, 172, and 178), selected from Music 21A-B-C (Keyboard Skills), Music 158A-B-C (Diction), Music 160 (University Orchestra), Music 161 (Wind Ensemble), Music 162 (University Chorus), Music 164 (Opera Workshop), Music 171 (Chamber Singers), Music 172 (Men in Blaque), Music 176 (Chamber Ensembles), Music 178 (Jazz Orchestra), Music 181A (Jazz Improvisation), Music 193A-B (Conducting).
4. One quarter of Senior Project (Music 192P). Depending upon the student's area of emphasis, one of the following senior projects (which may develop work originally completed in meeting

the requirements of another course) must be completed: (1) a formal lecture or lecture/performance lasting a minimum of 20 minutes; (2) a composition or portfolio of compositions of appropriate length growing out of work done in Music 157; or (3) a thesis of at least 20 double-spaced pages on an appropriate musical subject. Proposed projects, along with the name of the Senate faculty member who has agreed to supervise it, must be submitted to the undergraduate faculty advisor by November 1 of the academic year in which graduation is expected. Upon approval of the project proposal the student may register for one quarter of independent study (Music 199) in which to complete the project. In any case, the student must register for Music 192P in the quarter in which the project is completed.

Additional Requirements for the Bachelor of Music Degree

In addition to completing the common curriculum, students in the B.Mus. program must pass the departmental piano proficiency examination and complete the following course requirements:

1. Three courses in Theory, Composition, and Technology including Music 155 (Topics in Music Analysis) and two others selected from Music 51 (Music Technology and Computers), Music 131 (Post-Tonal Theory), Music 132 (Jazz Theory), Music 136 (Instrumentation), Music 147 (Studies in Music Technology), Music 150 (Composition), Music 151 (Computer Music Composition), Music 152 (Interactive Arts Programming), Music 157 (Advanced Study in Composition), Music 189 (Accompanying for Plucked Strings: Continuo and Changes).
2. Three courses in Music and Culture, selected from Music 140 (Studies in Medieval Music), Music 141 (Studies in Renaissance Music), Music 142 (Studies in Baroque Music), Music 143 (Studies in Classical Music), Music 144 (Studies in Romantic Music), Music 145 (Studies in Twentieth-Century Music), Music 146 (Studies in Jazz Music), Music 148 (Studies in Ethnomusicology), Music 180 (Music Criticism), Anthropology 138M (Music as Expressive Culture), Anthropology 138T (Africa and Afro-American Music), Chicano/Latino Studies 115A (Latino Music), Chicano/Latino Studies 115B (Music of Greater Mexico), Chicano/Latino Studies 115C (African-Latin Music), African American Studies 143 (Topics in African American Music), African American Studies 144 (Fire Music: Jazz and the Black Arts Movement).
3. Instrumental or vocal instruction (Music 165–170), every quarter in residence upon admission to the B.Mus. program (but no more than 12 quarters total, including instruction taken to meet the Common Curriculum).
4. Music 192S (Senior Recital).
5. Completion of the following courses according to the approved Bachelor of Music specialization:

Guitar and Lute: Music 176 (Chamber Ensembles), every quarter in residence.

Jazz Studies: Music 78A (History of Jazz); Music 132 (Jazz Theory); Music 160 (University Orchestra), Music 161 (Wind Ensemble), or Music 178 (Jazz Orchestra) and Music 176 (Chamber Ensembles), every quarter in residence.

Piano: Music 21A-B-C (Keyboard Skills); Music 122A-B-C (Piano Literature); Music 126 (Piano Pedagogy); six quarters of Music 176 (Chamber Ensembles) and three quarters of Music 162P, 164P, 166P, or 197 (Accompanying), as assigned by the Department. Transfer students must complete six quarters of chamber ensembles and/or accompanying in residence.

Voice: Music 156A-B (Song Literature), Music 158A-B-C (Diction); nine quarters of choral ensembles (minimum of three quarters for transfers) selected from Music 162 (University Chorus), Music 171 (Chamber Singers), or Music 172 (Men in Blaque); three quarters of Music 164 (Opera Workshop); Junior Recital (192J).

Winds, Percussion, and Strings: Music 160 (University Orchestra) or Music 161 (Wind Ensemble) and Music 176 (Chamber Ensembles), every quarter in residence.

Study Abroad

The Department actively encourages this option for eligible students and makes every effort to accommodate the student's work abroad within departmental requirements. Interested students should consult with the undergraduate faculty advisor at the earliest possible date for advice on this matter. For further information, see <http://www.cie.uci.edu/academics/music.html>.

MASTER OF FINE ARTS PROGRAM

Degree Offered

M.F.A. in Music, with emphasis in Choral Conducting, Collaborative Piano, Guitar/Lute Performance, Instrumental Performance, Integrated Composition, Improvisation, and Technology (ICIT), Piano Performance, and Vocal Arts.

Admission

Applications must be received online by January 15. In addition to meeting all general requirements for admission to graduate study, applicants should hold a B.A. in Music, a B.Mus., or the equivalent.

Applications must be accompanied by a writing sample in English, preferably on a musical topic; this requirement may be fulfilled by the submission of an undergraduate paper or example of similar size and scope.

Applicants must audition for members of the Music faculty by February 1. In exceptional cases (as approved in advance by the departmental graduate advisor), a recently recorded performance may be accepted in lieu of a live audition. Applicants in composition must, in addition, submit a representative sample of scores and recordings of their works.

Applicants are expected to have good general knowledge of music history and music theory, competence in basic musicianship skills, including sight-singing, written and keyboard harmony, dictation, and basic keyboard facility (including sight-reading). Entering students will be given diagnostic tests in these areas prior to the beginning of classes and will be required to remedy any evident deficiencies during the first year in residence by registering for the appropriate undergraduate courses. Credit earned in such courses cannot be counted toward fulfillment of any degree requirement.

General Degree Requirements

Course requirements may be fulfilled only by graduate courses (numbered 200 and higher) and upper-division undergraduate courses (numbered 100 and higher), and only by those courses in which a grade of B or higher has been earned.

All students except those in the ICIT emphasis must complete the graduate core curriculum in bibliography (Music 200) and music analysis (Music 201A-B). All students must register for tutorial study in the major field (Music 210, 211, or 212) during every quarter in residence. Students in the emphasis in Instrumental Performance must enroll in an approved large ensemble during every quarter in residence.

Students enrolled in the emphasis in Choral Conducting, Collaborative Piano, Guitar/Lute Performance, Piano Performance, and Vocal Arts must fulfill a foreign language requirement, as

described in the individual emphasis descriptions below. This requirement may be met either by attaining a passing score in the departmental examination or by earning a grade of B or higher in level 2A of an approved undergraduate language course.

All students must pass the Comprehensive Examination (normally taken during the fifth quarter in residence) and perform one or more public recitals. Details are found in the individual emphasis descriptions below.

The normative time to degree for students in the M.F.A. program is two years. Residence is required. The normative time to degree can be extended to three years only through a petition to the Chair of the Department. The maximum time to degree is three years.

Students who do not complete the degree in three years will be dropped from the program.

Individual Emphasis Requirements

Choral Conducting

Languages: reading knowledge of French, German, or Italian.

Course Work: Bibliography (Music 200), 4 units; Analysis (Music 201A-B), 8 units; Choral Conducting (Music 210), every quarter in residence (maximum 24 units); Diction (Music 158A-B-C), 6 units (Note: this requirement may be met by examination, in which case these 6 units are taken as electives); Seminars (selected from Music 220, 230, 235), 12 units; electives, selected with advisor, 12 units; Graduate Recital (Music 214), 0 units.

Comprehensive Examination: This is a special field exam, related to (but not limited to) repertoire selected for the Graduate Recital. It is taken no later than March of the second year. The graduate committee sets the exam 24 hours in advance; the student makes an oral presentation and then fields the committee's questions.

Collaborative Piano

Languages: reading knowledge of French, German, Italian, or Spanish.

Course Work: Bibliography (Music 200), 4 units; Analysis (Music 201A-B), 8 units; Performance (Music 211), every quarter in residence (maximum 24 units); Seminar (selected from Music 220, 230, 235), 4 units; Diction (Music 158A-B-C), 6 units (Note: This requirement is waived for students who demonstrate competence in this area by passing a diagnostic exam, in which case these 6 units are taken as electives); Song Literature (Music 156A-B-C), 6 units; Chamber Ensembles (Music 176), 3 units; two Graduate Recitals (Music 214), one instrumental and one vocal, 0 units.

Comprehensive Examination: This is a special field exam, related to (but not limited to) repertoire selected for the Graduate Recitals. It is taken no later than March of the second year. The graduate committee sets the exam 24 hours in advance; the student makes an oral presentation and then fields the committee's questions.

Guitar/Lute Performance

Languages: Reading knowledge of French, German, Italian, or Spanish.

Course Work: Bibliography (Music 200), 4 units; Analysis (Music 201A-B), 8 units; Performance (Music 211), every quarter in residence (maximum of 24 units); Seminars (selected from Music 220, 230, 235), 8 units; Chamber Ensembles (Music 176), 3 units; Accompanying for Plucked Strings: Continuo and Changes (Music 189), 6 units; Graduate Project in Performance (Music 240), 4 units; Graduate Recital (Music 214), 0 units. (Note: The recital is supported by a written essay, presented in advance of the Comprehensive Examination.)

Comprehensive Examination: This is a special field exam, related to (but not limited to) repertoire selected for the Graduate Recital. It is taken no later than March of the second year. The graduate

committee sets the exam 24 hours in advance; the student makes an oral presentation and then fields the committee's questions.

Instrumental Performance

Course Work: Bibliography (Music 200), 4 units; Analysis (Music 201A-B), 8 units; Performance (Music 211), every quarter in residence (maximum of 24 units); Seminars (selected from Music 220, 230, 235), 8 units; Chamber Ensembles (Music 176), 3 units; Large Ensemble (Music 160, 161), every quarter in residence (maximum of 12 units); Graduate Recital (Music 214), 0 units.

Comprehensive Examination: This is a special field exam, related to (but not limited to) repertoire selected for the Graduate Recital. It is taken no later than March of the second year. The graduate committee sets the exam 24 hours in advance; the student makes an oral presentation and then fields the committee's questions.

Integrated Composition, Improvisation, and Technology (ICIT)

Course Work: Composition (Music 212), every quarter in residence (maximum of 24 units); two courses in Music Technology (Music 215), 8 units; Open Improvisation (Music 231), 4 units; Advanced Improvisational Harmony (Music 232), 4 units; Black Music (Music 233), 4 units; Critical Studies in Music (Music 235), 4 units; seminar selected from Music 220 or 230, or comparable seminar in another department, 4 units; Thesis Colloquium (Music 239), 2 units.

Comprehensive Examination: Preparation and public presentation of a capstone project of original music (concert of original works or comparable body of original recorded music), including full documentation (scores and recordings as applicable) and a supporting written essay. Successful oral defense of the capstone project (music and essay) before the faculty committee.

Piano Performance

Languages: Reading knowledge of French, German, Italian, or Spanish.

Course Work: Bibliography (Music 200), 4 units; Analysis (Music 201A-B), 8 units; Performance (Music 211), every quarter in residence (maximum of 24 units); Seminars (selected from Music 220, 230, 235), 8 units; Chamber Ensembles (Music 176), 3 units; Electives, selected with advisor (upper division or graduate, Music or non-Music), 4 units; two Graduate Recitals (Music 214), 0 units.

Comprehensive Examination: This is a special field exam, related to (but not limited to) repertoire selected for the Graduate Recitals. It is taken no later than March of the second year. The graduate committee sets the exam 24 hours in advance; the student makes an oral presentation and then fields the committee's questions.

Vocal Arts

Languages: Reading knowledge of French, German, Italian, or Spanish.

Course Work: Bibliography (Music 200), 4 units; Analysis (Music 201A-B), 8 units; Performance (Music 211), every quarter in residence (maximum of 24 units); Seminars (selected from Music 220, 230, 235), 8 units; Opera Workshop (Music 164), 6 units; Electives, selected with advisor (upper division or graduate, Music or non-Music), 10 units; Graduate Recital (Music 214), 0 units.

Comprehensive Examination: This is a special field exam, related to (but not limited to) repertoire selected for the Graduate Recital. It is taken no later than March of the second year. The graduate committee sets the exam 24 hours in advance; the student makes an oral presentation and then fields the committee's questions.

Courses in Music

LOWER-DIVISION

3 Introduction to Music (4). Introduction to musical concepts and active listening skills. Students develop musical understanding through critical readings, selected repertoire, fundamental concepts related to rhythm, pitch, and genre. Students apply those concepts to music from a wide range of historical and cultural origins. (IV)

8 The Beatles and the Sixties (4). Through a study of the music of the Beatles, students are introduced to selected broader historical and cultural themes (e.g., race and music, gender and music, music and the counterculture) while developing an understanding of the basic elements of music. (IV)

9 Rock: The Early Years (4). Surveys the social and cultural fabric of the post-World War II United States (from the late 1940s through the early 1970s) as seen through the prism of music—rock and roll music. (IV)

10 Piano for Majors (1) F, W, S. For Music majors with little or no piano experience. Provides the necessary background for realizing keyboard exercises required in the theory and harmony courses, and develops skills to play and sight-read simple music from different periods. May be taken for credit three times.

14A-B-C European and American Music: 1700–Twentieth Century (4-4-4) F, W, S. Survey of European and American music from the Baroque period through the twentieth century. **14A:** Baroque and Classical music with adequate attention given to the Medieval and Renaissance periods.

14B: The nineteenth and twentieth centuries. **14C:** Selected topics in American music. (IV)

15A-B-C Musicianship (2-2-2) F, W, S. Interval and chord quality identification, melodic and harmonic dictation, tonal and chromatic sight-singing, rhythmic reading and dictation. Corequisite: Music 16A-B-C. Open to Music majors only.

16A-B-C Music Theory (4-4-4) F, W, S. **16A:** Review of music fundamentals. Triad and seventh chords, musical texture, chord spacing, embellishing tones, and introduction to diatonic harmony. Part-writing and model composition with tonic, dominant seventh, and subdominant harmonies. **16B:** Introduction to phrase structure. Part-writing and harmonization with predominants, linear dominants, 6/4 embellishing chords, leading-tone and other diatonic seventh chords. Advanced meters and rhythmic-metric dissonance. Diatonic sequence. Introduction to tonicization and modulation through motion to V and III. **16C:** Tonicization and modulation to closely related keys. Simple binary and ternary forms. Voice-leading reductions and simple forms. Diatonic sequence with seventh chords. Introduction to chromatic harmony I: modal exchange and mixture chords, the Neapolitan and augmented sixth chords. Corequisites: Music 15A-B-C.

16D Theory/Musicianship (4) F. Extended homophonic and contrapuntal formal designs (continuous variations, rondo form, sonata form, invention, fugue). Embellishing chromatic chords, dominant prolongation, modulations to foreign keys, extended harmonies, chromatic sequence, chromatic voice-leading and symmetrical divisions of the octave. Prerequisites: Music 15A-B-C and 16A-B-C.

21A-B-C Keyboard Skills (1-1-1) F, W, S. Designed to develop the foundational skills of sight-reading, harmonization, transposition, improvisation, figured bass realization, and score reading.

25A-B Fundamentals Music (2-2) F, W. Basic concepts and materials. Major and minor scales, intervals between pitches, key signatures, elements of rhythm, diatonic chords in root position, and inversion. Simple and compound meters.

40B-C History of European Music: Josquin to Wagner (4-4) F, W. An introduction to the analysis of musical styles and forms and to the sources for constructing music history and reconstructing historical music. **40B:** to J.S. Bach; **40C:** to Richard Wagner. Prerequisites: Music 16C; Music 16D recommended for 40C. Open to Music majors only. (IV, VIII)

40D Twentieth-Century Music (4) S. Survey of principal composers, movements, and compositional techniques of Western art music of the modern era. Prerequisite: Music 16C. (IV, VIII)

41 Major Composer (4). Study of the works of an important composer with emphasis on their significance in historical and social contexts. Composers selected represent a wide variety of historical periods, nationalities, and stylistic orientations. Primarily for non-music majors; majors may enroll with permission. May be taken for credit two times as topics vary.

51 Music Technology and Computers (4) F. A study of the influence of technology on the musical culture and aesthetics of America in the twentieth century, with particular emphasis on the role of the computer. Work includes lectures, readings, listenings, discussions, demonstrations, writing, and experimentation.

78A, B History of Jazz (4, 4). **78A:** Development of jazz from its African and African American folk origins through blues, early jazz and the swing era. **78B:** Continuation of the above survey, concentrating on bebop, “cool” jazz, and fusion. (VII)

82A, B, C Pish Radif: Introduction to Classical Persian Music (4, 4, 4) F, W, S. Survey of art music in Iran and the basic structures of classical Persian music. Students learn through vocal exercises how Persian music evolved and how it was influenced by Persian poetry. An interest in vocal music is strongly recommended.

UPPER-DIVISION

122A-B-C Piano Literature (2-2-2) F, W, S. Survey of stringed keyboard literature from the English Virginalists through twentieth-century composers. Historical, formal, and stylistic considerations of music presented. Performances by class participants and occasional outside guests. Prerequisites: Music 16A-B-C.

126 Piano Pedagogy (2). The materials and methods of piano instruction are examined and evaluated.

131 Post-Tonal Theory (4) W. Study of significant harmonic, rhythmic, and structural practices since 1900. Analysis and written work exploring free atonality and serialism; neo-tonal practices such as use of extended tertian harmonies, modalism, pandiatonicism, and non-tertian harmonies; structural principles such as aleatory, metric modulation and minimalism. Prerequisite: Music 16D. Formerly Music 35A.

132 Jazz Theory (4). Study of jazz harmony and melody construction in improvisation. Covered topics include terminology, chord symbols, notation, voicings, and scales as commonly used in jazz and popular music. Issues regarding tonality and ramifications of the blue scale are also examined. Prerequisite: Music 16D.

136 Instrumentation (4). Ranges and capabilities of modern orchestral instruments. Exercise in writing for various combinations of wind, string, and percussion instruments and for full orchestra. Prerequisite: Music 16C.

140 Studies in Medieval Music (4)

141 Studies in Renaissance Music (4). Prerequisite: Music 40B or equivalent, or consent of instructor. May be taken for credit three times.

142 Studies in Baroque Music (4). Prerequisite: Music 40B or equivalent, or consent of instructor.

143 Studies in Classical Music (4). Prerequisite: Music 40C or equivalent, or consent of instructor. May be taken for credit three times.

144 Studies in Romantic Music (4). Prerequisite: Music 40C or equivalent, or consent of instructor. May be taken for credit three times.

145 Studies in Twentieth-Century Music (4). Prerequisites: satisfactory completion of the lower-division writing requirement and upper-division standing.

146 Studies in Jazz Music (4)

147 Studies in Music Technology (4) F, W, S. Specialized topics in electronic music, computer-aided music, and other aspects of music technology.

148 Studies in Ethnomusicology (4)

150 Composition (4) F, W, S. Exercises and projects for diverse instrumental-vocal combinations; contemporary techniques and problems. Participation in the improvisation ensemble and working with electronic media. Prerequisite: Music 16C or consent of instructor. May be repeated for credit.

151 Computer Music Composition (4) W. Exercises in the composition of music uniquely possible by computer, including digital signal processing, computer control of synthesizers and processors, and algorithmic composition. Demonstrations and musical analyses in class; considerable studio work outside class. Prerequisite: Music 51 or consent of instructor.

152 Interactive Arts Programming (4) S. Study of artistic issues and programming techniques involved in the development of interactive computer art and music. Theoretical background, basic tenets of programming, and practical exercises in programming interactive computer multimedia art. Prerequisite: Music 151 or Studio Art 106 or consent of instructor.

155 Topics in Music Analysis (4). Methods of formal analysis applicable to all Western musical styles: additive, continuous, transformational, and hierarchic forms; rhythm, texture, and sonority as form and process. Prerequisites: Music 16D and 40B-C, or equivalent. May be repeated for credit as topics vary. Formerly Music 155A.

156A-B-C Song Literature (2-2-2) F, W, S. A survey of song literature. Designed as an overview of the song repertoire. **156A:** German Lieder. **156B:** French mélodie. **156C:** National Schools.

157 Advanced Study in Composition (2) F, W, S. Individual weekly lessons in composition. Prerequisite: Music 150. Open only to upper-division Music majors. May be taken for credit six times.

158A-B-C Diction (2-2-2) F, W, S. In-depth study of the International Phonetic Alphabet (IPA), including its transcription and pronunciation, and its application for singers. **158A:** Introduction to IPA and Italian diction. **158B:** German diction. **158C:** French diction.

160 University Orchestra (1 to 2) F, W, S. Study and performance of standard orchestral repertoire and works by contemporary composers. Membership is open to all qualified students by audition only. May be repeated for credit. (IX)

160L Orchestral Tutorial (1 to 2) F, W, S. Tutorial instruction for individual players in the University Orchestra, combining private instruction with independent practice. Corequisite: Music 160. Open to nonmajors only with consent of Department of Music and instructor. May be repeated for credit.

161 Wind Ensemble (1 to 2) F, W, S. Study and performance of works written for varying combinations of wind and percussion instruments. Membership is open to all qualified students by audition only. May be repeated for credit. (IX)

162 Choral Ensembles (1 to 2) F, W, S. Make-up of the ensembles varies and may include University Chorus, Chamber Choir, Madrigal Singers, Women's Chorus, and Reading Choir. Membership is open to all qualified students by audition only. May be repeated for credit. (IX)

162L Basic Voice Lab (1) F, W, S. Vocal technique and musicianship for selected singers in UCI's choral organizations. Not open to Music majors. Corequisite: Music 162. Prerequisite: consent of Director of the choral group. May be repeated for credit.

162P University Chorus: Accompanying (2) F, W, S. Keyboard accompanying for one of the UCI choral organizations, with individual coaching in sight reading, score reading, and other accompanying skills. Prerequisite: consent of instructor. May be repeated for credit.

162S Summer Choir (2) Summer. Participants with all levels of experience (or inexperience) are encouraged to join this class. Each meeting is a rehearsal, where students learn basic choral singing techniques and apply those techniques to choral repertoire. Pass/Not Pass only. May be repeated for credit.

164 Opera Workshop (2) F, W, S. Preparation and performance of operatic repertoire, including arias, scenes, and fully staged operas, and/or stage training and role analysis. May be repeated for credit. (IX)

164P Opera Workshop: Accompanying (2) F, W, S. Training in techniques and operatic repertoire for keyboard players. Prerequisite: consent of instructor. May be repeated for credit.

165 Advanced Study in Piano (2) F, W, S. Private weekly lessons. Open to Music majors only. May be repeated for credit.

166 Advanced Study for String Instruments (2) F, W, S. Private weekly lessons. Open to Music majors only. May be repeated for credit.

166P String Accompaniment (2) F, W, S. Chamber ensemble experience with the solo string repertoire for keyboard, participation in the weekly string master class, performance in public recitals. Prerequisite: consent of instructor. May be taken for credit three times.

167 Advanced Study for Wind Instruments (2) F, W, S. Private weekly lessons. Open to Music majors only. May be repeated for credit.

168 Advanced Study in Voice (2) F, W, S. Private weekly lessons. Open to Music majors only. May be repeated for credit.

169 Advanced Study for Percussion Instruments (2) F, W, S. Private weekly lessons. Open to Music majors only. May be repeated for credit.

170 Advanced Study for Guitar, Lute, and Other Plucked Strings (2) F, W, S. Private weekly lessons and a weekly master class/workshop for the discussion of solo repertoire and performance practice, including special topics such as historical notational systems, traditional American guitar styles, and demonstrations of period plucked instruments. Open to Music majors only. May be repeated for credit.

171 Chamber Singers (2) F, W, S. A select ensemble specializing in vocal/chamber music from all periods. Frequent performances on and off campus. Membership is open to all singers by audition. May be repeated for credit.

172 Men in Blaque (2) F, W, S. Men's chamber choir studying and performing music in original SATB and TTBB voicing. Gregorian chant, Renaissance motets and masses, part-songs from the Romantic era by Schubert and Schumann, folksongs, spirituals, jazz and contemporary literature comprises majority of repertoire. May be taken for credit 12 times.

176 Chamber Ensembles (1) F, W, S. Make-up of the ensembles varies and may include various Classical ensembles, Latin Jazz Ensemble, Small Jazz Combos, Percussion Ensemble, and Guitar Ensemble. Membership is open to all qualified students by audition only. May be repeated for credit. (IX)

178 Jazz Orchestra (1) F, W, S. Rehearsal and performance of literature written for large jazz ensemble with emphasis on methods and materials. Laboratory setting for new arrangers and/or composers of modern jazz pieces. Prerequisite: consent of instructor. May be repeated for credit. (IX)

180 Music Criticism (4). Topics vary.

181A Beginning Jazz Improvisation (2) F. Develops the student's basic understanding of the fundamentals of jazz improvisation. Basic harmonic patterns, blues, modality, and simpler song forms are covered. This is a performance workshop requiring a reasonable amount of instrumental facility. Prerequisite: Music 16C or equivalent.

181B Intermediate Jazz Improvisation (2) W. Continuation of beginning jazz improvisation which covers various 32-bar song forms, modal improvisation and more sophisticated blues forms. Studies the development of improvisation through history of jazz including composers Ellington, Monk, Morton, Mingus, Coltrane, Silver, and others. Prerequisite: Music 181A.

182 Advanced Jazz Combo (1) F, W, S. Small-group jazz ensemble and improvisational workshop. Range of music covered encompasses the full traditional jazz from improvised ragtime up through the most current avant-garde musical techniques. Prerequisite: consent of instructor. May be repeated for credit.

183A-B-C Jazz Composition (4-4-4) F, W, S. Performance and lecture course for writing and performing original jazz compositions. Emphasis is placed on composing as a way to create new improvisational frameworks. **183A:** Study of be-bop and hard-bop compositional methods centered on diatonic and dominant-motion harmonic structures. **183B:** Study of post-be-bop non-diatonic and modal structures. **183C:** Study of modern tonal-center compositions, intervallic compositions, and alternate rhythms. Prerequisites: Music 36A-B or 132, and 78A, 78B.

189 Accompanying for Plucked Strings: Continuo and Changes (2) F, W, S. Students apply theory to their instruments as they learn the basics of pre-1800 continuo playing and post-1900 jazz charts. Includes discussions of appropriate repertoire, treatment of harmonic progressions, and finer points of style and technique. Prerequisite: Music 16C. May be repeated for credit.

191 Tutorial in Music (1 to 4) F, W, S. Independent supplemental instruction related to student's area of study. May be repeated for credit.

192J Junior Recital (0) F, W, S. Solo or joint public recital with departmental approval. Prerequisite: Music 16D. Open to Music majors only. Pass/Not Pass only.

192P Senior Project (0) F, W, S. Senior project for Music majors in the B.A. program. Pass/Not Pass only.

192S Senior Recital (0) F, W, S. Performance of solo public recital with departmental approval. The recital must include at least one work composed since 1945. Corequisites: Music 163, 174, 175, or 176. Prerequisites: Music 16D, 40B-C-D or equivalent; and Music 155A. Pass/Not Pass only.

193A-B Conducting (2-2). **193A:** Introduces students to the basic technique employed in the practice of conducting. **193B:** Application of advanced conducting techniques, score study, and leadership skills. Prerequisites: Music 16D and 40B-C-D or equivalent.

197 Word and Music (2). Performance class for advanced singers and pianists with emphasis on collaborative approach to vocal literature. Prerequisite: consent of instructor. May be repeated for credit.

199 Independent Study (2) F, W, S. Research, writing, or composition work, under the guidance of a faculty member, normally undertaken in conjunction with preparation of the B.A. Senior Project. Prerequisite: consent of instructor. May be taken for credit two times.

GRADUATE

200 Bibliography and Research (4). Required of all entering students. A systematic introduction to the bibliographical tools both in the general field of music and in the students' areas of specialization. May be repeated for credit.

201A-B Analysis (4-4). Various approaches to analysis through concentrated study of a number of selected works.

210 Choral Conducting (4) F, W, S. Intensive private instruction and study of the various choral literatures. May be taken for credit six times.

211 Performance (4) F, W, S. Contents vary according to the student's major instrument. Intensive private instruction and study of the various literatures. May be taken for credit six times.

212 Composition (4) F, W, S. Intensive work in composition geared to each student's level of competence. May be repeated for credit.

213 Orchestral Conducting (4) F, W, S. Intensive private instruction in instrumental conducting. May be repeated for credit.

214 Graduate Recital (0) F, W, S. Performance of public recital. Satisfactory/Unsatisfactory only. May be taken for credit two times.

215 Music Technology (4) F, W, S. Studies in the history, literature, composition, and performance of electronic and computer music, including instruction in the theory and usage of prevalent music technology. May be repeated for credit.

220 Seminar in Music History (4)

230 Seminar in Contemporary Music (4). Special seminar projects dealing with music of the twentieth century with emphasis on analytical techniques and style criticism. May be repeated for credit as topics vary.

231 Open Improvisation (4) F. Introduces the practice and history of open improvisation in diverse fields of Western music since 1950. Performance projects and group critiques; weekly reading and listening assignment; participation in a class concert; and a research paper.

232 Advanced Improvisational Harmony (4) S. Knowledge of jazz chord symbols. Study of harmony used in modern improvisation. Issues covered include upper extension theory, tonal-center improvisation, and polychord progressions. Emphasis is placed on compositional methods for generating improvisational structures.

233 Black Music (4) F. Introduces questions of aesthetics, historiography, philosophy, and political economy in relation to Black music traditions. Topics center mostly on the United States, but also include other locations and transcultural forms. Students complete weekly assignments and a research paper.

235 Critical Studies in Music (4). A critical examination of Western music traditions, institutions, and aesthetics, employing new scholarship in music and new critical studies in other disciplines. May be repeated for credit.

239 Thesis Colloquium (2) W. Presentation of current research/creative activity. Second-year ICIT students present their thesis work-in-progress for discussion and criticism. Faculty and visiting artists/scholars also present their current work. Students are graded on their presentation and informed participation in critiques.

240 Graduate Projects (4) F, W, S. Substantial projects in performance, conducting, or composition (other than those specifically required for the degree), accompanied by a summary paper. May be repeated for credit.

250 Directed Reading (4). Individual research projects, resulting in the writing of a substantial paper pertaining to the principal area of concentration. May be repeated for credit.

399 University Teaching (1 to 4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory only. May be repeated for credit.

DEPARTMENT OF STUDIO ART

3229 Art, Culture and Technology Building; (949) 824-6648
Bruce Yonemoto, **Department Chair**

Faculty

Kevin Appel, M.F.A. University of California, Los Angeles, *Associate Professor of Studio Art* (painting)

Ed Bereal, Chouinard Art Institute, *Senior Lecturer with Security of Employment Emeritus, Studio Art*

Juli Carson, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Studio Art and Director of the University Art Gallery* (contemporary art history, critical and curatorial studies)

Miles Coolidge, M.F.A. California Institute of the Arts, *Associate Professor of Studio Art* (photography)

Beatriz da Costa, Diplôme National Supérieur d'Expression Plastique, École d'Art d'Aix-en-Provence (France), *Associate Professor of Studio Art, Electrical Engineering and Computer Science, and Informatics* (robotic art, tactical media, biotech initiatives, urban ecologies, surveillance projects, collaborative practice, social change)

Tony DeLap, Claremont Graduate School, *Professor Emeritus of Studio Art*
Martha Gever, Ph.D. City University of New York, *Associate Professor of Studio Art* (video/cultural/critical studies)

Bryan Jackson, M.F.A. University of California, Los Angeles, *Lecturer in Studio Art* (video, digital multimedia)

Ulysses Jenkins, Jr., M.F.A. Otis Parsons Art Institute, *Director of the Interdisciplinary Program in African American Studies and Associate Professor of Studio Art* (video)

Craig Kauffman, M.F.A. University of California, Los Angeles, *Professor Emeritus of Studio Art*

Antoinette LaFarge, M.F.A. School of Visual Arts, *Associate Professor of Studio Art* (digital media)

Simon Leung, B.A. University of California, Los Angeles, *Associate Professor of Studio Art* (new genres, critical theory, contemporary art history)

Mara Lonner, M.F.A. California Institute of the Arts, *Lecturer in Studio Art* (drawing, sculpture)

Catherine Lord, M.F.A. State University of New York, Buffalo (Visual Studies Workshop), *Professor of Studio Art* (critical and queer theory, feminism, photography)

Monica Majoli, M.F.A. University of California, Los Angeles, *Assistant Professor of Studio Art* (painting, drawing)

Daniel Joseph Martinez, B.F.A. California Institute of the Arts, *Professor of Studio Art* (new genres, photography, sculpture, post-tactical media, text installation, public intervention, performance)

Yong Soon Min, M.F.A. University of California, Berkeley, *Professor of Studio Art* (sculpture, cultural studies)

Gifford C. Myers, M.F.A. University of California, Irvine, *Professor of Studio Art* (ceramic sculpture)

Robert Nideffer, M.F.A., Ph.D. University of California, Santa Barbara, *Associate Professor of Studio Art and Informatics* (electronic intermedia, interface theory and design, contemporary social theory, game culture and technology)

Deborah Oliver, M.F.A. California Institute of the Arts, *Lecturer in Studio Art* (performance)

Simon Penny, Graduate Diploma in Sculpture, Sydney College of the Arts, New South Wales (Australia), *Professor of Electrical Engineering and Computer Science, Studio Art, and Informatics* (robotic sculpture, interactive environments, electronic media, art practice history, and critical theory)

Yvonne Rainer, *UCI Distinguished Professor of Studio Art* (performance, film history)

Shelby Roberts, M.F.A. California Institute of the Arts, *Lecturer in Studio Art* (photography)

Connie Samaras, M.F.A. Eastern Michigan University, *Professor of Studio Art and Women's Studies* (photography, media and film criticism, gender studies, culture and technology)

David Trend, M.F.A. State University of New York, Buffalo (Visual Studies Workshop); Ph.D. School of Education, Miami University, *Professor of Studio Art* (video, photography, visual studies, curriculum)

Bruce Yonemoto, M.F.A. Otis Art Institute, *Department Chair and Professor of Studio Art* (video, multimedia, film theory)

The Department of Studio Art takes a wide-ranging, interdisciplinary view of contemporary art practice. The Department emphasizes a demanding, conceptual approach to work in process in addition to traditional notions of product. Students are encouraged to develop an individual, disciplined direction through an experimental approach to media, materials, and techniques. To further this end, the curriculum provides studio experiences in drawing, painting, sculpture, ceramics, photography, digital imaging, and video, in addition to emphasizing cultural studies in relation to contemporary practice. Visiting artists and theorists who teach on a quarterly basis, or who make shorter guest appearances, are an integral part of the program.

The University's Education Abroad Program offers students the opportunity to study abroad. Graduate-level study also is available.

CAREERS FOR THE STUDIO ART MAJOR

Departmental faculty and the range of artists whose work is represented in the University Art Gallery exhibitions provide diverse career models. Some graduates go on to careers as exhibiting artists or teachers; others work in arts-related activities in museums, galleries, and artists' organizations. A bachelor's degree in Studio Art is usually required as preparation for graduate-level study in studio art.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 56–62.

School Requirements: None.

Departmental Requirements for the Major

Studio Art 1A-B-C (taken the first year in residence); Studio Art 9A, 9B, and 11A; Art History 40A, B, C or 42A, B, C; four lower-division courses selected from Studio Art 20–99; upper-division courses totaling 44 units as follows: three intermediate-level courses with no more than two in one area (Studio Art 102–115); five advanced or project courses (Senior Thesis Exhibition [Studio Art 198] and four other courses chosen from Studio Art 100, 101, 130–195, 199); three issues courses (Studio Art 116–129).

Sample Program for Freshmen

Fall	Winter	Spring
Studio Art 1A	Studio Art 1B	Studio Art 1C
Art History 40A/42A	Art History 40B/42B	Art History 40C/42C
Writing 39B	General Education	General Education
	Writing 39C	General Education

Concentration in Game Culture and Technology

The concentration in Game Culture and Technology is available to currently enrolled students majoring in Studio Art, Information and Computer Science, Informatics, and Computer Science. It exposes advanced students to an influential and expanding sector of media culture and contemporary art and technology practice, facilitates students' media literacy in relation to an increasingly prevalent art and entertainment form, and enables students to be more critical consumers and producers of new media art and culture.

Selection Process. Students may apply for admission no earlier than the end of their freshman year, and no later than the end of their junior year. Students will be selected by a competitive review process which occurs at the end of spring quarter. Each applicant must submit the following materials to the Program Director, c/o their School's Student Affairs Office: (1) a written statement of purpose; (2) portfolio or project samples that demonstrate an interest in the area; and (3) transcripts of UCI and other college course work. Applicants will be notified of the selection process outcome by the beginning of the fall quarter. A maximum of 12 students will be admitted per year in an effort to ensure access to Game Culture and Technology Laboratory research and development facilities in the Claire Trevor School of the Arts, Calit2, and the

Institute for Software Research (ISR), all of which may be used to support student projects.

Requirements. Students must complete a total of eight courses (32 units) from within the two schools, which may also be used to satisfy existing requirements.

- Three courses (12 units): Studio Art 135 (Gaming Studies), 166 (Advanced Collaborative Projects), and Computer Science 113/Informatics 125 (Computer Game Development).
- Three courses (12 units) chosen from Studio Art 106 (Interactive Digital Media), 110 (Interdisciplinary Digital Arts), 138 (World Building), 175 (Digital Art Aesthetics), Informatics 43 (Informatics Core Course III) or ICS 52 (Introduction to Software Engineering), Informatics 121 (Software Design I), 131 (Human-Computer Interaction), 132 (Project in Human-Computer Interaction and User Interfaces), Computer Science 112 (Computer Graphics), 171 (Introduction to Artificial Intelligence), 175 (Project in Artificial Intelligence).
- Two courses (8 units) chosen from Studio Art 197 (Internship), 199 (Independent Study), Computer Science H198 (Honors Research), 199 (Individual Study), Informatics H198 (Honors Research), and 199 (Individual Study).

Departmental Requirements for the Minor

Studio Art 1A-B-C; Studio Art 9A, B, C; three lower-division studio classes in three media (Studio Art 20–99); five upper-division courses divided as follows: one from intermediate-level courses (Studio Art 102–115) with no repetition of any course; one from issues courses (Studio Art 116–129); one from advanced or project courses (Studio Art 100, 101, 130–195, 199); plus two additional upper-division courses selected from any of these groups.

MASTER OF FINE ARTS PROGRAM

Degree Offered

M.F.A. in Studio Art

Graduate emphases in Feminist Studies and in Asian American Studies are also available. (Refer to the Program in Women's Studies section or the Department of Asian American Studies section of the *Catalogue* for information.)

General Information and General Degree Requirements

The program is designed to provide intensive professional training for independently motivated students wishing to pursue careers in the field of contemporary art. Rather than traditional ideas of subject and technique, experimental and interdisciplinary approaches to art making are emphasized. Students undergo a rigorous course of study combining seminar classes, intensive critique courses, and independent study. The seminars cover a range of critical issues dealing with the relationship of culture to contemporary art and are designed for students interested in theoretically positioning their art practices within an interdisciplinary framework. All incoming students must take the First-Year Graduate Seminar in preparation for further course work. As students progress in the program, they are required to take a series of additional seminars aimed at training them to develop research skills and a written component augmenting their culminating thesis exhibitions. Various approaches to developing text and word are considered, and students are encouraged to approach developing the thesis textual component following a path best suited to their postgraduate interests (e.g., critical writing, spoken word/performance, critical memoir, digital narrative structures).

The overall emphasis in the program, however, is on studio production. Throughout their three years, students must take a series of critique seminars. Work-in-progress, produced for the given quarter's critique class, is intensively discussed within a group context. Students must also, throughout their graduate careers, work each

quarter on an independent basis with faculty of their choice and are encouraged to work with a range of faculty members. During the second year, students must select a thesis committee with whom they will work closely on the development of both thesis studio production and research interests. However, even after selecting their committee, students are still encouraged to work with a range of faculty on an independent basis in order to continue to respond to and reflect on a diversity of ideas and differing approaches to both studio production and art distribution systems. Throughout the first two years, students must also undergo a series of progress checks including open studio reviews and a second-year exhibition. Students are evaluated by faculty committees during their first and second years. Satisfactory opinion by these committees coupled with both satisfactory independent study evaluations and grades of at least a B or above will allow the student to progress to candidacy for the degree. During the third year, candidates must mount a thesis exhibition. In tandem with the final thesis exhibition, students are required to do a public presentation on their work as part of their final defense before their thesis committee.

During the first two years, students are required to take courses from a structured curriculum totaling 12 units each quarter. Beyond that, students can select additional course work from any sector of the Department or University including approved upper-division undergraduate courses. The third year is structured so that students can individualize their course of study through a wide selection of classes. For example, students wishing to focus primarily on studio production can do so through a combination of independent studies and critique classes, or students could design their third year to focus both on studio production and acquiring additional course work in a given research area or graduate emphasis.

The normative time to degree for students in the M.F.A. program is three years. Residence is required. The maximum time to degree is four years. Students who do not complete the degree in four years will be dropped from the program.

M.F.A. candidates are each provided with an individual studio space. Facilities include photography laboratories (analog and digital), video production studios, data laboratories, and sculpture laboratories for work in wood and metal. There are also facilities to support work in digital media, painting, performance, drawing, and ceramics. Students also have regular opportunities to exhibit in two galleries.

Various programs of visiting artists and lecturers are an integral part of the student experience. There is a public lecture series for which solicited graduate student input is considered an important component. Visiting artists, curators, critics, and gallerists are invited to give lectures and conduct studio visits with graduate students. The Studio Art 220 seminar (required both first and second year) incorporates visiting lecturers into a colloquium setting where students are asked to lead in-depth discussions with a given visitor. In addition to artists and curators, Studio Art 220 visiting lecturers include faculty from the UCI campus as well as other UC campuses whose work and research may be of interest to graduate students. Some Studio Art faculty, in addition to their departmental appointment, are affiliated with other UCI and UC programs, e.g., Asian American Studies, African American Studies, Women's Studies, Engineering, Information and Computer Science, Critical Studies, Art History, the Cal-(IT)² Gaming Studies Initiative, and the UC Institute for Research in the Arts (UCIRA).

Admission

Applicants for admission to the M.F.A. program must meet the general requirements for admission to graduate study, hold a B.A. or B.F.A. in Art, have completed one year of twentieth-century art history (students who have not completed this will be required to do so as part of their graduate studies), and submit by January 15 a portfolio of their most recent creative work of a maximum of 20

slides, on a #80 Kodak carousel tray, or video tape (VHS; no more than five minutes, cued up). A short incisive statement about the work is required. Normally, anyone who has earned an M.F.A. degree in Studio Art will not be considered for admission into the program.

Specific Degree Requirements

One hundred and twelve units over a three-year course of study are required. Residency is required. Students must take a minimum of 12 units per quarter.

First Year: First-Year Graduate Seminar (Studio Art 210), Methods and Materials Workshop (Studio Art 211), Graduate Seminar: Interdisciplinary Studies in Art and Culture (Studio Art 215), Graduate Seminar: Issues in Contemporary Art (Studio Art 220), Graduate Group Critique (Studio Art 230 all three quarters), and Interdisciplinary Projects (Studio Art 240 all three quarters).

Second Year: Career Development Workshop (Studio Art 212), Graduate Seminar: Interdisciplinary Studies in Art and Culture (Studio Art 215) or Graduate Topics in Studio Production (Studio Art 236), Graduate Seminar: Issues in Contemporary Art (Studio Art 220), Graduate Group Critique (Studio Art 230 two quarters), Interdisciplinary Projects (Studio Art 240 two quarters), Graduate Research Seminar (Studio Art 260), Graduate Thesis Writing Seminar (Studio Art 261), and Graduate Thesis, Independent Study (Studio Art 262).

Third Year: Graduate Group Critique (Studio Art 230), Graduate Thesis, Independent Study (Studio Art 262 all three quarters), Graduate Thesis, Exhibition Critique (Studio Art 263); two courses selected from the following: Graduate Seminar: Interdisciplinary Studies in Art and Culture (Studio Art 215), Graduate Seminar: Issues in Contemporary Art (Studio Art 220), Graduate Topics in Digital Media (Studio Art 234), Graduate Topics in Studio Production (Studio Art 236), Directed Reading and Research (Studio Art 250), Directed Group Study (Studio Art 251), Graduate Interdisciplinary and Collaborative Projects (Studio Art 255), Curatorial Projects (Studio Art 257), Cooperative Program and/or Studies Abroad (Studio Art 269), Arts Computation Engineering (ACE) Seminar (Arts 270–279), University Teaching (Studio Art 399) or outside seminar (over two quarters); and two courses selected from Interdisciplinary Projects (Studio Art 240), University Teaching (Studio Art 399), or outside seminar (over two quarters).

Courses in Studio Art

LOWER-DIVISION

1A-B-C Topics in Visual Culture: Foundation Projects (4-4-4). Approaches to postwar art and culture. Solving visual problems and developing understanding of how gender, sexuality, race, nationality influence contemporary cultures. Examines individual's relation to being an artist, encouraging experimentation rather than repeating received ideas. (IV)

9 Contemporary Art and Visual Culture

9A Media, Art, and Technology (4) F. Addresses key themes in the Studio Art Department curriculum: the relationship between art and culture; concepts of audience; differing functions of media forms; new information and communication technologies; education and democracy; issues of identity, difference, and globalization. (IV)

9B Visiting Artists (4) W. Combines lectures on the various histories and contexts of contemporary art with guest speakers currently working in the field. (IV)

9C Thematic Investigation (4) S. A thematic investigation into modern and contemporary art (1945–present). (IV)

11A History of Contemporary Art (4) S. Surveys critical thought that has influenced twentieth-century art production, preparing the student to engage contemporary art with a critical eye, specifically addressing aesthetic and political debates of the historical avant-garde, the neo-avant garde, and post-modern culture. Prerequisites: Studio Art 9A, 9B. (IV)

20 Basic Drawing (4). Encourages an investigation of the premises and limits of drawing, primarily, but not inevitably, as a two-dimensional medium. Includes slide presentations and discussions of the historical uses of a wide range of drawing. (IX)

30A-B Basic Painting I, II (4-4). Examination of the fundamental components of painting: color, form, space, surface, scale, and content. Studio work, slide presentations, and critiques of student work. Open to Studio Art majors only. (IX)

40 Basic Sculpture (4). The practice of sculpture in the contemporary arts; inclusion of spatial interventions, site-specific and environmental design, appropriation of found materials; techniques in cutting, joining, and assembly of wood, metals, and plastics. May include casting, welding, and ceramics. Materials fee. (IX)

51 Basic Ceramic Sculpture (4). Exploration of use of clay as sculptural basis with an emphasis on development of an idea and its relation to contemporary and experimental art practice. Hand-building, glazing, finishing processes, and use of other structural materials. Materials fee. (IX)

65A Introduction to Digital Imaging (4). Introduction to basic theories and techniques for producing art using digital media. Provides an overview of the aesthetics of digital-art, covering such topics as the nature of the real and the relation between digital and analog media. Materials fee.

65B Introduction to Digital Multimedia (4). Introduction to theories and techniques of creating time-based art using digital technologies. Digital sound- and video-editing programs are emphasized and basic concepts in animation, multimedia, and interactivity are covered. Prerequisite: Studio Art 65A. Materials fee.

65C Introduction to the Internet (4). Introduction to creating art for the Internet, covering history and structure along with key types of Internet activity including e-mail, Telnet, html, virtual worlds, CUSeeMe, VRML. Basics of Internet connectivity and hands-on work in UNIX, html, and scripting for the Web. Prerequisite: Studio Art 65B. Materials fee.

71A Introduction to Photography I (4). Introduction to technical underpinnings emphasizing photography as a contemporary art practice. Topics include 35 mm. non-automatic camera operation, exposure and lighting, black and white printing, introduction to digital photography, discussion of critical and historical issues. Materials fee. (IX)

71B Introduction to Photography II (4). Techniques covered include: medium and large format cameras, digital photography, studio lighting, digital and analog color printing, mural room. Conceptual direction is developed through critiques, critical readings, discussions, slide lectures. Materials fee. Prerequisite: Studio Art 71 or 71A. (IX)

81A Video Production (4). Introduction to the three production stages of video making. Study of the narrative structure of cinema and acquisition of video production skills in camera, lighting, sound, and editing. Production work, readings, and screenings outside of class are assigned. Materials fee. Formerly Studio Art 81. (IX)

81B Video Stage Production (4). Focuses on video production, technical skills including: camera operation, stage lighting, sound recording, and construction of basic scenic elements. Emphasis is placed on the function and responsibilities of the production crew and proper working and safety procedures. Materials fee. Prerequisite: Studio Art 81A. (IX)

91 Basic Performance Art (4). Exploration of objects, gesture, action, text, image, and media to create narrative or non-narrative works. Elements of the theory and history of performance art are discussed to illustrate techniques and styles. The goal is to understand, identify, and articulate your artistic vision and voice. May be taken for credit twice. (IX)

UPPER-DIVISION

100 Special Topics in Studio Art (4). Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit six times as topics vary. Materials fee, topic dependent.

101 Artists as Writers (4). Contemporary art practice involves text, as final form or an integral element. Many contemporary artists consider writing as essential to their practice. Covers historical and contemporary uses of text and image as well as artists' writings. Prerequisites: Studio Art 10A, B, C or 9A, B and 11A, or consent of instructor; and, when offered for upper-division writing: satisfactory completion of the lower-division writing requirement.

102 Intermediate Drawing (4). Continuation of the investigation initiated in Studio Art 20, with an emphasis on experimentation, personal investigation, and the development of conceptual working premises, as well as the acquisition of necessary skills. Group discussion and critique are emphasized. Prerequisites: Studio Art 1A-B-C and 20 or consent of instructor. May be taken for credit twice.

103 Intermediate Painting (4). Continuation of the investigation initiated in basic painting, with an emphasis on experimentation, personal investigation, development of conceptual working premises, as well as the acquisition of necessary skills. Group discussion and critique are emphasized. Prerequisites: Studio Art 1A-B-C and 30A-B. May be taken for credit twice.

104 Intermediate Sculpture (4). Investigation of three-dimensional space, including the construction of objects and the manipulation of the environment. Students define personal projects and translate personal, social, and political experience into visual meaning. Range of artists' works introduced. Group discussion and critiques. Materials fee. Prerequisites: Studio Art 1A-B-C and 40 or consent of instructor. May be taken for credit twice.

105 Intermediate Ceramic Sculpture (4). Further investigation of the use of clay as a medium, with emphasis on experimental practice and the relationship to contemporary visual art. Emphasizes discussion of ideas, and provides information on clay body, fabrication, glazing, and firing. Materials fee. Prerequisites: Studio Art 1A-B-C and 51 or consent of instructor. May be taken for credit twice.

106 Interactive Digital Media: Sound and Video (4). Students learn how to prepare and present multimedia materials within interactive formats. Programs for digitizing and altering sound and video are introduced. Various strategies for editing and arranging materials within temporal parameters are discussed. Prerequisites: Studio Art 1A-B-C, 65A-B-C, or consent of instructor. May be taken for credit twice. Materials fee.

107 Intermediate Projects in Photography (4). Students begin learning how to develop photographic projects of their own making. Focuses on employing and expanding upon previously learned technical and critical skills specific to students' individual interests and ideas. Critiques, readings, lectures, labs. Materials fee. Prerequisites: Studio Art 1A-B-C, and 71 or 71A-B. May be taken for credit twice.

108 Intermediate Video Projects (4). Students learn how to conceive, develop, and produce original video works building directly upon previously learned skills. Use of the video stage and post-production editing facilities. Lectures on video and film subjects, production strategies, readings, screening, field trips, and group critiques. Materials fee. Prerequisites: Studio Art 81A-B; senior Studio Art majors only. May be taken for credit twice.

109 Intermediate Performance Art (4). Continued investigation of the concepts and history of experimental performance art, including its relation to contemporary artistic practice. Continues to refine technical skills, as well as space, audiences, and cultural connections. Prerequisites: Studio Art 1A-B-C; Studio Art 91 or consent of instructor. May be taken for credit twice.

110 Interdisciplinary Digital Arts (4) F, W, S. Covers a range of interdisciplinary approaches for utilizing computer systems. Investigates such topics as World Wide Web design and authoring, digital mail art, computer installations, and performance within video conferencing contexts. Prerequisites: Studio Art 1A-B-C, 65A-B-C, or consent of instructor. May be taken for credit twice. Materials fee.

111 3D Methods and Materials (4). Presents a wide variety of concepts, materials, tools, and fabrication techniques vital to art production. Wood tools, clay, castable rubber, urethane foam, fiberglass, plaster, steel, and welding are introduced. Student projects are based on conceptual problems incorporating these materials. Materials fee. Prerequisites: Studio Art 1A-B-C. May be taken for credit twice.

112 Digital Typography and Communication (4). Investigates the use of type for visual and verbal communication. Covers the history of typography and the fundamentals of creating and working with digital type, including type design and composition with type. Prerequisites: Studio Art 1A-B-C and 65A; or consent of instructor.

116 Feminist Issues in Studio Art (4). Feminist perspectives and topics in relation to cultural production. Feminist debates on sexuality, perspectives on women of color, on race and gender, feminist film criticism, histories of the first and second waves of feminism, histories of feminist art. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

116A (Dis)abled Bodies: Issues in Visuality (4). Takes a broad look at visualizations of normalcy and deviance. Among the topics considered are illness and/or disability in relation to allegory, metaphor, social space, oppositional-thinking, the medical gaze, ethnicity, gender resistance, passing, pain, and postmodernism. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A.

117 Issues in Popular Culture (4). In-depth investigation of the relationship between visual art practices and popular culture. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be repeated for credit as topics vary.

118 Issues in Urban Space, Housing, Community Development, and Architecture (4). Social histories and cultural critiques of urban, suburban, and architectural spaces and the social construction of community and public spaces. Content varies and may deal with a variety of geographic locations, cultures, social perspectives, and artists' strategies of public address. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

119 Issues in Contemporary Painting (4). Investigation of issues in modern and contemporary art work and criticism, wherein an assessment of Modernist influences is followed by the examination of contemporary painting as a cross-disciplinary practice employing popular culture, "high art," theory, and new technology. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

119A Issues in Contemporary Drawing (4). Investigation of the expanded category of drawing as a primary practice rather than a developmental tool. Explores the relationship between Conceptualism, process, and content considering the changes in method, presentation, and theory from middle of last century to now. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

120 Issues in Narrative (4). Emphasizes the construction of narratives in different media—painting, photography, sculpture, video. Particular attention paid to the development of personal and community histories as a working base. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

121 Issues in Race and Representation (4). Emphasizes the construction of racial difference and stereotyping in the visual and performing arts, and on the histories of cultures and artists who functioned outside the contemporary mainstream. Readings assigned. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

121A, B Afro-futurism (4, 4). Futuristic artistic visions of black film, video, and cyberspace which create Afro-futurism. African American diasporic cultural retention in modern techno-culture; digital activism; and dreams of designing technology based on African aesthetic principles are addressed. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A.

122 Issues in Lesbian and Gay Visual Representation (4). History of lesbian and gay culture in relation to the visual and performing arts; the construction of sexual difference, debates around positive and negative representations, queer activism, and the intersections of sexuality with gender and race. Readings assigned. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

123 Issues in Cultural Display (4). Lecture/seminar on issues of the production and representation of culture, including patronage, museum history, exhibition design and history, arts funding, cultural identity, and cultural diversity. Field trips, screening and slide lectures are generally assigned. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

123A Issues in the New Culture Wars (4). The term "culture wars" originally described Reagan/Bush era political efforts launched over matters like abortion, religion, gay rights, school curricula. Such controversies provided motivation and content for many artists. Addresses new culture wars emerging since 9/11 over privacy, technology globalization, terrorism. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A.

123B Issues in Media, Violence, and Fear (4). Violence has been a key ingredient in story-telling throughout history in art, literature, religion, and entertainment. The continuing presence of media violence has provoked debates among parents, politicians, media producers, and academics. Examines history, theory, aesthetics, economics, and politics of violent representation.

124 Issues in the History of Intermedia (4). Examines, in a nonlinear and eclectic fashion of contemporary oppositional art practices, work not considered art-making within conventional definitions, and intermedia approaches from the postwar period. Reading and lectures will be drawn from a wide range of sources. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

124A Tactical Media and the Politic of Information (4). Provides an overview of Tactical Media as a practice and its theoretical influences. First half covers extensive readings relating to Tactical Media as a practice, whereas the second half involves projects and workshops developments. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A.

125 Issues in Photography (4). Rigorous investigation of photographic practices and critical writings, the relationship of photography to the construction and maintenance of cultural institutions, the circulation of photographic ideas in society, and photography and technology. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be taken for credit twice.

127A Issues in Video History and Criticism (4). Investigation of historical development of video as an artistic practice. Topics include relationships between art and video technology, artists' critiques of television, experimentation with image processing and synthesis, performances designed for video, experiments in documentary representation, video installation. Readings and screenings assigned. Prerequisites: Studio Art 81A and 81B. Materials fee.

127B Issues in Experimental Film History (4). A critical study of experimental film/video art genres and production techniques considering their narrative, structural, iconographic, and cultural aspects. Hollywood narrative, Nouvelle Vague, American Independent, and Video Art are compared in terms of production innovation, design, and conceptual content. Prerequisite: Studio Art 127A. Materials fee.

128 Issues in New Genres (4). Investigates issues in post-studio practices, including concepts of time, relational aesthetics, site-specificity, institutional critique, and the post-medium condition. Prerequisites: Studio Art 10A, B, C, or 9A, B and 11A. May be repeated for credit as topics vary.

130 Projects in New Technologies (4). Working with media such as electronic still cameras, desktop publishing, faxes, satellites, virtual reality, digitized imaging. Cultural issues pertinent to the emergence of new technology (e.g., ethical concerns, social impact, copyright laws, nontraditional approaches to distribution, cyberpunk, global markets). Prerequisites: two intermediate courses and consent of instructor. May be repeated for credit as topics vary.

131 Projects in Installation (4). Investigates interior installation in particular spaces. Working in teams, students install, discuss, and remove projects. Technical information and hands-on experience with various media is provided. Prerequisites: two intermediate courses or consent of instructor. May be repeated for credit as topics vary. Materials fee.

132A Projects in Video Pre-Production (4). Examines the preparatory and planning stages of video production, including script writing, story boarding, location scouting, script breakdown, and budgeting. Projects may encompass one or more of these stages which will be explored through readings, discussions, and demonstrations. Materials fee. Prerequisites: Studio Art 81A-B. May be repeated for credit as topics vary.

132B Projects in Video Post-Production (4). Examines procedures and techniques utilized in video production after principal shooting is completed, including effects processing, composting, sound design, and DVD authoring. Projects focus on one or more of these processes, which will be explored through readings, discussions, and demonstrations. Prerequisites: Studio Art 81A-B. May be taken for credit twice. Materials fee.

135 Gaming Studies (4). Critical analysis of various genres of computer games and gaming theory and practice through playing, writing, and discussion. The focus is on creating a Design Document for the student's own gaming environment using gaming metaphors, design principles, and technologies. Prerequisites: Studio Art 1A-B-C and 65A-B-C; or consent of instructor.

138 World Building (4). Interdisciplinary approaches to working across the digital/nondigital boundary to create an alternative universe. Emphasis is on critical thinking, comprehensive planning, integration of multiple media, and narrative development. Prerequisites: Studio Art 1A-B-C and 65A.

141 Projects in Video Installation (4). Incorporating narrative structures in a multi-screen context. Students design and produce an active space in which activities will move from one screen to another. May be taken for credit twice. Materials fee.

143 Projects in Computer Painting (4). Study and utilization of the computer as a digital sketchbook and design tool for the creation of paintings. Discussion of the issues related to benefits and limitations of new technology in the art-making process. Prerequisite: Studio Art 30, 103, or consent of instructor.

146 The Artist in the Archive (4). Considers data storage, retrieval systems, technology, secrets, disparate collections, and forgetting. Focuses on artists who prefer their information in quantity and who use or construct databases to structure and/or generate their work. Prerequisites: Studio Art 1A-B-C; 10A, B, C, or 9A, B and 11A.

149 Multimedia and the Arts in the Multicultural Classroom (4) F, W, S. Multiculturalism and underrepresented U.S. minorities and the visual and performing arts: perspectives in artistic perception, creative expression, historical and cultural context, and aesthetic valuing, and media literacy in the interpretation and production of multimedia arts products and applications for K-12 classrooms. Same as Education 104E. (VII)

150 Advanced Studio Topics/Painting (4). Provides an intensive and specialized working environment. Thematic issues and material strategies explored. Prerequisites: Studio Art 30 and 103 or consent of instructor. May be repeated for credit as topics vary.

150C Advanced Drawing (4). Advanced studio problems for visual exploration. Students pursue individual solutions to self-defined and prescribed projects. Techniques/materials are individual choice. Continual analysis of the personal process. Prerequisites: Studio Art 20, 102. May be repeated for credit with consent of instructor.

150F Advanced Figure Drawing (4). Students develop technical skills in rendering the figure. Live model sessions and an introduction to anatomy. Also investigates use of the figure in contemporary art. Prerequisite: Studio Art 102. May be taken for credit twice. Materials fee.

151 Advanced Studio Topics/Sculpture (4). Provides an intensive and specialized working environment. Thematic issues and material strategies will be explored. Prerequisites: two intermediate courses and consent of instructor. Materials fee. May be repeated for credit as topics vary.

152A Advanced Studio Topics/Photography (4). Focused investigation of a range of issues in photographic practice, with an emphasis on developing individual student projects, refining critical thinking, and conceptual framing. Technical topics covered as required. Readings, lectures, critiques, labs. Materials fee. Prerequisites: Studio Art 71 or 71A-B, and 107. May be repeated for credit.

152B Documentary Photography (4). Documentary practice is examined through the realization of photo-based projects. Thematic focus of student's choosing is refined through lectures, discussions, technical demonstrations, field trips, labs, and individual meetings. Materials fee. Prerequisites: Studio Art 71 or 71A-B, and 107 or consent of instructor. May be repeated for credit.

152C The Public Image (4). Strategies for artistic intervention in the public circulation of images are examined alongside the role images play in constructing public identity. Individual or collaborative student projects are directed around course themes. Materials fee. Prerequisites: Studio Art 71 or 71A-B, and 107 or consent of instructor. May be repeated for credit.

152D The Photographic Tableau (4). Examines and develops photographic projects intended for traditional artistic venues (i.e., galleries and museums). In addition to exploring appropriate techniques and presentation strategies, students consider the interdependency between construction of images and semantic shaping of traditional art venues. Materials fee. Prerequisites: Studio Art 71 or 71A-B, and 107 or consent of instructor. May be repeated for credit.

152E The Constructed Image (4). A studio investigation of theoretical ideas, critical possibilities, historical precedents, and various techniques involving the production of fabricated images. Techniques may include montage, digital, chemical and in-camera manipulations, studio constructions, appropriations, performance, and projected images. Materials fee. Prerequisites: Studio Art 71 or 71A-B, and 107 or consent of instructor. May be repeated for credit.

152F Seminar Production Component (4). Photographic and/or inter-media production course tied to a specific Issues course (for example, Issues in Photography, Issues in Feminism, Issues in Urban Space). Critiques, labs, field trips, discussion, demonstrations. Materials fee. Prerequisites: Studio Art 71 or 71A-B, and 107 or consent of instructor. May be repeated for credit.

153 Advanced Studio Topics/Video (4). The class will be directed to the production of individual or collaborative videotapes, using studio, portable camera, and editing facilities and sound and computer elements. Emphasis will be on individually initiated projects. Readings and screenings are assigned. Materials fee. Prerequisites: Studio Art 108 or consent of instructor. May be repeated for credit as topics vary.

154 Advanced Studio Topics/Performance (4). An intensive investigation of the practice of performance art, with an emphasis on the development of individual projects, and the refinement of various technical skills, as well as audiences, spaces, and cultural connections. Prerequisite: Studio Art 109 or consent of instructor. May be repeated for credit as topics vary.

156 Advanced Studio Topics/Ceramic Sculpture (4). Discussion of ideas, techniques, and personal control of form. Clay body, fabrication, glazing, and firing. Emphasis on development of personal direction. Prerequisites: Studio Art 105. Materials fee. May be repeated for credit with consent of instructor.

166 Advanced Collaborative Projects (4). Organized around the design and completion of a group project such as authoring a CD-ROM, engineering a complex collaborative performance, or curating a Web-based exhibition site. Prerequisites: Studio Art 1A-B-C, 65A-B-C, or consent of instructor. May be taken for credit twice. Materials fee.

166A Advanced Collaborative Projects in Video (4). Original video projects produced in collaborative teams combining advanced video students with teams of students from other areas of study, including Drama, Dance, and Music. Shoots may be carried out on the video stage as well as field locations. Prerequisites: Studio Art 1A-B-C, 81A-B, and 108 or consent of instructor. May be taken for credit twice.

175 Digital Art Aesthetics (4). Focuses on current theoretical and political research related to digital imaging, including ethical implications of artificial life, significance of identity politics, gender/race in cyberspace, access to computing systems, issues of post-structuralist aesthetics. Showing of contemporary artists in this field. Prerequisites: Studio Art 1A-B-C, 65A-B-C, or consent of instructor. May be taken for credit twice. Materials fee.

190 Senior Project and Critique (4). Directed-study critique class in preparation for final project and life after graduation; documentation and portfolio preparation for graduate school. Investigation of exhibition spaces and funding opportunities, participation in artists' communities outside the university, artists' rights issues. Prerequisite: senior standing. May be repeated for credit as topics vary.

190B Senior Projects and Critique in Photography (4). Directed group study focused on production of photographic projects of significant scope and ambition. Emphasis on preparation for continued study and/or practice in photography in advanced settings beyond the undergraduate university experience. Materials fee. Prerequisites: Studio Art 71 or 71A-B; 107; and senior standing.

190C Senior Projects and Critique in Video (4). Directed group study focused on production and exhibition of individual video projects of significant scope and ambition. Emphasis is placed on critical evaluation. Assignments include work documentation, preparation for graduate school, and investigation of future opportunities outside the University. Prerequisites: Studio Art 1A-B-C, 81A-B, 108, 132A or 132B, 141 or 153; senior standing. May be taken for credit twice.

191 Studio Problems: Methods and Materials (4) An open media discussion and critique course emphasizing the development of working ideas and the execution of projects in all media. Readings assigned as required; field trips, slide and film/video presentations are integral. Prerequisites: two intermediate courses. May be repeated for credit as topics vary.

197 Studio Art Internship (1 to 4) Under faculty supervision, students participate directly in a variety of art institution settings, including museums, galleries, and nonprofit organizations. Pass/Not Pass only. Prerequisites: junior standing, consent of instructor, and consent of department chair. May be taken for credit twice.

198 Senior Exhibition (4) Preparation, installation, and participation in the annual senior exhibition. Pass/Not Pass only. Prerequisite: senior Studio Art majors only.

199 Independent Study (1 to 4) Individual study or directed creative projects as arranged with faculty member. Prerequisite: consent of instructor. May be repeated for credit. Materials fee, topic dependent.

GRADUATE

210 First-Year Graduate Seminar (4) F, W, S. Introductory theory to contemporary art: intellectual history, theoretical antecedents, and current critical concerns. Prerequisite: graduate standing.

211 Methods and Materials Workshops (2) F, W, S. Comprised of a series of workshops introducing graduates to production and facilities in photography, video, digital media, and sculpture. Prerequisite: graduate standing. *May be offered only once during academic year.*

212 Career Development Workshop (2) F, W, S. Workshop for various aspects of career development including but not limited to grant writing, writing a C.V., applying to teaching jobs, working with museums and galleries, working in/with public, not-for-profit, and community arts. Prerequisite: graduate standing.

215 Graduate Seminar: Interdisciplinary Studies in Art and Culture (4) F, W, S. In-depth discussion of contemporary art production in relation to a variety of theoretical, cultural, and historical topics. Material is determined by the given instructor's current research interests. Prerequisites: graduate standing and Studio Art 210. May be repeated for credit as topics vary.

220 Graduate Seminar: Issues in Contemporary Art (4) F, W, S. Classroom interaction with artists, curators, critics, lecturers from fields outside of the arts or from cross-disciplines. Includes recommended readings, discussions, panel participation, writing assignments. Prerequisites: graduate standing and Studio Art 210. May be taken for credit three times.

230 Graduate Group Critique (4) F, W, S. Focus on studio production. Students are expected to help foster and develop an environment in which serious and sophisticated peer critique can take place. Prerequisite: graduate standing. May be taken for credit nine times.

234 Graduate Topics in Digital Media (4) F, W, S. Introduction to art practices utilizing digital media methods and concepts. Emphasis is on works designed to take advantage of the unique medium properties through which the works are produced and delivered. Prerequisite: graduate standing. May be taken for credit twice.

236 Graduate Topics in Studio Production (4) F, W, S. Graduate group study of a specific medium or art practice (e.g., painting; video, installation, photography, sculpture/3-D, performance, digital media, public art, sound art; film). Includes consideration of technical, theoretical, historical, and/or formal issues. Prerequisite: graduate standing. May be repeated for credit as topics vary.

240 Interdisciplinary Projects (4) F, W, S. Intensive faculty-led discussion of in-progress graduate studio projects—can be discipline driven or working across fields in a rigorous interdisciplinary studio environment where students meet with the professor both individually and in small groups. Prerequisites: graduate standing and consent of instructor. May be repeated for credit.

250 Directed Reading and Research (4) F, W, S. Independent study with a supervising faculty member to direct academic research, develop bibliographies, and discuss assigned readings. Prerequisites: graduate standing and consent of instructor. May be repeated for credit as topics vary.

251 Directed Group Study (4) F, W, S. Directed reading and/or study group on a given research topic. Agreed-upon meeting structure may be flexible in order to accommodate off-campus field trips and travel. Prerequisite: graduate standing. May be repeated for credit as topics vary.

255 Graduate Interdisciplinary and Collaborative Projects (4) F, W, S. For graduate students working collaboratively across the School of the Arts (including the ACE specialization) or cross-university. May be team taught with one of the faculty members based in the Department of Studio Art. Prerequisite: graduate standing. May be repeated for credit as topics vary.

257 Curatorial Projects (2 to 8) F, W, S. Independent or group study for graduates working on or developing curatorial projects. Prerequisite: graduate standing. May be repeated for credit.

260 Graduate Research Seminar (4) F, W, S. Preparatory course for researching written thesis and thesis exhibition defense. Includes library research, developing bibliographies, methodologies. Students are expected to develop an abstract for their thesis topic. Prerequisites: graduate standing and Studio Art 210, 215, and 220.

261 Graduate Thesis Writing Seminar (4) F, W, S. Seminar for writing as a component of the thesis. Different models of writing, text, and spoken word are discussed. Corequisite: Studio Art 262. Prerequisites: graduate standing; Studio Art 210, 215, 220, 260.

262 Graduate Thesis Independent Study (1 to 4) F, W, S. Tutorials and directed study in thesis writing, research, and/or studio production with thesis committee chair and/or thesis committee members to be taken during final quarters of study. Corequisite: one section must be taken with Committee Chair in tandem with Studio Art 261 specifically to develop thesis writing. Prerequisites: graduate standing; consent of instructor; Studio Art 210, 215, 220, 260. May be repeated for credit.

263 Graduate Thesis, Exhibition Critique (4) F, W, S. Group critique required for matriculating M.F.A. students during the quarter in which their thesis exhibitions are scheduled. Public presentation/lecture on student's work required. Prerequisites: graduate standing; Studio Art 210, 215, 220, 230, 240, 260, 261, and 262.

269 Cooperative Program and/or Studies Abroad (12) F, W, S. For students undertaking a quarter of study at another UC campus or equivalent academic institution with which there is a cooperative arrangement with the UCI Department of Studio Art. Prerequisites: graduate standing; consent of instructors, Chair of Studio Art Graduate Studies Committee, and Chair of Department.

280 Contemporary Exhibition Systems (4) F, W, S. Investigates contemporary case studies of curatorial practice. Sometimes taught in collaboration with a host institution. The history, theory, and criticism of curatorial practice are tested through the explication of real exhibitions. May be taken for credit four times as topics vary.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants working under the active guidance and supervision of a regular rank faculty member responsible for curriculum and instruction at the University. Satisfactory/Unsatisfactory only. Prerequisites: graduate standing and consent of instructor. May be taken for credit for a total of 12 units.

Arts and Humanities

101 Mesa Arts Building: (949) 824-6646

James Penrod, **Co-Director (Arts)**

Catherine Liu, **Co-Director (Humanities)**

Core Faculty

Stephen Barker, Ph.D. University of Arizona, *Professor of Drama and Head of Doctoral Studies* (post-modern theatre, Beckett, critical theory)

David Brodbeck, Ph.D. University of Pennsylvania, *Department Chair and Professor of Music, and The Robert and Marjorie Rawlins Chair in Music* (nineteenth- and twentieth-century music, popular music studies)

Martha Gever, Ph.D. City University of New York, *Associate Professor of Studio Art* (video/cultural/critical studies)

Catherine Liu, Ph.D. City University of New York Graduate School and Center, *Co-Director of the Humanities and Arts Major and Associate Professor of Film and Media Studies, Comparative Literature, and English* (visual cultures, psychoanalysis, theories of the novel)

Lynn Mally, Ph.D. University of California, Berkeley, *Professor of History* (modern Russian and Soviet history)

Ian Munro, Ph.D. Harvard University, *Associate Professor of Drama* (European drama and performance, early modern popular culture, theatrical performance of wit)

Carrie J. Noland, Ph.D. Harvard University, *Professor of French* (twentieth-century poetry, literature of the avant-garde, and performance studies)

James Penrod, M.F.A. University of California, Irvine; C.M.A. Laban Institute of Movement Studies, *Associate Dean of the Claire Trevor School of the Arts, Co-Director of the Arts and Humanities Major, and Professor Emeritus of Dance* (ballet, modern, dance notation, choreography, movement analysis)

Frank B. Wilderson III, Ph.D. University of California, Berkeley, *Assistant Professor of African American Studies and Drama* (film theory, Marxism, dramaturgy, black political theory)

The major in Arts and Humanities allows motivated students to create their own interdisciplinary major with one focus in the School of the Arts and the other in the School of Humanities. Students work toward a critical and historical mastery of aesthetic theories and practices while learning about the process of making creative work. This humanist background will equip students to participate more effectively as artists, citizens, and critics in a world where critical thinking and creativity are vital to success in a variety of work environments.

Arts and Humanities students investigate the symbolic dimension of human behavior and identity, an interest shared by many critics and artists alike. Often, this interest is expressed in the context of interdisciplinary programs designed to facilitate contact among faculty and students from a wide range of different academic disciplines. This major's focus on the connection between practice and analysis distinguishes it from the broader and more diverse scope of more general interdisciplinary programs. The scholarly work of many UCI faculty in the Arts and Humanities lies at an intersection between the two academic units, and the major translates this intellectual and creative activity into a coherent curriculum and projects current forms of scholarship and artistic practice into the classroom.

CAREERS FOR THE ARTS AND HUMANITIES MAJOR

There is a steadily growing market in private industry for students whose training combines skills sharpened by both the Arts and Humanities. Business demands graduates with strong writing and analytic skills, talents stressed in the Humanities. They also desire people with creativity and visual skills who have experience putting their original ideas into practice, something emphasized in the Arts. Graduates of this program will be very attractive to teacher-training programs as well as academic Ph.D. programs. Additionally, graduates may find work in professional fields directly allied with the Arts, including museum work, art foundations, art criticism, journalism, theatre, and the entertainment industry.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

Application Process for the Arts and Humanities Major

New students are not admitted directly to the Arts and Humanities major. Continuing students apply to change their major to Arts and Humanities no earlier than the fall quarter of their sophomore year. Complete information about changing majors to Arts and Humanities is available at <http://www.changeofmajor.uci.edu>. Students must submit a transcript and meet the change-of-major criteria for each of the two departments they propose to combine. In addition, a program of study, approved by the designated faculty member in the Claire Trevor School of the Arts and in the School of

Humanities, is required for admission to the Arts and Humanities major. Students are strongly encouraged to consult with the Arts Student Affairs Office early in their decision to apply to Arts and Humanities.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 56–62.

School Requirements: None.

Requirements for the Major

Humanities 1A-B-C; a language other than English through 2C; one lower-division survey in a specialization in the Arts, chosen from Dance 90A-B-C, Drama 40A, B, C, Music 14A-B-C, Studio Art 9A, B, C; six units of “studio courses” in Dance, Drama, or Studio Art or six units of “ensemble courses” in Music; Arts and Humanities 100 (taken to satisfy upper-division writing), 101; 16 additional units of upper-division Arts courses and 16 additional units of upper-division Humanities courses focusing on a specific theme, region, or period, chosen with the approval of the Arts and Humanities faculty advisors. (Students must have their proposed program of study approved by their advisors each year.)

It is expected that students will choose their courses from one major in the Arts and one major in the Humanities. Students with well-developed interests can shape their curriculum more precisely to their needs.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Courses in Arts and Humanities

100 The Arts in Theory and Practice (4). Writing seminar explores writings on art from different times and cultures. How have artists and critics in different cultural contexts tried to explain the principles and theories that guide their work? How can students use their concepts to assess art works? Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Humanities and Arts 100.

101 Topics in Arts and Humanities (4). This interdisciplinary course examines themes relevant to both the Arts and the Humanities. May be repeated for credit as topics vary. Same as Humanities and Arts 101.

199 Independent Study (1 to 4). Directed reading and research in consultation with a faculty member. Substantial written work required. May be repeated for credit as topics vary.

SCHOOL OF BIOLOGICAL SCIENCES

Albert F. Bennett, **Dean**

5120 Natural Sciences II

Undergraduate Counseling: (949) 824-5318

Graduate Programs:

Department of Ecology and Evolutionary Biology: (949) 824-4743

Combined Graduate Program in Cellular and Molecular

Biosciences (CMB): (949) 824-8145

Department of Neurobiology and Behavior: (949) 824-8519

<http://www.bio.uci.edu/>

Faculty

Steven D. Allison, Ph.D. Stanford University, *Assistant Professor of Ecology and Evolutionary Biology*

Bogi Andersen, M.D. University of Iceland, *Professor of Medicine (Endocrinology) and Biological Chemistry*

Aileen J. Anderson, Ph.D. University of California, Irvine, *Director of the Christopher Reeve Paralysis Foundation Spinal Cord Injury Core Facility and Associate Professor of Physical Medicine and Rehabilitation and of Anatomy and Neurobiology*

Hoda Anton-Culver, Ph.D. St. Andrews University (Scotland), *Director of the Center for Cancer Genetics Research and Prevention; Director of the Genetic Epidemiology Research Institute (GERI); Associate Director of Cancer Control Population Sciences, Chao Family Comprehensive Cancer Center; Department Chair and Professor of Epidemiology; and Professor of Microbiology and Molecular Genetics, Planning, Policy, and Design, and Environmental Health, Science, and Policy*

Ruslan D. Aphasizhev, Ph.D. University of California, Berkeley, *Assistant Professor of Microbiology and Molecular Genetics*

Joseph Arditti, Ph.D. University of Southern California, *Professor Emeritus of Developmental and Cell Biology*

Kavita Arora, Ph.D. Bombay University, *Associate Professor of Developmental and Cell Biology*

Dana Aswad, Ph.D. University of California, Berkeley, *Professor of Molecular Biology and Biochemistry*

Peter R. Atsatt, Ph.D. University of California, Los Angeles, *Professor Emeritus of Ecology and Evolutionary Biology*

John C. Avise, Ph.D. University of California, Davis, *UCI Distinguished Professor of Ecology and Evolutionary Biology*

Francisco J. Ayala, Ph.D. Columbia University, *University Professor and Donald Bren Professor of Biological Sciences*

Pierre Baldi, Ph.D. California Institute of Technology, *Director of the Institute for Genomics and Bioinformatics and UCI Chancellor's Professor of Computer Science, Biomedical Engineering, Developmental and Cell Biology, and Biological Chemistry*

Kenneth M. Baldwin, Ph.D. University of Iowa, *Professor of Physiology and Biophysics*

Tallie Z. Baram, M.D. University of Miami, Ph.D. Weizmann Institute of Science (Israel), *Professor of Pediatrics, Neurology, and Anatomy and Neurobiology, and Danette (Dee Dee) Shepard Chair in Neurological Studies*

Alan G. Barbour, M.D. Tufts University School of Medicine, *Professor of Microbiology and Molecular Genetics and of Medicine (Infectious Diseases)*

Lee Bardwell, Ph.D. Stanford University, *Associate Professor of Developmental and Cell Biology*

Albert F. Bennett, Ph.D. University of Michigan, *Dean of the School of Biological Sciences and Professor of Ecology and Evolutionary Biology*

Rudi C. Berkelhamer, Ph.D. University of California, Berkeley, *Associate Dean, Division of Undergraduate Education, and Senior Lecturer with Security of Employment, Ecology and Evolutionary Biology*

Hans-Ulrich Bernard, Ph.D. University Göttingen (Germany), *Professor of Molecular Biology and Biochemistry and of Public Health*

Michael W. Berns, Ph.D. Cornell University, *Professor of Surgery, Developmental and Cell Biology, and Biomedical Engineering, and Arnold and Mabel Beckman Chair in Laser Biomedicine*

Devin K. Binder, M.D., Ph.D. Duke University School of Medicine, *Assistant Professor, Departments of Neurological Surgery and of Anatomy and Neurobiology*

Bruce Blumberg, Ph.D. University of California, Los Angeles, *Professor of Developmental and Cell Biology, Biomedical Engineering, and Pharmaceutical Sciences*

Hans R. Bode, Ph.D. Yale University, *Professor Emeritus of Developmental and Cell Biology*

Emiliana Borrelli, Ph.D. University of Naples (Italy), *Acting Professor of Microbiology and Molecular Genetics and of Pharmacology*

Peter A. Bowler, Ph.D. University of California, Irvine, *Director of the UCI Arboretum, UC Natural Reserve System Academic Coordinator, and Senior Lecturer with Security of Employment, Ecology and Evolutionary Biology*

Carrie Brachmann, Ph.D. The John Hopkins University School of Medicine, *Assistant Professor of Developmental and Cell Biology*

Timothy J. Bradley, Ph.D. University of British Columbia, *Professor of Ecology and Evolutionary Biology*

Ralph A. Bradshaw, Ph.D. Duke University, *Professor Emeritus of Physiology and Biophysics*

Adriana D. Briscoe, Ph.D. Harvard University, *Associate Professor of Ecology and Evolutionary Biology*

Peter J. Bryant, Ph.D. University of Sussex, *Professor of Developmental and Cell Biology*

Susan V. Bryant, Ph.D. University of London, *Vice Chancellor for Research and Professor of Developmental and Cell Biology*

Michael J. Buchmeier, Ph.D. McMaster University (Canada), *Professor of Medicine (Infectious Disease) and of Molecular Biology and Biochemistry*

Nancy Burley, Ph.D. University of Texas, Austin, *Professor of Ecology and Evolutionary Biology*

Jorge Busciglio, Ph.D. National University of Cordoba, *Associate Professor of Neurobiology and Behavior*

Robin M. Bush, Ph.D. University of Michigan, Ann Arbor, *Associate Professor of Ecology and Evolutionary Biology*

Michael D. Cahalan, Ph.D. University of Washington, *Department Chair and Professor of Physiology and Biophysics*

Lawrence F. Cahill, Ph.D. University of California, Irvine, *Associate Professor of Neurobiology and Behavior, Psychology and Social Behavior, and Cognitive Sciences*

Vincent J. Caiozzo, Ph.D. University of California, Irvine, *Professor in Residence, Departments of Orthopaedic Surgery and of Physiology and Biophysics*

Anne L. Calof, Ph.D. University of California, San Francisco, *Professor of Anatomy and Neurobiology and of Developmental and Cell Biology*

David Camerini, Ph.D. Harvard Medical School, *Assistant Professor of Molecular Biology and Biochemistry*

Diane R. Campbell, Ph.D. Duke University, *Professor of Ecology and Evolutionary Biology*

Richard D. Campbell, Ph.D. The Rockefeller Institute, *Professor Emeritus of Developmental and Cell Biology*

Thomas J. Carew, Ph.D. University of California, Riverside, *Department Chair and Donald Bren Professor of Neurobiology and Behavior*

F. Lynn Carpenter, Ph.D. University of California, Berkeley, *Professor of Ecology and Evolutionary Biology*

Paolo Casali, M.D. University of Milan, *Director of the Center for Immunology and Donald Bren Professor of Molecular Biology and Biochemistry and of Medicine (Immunology)*

Jefferson Y. Chan, M.D., Ph.D. University of California, San Francisco, *Associate Professor of Pathology and Laboratory Medicine and of Biological Sciences*

Frances S. Chance, Ph.D. Brandeis University, *Assistant Professor of Neurobiology and Behavior*

K. George Chandy, Ph.D. University of Birmingham (England), M.B.B.S. Christian Medical College University of Madras (India), *Professor of Physiology and Biophysics and of Microbiology and Molecular Genetics*

Phang-Lang Chen, Ph.D. University of California, San Diego, *Associate Professor of Biological Chemistry*

Ken W.-Y. Cho, Ph.D. University of Pennsylvania, *Department Chair and Professor of Developmental and Cell Biology*

Olivier Cinquin, Ph.D. University College London, *Assistant Professor of Developmental and Cell Biology*

- Olivier Civelli, Ph.D. Swiss Institute of Technology, *Professor of Pharmacology and of Developmental and Cell Biology*, and Eric L. and Lila D. Nelson *Chair in Neuropharmacology*
- Michael T. Clegg, Ph.D. University of California, Davis, *Donald Bren Professor of Biological Sciences and of Ecology and Evolutionary Biology*
- Melanie Cocco, Ph.D. Pennsylvania State University, *Assistant Professor of Molecular Biology and Biochemistry*
- Susana Cohen-Cory, Ph.D. Rockefeller University, *Associate Professor of Neurobiology and Behavior*
- Carl Cotman, Ph.D. Indiana University, *Professor of Neurology, Neurobiology and Behavior, and Biomedical Engineering*
- Karina S. Cramer, Ph.D. California Institute of Technology, *Associate Professor of Neurobiology and Behavior*
- Steven C. Cramer, M.D. University of Southern California, *Associate Professor, Departments of Neurology and of Anatomy and Neurobiology*
- Michael G. Cumsky, Ph.D. University of California, Berkeley, *Senior Lecturer with Security of Employment, Molecular Biology and Biochemistry*
- Dennis D. Cunningham, Ph.D. University of Chicago, *Senior Associate Dean for Academic Affairs, School of Medicine, and Professor Emeritus, Department of Microbiology and Molecular Genetics*
- Xing Dai, Ph.D. University of Chicago, *Associate Professor of Biological Chemistry*
- Rowland H. Davis, Ph.D. Harvard University, *Professor Emeritus of Molecular Biology and Biochemistry*
- Luis M. de la Maza, M.D. Facultad de Medicina (Spain); Ph.D. University of Minnesota, *Director of Medical Microbiology and Professor, Department of Pathology and Laboratory Medicine*
- Michael Demetriou, M.D., Ph.D. University of Toronto, *Associate Professor of Neurology and of Microbiology and Molecular Genetics*
- Peter J. Donovan, Ph.D. University College, London, *Professor of Developmental and Cell Biology and of Biological Chemistry*
- Aimee L. Edinger, V.M.D., Ph.D. University of Pennsylvania, *Assistant Professor of Developmental and Cell Biology*
- Robert A. Edwards, M.D., Ph.D. Baylor College of Medicine, *Assistant Professor in Residence of Pathology and Laboratory Medicine*
- James H. Fallon, Ph.D. University of Illinois, *Professor Emeritus of Anatomy and Neurobiology*
- Hung Fan, Ph.D. Massachusetts Institute of Technology, *Director of the Cancer Research Institute, Associate Director of the Chao Family Comprehensive Cancer Center, and Professor of Molecular Biology and Biochemistry*
- Mark Fisher, M.D. University of Cincinnati, *Professor of Neurology and of Anatomy and Neurobiology*
- Walter M. Fitch, Ph.D. University of California, Berkeley, *Professor of Ecology and Evolutionary Biology*
- Lisa Flanagan-Monuki, Ph.D. University of California, San Diego, *Assistant Adjunct Professor, Department of Pathology and Laboratory Medicine*
- Norbert Fortin, Ph.D. Boston University, *Assistant Professor of Neurobiology and Behavior*
- Donald E. Fosket, Ph.D. University of Idaho, *Professor Emeritus of Developmental and Cell Biology*
- Steven A. Frank, Ph.D. University of Michigan, *Professor of Ecology and Evolutionary Biology*
- Ron D. Frostig, Ph.D. University of California, Los Angeles, *Department Vice Chair and Professor of Neurobiology and Behavior and Professor of Biomedical Engineering*
- John P. Fruehauf, M.D. Rush University, *Associate Professor of Clinical Medicine (Hematology/Oncology), Biological Chemistry, and Biomedical Engineering*
- David A. Fruman, Ph.D. Harvard University, *Associate Professor of Molecular Biology and Biochemistry*
- Christine M. Gall, Ph.D. University of California, Irvine, *Professor of Anatomy and Neurobiology and of Neurobiology and Behavior*
- Anand Ganesan, M.D., Ph.D. Medical College of Wisconsin, *Assistant Professor of Dermatology and Biological Chemistry*
- David Gardiner, Ph.D. Scripps Institution of Oceanography, University of California, San Diego, *Professor of Developmental and Cell Biology*
- J. Jay Gargus, M.D., Ph.D. Yale University, *Professor of Physiology and Biophysics and of Pediatrics*
- Brandon S. Gaut, Ph.D. University of California, Riverside, *Department Chair and Professor of Ecology and Evolutionary Biology*
- Paul Gershon, Ph.D. Liverpool School of Tropical Medicine, University of Liverpool, *Professor of Molecular Biology and Biochemistry*
- Roland A. Giolli, Ph.D. University of California, Berkeley, *Professor Emeritus of Anatomy and Neurobiology*
- Charles Glabe, Ph.D. University of California, Davis, *Professor of Molecular Biology and Biochemistry*
- Alan L. Goldin, M.D., Ph.D. University of Michigan, *Professor of Microbiology and Molecular Genetics, Physiology and Biophysics, Biological Sciences, and Anatomy and Neurobiology*
- Sidney H. Golub, Ph.D. Temple University, *Professor Emeritus of Microbiology and Molecular Genetics*
- Michael L. Goulden, Ph.D. Stanford University, *Professor of Earth System Science and of Ecology and Evolutionary Biology*
- Celia Goulding, Ph.D. King's College London (United Kingdom), *Assistant Professor of Molecular Biology and Biochemistry and of Pharmaceutical Sciences*
- Sergei Grando, M.D. Kiev Medical Institute, Ph.D. Post Graduate Institute for Physicians, Kiev, *Professor of Dermatology*
- Gale A. Granger, Ph.D. University of Washington, *Professor Emeritus of Molecular Biology and Biochemistry*
- Steven Gross, Ph.D. University of Texas, Austin, *UCI Chancellor's Fellow and Associate Professor of Developmental and Cell Biology, Biomedical Engineering, and Physics*
- Ranjan Gupta, M.D. Albany Medical College, *Department Chair and Professor of Orthopaedic Surgery and Professor of Anatomy and Neurobiology and of Biomedical Engineering*
- George A. Gutman, Ph.D. Stanford University, *Professor Emeritus of Microbiology and Molecular Genetics*
- John F. Guzowski, Ph.D. University of California, Irvine, *Assistant Professor of Neurobiology and Behavior*
- Harry T. Haigler, Ph.D. Vanderbilt University, *Associate Dean for Basic Science Medical Education and Professor of Physiology and Biophysics*
- James E. Hall, Ph.D. University of California, Riverside, *Professor of Physiology and Biophysics and of Biological Sciences*
- Barbara A. Hamkalo, Ph.D. University of Massachusetts, *Edward A. Dickson Professor Emerita of Molecular Biology and Biochemistry*
- Steven N. Handel, Ph.D. Cornell University, *Adjunct Professor of Ecology and Evolutionary Biology*
- G. Wesley Hatfield, Ph.D. Purdue University, *Professor Emeritus of Microbiology and Molecular Genetics*
- Bradford A. Hawkins, Ph.D. University of California, Riverside, *Professor of Ecology and Evolutionary Biology*
- Patrick L. Healey, Ph.D. University of California, Berkeley, *Professor Emeritus of Developmental and Cell Biology*
- Agnes Henschen-Edman, M.D., Ph.D. Karolinska Institute (Stockholm), *Professor Emerita of Molecular Biology and Biochemistry*
- Klemens J. Hertel, Ph.D. University of Colorado, *Associate Professor of Microbiology and Molecular Genetics*
- James W. Hicks, Ph.D. University of New Mexico, *Professor of Ecology and Evolutionary Biology*
- Franz Hoffmann, Ph.D. University of Hohenheim, *Senior Lecturer with Security of Employment, Developmental and Cell Biology*
- Todd C. Holmes, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Physiology and Biophysics*
- Lan Huang, Ph.D. University of Florida, *Assistant Professor of Physiology and Biophysics, Developmental and Cell Biology, and Biological Chemistry*
- Taosheng Huang, M.D. Fujian Medical College (China), Ph.D. Mt. Sinai Medical School, *Associate Professor of Pediatrics (Human Genetics and Birth Defects) and of Developmental and Cell Biology*
- Bradley Hughes, Ph.D. University of California, Irvine, *Lecturer with Security of Employment, Ecology and Evolutionary Biology*
- Christopher C. W. Hughes, Ph.D. University of London, *Professor of Molecular Biology and Biochemistry and of Biomedical Engineering*
- George L. Hunt, Jr., Ph.D. Harvard University, *Professor Emeritus of Ecology and Evolutionary Biology*
- Anthony A. James, Ph.D. University of California, Irvine, *UCI Distinguished Professor of Microbiology and Molecular Genetics and of Molecular Biology and Biochemistry*
- Robert K. Josephson, Ph.D. University of California, Los Angeles, *Professor Emeritus of Neurobiology and Behavior*
- Frances A. Jurnak, Ph.D. University of California, Berkeley, *Professor of Physiology and Biophysics*
- Keith Justice, Ph.D. University of Arizona, *Professor Emeritus of Biological Sciences*
- Peter Kaiser, Ph.D. University of Innsbruck (Austria), *Associate Professor of Biological Chemistry*

- Claudia H. Kawas, M.D. University of Louisville, *Professor of Neurology and of Neurobiology and Behavior, and Nichols Clinical Neuroscience Chair*
- Hans S. Keirstead, Ph.D. University of British Columbia, *Co-Director of the Sue and Bill Gross Stem Cell Research Center and Associate Professor of Anatomy and Neurobiology and of Biological Sciences*
- Herbert P. Killackey, Ph.D. Duke University, *Vice Provost for Academic Personnel and Professor of Neurobiology and Behavior and of Anatomy and Neurobiology*
- Leonard M. Kitzes, Ph.D. University of California, Irvine, *Professor Emeritus of Anatomy and Neurobiology*
- Daniel J. Knauer, Ph.D. University of Nebraska, *Professor Emeritus of Developmental and Cell Biology*
- Natalia L. Komarova, Ph.D. University of Arizona, *Acting Associate Professor of Mathematics and of Ecology and Evolutionary Biology*
- Harold Koopowitz, Ph.D. University of California, Los Angeles, *Professor Emeritus of Ecology and Evolutionary Biology*
- Stuart M. Krassner, Sc.D. The Johns Hopkins University, *Professor Emeritus of Developmental and Cell Biology*
- John J. Krolewski, M.D., Ph.D. New York University, *Associate Professor of Pathology and Laboratory Medicine*
- Frank LaFerla, Ph.D. University of Minnesota, *Director of the Institute for Brain Aging and Dementia and UCI Chancellor's Professor of Neurobiology and Behavior*
- Arthur D. Lander, M.D., Ph.D. University of California, San Francisco, *Director, Center for Complex Biological Systems and Professor of Developmental and Cell Biology and of Biomedical Engineering*
- Thomas E. Lane, Ph.D. University of California, Los Angeles, *UCI Chancellor's Fellow and Professor of Molecular Biology and Biochemistry*
- Janos K. Lanyi, Ph.D. Harvard University, *Professor of Physiology and Biophysics and of Microbiology and Molecular Genetics*
- Eva Y.-H. P. Lee, Ph.D. University of California, Berkeley, *UCI Chancellor's Professor of Developmental and Cell Biology and of Biological Chemistry*
- Wen-Hwa Lee, Ph.D. University of California, Berkeley, *Donald Bren Professor of Biomedicine and Biological Chemistry*
- Howard M. Lenhoff, Ph.D. The Johns Hopkins University, *Professor Emeritus of Developmental and Cell Biology*
- Michael Leon, Ph.D. University of Chicago, *Associate Dean of Undergraduate Affairs of the School of Biological Sciences and Professor of Neurobiology and Behavior*
- Robert Leonard, Ph.D. University of Minnesota, *Adjunct Professor of Anatomy and Neurobiology*
- Leonid Lerner, M.D. Moscow Medical Academy; Ph.D. University of California, Los Angeles, *Assistant Professor in Residence, Department of Ophthalmology*
- Frances M. Leslie, Ph.D. Aberdeen University (Scotland), *Acting Dean of the Graduate Division and Professor of Pharmacology and of Anatomy and Neurobiology*
- Ellis R. Levin, M.D. Jefferson Medical College, *Vice Chair for Academic Affairs, Department of Medicine, Chief of Endocrinology, and Professor in Residence, Departments of Medicine (Endocrinology), Pharmacology, and Biological Chemistry*
- Shin Lin, Ph.D. University of California, Los Angeles, *Professor of Developmental and Cell Biology and of Biomedical Engineering*
- Steven Lipkin, M.D., Ph.D. University of California, San Diego, *Associate Professor of Medicine (Hematology/Oncology) and Biological Chemistry*
- Haoping Liu, Ph.D. Cornell University, *Professor of Biological Chemistry*
- Leslie Lock, Ph.D. University of California, San Francisco, *Assistant Professor of Developmental and Cell Biology and of Biological Chemistry*
- Anthony D. Long, Ph.D. McMaster University, *Professor of Ecology and Evolutionary Biology*
- John Longhurst, M.D., Ph.D. University of California, Davis, *Associate Dean, School of Medicine; Director of the Susan Samueli Center for Integrative Medicine; Professor of Medicine (Cardiology), Pharmacology, and Biomedical Engineering; Lawrence K. Dodge Endowed Chair in Integrative Biology; and Susan Samueli Chair in Integrative Medicine*
- Kenneth J. Longmuir, Ph.D. University of Oregon, *Associate Professor of Physiology and Biophysics*
- Catherine Loudon, Ph.D. Duke University, *Lecturer with Security of Employment, Ecology and Evolutionary Biology*
- Ulrike Luderer, M.D., Ph.D. Northwestern University; M.P.H. University of Washington, *Associate Professor of Medicine (Occupational and Environmental Medicine)*
- Hartmut Luecke, Ph.D. Rice University, *Professor of Molecular Biology and Biochemistry*
- Rui (Ray) Luo, Ph.D. University of Maryland, College Park, *Associate Professor of Molecular Biology and Biochemistry and of Biomedical Engineering*
- Andrej Luptak, Ph.D. Yale University, *Assistant Professor of Pharmaceutical Sciences, Chemistry, and Molecular Biology and Biochemistry*
- Gary Lynch, Ph.D. Princeton University, *Professor of Psychiatry and Human Behavior, Cognitive Sciences, and Anatomy and Neurobiology*
- David C. Lyon, Ph.D. Vanderbilt University, *Assistant Professor of Anatomy and Neurobiology*
- Grant MacGregor, Ph.D. University of Sussex, *Associate Professor of Developmental and Cell Biology*
- Richard E. MacMillen, Ph.D. University of California, Los Angeles, *Professor Emeritus of Ecology and Evolutionary Biology*
- Jerry E. Manning, Ph.D. University of Utah, *Professor Emeritus of Molecular Biology and Biochemistry*
- J. Lawrence Marsh, Ph.D. University of Washington, *Director of the Developmental Biology Center and Professor of Developmental and Cell Biology*
- John F. Marshall, Ph.D. University of Pennsylvania, *Professor of Neurobiology and Behavior*
- Rachel W. Martin, Ph.D. Yale University, *Assistant Professor of Chemistry and of Molecular Biology and Biochemistry*
- Adam C. Martiny, Ph.D. Technical University of Denmark, *Assistant Professor of Ecology and Evolutionary Biology and of Earth System Science*
- Jennifer Martiny, Ph.D. Stanford University, *Associate Professor of Ecology and Evolutionary Biology*
- James L. McGaugh, Ph.D. University of California, Berkeley, *Research Professor of Neurobiology and Behavior and of Cognitive Sciences*
- Matthew J. McHenry, Ph.D. University of California, Berkeley, *Assistant Professor of Ecology and Evolutionary Biology*
- Calvin S. McLaughlin, Ph.D. Massachusetts Institute of Technology, *Professor Emeritus of Biological Chemistry*
- Alexander McPherson, Ph.D. Purdue University, *Professor of Molecular Biology and Biochemistry and of Physiology and Biophysics*
- Dan Mercola, M.D. Southampton University (England); Ph.D. University of California, Los Angeles, *Professor of Pathology and Laboratory Medicine*
- Raju S. Metherate, Ph.D. McGill University, Montreal, *Associate Professor of Neurobiology and Behavior*
- Ronald L. Meyer, Ph.D. California Institute of Technology, *Professor of Developmental and Cell Biology*
- Frank L. Meyskens, Jr., M.D. University of California, San Francisco, *Associate Vice Chancellor, College of Health Sciences; Professor of Medicine (Hematology/Oncology) and Biological Chemistry, and Daniel G. Aldrich, Jr. Endowed Chair*
- Ricardo Miledi, M.D. Universidad Nacional Autónoma de México, *UCI Distinguished Professor of Neurobiology and Behavior*
- Edwin S. Monuki, M.D., Ph.D. University of California, San Diego, *Associate Professor of Pathology and Laboratory Medicine and of Developmental and Cell Biology*
- Kailen A. Mooney, Ph.D. University of Colorado, *Assistant Professor of Ecology and Evolutionary Biology*
- Naomi Morrisette, Ph.D. University of Pennsylvania, *Assistant Professor of Molecular Biology and Biochemistry*
- Robert K. Moyzis, Ph.D. The Johns Hopkins University, *Professor Emeritus of Biological Chemistry*
- Laurence D. Mueller, Ph.D. University of California, Davis, *Professor of Ecology and Evolutionary Biology*
- R. Michael Mulligan, Ph.D. Michigan State University, *Associate Dean of Graduate Studies of the School of Biological Sciences and Professor of Developmental and Cell Biology and of Ecology and Evolutionary Biology*
- Edward Nelson, M.D. Oregon Health Sciences University, *Associate Professor of Medicine (Hematology/Oncology) and of Molecular Biology and Biochemistry*
- Masayasu Nomura, Ph.D. University of Tokyo, *Professor of Biological Chemistry, Microbiology and Molecular Genetics, and Biological Sciences, and Grace Beekhuis Bell Chair in Biological Chemistry*
- Diane K. O'Dowd, Ph.D. University of California, San Diego, *Professor of Developmental and Cell Biology and of Anatomy and Neurobiology*
- Timothy F. Osborne, Ph.D. University of California, Los Angeles, *Department Chair and Professor of Molecular Biology and Biochemistry*
- Andre J. Ouellette, Ph.D. Indiana University, *Professor of Pathology and Laboratory Medicine and of Microbiology and Molecular Genetics*
- Ian Parker, Ph.D. University College, London, *Professor of Neurobiology and Behavior*

- Diane E. Pataki, Ph.D. Duke University, *Associate Professor of Earth System Science and of Ecology and Evolutionary Biology*
- Ellena M. Peterson, Ph.D. Georgetown University, *Associate Dean of Admissions and Outreach, School of Medicine, Associate Director of Medical Microbiology, and Professor of Pathology and Laboratory Medicine*
- Daniele Piomelli, Ph.D. Columbia University, *Professor of Pharmacology and Biological Chemistry, and Louise Turner Arnold Chair in the Neurosciences*
- Thomas L. Poulos, Ph.D. University of California, San Diego, *UCI Chancellor's Professor of Molecular Biology and Biochemistry, Pharmaceutical Sciences, Physiology and Biophysics, and Chemistry*
- Manuela Raffatellu, M.D. University of Sassari (Italy), *Assistant Professor of Microbiology and Molecular Genetics*
- James T. Randerson, Ph.D. Stanford University, *Associate Professor of Earth System Science and of Ecology and Evolutionary Biology*
- Jose M. Ranz, Ph.D. Universidad Autònoma de Barcelona (Spain), *Assistant Professor of Ecology and Evolutionary Biology*
- Mahendra Rao, Ph.D. California Institute of Technology, *Adjunct Professor of Anatomy and Neurobiology*
- Robert D. Reed, Ph.D. University of Arizona, *Assistant Professor of Ecology and Evolutionary Biology*
- Rainer K. Reinscheid, Ph.D. Center for Molecular Neurobiology (Germany), *Associate Professor of Pharmaceutical Sciences, Pharmacology, and Molecular Biology and Biochemistry*
- Charles E. Ribak, Ph.D. Boston University, *Professor of Anatomy and Neurobiology*
- Markus Ribbe, Ph.D. University of Bayreuth (Germany), *Associate Professor of Molecular Biology and Biochemistry*
- Richard T. Robertson, Ph.D. University of California, Irvine, *Professor of Anatomy and Neurobiology*
- W. Edward Robinson, Jr., M.D., Ph.D. Vanderbilt University, *Director, Combined Graduate Program in Cellular and Molecular Biosciences and Professor in Residence, Departments of Pathology and Laboratory Medicine and of Microbiology and Molecular Genetics*
- Irwin A. Rose, Ph.D. University of Chicago, *UCI Distinguished Professor in Residence, Departments of Physiology and Biophysics and of Biological Chemistry*
- Michael R. Rose, Ph.D. University of Sussex, *Professor of Ecology and Evolutionary Biology*
- Ingrid Ruf, Ph.D. Emory University, *Assistant Professor of Molecular Biology and Biochemistry*
- Michael D. Rugg, Ph.D. University of Leicester, *Director of the Center for the Neurobiology of Learning and Memory, and Professor of Neurobiology and Behavior, Cognitive Sciences, and Psychology and Social Behavior*
- Hamid M. Said, Ph.D. University of Aston (England), *Professor of Medicine (Gastroenterology, Nephrology) and of Physiology and Biophysics*
- Ann K. Sakai, Ph.D. University of Michigan, *Professor of Ecology and Evolutionary Biology*
- Suzanne B. Sandmeyer, Ph.D. University of Washington, *Professor of Biological Chemistry, Microbiology and Molecular Genetics, and Biological Sciences*
- Rozanne Sandri-Goldin, Ph.D. The Johns Hopkins University, *Department Chair and Professor of Microbiology and Molecular Genetics*
- Paolo Sassone-Corsi, Ph.D. University of Naples, *Department Chair of Pharmacology and UCI Distinguished Acting Professor, Department of Pharmacology*
- Thomas F. Schilling, Ph.D. University of Oregon, *Professor of Developmental and Cell Biology*
- Steven S. Schreiber, M.D. Albany Medical College, *Interim Department Chair of Neurology and Professor in Residence, Departments of Neurology and of Anatomy and Neurobiology*
- Michael E. Selsted, M.D., Ph.D. University of California, Los Angeles, *Department Chair and Professor, Pathology and Laboratory Medicine; Professor, Departments of Microbiology and Molecular Genetics and of Pharmacology; and Warren L. Bostick Chair in Pathology*
- Bert L. Semler, Ph.D. University of California, San Diego, *Professor of Microbiology and Molecular Genetics*
- Donald F. Senear, Ph.D. University of Washington, *Department Vice Chair and Professor of Molecular Biology and Biochemistry*
- Yongsheng Shi, Ph.D. Syracuse University, *Assistant Professor of Microbiology and Molecular Genetics*
- Martin A. Smith, Ph.D. University of Newcastle Upon Tyne, *Professor of Anatomy and Neurobiology and of Biological Sciences*
- Ivan Soltesz, Ph.D. L. Eötvös University (Hungary), *Department Chair and Professor of Anatomy and Neurobiology and Professor of Physiology and Biophysics and of Neurobiology and Behavior*
- George Sperling, Ph.D. Harvard University, *UCI Distinguished Professor of Cognitive Sciences and of Neurobiology and Behavior*
- Eric J. Stanbridge, Ph.D. Stanford University, *UCI Distinguished Professor of Microbiology and Molecular Genetics and of Biological Sciences*
- Wendell M. Stanley, Jr., Ph.D. University of Wisconsin, *Senior Lecturer Emeritus in Biochemistry*
- Craig Stark, Ph.D. Carnegie Mellon University, *Associate Professor of Neurobiology and Behavior*
- Arnold Starr, M.D. New York University, *Research Professor of Neurology*
- Robert Steele, Ph.D. Yale University, *Interim Department Chair and Associate Professor of Biological Chemistry*
- Oswald Steward, Ph.D. University of California, Irvine, *Professor of Anatomy and Neurobiology, Neurobiology and Behavior, and Neurosurgery, and Reeve-Irvine Chair in Spinal Cord Injury Research*
- Georg Striedter, Ph.D. University of California, San Diego, *Associate Professor of Neurobiology and Behavior*
- Katharine N. Suding, Ph.D. University of Michigan, Ann Arbor, *Associate Professor of Ecology and Evolutionary Biology*
- Noboru Sueoka, Ph.D. California Institute of Technology, *Adjunct Professor of Ecology and Evolutionary Biology*
- Christine Suetterlin, Ph.D. University of Basel (Switzerland), *Assistant Professor of Developmental and Cell Biology*
- Katumi Sumikawa, Ph.D. Imperial College, London (England), *Associate Professor of Neurobiology and Behavior*
- Adam P. Summers, Ph.D. University of Massachusetts, Amherst, *Associate Professor of Ecology and Evolutionary Biology*
- Richard Symanski, Ph.D. Syracuse University, *Senior Lecturer with Security of Employment, Ecology and Evolutionary Biology*
- Sandor Szabo, M.D. University of Belgrade Medical School (Yugoslavia); Ph.D. University of Montreal (Canada); M.P.H. Harvard University School of Public Health; *Chief of Diagnostic and Molecular Medicine Health Care Group and Professor in Residence, Departments of Pathology and Laboratory Medicine and of Pharmacology*
- Ming Tan, M.D. Johns Hopkins University, *Associate Professor of Microbiology and Molecular Genetics and of Medicine (Infectious Disease)*
- Andrea J. Tenner, Ph.D. University of California, San Diego, *Professor of Molecular Biology and Biochemistry and of Neurobiology and Behavior*
- Krishna K. Tewari, Ph.D. Lucknow University, *Professor Emeritus of Molecular Biology and Biochemistry*
- Leslie Michels Thompson, Ph.D. University of California, Irvine, *Professor of Psychiatry and Human Behavior, Biological Chemistry, and Neurobiology and Behavior*
- Kevin Thornton, Ph.D. University of Chicago, *Assistant Professor of Ecology and Evolutionary Biology*
- Francesco Tombola, Ph.D. University of Padua (Italy), *Assistant Professor of Physiology and Biophysics*
- Kathleen K. Treseder, Ph.D. Stanford University, *Associate Professor of Ecology and Evolutionary Biology and of Earth System Science*
- Bruce Tromberg, Ph.D. University of Tennessee, *Director of the Beckman Laser Institute and Professor of Surgery, Biomedical Engineering, and Physiology and Biophysics*
- Shiou-Chuan (Sheryl) Tsai, Ph.D. University of California, Berkeley, *Associate Professor of Molecular Biology and Biochemistry and of Chemistry*
- Nosratola D. Vaziri, M.D. Tehran University Medical School (Iran), *Chief of Nephrology and Professor of Medicine (Renal Diseases) and of Physiology and Biophysics*
- Larry E. Vickery, Ph.D. University of California, Santa Barbara, *Professor of Physiology and Biophysics*
- Luis P. Villarreal, Ph.D. University of California, San Diego, *Director of the Center for Virus Research and Professor of Molecular Biology and Biochemistry*
- Douglas C. Wallace, Ph.D. Yale University, *Director of the Center for Molecular and Mitochondrial Medicine and Genetics (MAMMAG) and Donald Bren Professor of Molecular Medicine and Biological Chemistry*
- Craig M. Walsh, Ph.D. University of California, Los Angeles, *Associate Professor of Molecular Biology and Biochemistry*
- Ping H. Wang, M.D. Kaoshing University, *Professor of Medicine (Endocrinology) and of Physiology and Biophysics*
- Rahul Warrior, Ph.D. Yale University, *Associate Professor of Developmental and Cell Biology*

- Marian L. Waterman, Ph.D. University of California, San Diego, *Department Vice Chair and Associate Professor of Microbiology and Molecular Genetics*
- Steven L. Wechsler, Ph.D. University of North Carolina, *Professor, Department of Ophthalmology and of Microbiology and Molecular Genetics*
- Norman M. Weinberger, Ph.D. Case Western Reserve University, *Research Professor of Neurobiology and Behavior*
- Arthur E. Weis, Ph.D. University of Illinois, *Professor Emeritus of Ecology and Evolutionary Biology*
- Gregory Alan Weiss, Ph.D. Harvard University, *Associate Professor of Chemistry and of Molecular Biology and Biochemistry*
- John H. Weiss, M.D., Ph.D. Stanford University, *Professor of Neurology and of Anatomy and Neurobiology*
- Stephen G. Weller, Ph.D. University of California, Berkeley, *Department Vice Chair and Professor of Ecology and Evolutionary Biology*
- Stephen H. White, Ph.D. University of Washington, *Professor of Physiology and Biophysics*
- Dominik Wodarz, Ph.D. Oxford University, *Professor of Ecology and Evolutionary Biology and of Mathematics*
- Marcelo Wood, Ph.D. Princeton University, *Assistant Professor of Neurobiology and Behavior*
- Clifford A. Woolfolk, Ph.D. University of Washington, *Professor Emeritus of Molecular Biology and Biochemistry*
- Xiangmin Xu, Ph.D. Vanderbilt University, *Assistant Professor of Anatomy and Neurobiology*
- Pauline Yahr, Ph.D. University of Texas, *Professor Emerita of Neurobiology and Behavior*
- Guiyun Yan, Ph.D. University of Vermont, *Professor of Public Health*
- Tau-Mu Yi, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Developmental and Cell Biology and of Biomedical Engineering*
- Kyoko Yokomori, Ph.D. University of Southern California; Ph.D. of Agriculture (Veterinary Medicine) University of Tokyo; *Associate Professor of Biological Chemistry*
- Fan-Gang (Frank) Zeng, Ph.D. Syracuse University, *Director of the Hearing and Speech Laboratory and Professor, Departments of Otolaryngology, Biomedical Engineering, and Anatomy and Neurobiology*
- Yi-Hong Zhou, Ph.D. Dalhousie University (Canada), *Assistant Professor, Assistant Professor in Residence, Departments of Neurological Surgery and Biological Chemistry*
- Albert Zlotnik, Ph.D. University of Colorado, *Professor of Physiology and Biophysics*

Overview

This is the ideal time to be studying biology. We are solving problems today whose solutions were unimaginable even a few years ago, and implications for our society, our health, and our environment are profound. The School of Biological Sciences is dedicated to providing students with a unique course of study that fosters a deep appreciation for the exciting facts and concepts in the field, an education that allows graduates to excel in their chosen careers.

To that end, the School has recently redesigned the curriculum to remain on the cutting edge of biological education. All first-year students are enrolled in a Biology Freshman Seminar of their choice with one of 100 faculty members. Each seminar is different, designed by each member of the faculty to share their excitement about a particular aspect of biology with new students. Students also are introduced to basic concepts in ecology and evolutionary biology, as well as cellular and molecular biology, in that first year. The core set of courses in biology continues into the second year, featuring genetics, biochemistry, and molecular biology, followed in the third and fourth year by a choice of advanced courses in biology. Since biology is a laboratory discipline, students complete a series of laboratory courses in which they learn both the techniques and approaches needed to solve problems in biology.

Finally, the faculty expect that most students will engage in cutting-edge research in one of more than 250 laboratories and medical clinics in the School of Biological Sciences and the UCI School of Medicine. It is in these situations that faculty train students to think in a sophisticated way about real-world problems. There is also no feeling of excitement greater than finding out

something about the world that no one has ever known before, a feeling afforded in biology only by participation in research. The Excellence in Research Program allows students to present their work and be recognized for their performance with a series of awards and publication of their reports in the School's *Journal of Undergraduate Research*. The combination of small seminars that transmit the faculty's enthusiasm for biology, the set of core classes that instructs students in the concepts of biology, the advanced classes that allow a deep understanding of specialized aspects of biology, the laboratory courses that convey the practical aspects of problem-solving in biology, and the research experiences that engage students in the real excitement in revealing new information about biology, come together to provide an extraordinary experience for students. The Honors Program in the School of Biological Sciences further enhances the educational experience for the best students.

Biology students have the option of specializing in areas of biology that best fit their interests, completing courses for degree programs in Biochemistry and Molecular Biology, Developmental and Cell Biology, Ecology and Evolutionary Biology, Genetics, Microbiology and Immunology, Neurobiology, Pharmaceutical Sciences, or Plant Biology.

Those students who wish to receive a broader education in the area can opt to complete a major in Biological Sciences. Completion of any of these majors forms an excellent basis for application to either graduate or professional studies such as medical school, and graduates of the School of Biological Sciences are routinely accepted to the most prestigious programs in the country.

The quality of the faculty in the School of Biological Sciences has remained high while increasing steadily in number over the past few years, giving students a remarkable range of expertise in biology and with it, a large number of different advanced courses and research opportunities. In addition, their efforts have brought several high-impact research units to the campus, such as the Center for the Neurobiology of Learning and Memory, the Center for Virus Research, the Beckman Laser Institute, the Cancer Research Institute, the Developmental Biology Center, the Center for Immunology, the Institute for Brain Aging and Dementia, the Macromolecular Structure Research Unit, the Center for Molecular and Mitochondrial Medicine and Genetics, the Institute for Genomics and Bioinformatics, and the Reeve-Irvine Research Center, all of which are accessible to undergraduates. The School of Biological Sciences also has close research and teaching collaborations with faculty in the Schools of Medicine, Physical Sciences, Social Ecology, and Social Sciences; the Donald Bren School of Information and Computer Sciences; and The Henry Samueli School of Engineering.

In addition to the regular University requirements for admission, students interested in the biological sciences should include in their high school curriculum, in addition to a course in biology, four years of mathematics, as well as courses in chemistry and physics, which are now an integral part of most contemporary biological work.

The School's professional counseling staff is always available for consultation to students regarding the many decisions in their academic program. They also are trained to provide guidance in the application process to both professional and graduate schools, a real advantage to the high proportion of students in the School of Biological Sciences who go on to pursue advanced degrees.

Opportunities are available at the graduate level to specialize in Anatomy and Neurobiology, Biological Chemistry, Developmental and Cell Biology, Ecology and Evolutionary Biology, Experimental Pathology, Microbiology and Molecular Genetics, Molecular Biology and Biochemistry, Neurobiology and Behavior, and Physiology and Biophysics.

DEGREES

Biochemistry and Molecular Biology	B.S.
Biological Sciences	B.S., M.S., Ph.D.
Developmental and Cell Biology	B.S.
Ecology and Evolutionary Biology	B.S.
Genetics	B.S.
Microbiology and Immunology	B.S.
Neurobiology	B.S.
Pharmaceutical Sciences	B.S.
Plant Biology	B.S.

HONORS

Honors Program in the School of Biological Sciences

The Honors Program in the School of Biological Sciences provides an opportunity for outstanding majors in the School to pursue advanced work in independent research via participation in the Excellence in Biological Sciences Research Program and earn Honors in Biological Sciences upon graduation. Admission to the program is based on an application to participate in the Excellence in Biological Sciences Research program filed during the middle part of the fall quarter of the year of the student's participation. Additionally, students must have a minimum overall 3.5 grade point average and a minimum 3.5 grade point average in all required Biological Sciences courses. The Program requires a minimum of three quarters enrollment in research (Biological Sciences 199) including successful completion of Biological Sciences H195 and the Excellence in Biological Sciences Research program.

Graduation with Honors

Of the graduating seniors, no more than 12 percent will receive Latin honors: approximately 1 percent *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*. The selection for these awards is based on spring quarter rank-ordered grade point averages. To be eligible for honors at graduation, the student must, by the end of spring quarter of the senior year, be officially declared a Biological Sciences major; submit an Application to Graduate by the end of winter quarter of the senior year; have completed at least 72 units in residence at a UC campus by the end of the spring quarter of the academic year in which they graduate; have all corrections to the academic record processed by the Registrar's Office by the end of spring quarter; if completing the Language Other Than English general education requirement with a language exemption test, pass the test by the end of spring quarter; and be able to verify completion of all course work by the end of the spring quarter of the senior year. Other important factors are considered (see page 52).

Excellence in Research Program

The School of Biological Sciences believes that successful participation in creative research is one of the highest academic goals its undergraduates can attain. Students enrolled in Undergraduate Research (Biological Sciences 199) and who meet the eligibility requirements have an opportunity to present the results of their research endeavors to peers and faculty. Those students awarded with "Excellence in Research" will then have their papers published in the School's *Journal of Undergraduate Research in the Biological Sciences*.

The program begins each fall with a series of instructional workshops and continues through spring with students completing a scientific paper, poster presentation, and scientific talk. The program then concludes in June with the Excellence in Research Reception where certificates are presented. Contact the Biological Sciences Student Affairs Office in 3210 Biological Sciences III or visit the Web site at <http://www.bio.uci.edu/studentaffairs> for additional information.

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

Dean's Honor List. The quarterly Dean's Honor List is composed of students who have received a 3.5 grade point average while carrying a minimum of 12 graded units.

Biological Sciences Honors, Scholarships, Prizes, and Awards

The following honors, scholarships, prizes, and awards are presented at the annual Biological Sciences Honors Convocation held in June.

Excellence in Research Award. Undergraduates who have successfully completed the requirements for this program are presented with Excellence in Research certificates.

Atwood Family Scholarship. The Atwood Family Scholarship is awarded to sophomore Biological Sciences majors who demonstrate outstanding achievement in both scholarship and service to the UCI community.

Robert H. Avnet Memorial Scholarship. The Robert H. Avnet Memorial Scholarship has been established to assist a student interested in becoming a physician. The student must be a Biological Sciences major and demonstrate financial need.

Carol Becker McGaugh Award. This award is given to a junior with outstanding research in the area of neurobiology of learning and memory.

Robert Ernst Prize for Excellence in Research in the Biological Sciences. This prize is awarded to a student for meritorious research conducted in the field of biology.

Robert Ernst Prize for Excellence in Student Research in Plant Biology. This prize is awarded to a student for meritorious research conducted in plant biology.

Dr. William F. Holcomb Scholarship. The intent of the Dr. William F. Holcomb Scholarship is to support biomedical or marine biological studies. The Scholarship is to be used to support continuing academic work over a specific period.

Leadership Scholars Program. This program was established by the Dean's Leadership Council for the School of Biological Sciences. The scholarship will support Biological Sciences majors who demonstrate academic and personal commitment to the School, University, and their local community.

Michael and Judy Leon Award. This award was established to support an exceptional Biological Sciences major who is graduating and has been accepted into a Ph.D. program (or has great likelihood of acceptance).

Laurence J. Mehlman Prize. The Laurence J. Mehlman Prize is awarded to an undergraduate student in the School of Biological Sciences who has demonstrated outstanding achievement in both scholarship and service to the School.

Edward Mittelman Memorial Fund Scholarship. The Edward Mittelman Memorial Fund Scholarship is presented to an outstanding Biological Sciences student who will pursue a career in the medical field.

Edward A. Steinhaus Memorial Award. The Edward A. Steinhaus Memorial Award is given to outstanding Biological Sciences graduate student teaching assistants who demonstrate promise as future educators.

Joseph H. Stephens Award for Outstanding Research in Ecology and Conservation. This award is granted to an undergraduate student who has demonstrated outstanding research in ecology and conservation.

Joseph H. Stephens Award for Outstanding Research in Biochemistry and Molecular Biology. This award is granted to an undergraduate student who has demonstrated outstanding research in biochemistry and molecular biology.

Jayne Unzelman Scholarship. The Jayne Unzelman Scholarship is presented to an undergraduate student who has shown academic excellence and been of service to the School of Biological Sciences and/or the University, and to the community.

Special Service Awards. These awards are given to students who have demonstrated great service to the School, the University, and/or community.

UNDERGRADUATE PROGRAMS

ADMISSION TO THE MAJOR IN BIOLOGICAL SCIENCES

In the event that the number of students who elect Biological Sciences as a major exceeds the number of positions available, applicants may be subject to screening beyond minimum University of California admissions requirements.

Freshmen: Preference will be given to those who rank the highest using the selection criteria as stated in the Undergraduate Admissions section of this *Catalogue*.

Transfer students: Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission. All applicants must complete one year of general chemistry with laboratory with grades of B or better; one year of biology courses equivalent to Biological Sciences 93, 94, and 100L at UCI with a grade of C or better in each course; and have a cumulative GPA of 3.0 or higher.

No student may enter as a double major, but Biological Sciences students interested in other areas may apply to become double majors after the first quarter, if the second school or program approves. A strong academic performance in the second area is requisite for acceptance as a double major.

CHANGE OF MAJOR

Students who wish to declare any major within the School of Biological Sciences should contact the Biological Sciences Student Affairs Office in 3210 Biological Sciences III for information about change-of-major requirements, procedures, and policies. Information can also be found at <http://www.changeofmajor.uci.edu>. Change of Major petitions are accepted and reviewed by the School throughout the year.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

All School of Biological Sciences students must complete the following requirements.

University Requirements: See pages 56–62.

School Requirements

Biological Sciences 2B, 194S; Biological Sciences Core 93, 94, 97, 98, 99, 100L; Chemistry 1A-B-C, 1LB-LC or H2A-B-C, 1LB-1LC; Chemistry 51A-B-C, 51LA-LB or 52A-B-C, 52LA-LB; Mathematics 2A-B and one course selected from Statistics 7, 8, Mathematics 2D, 2J, or 7; Physics 3A-B-C, 3LB-LC or 7C-D-E, 7LC-LD.

Prerequisites for all Biological Sciences Core courses are rigorously enforced. Students must have a 2.0 cumulative grade point average in the Biological Sciences Core Curriculum, four upper-division elective courses, and three upper-division laboratories.

School Residence Requirement: After matriculation, all courses required for the major must be successfully completed at UCI. The School of Biological Sciences strictly enforces the UCI residence

requirement. At least 36 of the final 45 units completed by a student for the bachelor's degree must be earned in residence at the UCI campus. (The School considers courses taken in the Education Abroad Program to be in-residence courses.)

Undergraduate Major in Biological Sciences

The Biological Sciences major presents a unified, in-depth study of modern biology. The Biological Sciences Core is a five-quarter series of courses ranging from ecology and evolutionary biology, to genetics, biochemistry, and molecular biology. Important laboratory techniques and methodology are presented in upper-division laboratories. Advanced elective courses provide an opportunity to continue to diversify students' exposure to the biological sciences or to gain a much more in-depth study of a particular area of the biological sciences.

NOTE: Biological Sciences majors who successfully complete their second year of study may elect to apply for a change of major to one for the following: Biochemistry and Molecular Biology, Developmental and Cell Biology, Genetics, Microbiology and Immunology, Neurobiology, Pharmaceutical Sciences, or Plant Biology. Students may apply directly to the Ecology and Evolutionary Biology major when they apply for admission to UCI. Contact the Biological Sciences Student Affairs Office for more information.

REQUIREMENTS FOR THE B.S. DEGREE IN BIOLOGICAL SCIENCES

University Requirements: See pages 56–62.

School Requirements: See this page, to the left.

Major Requirements

- A. **Required Major Courses:** Three courses selected from Biological Sciences D103, D104, D105, E106, E109, N110.
- B. **Upper-Division Laboratories:** Three laboratories required. At least two selected from Biological Sciences D111L, E112L, E115L, E166, M114L, M116L, M118L, M121L, M122L, M124L, N113L; one laboratory can be satisfied with E179L, E161L, M174L, or completion of Excellence in Research in the Biological Sciences.
- C. **Upper-Division Biology Electives:** Four upper-division, four-unit courses selected from Biological Sciences D103–D190, E106–E190, M114–M190, N110–N190. Biological Sciences D103, D104, D105, E106, E109, N110 may not be used to satisfy more than one requirement. Chemistry 130A-B-C or 131A-B-C or Physics 147A-B can be used to partially satisfy the elective requirement. Additionally, Psychology/Biological Sciences double majors may also use Psychology 112A-B-C to partially satisfy the elective requirement.

NOTE: Double majors within the School of Biological Sciences or with Public Health Sciences are not permitted.

Concentration in Biological Sciences Education

The optional concentration in Biological Sciences Education requires eight courses: Biological Sciences 14, 101, 102, Physics 20A, 20B, Earth System Science 1, 7, and one course selected from Education 108, 124, 128, 131, 136, or 173.

The requirements for a general Biological Sciences B.S. degree for students in this concentration will be reduced by one upper-division laboratory course (major requirement B) and two upper-division biology electives (major requirement C). Students pursuing other majors within the School of Biological Sciences will need specific departmental approval for the reduction of degree requirements when completing this concentration.

Requirements for the Minor in Biological Sciences

Nine courses are required, no more than two of which may be taken on a Pass/Not Pass basis:

- A. Three courses selected from Biological Sciences 93, 94, 97, 98, and 99. (Prerequisites are strictly enforced. Exceptions may be made for some majors that accept the above courses for degree requirements. Consult with the Biological Sciences Student Affairs Office or the academic counseling office of the major.)
- B. Six three- or four-unit courses selected from Biological Sciences 5-H90 (excluding 46), 93-99, 100L, and D103-D190, E106-E190, M114-M190, N110-N190. Three courses must be upper-division. Prerequisites are strictly enforced. (Courses used to satisfy group A may not also be used to satisfy group B.)

Residence requirement for the minor: A minimum of six courses required for the minor must be completed at UCI. Approved courses taken in the Education Abroad Program are considered to be in-residence courses.

NOTE: Students in any of the majors within the School of Biological Sciences or Public Health Sciences may not minor in Biological Sciences.

PLANNING A PROGRAM OF STUDY

Since biological sciences courses are built upon a base of the physical sciences, it is very important for students to take their required physical sciences early, particularly general and organic chemistry. Students who have not completed high school chemistry are well advised to complete a preparatory chemistry course before entering UCI. The academic program shown is only a suggested program. Students should consult the Biological Sciences Student Affairs Office for individual academic planning.

Freshmen will normally take Humanities 1A or lower-division writing courses, Chemistry 1A, Biological Sciences 93, and a freshman seminar (Biological Sciences 2A) during the fall quarter. Students will then continue with Biological Sciences 94, 2B, complete their general chemistry requirement, and continue with Humanities or lower-division writing during the remaining winter and spring quarters.

Sophomores begin organic chemistry (Chemistry 51A or 52A), continue the Biological Sciences Core with 97, 98, 99, and 100L; students enrolling in 100L must have completed or be concurrently enrolled in Biological Sciences 97 and 194S. Sophomores often begin taking courses in other disciplines to meet the UCI general education requirement and fulfill their mathematics requirement if they have not done so as freshmen.

During their junior year, most majors continue with the Biological Sciences electives and take physics. Students who intend to double major in Chemistry will be required to take Physics 7C-D-E in place of Physics 3A-B-C. Juniors may complete their general education requirements and usually start their research and their upper-division biology laboratory courses.

Finally, during their senior year, students continue their research and complete their remaining major requirements.

Students in the Biological Sciences major are required to make progress toward their degree, and their progress will be monitored. If normal academic progress toward the degree in Biological Sciences is not being met, students will be subject to probation.

Sample Program — Biological Sciences

¹ Students have the option of taking Humanities 1A or lower-division writing courses.

² Chemistry 52A-B-C, 52LA-LB may be taken instead of 51A-B-C, 51LA-LB.

³ Prerequisites are completion of or concurrent enrollment in Biological Sciences 97 and 194S, and satisfactory completion of the lower-division writing requirement; 100L must be completed prior to taking the three upper-division labs.

⁴ In addition to the listed Biological Sciences elective courses, Chemistry 130A-B-C or 131A-B-C, Physics 147A-B, and Psychology 112A-B-C (for Biological Sciences/Psychology double majors) are counted as Biological Sciences elective courses.

⁵ Electives should be chosen with the following purposes in mind: UCI general education requirements; students' own breadth; preprofessional training.

Undergraduate Major in Biochemistry and Molecular Biology

Few areas of Biological Sciences remain that are not impacted by studies at the chemical and molecular level. The major in Biochemistry and Molecular Biology is designed to provide a comprehensive background in this modern, conceptual understanding of biology. Students who wish to begin in-depth study of the molecular basis in any of a variety of fields, including development, gene expression, immunology, pathogenesis, disease, virology, and evolution, can do so through this major. This program will be especially attractive to those students who intend to pursue an advanced degree in biological or medical sciences.

The Biochemistry and Molecular Biology major is based upon required courses in Advanced Biochemistry and Advanced Molecular Biology (Biological Sciences M114 and M116). These courses, together with a wide variety of elective course offerings, provide majors the choice to either explore the breadth of the field or follow a more in-depth study of any of its subdisciplines. For students interested in the interface between biology and chemistry, this program articulates well with a second major in Chemistry.

The program of study emphasizes laboratory experience and its integration with basic theory. This is accomplished in three ways: first, through coordination between the advanced courses in Biochemistry (M114) and Molecular Biology (M116), and laboratory courses in Biochemistry (M114L) and Molecular Biology (M116L) which provide students with the basic laboratory skills and an appreciation for the experimental foundations of the field; second, through advanced laboratories in Immunology (M121L) and Virology (M124L) which provide students with the opportunity to develop cutting edge research skills; and third, by emphasizing independent research sponsored by a participating faculty member. The program encourages the research interests of students in subdisciplines other than immunology or virology by offering the opportunity to substitute one year of independent research for the advanced laboratory.

The major in Biochemistry and Molecular Biology is designed to provide students with the appropriate tools and training to successfully pursue graduate degrees that emphasize basic scientific

research, including Ph.D. and M.S. training as well as combined M.D./Ph.D. programs. In addition, and particularly with the explosive growth in biotechnology and its significant influence in everyday life, graduates could use their backgrounds very effectively to pursue careers in business, education, law, and public affairs.

REQUIREMENTS FOR THE B.S. DEGREE IN BIOCHEMISTRY AND MOLECULAR BIOLOGY

University Requirements: See pages 56–62.

School Requirements: See page 130.

Major Requirements

- A. Required Major Courses:** Biological Sciences M114 and M116.
- B. Upper-Division Laboratories:** Biological Sciences M114L, M116L, and one additional laboratory selected from M121L, M124L, or one year of research (Biological Sciences 199) approved by the Biochemistry and Molecular Biology Faculty Board.
- C. Upper-Division Biology Electives:** Four courses selected from Biological Sciences D137, D146, D147, M120–M189, Chemistry 128, 130A–B–C, or 131A–B–C (two of the four must be from Biological Sciences). Two additional four-unit courses selected from Biological Sciences D103–D190, E106–E190, M120–M190, N110–N190, or Chemistry 128, 130A–B–C, or 131A–B–C. No course may be used to satisfy more than one requirement.

Application Process to Declare the Major: The major in Biochemistry and Molecular Biology is open to junior- and senior-level students only. Applications to declare the major can be made at any time, but typically in the spring of the sophomore year. Review of applications submitted at that time and selection to the major by the Biochemistry and Molecular Biology Faculty Board is completed during the summer. Information can also be found at <http://www.changeofmajor.uci.edu>. Double majors within the School of Biological Sciences or with Public Health Sciences are not permitted.

³ Prerequisites are completion of or concurrent enrollment in Biological Sciences 97 and 194S, and satisfactory completion of the lower-division writing requirement; 100L must be completed prior to taking upper-division labs.

Undergraduate Major in Developmental and Cell Biology

The Developmental and Cell Biology major is intended to provide students with intensive training in cutting edge approaches to understanding the structure and function of cells and how they interact to produce a complex organism, starting with a fertilized egg. The focus of the B.S. in Developmental and Cell Biology is to provide students with intensive training aimed at preparing them for graduate programs in modern Developmental and Cell Biology or other biomedical sciences. In-depth training in the molecular basis of cell and developmental biology will be coupled with integrating knowledge obtained from the recent explosive advances in genomic technology to provide a strong working understanding of how to approach problems in basic research.

The major has distinctive features. The first is a reduction in the number of required courses, allowing students the opportunity to focus more deeply on training in Developmental and Cell Biology. The second is the implementation of a new course in Genomic and Proteomic analysis that is closely tied to problems in genetics, developmental, and cell biology. Understanding the connections among these disciplines and how to apply the appropriate tools for defining and answering fundamental questions in biomedical research is a critical tool for success in research. Another distinctive feature of the major is the opportunity to replace two upper-division laboratory courses with mentored Biological Sciences 199 individual research in faculty laboratories. This offers students the opportunity to apply the tools they have acquired during formal course work to current problems at the frontiers of research. Lastly, students majoring in Developmental and Cell Biology have faculty advisors with whom they meet at least quarterly. The faculty advisors help students plan their curriculum, select appropriate 199 projects and sponsoring labs, and as a group grant petitions and certify the degree. The combination of new upper-division courses, more flexibility in the curriculum, the option for mentored research, and close interaction with faculty advisors will help the Developmental and Cell Biology majors to develop an appreciation of the nature of research and establish a strong foundation for future success in graduate or professional schools.

REQUIREMENTS FOR THE B.S. DEGREE IN DEVELOPMENTAL AND CELL BIOLOGY

University Requirements: See pages 56–62.

School Requirements: See page 130.

Major Requirements

- A. Required Major Courses:** Biological Sciences D103, D104, D114, and D145.
- B. Upper-Division Laboratories:** Biological Sciences D111L and two selected from E112L, E115L, E166, M114L, M116L, M118L, M121L, M122L, M124L, N113L. Students may petition to substitute Excellence in Research (Biological Sciences 199) for two upper-division laboratories (other than D111L); 199 research is strongly encouraged. The 199 laboratory must be approved by the Department, and Excellence in Research must be successfully completed. Final approval is given by the Department.
- C. Upper-Division Biology Electives:** one from Biological Sciences D136, D137, D148; one from Biological Sciences D151, M144; and three from Biological Sciences D105, D129, D130, D134, D136, D137, D143, D146, D148, D149, D151, D187, E109, E141, E157, M114, M116, M125, M137, M144, M151, N110, N153, N154.

Application Process to Declare the Major: The major in Developmental and Cell Biology is open to junior- and senior-level students only. Applications to declare the major can be made at any time. Information can also be found at <http://www.changeofmajor.uci.edu>. Double majors within the School of Biological Sciences or with Public Health Sciences are not permitted.

Undergraduate Major in Ecology and Evolutionary Biology

It has famously been said that nothing in biology makes sense except in the light of evolution. This major is designed to allow students to make sense of biology. It is a broad major, including components of evolutionary biology, ecology, and physiology. Faculty interests are also broad and include the evolution of aging, conservation biology, biogeography, plant and animal population and community ecology, the evolution of infectious disease, evolutionary physiology, behavioral ecology, host-disease interactions, evolutionary genetics, marine ecology, genetics of invasive species, and plant population biology. Following graduation students will be especially well prepared to enter graduate programs in either ecology or evolution for advanced study. The major also provides the foundation to pursue careers in governmental and non-governmental environmental organizations, as well as professional schools. The Department considers undergraduate experience in research an integral component of a scientific education, and majors are encouraged to participate in Biological Sciences 199 in which they will be mentored by an individual faculty member within the Department.

REQUIREMENTS FOR THE B.S. DEGREE IN ECOLOGY AND EVOLUTIONARY BIOLOGY

University Requirements: See pages 56–62.

School Requirements: See page 130.

Major Requirements

A. *Required Major Courses:* Statistics 8 and Biological Sciences E106 and E107.

B. *Upper-Division Laboratories:* Biological Sciences E115L, E166, and one selected from Biological Sciences D111L, E112L, E161L, E172L, E179L, M114L, M116L, M118L, M121L, M122L, M124L, N113L.

C. *Upper-Division Biology Electives:* one from Biological Sciences D103, D104, D105, E109, N110; and three four-unit courses from Biological Sciences E118–E190 and D147. Biological Sciences 199 Research is strongly encouraged.

Double majors within the School of Biological Sciences or with Public Health Sciences are not permitted.

¹ Students have the option of taking Humanities 1A or lower-division writing courses.

² Chemistry 52A-B-C, 52LA-LB may be taken instead of 51A-B-C, 51LA-LB.

³ Prerequisites are completion of or concurrent enrollment in Biological Sciences 97 and 194S, and satisfactory completion of the lower-division writing requirement; 100L must be completed prior to taking upper-division labs.

Undergraduate Major in Genetics

Genetics pervades every aspect of modern society, from newspaper articles to talk shows, from discussions on health care to discussions on cloning. With the sequencing of the human genome, it is more important than ever for biology students to have a broad background in the study of heredity and evolution. The Genetics major is designed to benefit motivated undergraduates who have a particular interest in learning about developmental genetics, evolutionary genetics, and molecular genetics and to allow them to explore how our knowledge of genetic mechanisms contributes to our understanding of human development and disease. The Genetics major will accommodate students interested in the study of inheritance either as a basic discipline or in terms of its applied aspects in biotechnology, medicine, and agriculture, but will be especially attractive to those students desiring focused study and preparation for graduate training.

Genetics majors begin their study in the junior year with two Genetics courses (Biological Sciences M137 and D137) and a Genomics and Proteomics course (D145). This series of courses is designed to give students an understanding of genetic mechanisms and teach them how to define and answer fundamental questions in biomedical research. Additionally, students choose at least two electives that deal with topics such as the molecular biology of cancer, human genetic diseases, developmental genetics, and the genetics of aging. Finally, Genetics majors are encouraged to explore laboratory research by enrolling in Biological Sciences 199. Laboratory research not only expands a student's technical skills, but is also designed to allow faculty members to mentor Genetics majors. All students majoring in Genetics have a faculty advisor with whom they meet at least quarterly. The faculty advisor helps students plan their curriculum and select appropriate Biological Sciences 199 research projects. Genetics majors also have an opportunity to meet with other Genetics majors on a regular basis and participate in research talks.

The Genetics major provides graduates with advanced training in the skills necessary to pursue graduate degrees in biomedical research. These include Ph.D. graduate programs, teacher-training programs, medical school, and veterinary school. Genetics graduates may also use their backgrounds effectively in planning careers in law, business, education, and public affairs.

REQUIREMENTS FOR THE B.S. DEGREE IN GENETICS

University Requirements: See pages 56–62.

School Requirements: See page 130.

Major Requirements

- A. *Required Major Courses:* Biological Sciences D103, D104, D113, D137, D145, and M137.
- B. *Upper-Division Laboratories:* three selected from Biological Sciences D111L, E112L, E115L, E166, M114L, M116L, M118L, M121L, M122L, M124L, N113L. Students may petition to substitute Excellence in Research (Biological Sciences 199) for two upper-division laboratories; 199 research is strongly encouraged. The 199 laboratory must be approved by the Department, and Excellence in Research must be successfully completed. Final approval is given by the Department.
- C. *Upper-Division Biology Electives:* two selected from Biological Sciences D105, D129, D130, D136, D143, D146, D148, D149, D151, D187, E109, E141, E157, M114, M116, M125, M144, M151, N110, N153, N154.

Application Process to Declare the Major: The major in Genetics is open to junior- and senior-level students only. Applications to declare the major can be made at any time. Information can also be found at <http://www.changeofmajor.uci.edu>. Double majors within the School of Biological Sciences or with Public Health Sciences are not permitted.

Undergraduate Major in Microbiology and Immunology

Microbiology and immunology are well-established disciplines within the life sciences. Microbiology addresses the biology of bacteria, viruses, and unicellular eukaryotes such as fungi and protozoa. Studies of microorganisms reveal basic information about processes in evolution, genetics, biochemistry, molecular biology, cell biology, structural biology, and ecology. Many bacteria, viruses, and protozoa cause disease in plants and animals. Hence, major areas of medicine and public health focus on these microorganisms.

Immunology encompasses efforts to understand how multicellular organisms have evolved to survive a variety of challenges to health and survival, including threats by pathogens and cancer cells. Basic questions of how immunity functions are entwined with a fundamental understanding of the consequences of microbial infection. Immunology also refers to the study of autoimmunity, the attack of the host by its own immune system.

The study of viruses (virology) is an important branch of microbiology that has contributed to our understanding of most of the fundamental processes in eukaryotic molecular biology, including the discovery of oncogenes. Viruses provide an excellent tool for the study of disease, cancer, and mechanisms of gene control. With growing threat of emerging diseases and the potential for viral-based biological weapons, the study of virology was recently intensified and gained new perspectives.

The major has been designed to span the interconnected disciplines of Microbiology and Immunology, and because the scope of the disciplines is considerable, students have the opportunity to specialize within the major in one of three areas: microbiology, immunology, or virology. The curricula overlap considerably, but there are unique courses for each specialty. Students opting for the microbiology specialization can select from courses focused on prokaryotes (bacteria) or eukaryotes (parasites).

The major is designed primarily for students who are serious about pursuing careers in microbiology and immunology and is intended to provide its graduates with the appropriate tools and training to successfully pursue professional and graduate degrees emphasizing these disciplines. These include Ph.D., M.D., and combined M.D./Ph.D. programs. Majoring in Microbiology and Immunology will also provide resources for serious students wishing to use a solid background in these disciplines for career goals in business, law, public and environmental policy, education, and other pursuits.

REQUIREMENTS FOR THE B.S. DEGREE IN MICROBIOLOGY AND IMMUNOLOGY

University Requirements: See pages 56–62.

School Requirements: See page 130.

Major Requirements for the General Track in Microbiology and Immunology

- A. *Required Major Courses:* Biological Sciences M121, M122, M124A.
- B. *Upper-Division Laboratories:* M116L and one selected from M121L, M122L, or M124L.
- C. *Upper-Division Biology Electives:* Six courses selected from the following: Recommended: E124, E176, M119, M120, M124B, M125, M128, M137, M143, M205, or from Alternatives: D103, D137, M114, M116, M144.

Requirements for the Specialization in Immunology

- A. *Required Major Courses:* Biological Sciences M121, M122, M124A.
- B. *Upper-Division Laboratories:* M116L and M121L.
- C. *Upper-Division Biology Electives:* Six courses selected from the following: Recommended: M119, M120, M124B, M125, or from Alternatives: D103, D137, M114, M116, M128, M137, M144.

Requirements for the Specialization in Microbiology

- A. *Required Major Courses:* Biological Sciences M121, M122, M124A.
- B. *Upper-Division Laboratories:* M116L and M122L.
- C. *Upper-Division Biology Electives:* Six courses selected from the following: Recommended: E124, E176, M137, M143, or from Alternatives: D103, D137, M114, M116, M128, M144.

Requirements for the Specialization in Virology

- A. *Required Major Courses:* Biological Sciences M121, M122, M124A.
- B. *Upper-Division Laboratories:* M116L and M124L.
- C. *Upper-Division Biology Electives:* Six courses selected from the following: Recommended: E124, M120, M124B, M125, M205, or from Alternatives: D103, D137, M114, M116, M128, M137, M144.

NOTE: Within the Microbiology and Immunology major, only one specialization can be awarded.

Application Process to Declare the Major: The major in Microbiology and Immunology is open to junior- and senior-level students only. Applications to declare the major can be made at any time, but typically in the spring of the sophomore year. Review of applications submitted at that time and selection to the major by the Microbiology and Immunology Faculty Board is completed during the summer. Information can also be found at <http://www.changeofmajor.uci.edu>. Double majors within the School of Biological Sciences or with Public Health Sciences are not permitted.

Honors Program

The Microbiology and Immunology Honors Program is available to high-achieving majors. The honors designation can be achieved by exceptional performance in research (Excellence in Research) and exceptional scholarship in the required and elective courses (3.5 GPA), and is noted on the transcript. The specific details of this achievement are to be submitted and approved by the major coordinator and the faculty oversight committee. The honors selection process occurs after winter quarter each year. Microbiology and

Immunology students must enroll in Biological Sciences H195 to complete the requirements for the Excellence in Research Honors program.

² Prerequisites are completion of or concurrent enrollment in Biological Sciences 97 and 194S, and satisfactory completion of the lower-division writing requirement; 100L must be completed prior to taking upper-division labs.

Undergraduate Major in Neurobiology

The Neurobiology major is designed to teach students how neurobiologists apply cellular, molecular, systems, and behavioral analyses in understanding how the nervous system works. The hallmark of the major is a year-long, in-depth exploration of the intellectual tools used to create, advance, and disseminate knowledge about the nervous system. Through neurobiology satellite courses, students acquire advanced factual knowledge about neurobiology. In addition, Neurobiology majors may choose to participate in research through Biological Sciences 199, where they will learn technical skills and receive mentoring from faculty members.

Students completing the Neurobiology major will be well qualified for admission to graduate or professional schools in preparation for careers in biological research, medicine, dentistry, veterinary medicine, nursing, and other related fields. Even without additional education, they will be competitive for positions in the pharmaceutical industry, the health care delivery industry, or in medically or biologically related technologies. The major also provides valuable preparation for students interested in entering other disciplines that increasingly interface with biology and biotechnology, such as law, business administration, and government policy. Additionally, the major provides excellent preparation for students who wish to become high school science teachers.

REQUIREMENTS FOR THE B.S. DEGREE IN NEUROBIOLOGY

University Requirements: See pages 56–62.

School Requirements: See page 130.

Major Requirements

- A. *Upper-Division Core:* Biological Sciences N110 and two selected from D103, D104, E106, E109.
- B. *Required Major Courses:* Biological Sciences N112A-B-C.

C. *Upper-Division Laboratories*: Biological Sciences N113L and two selected from D111L, E112L, E115L, E166, M114L, M116L, M118L, M122L; one of these two laboratories can be satisfied by completion of Excellence in Research in the Biological Sciences.

D. *Upper-Division Biology Electives*: two selected from Biological Sciences N117–N190 and D149; one additional four-unit course selected from Biological Sciences D103–D190, E106–E190, M114–M190, N110–N190, or from Chemistry 130A–B–C, Chemistry 131A–B–C, and Physics 147A. No course may be used to satisfy more than one requirement.

Application Process to Declare the Major: The major in Neurobiology is open to junior- and senior-level students only. Applications to declare the major can be made at any time, but typically in the spring of the sophomore year. Review of applications submitted at that time and selection to the major by the Neurobiology Faculty Board is completed during the summer. Information can also be found at <http://www.changeofmajor.uci.edu>. Double majors within the School of Biological Sciences or with Public Health Sciences are not permitted.

Undergraduate Major in Pharmaceutical Sciences

The B.S. degree program in Pharmaceutical Sciences trains students in a multidisciplinary approach so that they can contribute to the advancement of new pharmaceutical technologies such as accelerated chemical synthesis, molecular-based assays using cloned enzymes and cloned metabolizing enzymes, combinatorial chemistry, *in vitro* biopharmaceutical techniques, and gene therapies. Pharmaceutical scientists are rapidly changing the field of drug discovery and development. The graduates of this program may seek employment in public and private sectors or choose to pursue graduate degrees such as a Ph.D., M.D., or Pharm.D.

NOTE: The School of Biological Sciences Student Affairs Office is coordinating the undergraduate affairs activities for the College of Health Sciences' Department of Pharmaceutical Sciences.

REQUIREMENTS FOR THE B.S. DEGREE IN PHARMACEUTICAL SCIENCES

University Requirements: See pages 56–62.

School Requirements: See page 130.

Major Requirements

A. *Upper-Division Requirements*: Pharmaceutical Sciences M170A, M170B, M171, M172, M173, M174, M174L, M175, M176, Chemistry 177, and Chemistry 177L.

B. *Upper-Division Pharmaceutical Sciences Electives (15 units)*:

1. One upper-division laboratory selected from Biological Sciences D111L, E112L, M114L, M116L, M118L, M122L, M124L, N113L, Chemistry 128L, Chemistry 151L, Chemistry 160.
2. Biological Sciences E109.
3. One course, for students who choose electives that have these courses as prerequisites, selected from Biological Sciences D103, D104, N110, Chemistry 125.
4. The remaining elective units may be selected from Biological Sciences D126, D129, D136, D137, D145, D146, D148, D149, D151, D153, E112L, E136, E137, E141, E142, E189, M114, M114L, M118L, M120, M121, M122, M122L, M123, M124A, M124B, M125, M128, M137, M143, M144, N113L, N153, N154, N171, Environmental Analysis and Design E112, E124, E154U, E172, E186, Chemistry 128, 128L, 151, 151L, 156, 160, and 170. (Course may not be used to satisfy more than one requirement.)

C. *Research*: Nine units selected from undergraduate research courses such as Biological Sciences 199, Chemistry 180 or 199.

Application Process to Declare the Major: The major in Pharmaceutical Sciences is open to junior- and senior-level students only. Applications to declare the major can be made at any time, but typically in the spring of the sophomore year. Review of applications submitted at that time and selection to the major by the Pharmaceutical Sciences Faculty Board is completed during the summer. Information can also be found at <http://www.changeofmajor.uci.edu>. Double majors within the School of Biological Sciences (including Pharmaceutical Sciences) or with Public Health Sciences are not permitted.

Undergraduate Major in Plant Biology

Recent developments in plant biology and biotechnology place plants in the center of biological research. A dramatic increase in the understanding of cellular and developmental processes in plants enables plant biologists to control and manipulate plants developmentally as well as genetically. The availability of unique regeneration and gene delivery systems puts plant genetic engineering to the forefront of biotechnology. Food derived from genetically engineered plants is a daily experience for the American public and a continuous topic of ethical, environmental, sociological, and political discussions.

The Plant Biology program builds on core knowledge in plant structure taught in courses required for all majors offered by the School of Biological Sciences. After completing their second year, students may be admitted to the Plant Biology major and take courses primarily focusing on cellular, developmental, and molecular aspects of plant biology in lecture and laboratory classes. Although not affiliated with agricultural sciences, a limited exposure to applied aspects, such as plant breeding and hands-on horticulture is offered through the program. The Plant Biology major is fully compatible with the major in Biological Sciences and with medical school admission requirements.

The Plant Biology major is intended to provide graduates with the knowledge and skills necessary to pursue graduate degrees in biological research, including Ph.D. and M.S. training. In addition, graduates should be excellent candidates for pharmacy schools. Furthermore, the unit requirement for the major gives enough flexibility for students to tailor the curriculum to effectively support careers in business and education. The impact of biotechnology on society and the resulting need for informed specialists make this area of study effective training for students interested in law, journalism, or public affairs.

REQUIREMENTS FOR THE B.S. DEGREE IN PLANT BIOLOGY

University Requirements: See pages 56–62.

School Requirements: See page 130.

Major Requirements

- A. *Required Major Courses:* Biological Sciences D103, D105, D129, and D134.
- B. *Upper-Division Laboratories:* Biological Sciences D111L and two selected from Biological Sciences E112L, E115L, E166, M114L, M116L, M118L, M121L, M122L, M124L, N113L. Students may petition to substitute Excellence in Research (Biological Sciences 199) for one upper-division laboratory other than D111L; 199 research is strongly encouraged. The 199 laboratory must be approved by the Department, and Excellence in Research must be successfully completed. Final approval is given by the Department.
- C. *Biology Electives:* one from Biological Sciences D104, E106, E109; and two from Biological Sciences 9E, 11B, D137, D146, D147, D151, E118, E137, E167, E172, E175, E185, E189, M116, M122, M128, M137, M144.

Application Process to Declare the Major: The major in Plant Biology is open to junior- and senior-level students only. Applications to declare the major can be made at any time, but typically in the spring of the sophomore year. Information can also be found at <http://www.changeofmajor.uci.edu>. Double majors within the School of Biological Sciences or with Public Health Sciences are not permitted.

Special Programs and Courses

Biological Sciences 199

The Biological Sciences 199 Undergraduate Research Training Program provides students the opportunity to pursue independent research. Students conduct experimental laboratory, field, or clinical research as an apprentice scientist under the supervision of a professor in the School of Biological Sciences or the School of Medicine. Biological Sciences 199 research students experience the challenge and excitement of the world of science. Students develop new scientific skills and knowledge while training with professors who are on the cutting edge of research and discovery in the biological and medical sciences. The research training may commence as early as the sophomore year or, in the case of exceptional students, in the freshman year.

To participate in this unique research training program, students must be in good academic standing, and completion of the Biological Sciences 194S Safety and Ethics course is mandatory prior to enrollment. Students are encouraged to investigate the possibilities for research early to assure that all requirements and deadlines are met. It is recommended that students contact a faculty sponsor at least one quarter in advance for Biological Sciences 199 enrollment. Once a faculty sponsor is acquired, the student must submit a research proposal and the signed Waiver and Release of Liability and Acknowledgment of the Assumption of Risk form to the Biological Sciences Student Affairs Office, 3210 Biological Sciences III. At the end of each quarter a Summary Report is required. The packets (including the waiver form) and summary forms are available online only.

Students cannot participate in research involving human blood, body fluids, or tissue, unless special approval is granted. The faculty sponsor must submit a request for exception to the Biological Sciences Student Affairs Office.

Students conducting research directly with patients or other human subjects must comply with special enrollment procedures and the additional safety training required at the clinical site. Visit the Student Affairs Office or the Web site for complete instructions.

The Biological Sciences 199 Undergraduate Research Training Program standards, faculty abstracts, enrollment policies, and announcements are available at <http://www.bio.uci.edu/> (click on “Student Affairs.”). The Biological Sciences 199 Research Program Opportunities and Enrollment Procedures Workshop is podcasted on the Biological Sciences Student Affairs Web site.

The Biological Sciences 199 Undergraduate Research Training Program can provide experience that is beneficial for the future pursuit of graduate school. Information regarding research careers in the biological sciences is best obtained from a faculty research mentor.

Students should be aware that for any one quarter, a maximum of five units of independent study courses, taken in any school or program, is permitted.

Minority Sciences Programs in Biological Sciences

The Minority Sciences Programs (MSP) in Biological Sciences is a UCI umbrella program that provides infrastructure and orchestration for the operation of minority research training grants supported by the National Institutes of Health (NIH) and other agencies. MSP seeks to increase the number of U.S. underrepresented groups in biomedical research careers. MSP participants benefit from early exposure, continuous research training, and faculty mentoring. Support is also provided through paid summer and year-round research internships, access to the latest computer technology, tutoring, academic advising, scientific writing, and participation at national conferences. Furthermore, MSP has established a campuswide, regional, national, and international network of committed faculty and resource programs to facilitate the transition from high school through community college, baccalaureate, and master’s degrees to Ph.D. careers in biomedical research and related fields. Additional information is available from the MSP office, 1331 Biological Sciences III; (949) 824-6463; <http://port.bio.uci.edu>.

Biological Sciences Tutoring Program

The Tutoring Program provides free tutoring for most Biological Sciences courses and is available to all students in any major. Weekly small group tutoring sessions, reviews for midterms and finals, and a growing online database of worksheets and review materials are provided. In the Tutoring Program, UCI students tutor other UCI students. For the student tutor, this program provides opportunities to develop their teaching abilities, to meet and interact with faculty, and to perform a worthwhile and necessary service. Tutors also receive academic credit. For more information, contact the Biological Sciences Student Affairs Office in 3210 Biological Sciences III or visit the tutoring program Web site at <http://www.eee.uci.edu/programs/biotutor>.

Education Abroad Program

Upper-division students have the opportunity to experience a different culture while making progress toward degree objectives through the Education Abroad Program (EAP). EAP is an overseas study program which operates in cooperation with host universities and colleges throughout the world. Specifically, Biology majors should consider the EAP programs in the United Kingdom, Canada, Sweden, Australia, Denmark, and Costa Rica. See the Center for International Education section for additional information.

Students may wish to participate in the Education Abroad Program’s Tropical Biology Quarter which is for undergraduates with at least one year of introductory biology, one quarter of upper-division biology, and a serious interest in biological studies. The program includes lectures, field laboratories, and independent research, with an emphasis on direct field experience. Students also take a course in Spanish language and Latin American culture.

Master of Science with a Concentration in Biotechnology

The School of Biological Sciences offers a master’s program with a concentration in Biotechnology designed to train students to enter the field of biotechnology as skilled laboratory practitioners. The upper-division course requirements for admission into the program are extensive. Students interested in applying for admission to the Biotechnology program should plan to complete the necessary courses during their junior and senior years. See the Graduate Study in Biological Sciences section for more information.

3-2 Program with The Paul Merage School of Business

Outstanding Biological Sciences majors who are interested in a career in management may wish to apply for entry into the 3-2 Program with The Paul Merage School of Business. Students normally apply for this program early in their junior year. See The Paul Merage School of Business section for further information.

Special Research Resources

Special research resources include the Beckman Laser Institute and Medical Clinic, a research, training, and service facility in the area of laser microbeam technology; the School of Biological Sciences Biohazard (P-3) Facility, which provides laboratory facilities for working with biological agents or biological molecules such as recombinant DNA which would be hazardous when used in open laboratories; the Developmental Biology Center, devoted to analyzing the cellular and genetic mechanisms underlying growth, development, and regeneration; the Center for the Neurobiology of Learning and Memory, a research center for studies of the brain mechanisms underlying learning and memory; the Institute for Brain Aging and Dementia; the Center for Virus Research, which includes the Viral Vector Design research group; the Conservation Biology Project; the Cancer Research Institute; the Center for Immunology; the Macromolecular Structure Research Unit; the UCI Arboretum, a botanical garden facility; the San Joaquin Marsh Reserve, which supports controlled marsh biota; the Burns Piñon Ridge Reserve, a high-desert habitat in San Bernardino County; and the UCI Ecological Preserve, which includes coastal hills on the campus, once under heavy grazing, but now returning to a more natural state. It is important to note that the School of Biological Sciences collaborates with the School of Medicine, thereby providing an opportunity for the sharing of both teaching and research activities. These collaborative efforts include the Institute for Genomics and Bioinformatics; the Reeve-Irvine Research Center; and the Bio-Imaging Interest Group.

Advising: Academic, Career, Health Sciences

3210 Biological Sciences III
<http://www.bio.uci.edu/students/>

Academic Advising

The Biological Sciences Student Affairs Office coordinates the advising program and provides academic counseling as well as special services particularly in the area of preprofessional career counseling. Undergraduate Biological Sciences students should consult the Biological Sciences Student Affairs Office for information on academic requirements for the degree, career opportunities, the Biological Sciences 199 Research Program, available tutoring for Biological Sciences courses, Biological Sciences student organizations, and scholarship information. Students can also come to the Biological Sciences Student Affairs Office to change their major, apply for graduation, or for any other help they might need related to their academic career at UCI.

All freshmen will enroll in small-group freshman seminars (Biological Sciences 2A) and all other new students will enroll in special sections of Biological Sciences 190.

Peer Academic Advisors. The Peer Academic Advisors are upper-division Biological Sciences majors who bring with them valuable academic and social experiences. Their functions include counseling students in matters of major selection, program planning, petitioning, tutoring, learning skills problems, and participation in cocurricular and extracurricular activities.

The Peer Advisors are located in the Biological Sciences Student Affairs Office. Office hours are posted at the beginning of each quarter.

Career Advising

Information on graduate and professional schools in the health sciences can be obtained from the Biological Sciences Student Affairs Office. The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information. The Student Affairs Office has developed a complete career library and a close relationship with the Center in an effort to provide current, relevant career information for students.

Areas of opportunity open to those with a Bachelor of Science degree include laboratory technology, publishing, technical editing, pharmaceutical sales, and training programs in county, state, and federal agencies. The bachelor's degree is necessary to pursue studies leading to the M.S. and Ph.D. degrees.

The B.S. degree, plus short training periods, may prepare students for employment in education, medical technology (usually one year), physical therapy, and various other areas.

Education (community colleges, state colleges, or private schools), medical illustration, and public health (which includes hospital administration, biostatistics, epidemiology, environmental health sciences, social work, public health education, maternal and child health, and infectious and tropical diseases) are fields in which opportunities are available upon completion of a master's program.

The Ph.D. degree may lead to research in many areas, among them biochemistry, biometeorology, botany, cytology, ecology, fishery biology, genetics, home economics, microbiology, molecular biology, pathology, physiology, psychobiology, public health, range management, soil conservation, and zoology.

Other areas where advanced degrees are necessary include medicine, dentistry, law, optometry, podiatry, osteopathy, and veterinary medicine.

Health Sciences Advising

Advising for careers in the health sciences is a specialty of the Biological Sciences Student Affairs Office. Students desiring to enter the health sciences should have their programs checked in the Office and should plan to enroll in Biological Sciences 3A. Admissions tests for medical, dental, pharmacy, and graduate schools should be taken in the spring, a year and one-half before the student plans to enter.

Leaders in nearly all health professional schools recommend that students preparing to seek admission to their schools plan to obtain a bachelor's degree. Students who plan to enter a school of dentistry, medicine, or other areas of the health sciences may receive the required preprofessional training at UCI. This preprofessional training may be accomplished by (1) completing the major in Biological Sciences or (2) majoring in any school or department and fulfilling concurrently the specific course requirements of the dental, medical, or other professional school the student expects to attend.

Students interested in the health sciences should choose electives in the social sciences, possibly a foreign language, physical chemistry, or other specific courses required or recommended by graduate schools.

The Biological Sciences Student Affairs Office offers specialized services, for a fee, to all students applying to postgraduate professional schools in the health sciences, including a personal file containing the student's letters of recommendation, and a service of sending all recommendations for a student to professional and graduate schools.

Student Participation

A wide variety of student associations, clubs, and groups provide opportunities for School of Biological Sciences students to participate in different types of activities and events. The groups are wide ranging and include nationally recognized honors societies such as Alpha Epsilon Delta, volunteer service organizations such as the Flying Sams, specialized groups such as the UCI Sports Medicine Club, and more. Detailed information about the numerous options is available online at http://www.bio.uci.edu/students/Current/content_organizations.html.

Undergraduate Courses in Biological Sciences

1A-B Life Sciences (4-4) F, W, S. Lecture, three hours. A two-quarter integrated sequence designed to introduce nonmajors to the basic concepts of modern biology. **1A:** Discussion of evolutionary biology, ecology, molecular biology, and genetics. **1B:** Cell and behavioral biology including plant structure and function, photosynthesis, and animal physiology. Prerequisite for 1B: Biological Sciences 1A. Open to nonmajors only. **(II)**

2A Freshman Seminars (1). Lecture, one hour; seminar, one hour. Weekly meetings consisting of presentations by faculty, professional staff, and New Student Peer Academic Advisors provide information about the School of Biological Sciences, campus resources, and special programs/opportunities. Pass/Not Pass only. Open to freshman Biological Sciences majors only.

2B Freshman Seminar (1). Seminar, one hour. Faculty presentations and readings focused on the structure, function, opportunities, and current issues in the biological sciences. Pass/Not Pass only. Open to freshmen only.

3A Career Decision Making (0). Lecture, one hour. An introductory course designed to facilitate the career decision-making process. Decision-making processes, values, and standardized tests of aptitudes, interests, and values are utilized with non-test data in appraising biological sciences career options. Pass/Not Pass only. One unit of workload credit only.

4 Introduction to Biomedical Research and Careers (0). Seminar, 1.5 hours. A seminar series for students interested in careers in the biological sciences and medicine. Presents a broad view of research areas, experimental approaches, clinical and industrial applications, issues of national health policies and economics, career paths in the biomedical sciences. May be repeated for credit as topics vary. One unit of workload credit only.

5 Introduction to Molecular Biology (4). Lecture, three hours. Molecules of life, with emphasis on medical applications. Open to nonmajors only. No credit given for Biological Sciences 5 if taken after Biological Sciences 99. **(II)**

6 Tropical Biology: Race to Save the Tropics (4). Lecture, three hours. Population growth combines with tropical resource consumption by industrialized nations to cause high rates of deforestation, pollution, habitat fragmentation, and extinction of species. Discusses tropical biomes, their population, community, and ecosystem processes, and possible means of conservation of biodiversity. **(II)**

8A Human Genetics (4) S. Lecture, three hours; discussion, one hour. This survey course in human genetics includes an introduction to basic genetic concepts including family studies, chromosomes, molecular genetics of human disease, and an analysis of the Human Genome Project. Special emphasis is given to ethical and social issues. **(II)**

9A Nutrition Science (4) F, W. Lecture, three hours. An introduction to nutrition science, integrating concepts from biology, biochemistry, microbiology, physiology, and psychology to explain the interaction between nutrients and the human body. Biological basis of nutrient standards is analyzed. Effects of nutrition, behavior, exercises on health/disease. **(II)**

9B Biology and Chemistry of Food and Cooking (4) S. Lecture, three hours. The kitchen is used as a laboratory to introduce fundamental principles of biology, chemistry, and physics. A molecular/cellular analysis of cooking, including concepts such as protein structure, browning reactions, colloids, emulsions, carbohydrate metabolism, and development of flavor/texture through biochemical transformations. (II)

9C Biotech Basics (4). Lecture, three hours. An overview of current biotechnology. Discusses the biological/molecular basis of novel therapies for diseases, modification of human genes, human genome project, cloning, DNA fingerprinting, and genetically modified food. Targeted for students interested in modern breakthroughs in biology. (II)

9D Diseases of the Twenty-First Century (4) F. Lecture, three hours. Why do we get sick? An introduction to the biological basis of human disease, including diseases of the cardiovascular, respiratory, nervous, and reproductive systems. Case studies present diagnosis, treatment, and prevention protocols. Inheritable and infectious diseases also discussed. (II)

9E Horticulture Science (4). Lecture, two hours; laboratory, two hours; field work, one weekend day per quarter. Scientific principles of horticulture at the UCI Arboretum. Taxonomy, plant life history strategies; experiments with seed dormancy; morphological adaptations for specialized sexual and clonal reproduction; basics of plant propagation and ecological restoration. Laboratory fee. (II)

9F Current Issues in Biology: A Problem-Based Learning Approach (4). Seminar, three hours. Students explore in-depth several complex biological and interdisciplinary issues using problem-based learning. The main techniques for learning course material are group discussion, research, projects, and presentations. Attendance and group participation are mandatory. Prerequisites: Biological Sciences 1A-B or Biological Sciences 94 and 96. (II)

9G Way Your Body Works (4). Lecture, three hours. An introduction to the basic mechanisms that control the organ systems of the human body, including the nervous, cardiovascular, immune, and reproductive systems. Emphasis is on how the body works normally, but includes how these processes fail in disease. Open to nonmajors only. (II)

9J Biology of Oriental Medicine (4) W. Lecture, three hours. With lectures, demonstrations, and hands-on learning, the theory and practice of herbal medicine, acupuncture, qigong, and manipulative therapies are explained in Western biomedical terms. The latest basic and clinical research advances in each area are also described. Only one course from Biological Sciences 9J, 9N, and D124 may be taken for credit. (II)

9K Global-Change Biology (4) W. Lecture, three hours; discussion, one hour. Addresses ways in which humans are altering the global environment, with consequences for the ecology of animals, plants, and microbes. Discussion on how these biologically oriented questions relate to human society, politics, and the economy. Same as Earth System Science 13. (II)

9M The Biosphere (4) W. Lecture, three hours; discussion, one hour. An introduction to the role of biological processes in the Earth system. Topics span the functioning of cells, organisms, ecosystems, and the global biosphere, including an introduction to evolution, terrestrial and marine organismal biology, and principles of ecology and biogeochemistry. Same as Earth System Science 9. (II)

9N Introduction to Complementary and Alternative Medicine (4) Summer. Lecture, three hours. Basic and clinical research on complementary and alternative therapies (e.g., herbal medicine, mind-body practices, energy medicine, acupuncture, homeopathy, chiropractic, Ayurveda), and how such practices are integrated into Western medicine are discussed. Includes lectures, demonstrations, and hands-on learning. Only one course from Biological Sciences 9N, 9J, and D124 may be taken for credit. (II)

10 The Biology of Human Diseases (4). Lecture, three hours. Introduction to concepts of diagnosis, treatment, and prevention of major human infectious diseases. Covers some aspects of epidemiology. Scope and impact of infectious diseases in the present and past experiences in controlling infectious disease. Reviews the biology of human organ systems. Open to nonmajors only. (II)

11 Topics in Biological Sciences (4) F, W, S. Lecture, four hours. Studies in selected areas of biological sciences. May be taken for credit three times as topics vary. (II)

12A Human Reproduction and Development (4). Lecture, three hours. Provides detailed insight into human reproduction and development. Reproductive topics include anatomy/physiology of the adult reproductive systems, infertility, and STDs. Development topics include gamete formation, fertilization, fetal development, and birth. Human genetic diseases and developmental disorders also discussed. (II)

12B Disease and Civilization (4). Lecture, three hours. To demonstrate the role played by infectious diseases on the development of human civilization. The psychological impact of major epidemic diseases upon society and culture. Starting with early hunting and gathering cultures through the effect of AIDS in the modern world. (II)

12C Neurobiology of Behavior (4). Lecture, three hours. Examines how animals ranging from insects to mammals have evolved neural solutions to specific problems posed by their environments. Principles derived from research findings draw on the fields of animal behavior, cellular physiology, anatomy, genetics, and molecular biology. (II)

12D Molecular Basis of Human Disease (4). Lecture, three hours; discussion, one hour. Introduction to the concepts of the cellular and molecular basis, treatment, and diagnosis of human disease. Diseases resulting from infectious agents such as virus, bacteria, protozoan and metazoan animals, and diseases resulting from genetic disorders discussed in context of molecular mechanisms. (II)

12E Plants, Civilization, and Technology (4). Lecture, three hours. How plants affected the formation of civilization and the course of history, from early agriculture to today's plant genetic engineering. Discusses and merges biological, historical, and cultural aspects. May include field trips, musical and art presentations, a Japanese tea ceremony.

14 California Teach 1: Introduction to Science and Mathematics Teaching (3) F, W, S. Seminar, three hours. First in a series for students interested in becoming middle or high school teachers of mathematics or science. Students gain an understanding of effective, research-based teaching strategies. Includes supervised field experience in a K–12 classroom. Same as Physical Sciences 5. (IX)

16 Introduction to Darwinian Biology (4) W. Lecture, three hours. An introduction to the basic concepts of ecology, evolution, and functional biology suitable for non-scientists. Open to nonmajors only. No credit given for Biological Sciences 16 if taken after Biological Sciences E106. (II)

20 California Natural History (4) F. Lecture, three hours. Introduction to ecological relationships within a variety of California habitats. Explores aspects of the physical environments and the adaptations of organisms to their physical and biological surroundings in habitats such as the coastal zone, mountains, and deserts. (II)

25 Biology of Cancer (4) W. Lecture, four hours. Biological, clinical, and psychosocial nature of cancer through the perspectives of medical researchers, biologists, physicians, and health educators. For students of all majors, designed so that each can increase personal awareness of the biology of cancer.

30 Biomedical Ethics (4) S. Lecture, three hours. Ethical issues inherent in twenty-first-century biological and medical advances. An introduction to the basic biology underlying these issues and an analysis of the ethical implications to society. Topics such as cloning, stem cell research, genetic engineering are discussed by guest speakers.

35 The Brain and Behavior (4). Lecture, three hours. Introduction to how the brain works. Biological processes underlying perception, movement, sleep-wake cycles, motivation, language, learning, and memory. Changes in the brain associated with sex differences, drug use, aging, seasons, and time of day. Fundamental properties of the nervous system. Open to nonmajors only. (II)

36 Drugs and the Brain (4). Lecture, three hours. Introduction to the actions of drugs on the brain. How studying drug action helps to reveal normal functions of neurons. How drugs can correct neural disorders or disrupt neural function. Biological issues related to drug abuse, drug addiction, and drug seeking. Open to nonmajors only. (II)

37 Brain Dysfunction and Repair (4). Lecture, three hours. Introduction to the disruptions in brain function that underlie disorders such as Alzheimer's disease, Parkinsonism, schizophrenia, and depression, and the basis for drug therapies. The brain's ability to repair itself after damage and the pros and cons of that repair. Open to nonmajors only. (II)

38 Mind, Memory, Amnesia, and the Brain (4) S. Lecture, three hours. Introduction to neural mechanisms underlying learning and memory. Emphasis on molecular changes that mediate memory as well as structures involved in different forms of memory. Additionally, the biology of memory phenomena, from extraordinary memory to false memory to amnesia is examined. Open to nonmajors only. (II)

39 Neurobiology of Sex Differences (4) W. Lecture, three hours. Analysis of the difference between the two sexes. Analyzing the sex chromosomes provides a look at the general biological development of the sexes. Also focuses on how the nervous system becomes sexually differentiated and how the nervous system ultimately mediates different behaviors. Open to nonmajors only. (II)

40 Neurobiology of Communication (4). Lecture, three hours. Explores various modes of communications focusing on neurobiological and sensory bases that support these modes. Topics include: communication codes for a specific signal, such as alarm, social hierarchy, mating readiness, emotions, and the purpose, accuracy, and honesty of these signals. Open to nonmajors only.

45 AIDS Fundamentals (4) F, W. Lecture, three hours; discussion, one hour. Considers the biological and sociological bases of the AIDS epidemic. Topics include the history of AIDS, current medical knowledge, transmission, risk reduction, and how the community can respond. Same as Planning, Policy, and Design 45 and Public Health 80. (II)

46 Discussion and Literature Research in AIDS (2 to 4) F, W. Discussion, two hours; research, two hours. Students carry out two activities: (1) leading discussions about HIV/AIDS (predominantly regarding sociological and personal reactions) among students taking the AIDS Fundamentals course and (2) literature research about biomedical aspects of AIDS. Prerequisite: Biological Sciences 45 or Planning, Policy, and Design 45 or Public Health 80; consent of instructor.

50 Biology of Heart Disease (4) F. Lecture, four hours. Guest lecturers from the field of cardiovascular medicine discuss current concepts regarding cause, diagnosis, and treatment of heart disease. Topics include surgery, rehabilitation, and congenital defects, with emphasis on prevention.

55 Introduction to Ecology (4). Lecture, three hours. Principles of ecology; application to populations, communities, ecosystems, and humans. Open to nonmajors only. No credit given for Biological Sciences 55 if taken after Biological Sciences 96 or E106. (II)

65 Biodiversity and Conservation (4) W. Lecture, three hours. A biological perspective on the current environmental crisis. The origin, evolution, and value of biological diversity. Extinction and depletion caused by overexploitation, habitat loss, and pollution. Conservation through habitat preservation and restoration, captive breeding, cryopreservation. (II)

75 Human Development: Conception to Birth (4) W, S. Lecture, three hours. Processes leading to the birth of a healthy child and the avoidance of birth defects. Male and female reproductive systems, hormonal control of egg-sperm formations, sexual intercourse, contraception, venereal diseases, fertilization, cell division, embryonic development, fetal physiology. Open to nonmajors only. (II)

H90 The Idiom and Practice of Science (4). The importance of biological sciences in our world are discussed. Topics may include brain and behavior, health and disease, genetics and society, and conservation biology. A primary goal is to encourage students to understand better the world in which they live. Prerequisite: restricted to members of the Campuswide Honors Program. (II)

92 Special Group Activities

Sec. 3 Reading, Writing, and Reasoning for Health Science (4) F, W, S. Designed to strengthen biology students' reading, writing, and critical thinking skills to ensure their success at the University and to prepare them for graduate study in medicine, dentistry, optometry, or public health. Pass/Not Pass only. Open to Biological Sciences majors only.

Sec. 5 Curriculum (2). Initiation, planning, and coordination of student-run courses. Prerequisite: consent of instructor. May be repeated for a total of eight units. Pass/Not Pass only.

101 California Teach 2: Middle School Science and Mathematics Teaching (3) F, W. Seminar, three hours. Second in a series for students interested in becoming middle or high school teachers of mathematics or science. Students gain an understanding of effective, research-based teaching strategies for grades 6–8. Includes supervised field experience in a middle school classroom. Prerequisite: Biological Sciences 14. Same as Physical Sciences 105. (IX)

102 California Teach 3: High School Science and Mathematics Teaching (2) F, W. Seminar, 1.5 hours; field work, 1.5 hours. Capstone of a series of three seminars for students interested in becoming secondary mathematics or science teachers. Meets six times for students to understand effective, research-based teaching strategies. Includes an opportunity to experience teaching in a high school. Prerequisites: Biological Sciences 14 and 101. Same as Physical Sciences 106.

108 Research Methods (4) W, S. Lecture, three hours; laboratory, two hours. Explores tools of inquiry for developing and implementing science research projects. Students undertake independent projects requiring data collection, analysis, and modeling, and the organization and presentation of results. Additional topics include ethical issues and role of scientific literature. Prerequisite: Biological Sciences 14 or Physical Sciences 5. Same as Chemistry 193 and Physics 193.

190 Transfer Student Seminars (1). Lecture, one hour; seminar, one hour. Weekly meetings consisting of presentations by faculty, professional staff, and New Student Peer Academic Advisors provide information about the School of Biological Sciences, campus resources, and special programs/opportunities. Pass/Not Pass only. Open to new transfer students only.

CORE CURRICULUM

Prerequisites listed for Core courses are rigorously enforced. (Transfer students who have successfully completed one or more years of college biology should consult with the Biological Sciences Student Affairs Office for possible exemption from portions of the Core.)

93 From DNA to Organisms (4) F. Lecture, three hours; discussion, one hour. Cell biology, biochemistry, genetics, and the biology of organ systems. Covers concepts of building blocks (nucleotides, amino acids, and cells) and of information flow (DNA to proteins, receptors to nuclei, the blood to distant organs, and DNA to offspring). No credit given for Biological Sciences 93 if taken after Biological Sciences 97 and/or 98. (II)

94 From Organisms to Ecosystems (4) W. Lecture, three hours; discussion, one hour. Patterns of diversity, ecology, and evolutionary biology. Emphasis is on the Tree of Life and how its members are distributed and interact. Prerequisite: Biological Sciences 93. No credit given for Biological Sciences 1A if taken after Biological Sciences 94. (II)

97 Genetics (4) F. Lecture, three hours; discussion, one hour. Introduction to genetics. Basic features of the replication and expression of DNA; cell division; and gene transmission. Recombination and mutation in diploid organisms. Prerequisite: Biological Sciences 94.

98 Biochemistry (4) W. Lecture, three hours. Structure and properties of proteins; major biochemical pathways and mechanisms for their control. Prerequisites: completion of Biological Sciences 97 and completion of or concurrent enrollment in Chemistry 51B or 52B.

99 Molecular Biology (4) S. Lecture, three hours. Biochemistry and replication of nucleic acids; molecular genetics; protein biosynthesis; genetic code; regulation of expression of genetic information; biochemical evolution. Prerequisite: Biological Sciences 98.

100L Experimental Biology Laboratory (4) F, S. Lecture, one hour; laboratory, three hours. Basic experimental design, laboratory techniques, data gathering skills, and analysis and preservation of data for a variety of areas of inquiry in the biological sciences. Prerequisites: current enrollment in or completion of Biological Sciences 97 and 194S; satisfactory completion of the lower-division writing requirement.

D103 Cell Biology (4) F, W. Lecture, three hours; discussion, one hour. Analysis of the basic structure and function of animal cells, with an emphasis on the regulation of cellular processes. The basic features of membranes, cellular compartmentalization, protein trafficking, vesicular transport, cytoskeleton, adhesion, signal transduction, and cell cycle are covered. Prerequisite: Biological Sciences 99. Biological Sciences D103 and 107 may not both be taken for credit.

D104 Developmental Biology (4) W. Lecture, three hours; discussion, one hour. Cellular and molecular analysis of how a fertilized egg develops into an organism consisting of complex structures such as the eye, arms, and brain. Emphasis is on the key concepts of developmental processes underlying pattern formation, growth, and regeneration. Corequisite or prerequisite: Biological Sciences D103. Biological Sciences D104 and 108 may not both be taken for credit.

D105 Cell, Developmental, and Molecular Biology of Plants (4) F. Lecture, three hours. Emphasizes the special features of plant cells and plant development as compared to animals. Plants' ability to fuel our planet through photosynthesis and the interactions of plants with microorganisms in making nitrogen available to other life forms are two central topics. Prerequisite: Biological Sciences 99.

E106 Processes in Ecology and Evolution (4) S. Lecture, three hours; discussion, one hour. An in-depth study of the mechanisms that drive evolution and ecology including: natural selection, mutation, genetic drift, speciation, extinction, life-history patterns, population dynamics, ecosystem and community structure, predator-prey and host pathogen interactions, and social behavior. Prerequisite: Biological Sciences 94. May be used as a course repeat of Biological Sciences 96. Biological Sciences E106 and 96 may not both be taken for credit.

E109 Human Physiology (4) F, W. Lecture, three hours. Functional features of the major organ systems in the human body. Emphasis on homeostasis and the interactions of organ systems in health and disease. (Discussion of behavior and brain function deferred to Biological Sciences N110.) Prerequisite: Biological Sciences 99.

N110 Neurobiology and Behavior (4) S. Lecture, three hours. Consideration of the evolution of behavior, including ethological and psychological aspects and analysis of neuroanatomical, neurochemical, neurophysiological, and neuroendocrine systems underlying basic behavioral processes. Corequisite or prerequisite: Biological Sciences 99.

UPPER-DIVISION LABORATORIES

D111L Developmental and Cell Biology Laboratory (4) F, W, S. Lecture, two hours; laboratory, three hours. Students study the division of cells, isolate cellular organelles (chloroplasts, mitochondria, nuclei), and follow changes in cells undergoing programmed cell death. Development is demonstrated in experiments showing cooperation of individual cells in forming a multicellular organism. Prerequisites: Biological Sciences 100L and 194S; concurrent enrollment in or completion of Biological Sciences D103 or D104 or D105.

E112L Physiology Laboratory (3) F, W, S. Laboratory, four hours. Prerequisites: Biological Sciences 100L and 194S; and E109 or Engineering BME120 and BME121.

E115L Evolution Laboratory (4) S. Laboratory, seven hours. Students perform experiments which illustrate important concepts in evolutionary biology such as natural selection, random genetic drift, inbreeding, age-specific selection, sexual selection, and phylogenetic reconstruction. Prerequisites: Biological Sciences 100L, E106, and 194S.

E166 Field Methods in Ecology (6) F. Laboratory, eight hours. Field studies of major concepts in plant and animal ecology, with emphasis on experimental design, field sampling methods, statistical analysis, and scientific writing. An independent project and two field trips are required. Satisfies the upper-division writing requirement with a grade of C or better. Prerequisites: Biological Sciences 100L, E106, and 194S, and satisfactory completion of the lower-division writing requirement.

M114L Biochemistry Laboratory (4) F, W, S. Laboratory, four hours. Properties of enzymes and the culture and isolation of mutants of microorganisms. Prerequisites: Biological Sciences 99, 100L, and 194S.

M116L Molecular Biology Laboratory (4) F, W, S, Summer. Laboratory, four hours. Students perform experiments which illustrate the chemical and biological properties of nucleic acids. Emphasis is placed on recent techniques in recombinant DNA technology including gene isolation and characterization. Prerequisites: Biological Sciences 99, 100L, and 194S.

M118L Experimental Microbiology Laboratory (4) F, W, S, Summer. Laboratory, three hours, discussion, one hour. Introductory general microbiology designed for preprofessional biology majors. Includes microscopy, cultivation of bacteria, morphological and biochemical characterization of bacteria, microbial metabolism, growth and genetics, microorganisms and human disease, and interactions of microorganisms with the environment. Prerequisites: Biological Sciences 100L and 194S; concurrent enrollment in or completion of Biological Sciences M122 or M132, or equivalent. M118L and M122L may not both be taken for credit.

M121L Advanced Immunology Laboratory (4) S. Laboratory, four hours. Emphasis is placed on learning modern techniques in immunology such as ELISAs, western blotting, immunofluorescent staining assays. Prerequisites: Biological Sciences M116L and M121; consent of instructor. Concurrent with Molecular Biology and Biochemistry 221L.

M122L General Microbiology Laboratory (6) F, Summer. Laboratory, six hours. Selective isolation of wide variety of microbial types. Characterization and identification by morphological and comparative nutritional and biochemical approaches. Industrial, medical, and biological research applications. Prerequisites: Biological Sciences 100L and 194S; concurrent enrollment in or completion of Biological Sciences M122 or M132, or equivalent. M122L and M118L may not both be taken for credit.

M124L Virus Engineering Laboratory (4) S. Laboratory, four hours; discussion, one hour. An advanced laboratory for undergraduates who have completed a virology lecture class. Students learn to engineer recombinant viruses and express genes in mouse tissue. Prerequisites: Biological Sciences M116L and M124A or M124B; consent of instructor.

N113L Neurobiology Laboratory (3) W, S. Laboratory, four hours. Prerequisites: Biological Sciences 100L and 194S; concurrent enrollment in or completion of Biological Sciences N110.

UPPER-DIVISION ELECTIVES

DEVELOPMENTAL AND CELL BIOLOGY

D113 Genetics Majors Seminar (1) W. Seminar, one hour. Genetics majors attend a weekly seminar to discuss current research techniques and career opportunities in the field. Students have the opportunity to present their own independent research. Open to Genetics majors only. May be taken for credit two times.

D114 Developmental and Cell Biology Majors Seminar (1) S. Seminar, one hour. Developmental and Cell Biology majors attend a weekly seminar to discuss current research techniques and career opportunities in the field. Students have the opportunity to present their own independent research. Pass/Not Pass only. May be taken for credit two times.

D115 Molecular Motors and the Cytoskeleton (4). Lecture, three hours; discussion, one hour. Cells use nano-machines (molecular motors) to organize themselves and transport cargo. This interdisciplinary course studies these motors and the rails they move along. Examines their biological function and how they function at the single-molecule level as machines. Prerequisite: Biological Sciences D103 or consent of instructor. Concurrent with Developmental and Cell Biology 205.

D116 Human Reproduction and Development PBL Course (4) Summer. Lecture, six hours. Focuses on human reproductive biology and *in utero* human development. Taught in a problem-based learning (PBL) format focused on the biological, social, economic, and ethical implications of specific clinical cases. Prerequisites: Biological Sciences 93, 94, 97, 98, and 99, or equivalent.

D124 Biology of Integrative Medicine (4). Lecture, three hours. Presentation of biological principles and the latest clinical and basic research on complementary and alternative therapies (e.g., mind-body medicine, energy medicine, herbal medicine, acupuncture, manipulative therapies) and their integration with Western medicine. Lectures supplemented by demonstrations and hands-on learning sessions. Only one course from Biological Sciences D124, 9J, and 9N may be taken for credit.

D126 Systems Biology of Human Disorders (4) F, W, S. Lecture, three hours; discussion, one hour. Introduces human pathophysiology using a systems biology perspective. Focuses on the proper regulation of human systems, and the dire consequences of loss of regulation. The goal is to impart an "engineering" mind-set to understand human disorders. Prerequisites: Biological Sciences 99 or Engineering BME50A-B and Mathematics 2A-B.

D129 Biotechnology and Plant Breeding (4) S. Lecture, three hours. Synopsis of conventional plant breeding techniques, their limitations, and supplementations through modern biotechnology. These new biotechnological methods include steps such as cloning, cell transformation (genetic engineering), and cell fusion. Focuses on crop improvement, the state of the art in animal and human systems, and the impact of gene technology on society. Prerequisite: Biological Sciences 94 or consent of instructor.

D129L Plant Cell Culture Laboratory (4). Laboratory, 60 hours per quarter, run on two, full three-day weekend sessions which normally will not conflict with other classes. Isolation and culture of plant cells and tissues, i.e., protoplasts, pollen, meristem. Genetics and structural manipulation of cultured cells, i.e., fusion, laser microsurgery, mutation. Regeneration of plants from cultured cells and tissues. Greenhouse experience (propagation, fertilization, grafting). Prerequisite: Biological Sciences D129 or consent of instructor.

D130 Photomedicine (4) W. Lecture, three hours; discussion, one hour. Studies the use of optical and engineering-based systems (laser-based) for diagnosis, treating diseases, manipulation of cells and cell function. Physical, optical, and electro-optical principles are explored regarding molecular, cellular, organ, and organism applications. Prerequisites: Physics 3A-B-C or 7A-B-D, or Engineering EECS12, or consent of instructor. Same as Engineering BME135.

D134 Plant Physiology (4) S. Lecture, three hours. Plant hormones, growth and development, metabolism, mineral nutrition, and photosynthesis. Prerequisite: Biological Sciences 15 or consent of instructor.

D136 Human Anatomy (4) F. Lecture, three hours; discussion, one hour. Presents a systems approach to the analysis of human structure. Molecular, cellular, tissue, organ, and organ system levels of structure and organization are integrated throughout. Prerequisite: Biological Sciences 99.

D137 Eukaryotic and Human Genetics (4) F. Lecture, four hours. Structure and function of genes in eukaryotes with emphasis on special problems of genetic studies in humans. Molecular methods of genetic analysis and gene transfer are discussed. Practical applications and ethical and social issues raised by genetic studies are addressed. Prerequisites: Biological Sciences 97; Biological Sciences 99 recommended.

D145 Genomics and Proteomics (4) W. Lecture, three hours. Focuses on the applications of genomics and proteomics to problems in genetics, cell, and developmental biology. Students gain a comprehensive understanding of the techniques currently used for genomics analysis and how best to apply these tools to solve research problems. Prerequisites: Biological Sciences 97, 98, 99.

D146 Eukaryotic Genes (4) W. Lecture, three hours. Molecular organization of eukaryotic genes and the molecular mechanisms which regulate their expression. Topics include developmentally regulated genes, tissue-specific gene expression, multigene families, oncogenes, gene transposition, and recombinant gene cloning. Prerequisite: Biological Sciences 99.

D147 Plant Molecular Biology (4) W. Lecture, three hours. Presents the molecular mechanisms of plant growth and development. Topics considered include: the identification of genes regulating cell division, growth, and morphogenesis; control of gene expression by external and internal factors; plant transformation mechanisms. Prerequisite: Biological Sciences D105.

D148 Development and Disease (4) S. Lecture, three hours. Development of animal embryos from a fertilized egg to a functioning organism. Topics include body-axis formation, growth and differentiation of embryonic cells, and organogenesis, with an emphasis on congenital birth defects and diseases that disrupt these processes. Prerequisite: Biological Sciences D104.

D149 Development, Injury, and Repair of the Nervous System (4) F, W. Lecture, three hours. The formation of the nervous system including neurogenesis, trophic factors, cell death, and formation of nerve connections. Damage to the brain and spinal cord from injury and disease and experimental strategies for repair. Prerequisite: Biological Sciences N110.

D151 Advanced Cell Biology (4) W. Lecture, four hours. Plasma membrane and cytoskeletal-mediated events. Topics include: endocytosis, receptor-ligand interactions, the biochemical basis of growth control, cell structure and motility, and cell-cell, cell matrix interactions. The biochemistry and molecular aspects of these topics are emphasized. Prerequisite: Biological Sciences D103.

D153 Molecular and Cellular Basics of Disease (4). Lecture, three hours. Provides students with examples of how human disease is usually manifested at the cellular level. The roles of specific molecules and organelles are discussed where their roles in the disease process are understood. Prerequisite: Biological Sciences D103.

D154 Cell Biology (4) F. Lecture, three hours. An advanced, integrated view of cell biology. Topics include the cell cycle, the cytoskeleton, the extracellular matrix, signal transduction, the cellular basis of development, and the cell biology of cancer. Prerequisite: Biological Sciences D103 or 107.

D155 Systems Cell and Developmental Biology (4) W. Lecture, three hours. Introduces concepts needed to understand cell and developmental biology at the systems level, i.e., how the parts (molecules) work together to create a complex output. Emphasis on using mathematical/computational modeling to expand/modify insights provided by intuition. Concurrent with Developmental and Cell Biology 232.

D180 Fractal Geometry in Biology (4) F. Lecture, two hours; discussion, one hour. Fractal geometry explored with tools and interests of the biologist. Provides a general background of fractal geometry and investigates the types of biological processes that generate fractals. Prerequisites: completion of the Biological Sciences Core, Physics 3A, and Mathematics 2B.

D187 Developmental Genetics (4) W of odd years. Lecture, three hours. Advanced course on the use of genetic analysis to identify the genes that control cell behavior and development. Instructor-led discussion of genetics and the relationship between genotype and phenotype followed by student-led discussion based on assigned readings. Prerequisite: Biological Sciences D137.

D190 Topics in Developmental and Cell Biology (2 to 4) F, W, S. Lecture, two hours. Studies in selected areas of developmental and cell biology. Prerequisites: Biological Sciences D103; limited to School of Biological Sciences majors with upper-division standing. May be taken for-credit three times as topics vary.

ECOLOGY AND EVOLUTIONARY BIOLOGY

E107 Seminar in Ecology and Evolutionary Biology (2) F, W, S. Seminar, one and one-half hours. Invited speakers, graduate students, and faculty present current research in ecology and evolutionary biology. Pass/Not Pass only. Open only to upper-division Ecology and Evolutionary Biology majors.

E118 Ecosystems Ecology (4) F, W, S. Lecture, three hours. A mechanistic perspective on ecosystem processes. Covers ecosystem development, element cycling, and interactions with plants and microbes. The role of ecosystems in environmental change is also addressed. Prerequisite: Chemistry 51C. Same as Earth System Science 164 and Environmental Analysis and Design E167.

E124 Infectious Disease Dynamics (4) F, W, S. Lecture, three hours. Discusses how the dynamical interactions between pathogens and the immune system can give rise to a variety of outcomes which include clearance of infection, persistent infection, escape from immune responses, and pathology. Prerequisite: Biological Sciences 96 or E106 or 97.

E127 Physiological Plant Ecology (4) F. Lecture, three hours. An examination of the interactions between plants and their environment. Emphasis on the underlying physiological mechanisms of plant function, adaptations and responses to stress, and the basis of the distribution of plants and plant assemblages across the landscape. Prerequisite: Biological Sciences E106 or Earth System Science 51 or consent of instructor. Same as Earth System Science 168. Concurrent with Earth System Science 268.

E135 Molecular Evolution (4) W. Lecture, three hours. Introduction to the study of evolutionary change in genes and DNA sequences. Combines study of molecular biology with the study of evolution. Molecular evolution has application to many disciplines, including molecular biology, virology, systematics, and the origin of life. Prerequisite: Biological Sciences E106.

E136 The Physiology of Human Nutrition (4) S. Lecture, three hours. Examines the biochemical basis of energy metabolism, physiological processes in digestion and uptake, and the biochemical transformation of carbohydrates, fats, and proteins in the human body. The emphasis is on expanding the students' understanding of physiology. Prerequisites: Biological Sciences 98 and E109.

E137 Genetics of Complex Traits (4) F, W, S. Lecture, three hours; discussion, one hour. Many ecologically important traits (e.g., size, age at sexual maturity) and clinical conditions are rooted in the interaction of multiple genetic loci with the environment. Theoretical and practical approaches to dissecting the genetic architecture of complex traits are explored. Prerequisites: Biological Sciences 96 or E106, and 97; Biological Sciences 7 or Mathematics 7 recommended.

E138 Comparative Animal Physiology (4) S of odd years. Lecture, three hours. Maintenance aspects of physiology: water balance; feeding and digestion; metabolism; respiration and circulation. Prerequisite: Biological Sciences E109.

E142 Writing/Philosophy of Biology (4) F, W, S. Lecture, three hours. Philosophy of biology, e.g., scientific method in biology, the structure of evolutionary theory, teleology, ethics, and evolution. Course work includes one 4,000-word and four 1,000-word papers. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Philosophy 142 and Logic and Philosophy of Science 142.

E150 Conservation Biology (4) W. Lecture, three hours. Topics for lecture and discussion: current crisis in species extinction and human impacts on the biosphere. Value of species and ecosystems to humans. Effects of ecosystem degradation on societies in the past. Current efforts at conservation and restoration, with political and economic considerations. Prerequisite: Biological Sciences 94.

E151 Population Dynamics in Ecology, Epidemiology, and Medicine (4) S. Lecture, three hours. Explore the dynamics of populations on an ecological, epidemiological, and medical level. Considers the dynamics of competition, predation, and parasitism; the spread and control of infectious diseases; and the *in vivo* dynamics of viral infections and the immune system. Prerequisite: Biological Sciences 94 or E106. Concurrent with Ecology and Evolutionary Biology 251.

E153 Functional and Structural Evolutionary Genomics (4) W. Lecture and computer lab, four hours. Function and organization of genomes analyzed from an evolutionary perspective. Review of some of the most recent experimental approaches in genome analysis and comparative genomics. Relevant software to analyze DNA and expression data is used. Prerequisite: Biological Sciences 97. Recommended: Biological Sciences E135 or E168, and Biological Sciences 7 or Statistics 7/Mathematics 7. Concurrent with Ecology and Evolutionary Biology 253.

E155 Physiology in Extreme Environments (4) F, W, S. Lecture, three hours. An in-depth look at the physiological mechanisms that allow animals to live and survive in extreme environments. Physiological responses to high altitude, diving, microgravity, deserts, and extreme cold are examined. Prerequisites: Biological Sciences E109 and Physics 3A.

E157 Comparative Vertebrate Anatomy (4) W. Lecture, three hours. Structure and evolution of the major organ systems in vertebrates, from fish to mammals. Prerequisite: Biological Sciences 94.

E160 Ornithology (4). Lecture, three hours. A thorough introduction to the biology of birds, covering topics ranging from avian anatomy and physiology to behavior, natural history, ecology, genetics, evolution, systematics, and conservation. Examples from both local and global avifauna. Prerequisite: Biological Sciences E106. Concurrent with Ecology and Evolutionary Biology 260.

E161L Ornithology Laboratory (4). Laboratory, three hours. An elective companion course to Biological Sciences-E160 consisting primarily of field trips to nearby sites to identify local birds and study avian natural history. Some field trips may depart campus as early as 7 a.m. Corequisite or prerequisite: Biological Sciences E160.

E163 Environmental Microbiology (4) F. Lecture, three hours. Establishes a fundamental understanding of microbes living in the environment, including their distribution, diversity, and biochemistry, and discusses how they attribute to global biogeochemical cycles. Prerequisite: Biological Sciences E106 or Earth System Science 53. Same as Earth System Science 170.

E167 Plant Population Biology (4) F of odd years. Lecture, three hours. Current topics in plant population biology are reviewed in an ecological and evolutionary context. Topics include aspects of population genetics, population ecology, evolutionary ecology, and applications to conservation biology. Discussions of current literature. Prerequisites: Biological Sciences 94 and E106.

E168 Evolution (4) S. Lecture, three hours. An integrative treatment of evolutionary biology that covers evolutionary processes, basic research methods, and the history of life. Prerequisite: Biological Sciences E106.

E170 Mechanical Physiology (4). Lecture, three hours. Explores the mechanics of animal physiology. Basic biomechanical principles are introduced and illustrated in a variety of physiological systems. Topics include the fluid and structural mechanics of muscles, skeletons, circulation, insect flight, biomaterials, and fish swimming. Prerequisite: Biological Sciences E109.

E172 Systematics and Evolution of Flowering Plants (4) S of odd years. Lecture, three hours. Basic systematic concepts including phylogenetic analysis, introduction to major groups of flowering plants, analysis of evolutionary significance of characters used in systematic studies. Prerequisite: Biological Sciences E106. Concurrent with Ecology and Evolutionary Biology 272.

E172L Plant Systematics Laboratory (4) S. Laboratory, two hours; Field work, one hour. Diversity of flowering plants is investigated in the laboratory and field. Familiarity with flowering plant families, particularly those prominent in the California flora, is emphasized. Prerequisites: Biological Sciences E106 and prior or concurrent enrollment in E172. Concurrent with Ecology and Evolutionary Biology 273.

E174 Behavioral Ecology (4) F, W, S. Lecture, three hours; discussion, two hours. Animal behavior as an evolutionary solution to problems encountered during an animal's life cycle. Includes a broad comparative approach to communication, social behavior, habitat selection, and food finding. Prerequisite: Biological Sciences E106 or consent of instructor.

E175 Restoration Ecology (4) F, W, S. Lecture, two hours; field work, two hours. Theoretical and practical aspects of habitat restoration and mitigation. Design, implementation, and monitoring of restoration projects in local habitats. Collection of seed and cuttings, planting and maintenance presented. Control of exotics in natural areas discussed. Environmental ethics of restoration emphasized. Prerequisite: Biological Sciences E106.

E176 Coevolution of Hosts and Parasites (4) W of even years. Lecture, three hours; discussion, one hour. Ecology and evolution of host-parasite relationships. Ecological factors that influence the spread of disease, genetics of resistance and virulence, and significance of cellular parasites in genomic evolution. Emphasis on conceptual issues with examples from many different organisms. Prerequisite: Biological Sciences 97.

E178 Ocean Ecology (4) W of even years. Lecture, three hours; discussion, one hour. Examines the relationships between physical processes in the ocean, biological productivity, and the exploitation of ocean resources by high-trophic-level predators, including humans. Discusses open ocean ecosystems, intertidal and benthic regions of the world ocean. Prerequisite: Biological Sciences 94.

E179 Limnology and Freshwater Biology (4) F, W, S. Lecture, three hours; discussion, one hour. Biology of freshwater environments: lakes, ponds, rivers, their biota, and the factors which influence distribution of organisms. Prerequisite: Biological Sciences 94.

E179L Field Freshwater Ecology (4) S. Field work, three hours. Analytical techniques for common water-quality variables of lakes, streams, rivers. Benthic fauna, vertebrates, and invertebrates, algae, and aquatic plants. Emphasis on field methods with an experimental approach; laboratory exercises. Field trips to marshes, lakes, vernal pools, rivers, and streams. Corequisite or prerequisite: Biological Sciences E179.

E181 Conservation in the American West (4) W of odd years. Lecture, three hours. Critical examination of contemporary conservation issues in the American west, with particular attention to water in California, grazing on public lands, and species decline and extinctions. Prerequisite: Biological Sciences E106.

E182 Mediterranean Ecosystems: Biodiversity and Conservation (4) W. Lecture, three hours. Biodiversity, history of human impacts, and conservation efforts are examined in the five Mediterranean-type ecosystems. The extent of remaining natural habitat, approaches to ecological habitat restoration, control of exotic species, and predicted consequences of global climate change are described. Prerequisite: Biological Sciences E106.

E183 Exercise Physiology (4) S. Lecture, three hours. Focus upon critical topics in the area of exercise biology using the comparative physiological approach. Specifically examine the physiological factors that limit the capacity of an organism to sustain high levels of aerobic metabolism. Prerequisites: Biological Sciences 98, D104, and E109.

E184 Entomology (4) F of even years. Lecture, two hours; laboratory, four hours. Central features of the Insecta are reviewed in an evolutionary and ecological context. Topics include external and internal morphology, systematic relationships among the insect orders, insects in ecological communities, and the impact of agricultural and medical pests. Field trips. Prerequisite: Biological Sciences E106.

E185 Plant-Animal Interactions (4) W of even years. Lecture, two hours; laboratory, four hours. Ecology and evolution of mutualistic and antagonistic interactions between plants and animals. Topics include pollinator behavior, plant reproductive systems, plant defense mechanisms, and herbivore diet choice. Field-oriented laboratory. Prerequisites: Biological Sciences 97 and E106.

E186 Population and Community Ecology (4) W. Lecture, three hours. Population structure, function, development, and evolution. Topics include population structure, population growth and regulation, metapopulations, predation, competition, species diversity, ecosystem function, macroecology, and island biogeography. Prerequisite: Biological Sciences E106.

E188 Introduction to Insect Physiology (4) W of even years. Lecture, three hours. Physiology of insects. Insect respiration, digestion, excretion, and neurobiology, including sensory systems and effectors. Prerequisites: Biological Sciences D104 and E109.

E189 Environmental Ethics (4) W. Lecture, three hours. History of evolution of environmental ethics in America. Management problems in national parks, wilderness areas, wild and scenic rivers, national forests. Contemporary and historical aspects/contributors to the field. Mitigation, endangered species, habitat restoration, biodiversity, and environmental activism. Field trips required. Prerequisite: upper-division standing.

E190 Topics in Ecology and Evolutionary Biology (2 to 4) F, W, S. Lecture, two to four hours. Studies in selected areas of ecology and evolutionary biology. Prerequisite: Biological Sciences E106. May be taken for credit three times as topics vary.

MOLECULAR BIOLOGY AND BIOCHEMISTRY

M114 Advanced Biochemistry (4) F, W, S. Lecture, three hours; discussion, one hour. Physical-chemical properties of macromolecules. Structure-function relationships in nucleic acids, protein, carbohydrates, and lipids. Integration and regulation of metabolism. Biochemistry of organs and biochemistry of diseases. Prerequisite: Biological Sciences 99.

M116 Advanced Molecular Biology (4) F, W, S. Lecture, three hours; discussion, one hour. Mechanisms of gene expression; special emphasis on regulatory events that occur in Eukaryotic organisms other than initiation of transcription. Chromatin structure and rearrangement, RNA polymerases, cis- and trans-acting elements, RNA processing, transport and stability, protein synthesis, trafficking, and turnover. Prerequisites: Biological Sciences 99, and M114L or M116L.

M119 Fundamental Immunology II (4) S. Lecture, two hours; discussion, one hour. Lectures and paper discussions/analyses to achieve a basic understanding of immune system function in health and disease. Topics include immunodeficiency diseases, allergy and hypersensitivity, autoimmunity, transplantation, vaccines, tumor immunology, and modern immunological methods. Prerequisite: Biological Sciences M121. Concurrent with Molecular Biology and Biochemistry 219.

M120 Signal Transduction in Mammalian Cells (4) F. Lecture, three hours. Introduction to major biochemical pathways that transmit information from extracellular cues into changes in cell behavior. Focuses on kinases, phosphatases, G proteins, second messengers, and protein-protein interactions. Includes discussion of primary research articles and experimental techniques. Prerequisite: Biological Sciences D103.

M121 Immunology with Hematology (4) W. Lecture, three hours; discussion, one hour. Antibodies, antigens, antigen-antibody reactions, cells and tissues of lymphoreticular and hematopoietic systems, and individual and collective components of cell-mediated and humoral immune response. Prerequisite: Biological Sciences 98 or consent of instructor.

M122 General Microbiology (4) F, S, Summer. Lecture, three hours; discussion, one hour. Comparative metabolism of small molecules and cell structure and relationship to microbial classification. Macromolecule synthesis and regulation, sporulation, cell division, growth, and effect of antibiotics. Prerequisite: Biological Sciences 98.

M123 Introduction to Computational Biology (4) S. Lecture, three hours; laboratory, two hours. The use of theories and methods based on computer science, mathematics, and physics in molecular biology and biochemistry. Basics in biomolecular modeling. Analysis of sequence and structural data of biomolecules. Analysis of biomolecular functions. Prerequisite: Mathematics 2D or 2J or 7 or Statistics 8. Same as Computer Science 183. Concurrent with Molecular Biology and Biochemistry 223.

M124A Virology (4) F. Lecture, three hours; discussion, one hour. Replication of viruses in populations, animals, and the host cell. The effects of viral infection on populations, individuals, and specific molecular effects on the target cell. Role of viral infections in cancer and degenerative diseases. Prerequisite: Biological Sciences 99. Formerly Biological Sciences M124.

M124B Viral Pathogenesis and Immunity (4) W. Lecture, three hours. The mechanisms of viral pathogenesis and of host resistance to viruses are explored in detail. HIV-1 and Influenza-A are used as examples. In each case, viral replication, cytopathic effects, immune response, and viral evasion are discussed. Prerequisites: Biological Sciences M121 or M124A, or consent of instructor; Biological Sciences M122 recommended. Formerly Biological Sciences M162.

M125 Molecular Biology of Cancer (4) S. Lecture, three hours. Molecular mechanisms of carcinogenesis. Consideration of transformation by DNA tumor viruses, RNA tumor viruses, and chemical carcinogens. Prerequisite: Biological Sciences 99 or consent of instructor.

M128 Genetic Engineering (4) S. Lecture, three hours. Basic biochemical and molecular biology of restriction endonucleases. Vectors for recombinant DNA. Cloning of genes. Sequence analysis of genes. Prerequisite: Biological Sciences 98; Biological Sciences 99 recommended.

M133 High-Resolution Structures: NMR and X-ray (4) F of even years. Lecture, three hours. Basic principles of magnetic resonance and x-ray crystallography toward the determination of high-resolution biomolecular structures. Prerequisites: Mathematics 2B and consent of instructor. Concurrent with Molecular Biology and Biochemistry 211.

M137 Microbial Genetics (4) W. Lecture, three hours; discussion, one hour. Prerequisites: Biological Sciences 97 and 98. Recommended: concurrent enrollment in Biological Sciences 99.

M140 Macromolecular Structure, Function, and Interaction (4) F. Lecture, three hours; discussion, one hour. Chemistry of macromolecules; emphasis on proteins. Physical and chemical properties of proteins, forces that maintain protein structure, relationship between structure and function, interactions of proteins with ligands and other macromolecules, and experimental methods to study structure, function, and interactions. Corequisite: Chemistry 130A or 131A. Prerequisites: Biological Sciences 98 and 99. Concurrent with Molecular Biology 240.

M143 Human Parasitology (4) S. Lecture, three hours. Introduction to human animal-parasitic diseases including worms and protozoan infections. Prerequisite: Biological Sciences 99. Formerly Biological Sciences D143.

M144 Cell Organelles and Membranes (4) S. Lecture, three hours. Structure, function, and biogenesis of biological membranes and membrane-bound organelles; protein trafficking and transmembrane signaling. Prerequisite: Biological Sciences D103.

M160 Structure-Function Relationships of Integral Membrane Proteins (4) W. Lecture, three hours. Integral membrane proteins such as voltage and ligand-gated ion channels, water channels, pumps, cotransporters, and receptors (e.g., GPCRs). The emphasis is on the relationship between atomic structure and the functional properties of these proteins. Prerequisites: a grade of B or better in Biological Sciences 98 and 99. Concurrent with Molecular Biology and Biochemistry 255.

M170A Molecular Pharmacology I (4) S. Lecture, three hours; discussion, one hour. Molecular basis of drug-receptor action at the molecular and cellular levels. Structure-function of drug targets emphasizing enzymes, ion channels, and membrane transport proteins. Understanding how the drugs' mechanisms of action contribute to the development of more efficacious and safer drugs. Prerequisites: Chemistry 51B, Biological Sciences E109 and 98 or Chemistry 128. Same as Pharmaceutical Sciences M170A.

M170B Molecular Pharmacology II (4) S. Lecture, three hours; discussion, one hour. Mechanism-based overview of pharmacology and therapeutic drugs in the fields of autonomic nervous system, central nervous system, and antimicrobials. Prerequisites: Biological Sciences 99, E109, and M170A; and Chemistry 51C. Same as Pharmaceutical Sciences M170B.

M171 Physical Biochemistry (4) F. Lecture, three hours; discussion, one hour. Thermodynamics and kinetic fundamentals as applied to problems relevant to pharmaceutical sciences such as receptor/enzyme-ligand interactions. Fundamentals of biophysical methods used in the pharmaceutical sciences including structure determination and biomolecular spectroscopy. Prerequisites: Biological Sciences 99, Chemistry 1C, Mathematics 2B, and Physics 3B. Same as Pharmaceutical Sciences M171.

M172 Topics in Pharmaceutical Sciences (2) F. Lecture, two hours. Presents information about various fields of research, study, careers, and graduate school opportunities in pharmaceutical sciences. Taught by guest lecturers from various disciplines including 199 research course faculty. Helps Pharmaceutical Sciences students select electives appropriate to their future goals. Prerequisites: Biological Sciences 99 and Chemistry 51C. Pass/Not Pass only. Same as Pharmaceutical Sciences M172.

M173 Pharmacotherapy (4) W. Lecture, three hours; discussion, one hour. An exploration of the clinical application of medications to selected disease states. Focus is on an understanding of underlying principles of pharmacology and how this knowledge can be applied to treatment of diseases. Prerequisites: Biological Sciences M170A or Pharmaceutical Sciences M170A; completion of or concurrent enrollment in Biological Sciences M170B or Pharmaceutical Sciences M170B. Same as Pharmaceutical Sciences M173.

M174 Biopharmaceutics (4) F. Lecture, three hours; discussion, one hour. Introduces theories and tools of new drug formulations. Particularly new novel therapeutics based on biological materials, pathological characteristics utilized to achieve the maximum efficacy and specificity, and drug delivery systems are extensively discussed. Prerequisites: Biological Sciences M170A and M170B, or Pharmaceutical Sciences M170A and M170B, or consent of instructor. Same as Pharmaceutical Sciences M174.

M174L Biopharmaceutics Laboratory (3) F. Laboratory, three hours; discussion, one hour. Introduction to cancer drug screening using cellular models and confirmation of comprehensive therapeutic efficacy using a live animal model. Includes basic cell culture, cytotoxicity assays, cell analysis, drug circulation test, and tumor eradication and imaging experiments. Prerequisites: Biological Sciences M170A and M170B, or Pharmaceutical Sciences M170A and M170B, or consent of instructor. Same as Pharmaceutical Sciences M174L.

M190 Topics in Molecular Biology and Biochemistry (2 to 4) F, W, S. Lecture, two to four hours. Studies in selected areas of Molecular Biology and Biochemistry. Prerequisite: Biological Sciences 98 or consent of instructor. May be taken for credit three times as topics vary.

NEUROBIOLOGY AND BEHAVIOR

N112A-B-C Neuroscience: Fundamental Concepts and Current Applications (2-2-2) F, W, S. Lecture, two hours. In-depth exploration of the intellectual tools used to create, advance, and disseminate knowledge about the nervous system. Develops analytical, reasoning, and communication skills by exploring fundamental issues of data interpretation in cellular, molecular, systems, and behavioral analyses of brain function. Prerequisite: Biological Sciences N110.

N117 Principles of Brain Evolution (4) F, W, S. Lecture, two hours; seminar, one hour. Brains obviously differ between different species, yet many commonalities exist. Surveys species similarities and differences in brain organization, then extracts some general principles of how brains evolve. Emphasis placed on vertebrate brains and on the functional implications of neuroanatomical change. Concurrent with Neurobiology and Behavior 243 and Ecology and Evolutionary Biology 243.

N119 History of Neuroscience (4) F, W, S. Lecture, three hours. An overview of the conceptual and technical foundations of contemporary neuroscience from ancient times to the present. The subjects include synapses, neurons, brain organization, sensory, motor and regulatory systems, learning and memory, human brain function and dysfunction. Prerequisites: Biological Sciences 35 or N110, or Psychology and Social Behavior P115D, or Psychology 9A-B-C, or consent of instructor. Concurrent with Neurobiology and Behavior 255.

N146 Neurobiology of Sensation and Attention (4) F, W, S. Lecture, three hours. Focuses on neural mechanisms in sensory cortex at the cellular, synaptic, and systems levels that contribute to sensory processing and attention to sensory stimuli. Covers four topics: neurophysiology of sensory cortex and thalamus; diffuse modulatory systems and neuromodulation; arousal: integration of channels, neurons, systems; sensory processing during attention. Prerequisite: Biological Sciences N110.

N147 Hearing and the Brain (4) F. Lecture, three hours. An overview of brain mechanisms of hearing, including perception of simple sounds, speech, and music. Begins with sound itself, and looks at processing by the ear, auditory pathways, auditory cortex, and beyond. Also auditory development, learning, and clinical issues. Prerequisite: Biological Sciences N110 or Psychology 160A. Same as Psychology 161H.

N153 Neuropharmacology (4) S. Lecture, three hours. Survey of neurotransmitter systems, focusing on how transmitters are made, how they interact with their receptors, and how drugs can influence these processes to alter neural function and behavior. Prerequisite: Biological Sciences N110.

N154 Molecular Neurobiology (4) F, W, S. Lecture, three hours. Nature and actions of genes and gene products that regulate the functioning of the nervous system and its interaction with muscles. Topics include: neural control of gene expression; genetics and molecular biology of neural and neuromuscular diseases; gene therapies for neural disorders. Prerequisite: Biological Sciences N110.

N158 Neurobiology of Learning and Memory (4). Lecture, three hours. How the brain and behavior change as a result of experience, with an emphasis on identifying the neurochemical processes through which memory is stored and the parts of the brain that are involved. Prerequisite: Biological Sciences 35 or N110. Same as Psychology 162A.

N159 Animal Behavior (4) S. Lecture, three hours. Explores why animals behave the way they do from both evolutionary and mechanistic perspectives. Considers selective pressures and evolutionary constraints that shape animal behavior and the underlying neural and hormonal mechanisms by using examples such as why dogs bark, why some birds migrate. Prerequisite: Biological Sciences N110.

N160 Language and the Brain (4) W. Lecture, three hours. Analysis of current research on the biological bases of human linguistic capacity. Development, focusing on hemispheric specialization and plasticity; localization of specific linguistic functions in adults, with emphasis on study of aphasia; relation of linguistic capacity to general cognitive capacity, considering research on retardation. Prerequisite: Biological Sciences 35 or N110, or consent of instructor. Same as Psychology 161 and Linguistics 158.

N161 Cellular Neurophysiology (4) F, W, S. Lecture, three hours. Introduction to the biophysical mechanisms underlying the generation and propagation of signals within and between nerve cells. Emphasizes the roles of ion channels in generating resting and action potentials, the mechanisms of quantal neurotransmitter release, and the ionic conductances involved in synaptic transmission. Prerequisite: Biological Sciences N110.

N162 Neuroscience of Human Memory (4) S. Lecture, three hours. Overview of topics in the cognitive neuroscience of human long-term memory and their relevance to an understanding of clinical disorders of memory. Methods of investigation of dual process models, human memory, functional architecture of memory, implicit vs. explicit distinction, control processes. Prerequisite: Biological Sciences N112B.

N163 Endocrinology, Neuroendocrinology, and Behavior (4) F, W, S. Lecture, three hours. Survey of the hormones secreted by the endocrine system, their physiological effects, and their mechanisms of action, followed by consideration of how the endocrine and nervous systems interact to regulate each other and behavior. Prerequisite: Biological Sciences N110.

N164 Functional Neuroanatomy (4) F, W, S. Lecture, three hours. How neuroscience uses tools of many disciplines, from imaging to behavior, to develop and test hypotheses about functions of specific parts of the brain. Basic organization of nerve cells and vertebrate nervous system; methods of visualizing nerve cells; neural connections, neural activity patterns. Prerequisite: Biological Sciences N110.

N171 Neurobiology of Transmitter Receptors (4) W. Lecture, three hours. Introduction to the use of frog oocytes as a model system for studies in neurobiology. Transplantation of neurotransmitter receptors and voltage-operated ion channels from the brain into oocytes. Prerequisites: Biological Sciences 99 or N110 and consent of instructor.

N177 Topics in Cortical Plasticity (4) F, W, S. Seminar, three hours. Focuses on neural mechanisms that underlie cortical plasticity. These include neurophysiological, pharmacological, anatomical, and developmental mechanisms that act at the synaptic, cellular, and system (population of neurons) levels. Prerequisite: Biological Sciences N110.

N182 Vision (4). Lecture, three hours; discussion, one hour. Visual perception and the anatomy and physiology of the visual system. Topics include: the retina and the visual pathway; visual sensitivity; color vision; spatial vision; motion perception; and the development of the visual system. Same as Psychology 131A. Psychology 130A may not be taken for credit after Biological Sciences N182.

N190 Topics in Neurobiology and Behavior (2 to 4) F, W, S. Lecture, four hours. Studies in selected areas of neurobiology and behavior. Prerequisite: Biological Sciences N110. May be taken for credit three times as topics vary.

Seminars and Special Courses

191A-B Senior Seminar on Global Sustainability I, II (2-2) F, W. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations. **A:** Prepare bibliography. **B:** Prepare research proposal. In-progress grading for 191A-B, grade for sequence given upon completion of 191C. Prerequisites: senior standing, Biological Sciences 65, Environmental Analysis and Design E20, and Earth System Science 10. Same as Earth System Science 190A-B and Social Ecology 186A-B.

191C Writing/Senior Seminar on Global Sustainability III (4) S. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations and to prepare senior research paper. Prepare/write research paper under the direction of a faculty member. Prerequisites: Biological Sciences 191A-B and satisfaction of the lower-division writing requirement. Same as Earth System Science 190C and Social Ecology 186C.

192 Tutoring in Biology (2). Enrollment limited to participants in the Biological Sciences Peer Tutoring Program. Prerequisite: consent of instructor. May be repeated. No more than eight units earned in this course may be counted toward the 180 units required for graduation. Satisfies no degree requirement other than contribution to the 180-unit total.

193 Research Writing for Biological Science Majors (4). Under the guidance of selected faculty in the School of Biological Sciences and a writing professional, students learn to conduct library research in the field of biology and to write scientific review papers. Prerequisite: upper-division Biological Sciences major.

194 Current Topics in Biology (1) F, W, S. A seminar designed to discuss recent research findings and experimental issues in biology. Meets once each week for one hour. Corequisite: Biological Sciences 199.

194S Safety and Ethics for Research (1) F, W, S. Introduces students to the concepts, techniques, and ethics involved in biological sciences laboratory work. Pass/Not Pass only.

H195 Honors Seminar in Biological Sciences (1) S. Contemporary research problems in biological sciences. Participating students and faculty present their research findings as well as examine and discuss research in related fields. Writing instruction for participation in Excellence in Research takes place during required workshops in the fall quarter. Limited to students in the Biological Sciences Honors Program.

H195A Honors Writing for Biological Research (4) S. Lecture, two hours; laboratory, two hours. A science writing and critical reasoning course. Work, research, and writing exercises are conducted in a computer laboratory with full Internet access to library and other information resources. Students complete a number of preliminary writing exercises and then further develop their Excellence in Research report to a full scientific senior thesis. This forms the basis for an oral defense. Prerequisites: three quarters of Biological Sciences 199 research, participation in Excellence in Research, and satisfactory completion of the lower-division writing requirement; open only to students eligible for the Honors Program.

H195B Honors Physiology (4) S. Seminar, three hours. Contemporary research problems in physiology using insects as model systems. Topics include digestion, osmoregulation, development, and neurobiology, including sensory systems and behavior. Participating students present papers in a journal club-style format and write short essays summarizing research findings. Prerequisites: limited to students in the Biological Sciences Honors Program and graduate students; consent of instructor.

196 Writing for Biology Research (4) W. Lecture, two hours; laboratory, two hours. A science writing and critical reasoning course to be taken the quarter prior to participation in the Excellence in Research Program. Students work in a computer laboratory with full access to writing, library, and network resources and prepare and review a formal scientific paper. Prerequisites: two quarters of Biological Sciences 199; satisfactory completion of the lower-division writing requirement. Enrollment preference given to students who have taken two or more quarters of Biological Sciences 197.

196A Seminar in Interactive Teaching in Biology (2) F. Students receive formal training in use and assessment of interactive teaching strategies in university-level biology classes. Additional aspects of course design and implementation are covered. Recommended for undergraduates involved in the BioSci Peer Tutoring Program. May be taken for credit two times.

198A-B-C Directed Group Studies (1 to 5) F, W, S. Small group experimental laboratory or fieldwork performed under the influence of a faculty member. Prior to beginning group studies, each student must submit an abstract which must be filed in the Biological Sciences Student Affairs Office and renewed yearly, if applicable. A Summary Report must be submitted at the end of each quarter. May be graded In Progress. Prerequisites: Biological Sciences 194S and consent of instructor. May be taken for credit three times.

Independent Study

Independent-study credit for undergraduates is limited to five units per quarter.

197A-B-C Special Study in Biological Sciences (1 to 4 per quarter) F, W, S. Tutorial, one to four hours. Library research, tutorial, and other independent projects under individual professors. Individualized instruction dealing with conceptual or theoretical problems in the biological sciences, rather than technical problems. Regularly scheduled meetings between student and faculty member and successful completion of a written report. Prerequisite: consent of instructor. An abstract form must be filed in the Biological Sciences Student Affairs Office. May be graded "IP." May be repeated for credit.

199 Independent Study in Biological Sciences Research (1 to 5 per quarter) F, W, S. Individual experimental laboratory or field research under a professor's direction. Required for participation in the Excellence in Research Program. Further information and a booklet describing many prospective projects are available in the Biological Sciences Student Affairs Office. Prerequisites: Biological Sciences 194S and consent of instructor. An abstract form must be filed in the Biological Sciences Student Affairs Office. May be repeated for credit as topics vary.

Courses in Pharmaceutical Sciences

1 Introduction to Pharmaceutical Sciences (1) S. Lecture, one hour. Introduction to the scientific disciplines that comprise the multidisciplinary field of pharmaceutical sciences. Students gain an appreciation of basic concepts in the relevant physical, biological, and clinical sciences and how they fit together in the search for new medicines. Pass/Not Pass only.

M170A Molecular Pharmacology I (4) S. Lecture, three hours; discussion, one hour. Molecular basis of drug-receptor action at the molecular and cellular levels. Structure-function of drug targets emphasizing enzymes, ion channels, and membrane transport proteins. Understanding how the drugs' mechanisms of action contribute to the development of more efficacious and safer drugs. Prerequisites: Chemistry 51B, Biological Sciences E109 and 98 or Chemistry 128. Same as Biological Sciences M170A.

M170B Molecular Pharmacology II (4) S. Lecture, three hours; discussion, one hour. Mechanism-based overview of pharmacology and therapeutic drugs in the fields of autonomic nervous system, central nervous system, and antimicrobials. Prerequisites: Biological Sciences 99, E109, and M170A; and Chemistry 51C. Same as Biological Sciences M170B.

M171 Physical Biochemistry (4) F. Lecture, three hours; discussion, one hour. Thermodynamics and kinetic fundamentals as applied to problems relevant to pharmaceutical sciences such as receptor/enzyme-ligand interactions. Fundamentals of biophysical methods used in the pharmaceutical sciences including structure determination and biomolecular spectroscopy. Prerequisites: Biological Sciences 99, Chemistry 1C, Mathematics 2B, and Physics 3B. Same as Biological Sciences M171.

M172 Topics in Pharmaceutical Sciences (2) F. Lecture, two hours. Presents information about various fields of research, study, careers, and graduate school opportunities in pharmaceutical sciences. Taught by guest lecturers from various disciplines including 199 research course faculty. Helps Pharmaceutical Sciences students select electives appropriate to their future goals. Prerequisites: Biological Sciences 99 and Chemistry 51C. Pass/Not Pass only. Same as Biological Sciences M172.

M173 Pharmacotherapy (4) W. Lecture, three hours; discussion, one hour. An exploration of the clinical application of medications to selected disease states. Focus is on an understanding of underlying principles of pharmacology and how this knowledge can be applied to treatment of diseases. Prerequisites: Pharmaceutical Sciences M170A or Biological Sciences M170A; completion of or enrollment in Pharmaceutical Sciences M170B or Biological Sciences M170B. Same as Biological Sciences M173.

M174 Biopharmaceutics (4) F. Lecture, three hours; discussion, one hour. Introduces theories and tools of new drug formulations. Particularly new novel therapeutics based on biological materials, pathological characteristics utilized to achieve the maximum efficacy and specificity, and drug delivery systems are extensively discussed. Prerequisites: Pharmaceutical Sciences M170A and M170B, or Biological Sciences M170A and M170B, or consent of instructor. Same as Biological Sciences M174.

M174L Biopharmaceutics Laboratory (3) F. Laboratory, three hours; discussion, one hour. Introduction to cancer drug screening using cellular models and confirmation of comprehensive therapeutic efficacy using a live animal model. Includes basic cell culture, cytotoxicity assays, cell analysis, drug circulation test, and tumor eradication and imaging experiments. Prerequisites: Pharmaceutical Sciences M170A and M170B, or Biological Sciences M170A and M170B, or consent of instructor. Same as Biological Sciences M174L.

M175 Pharmaceutical Entrepreneurship (4) S. Lecture, three hours; discussion, one hour. Describes the path of a novel therapeutic idea from laboratory bench to the clinics. Covers the scientific principles and technologies involved in making the transition from a basic biological observation to the creation of a new drug. Prerequisite: Pharmaceutical Sciences M174/Biological Sciences M174.

M176 Bioethics (4) S. Lecture, three hours; discussion, one hour. Discusses the ethical and social responsibilities of the pharmaceutical scientist and entrepreneur. Issues explored include animal experimentation, clinical trials, medicine, and economics as they are related to pharmaceutical sciences and drug discovery and development.

177 Medicinal Chemistry (4) F, W. Lecture, three hours; discussion, one hour. An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity. Corequisite: Pharmaceutical Sciences 177L. Prerequisites: Chemistry 51A-B-C or equivalent, and Biological Science 98 or Chemistry 128. Same as Chemistry 177.

177L Medicinal Chemistry Laboratory (2) F, W. Laboratory, four hours. Laboratory accompanying Pharmaceutical Sciences 177. Corequisite: Pharmaceutical Sciences 177. Prerequisites: Chemistry 51A-B-C or equivalent, and Biological Science 98 or Chemistry 128. Same as Chemistry 177L.

GRADUATE STUDY IN BIOLOGICAL SCIENCES

The School of Biological Sciences offers graduate study in a wide variety of fields ranging across the spectrum of the biological sciences. The four Departments of the School of Biological Sciences (Developmental and Cell Biology, Ecology and Evolutionary Biology, Molecular Biology and Biochemistry, and Neurobiology and Behavior) and five basic science Departments of the School of Medicine (Anatomy and Neurobiology, Biological Chemistry, Microbiology and Molecular Genetics, Pathology and Laboratory Medicine, and Physiology and Biophysics), representing respective concentrations of study under the Ph.D. degree in Biological Sciences, cooperate in the conduct of graduate education administered by the School of Biological Sciences. Although students are admitted to the Doctor of Philosophy (Ph.D.) degree program, the Master of Science (M.S.) degree may be earned in pursuit of the Ph.D. Additionally, a master's program in Biotechnology (M.S. degree in Biological Sciences) and a master's program in Ecology and Evo-

lutionary Biology (M.S. degree in Biological Sciences) are offered. Each department has a graduate advisor whom students may consult in regard to the technical details of the individual programs.

Applications for admission to graduate study are evaluated by the department or program to which the student has applied on the basis of letters of recommendation, Graduate Record Examination scores, grades, research experience, and other relevant qualifications of the applicant. Candidates for graduate admission are urged to consult the particular department or program whose faculty and expertise best fit their interests and background.

MASTER OF SCIENCE AND DOCTOR OF PHILOSOPHY IN THE BIOLOGICAL SCIENCES

While both the Master of Science and Doctor of Philosophy programs are offered, emphasis at the graduate level is on the Ph.D. programs, with the exception of the master's programs in Biotechnology and in Ecology and Evolutionary Biology. Most training takes place within one of the departments, although full facilities and curricular offerings are available to all graduate students in all departments of the Biological Sciences. Interdisciplinary study and research are encouraged.

Students are expected to maintain a B average at all times. The normative time to degree for the master's degree is two years, and five years for the doctoral degree. A master's degree, however, is not a prerequisite for the Ph.D. degree.

During the first part of the initial year of graduate work, the student plans an academic program in consultation with the graduate advisor or a faculty committee. Faculty advisors may be changed to meet the needs and interests of the student. In addition, it is possible for students to transfer to another program in the School, subject to the approval of the Dean of Graduate Studies, and acceptance into that program. Students are encouraged to consult with faculty members with regard to their research and academic interests.

During their graduate training all doctoral students are required to serve some time as a teaching assistant under the direction of laboratory coordinators or faculty. Advanced graduate students may work closely with faculty in the planning and execution of the teaching program. The amount and exact nature of the teaching experience varies with the department.

Master of Science

Depending upon the program, there are two plans by which a Master of Science degree may be obtained.

Plan I: Thesis Plan. The student completes seven upper-division and graduate courses including a minimum of five non-research courses. The student then presents a thesis based upon research done while in the School.

Plan II: Comprehensive Examination Plan. The student completes a minimum of nine upper-division and graduate courses. At least six must be graduate courses (numbered 200–299) in the student's field of specialization. This program is terminated with a comprehensive final examination.

Doctor of Philosophy

Comprehensive Examination-First Year. The student attains this level by completing oral or written examinations at the discretion of the department. The examination is generally taken at the end of the first year of graduate study.

Advancement to Candidacy. The advancement to candidacy examination is taken in the third year of graduate study. The student is expected to have identified an important and tractable dissertation research topic. A committee for the purpose of administering this examination is appointed by the School, on behalf of the Dean of the Graduate Division and the Graduate Council.

Once this examination is completed, the student is advanced to candidacy for the degree and is considered to have formally begun dissertation research. The student submits a dissertation on this research and defends it at an oral examination during the final year of graduate study. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Graduate student status or consent of instructor is a prerequisite for all 200–299 courses.

Master of Science with a Concentration in Biotechnology

Department of Molecular Biology and Biochemistry
3205 McLaugh Hall; (949) 824-6034
biotech@uci.edu; <http://www.bio.uci.edu/>
Michael G. Cumsky, **Director**

The field of biotechnology has developed explosively since the discovery of gene cloning and sequencing methods in the mid-1970s. The field is now represented by many active and successful companies who share an intense demand for well-trained people with up-to-date research skills in the manipulation of nucleic acids, proteins, immunological reagents, and pathogenic organisms. The program in Biotechnology features two tracks leading to an M.S. degree in Biological Sciences. The first is the traditional program, and the second, which takes advantage of a defined area of campus research strength, provides an emphasis in stem cell biology. Both tracks incorporate extensive training from both teaching laboratories and actual research settings (individual faculty laboratories). Focus is placed on techniques relevant to industry and seminar exposure to the nature of industry. It is designed to train students to enter the field of biotechnology as skilled laboratory practitioners. Emphasis is placed on learning state-of-the-art technology in protein isolation and characterization, animal and microbial cell culture, virology, immunology, and/or stem cell biology. Students are trained in experimental rationales for solving actual research problems and are encouraged to take summer internships in industry between the first and second year of their studies.

The Department of Molecular Biology and Biochemistry evaluates applicants to the program on the basis of grades, letters of recommendation, GRE scores, and other relevant qualifications. Applicants should have successfully completed a B.S. degree or equivalent. Courses should include general chemistry with laboratory, calculus, physics, organic chemistry, genetics, biochemistry, molecular biology, microbiology, immunology, and virology, as well as laboratory courses in biochemistry, molecular biology, microbiology, and either animal virology or immunology. Enrollment in the stem cell biology emphasis is limited to eight continuing students per year. Biotechnology graduate students interested in this track apply for admission during the winter quarter of their first year in the program.

The traditional program emphasizes training in laboratory and research environments. First-year students are required to enroll in a series of laboratory courses (Molecular Biology and Biochemistry 221L, 224L, 250L, and 251L) that are designed to teach them techniques in recombinant DNA methodology, protein isolation and characterization, proteomics, animal and microbial cell culture, immunology, and virology. In addition, students are trained rigorously in data recording and presentation as the laboratory notebooks are reviewed and graded by laboratory course instructors. Students are taught formal course work in nucleic acids, proteins, genetic engineering, and molecular/cellular biology. Emphasis during the second year is devoted exclusively to research projects in faculty laboratories, with the exception of one required elective course each quarter (e.g., Developmental and Cell Biology 210, 231B, Molecular Biology and Biochemistry 206, 207). The

program concludes with a presentation of the student's research at the end of the second year.

Students enrolled in the stem cell biology emphasis take the same number of laboratory and lecture courses as those in the traditional track. However, in the spring quarter of their first year they must enroll in the stem cell laboratory (taught at the Stem Cell Research Core Facility), and their electives must include the following courses: Stem Cell Policy (Microbiology and Molecular Genetics 230), Stem Cell Biology (Developmental and Cell Biology 245), and Clinical Aspects of Stem Cells (Developmental and Cell Biology 203B, when offered). In addition, their individual research must be conducted in the laboratory of a faculty member utilizing stem cells.

While the Biotechnology program is designed to produce skilled laboratory practitioners for industrial positions, some students may wish to continue in a Ph.D. degree program. The Department of Molecular Biology and Biochemistry is a member of the interdisciplinary graduate program in Cellular and Molecular Biosciences, a program which offers the Ph.D. degree in Biological Sciences. Biotechnology program students who wish to enter the interdisciplinary graduate program upon completion of the M.S. degree should apply for admission during their second year.

INTERDISCIPLINARY GRADUATE PROGRAMS

The School is structured in a manner that encourages an interdisciplinary approach to scientific problems. Interaction and cooperative efforts across traditional institutional boundaries are especially evident in the School's participation in various organized research units (described in the previous Office of Research section) and in the interdepartmental/interschool graduate programs described below.

Graduate Program in Cellular and Molecular Biosciences

4141 Natural Sciences II; (949) 824-8145
<http://www.cmb.uci.edu>
W. Edward Robinson, Jr., **Director**

The combined graduate program in Cellular and Molecular Biosciences (CMB) provides the first year of instruction for graduate students entering Ph.D. programs in six departments within the School of Biological Sciences and the School of Medicine. Students in the CMB program will select three didactic courses, one each quarter, from a menu of approved course options. Students will select one course from each key biological category of "Molecules of Life," "Cells and Signaling," and "Integrated Systems and Genetics." The diversity of curriculum options offers students, in cooperation with a faculty advisor, the opportunity to customize the curriculum to the student's research goals and interests. During the first year the students also undertake introductory research in at least two laboratories. The year culminates in a comprehensive preliminary examination and evaluation.

By the beginning of the second year the student identifies a research advisor from over 100 faculty from the participating departments of Biological Chemistry, Developmental and Cell Biology, Microbiology and Molecular Genetics, Molecular Biology and Biochemistry, Pathology and Laboratory Medicine, and Physiology and Biophysics. Each faculty member's area of research is described at the beginning of the departmental sections on the following pages. Regular teaching of undergraduates is part of graduate student training, at least in the second year of study. During the second year and beyond, students participate in the journal club and seminar series of the department in which they have elected to carry out their dissertation work, as specified by the departmental requirements. The normative time for completion of the Ph.D. is

five years, and the maximum time permitted is seven years. Further information is available in the *Catalogue* sections of the participating departments and through the CMB program office.

Applicants should have significant laboratory experience and be well prepared in calculus, physics, organic chemistry, and biochemistry.

Graduate Program in Mathematical and Computational Biology

4213 McGaugh Hall; (949) 824-7927
adetsch@uci.edu; <http://mcsb.bio.uci.edu/>
Frederic Y.M. Wan, **Director**

The graduate program in Mathematical and Computational Biology (MCB) is a one-year program designed to function in concert with existing departmental programs. Students who successfully complete the MCB program select a thesis advisor from among the participating faculty and then automatically join a departmental program for the remainder of their Ph.D. training. In this way, the MCB serves not as a degree-granting program, but as a “gateway” toward a Ph.D. degree in an existing degree program.

The MCB program provides students with an opportunity for a broad introductory training in mathematical and computational biology, individualized faculty counseling on curricular needs, and exposure to a large and diverse group of faculty and research projects in participating departments of the program. Member departments include Biomedical Engineering, Computer Science, Developmental and Cell Biology, Ecology and Evolutionary Biology, Mathematics, Microbiology and Molecular Genetics, and Molecular Biology and Biochemistry. (Other actively participating departments are Chemistry and Physics; admission to these departments via MCB is currently under review.)

The MCB curriculum is designed to teach students at the beginning of their graduate studies the necessary mathematical, computational, and biological knowledge for successful research at the interface between these disciplines. The needs of students with a variety of backgrounds can be met provided that they have had mathematical training comparable to a standard one-year university-level calculus course and a lower-division university course in elementary differential equations and linear algebra. Exceptional students not meeting these prerequisites may be admitted to the program on the condition that they fulfill these requirements during the first fall quarter of their graduate study or the summer preceding, and pass with a grade of B or better.

All first-year students normally take six four-unit MCB core courses, three quarters in mathematical and computational methods for biology and three in biological sciences. Research laboratory rotations constitute an important component of the first-year training program, providing students with intensive introductions to experimental design and quantitative data analysis as well as familiarizing them with available research opportunities. Students are expected to conduct three rotations in different labs prior to choosing a thesis advisor. Because of the interdisciplinary nature of the MCB program and the diversity of the enrolled students, MCB students are expected to become familiar with both “wet” experimental biology labs as well as with mathematical/computational laboratories.

At the end of the first year, each student will choose a primary thesis advisor from among the participating faculty of the member departments, and will enroll in a departmental Ph.D. program with which the thesis advisor is affiliated. To ensure interdisciplinarity of the thesis project, students who complete the MCB program choose a secondary thesis advisor from a department complementary to the primary thesis advisor’s department. Although completion of the Ph.D. will be subject to the degree requirements of the departmental Ph.D. program in which the student enrolls, partici-

pating departments have agreed to accept both the course work and research conducted during the MCB gateway year in partial fulfillment of such requirements. The degree to which this is applicable varies. Students must consult with the department of choice for more specific information.

Interdepartmental Neuroscience Program

4145 Natural Sciences II; (949) 824-6226
gp-inp@uci.edu; <http://www.inp.uci.edu>
Leslie M. Thompson, **Director**

The Interdepartmental Neuroscience Program (INP) is a first-year graduate program that brings together more than 70 faculty from the School of Biological Sciences and the School of Medicine, including participation from the Departments of Anatomy and Neurobiology, Developmental and Cell Biology, Neurobiology and Behavior, and Pharmacology. INP faculty have broad research interests in behavioral neuroscience, brain aging, developmental neurobiology, genetics, learning and memory, molecular neurobiology, cellular neurobiology, neural injury/disorders/repair, neuropharmacology, plasticity, and sensation and perception. Neuroscience as a discipline requires scientists to have a detailed understanding of at least one field, and a broad understanding of many other fields. INP provides breadth early on, followed by specialization in years two through five of predoctoral training.

INP organizes and coordinates a core curriculum that provides a foundation in Neuroscience; this forms the basis of future specialized instruction in a participating departmental degree-granting program. This curriculum includes course work and laboratory rotations. Each trainee is assigned a Student Advisory Committee, consisting of three participating faculty members, to assist trainees in tailoring an appropriate course of study based on academic background, interests, and research foci. After successfully completing the core curriculum, students select an advisor from the participating faculty and then are guaranteed automatic admission to the Ph.D.-granting program in their advisor’s home department. In this way, INP serves not as a degree-granting program, but as a “gateway” to further graduate training. Students are required to meet all doctoral degree requirements associated with the thesis advisor’s department or program.

In particular, the program will provide trainees an opportunity (1) to begin training in Neuroscience with a broad academic introduction, (2) to receive individualized attention to curricular needs, (3) to conduct initial research projects with a large and diverse group of faculty in a wide variety of departments, and (4) to conduct dissertation research in any of a large and diverse group of laboratories in a wide variety of departments.

In the first year of study, students must successfully complete one course from each of the molecular, systems, and cellular neuroscience categories. All trainees also participate every quarter in a two-unit course called Foundations of Neuroscience. This mandatory course meets in the fall and winter quarters and is intended to expose students to critical reading and analysis of the primary literature. Students are encouraged to carry out three laboratory rotations of 10 weeks each. With permission from their Advisory Committee, students may carry out fewer rotations. Rotations are graded on a Satisfactory/Unsatisfactory only scale. Trainees are judged as having successfully completed the program provided that they have (1) achieved at least a B⁺ (3.3) average in the core courses, (2) achieved a satisfactory grade in each quarter of Foundations of Neuroscience, (3) achieved satisfactory grades in all rotations, and (4) identified a participating faculty member who has agreed to serve as their thesis advisor.

The ideal INP candidate will have had a substantial subset of the following courses: biology, chemistry, physics, calculus, neuroscience, psychology, biochemistry, and genetics. Preference will be given to applicants who have had laboratory research experience.

Following completion of the INP and selection of a thesis mentor, students will become members of the faculty member's participating department. In addition to the INP course work requirements, each department has specific requirements to be fulfilled, indicated below.

Anatomy and Neurobiology: Students entering the Anatomy and Neurobiology program are required to participate in the Current Topics in Neuroscience journal club (Anatomy 227A-B-C) and attend all department sponsored seminars. They are also required to meet once each year with an advisory committee to monitor their progress and present their research at the annual "Grad Day" meeting. Individual advisors may require students to take other courses depending on their interests and research program.

Developmental and Cell Biology: Students entering the Developmental and Cell Biology program are required to enroll in and attend the weekly department seminar series (Developmental Biology 290) and Advanced Topics in Cell Biology journal club (Developmental Biology 206). Students are expected to teach (TA) in their second year and enroll in University Teaching (399). Student training will also be individually assessed for possible courses with an emphasis in molecular, developmental biology, or genetics as deemed necessary for successful completion of the thesis research project.

Neurobiology and Behavior: Neurobiology and Behavior accepts any of the INP core courses toward the requirement of one each from Cellular, Molecular, Systems, and Behavioral categories. INP students who enter Neurobiology and Behavior in their second year must complete the fourth category if they only fulfilled three as INP students. In addition, they will fulfill the requirements met by all continuing students including teaching, advancing to candidacy in their third year, annual meetings with an advisory committee, and completing four advanced courses prior to defending their dissertation in their fifth year. They must also participate in the regular department colloquia. Students also present their research annually in the graduate student NeuroBlitz colloquium series.

Pharmacology: Students entering the Pharmacology program through the INP are required to complete Statistics (Pharmacology 256) and Ethics (Pharmacology 257) during the summer. They will also fulfill requirements met by all continuing students including the seminar series (Pharmacology 298), research (Pharmacology 299), and advance to candidacy in their third year.

DEPARTMENT OF DEVELOPMENTAL AND CELL BIOLOGY

5205A McGaugh Hall; (949) 824-1721

Ken W.-Y. Cho, Department Chair

Faculty

Joseph Arditti (*Emeritus*): Developmental physiology of orchids

Kavita Arora: *Drosophila* development; TGF- β signal transduction; cell signaling

Lee Bardwell: Intracellular signaling in development and disease

Bruce Blumberg: Gene regulation by nuclear hormone receptors in vertebrate development and adult physiology

Hans R. Bode (*Emeritus*): Pattern formation and stem cell differentiation

Carrie Brachmann: Spatial and molecular regulation of developmental apoptosis

Peter J. Bryant: Tumor-suppressor genes of *Drosophila* and humans

Susan V. Bryant: Molecular basis of limb development and regeneration

Richard D. Campbell (*Emeritus*): Morphogenesis; biology of *Hydra*; fractal geometry of biological forms

Ken W.-Y. Cho: Molecular mechanisms of axis specification in *Xenopus*

Olivier Cinquin: Mathematical modeling of networks, systems biology

Peter J. Donovan: Stem cell biology

Aimee L. Edinger: Cancer biology, cellular growth control, apoptosis

Donald E. Fosket (*Emeritus*): Regulation of cytoskeleton formation and function

Steven Gross: Force Generation by molecular motors in living cells

David Gardiner: Limb development and regeneration

Patrick L. Healey (*Emeritus*): Plant cellular differentiation and morphogenesis; ultrastructure and histochemistry of secretory systems; early reproductive development

Franz Hoffmann: Regeneration of cultured plant cells; somatic cell genetics

Lan Huang: Mass spectrometry/proteomics

Daniel J. Knauer (*Emeritus*): Human antithrombins and related serine protease inhibitors

Stuart M. Krassner (*Emeritus*): Developmental transitions of hemoflagellates

Arthur D. Lander: Molecular mechanisms of cell and axon guidance; proteoglycans

Eva Y.-H. P. Lee: DNA repair and tumor suppressor genes; cancer biology

Howard M. Lenhoff (*Emeritus*): Biology of *Hydra*; immobilized enzymes; history of experimental biology

Shin Lin: The combined use of biochemistry, cell biology, molecular biology, and molecular biophysics to study the structure and function of proteins involved in cytoskeletal/contractile functions and signal transduction in muscle and nonmuscle cells

Leslie Lock: Stem cell biology

Grant MacGregor: Mouse reproduction and development

J. Lawrence Marsh: Molecular genetics of development in *Drosophila* and humans

Ronald L. Meyer: Development of nerve connections, nerve injury and regeneration

R. Michael Mulligan: RNA editing in plant mitochondria and chloroplasts

Diane K. O'Dowd: Electrical excitability and synaptic connectivity during development

Thomas F. Schilling: Zebrafish development, vertebrate genetics, and craniofacial development

Christine Suetterlin: Golgi dynamics during the cell sumoylation

Rahul Warrior: Genetics and cell biology of nuclear migration of growth factor signaling

Tau-Mu Yi: G-protein signaling; systems biology

Research programs of the Department of Developmental and Cell Biology focus on molecular aspects of the development of eukaryotic organisms, on the molecular interaction of cells in tissue differentiation, and expression and function of genes related to the biogenesis of organelles and cellular constituents. The main emphasis of research training is in the molecular aspects of cells and development, and the utilization of biotechnology. The Department maintains facilities for research that include genetic, molecular, and biochemical techniques and also has facilities in advanced electron optics, microsurgery, microinjection, and neurophysiology.

The Department offers graduate study in conjunction with the program in Cellular and Molecular Biosciences (CMB), and the Interdepartmental Neuroscience Program, which are described in a previous section. Students admitted into the combined program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year. Students participate in the Developmental or Cell Biology Journal Club and the departmental seminar series, which meet weekly during the academic year. In the fall of their third year, students take the advancement-to-candidacy examination by presenting and defending a proposal for specific dissertation research. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Developmental and Cell Biology

200A-B-C Research in Developmental and Cell Biology (2 to 12 per quarter) F, W, S. Individual research supervised by a particular professor. Prerequisite: consent of instructor.

200R Research in Developmental and Cell Biology for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Developmental and Cell Biology for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

201A Advanced Topics in Developmental Biology (2). Seminar, two hours. Advanced study in various fields of organismic biology. Prerequisite: consent of instructor. May be repeated for credit.

202A-B-C Basic Training (2-2-2) F, W, S. Lecture, two hours. Provides students with skills and knowledge needed to make a rapid start in productive research in molecular biology, genetics, and biochemistry. Includes experimental design; laboratory safety; literature management; microscopy; statistics; patents; grantsmanship; publication; presentation; teaching; and responsible conduct of research. Satisfactory/Unsatisfactory only.

203A-B-C Graduate Tutorial in Developmental and Cell Biology (4-4-4) F, W, S. Advanced study in areas not represented by formal courses. May involve individual or small group study through discussion, reading, and composition. Time and subject matter arranged individually.

204 Advanced Topics in Developmental Neurobiology (2) F, W, S. Seminar, two hours. Discussion of recent papers in the area of molecular aspects of cellular and developmental neurobiology. Prerequisite: consent of instructor. May be repeated for credit. Satisfactory/Unsatisfactory only.

205 Molecular Motors and the Cytoskeleton (4) F, W, S. Lecture, three hours; discussion, one hour. Cells use nano-machines (molecular motors) to organize themselves and transport cargo. This interdisciplinary course studies these motors and the rails they move along. Examines their biological function and how they function at the single-molecule level as machines. Prerequisite: Biological Sciences D103 or consent of instructor. Concurrent with Biological Sciences D115.

206A-C Advanced Topics in Cell Biology (2-2) . Seminar, two hours. Advanced study of various topics in cell biology. Prerequisite: consent of instructor. May be repeated for credit.

207 Mouse Developmental Genetics (4) S. Lecture, three hours. Introduction to the use of the mouse in contemporary biomedical research. The biology and development of the laboratory mouse, methods for manipulation of the mouse genome and embryos, and examples of application of these methods to understanding mammalian development and homeostasis. Prerequisite: graduate standing, advanced undergraduate standing, or consent of instructors. Same as Biological Chemistry 215.

208 Balancing an Academic Workload (1) F. Seminar, one hour. Students receive formal training in balancing graduate-level biology research with other time commitments, including teaching. Recommended for graduate students who have an active research program and teaching or course work commitments.

209 Molecular Genetics Journal Club (2) F, W, S. Seminar, one and one-half hours. Advanced topics of current interest in molecular and developmental genetics. May be repeated for credit.

210 Advanced Development Genetics (4). Lecture, two hours; discussion, two hours. Focuses on discussion of critical concepts in developmental biology and regeneration, with emphasis on model organisms such as *Drosophila*, Zebrafish, and murine systems. Molecular mechanisms underlying key developmental decisions also discussed. Prerequisite: consent of instructor.

211 Faculty Research Colloquium (2) F. Research interests of faculty participating in the graduate program in Cellular and Molecular Biosciences are presented in weekly meetings. Corequisite: enrollment in the CMB graduate program.

231B Cell Biology (4) F. Lecture, two hours; discussion, two hours. A broadly based course including topics in extracellular matrix, cytoskeleton, organelle biogenesis, receptor-mediated endocytosis, signal transduction, cell cycle, and developmental biology. Prerequisite: consent of instructor.

232 Systems Cell and Developmental Biology (4) W. Lecture, three hours. Introduces concepts needed to understand cell and developmental biology at the systems level, i.e., how the parts (molecules) work together to create a complex output. Emphasis on using mathematical/computational modeling to expand/modify insights provided by intuition. Prerequisite: graduate standing. Concurrent with Biological Sciences D155. Same as Biomedical Engineering 213.

233 Topics in Corporate and Translational Research (1) S. Speakers are drawn from biotechnology and pharmaceutical companies and university faculty. Emphasis is on basic and applied research in a corporate environment, and academic research with strong potential for clinical and commercial applications. Satisfactory/Unsatisfactory only. May be repeated for credit.

245 Stem Cell Biology (4) F. The basic characteristics and development roles of embryonic, adult, and cancer stem cells in the human body and in model systems and the use of experimental and genetic methods to analyze and manipulate their properties.

252L Stem Cell Laboratory (4) S. Designed to prepare M.S. Biotechnology program students for a career in stem cell research. Laboratory training utilizes tissue culture, mouse and human embryonic stem cells, and is enhanced with didactic material and discussion. Prerequisites: Molecular Biology and Biochemistry 250L and 251L. Limited to M.S. Biotechnology program students in the Stem Cell emphasis, or consent of instructor.

290A-B-C Colloquium in Developmental and Cell Biology (2-2-2) F, W, S. Colloquium, one and one-half hours. Contemporary research problems. Research students, faculty, and other invited speakers introduce research and review topics.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

293 Seminar in Interactive Teaching in Biology (2) F. Students receive formal training in use and assessment of interactive teaching strategies in university-level biology classes. Additional aspects of course design and implementation are covered. Recommended for graduate students who have or will be teaching discussion sections. May be taken for credit two times.

399 University Teaching (4-4-4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory only.

DEPARTMENT OF ECOLOGY AND EVOLUTIONARY BIOLOGY

321 Steinhaus Hall; (949) 824-6006

<http://www.bio.uci.edu/>

Brandon S. Gaut, **Department Chair**

Stephen G. Weller, **Department Vice Chair**

Faculty

Steven D. Allison: Microbial enzymes, theoretical ecology, and biochemistry

John C. Avise: Molecular evolution and population genetics

Francisco J. Ayala: Evolutionary genetics

Albert F. Bennett: Environmental and evolutionary physiology of animals

Rudi C. Berkelhamer: Insect ecology and evolutionary biology; teaching methods

Peter A. Bowler: Conservation and restoration biology

Timothy J. Bradley: Comparative physiology of ion transport epithelia

Adriana D. Briscoe: Evolution of sensory systems

Nancy Burley: Behavioral ecology, sexual selection, social organization and communication

Robin M. Bush: Evolution of infectious disease

Diane R. Campbell: Plant-pollinator interactions; evolution of plant reproductive systems

F. Lynn Carpenter: Restoration of tropical forest; tropical plantation forestry

Michael T. Clegg: Plant genetics; population genetics; molecular evolution

Walter M. Fitch: Molecular evolution

Steven A. Frank: Evolutionary genetics, host-parasite interactions

Brandon S. Gaut: Phylogenetic analysis; molecular evolution

Michael L. Goulden: Ecosystem ecology, plant physiological ecology, micrometeorology

Steven N. Handel: Urban restoration ecology

Bradford A. Hawkins: Insect population and community ecology

James W. Hicks: Comparative physiology of circulation and gas exchange; activity physiology

Bradley S. Hughes: Experimental evolution, coastal ecology, and science education

George L. Hunt, Jr.: Behavioral ecology, marine ornithology

Robert K. Josephson: Comparative neurophysiology; muscle physiology

Natalia L. Komarova: Mathematical biology, biophysics, evolution of language, models of cancer and viruses

Harold Koopowitz: Conservation of endangered plant species

Anthony D. Long: Quantitative and population genetics

Catherine Loudon: Biomechanics and insect physiology

Adam C. Martiny: Microbial ecology, genomics, and physiology

Jennifer Martiny: Microbial ecology and biodiversity

Matthew J. McHenry: Hydrodynamics and mechanoreception of aquatic animals

Kailen A. Mooney: Community ecology, evolutionary ecology, plant-insect interactions

Laurence D. Mueller: Theoretical and empirical studies of density-dependent natural selection

R. Michael Mulligan: RNA editing in plant mitochondria and chloroplasts
 Diane E. Pataki: Plant physiological ecology; ecosystems ecology, global change
 James T. Randerson: Global carbon and nutrient cycles, fires, atmospheric trace gases, and biosphere-atmosphere interactions
 Jose M. Ranz: Comparative genomics and evolution of the expression network
 Robert D. Reed: Evolution and development; butterfly wing patterns
 Michael R. Rose: Evolution of life histories and genetic systems
 Ann K. Sakai: Plant population biology; evolution of plant reproductive systems
 Georg Striedter: Evolutionary developmental neurobiology
 Katharine N. Suding: Community ecology, plant-soil feedbacks
 Noboru Sueoka: Compositional genomics and evolution
 Adam P. Summers: Functional morphology and biomaterials
 Richard Symanski: Conservation biology
 Kevin Thornton: Comparative genomics and population genetics
 Kathleen K. Treseder: Ecosystem ecology, global change biology, and microbial biogeochemistry
 Douglas C. Wallace: Evolutionary biology; genetics; mitochondrial medicine; anthropology
 Stephen G. Weller: Plant population biology; evolutionary genetics of plant reproductive systems
 Dominik Wodarz: Theoretical biology of cancer, infectious diseases, and immunology
 Guiyan Yan: Ecology and genetics of malaria

Ecology and evolutionary biology deals with the establishment of adaptations over evolutionary time and with the organismal function in ecological time. Faculty in the Department of Ecology and Evolutionary Biology study questions pertinent at a variety of levels of biological organization, from molecular aspects of evolution, to organismal structure and performance, to the ecology of ocean ecosystems. Research is conducted in both the laboratory and field and includes work on a variety of organisms from phage and bacteria, to higher plants and animals. Primary attention is given to evolutionary, ecological, and functional questions rather than to particular habitats or taxa. Faculty and graduate student research is often collaborative and interdisciplinary in approach. Departmental research activities include physiological ecology energetics, plant-herbivore and plant-pollinator interactions, microbial ecology and coevolution, quantitative genetics, life history evolution, population and reproductive ecology, and community ecology. These research endeavors provide a balance between empirical and theoretical approaches to evolutionary, organismal, and ecological problems.

The graduate program offers both the Plan I M.S. and the Ph.D. in Biological Sciences. A basic course sequence consisting of Ecology and Evolutionary Biology 204, 205, 206, 207, and 208 is recommended for most entering students during their first year. At the end of the first year, students complete an examination based upon three of these courses (205, 206, and 208) and other materials the Department might require. Satisfactory performance on this Comprehensive Examination is required for continuation in the graduate program.

Each entering graduate student chooses a faculty advisor and a three-person advisory committee for guidance, with whom the student meets at least twice each year. All students are encouraged to submit a research proposal to their advisory committee during their first year of residency. A comprehensive proposal is required before the end of the second year. The progress of each student is reviewed by the student's advisory committee, together with the graduate advisor, once each academic year.

The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years. All requirements for the M.S. degree should be completed within two years, with a maximum of three years allowed for completion of the program. Advancement to doctoral candidacy by an oral examination is expected during the third year for students entering with a B.A. or B.S. or during the second year for those entering with an M.A. or

M.S. Applicants for this program should have a solid undergraduate program in biology and ecology, emphasizing both research and field work. In addition, course work in statistics, mathematics, and physical and chemical sciences is expected. All applicants are required to submit aptitude and advanced biology GRE scores. The deadline for application is January 15.

Courses in Ecology and Evolutionary Biology

200A-B-C Research in Ecology and Evolutionary Biology (2 to 12 per quarter) F, W, S. Individual research supervised by a particular professor. Prerequisite: consent of instructor.

201 Seminar in Ecology and Evolutionary Biology (2) F, W, S. Invited speakers, graduate students, and faculty present current research in ecology and evolutionary biology. Satisfactory/Unsatisfactory only. Prerequisite: graduate standing. May be repeated for credit.

203A-B-C Graduate Tutorial in Ecology and Evolutionary Biology (2 to 12 per quarter) F, W, S. Advanced study in areas not represented by formal courses. May involve individual or small group study through reading, discussion, and composition. Prerequisite: consent of instructor.

204 Writing Grant Proposals (4) S. Provides students with hands-on experience writing proposals in the research areas of ecology, evolution, or physiology. Prerequisite: graduate standing or consent of instructor.

205 Special Topics in Ecology (4) F. Lecture, four hours. Survey of special topics in ecology. Prerequisite: graduate standing.

206 Special Topics in Evolution (4) S. Lecture, four hours. Extensive introduction to the primary literature of evolutionary biology. Topics include population genetics, quantitative genetics, neutralism, molecular evolution, evolution of genetic systems, genetic architecture of fitness, speciation, and macroevolution. Prerequisite: graduate standing.

207 Quantitative Methods in Ecology and Evolutionary Biology (4) W. Lecture, four hours. Statistics for ecologists and evolutionary biologists. Emphasis on specific applications and underlying assumptions rather than on methods of calculation. Topics include experimental design, parametric and nonparametric methods, analysis of variance and covariance, and multiple regression. Prerequisites: at least one quarter of statistics, including regression and analysis of variance; graduate standing.

208 Ecological and Evolutionary Physiology (4) F. Seminar, four hours. A summary of information in organismal biology, comparative and ecological physiology, and the biophysical basis of organismal function. Prerequisite: graduate standing or consent of instructor.

NOTE: Enrollment in the following courses (210–285) may be approved for undergraduate students with advanced standing.

210A-B-C Foundations of Physiology (4-4-4) F, W, S. Lecture and discussion, four to eight hours. Physical and functional principles common to many living forms. Course forms a basis for subsequent specialization in any of the subdisciplines of physiology. May be repeated for credit. Satisfactory/Unsatisfactory only.

218 Advanced Topics in Evolutionary Biology (4) F, S. Seminar, three hours. Content and instructor will vary from quarter to quarter. Possible topics include quantitative genetics, experimental methods of evolutionary studies, mathematical modeling in evolutionary studies, and the evolution of genetic systems. Prerequisite: consent of instructor.

219 Advanced Topics in Ecological Genetics (4) W. Seminar, three hours. Content and instructor will vary from year to year. Possible topics include coevolution, sex-ratio evolution, evolution senescence, plant population biology, and density-dependent selection. Prerequisite: consent of instructor.

221 Advanced Topics in Ecology (2 to 4) F, W, S. Weekly discussion of current topics in ecology at the graduate level. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

223 Advanced Applied Statistics (3) W. Lecture, three hours. Applications of general linear models using SAS software. Topics include: theory of general linear models, multiple regression, multivariate analysis, and random effects in mixed models. Sample data come from ecology and evolution and are analyzed using SAS. Prerequisite: Ecology and Evolutionary Biology 207 or consent of instructor. Satisfactory/Unsatisfactory only.

225 Global Biological Change (4) F. Lecture, two hours; field work, one hour. An investigation of the mechanisms that underlie responses of organisms to human-caused environmental changes. Activities include field trips, literature discussions, and lectures. Focuses on issues of interest in Southern California, including nitrogen deposition, invasions, and habitat fragmentation. Same as Earth System Science 260.

228 Seminar in Conservation Biology (2) F, W. Devoted to the application of basic ecological principles to the understanding and resolution of environmental problems of both local and global natures. Current problems approached through a combination of readings, group discussions, and visiting speakers. Prerequisite: graduate standing or consent of instructor.

230 Topics in Microbial Ecology (2 to 4) F, W, S. Weekly discussion of current topics in ecology, biogeochemistry, evolution, and physiology of microbial organisms. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

241 Teaching Science in Secondary School (4). Prospective secondary science teachers learn how to teach science in grades 7–12. Covers State science requirements, a variety of teaching methods, criteria for selecting science curricular materials, and how to plan science lessons, units, experiments, projects, and demonstrations. Limited to students accepted into the Teacher Credential Program. Same as Education 341.

243 Principles of Brain Evolution (4). Lecture two hours. Brains obviously differ between different species, yet many commonalities exist. Surveys species similarities and differences in brain organization, then extracts some general principles of how brains evolve. Emphasis placed on vertebrate brains and on the functional implications of neuroanatomical change. Concurrent with Biological Sciences N117. Same as Neurobiology and Behavior 243.

244 Applied Instructional Strategies in Secondary School Sciences (4). Application of pedagogy and research to practice science teaching experiences in the secondary schools. A continuation of the Education 340 series with an emphasis on the needs of students with culturally diverse backgrounds. Limited to students accepted into the Teacher Credential Program. May be taken twice for credit. Same as Education 344.

251 Population Dynamics in Ecology, Epidemiology, and Medicine (4) S. Lecture, three hours. Explore the dynamics of populations on an ecological, epidemiological, and medical level. Considers the dynamics of competition, predation, and parasitism; the spread and control of infectious diseases; and the *in vivo* dynamics of viral infections and the immune system. Prerequisite: graduate standing. Concurrent with Biological Sciences E151.

253 Functional and Structural Evolutionary Genomics (4) W. Lecture and computer lab, four hours. Function and organization of genomes analyzed from an evolutionary perspective. Review of some of the most recent experimental approaches in genome analysis and comparative genomics. Relevant software to analyze DNA and expression data is used. Concurrent with Biological Sciences E153.

260 Ornithology (4). Lecture, three hours. A thorough introduction to the biology of birds, covering topics ranging from avian anatomy and physiology to behavior, natural history, ecology, genetics, evolution, systematics, and conservation. Examples from both local and global avifauna. Concurrent with Biological Sciences E160.

272 Systematics and Evolution of Flowering Plants (4) S of even years. Lecture, three hours. Basic systematic concepts including phylogenetic analysis, introduction to major groups of flowering plants, analysis of evolutionary significance of characters used in systematic studies. Students carry out a phylogenetic analysis using appropriate software. Concurrent with Biological Sciences E172.

273 Plant Systematics Laboratory (4) S. Laboratory, three hours. Diversity of flowering plants is investigated in the laboratory and field. Familiarity with flowering plant families, particularly those prominent in the California flora, is emphasized. Concurrent with Biological Sciences E172L.

275 Coastal Ecosystem Health (4) F. Seminar, three hours. Examines the causes of coastal ecosystem degradation and strategies to restore the ecosystem balance or prevent further coastal ecosystem health degradation. Prerequisite: graduate standing or consent of instructor. Same as Environmental Health, Science, and Policy E205 and Public Health PH260.

285 Topics in Evolutionary Genetics (2). Discussion, one to two hours. Weekly discussion of recent research on evolutionary genetics. Prerequisites: graduate standing and consent of instructor.

324 Curriculum and Methods for Elementary School Science (4). Lecture, three hours. Prospective elementary teachers learn how to teach science in grades K–8. Covers State science requirements, a variety of teaching methods, criteria for selecting science curricular materials, and how to plan science lessons, units, experiments, projects, and demonstrations. Limited to students in the Teacher Credential Program. Same as Education 323.

398 Teaching Assistant Seminar (2) W. Seminar, two hours. Readings, lectures, workshops, and student presentations designed to help develop teaching skills of graduate students teaching university-level biology classes. Topics vary and may include: course organization, presentation styles, exam design, grading, motivating students, and commonly encountered problems. May be repeated for credit as topics vary.

399 University Teaching (4-4-4) F, W, S. Limited to Teaching Assistants.

DEPARTMENT OF MOLECULAR BIOLOGY AND BIOCHEMISTRY

3205 McGaugh Hall; (949) 824-4915

Timothy F. Osborne, **Department Chair**

Donald F. Seneor, **Department Vice Chair**

Faculty

Dana W. Aswad: Regulation of protein function by covalent modification

Hans-Ulrich Bernard: Papillomavirus/cancer

Michael J. Buchmeier: Molecular biology and pathogenesis of emerging viruses

David Camerini: HIV-1 pathogenesis and molecular biology

Paolo Casali: Human immune response to cancer and viral diseases

Melanie Cocco: Structural studies of proteins and DNA using NMR spectroscopy

Michael G. Cumsy: Mitochondrial protein import; regulation of gene expression in yeast

Rowland H. Davis (*Emeritus*): Regulation of polyamine metabolism in *Neurospora crassa*

Hung Fan: Molecular biology and pathogenesis of mouse and human retroviruses

David A. Fruman: Signal transduction, immunology, cancer, leukemia, kinase, microarray

Paul Gershon: mRNA transcription and modification

Charles G. Glabe: Amyloid A β peptide in Alzheimer's pathogenesis; gamete recognition

Celia Goulding: Utilizing proteomic and crystallographic techniques to elucidate and characterize novel systems of protein complexes in *Mycobacterium tuberculosis*

Gale A. Granger (*Emerita*): Immunology and pathogenesis: Cell-mediated immunity; tumor immunology; cytokine action

Barbara A. Hamkalo (*Emerita*): Molecular basis of differential chromatin condensation

Agnes Henschen-Edman (*Emerita*): Protein structure, function, post-translational modification; fibrinogen

Christopher C.W. Hughes: Endothelial cells as initiators and targets of immune responses

Anthony A. James: Malaria parasite development; genetic manipulation of insect vectors

Thomas E. Lane: Molecular/immuno-pathogenic mechanisms of virus-induced demyelinating disease

Hartmut Luecke: Structure-function studies of membrane-associated proteins

Rui (Ray) Luo: Protein structure and noncovalent associations involving proteins

Andrej Luptak (*Joint*): RNA biology and chemistry

Jerry E. Manning (*Emeritus*): Major surface proteins and their genes in *Trypanosoma cruzi*

Rachel W. Martin (*Joint*): Solid-state NMR methods development, protein structure determination, biophysical chemistry, physical chemistry

Alexander McPherson: X-ray and atomic force microscopy analysis of protein, nucleic acid, and virus crystals; structural immunology, structural virology; microgravity research on macromolecular crystal growth

Naomi Morrissette: Genetic, cell biological, and structure-function studies of tubulin and microtubules in *Apicomplexan* parasites

Edward Nelson (*Joint*): Tumor immunology

Timothy F. Osborne: Transcriptional regulation of cholesterol biosynthesis

Thomas L. Poulos: Protein engineering and crystallography

Rainer K. Reinscheid (*Joint*): Molecular pharmacology, G Protein-coupled receptors, GPCRs
 Markus Ribbe: Fundamental biochemical processes in microbial systems
 Ingrid Ruf: Mechanisms of viral oncogenesis, maintenance of viral latency and regulation of gene expression
 Donald F. Seneor: Interactions of proteins and DNA in transcriptional regulation
 Andrea J. Tenner: Molecular basis of the enrichment of human leukocyte function
 Krishna K. Tewari (*Emeritus*): Chloroplast DNA: replication and transcription
 Shiou-Chuan (Sheryl) Tsai: Structural and chemical biology of multisubunit enzyme complexes that make pharmaceutically important natural products
 Luis P. Villarreal: Tissue-specific viral and cellular gene expression; viral vectors
 Craig M. Walsh: T cell function, development, and homeostasis
 Gregory A. Weiss (*Joint*): Bioorganic chemistry, chemical biology, protein engineering, molecular biology and biochemistry
 Clifford A. Woolfolk (*Emeritus*): General microbiology; enzymology

The research interests of faculty in the Department of Molecular Biology and Biochemistry include structure and synthesis of nucleic acids and proteins, regulation, virology, biochemical genetics, gene organization, nucleic acids and proteins, cell and developmental biology, molecular genetics, biomedical genetics, and immunology.

The Department offers graduate study in conjunction with the program in Cellular and Molecular Biosciences (CMB), which is described in a previous section. Students admitted into the combined program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their third year. Participation in an advanced topics seminar series and completion of at least one course per year for three years are expected of all students. Students must advance to candidacy in their third year. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Graduate Gateway Program in Medicinal Chemistry and Pharmacology (MCP). The one-year MCP graduate gateway program is designed to function in concert with selected graduate programs, including the Ph.D. in Biological Sciences. Detailed information is available in the Department of Pharmaceutical Sciences section on page 538, and online at <http://www.cohs.uci.edu/pharm.shtml>.

Courses in Molecular Biology and Biochemistry

200A-B-C Research in Molecular Biology and Biochemistry (2 to 12 per quarter) F, W, S. Individual research supervised by a particular professor. See areas of interest listed under Faculty. Prerequisite: consent of instructor.

200R Research in Molecular Biology and Biochemistry for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Molecular Biology and Biochemistry for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

201A-B-C Seminars in Molecular Biology and Biochemistry (2-2-2) F, W, S. Seminar, two hours. Presentation of research from department laboratories or, when pertinent, of other recent developments. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

202A-B-C Tutorial in Molecular Biology and Biochemistry (2-2-2) F, W, S. Tutorials in the area of research of a particular professor which relate current research to the literature. May be conducted as journal clubs. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

203 Nucleic Acid Structure and Function (4) W. Lecture, three hours. Structure and chemistry of nucleic acids. Relationship between these properties and the mechanisms of fundamental processes such as replication and repair, RNA-mediated catalysis, formation and regulation of higher order chromatin structure and recombination. Prerequisites: Biological Sciences 98 and 99 or the equivalent and Chemistry 51A-B-C or the equivalent. (Coordinator, D. Seneor)

204 Protein Structure and Function (4) F. Lecture, three hours. The structure and properties of proteins, enzymes, and their kinetic properties. Prerequisites: Biological Sciences 98 and 99 or the equivalent and Chemistry 51C or the equivalent. (Coordinator, D. Aswad)

205 Topics in Viral Gene Expression (4) W. Lecture, three hours. Primary research data on the major DNA and RNA viruses emphasizing strategies of regulation of gene expression. Utilization of viruses as molecular biological tools. Graduate-level knowledge of the biochemistry and molecular biology of macromolecules is required. Prerequisites: Molecular Biology 203 and 204 or the equivalent. (Coordinator, B. Semler)

206 Regulation of Gene Expression (4) W. Lecture, three hours. Aspects of gene expression including the organization of the eukaryotic nucleus in terms of protein-nucleic acid interaction (i.e., chromatin and chromosome structure); comparisons between prokaryotic and eukaryotic gene expression, the enzymology and regulation of RNA transcription in *E. Coli* and other prokaryotes. Enzymology of transcription in eukaryotes. Same as Microbiology and Molecular Genetics 206. (Coordinator, R. Sandri-Goldin)

210A-B Basic Medical Biochemistry (10-10) F, W. Lecture, ten hours. Classical and molecular biochemistry, including structure, function, and biosynthesis of macromolecules; metabolic interrelations and control mechanisms; and biochemical genetics. Application of recent advances in knowledge of molecular bases for cellular function to disease states (diagnosis, prevention, and treatment). Prerequisite: consent of instructor.

211 High-Resolution Structures: NMR and X-ray (4) F. Lecture, three hours. Basic principles of magnetic resonance and x-ray crystallography toward the determination of high-resolution biomolecular structures. Prerequisites: Mathematics 2B and consent of instructor. Concurrent with Biological Sciences M133.

213 Literature in Nucleic Acid Structure and Function (2). Seminar and discussion, two hours. Exploration and critical analysis of recent primary scientific literature in structure, properties, and biological mechanisms involving nucleic acids. Corequisite: Molecular Biology and Biochemistry 203. Prerequisite: consent of instructor. (Coordinator, D. Seneor)

214 Literature in Protein Structure and Function (2). Seminar and discussion, two hours. Exploration and critical analysis of recent primary scientific literature in structure and properties of proteins, enzymes, and their kinetic properties. Corequisite: Molecular Biology and Biochemistry 204. Prerequisite: consent of instructor. (Coordinator, D. Aswad)

215 Integrative Immunology (4). Lecture and discussion, four hours. Lectures and student presentations of primary literature. The main goal is to achieve a basic understanding of the cellular and molecular basis of innate and adaptive immunity, and how immune function is coordinated at a systems level. Same as Microbiology and Molecular Genetics 215.

217A Principles of Cancer Biology I (4) W of even years. Lecture, three hours. Oncogenes and tumor suppressor genes are studied from molecular viewpoints. Also studies their role in cancer; viral carcinogenesis. Designed for graduate students interested in cancer research. Format includes lectures and student-led discussions. Prerequisites: Molecular Biology and Biochemistry 203 and 204.

217B Principles of Cancer Biology II (4) W of odd years. Lecture, three hours. Topics include cancer cell growth and metastasis, chemical carcinogenesis, and cancer genetics and epidemiology. Designed for graduate students interested in cancer research. Format includes lectures and student-led discussions. Prerequisites: Molecular Biology and Biochemistry 203 and 204.

218 Clinical Cancer (3) F of even years. Lecture, two hours. Designed to acquaint students in basic life science with clinical cancer. Restricted to graduate and postdoctoral students. May be repeated for credit. (Coordinator, H. Fan)

219 Fundamental Immunology II (4) S. Lecture, three hours. Lectures and paper discussions/analyses to achieve a basic understanding of immune system function in health and disease. Topics include immunodeficiency diseases, allergy and hypersensitivity, autoimmunity, transplantation, vaccines, tumor immunology, and modern immunological methods. Prerequisite: Microbiology and Molecular Genetics 215. Concurrent with Biological Sciences M119.

220 Structure and Synthesis of Biological Macromolecules Journal Club (2). Seminar, one hour. Advanced topics in macromolecular structure and synthesis as related to biological problems. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

221 Advanced Topics in Immunology (4) S of even years. Lecture, three hours. Literature-based, interactive discussions focused on review of seminal historic and recent immunology literature. Student responsibilities include reading, critical evaluation, and discussion of manuscripts.

221L Advanced Immunology Laboratory (4) S. Laboratory, four hours. An advanced course in immunology for graduate students enrolled in the Biotechnology master's program. Emphasis is placed on learning modern techniques in immunology such as ELISAs, western blotting, immunofluorescent staining assays. Prerequisite: graduate standing. Concurrent with Biological Sciences M121L.

223 Introduction to Computational Biology (4) S. Lecture, three hours; laboratory, two hours. The use of theories and methods based on computer science, mathematics, and physics in molecular biology and biochemistry. Basics in biomolecular modeling. Analysis of sequence and structural data of biomolecules. Analysis of biomolecular functions. Concurrent with Biological Sciences M123 and Computer Science 183.

224 Virus Engineering Laboratory (4) S. Laboratory, four hours. An advanced laboratory for graduate students enrolled in the Biotechnology master's program. Students learn to engineer recombinant eukaryotic viruses and express genes in mouse tissue. Prerequisite: graduate standing.

227 Immunology Journal Club (2) F, W, S. Seminar and discussion, one hour. Advanced topics in immunology as related to an understanding of human disease. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

228 Genetic Engineering and Biotechnology (4) S. An advanced course in genetic engineering and biotechnology for graduate students enrolled in the Biotechnology master's program. Emphasis is placed on learning advanced methods in assembling the gene for expression in bacteria, yeast, and human cells.

229 Research-in-Progress Seminars (1) F, W, S. Seminar and discussion, one hour. Two half-hour presentations by graduate students and postdoctorals to the department on their current research projects. Satisfactory/Unsatisfactory only. May be taken for credit 15 times.

240 Macromolecular Structure, Function, and Interaction (4) F. Lecture, three hours; discussion, one hour. Chemistry of macromolecules; emphasis on proteins. Physical and chemical properties of proteins, forces that maintain protein structure, relationship between structure and function, interactions of proteins with ligands and other macromolecules, and experimental methods to study structure, function, and interactions. Prerequisites: Molecular Biology 203 and 204. Concurrent with Biological Sciences M140. (Coordinators: D. Seneor and T. Poulos)

250 Advanced Topics in Biotechnology–Nucleic Acids (2) F. Lecture, two hours. Taken concurrently with 250L, supplements laboratory curriculum with scientific background behind experimental methods. Format consists of lectures and the presentation and analysis of relevant papers from the scientific literature. Corequisite: Molecular Biology and Biochemistry 250L. Limited to Biotechnology concentration M.S. students or consent of instructor.

250L Biotechnology Laboratory–Nucleic Acids (8) F. Laboratory, eight hours. Nucleic acid techniques and recombinant DNA technology. Extraction and purification of nucleic acids, cloning and subcloning, PCR, site-directed mutagenesis, nucleic acid hybridization, additional associated procedures. Students must demonstrate accurate documentation of data (laboratory notebook) detailing experience and results. Corequisite: Molecular Biology and Biochemistry 250. Limited to Biotechnology concentration M.S. students or consent of instructor.

251 Advanced Topics in Biotechnology–Protein Purification and Characterization (2) W. Lecture, two hours. Taken concurrently with 251L, supplements laboratory curriculum with scientific background behind experimental methods. Format consists of lectures and the presentation and analysis of relevant papers from the scientific literature. Corequisite: Molecular Biology and Biochemistry 251L. Prerequisites: Molecular Biology and Biochemistry 250 and 250L. Limited to Biotechnology concentration M.S. students or consent of instructor.

251L Biotechnology Laboratory–Protein Purification and Characterization (8) W. Laboratory, eight hours. Major techniques of handling proteins and antibodies. Protein engineering, expression and large-scale purification of recombinant proteins from bacteria, HPLC, antibody purification, western blotting, additional associated procedures. Students must demonstrate accurate documentation of data (laboratory notebook) detailing experience and results. Corequisite: Molecular Biology and Biochemistry 251. Prerequisites:

Molecular Biology and Biochemistry 250 and 250L. Limited to Biotechnology concentration M.S. students or consent of instructor.

255 Structure-Function Relationships of Integral Membrane Proteins (4) W. Lecture, three hours. Integral membrane proteins such as voltage and ligand-gated ion channels, water channels, pumps, cotransporters, and receptors (e.g., GPCRs). The emphasis is on the relationship between atomic structure and the functional properties of these proteins. Prerequisites: a grade of B or better in Biological Sciences 98 and 99. Concurrent with Biological Sciences M160.

280 Advanced Topics in Biochemistry and Molecular Biology (3) F. Lecture, three hours. Selected topics in specified areas of concentration, e.g., nucleic acids, protein biochemistry, genetic expression, biochemical genetics. Specific topics announced in advance. Prerequisites: Biological Sciences 98 and 99 and consent of instructor. Normally taken with Molecular Biology and Biochemistry 205A. Open to advanced undergraduates.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

399 University Teaching (4-4-4) F, W, S. Limited to Teaching Assistants.

DEPARTMENT OF NEUROBIOLOGY AND BEHAVIOR

2205 McGaugh Hall; (949) 824-8519
Thomas J. Carew, **Department Chair**
Ron Frostig, **Department Vice Chair**

Faculty

Jorge Busciglio: Cellular and molecular mechanisms of neuronal degeneration in Down's syndrome and Alzheimer's disease

Lawrence F. Cahill: Brain mechanisms of emotion and memory

Thomas J. Carew: Cellular and molecular mechanisms of memory

Frances S. Chance: Sensory processing by cortical circuitry; single neuron integration; computational modeling or neural networks

Susana Cohen-Cory: Nervous system development; development of synaptic connectivity, neurotrophic factors, *in vivo* imaging

Carl Cotman: Brain aging, Alzheimer's, cell biology, biochemistry

Karina S. Cramer: Mechanisms of nervous system development; axonal target selection; development of auditory brainstem pathways

Norbert Fortin: Fundamental neurobiological mechanisms underlying episodic memory

Ron D. Frostig: Functional organization of cortex

Christine M. Gall: Regulation of neuronal gene expression

John F. Guzowski: Experience-dependent gene expression in the modification of neural circuits involved in long-term memory formation

Robert K. Josephson: Design of skeletal muscle

Claudia H. Kawas: Clinical neurology

Herbert P. Killackey: Developmental neuroanatomy

Frank LaFerla: Alzheimer's, neural apoptosis, transgenic animal modeling

Michael Leon: Brain development

John Marshall: Neuropharmacological approaches to behavioral analysis

James L. McGaugh: Neurobiology of learning and memory

Raju Metherate: Synaptic physiology and plasticity in sensory neuroprocesses

Ricardo Miledi: Molecular neurobiology and physiology of ion channels and receptors

Ian Parker: Intracellular calcium and cell signaling

Michael D. Rugg: Cognitive and neural bases of human memory

Ivan Soltesz: Molecular and cellular neurobiology

George Sperling: Cognition, vision, and visual perception

Craig Stark: Memory, hippocampus, neuroimaging, amnesia, FMRI

Arnold Starr: Cognitive and sensory neuroprocesses

Oswald Steward: Mechanisms of synapse growth and plasticity

Georg Striedter: Neuroethology, behavioral neuroscience, evolutionary neurobiology

Katumi Sumikawa: Molecular neurobiology of synapses

Andrea J. Tenner: Molecular basis of the enrichment of human leukocyte function

Leslie Michels Thompson: Molecular/biochemical analysis of skeletal dysplasias and Huntington's disease

Norman M. Weinberger: Neural bases of attention and learning

Marcelo Wood: Neurobiology and memory

Pauline Yahr: Behavioral neuroendocrinology

Neurobiology and Behavior is concerned with the biology of the nervous system and behavior. The Department of Neurobiology and Behavior emphasizes the adaptive aspects of neural and behavioral plasticity. The faculty's research interests include the biochemical, endocrinological, genetic, and experiential determinants of nervous system function and behavior. Focal topics include synaptic processes, neurophysiology, neuroendocrinology, neuroanatomy, molecular neurobiology, neuropharmacology, theoretical neurobiology, arousal and attention, learning and memory, reproductive behavior, and communication. The importance of developmental and comparative approaches to these problems is stressed. The Department also participates in the Interdepartmental Neuroscience Program, described in a previous section.

The Department of Neurobiology and Behavior offers the Ph.D. degree in Biological Sciences. Graduate students must complete a sequence of core courses (lectures and laboratories) during their first year, and maintain an overall GPA of 3.3 or better. They also must take a minimum of four advanced courses before graduation and participate in directed research each year and teaching during their first, second, third, and fourth years. Students will advance to candidacy for the Ph.D. at the end of their third year by means of a written critical review of the literature in the area in which they plan to do their dissertation, a research proposal, and an oral examination. Graduation depends on successful preparation and oral defense of a dissertation based on the student's research. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Ideally, applicants for this program should have taken undergraduate courses in biology (one introductory year plus some advanced work), psychology (experimental, physiological, and learning), chemistry through biochemistry, introductory physics, calculus, and statistics. They also must submit GRE Aptitude test scores. Because graduate training emphasizes research, preference is given to applicants having laboratory research experience as undergraduates. Applicants with substantial outside commitments that would curtail laboratory research or prolong the time to degree are not accepted. The deadline for application is January 3.

Courses in Neurobiology and Behavior

200A-B-C Research in Neurobiology and Behavior (2 to 12 per quarter) F, W, S. Individual research supervised by a specific professor. Prerequisite: consent of instructor.

201A-B-C Research in Neurobiology and Behavior (2 to 12 per quarter) F, W, S. Individual research supervised by a specific professor. Prerequisite: consent of instructor.

202A, B, C Foundations of Neuroscience (2, 2, 2). Intended to expose students to critical reading and analysis of the primary neuroscience literature. Instructors from departments associated with the Interdepartmental Neuroscience Program participate and discuss topics of current interest. Satisfactory/Unsatisfactory only.

206 Molecular Neuroscience (5) F. Surveys molecular and cellular mechanisms involved in neuronal function, including control of gene expression, post-transcriptional and post-translational processing, RNA and protein targeting, cell death mechanisms, and the molecular genetic basis of neurological disorders. Overview of the molecular aspects of developmental neurobiology. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor. May be taken for credit twice.

207 Cellular Neuroscience (5) W. Neurophysiological and neurochemical mechanisms of electrical and chemical signaling in neurons. Topics include generation of resting- and action-potentials, voltage- and ligand-gated ion channels, second messenger systems, and synaptic transmission and integration. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor. May be taken for credit twice.

207L Cellular Neuroscience Laboratory (2) W. Intensive hands-on laboratory experience of contemporary techniques for studying ion channels and synaptic function. Experiments include microelectrode-recording, patch clamp, quantal analysis of synaptic transmission, heterologous expression of

genes for channels and receptors, brain slice, and fluorescence calcium imaging. Satisfactory/Unsatisfactory only. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor. May be taken for credit twice.

208A-B Systems Neuroscience (5-5) F, W. Study of the mammalian nervous system at the systems level. Anatomy and physiology of sensory, motor, and integrative functions. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor. May be taken for credit twice. Same as Anatomy and Neurobiology 210A-B.

209 Behavioral Neuroscience (5) S. Overview of fundamental conceptual and experimental issues in behavioral neuroscience, emphasizing behavioral endocrinology, aggression, emotion, the neurobiology of learning and memory, and addiction. The approach is a cross-level integration of research in molecular-genetic, cellular, circuit, systems, and behavioral analyses. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor. May be taken for credit twice.

237 Neurobiology of Brain Aging (4). Lecture, three hours. Outlines some of the significant changes that occur in the aging brain, with a special emphasis on risk factors and protective strategies that promote successful brain aging. Topics include changes in synaptic plasticity, neurotrophic factors, and molecular mechanisms in aging. Prerequisite: Neurobiology and Behavior 209.

238 Neurobiology of Memory as a Multidisciplinary Science (4). Lecture, three hours. The study of memory is a highly multidisciplinary science filled with challenges. The focus of this course is to integrate across approaches and levels of analysis to better understand how the hippocampus, and its constituent elements, subserves memory. Prerequisite: Neurobiology and Behavior graduate students only.

239 Functional Imaging of the Nervous System (4). Lecture, three hours. Overview of technical and applied aspects of imaging techniques available for studying the nervous system. The areas emphasized are cellular and sub-cellular imaging of neural function, systems-level imaging of brain function, and imaging of the human brain. Prerequisite: Neurobiology and Behavior graduate students only.

240 Advanced Analysis of Learning and Memory (4). Lecture and seminar, three hours. Advanced analysis of contemporary research concerning the nature and neurobiological bases of learning and memory. Special emphasis is given to time-dependent processes involved in memory storage. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor.

243 Principles of Brain Evolution (4). Lecture, two hours. Brains obviously differ between different species, yet many commonalities exist. Surveys species similarities and differences in brain organization, then extracts some general principles of how brains evolve. Emphasis placed on vertebrate brains and on the functional implications of neuroanatomical change. Concurrent with Biological Sciences N117. Same as Ecology and Evolutionary Biology 243.

244 Cognitive Neuroscience of Human Memory (4). Lecture, three hours. In-depth treatment of current topics of interest in the cognitive neuroscience of human long-term memory. Topics include methods of investigation of human memory, functional architecture of memory, implicit vs. explicit distinction, and control processes in memory, among others. Prerequisite: Neurobiology and Behavior 209.

245 Advanced Topics in the Neurobiology of Aging (4). Lecture and seminar, three hours. Covers the major topics and rapidly advancing areas in the molecular and cellular events leading to brain aging and dementia. Lectures are presented by investigators active in the fields of aging and neurodegeneration. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor.

248 Topics in Neurobiology and Behavior (4). Studies in selected areas of neurobiology and behavior. May be taken for credit three times.

249 Electronics for Biologists (4). Lecture, three hours; laboratory, four hours. Basic principles of electricity; properties and use of discrete components and integrated circuits; circuit analysis and design. Intended for advanced students in the life sciences. Same as Physiology and Biophysics 205.

250 Basal Ganglia and Movement Disorders (4). Lecture and seminar, three hours. Principles underlying the organization and functions of the basal ganglia and amygdala are considered. The circuitry, neurotransmitters, and influences on cortex and brainstem motor regions are discussed. Clinical disorders of the basal ganglia, including parkinsonism and ballism, are included. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor.

254 Molecular Neurobiology (4). Lecture and seminar, three hours. The application of genetic and recombinant DNA technology to neurobiology. Topics include the study of neuronal proteins which play important roles in the formation of synapses and synaptic transmission. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor.

255 History of Neuroscience (4). An overview of the conceptual and technical foundations of contemporary neuroscience from ancient times to the present. The subjects include synapses, neurons, brain organization, sensory, motor, and regulatory systems, learning and memory, human brain function and dysfunction. Concurrent with Biological Sciences N119. May be taken twice for credit.

256 Seminar in Excitotoxicity and Neuronal Injury (4). Lecture and seminar, three hours. A review of recent theories concerning mechanisms of neuronal death in brain diseases. Focuses on recent breakthroughs and controversies in the field, with a special emphasis on the role of the excitatory neurotransmitter, glutamate. Same as Anatomy and Neurobiology 225.

258 Advanced Analysis of Neurogenetics (4). Lecture and seminar, three hours. Analysis of the genetic basis of neurological development and disorders. Emphasis on the approaches used to identify novel, neurologically relevant genes and analysis on the molecular level. Focuses on understanding how genetic changes alter cellular functions and the clinical consequences that ensue. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor.

260 Auditory Neuroscience (4). Lecture, three hours. Multidisciplinary overview of brain mechanisms of hearing. Emphasizes breadth of auditory function and research: single neurons to psychoacoustics, the cochlea to the cortex, and basic science to clinic.

261 Advanced Topics in Neurodegeneration (4). Lecture, three hours. Neurodegenerative disorders represent one of the most devastating illnesses to afflict humans, and usually occur in an age-dependent fashion. Course reviews the basic mechanisms that underlie cognitive and motor dysfunction in the major disorders of the brain. Prerequisite: Neurobiology and Behavior 206.

267 Seminar in Neurobiology and Behavior (1.3). Open only to Neurobiology and Behavior graduate students. May be repeated for credit.

290 Colloquium in Neurobiology and Behavior (1.3) F, W, S

292 Scientific Communication (4). Lecture and discussion, three hours. Students learn how to effectively communicate scientific ideas and results. Activities include learning how to effectively write a scientific manuscript, how to perform a coherent slide presentation, and how to run-through a poster presentation. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor.

397 Learning to Teach Neurobiology (4). Students learn to teach neurobiology, both in concept and in practice. Open only to Neurobiology and Behavior graduate students. Pass/Not Pass only.

398 Learning to Mentor Neurobiology (1 to 4). Students learn to teach neurobiology, both in concept and in practice. Open only to Neurobiology and Behavior graduate students. Pass/Not Pass only. May be repeated for credit.

399 University Teaching (1 to 4) F, W, S. Limited to Teaching Assistants. May be repeated for credit.

400E Spinal Cord Injury Research Techniques (4) Summer. Intensive four-week training course in experimental approaches to spinal cord injury. Laboratory techniques cover pathophysiology, experimental models used, and accepted outcome measures (both functional and anatomical). Lectures and seminars by invited speakers and distinguished scholars-in-residence. Prerequisites: Neurobiology and Behavior graduate student and consent of instructor. Satisfactory/Unsatisfactory only. Same as Anatomy and Neurobiology 400E.

DEPARTMENT OF ANATOMY AND NEUROBIOLOGY

364 Medical Surge II; (949) 824-6050
anatomy@uci.edu; <http://www.ucihs.uci.edu/anatomy/index.html>
Ivan Soltesz, Department Chair

Faculty

Aileen J. Anderson: Mechanisms of neurodegeneration and inflammation after central nervous system injury
Tallie Z. Baram: Developmental neurobiology of excitation and excitotoxicity; CNS mechanisms of stress response
Devin Biader: Glial cell roles in nervous system disease

Robert H. Blanks (*Emeritus*): Vestibular physiology and anatomy
Anne L. Calof: Developmental neurobiology; molecular mechanisms of neurogenesis and programmed cell death

Steven C. Cramer: Mapping and treating neurorecovery in humans

James H. Fallon (*Emeritus*): Human and molecular brain imaging, growth factors and adult stem cells in injured brain

Mark Fisher: Mechanisms of stroke

Christine M. Gall: Regulation of neuronal gene expression; neurotropic factors

Roland A. Giolli (*Emeritus*): Experimental neuroanatomy; visual system

Alan L. Goldin: Ion channels and CNS disease

Ranjan Gupta: Peripheral nerve injury

Hans S. Keirstead: Axon and myelin regeneration following spinal cord injury

Herbert P. Killackey: Developmental neuroanatomy; somatosensory system

Leonard M. Kitzes (*Emeritus*): Auditory system physiology and development

Robert Leonard: Clinical anatomy education

Frances M. Leslie: Effects of drugs of abuse on central nervous system development

Gary Lynch: Brain aging; synaptic plasticity

David C. Lyon: Anatomy and physiology of visual cortex and thalamus

Diane K. O'Dowd: Regulation of neuronal excitability; development of functional synaptic connections

Charles E. Ribak: Changes in neural circuitry in the epileptic brain

Richard T. Robertson: Developmental neurobiology

Steven S. Schreiber: Mechanisms of neural reorganization in CNS after injury and therapeutic applications

Martin A. Smith: Cellular and molecular mechanisms of synapse formation

Ivan Soltesz: Modulation of CNS inhibition

Oswald Steward: Mechanisms of recovery from injury

John E. Swett (*Emeritus*): Peripheral nervous system, spinal cord, pain mechanisms

John H. Weiss: Mechanisms of neural degeneration

Xiangmin Xu: Local inhibitory cortical circuits

Fan-Gang Zeng: Auditory prostheses

Research programs in the Department of Anatomy and Neurobiology in the School of Medicine focus on the neurosciences. Faculty interests range across all areas of basic and clinical research including cellular and molecular neurobiology, mechanisms of development, ion channel physiology, experimental neuroanatomy, structure and function of sensory and motor systems, response to injury and regeneration. The Department maintains facilities for electron microscopy, laser confocal microscopy, and computer-based imaging and informatics. Students performing graduate work in the Department are encouraged to become proficient in multiple areas of study using interdisciplinary techniques.

The Department offers graduate training under the auspices of the School of Biological Sciences in conjunction with the Interdepartmental Neuroscience Program (INP). Students are eligible to enter the Department program only after meeting the specific requirements of the INP gateway curriculum. The Department program leads to a Ph.D. degree in Biological Sciences, awarded after successful completion of all requirements.

In concert with other departments, a combined neuroscience core curriculum has been developed which includes offerings in systems neurobiology, neurophysiology, and cellular, molecular, and developmental neurobiology that may be taken as complete or partial fulfillment of the requirements of the INP. Students admitted into the INP who subsequently select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year. Students may take additional elective courses at their own option, but are strongly encouraged to attend departmental seminars and participate in the Journal Club and an annual "Grad Day" symposium. The research topic for a student's dissertation is chosen by the student in consultation with the research advisor. Students are expected to advance to candidacy by the end of the third year by presenting and defending a proposal for their research dissertation. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Anatomy and Neurobiology

200 Research in Anatomy (2 to 12) F, W, S, Summer. Individual research supervised by a particular faculty member. Prerequisite: consent of instructor. May be repeated for credit.

200R Research in Anatomy and Neurobiology for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Anatomy and Neurobiology for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

201 Human Gross Anatomy (8) F, W, S. Lecture, three hours; laboratory, nine hours. Study and dissection of the human body, including muscular, skeletal, nervous, and cardiovascular systems. Emphasis on both normal and abnormal structure and function. Prerequisites: graduate standing, consent of instructor.

202B Human Neuroscience (4) S. Lecture, three hours; discussion, one hour; laboratory, one hour. Study of the human nervous system at the systems level including the physiology and anatomy of sensory, motor, and integrative functions. Prerequisite: Anatomy 202A and consent of Department.

203A-B Human Microscopic Anatomy (3-3) F, W. Lecture, two hours; laboratory, three hours. Lecture and laboratory course on human microscopic anatomy. Emphasis is on functional implications of structure of cells and tissues. Prerequisites: graduate standing, consent of instructor.

206 Tutorial in Anatomy. Tutorial, three hours. Series of tutorials on advanced topics in anatomy. Each may be repeated for credit.

206A Surgical Anatomy (3) F. Exploration of topics in gross anatomy. Dissection/library work required. Prerequisites: Anatomy 201A-B.

206B Neuroanatomy (3) W. Exploration of special topics in neuroanatomy. Primarily library work, but study of prepared slides also included. Prerequisite: Anatomy 202.

206C Microanatomy (3) S. Special topics in microanatomy. Primarily library work, but study of prepared histological slides and photographs included. Prerequisites: Anatomy 203A-B.

207 Auditory System: Information Processing and Neurobiology (4). Seminar, four hours. Focuses on the neurobiology of the auditory system. Topics include signal processing, anatomy, physiology, plasticity, development, cochlear prosthetics, psychoacoustics, pathology, and speech. Publications related to hearing are presented and discussed. May be repeated for credit as topics vary.

210A-B Systems Neuroscience (5-5) F, W. Study of the mammalian nervous system at the systems level. Anatomy and physiology of sensory, motor, and integrative functions. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor. May be taken for credit twice. Same as Neurobiology and Behavior 208A-B.

225 Seminar in Excitotoxicity and Neuronal Injury (4) S. A review of recent theories concerning mechanisms of neuronal death in brain diseases. Focuses on recent breakthroughs and controversies in the field, with a special emphasis on the role of the excitatory neurotransmitter, glutamate. Same as Neurobiology and Behavior 256.

227A-B-C Current Topics in Neuroscience (1 to 4) F, W, S. Focuses on critical reading, presentation, and discussion of current literature in neuroscience research. Prerequisites: graduate standing and consent of instructor.

230A Molecular, Cellular, and Developmental Neurobiology (4) F. Lecture, three hours. Molecular aspects of the structure and function of neurons and glia including neurotransmission, synaptic modulation, and channels. Neural development at the cellular and molecular level including neurogenesis, pattern formation, trophic factors, axonal growth, and synaptic rearrangement. Prerequisite: consent of instructor. Formerly Developmental and Cell Biology 231D.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

400E Spinal Cord Injury Research Techniques (4) Summer. Intensive four-week training course in experimental approaches to spinal cord injury. Laboratory techniques cover pathophysiology, experimental models used, and accepted outcome measures (both functional and anatomical). Lectures and seminars by invited speakers and distinguished scholars-in-residence. Prerequisites: Anatomy and Neurobiology graduate student and consent of instructor. Satisfactory/Unsatisfactory only. Same as Neurobiology and Behavior 400E.

DEPARTMENT OF BIOLOGICAL CHEMISTRY

Building D, Room 240, Medical Sciences I; (949) 824-6051
Robert Steele, **Interim Department Chair**

Faculty

Bogi Andersen: Transcriptional regulation in Epithelial tissues
Pierre Baldi: Computation biology, bioinformatics, probabilistic modeling, machine learning
Phang-Lang Chen: Signal transduction in response to DNA damage and tumor genesis
Xing Dai: Signaling and transcriptional control in skin epithelia
Peter Donovan: The mechanisms by which pluripotent stem cells are formed in the embryo and the uses of such stem cells for transplantation therapy of human disease
John P. Fruehauf: Regulatory elements in cancer-related angiogenesis: prognosis and therapeutic targeting
Anand Ganesan: Disorders of pigmentation and melanoma
Sergei Grando: Non-neuronal cholinergic system
Peter Kaiser: Cell cycle regulation by ubiquitin
Eva Y.-H. P. Lee: Breast cancer etiology and DNA damage checkpoint control
Wen-Hwa Lee: Molecular cancer genetics, mainly the mechanism of tumor suppressor gene functions, cancer progression and novel therapy
Leonid Lerner: Retinal diseases, vitreoretinal surgery, uveitis and ocular inflammation
Ellis R. Levin: The plasma membrane estrogen receptor (ER) and its effects on the biology of estrogen action
Steven Lipkin: Cancer genetics and genomics
Haoping Liu: Signal transduction, cell cycle regulation, hypha development in yeast
Leslie Lock: Mammalian embryonic stem cells in studies of development and human disease
Frank Meyskens: Carcinogenesis and molecular biology of melanoma and chemoprevention of human cancer
Masayasu Nomura: RNA polymerase I, nucleolus and ribosome synthesis in yeast
Daniele Piomelli: Biochemistry and pharmacology of the endogenous cannabinoids and other lipid signaling systems
Suzanne B. Sandmeyer: Retrovirus-like elements in yeast
Robert E. Steele: Evolution of multicellular animals and their genomes
Leslie Michels Thompson: Molecular/biochemical analysis of multiple myeloma and Huntington's disease
Douglas C. Wallace: Molecular and mitochondrial medicine and genetics
Kyoko Yokomori: Chromosome structure organization and its role in genome function and stability
Yi-Hong Zhou: Tumor suppression pathways and molecular prognosis of brain tumor

Faculty research interests in the Department of Biological Chemistry are in the structure and function of chromosomes, signal transduction and its role in cell growth and differentiation control, regulation of gene expression (transcription, protein synthesis, and protein localization), and the molecular basis of development. Genome sequencing projects are making it possible for faculty to exploit information learned about gene function in model organisms for understanding human disease processes. Students are exposed to technical expertise in all facets of current research in molecular biochemistry from protein chemistry to genetic engineering and gene mapping. A newly established atomic force microscopy facility is available for structure research. Researchers in the Department are also using old DNA array technology and bioinformatics to understand global changes in gene expression in response to the environment.

The Department offers graduate study under the auspices of the School of Biological Sciences and in conjunction with the program in Cellular and Molecular Biosciences (CMB), which is described in a previous section. Students admitted into the combined program who select a research advisor in the Department begin thesis research in the second year. Students are required to attend and participate in the departmental research seminars. In addition, students are required to complete three advanced-level graduate

courses subsequent to entering the Department's Ph.D. concentration. In the third year, students take the advancement-to-candidacy examination for the Ph.D. degree by presenting and defending a proposal for specific dissertation research. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Biological Chemistry

200A, B, C Research in Biological Chemistry (2 to 12) F, W, S. Individual research under the supervision of a professor. May be repeated for credit.

200R Research in Biological Chemistry for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Biological Chemistry for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

202A, B, C Laboratory Seminar Series (1, 1, 1) F, W, S. Study within a laboratory group including research and journal presentations. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

207 Advanced Molecular Genetics (4) S. Lecture, two hours; quiz, two hours. Teaching genetics and genomics approaches in yeast. Covers cell-type determination, MAPK signaling, cell cycle, ubiquitin, genomics, transposons. Prerequisite: consent of instructor. May be taken for credit two times.

210A Medical Biochemistry and Molecular Biology (12) F. Covers the following topics from a biomedical perspective: protein and nucleic acid biochemistry, carbohydrates, lipids, amino acids, purines and pyrimidines, genome structure, molecular mechanisms of development, and signal transduction.

212 Signal Transduction and Growth Control (4) S. Lecture, two hours; discussion, two hours. Covers various eukaryotic signaling pathways (tyrosine kinase, ras-raf-MAPK, TGF- β , wnt, JAK-STAT, and FAS) with an emphasis on the experimental underpinnings. The material is covered in lectures and discussions of pertinent papers. Prerequisite: consent of instructor. Same as Pathology 212. *Offered every other year.*

215 Mouse Developmental Genetics (4) S. Lecture, three hours. Introduction to the use of the mouse in contemporary biomedical research. The biology and development of the laboratory mouse, methods for manipulation of the mouse genome and embryos, and examples of application of these methods to understanding mammalian development and homeostasis. Prerequisite: graduate standing, advanced undergraduate standing, or consent of instructor. Same as Developmental and Cell Biology 207.

217 Human Evolution and Behavior (4) S. Lecture, three hours. Covers theories and empirical research concerning the evolutionary origins of human behaviors and their variations. An interdisciplinary course emphasizing both evolutionary psychology (e.g., mating strategies, kinship, and parenting) and molecular evolution (i.e., evolution of genes for various behaviors). Same as Psychology and Social Behavior P271. *Offered every other year.*

225 Chromatin Structure and Function (4) W. Lecture, three hours. Focuses on the role of chromatin/nuclear structure organization in eukaryotic genome regulation. The effects of histone and DNA modification, chromatin remodeling, higher order chromatin structure and nuclear organization on gene regulation, and DNA replication and repair are discussed. Prerequisites: graduate standing and Molecular Biology and Biochemistry 203 and 204, or consent of instructor. *Offered every other year.*

291 Research Seminar (2) F, W, S. Student research-based colloquium covering current topics in gene organization and expression, cell cycle and differentiation, DNA repair, checkpoint control, and the physical, chemical, and biological properties of macromolecules. Students are encouraged to read critically and analyze recent literature. Prerequisite: graduate standing, advanced undergraduate standing, or consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

293A, B, C Cancer Biology Journal Club (1, 1, 1) F, W, S. Focuses on molecular mechanisms that underlie the development and progression of cancers. Covers a variety of cancer-related research areas, such as cell cycle control, apoptosis, DNA repair, metastasis, angiogenesis, and others. Satisfactory/Unsatisfactory only.

DEPARTMENT OF MICROBIOLOGY AND MOLECULAR GENETICS

Building B, Room 240, Medical Sciences I; (949) 824-5261

Rozanne M. Sandri-Goldin, **Department Chair**

Marian L. Waterman, **Department Vice Chair**

Faculty

Hoda Anton-Culver (*Joint*): Cancer epidemiology, genetic epidemiology, statistical genetics, molecular genetics and medical informatics
Ruslan D. Aphasizhev: Molecular biology of trypanosomes; mitochondrial RNA editing

Alan G. Barbour: Molecular pathogenesis and immunology of vector-borne infections

Emiliana Borrelli: Dopaminergic system and glial cells in CNS development

K. George Chandy (*Joint*): Role of potassium channels in lymphocyte function and disease

Dennis D. Cunningham: Proteases and protease nexins: regulation of neural cells

Michael Demetriou (*Joint*): The molecular biology and glycobiology of T cell dysfunction in organ-specific autoimmunity

Alan L. Goldin: Molecular analysis of ion channel function and its roles in human diseases

Sidney H. Golub: Regulation of cytotoxic cell functions

George A. Gutman: Potassium channel and immunoglobulin super-family genes

G. Wesley Hatfield: Effects of DNA topology and chromosome structure on gene expression

Klemens J. Hertel: Regulation of gene expression by alternative splicing

Anthony A. James: Methods for controlling the transmission of vector-borne diseases, specifically malaria and dengue fever

Janos K. Lanyi (*Joint*): Bacteriorhodopsin; halorhodopsin; light-driven ion pumps

Masayasu Nomura (*Joint*): RNA Polymerase I; nucleolus; nuclear transport and function

Andre J. Ouellette (*Joint*): Regulation of Paneth cell defensin biosynthesis and function

Manuela Raffatellu: Mechanisms of *Salmonella* interaction with the intestinal mucosa; mucosal barrier function during *Salmonella* infection

W. Edward Robinson, Jr. (*Joint*): Molecular pathogenesis of lentivirus infection and drug discovery against HIV

Suzanne B. Sandmeyer (*Joint*): Molecular genetics of a position-specific yeast retrovirus-like element

Rozanne M. Sandri-Goldin: Structural and functional analysis of a multifunctional herpes virus regulatory protein

Paolo Sassone-Corsi (*Joint*): Signal transduction, gene expression, oncogenesis, circadian clock

Michael Selsted (*Joint*): Role and mechanisms of antimicrobial peptides in mammalian innate immunity

Bert L. Semler: Replication and translation of picornaviruses; RNA-protein and protein-protein interactions

Yongsheng Shi: Post-transcriptional gene regulation and its role in human diseases

Eric J. Stanbridge: Tumor suppressor genes and oncogenes in human cancer

Ming Tan: Bacterial pathogenesis; gene regulation in *Chlamydia*

Marian L. Waterman: Wnt signaling in cancer and lymphocytes

The Department of Microbiology and Molecular Genetics provides advanced training to individuals interested in the regulation of gene expression and the structural and functional properties of proteins encoded by these genes. The research in the Department covers a wide range of topics with special emphasis on bacterial gene expression and pathogenesis; viral gene expression and host interactions; trypanosome molecular biology; vector-borne malaria and dengue fever transmission; nuclear-cytoplasmic transport and intracellular signaling; eukaryotic gene expression; mRNA splicing, editing, and processing; cancer genetics and tumor suppressors; ion channel expression and function; genomics and bioinformatics.

The Department offers graduate study under the auspices of the School of Biological Sciences and in conjunction with the program in Cellular and Molecular Biosciences (CMB), which is described in a previous section. Students admitted into the CMB program who select a research advisor in the Department begin following

the departmental requirements for the Ph.D. at the beginning of their second year.

Participation in the Department's seminar series and completion of at least one advanced topics course per year for three years are expected of all students. In their third year, students take the advancement-to-candidacy examination for the Ph.D. degree by presenting and defending an original proposal for specific dissertation research. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Microbiology and Molecular Genetics

200A-B-C Research in Microbiology and Molecular Genetics (2 to 12 per quarter) F, W, S. Individual research supervised by a particular professor. Prerequisite: consent of instructor. May be repeated for credit.

200R Research in Microbiology and Molecular Genetics for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Microbiology and Molecular Genetics for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

201A-B-C Research Topics in Microbiology and Molecular Genetics (1-1-1) F, W, S. Lecture and seminar. Seminars presented by graduate students and faculty of the Department which explore research topics in specialized areas of microbiology and molecular genetics. Opportunity for students to gain experience in the organization, critical evaluation, and oral presentation of current research developments. Prerequisite: consent of instructor. May be repeated for credit. Satisfactory/Unsatisfactory only.

203A-B-C Advanced Studies in Microbiology and Molecular Genetics (1-1-1) F, W, S. Organized within each laboratory group, one to four hours. Advanced study in areas related to faculty research interests. Involves small group study based on readings, discussions, and guest speakers. May be conducted as journal clubs. Satisfactory/Unsatisfactory only. May be repeated for credit.

205A-B-C Basic Immunology Core Lectures (1-1-1) F, W, S. Basic concepts in human immunology including development of the immune system, innate immunity, immunoglobulin structure and genetics, antigen-antibody reactions, the major histocompatibility complex and antigen presentation, T cell and B cell development, initiation of the immune response, effector mechanisms. Prerequisite: consent of instructor.

206 Regulation of Gene Expression (4) W. Lecture, three hours. Aspects of gene expression including the organization of the eukaryotic nucleus in terms of protein-nucleic acid interaction (i.e., chromatin and chromosome structure); comparisons between prokaryotic and eukaryotic gene expression, the enzymology and regulation of RNA transcription in *E. Coli* and other prokaryotes. Enzymology of transcription in eukaryotes. Same as Molecular Biology and Biochemistry 206. (Coordinator, R. Sandri-Goldin)

210A Medical Microbiology (4 to 6). Lecture, five hours; laboratory, three hours. The biology of infectious agents, including viruses, bacteria, fungi, and parasites, to provide the foundation in microbiology for the subsequent study of infectious diseases. Lectures, small group sessions with clinicians, and laboratory sessions are used to teach the molecular bases of microbial pathogenesis, diagnostic testing, antimicrobial therapy, and prevention strategies. Prerequisites: first-year curriculum. Graduate students must have approval of the course director and enroll through the Department of Microbiology and Molecular Genetics. (Medicine 507A-B).

210B Medical Immunology (6) Lecture, five hours; laboratory, three hours. Covers the cellular and molecular basis of immune responsiveness and the roles of the immune system in both maintaining health and contributing to disease. Material is presented in lectures, clinical correlates, and printed core notes. Includes three required Patient-Oriented Problem Solving (POPS) sessions. Prerequisite: UCI medical students only. Graduate students require consent of course director and must enroll through the Department.

215 Integrative Immunology (4). Lecture and discussion, four hours. Lectures and student presentations of primary literature. The main goal is to achieve a basic understanding of the cellular and molecular basis of innate and adaptive immunity, and how immune function is coordinated at a systems level. Same as Molecular Biology and Biochemistry 215.

216 Pathogenic Microbiology (4) F. Lecture, four hours. Biochemical and genetic properties of infectious agents; identification and behavior of pathogens; activities of toxins; the chemotherapy, biochemistry, and genetics of drug resistance; and epidemiology of infectious diseases. Prerequisite: consent of instructor.

219 Medical Virology (4) F. Lecture, four hours. Animal viruses as disease causing agents, including mechanisms of infection at both the cellular and organismic levels. Topics include comparative studies of different groups of viruses, viral transformation, and mechanisms of viral gene expression. Prerequisite: consent of instructor.

221 Immunopathogenic Mechanisms of Disease (3) W. Examination of the mechanisms underlying disease states mediated by immune dysregulation. Topics include innate and adaptive immunity, autoimmunity, immunodeficiency, inflammatory disorders, and certain infectious diseases. Emphasis on biological basis of immunopathologies taught from reports in the original scientific literature. Prerequisite: Microbiology and Molecular Genetics 215. Same as Pathology 221.

222 Molecular Pathogenesis of Viral Infections (4) S. Features lectures by faculty on the molecular aspects of viral pathogenesis, highlighting both viral and cellular functions. Students give oral presentations and write a research proposal on a selected topic. Prerequisite: Molecular Biology and Biochemistry 205.

225 Molecular Mechanisms of Human Disease (3) S. Provides an overview of the molecular mechanisms of human diseases, including neurologic, hematologic, neoplastic, and infectious diseases. Students gain an understanding of these mechanisms, as well as models of human diseases. Same as Pathology 225.

230 Ethical and Political Issues of Embryonic Stem Cell Policy (4) S. Science policy and how it is created in the U.S.A. Focuses on human embryonic stem cell policy politics and ethics. Designed for graduate students in the sciences.

235 Viruses and Cells (4) W. Covers the molecular mechanisms by which animal and human viruses infect cells and details the host response to infection. Also covers prevention and treatment.

240 M.D./Ph.D. Tutorial (1) F, W, S. Explores a variety of topics that impact careers of medical scientists (M.D./Ph.D students). Topics range from scientific, such as recent advances in particular research areas, to ethical problems brought on by increased technology and intervention in the disease process. May be repeated for credit.

250 Responsible Conduct of Research (2) S. Each session includes a formal presentation by faculty/invited speaker followed by a discussion of case studies related to the topic under consideration. Satisfactory/Unsatisfactory only.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

DEPARTMENT OF PATHOLOGY AND LABORATORY MEDICINE

Building D, Room D440, Medical Sciences I; (949) 824-6574
Michael E. Selsted, **Department Chair**

Experimental Pathology Faculty

- Jefferson Y. Chan: Regulation of genes associated with oxidative stress
K. George Chandy: Molecular biology and structure of ion channels; novel therapeutic agents
Robert A. Edwards: Mucosal immunology, inflammatory bowel disease, G-proteins, prostaglandins, and chemokines
Lisa Flanagan-Monuki: Regulation of neural stem cells
Taosheng Huang: Molecular basis of genetic diseases in humans
Anthony A. James: Malaria parasite development; genetic manipulation of insect vectors
John J. Krolewski: Signal transduction pathways regulating the growth and death of normal and neoplastic cells
J. Lawrence Marsh: Regulation of growth factor signaling in patterning, regeneration and oncogenesis

Dan Mercola: Translational cancer biology

Edwin S. Monuki: Cerebral cortex development and disease

Andre J. Ouellette: Mechanisms and regulation of innate immunity in mammalian epithelia

W. Edward Robinson: Pathogenesis of retrovirus infections; molecular mechanisms of integration

Michael E. Selsted: Molecular effectors of mammalian innate immunity

Sandor Szabo: Pathogenesis of gastrointestinal ulceration, duodenal ulcer

Andrea J. Tenner: Innate immunity; the roles of complement and phagocytes in health and disease

Ping Wang: Molecular hormone actions in the normal and diseased heart

The Department of Pathology and Laboratory Medicine offers a Ph.D. in Biological Sciences with a concentration in Experimental Pathology. The graduate program emphasizes experimental approaches to better understand the molecular and cellular mechanisms of disease. Students work in laboratories studying topics ranging from infectious processes such as malaria and the acquired immune deficiency syndrome to innate immunity, including studies on granulocytes and antimicrobial peptides. The principal areas of research investigated by faculty in the Experimental Pathology concentration range from developmental neurobiology to cancer, including prostate cancer.

The Department offers graduate study under the auspices of the School of Biological Sciences and in conjunction with the program in Cellular and Molecular Biosciences (CMB), which is described in a previous section. Students admitted into the combined program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the start of their second year.

Experimental pathology makes extensive use of both animal models of human disease and studies on human tissues from human subjects. Therefore, the curriculum is heavily weighted on experimental models, including animal models, of human disease. The didactic teaching components of the track are supplemented by a twice-monthly Pathology research conference, in which postdoctoral fellows and graduate students present "research in progress" seminars. This seminar series allows trainees the opportunity to gain invaluable experience in presenting their research to other scientists and provides a mentoring process through which students gain insights from diverse scientific viewpoints.

Students must advance to candidacy during their third year. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Pathology

200A-B-C Research in Experimental Pathology (2 to 12) F, W, S. Independent research for the Ph.D. program within the laboratories of graduate training faculty in the Department of Pathology and Laboratory Medicine. Corequisite: Pathology 203A-B-C. May be repeated for credit as topics vary.

200R Research in Experimental Pathology for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Pathology and Laboratory Medicine for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

203A-B-C Advanced Studies in Experimental Pathology (1-1-1) F, W, S. A tutorial course for Ph.D. students in the Department of Pathology entailing attendance at Departmental seminars and critical reading of the scientific literature. Corequisite: Pathology 200A-B-C. May be repeated for credit.

204A, B, C Experimental Pathology Research Seminar (1, 1, 1) F, W, S. Seminar series for graduate students in Experimental Pathology. Students attend seminars and, beginning in their third year of graduate study, present one formal seminar on their graduate research. May be repeated for credit as topics vary.

212 Signal Transduction and Growth Control (4) S. Covers various eukaryotic signaling pathways (tyrosine kinase, ras-raf-MAPK, TGF- β , wnt, JAK-STAT, and FAS) with an emphasis on the experimental underpinnings. The material is covered in lectures and discussions of pertinent papers. Prerequisite: consent of instructor. Same as Biological Chemistry 212. Offered every other year.

221 Immunopathogenic Mechanisms of Disease (3) W. Examination of the mechanisms underlying disease states mediated by immune dysregulation. Topics include innate and adaptive immunity, autoimmunity, immunodeficiency, inflammatory disorders, and certain infectious diseases. Emphasis on biological basis of immunopathologies taught from reports in the original scientific literature. Prerequisite: Microbiology and Molecular Genetics 215. Same as Microbiology and Molecular Genetics 221.

225 Molecular Mechanisms of Human Disease (3) S. Provides an overview of the molecular mechanisms of human diseases, including neurologic, hematologic, neoplastic, and infectious diseases. Students gain an understanding of these mechanisms, as well as models of human diseases. Same as Microbiology and Molecular Genetics 225.

226 Topics in Experimental Pathology (4) W. Select topics related to principles of experimental pathology including normal host responses to disease are presented. Animal models of human disease are emphasized. Material includes both lectures and critical review of the primary literature.

230D Principles of Experimental Pathology (4) F. Introduces graduate students to the general pathologic processes that mediate disease. Topics include cell injury and repair, inflammation, immunopathology, neoplasia, and genetic diseases. Combines lecture, small group discussion, and oral presentations.

231A Pathology of Cardiovascular Diseases (2) F. For graduate students interested in human cardiovascular disease. Students receive training in physiology, anatomy, and pathologic processes of the heart and blood vessels. Experimental approaches to study such processes are emphasized.

232A Pathology of Pulmonary Diseases (1.5) F. For graduate students interested in pulmonary disease. Students receive training in physiology, anatomy, and pathologic processes of the lungs and airways. Experimental approaches to study such processes are emphasized.

233A Pathology of Renal Diseases (1) F. For graduate students interested in renal disease. Students receive training in physiology, anatomy, and pathologic processes of the kidneys. Experimental approaches to study such processes are emphasized.

234A-B Pathology of Gastrointestinal Diseases (0-2) F, W. For graduate students interested in gastrointestinal disease. Students receive training in physiology, anatomy, and pathologic processes of the gastrointestinal tract. Experimental approaches to study such processes are emphasized. In-progress grading.

235A-B Pathology of Genitourinary Tract Diseases (0-2) F, W. For graduate students interested in genitourinary tract or breast disease. Students receive training in physiology, anatomy, and pathologic processes of the breast and genitourinary tract. Experimental approaches to study such processes are emphasized. In-progress grading.

236B Graduate Neuropathology (1.5) W. For graduate students interested in diseases of the nervous system. Students receive training in physiology, anatomy, and pathologic processes of the central and peripheral nervous system. Experimental approaches to study such processes are emphasized.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

DEPARTMENT OF PHYSIOLOGY AND BIOPHYSICS

Building D, Room D340, Medical Sciences I; (949) 824-5863
Michael D. Cahalan, **Department Chair**

Faculty

- Kenneth M. Baldwin: Developmental, hormonal, and exercise factors regulating striated muscle gene expression
Ralph A. Bradshaw (*Emeritus*): Structure and function of polypeptide growth factors and their receptors; mechanisms of protein turnover
Michael D. Cahalan: Ion channels and Ca^{2+} signaling in the immune system
Vincent J. Caiozzo: Cellular and molecular mechanisms regulating the mechanical properties of skeletal muscle
K. George Chandy: Molecular biology of ion channels and their role in immune cells
J. Jay Gargus: Molecular analysis of membrane signaling proteins
Alan L. Goldin: Molecular biology of neural channels and receptors
Harry T. Haigler: Structure, function, and topography of annexin calcium binding proteins on membranes
James E. Hall: Biophysics of membrane channels, gap junctions and water channels
Todd C. Holmes: Ion channels, cellular physiology, neural circuits and behavior; circadian and visual circuits
Lan Huang: Developing and employing mass spectrometry-based proteomic approaches for study of signal transduction networks, identification of protein complexes and characterization of their post-translational modifications
Frances A. Jurnak: Macromolecular crystallography; biochemical and structural studies of a model G protein; EF-Tu; structure/function of plant virulence factors
Janos K. Lanyi: Transport, structure, and energy coupling in bacteriorhodopsin and halorhodopsin
John A. Longhurst: Integrative biology and sensory signaling systems important in cardiovascular regulation; central neural regulation of autonomic outflow inactivation of cardiac afferents and the influence of electroacupuncture
Kenneth J. Longmuir: Intracellular metabolism, sorting, and transport of lipid in mammalian cells; membrane fusion
Hartmut Luecke: Protein crystallography; structure and function of membrane-associated proteins
Ian Parker: Intracellular calcium and cell signaling
Thomas L. Poulos: Protein crystallography; protein engineering; heme enzyme structure and function
Hamid M. Said: Cellular and molecular mechanisms and regulation of intestinal and renal vitamin transporters
Ivan Soltesz: Plasticity and modulation of inhibitory synaptic neurotransmission
Francesco Tombola: Electrical and chemical sensing in excitable cells, VSD-containing ion channels and enzymes
Bruce J. Tromberg: Optical spectroscopy of tissues and cells
Nosratos D. Vaziri: Vascular biology and role of nitric oxide and reactive oxygen species in regulation of blood pressure; molecular basis of lipid disorders
Larry E. Vickery: Molecular chaperones and protein folding; protein engineering
Ping H. Wang: Molecular actions of insulin-like growth factor I (IGF) in cardiac muscle; complications of diabetes
Stephen H. White: Protein folding in membranes; peptide-bilayer interactions; membrane structure
Albert Zlotnik: Chemokines, cancer metastasis, gene array analysis of human diseases and bioinformatics in immunology

The Department of Physiology and Biophysics offers research opportunities in the molecular biophysics of membranes and proteins, ion channels and signal transduction, endocrinology, molecular and cell biology, developmental neurobiology, and exercise physiology.

The Department offers graduate study under the auspices of the School of Biological Sciences and in conjunction with the graduate program in Cellular and Molecular Biosciences (CMB), which is described in a previous section. Students admitted into the combined program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year.

The faculty conducts quarterly reviews of all continuing students to ensure that they are maintaining satisfactory progress within their particular academic program. Students participate in a literature review course designed to strengthen research techniques and presentation skills, and attend the weekly Department colloquium. Students advance to candidacy during the third year; each student presents a seminar on a topic assigned by the formal candidacy committee. Following the seminar, the committee examines the student's qualifications for the successful conduct of doctoral dissertation research. Each student must submit a written dissertation on an original research project and successfully defend this dissertation in an oral examination. Interdisciplinary dissertation research involving more than one faculty member is encouraged. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Physiology and Biophysics

- 200 Research in Physiology and Biophysics (2 to 12 per quarter) F, W, S.** Individual research directed toward doctoral dissertation and supervised by a particular professor. Prerequisite: consent of instructor. May be repeated for credit.
- 200R Research in Physiology and Biophysics for First-Year Students (2 to 12) F, W, S.** Independent research within the laboratories of graduate training faculty in the Department of Physiology and Biophysics for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.
- 201 Introduction to Physiology Research (1 to 4 per quarter) F, W, S.** Introduction to research in physiology and related sciences. Students concentrate on techniques emphasized in the various laboratories of the Department. Prerequisite: consent of instructor. May be repeated for credit.
- 204 Concepts of Biophysics (3) S.** Lecture, two hours; laboratory, one hour. Principles of crystallography; introduction to time-resolved absorption and fluorescence spectroscopy; the concepts of kinetic order and kinetic rate theory. Prerequisites: graduate standing in Biological Sciences and consent of instructor. *Offered only if sufficient demand exists.*
- 205 Electronics for Biologists (4) W.** Lecture, three hours; laboratory four hours. Basic principles of electricity; properties and use of discrete components and integrated circuits; circuit analysis and design. Intended for advanced students in the life sciences. Same as Neurobiology and Behavior 249.
- 206A-B Introduction to Medical Physiology (5-6) W, S.** Lecture, six hours; discussion, two hours; other, two hours. Vertebrate physiology with emphasis on humans and on the relationship between the function of normal tissues and the processes of disease. Fundamental principles of physiology and the interrelationships which control organ function. Prerequisites: Physiology 202 and consent of Department.
- 232 Physiology of Ion Channels (4) S.** Lecture, two hours; discussion, two hours. Discusses how ion channels work (molecular/structural biophysics level) and what ion channels do in diverse cell types (cell physiology level).
- 252 Introduction to Proteomics (3) W.** Introduces students to concepts and methods of proteomics including protein identification, expression proteomics, and protein-protein interactions.
- 290 Topics in Physiology (3) F, W, S.** Seminar, two hours; colloquium, one hour. Contemporary research problems in physiology. Students review papers in the current literature and present ideas contained therein to other students. Students present results of their own research and attend presentations given by other students and departmental researchers. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.
- 292A-B-C Scientific Communication (2-2-2) F, W, S.** Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.
- 299 Dissertation in Physiology and Biophysics (2 to 12 per quarter) F, W, S, Summer.** Preparation and completion of the dissertation required for the Ph.D. or Master of Science degree. Prerequisite: consent of instructor. May be repeated for credit.

Faculty

Dennis J. Aigner, Ph.D. University of California, Berkeley, *Professor Emeritus of Management* (corporate environmental management, international economics, and trade and environment)

Alpesh Amin, M.D. Northwestern University, *Interim Chair, Department of Medicine; Executive Director, Hospitalist Program; Chief, Division of General Internal Medicine; and Professor of Clinical Medicine, Department of Medicine (Hospitalist Program and General Internal Medicine) and Management* (medical education, curriculum development, hospital medicine, and anticoagulation)

Christine M. Beckman, Ph.D. Stanford University, *UCI Chancellor's Fellow and Associate Professor of Management and Sociology* (entrepreneurship and emerging companies, organizational learning and interorganizational networks, organizational identity and control, gender and organizations, and social entrepreneurship)

Kristin M.J. Behfar, Ph.D. Cornell University, *Assistant Professor of Management* (intra- and inter-group conflict management, team decision making and performance, and culture and group adaptation)

David H. Blake, Ph.D. Rutgers-The State University of New Jersey, *Professor of Management* (global business strategy, globalization, leadership strategies, corporate strategies and governance, and ethical business leadership)

Philip Bromiley, Ph.D. Carnegie-Mellon University, *Dean's Professor of Management* (behavioral research in strategic management, strategic decision making, strategy processes, corporate risk-taking, risk assessment in commercial lending, accounting misrepresentation, R&D policy, trust in organizations, and corporate capital investment)

Christopher S. Carpenter, Ph.D. University of California, Berkeley, *Assistant Professor of Management and Economics* (health economics, labor economics, policy evaluation, causes and consequences of youth alcohol use, effects of workplace substance abuse policies, the role of sexual orientation in the labor market, and the effect of public policy on alcohol consumption)

Maria Y. Chandler, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Pediatrics and Management*

Nai-Fu Chen, Ph.D. University of California, Berkeley; Ph.D. University of California, Los Angeles, *Professor of Management* (stability of currency and banking systems, macroeconomic impact on investing, GDP growth, inflation, interest rates, credit risk and the financial market, and hedge funds: asset allocations and portfolio management)

Vidyanand Choudhary, Ph.D. Purdue University, *Assistant Professor of Management* (economics of information systems, versioning and product line design for information goods, pricing and quality strategy for information goods, competitive strategy, economics of software as a service and electronic marketplaces and information intermediaries)

Imran S. Currim, Ph.D. Stanford University, *UCI Chancellor's Professor of Management* (marketing research, customer choice, design and marketing of products and services, customer behavior online, and assessing the impact of competitive product and service features and marketing efforts on consumer choice and market share)

Sanjeev Dewan, Ph.D. University of Rochester, *Associate Professor of Management* (business value of information technology investments, impact of Web 2.0 technologies, and electronic markets)

Joseph F. Di Mento, Ph.D., J.D. University of Michigan, *Professor of Planning, Policy, and Design; Law; Environmental Health, Science, and Policy; and Management* (law, environment and urban planning, law and society, alternate dispute resolution and conflict resolution, and organizational response to innovations)

Henry Fagin, M.S. Columbia University, *Professor Emeritus of Management* (societal context of organizations)

Lucile C. Faurel, Ph.D. New York University, *Assistant Professor of Management* (financial accounting and capital markets, financial reporting quality, voluntary disclosure, corporate investment strategies, mergers and acquisitions, and intangible assets)

Martha S. Feldman, Ph.D. Stanford University, *Professor of Planning, Policy, and Design, Management, Sociology, and Political Science, and Roger W. and Janice M. Johnson Chair in Civic Governance and Public Management* (organization theory, organizational change, decision making, public management, practice theory and qualitative research methods)

Paul J. Feldstein, Ph.D. University of Chicago, *Director of the Center for Health Care Management and Policy; Professor of Management, Planning, Policy, and Design, and Economics; and Robert Gumbiner Chair in Health Care Management* (economics of health care, reasons for employees switching health care plans, and measuring health plan performance by examining breast cancer outcomes by stage at detection, treatment and survival)

David B. Fitoussi, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Management* (economic impact of information technology [IT] on corporate organizations, relationship between IT and the location of workers, intangible costs and benefits of IT investments, and rules for multi-agent systems in artificial intelligence)

Cristina B. Gibson, Ph.D. University of California, Irvine, *Co-Director of the Center for Leadership and Team Development and Dean's Professor of Management* (communication, interaction, and effectiveness in teams, virtual teams, multicultural collaboration, impact of culture on work behavior, international management, innovation, cross-cultural and technology-enabled communication, executive leadership, motivating employees)

Mary C. Gilly, Ph.D. University of Houston, *Professor of Management* (consumers and technology, services marketing, underserved markets, including Hispanics and the elderly, effects of advertising on employees, and compliance in service encounters)

Yan Gong, Ph.D. University of Wisconsin-Madison, *Assistant Professor of Management* (capabilities, routines, and unexpected events in entrepreneurial firms)

John Graham, Ph.D. University of California, Berkeley, *Professor of Management* (global marketing, international business negotiations, innovation, business in Japan and negotiation styles in the United States, Japan, Canada, Mexico, Brazil, Taiwan and The Peoples' Republic of China, South Korea, France, Germany, the United Kingdom, and the Soviet Union)

Vijay C. Gurbaxani, Ph.D. University of Rochester, *Director of the Center for Research on Information Technology and Organizations and Professor of Management and Informatics* (information technology and business innovation, sourcing strategies for information systems services, value of information technology investment, and economics of information technology)

David A. Hirshleifer, Ph.D. University of Chicago, *Professor of Management and Economics, and Merage Chair in Business Growth* (psychology, social interactions and markets, investments, corporate finance, and risk management)

Joanna L. Y. Ho, Ph.D. University of Texas at Austin, *Professor of Management* (managers' incentive plans, performance evaluations, corporate governance, and contemporary issues in auditing)

Philippe Jorion, Ph.D. University of Chicago, *UCI Chancellor's Professor of Management and Economics* (financial risk management, global asset allocation, exchange rate models, fixed income markets, and hedge fund investments)

Christo S. Karunanathan, Ph.D. University of Michigan, *Assistant Professor of Management* (executive compensation, managerial performance evaluation and turnover, corporate governance)

- L. Robin Keller, Ph.D. University of California, Los Angeles, *Professor of Management* (creative problem structuring, cross-cultural decision making, fairness in decision making, decision analysis theory and applications, medical decision making, multiple attribute decision making, probability judgments, ambiguity of probabilities or outcomes, risk analysis for terrorism, environmental, health, and safety risks, time preferences and discounting, utility models, and models of risk)
- Sreya Kolay, Ph.D. University of Rochester, *Assistant Professor of Management* (pricing and promotion strategies relating to design of optimal pricing contracts for firms in various markets, vertical market and distribution channels topics including analysis of mechanisms that help a manufacturer to achieve channel coordination, advertising and durable goods)
- Kenneth L. Kraemer, Ph.D. University of Southern California, *Associate Director of the Center for Research on Information Technology and Organizations, and Professor Emeritus of Management* (use and impact of information technology in organizations, globalization of information technology production and use, and management of information systems)
- Loraine G. Lau-Gesk, Ph.D. University of California, Los Angeles, *Assistant Professor of Management* (the influence of affect or emotions in consumer decision making and the role of culture and self in consumer persuasion and judgment)
- Newton Margulies, Ph.D. University of California, Los Angeles, *Professor Emeritus of Management* (organizational behavior, organizational change and development, analysis of team functioning, organizational behavior in health care organizations)
- Joseph W. McGuire, Ph.D. Columbia University, *Professor Emeritus of Management* (business strategy, entrepreneurship, organizational economics)
- Richard B. McKenzie, Ph.D. Virginia Polytechnic Institute and State University, *Professor of Management and Economics, and Walter B. Gerken Chair in Enterprise and Society* (monopoly in economic theory and law, various pricing strategies, rational and irrational behavior in economic theory, Microsoft antitrust case, public policies relating to digital goods, and orphanages and public policy relating to foster care)
- Alexander M. Mood, Ph.D. Princeton University, *Professor Emeritus of Management*
- Calvin Morrill, Ph.D. Harvard University, *Professor of Sociology, Management, and Criminology, Law and Society*, (organizations, law and society, culture, youth, and qualitative field methods)
- Peter Navarro, Ph.D. Harvard University, *Professor of Management* (electric utilities regulation, growth management, industrial policy, public policy, and the international issue of regulation and trade advantage)
- Alexander Nekrasov, Ph.D. University of Minnesota, *Assistant Professor of Management* (financial reporting, role of accounting in security valuation, market efficiency, and financial analysts' forecasts)
- David Neumark, Ph.D. Harvard University, *Professor of Economics and Management* (labor economics)
- David M. Obstfeld, Ph.D. University of Michigan, *Assistant Professor of Management* (knowledge management, knowledge creation, innovation, social networks, and entrepreneurship)
- Jone L. Pearce, Ph.D. Yale University, *Co-Director of the Center for Leadership and Team Development and Dean's Professor of Management* (organizational behavior, employee perceptions of workplace trust and justice, contract labor, compensation, management practices in the transition from communism, personal relationships as the basis for organization)
- Cornelia A. R. Pechmann, Ph.D. Vanderbilt University, *Professor of Management* (effectiveness of various anti-smoking and anti-drug advertising tactics, consumer behavior, advertising strategy and regulation, advertising to adolescents, deceptive advertising, product placements, role models in advertising, pharmaceutical advertising, and retailing, micro-marketing, and geographic information systems)
- Morton P. Pincus, Ph.D. Washington University in St. Louis, *Dean's Professor of Management* (relation between accounting information and capital market variables, including the pricing of accruals in international capital markets, earnings management, Sarbanes-Oxley Act, usefulness of book-tax differences in detecting earnings management, and accounting method choices)
- Andrew J. Policano, Ph.D. Brown University, *Dean of The Paul Merage School of Business and Professor of Management and Economics* (financial institutions and markets, macroeconomics, monetary policy, and business school trends)
- Lyman W. Porter, Ph.D. Yale University, *Edward A. Dickson Professor Emeritus of Management* (management education and development, organizational psychology, and human resource management)
- Judy B. Rosemer, Ph.D. Claremont Graduate School, *Senior Lecturer with Security of Employment Emerita of Management* (men and women at work, cultural diversity, business and government, and managing nonprofits)
- Claudia B. Schoonhoven, Ph.D. Stanford University, *Director of the Don Beall Center for Innovation and Entrepreneurship and Professor of Management* (evolutionary dynamics of technology-based firms, innovation, and entrepreneurship)
- Christopher G. Schwarz, Ph.D. University of Massachusetts, Amherst, *Assistant Professor of Management* (hedge funds, mutual funds, investments, regulation and money management)
- Carlton H. Scott, Ph.D. The University of New South Wales (Australia), *Professor of Management and of Electrical Engineering and Computer Science* (application of quantitative methods to decision making problems, development of new theory for optimization, operations research and operations management)
- Charles Shi, Ph.D. University of Minnesota, *Assistant Professor of Management* (valuation of intangible investments, the role of accounting information in credit risk analysis and debt pricing, and the economic consequences of disclosure and securities regulations in stock and bond markets)
- Shivendu Shivendu, Ph.D. University of Southern California, *Assistant Professor of Management* (economics of information systems, digital goods supply chain, and forecasting and analytical modeling)
- Kut C. So, Ph.D. Stanford University, *Professor of Management* (operations and supply chain management, design of manufacturing and service systems, just-in-time production systems, time-based management, and mathematical modeling and operations research)
- Zheng Sun, Ph.D. New York University, *Assistant Professor of Management* (empirical asset pricing, investments, market microstructure and banking)
- Eli Talmor, Ph.D. University of North Carolina at Chapel Hill, *Professor Emeritus of Management* (corporate finance, executive compensation and managerial accounting)
- Siew Hong Teoh, Ph.D. University of Chicago, *Dean's Professor of Management* (capital market issues in accounting and finance and limited attention and earnings management effects on security pricing and disclosure)
- Denis Trapido, Ph.D. Stanford University, *Assistant Professor of Management* (formation of social relations in economy, social effects of economic competition, and the role of motive signaling in shaping interfirm social networks)
- Rajeev K. Tyagi, Ph.D. University of Pennsylvania, *Professor of Management* (competitive marketing strategies, game theory, distribution channels, and new products)
- Kerry D. Vandell, Ph.D. Massachusetts Institute of Technology, *Director of the Center for Real Estate and Professor of Management, Law, and Planning, Policy, and Design* (mortgage analytics, housing and urban economics and policy, appraisal theory, and the extension of real estate and urban land economic theory)
- Alladi Venkatesh, Ph.D. Syracuse University, *Professor of Management and Informatics* (new media and information technologies in the home, social impacts and consumer issues, household technology adoption and diffusion, and postmodern consumer culture)
- Wenqing Wang, Ph.D. University of California, Los Angeles, *Assistant Professor of Management* (empirical asset pricing, liquidity, institutional investment behavior, and learning)
- Margarethe F. Wiersema, Ph.D. University of Michigan, *Dean's Professor of Management* (CEO succession and dismissal, CEO replacement, corporate strategy-product and international diversification, and corporate governance)
- Shuya Yin, Ph.D. University of British Columbia, *Assistant Professor of Management* (supply chain management, operations management, competition and cooperation in supply chain, and application of cooperative and non-cooperative game theory)
- Yu Zhang, Ph.D. Institut Européen d'Administration des Affaires (INSEAD) (France), *Assistant Professor of Management* (interaction between strategy and capital markets, competitive strategy and corporate governance)
- Lu Zheng, Ph.D. Yale University, *Associate Professor of Management* (investments, equity markets, mutual funds, hedge funds, investor behavior and expectations and institutional trading)

OVERVIEW

The Paul Merage School of Business offers the B.A. degree in Business Administration, the B.S. degree in Business Information Management (offered jointly with the Donald Bren School of Information and Computer Sciences), the M.B.A. (Master of Business Administration) degree, the Ph.D. degree in Management, and undergraduate minors in Management and Accounting. The Master's degree is professional in nature and is intended to provide future managers with a firm foundation in the basic disciplines and in management tools and techniques; the Ph.D. in Management is for those who wish to pursue a career in scholarly research. The undergraduate minor in Management is designed for those who wish to gain some insight into issues of modern management, as well as those who anticipate future graduate work in management. In establishing the undergraduate minor in Accounting, the faculty anticipated three types of students to be drawn to courses in accounting: (1) students who wish to meet the accounting course work eligibility requirements to sit for the uniform CPA examination, (2) students preparing for careers in private accounting or in other fields that require some knowledge of accounting, and (3) students planning to pursue a graduate degree in accounting who wish early guidance and undergraduate work appropriate to this career objective.

Degrees

Business Administration	B.A., M.B.A.
Business Information Management ¹	B.S.
Management	Ph.D.

¹ Offered jointly with the Donald Bren School of Information and Computer Sciences.

HONORS

Graduation with Honors. Honors at graduation, e.g., *cum laude*, *magna cum laude*, *summa cum laude*, are awarded to approximately the top 12 percent of the graduating seniors. To be eligible for honors, a general criterion is that students must have completed at least 72 units in residence at the University of California. The student's cumulative record at the end of the final quarter is the basis for consideration for awarding Latin honors. Other important factors are considered (see page 52).

The Waltos Group of Northwestern Mutual Future Business Leader Scholarship. This scholarship awards \$2,500 to two outstanding undergraduate students per academic year in The Paul Merage School of Business. Applicants entering their sophomore, junior, or senior year in the Business Administration major, the minor in Management, or the minor in Accounting who demonstrate financial need and are graduates of a low-performing California public high school are eligible to apply. Students must be enrolled full-time and have a minimum 3.0 GPA for consideration.

UNDERGRADUATE PROGRAMS

Bachelor of Arts in Business Administration

The undergraduate Business Administration program at The Paul Merage School of Business educates students to understand and apply the theories and concepts of effective business and management and prepares students for a wide variety of careers and life experiences. Business Administration majors can pursue careers in the for-profit and not-for-profit sectors or can proceed on to graduate school in several disciplines including business, economics, and law. The program provides a broad learning experience in a multidisciplinary and global context and focuses on the development of

essential managerial skills, especially critical thinking, quantitative and qualitative analysis, and effective communication skills.

The Business Administration major at The Paul Merage School of Business offers a traditional business curriculum similar to those at other top business schools in the country. The major is broad, drawing on the social sciences more generally to study organizations, interpersonal communication skills, individual and group behavior, leadership, strategy, financial and accounting issues, ethics, information technology, marketing, and a variety of other topics in the content of a rapidly changing global environment.

The faculty strongly encourages majors to create an educational program composed of courses within and outside the Merage School that provide substance and focus to their careers and enable them to pursue their own personal interests. While preparing students for careers in management, the Merage School, through academic advising, will help students fashion an undergraduate program that they can tailor to their own unique career objectives. Examples of programs of study that allow Business Administration majors to blend management education with specific industry areas include (but are not limited to) bioscience business, government service, international commerce, arts management, entrepreneurship in computer gaming, and other combinations. Through appropriate choice of courses, students can prepare to pursue a law degree, a master's degree in a variety of areas, or a doctoral program in business or related disciplines.

Students are required to complete 10 business courses that provide a foundation in essential core business competencies, followed by a minimum of 10 business electives selected from specializations. Students select a minimum of one of three specializations in Accounting, General Management, or Marketing. This program of study enables students to develop areas of focus as they pursue the Business Administration major. Because much business is conducted on a global scale, students are required to either participate in the University's Education Abroad Program or to take one of a number of designated courses that stresses the international dimension of a business area. Students interested in learning more about the full array of requirements for professional licensing in Accounting are encouraged to visit <http://www.dca.ca.gov/cba> and <http://www.cpa-exam.org/>.

While academic course content is crucial to an undergraduate business major, auxiliary noncurricular programs also are important to students' academic experience. The Merage School incorporates a cocurricular element into the classroom experience. Drawing from Merage School and University resources, students are exposed to opportunities to enhance communication and presentations skills, attend formal speaker events, and engage in informal mentoring. The Merage faculty is committed to ensuring that undergraduate majors have ample opportunity to enhance their writing and presentation skills through class assignments and a business communication course.

Students are strongly encouraged to become involved with the clubs that comprise the new Alliance of Business Students. The Alliance consists of several student organizations. These high-profile student groups promote interaction between students and the surrounding business community through their Corporate Speaker Series, social activities, and student/employer receptions. Students with an entrepreneurial interest are invited to participate in the annual business plan competition.

Work experience is an important way to learn about business and management. UCI's Internship Program, sponsored by the Career Center, can assist students in finding opportunities to work in either voluntary or paid positions in business, nonprofit, or industrial settings. Students who plan to enter business or apply to a graduate school of business or management in the future will find

it necessary to supplement their academic work with a variety of practical experiences.

Another opportunity is UCI's Undergraduate Administrative Intern Program, which offers selected students the opportunity to assume one-year positions under the guidance of University administrators. Students can choose from a range of offices in which they will be asked to undertake special projects specifically related to the management and administration of UCI and higher education in general. These internships are supplemented by a two-quarter management seminar and by field trips to administrative conferences such as meetings of The Regents of the University of California.

ADMISSION TO THE MAJOR IN BUSINESS ADMINISTRATION

In the event that the number of students who elect Business Administration as a major exceeds the number of positions available, applicants may be subject to screening beyond minimum University of California admissions requirements.

Freshmen: Preference will be given to those who rank the highest using the selection criteria as stated in the Undergraduate Admissions section of the *Catalogue*.

Transfer students: For fall 2010, junior-level applicants with the highest grades overall (minimum cumulative GPA of 3.0) and who satisfactorily complete lower-division courses equivalent to UCI's calculus (Mathematics 2A-B), economics (Economics 20A-B), and statistics and accounting (Management 7, 30A, 30B) will be given preference for admission. Management 10 may be completed at UCI. Admission to the major will be competitive due to limited space availability.

CHANGE OF MAJOR

Students who wish to declare the Business Administration major should contact The Paul Merage School of Business Undergraduate Counseling and Student Affairs Office, 226 MPAA Building, for information about change-of-major requirements, procedures, and policies. Information can also be found at <http://www.changeofmajor.uci.edu>. As of fall 2010, applications to declare the major can be made at any time, although typically in the sophomore year, with review of applications and selection to the major to be governed by the Undergraduate Programs Committee. Admission to the major will be competitive due to limited space availability. Completion of the prerequisite courses does not guarantee admission into the major.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN BUSINESS ADMINISTRATION

University Requirements: See pages 56–62.

Major Requirements

- A. *Lower-Division:* Mathematics 2A-B, Economics 20A-B, Management 7, 10, 30A, 30B.
- B. *Upper-Division Core:* Management 101, 102, 105, 107, 109, 110.
- C. *Business Electives:* 10 upper-division Merage School electives*, to be fulfilled by completing one of the specializations below.

Specialization in Accounting (10 courses*): Requires Management 131A, 131B, 132A, and three accounting electives selected from Management 132B, 133, 135, 136, 137, 138, 194, 195, and four additional (four-unit) upper-division Merage School electives selected from Management 119–197.

Specialization in General Management

(10 courses*): Requires completion of four (4) two-course sets, selected from the following sets:

Course Sets (select four sets, selecting two courses from each of the four sets):

Accounting: Management 131A, 131B, 132A, 132B, 133, 135, 136, 137, 138, 194, 195

Finance: Management 141, 144, 147, 149

Marketing: Management 150, 151, 152, 153, 154, 155, 157, 158, 159

Public Policy/Economics: Management 161, 162, 163, 164, 168, 169

Information Systems: Management 170, 173, 174, 175, 178, 179

Operations and Decision Technologies: Management 180, 182, 184, 189, 196, 197

Organization and Management: Management 119, 121, 122, 123, 125, 128, 129

and

Two additional (four-unit) upper-division Merage School electives selected from courses numbered Management 119–197.

Specialization in Marketing (10 courses*): Requires six Marketing electives selected from Management 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, and four additional (four-unit) upper-division Merage School electives selected from courses numbered Management 119–197.

D. *International Business Requirement:* Fulfillment of the International Business requirement by

1. completing one course selected from Management 119, 121, 128, 135, 144, 154* (which may also be utilized for specified category C requirements above); or
2. participating in select UC Education Abroad Program options, with prior approval of the Associate Dean.

* By exception, students may petition the Associate Dean to accept an upper-division elective that has business content equivalent to a stated Merage elective.

NOTE: Students majoring in Business Administration may not minor in either Management or Accounting, or double major in Business Information Management. Students may pursue more than one Merage School specialization; however, no more than two courses may be utilized toward requirements for more than one specialization outlined above.

Bachelor of Science in Business Information Management

As the business environment becomes increasingly global and information-centric, the need has increased for graduates who understand and can use technology that gathers and provides information, who are able to distill and recognize patterns in that information, and who can apply those analyses to achieve business objectives.

The undergraduate Business Information Management major administered by the Donald Bren School of Information and Computer Sciences is a collaborative, interdisciplinary degree program between the Bren School and The Paul Merage School of Business. The program seeks to educate students to understand and then apply the theories and concepts of a broad, integrated curriculum covering computing, informatics, business fundamentals, and analytical decision-making. The major prepares students for a wide variety of careers and life experiences. Business Information

Management majors can pursue careers in the for-profit and not-for-profit sectors or can proceed to graduate school in several disciplines, including information systems, computing, economics, business, and law.

The curriculum is presented across three general academic areas: Computing (computer science, informatics, and software); Business Foundations (accounting, finance, marketing, strategy, and operations); and Analytical Methods (mathematics, statistics, economics, management science, and decision analysis). The fundamentals of information and computer science, including the rudiments of software design and construction with an emphasis on data management, provide the foundation for understanding, describing, and evaluating the technology through which most business information is gathered and presented. The business fundamentals, covering all the functional areas in the Merage School, provide a background and context in which information and its analysis will be applied.

For complete information about the major, see the Interdisciplinary Studies section of the *Catalogue*, page 370.

Undergraduate Minor in Management

The Paul Merage School of Business faculty offer an undergraduate minor in Management which consists of seven courses: one lower-division introductory course and six upper-division courses.

In establishing the undergraduate minor in Management, the faculty anticipated three types of students to be drawn to courses in administration: (1) students who wish to learn about the management of organizations as a way of preparing for a career in business, (2) students preparing for careers in other fields that require some knowledge of management, and (3) students who expect to go on to graduate work in management who wish early guidance and undergraduate work appropriate to this career objective.

Students are eligible to apply for the minor in Management if they have completed all prerequisite courses (including Management 5) with a grade no lower than C (2.0) and have upper-division standing. Completion of the prerequisite courses does not guarantee admission to the minor in Management. Admission is on a competitive basis and students must submit an application, transcripts, and a statement of purpose. Applications are accepted on a quarterly basis. Interested students are encouraged to obtain further information from the Undergraduate Counseling and Student Affairs Office, 226 MPAA Building; <http://www.merage.uci.edu/>.

Prerequisite Courses

The following are prerequisites for enrolling in the upper-division undergraduate minor courses: Management 5; Economics 20A; and one course or one sequence selected from Anthropology 10A-B-C, Engineering CEE11, Economics 15A-B, Mathematics 7, Mathematics 131A-B-C, Psychology 10A-B-C, Social Ecology 13, Social Ecology 166A-B-C, Social Science 9A-B-C or 10A-B-C, or Sociology 10A-B-C.

Transfer students should check with their college counselor for established equivalencies for these prerequisite courses.

NOTE: Individual courses that students may select within the minor may require additional prerequisites, including Mathematics 2A.

Requirements for the Undergraduate Minor in Management

Completion of seven courses:

- A. One lower-division core course: Management 5.
- B. Four upper-division core courses selected from Management 101, 102, 105, 107, 109, 185.
- C. Two additional courses selected from the upper-division core course list above, Management 160, and Management 190.

With faculty approval, a student may substitute a maximum of one course. Students participating in the UC Education Abroad Program may substitute a maximum of two courses, with Paul Merage School of Business faculty approval.

NOTE: Students may not receive both the minor in Management and the minor in Accounting.

Undergraduate Minor in Accounting

The Paul Merage School of Business faculty offer an undergraduate minor in Accounting consisting of seven upper-division courses. In addition, two lower-division introductory accounting courses, one lower-division microeconomics course, and one lower-division single variable calculus course are prerequisites to the minor program.

In establishing the undergraduate minor in Accounting, the faculty anticipated three types of students to be drawn to courses in accounting: (1) students who wish to meet the accounting course work eligibility requirements to sit for the uniform CPA examination, (2) students preparing for careers in private accounting or in other fields that require some knowledge of accounting, and (3) students planning to pursue a graduate degree in accounting who wish early guidance and undergraduate work appropriate to this career objective.

Students are eligible to apply for the minor in Accounting if they have upper-division standing and have completed Management 30A and 30B with a grade no lower than B (3.0) and all other prerequisite courses with a grade no lower than C (2.0). Completion of the prerequisite courses does not guarantee admission to the minor in Accounting. Admission is on a competitive basis and students must submit an application, transcripts, and a statement of purpose. Applications are accepted on a quarterly basis. Interested students are encouraged to obtain further information from the Undergraduate Counseling and Student Affairs Office, 226 MPAA Building; <http://www.merage.uci.edu/>.

Prerequisite Courses

The following are prerequisites for enrolling in the upper-division undergraduate minor courses: Economics 20A, Mathematics 2A, Management 30A, and Management 30B.

Transfer students should check with their college counselor for established equivalencies for these prerequisite courses. Students not taking Management 30A and 30B at UCI during regular session or summer session must complete Management 131A with a minimum grade of B prior to admission in the program.

NOTE: Individual courses that students may select within the minor may require additional prerequisites.

Requirements for the Undergraduate Minor in Accounting

Completion of seven upper-division courses:

- A. Three core accounting courses: Management 131A, 131B, 132.
- B. Two accounting elective courses selected from Management 132B, 133, 136, 137, 138.
- C. Two additional courses selected from the upper-division accounting elective course list above, Management 101, 102, 105, 107, 109, 160, 190 (provided topics have not been covered in other accounting courses), 192.

With Paul Merage School of Business faculty approval, a student may substitute a maximum of one minor course.

NOTE: Students may not receive both the minor in Accounting and the minor in Management.

GRADUATE PROGRAMS

Educational Objectives

The Paul Merage School of Business offers a generalist M.B.A. degree and a learning experience that prepares graduates for a lifetime of professional and personal growth with increasingly important enterprise-wide responsibilities. The rigorous curriculum, combined with extensive professional and interpersonal training and opportunities made available through the School's M.B.A. Career Center, allows students to gain theoretical perspectives that are in turn tested and affirmed with practical application. The result is an environment that fosters the development of professional and personal skills vital to contemporary executives or managers. Students are encouraged to develop their ability to lead change by mastering communication skills, to work productively and actively within a team-oriented environment, to gain a solid grasp of quantitative skills, and to appreciate and effectively employ those solutions that involve the integration and implementation of information and technology to offer creatively viable business options.

The School has developed a thematic approach to business education: sustained growth through strategic innovation. The goal is to graduate leaders with the exceptional ability to grow their organizations through strategic innovation supported by analytic decision making, information technology, and collaborative execution. Although a solid grounding in basic business disciplines provides the foundation for effective management, graduates are encouraged to aim higher. They learn about change as it takes place within the context of a knowledge-based, technology-driven society where information and its effective use are vital to establishing a competitive edge. Students, whether they are interested in finance, marketing, general management, strategic planning, accounting, operations, health care, human resources, international business, or other areas, will be thoroughly imbued and comfortable with the nature and importance of strategic innovation and how crucial it is toward sustaining growth in today's competitive global economy. Further, they will understand the impacts of technology and the technological processes that enable the gathering, analysis, dissemination, and use of information to change the way business is done. The thematic approach of the School provides a skill-set, core understanding, and depth of knowledge that will enable its graduates to be effective managers who are not only proficient in business procedures but have the leadership qualities and conceptual framework to affect change by transforming conventional business practices or perhaps even inventing new business processes and management techniques.

Additionally, The Paul Merage School of Business has achieved a national reputation for excellence in graduate management education in the health care industry through the Health Care Executive M.B.A. (HCEMBA) program. Industry managers and health care professionals learn about managerial challenges and issues in the health care industry where hundreds of health care providers, medical device and instrumentation companies, and biosciences firms are headquartered. A joint M.D./M.B.A. program is also available.

General Admission Requirements

Evaluation of the applicant's file for admission to the Master's and Ph.D. degree programs will consist of an integrated assessment of all materials (test scores, transcripts of previous academic work, essays, and letters of recommendation). The University admission standard of a 3.0 or better undergraduate grade point average (on a 4.0 scale) is required. The minimum TOEFL (Test of English as a Foreign Language) score acceptable for study at the School for all M.B.A. programs is 600 on the paper-based test; 250 or better on the computer-based test; or 100 or better on the Internet-based test.

Substantive work experience is considered for applicants to M.B.A. programs.

Requests for application material should be addressed to either the Full-Time M.B.A., M.B.A. Programs for Working Professionals, or Ph.D. Program at the University of California, Irvine, The Paul Merage School of Business, Irvine, CA 92697-3125; mba@uci.edu, or gsm-phd@merage.uci.edu; <http://www.merage.uci.edu/>.

Doctor of Philosophy in Management

The Paul Merage School of Business admits students for the Ph.D. in the fall quarter only. The deadline for application is January 4. The Ph.D. program requires a commitment to full-time study. In addition to the other requirements, Ph.D. applicants are encouraged to submit a previously prepared paper (research report, research essay, case study) which may be indicative generally of the applicant's interests and capabilities.

The School offers the Ph.D. in Management to students with backgrounds in a variety of disciplines. While a master's degree is preferred, students may be admitted to the doctoral program directly from the baccalaureate degree. There are many appropriate undergraduate majors, including (but not limited to) psychology, political science, business or public administration, mathematics, computer sciences, economics, sociology, and so forth. Students with academic strengths in disciplines not usually considered as precursors for management (e.g., natural sciences, humanities, and the arts) are encouraged to apply. The Ph.D. program is designed to prepare students for academic careers in a number of the fields of management, e.g., organization and management, strategy, operations and decision technologies, management information systems, finance, accounting, and marketing. Requirements of the Ph.D. program include a broad knowledge of core management disciplines. In addition, the Ph.D. student must qualify as a skilled researcher and must complete a dissertation demonstrating these skills.

The Ph.D. program is divided into two phases: qualification and dissertation. In the qualification phase the student prepares for dissertation research in an area of specialization. This phase is completed when an oral qualifying examination is passed and the candidacy committee recommends advancement to candidacy for the Ph.D. The normative time for advancement to candidacy is three years. The dissertation phase involves a significant original research project which demonstrates the Ph.D. student's creativity and ability to launch and sustain a career of research. The normative time for completion of the Ph.D. is four years, and the maximum time permitted is six years.

Requests for information should be addressed to the University of California, Irvine, The Paul Merage School of Business, Doctoral Program Admissions Office, 418 School of Business, Irvine, CA 92697-3125; phd@merage.uci.edu; <http://www.merage.uci.edu/AcademicPrograms/DoctoralProgram/index.aspx>.

Master's Degree Programs

The Paul Merage School of Business offers a variety of programs leading to the M.B.A. (Master of Business Administration) degree. These include a two-year, full-time M.B.A. program, and three part-time M.B.A. programs: a 21-month Executive M.B.A. program, a two-year Health Care Executive M.B.A. program, and a three-year Fully Employed M.B.A. program. A five-year joint M.D./M.B.A. program is offered in conjunction with the School of Medicine.

M.B.A. PROGRAM

The Paul Merage School of Business admits students to the two-year, full-time M.B.A. program in the fall quarter. Students from a variety of undergraduate disciplines, including liberal arts, social sciences, physical or biological sciences, computer science, and

engineering, are encouraged to apply. The final deadline for completion of all phases of the application procedure is April 15. In addition to the general University rules governing admission to graduate study, the School normally requires the completion of the Graduate Management Admission Test (GMAT). There are no specific prerequisite requirements for the full-time M.B.A. program. However, the Admissions Committee does look for evidence of quantitative proficiency in all applicants. The Committee strongly recommends that applicants complete, at a minimum, a college-level mathematics and statistics course.

The evaluation of an applicant's file for admission consists of an integrated assessment of all materials submitted including test scores, transcripts of previous academic work, statements on application forms, and letters of recommendation. Above and beyond these factors, substantive work experience is given serious consideration in the evaluation process.

The M.B.A. program at The Paul Merage School of Business is distinctive for its focus on providing students the capabilities and skills to succeed in the technology-rich Innovation Economy. Students develop a sophisticated understanding of the new requirements for success in the School's new curriculum that emphasizes the three critical drivers of the Innovation Economy: Strategic Innovation, Information Technology, and Analytical Decision Making.

This understanding is advanced through experiential learning course work in which teams of students work on challenging assignments for leading companies. Another distinctive feature of the program is the new "Edge" capstone course on the future of business where students explore specific industries and companies and discover what actions must be taken today to reap the benefit from long-term trends in technologies, geopolitics, demographics, and macroeconomics.

The full-time M.B.A. program requires a minimum of 92 units with a minimum grade point average of 3.0 in the Core and overall. The curriculum consists of courses divided into two groups designed to achieve specific educational objectives. The courses are divided as follows: 13 required Common Core Courses (50 units) and 42 units of elective courses which students select to emphasize career goals and educational interests. A thesis is not required.

Required Course Work. Common Core Courses, each of which is four units, are Management of Complex Organizations, Statistics for Management, Management Science, Operations Management, Organizational Analysis, Financial and Managerial Accounting, Microeconomics, Macroeconomics or Business and Government, Information Technology for Management, Marketing Management, Managerial Finance, Business Strategy.

International Requirement. Students must fulfill the requirement in one of the following ways: completion of a Paul Merage School of Business international elective in a functional area; participation in a Paul Merage School of Business international exchange program; or completion of an upper-division or graduate international course offered by another UC school, with the approval of The Paul Merage School of Business Associate Dean.

Electives. In addition to the core courses, 42 more units of elective courses are required. The major emphasis in the elective courses is to develop additional depth in a discipline or interdisciplinary area or specialized competence in the use of a particular set of technical tools and methods. Students select their electives in light of their educational and career goals and interests.

The 3-2 Program for Undergraduates

In addition to the full-time master's program for students who have already received a bachelor's degree, outstanding UCI undergraduate students may apply to enter a cooperative 3-2 Program with the School and most other campus units. Acceptance into the 3-2 Pro-

gram constitutes advanced admission to the graduate program. Such students complete their undergraduate major requirements by the end of their junior year. During their senior year, they take graduate courses in the School. These courses are used to satisfy their undergraduate unit requirements, and at the same time apply toward their graduate degree. Successful completion of the requirements in the program normally leads to the bachelor's degree in the cooperating discipline after the fourth year, and the M.B.A. degree after the fifth year. Students should consult with their academic counselor in their major school early in their academic careers for further information about completing undergraduate requirements in three years. Students contemplating entering such a program should contact The Paul Merage School of Business prior to, or early in, the start of their junior year for the purpose of program consultation.

NOTE: With the exception of 3-2 students, no undergraduates will be enrolled in Paul Merage School of Business graduate-level courses.

M.D./M.B.A. Degree Program

The M.D./M.B.A. program requires five or six years for completion. It is aimed at individuals who are exceptional in ability and motivation and who seek a career as physicians with major responsibility for administration and management in health care organizations and institutions. Students in this program pursue a combined curriculum for an M.D. degree from the School of Medicine and an M.B.A. degree from The Paul Merage School of Business.

Students must be currently enrolled in the M.D. program and in good academic standing in order to apply to the combined M.D./M.B.A. program. During their second or third year of medical school, interested students submit an application to The Paul Merage School of Business Admissions Committee, after review by the School of Medicine. Final acceptance to the program is granted by The Paul Merage School of Business, and M.B.A. course work begins following completion of the student's third year of medical school. Students should be aware that enrollment in the M.D. program does not guarantee acceptance into the M.B.A. program.

The MCAT, along with the completion of three years of medical school training in good standing and passage of USMLE Step I, currently serve as a waiver for the GMAT entrance examination usually required for application to the M.B.A. program. The total number of units required to graduate for each program separately are satisfied in the M.D./M.B.A. program. Contact the M.D./M.B.A. Advisor at (949) 824-5388 for more information.

Special Opportunities

The Paul Merage School of Business offers course work in health care management within the M.B.A. program. The courses provide training not only in health care and related issues, but also expose students to professionals in the areas of management, finance, marketing, and strategic planning.

In today's interconnected global business world, it has become increasingly important for management students to learn to operate in an international environment. M.B.A. students in the full-time program can gain first-hand knowledge of the culture and management practices of other industrialized countries by participating in an academic exchange with universities located abroad. This experience, combined with course work in international management, prepares students for the demands and complexities of the growing global economic environment. Currently, The Paul Merage School of Business has exchange relationships with Bocconi University, Milan, Italy; Budapest University of Economic Sciences (BUES), Budapest, Hungary; Chinese University of Hong Kong (CUHK), Hong Kong; ESSEC Graduate School of Management, France; Hong Kong University of Science & Technology, Hong Kong;

Maastricht University, Netherlands; National University of Singapore (NUS), Singapore; Pontificia Universidad Catolica de Chile (PUC), Santiago, Chile; Vienna University of Economics and Business Administration, Vienna, Austria; and Yonsei University, Seoul, Korea.

Opportunities for students to take part in ongoing research exist through the Center for Research on Information Technology and Organizations (CRITO), which was recently designated by the National Science Foundation (NSF) as one of six industry-University Information Research Centers in the United States. CRITO is a consortium of corporations working together with faculty at UCI and elsewhere to better understand the evolving fabric of the information society and its implications for the design, use, and management of information and technology in various user environments. These environments range from the individual user's environment to work-groups, organizations, social communities, and society. The aim is to determine how organizations can more effectively use information and better design and manage new technology for improving organizational performance and society more generally.

CRITO faculty associates are recognized internationally for their excellence in the study of information technology as it applies to complex organizations. This tradition of excellence has been established by faculty from The Paul Merage School of Business, the Donald Bren School of Information and Computer Sciences, and the School of Social Sciences. These associates have collaborated since 1974 on theoretical and empirical research projects studying a broad array of questions about the relationship between information technology and organizational structure, society, political behavior, productivity, and performance. Research conducted through CRITO focuses on the management, use, and impact of *information technology in the emerging global, competitive marketplace* and the policy issues raised by such use. Qualified Paul Merage School of Business students are encouraged to participate in the various CRITO research activities and to avail themselves of this unique opportunity to interact with scholars from allied disciplines and to study in-depth the effects of the information technology revolution.

M.B.A. Career Center

The M.B.A. Career Center, located within the School, was established to serve the unique placement needs of M.B.A. students and alumni. It has two main functions: (1) attracting a variety of organizations to interview and hire graduates and (2) counseling students in career opportunities and the techniques necessary to conduct effective job searches, not only for their first jobs but throughout their careers. The relatively small size of the M.B.A. program allows considerable interaction between the Career Center and students.

EXECUTIVE M.B.A. PROGRAM

The Executive M.B.A. (EMBA) program presents a challenging 21-month course of study specifically designed for executives, senior managers, professionals, entrepreneurs, and technical experts throughout Southern California. Participants have significant work experience (with a minimum of eight years), demonstrated leadership abilities, and a proven track record of success. Commencing each fall, students meet for seven consecutive quarters on alternate weekends (Friday and Saturday) at The Paul Merage School of Business. Class size allows students the opportunity to actively participate in class discussions and interact closely with their peers.

The program offers an applications-oriented curriculum with an international focus designed to give the working professional contemporary management tools for successfully doing business in a domestic and global environment. The EMBA program is a 92-unit program and offers a maximum amount of core and elective course

material presented in an accelerated timetable and is delivered to students using a lock-step curricular model.

In addition to the two, week-long residentials, students participate in an in-depth academic, week-long international seminar abroad. This provides a unique opportunity to experience global business firsthand from a corporate, academic, and cultural standpoint.

Further information may be obtained by contacting the University of California, Irvine, Executive M.B.A. Programs, 230 School of Business, Irvine, CA 92697-3130; (949) 824-0561; <http://www.merage.uci.edu/ExecutiveMBA>.

HEALTH CARE EXECUTIVE M.B.A. PROGRAM

The Health Care Executive M.B.A. (HCEMBA) program is a comprehensive academic experience for individuals working in the health care industry. This unique program is designed for professionals who want to expand their business expertise and gain the fundamentals of management as well as develop a better understanding of the economic, political, and social dynamics which shape the global health care industry. Students come from the intersecting industries of pharmaceuticals, medical devices, managed care, insurance, health care services, and health care policy. Participants have significant relevant work experience, demonstrated leadership abilities, and a proven track record of success. This 24-month program begins each fall. Classes meet one weekend a month, starting Thursday evening and continuing until noon on Sunday. Classes meet for eight consecutive quarters at The Paul Merage School of Business.

The curriculum is a carefully structured program that assures each student exposure to the full range of disciplines which are essential components of a management education. The core and elective courses are specifically customized for application to a health care professional's daily challenges. Distinguished speakers from the industry are an integral part of the program. This activity has been approved for Continuing Medical Education (CME) credit.

In addition to two, week-long residentials, students participate in an in-depth academic, week-long seminar where they meet health care industry leaders to better understand legislative and regulatory processes that effect health care.

Further information may be obtained by contacting the University of California, Irvine, Executive M.B.A. Programs, 230 School of Business, Irvine, CA 92697-3130; (949) 824-0561; <http://www.merage.uci.edu/HealthcareExecutiveMBA>.

FULLY EMPLOYED M.B.A. PROGRAM

The Fully Employed M.B.A. (FEMBA) program gives emerging managers an opportunity to earn an M.B.A. degree with minimal disruption to their professional lives. Students attend classes on weeknights and/or Saturdays during the program. The FEMBA Program admits new students for enrollment in spring or fall. Students beginning the program in spring attend classes nine consecutive quarters and complete the program in 27 months. Students beginning the program in fall attend classes nine non-consecutive quarters (summers off) and complete the program in 33 months.

The program consists of both core courses and electives, allowing students to establish a solid foundation of traditional business skills and then customize their education based on personal interests and goals. The curriculum provides constant interaction between information presented in the classroom and what is being used on the job, reinforcing and enhancing the student's learning experience.

In addition to classroom work, students attend three residential sessions including one abroad focusing on global markets. In this concentrated setting, students and faculty have an opportunity to

explore in depth a variety of business challenges and how those challenges can best be met using contemporary management tools.

Further information may be obtained by contacting the University of California, Irvine, Fully Employed M.B.A. Program Office, 202 School of Business, Irvine, CA 92697-3125; (949) 824-4565; <http://www.merage.uci.edu/>.

Courses in Management

UNDERGRADUATE

5 Managing in Contemporary Organizations (4). Equips students with working knowledge of several major subject areas within the context of business and society studies. Topics include: role of management in organizations, corporate social responsibility and responsiveness, ethics and values in business, government regulation, and international business.

6 Introduction to Business (4). Introduction to the study of modern business enterprise, including a broad exposure to areas of study, vocabulary, and careers. Exposure to faculty from the area of Marketing, IS, Economics, Accounting, Finance, Operations and Decision Technologies, and Organization and Strategy.

7 Statistics for Business Decision Making (4). Basics of data analysis and the fundamental notion of statistical inference emphasizing applications to administrative and management decision problems. Classical estimation and hypotheses testing, regression, correlation, analysis of variance, nonparametric methods and statistical probability. Only one course from Management 7, Mathematics 7/Statistics 7, Statistics 8, or Biological Sciences 7 may be taken for credit. No credit for Management 7 if taken after Mathematics 67. No credit for Management 7 if taken after Economics 15A-B. Management 7 may not be used to substitute for Economics 15A-B. (V)

10 Business and Management in the World Today (4). Accounting scandals, e-commerce, and globalization are only a few examples that show the profound impact of business practices on individuals and on society at large. Provides students with a broad overview of business functions and management practices.

30A Principles of Accounting I (4). First in a series of two introductory-level courses in accounting theory and practice. Emphasis on financial accounting concepts including the corporate financial statements, their content and interpretation, and the impact of financial transactions upon them. Management 30A and Economics 25 may not both be taken for credit.

30B Principles of Accounting II (4). Second in a two-course series. Continuation of financial accounting concepts and introduction of managerial accounting concepts. Managerial accounting topics include product costing and decision making. Prerequisite: Management 30A. Management 30B and Economics 26A may not both be taken for credit.

101 Management Science (4). Concepts and methods of management science, which applies mathematical modeling and analysis to management problems. Topics include linear and integer programming, project scheduling, inventory management, queuing analysis, decision analysis, and simulation. Prerequisite: Management 7. Formerly Management 183.

102 Managing Organizational Behavior (4). Basic theory and concepts which provide the manager with tools for understanding behavior of people in organizations. Areas such as individual, group, and organizational determinants. Prerequisite: Management 5 is recommended. Formerly Management 181.

105 Introduction to Marketing (4). Basic marketing concepts; discussion of the role marketing plays in modern society. Topics: industrial and consumer marketing, promotion, distribution, and pricing theory. Formerly Management 187.

107 Introduction to Management Information Systems (4). Provides exposure to the major features and issues relating to the deployment, use, and impact of information technology within public and private organizations. Topics include selection and feasibility assessment of information technology (IT), application of IT to business, and design and implementation of IT. Formerly Management 188.

109 Introduction to Managerial Finance (4). Basics of financial administration. Capital budgeting, cost of capital, cash budgeting, working capital management, and long-term sources of funds. Provides a basic understanding of issues and techniques involved in financial decision making. Prerequisites: Mathematics 2B and Management 30A. Management 109 and Economics 134A may not both be taken for credit. Formerly Management 186.

110 Strategic Management (4). Addresses management of the entire business. Role of the general manager in organizations, industry analysis, core competencies, growth through vertical integration, innovation, acquisition and diversification, globalization, strategy implementation and the ethical and moral responsibilities of a manager. Prerequisites: Management 102, 105, and 109. Management 110 and Economics 147B may not both be taken for credit.

119 Global Strategies (4). Examines the phenomena of technology and globalization and the impact on global business strategy. Macro approach considers the implications for the development of flexible yet focused business strategy and the creative and agile execution of policies. Class discussions are stimulated by case analyses. Prerequisite: Management 102.

121 Global Collaboration (4). Working in collaborations requires skills in cross-cultural communication, technology use, and dynamic planning and design. Understanding of the components that comprise global collaborations, including learning to identify key factors that influence performance. Prerequisite: Management 102.

122 Communication in Organizations (4). Addressing communication at three levels—interpersonal, group/meeting, and organizational. Dealing with conflict, interpersonal problems, being effective in meetings, and getting your message heard. Experiential course. Prerequisite: Management 102.

123 Critical Thinking and Creativity in Organizational Problem Solving (4). Learn about your own thinking process; develop the ability to think both logically and creatively and to understand how emotions affect your thinking. Class sessions involve discussion and experiential exercises. Business problems and issues are used for discussion and exercises. Prerequisite: Management 102.

125 Negotiations (4). Negotiating well is a skill. The objective is to assist students in developing an understanding of different theoretical perspectives. Exploration of feelings and beliefs about negotiation, negotiation skills, and putting theory into action by practicing new negotiation skills. Prerequisite: Management 102.

128 International Management (4). Impact of different cultures and political/economic systems on assumptions, expectations, and organizational practices relevant to conducting business in different national settings. Understanding of the challenges of cross-national management and resources utilized to work and conduct business outside the United States. Prerequisite: Management 102.

129 Leadership (4). Challenges facing today's leaders. Case analyses, free-form discussion, and written assignments designed to develop critical thinking skills. Experiential exercises encourage students to develop their ability to risk innovation, foster collaboration, manage conflict, and value diversity. Prerequisite: Management 102.

131A Intermediate Accounting I (4). First in a series of two intermediate-level courses in financial accounting theory and practice. Concepts include valuation and reporting of current and long-term assets, current liabilities and contingencies, and revenue recognition issues. Prerequisites: Management 30A and 30B.

131B Intermediate Accounting II (4). Second in a two-course series. Topics include the recognition and valuation of long-term liabilities, accounting for stockholders' equity, and the Statement of Cash Flows. Prerequisite: Management 131A.

132 Individual Taxation (4). Fundamentals of federal income taxation pertaining to individuals. Topics include income, deductions, credits, property transactions, and the impact of taxes on business and investment decisions. Prerequisite: Management 30B.

132B Special Topics in Taxation (4). Taxation topics of particular interest to undergraduate students. Content may vary each quarter depending on the interests of the instructors and the students. Prerequisite: Management 132. May be repeated for credit as topics vary. Formerly Management 134.

133 Corporate and Partnership Taxation (4). A study of the federal income taxation of partnerships and corporations, including subchapter S corporations. Emphasis on the tax issues associated with formation, operation, and termination of these entities. Prerequisite: Management 132.

135 International Accounting (4). Introduces the international dimensions of financial statement analysis; examines differences in measurement and disclosure practices that exist internationally, the reasons for these differences, their resultant financial statement effects, and methods that analysts and financial managers can use to deal with such differences. Prerequisites: Management 30A and 30B.

136 Accounting Information Systems and Spreadsheets (4). Fundamentals of accounting information systems including internal controls and transaction processing cycles. Development of efficient spreadsheets as applied to financial and managerial accounting concepts. Prerequisite: Management 30B.

137 Advanced Accounting (4). Accounting theory and practice with emphasis on business combinations, consolidated financial statements, foreign exchange transactions, and governmental and nonprofit organizations. Prerequisite: Management 131B.

138 Auditing (4). An introduction to auditing practice with emphasis on the verification of financial statements and related information. Topics include professional ethics, assessment of audit risk, study and evaluation of internal control, gathering and evaluating audit evidence, and audit reporting. Prerequisite: Management 131B.

141 Investments (4). Foundations of investment management. Theory and empirical evidence related to portfolio theory, market efficiency, asset pricing models, factor models, and option pricing theory. Students are expected to combine market research results and electronic information sources to create optimal investment strategies. Prerequisite: Management 109. Management 141 and Economics 132A may not both be taken for credit.

144 Multinational Finances (4). Focuses on financial issues facing multinational corporations, the most important of which is the management of foreign exchange risk. Introduction to investments and financing decisions in international capital markets. Prerequisites: Management 109, Economics 20A-B.

147 Case Studies in Corporate Finance (4). A case study course using the principles of financial value creation for optimum performance. Introduction to venture capital, IPOs, real options, mergers and acquisition, stock buybacks, dividends, and recapitalizations. Prerequisite: Management 109.

149 Derivatives (4). Introduction to options, futures, and other derivatives. First covers forward, futures, and swaps, and then examines the pricing of options. Applications of these instruments are emphasized. Prerequisite: Management 109.

150 Consumer Behavior (4). Application of the behavioral sciences to understanding buyer behavior. Topics include perception, memory, affect, learning, persuasion, motivation, behavioral decision theory, social and cultural influences, and managerial implications. Prerequisite: Management 105.

151 Marketing Research (4). Research to aid managerial decisions for products and services; problem formulation, research design, data collection, sampling, statistical analyses, managerial recommendations, and implementation in several real-world settings. Prerequisite: Management 105.

152 New Product Development (4). Identifying markets, developing product ideas, measuring consumer preferences, positioning and designing products, and forecasting their sales. Hands-on experience with software to conduct various analyses useful in new product development, such as cluster analysis, factor analysis, and conjoint analysis. Prerequisite: Management 105.

153 Integrated Marketing Communication (4). Management of the communication aspect of marketing strategy. Emphasis on emotional experiences, persuasive appeals, sales promotion, public relations, and direct marketing. Topics include setting communications objectives and budgets, media selection, creative strategy, and sales promotion techniques. Prerequisite: Management 101.

154 International Marketing (4). Students are exposed to the challenges and opportunities facing marketers in the international marketplace. Special attention is given to the management of cultural differences in product development, distribution systems, pricing, and promotion. Prerequisite: Management 105.

155 Brand Management (4). Introduction to issues in planning, implementing, and evaluating brand strategies, relevant theories, models, and tools for the making of brand decisions; application of these principles. Prerequisite: Management 105.

157 Marketing on the Internet (4). Recent developments in interactive technologies indicate that "marketing on the Internet" is becoming a serious business activity, with exponential growth. How to do marketing on the Internet and to identify the key issues pertaining to the marketing process. Prerequisite: Management 105.

158 Micromarketing (4). Develop marketing plans for specific retail locations and neighborhoods based on past purchases and demographics. Retail site selection, product category management, promotion management, shelf space allocation, targeted advertising. Hands-on experience with Retail Sales Analysis and Geographic Information Systems software. Prerequisite: Management 105.

159 Design Management (4). Design of products and services, particularly in consumer- and technology-oriented industries where design is viewed as a strategic resource. User-oriented design, design as a strategic tool, the role of design aesthetics, and the management of design. Prerequisite: Management 105.

160 Introduction to Business and Government (4). Introduces undergraduate students to the study of public administration. Designed for those expecting to take further courses in the field or considering a public service career. Prerequisites: Management 5 and upper-division standing.

161 Managing the Business Cycle for Competitive Advantage (4). Countercyclical strategies and tactics that can be implemented over the course of the business cycle in areas ranging from marketing, human resource management, and production to M&A activity and acquisitions/divestitures. Forecasting methods, tools and business cycle dynamics. Prerequisites: Economics 20A-B.

162 Managing Nonprofits (4). Designed for students interested in the management of nonprofit organizations. Examines similarities and differences between for-profit and nonprofit organizations, major management issues specifically associated with nonprofits, and exposes students to career opportunities in the nonprofit sector.

163 Parsing the China Price (4). Examines the ability of Chinese manufacturers to produce at substantially lower costs. Elements include low wage costs, lax environmental and safety regulations, economies of scope and scale driven by geographical considerations, counterfeiting and piracy, subsidies, and protectionism. Prerequisites: Economics 20A-B.

164 Human Resources and Public Policy (4). Examines the government's growing influence on the workplace and the impact of public policy on the management of human resources. Examples include policies pertaining to wages, hours, and family/medical leave; and labor/management relations and collective bargaining policies. Prerequisites: Economics 20A-B.

168 Economics of Strategy (4). Applies key concepts of game theory to the analysis of the strategic behavior of profit-maximizing firms. Simultaneous move games, sequential games, credibility and commitment, repeated games, pure and mixed strategies, signaling, and screening. Lecture and problem sets. Groups projects. Prerequisites: Economics 20A-B. Management 168 and Economics 147B may not both be taken for credit.

169 Applied Econometrics for Business (4). Bridge between an introductory statistics course and a course in econometrics. Oriented toward the ways in which economists use data to motivate and test economic theories. How to locate economics data, analyze, and appropriately interpret these data. Prerequisites: Economics 20A-B.

170 Technologies for Business (4). Introductory course that includes hands-on exposure to powerful, high-level tools for using computers in business situations more effectively. Next-generation graphical user interfaces, Internet applications, client/server technology, information security, and wireless. Prerequisite: Management 107.

173 Business Intelligence (BI) for Analytical Decisions (4). BI from both managerial and technical perspectives. Strategic role of BI. Software tools coupled with case studies are used to show how leading companies are using BI technologies to turn complex data into business decisions. Prerequisite: Management 107.

174 Database Management and Applications (4). Query, manipulate, and understand data and learn about leading edge applications for databases. Database fundamentals including entity relationship design, creating database tables, normalization, and data querying. Contemporary applications of databases using case studies. Applications include data warehousing, data mining. Prerequisite: Management 107.

175 Information Technology (IT) and Strategy (4). Strategic and competitive uses of IT and the Internet. Globalization and firm competition; alignment of IT with business strategy; business value of IT; business transformation with IT; implications of offshoring and outsourcing; strategy and IT in the Internet era. Prerequisite: Management 107.

178 Management of Information Technology (4). Analysis and design of business information systems and IT project management. Various phases of software development life cycle are examined from identification and selection of projects to rapid prototyping to training and maintenance. Automated tools for software development and project management. Prerequisite: Management 107.

179 Business Data Communications and Security (4). Analysis, technology integration, and technology choices involved with deploying, managing, and securing effective data communications systems, local area networks, Internet, intranet, and wide area networks. Fundamental concepts, as well as new enabling technologies that can provide a strategic advantage to firms. Prerequisite: Management 107.

180 Business Forecasting (4). Forecasts are critical inputs into the wide range of business decision making. Users include accountants, financial experts, human resource managers, production managers, and marketing people. Methodologies used to support business decision making. Computer-oriented approach. Prerequisite: Management 101. Management 180 and Economics 125 may not both be taken for credit.

182 Supply Chain Management (4). Flows of materials and information among all of the firms that contribute to a product or service. Forecasting, demand management, logistical networks, inventory management, supplier contracting, sourcing, information technology, flexibility, globalization, and performance management. Prerequisite: Management 101.

184 Optimization in Management (4). Firms attempt to maximize profit or minimize cost. Linear, integer, and nonlinear programming models in functional areas of business such as finance, marketing, and operations. Solutions via computer and the interpretation of output in a managerially significant way. Prerequisite: Management 101.

185 Introduction to Financial Accounting (4). Acquisition, reporting, and use of financial information in a business organization. Emphasis on use of information generated by the accounting system for decision making, planning, and control. Public sector analogies considered wherever possible. Prerequisites: Management 5 and upper-division standing.

189 Operations Management (4). Managing the productive resources, from which raw materials as inputs are being transformed into useful outputs of final products and services. Explanation of issues pertaining to both manufacturing and services-oriented systems. Prerequisite: Management 101.

190 Special Topics in Management (4). Special topics courses are offered from time to time, but not on a regular basis. Prerequisites vary. May be repeated for credit as topics vary.

191 Business Communication (2). Effective professional communication in a business environment. Students practice what they learn with oral presentations and written assignments that model actual business cases.

192 Business Law (4). A study of the legal environment of business. Topics include contracts, agency, partnerships, corporations, and other basic principles of law as they relate to business transactions. Formerly Management 139.

193 The Ethical Environment of Business (4). The political, social, and ethical environment of business. Topics include the historical development of American business, competitiveness problems, corporate social responsibility, corporate governance, and government regulation of business.

194 Financial Statement Analysis (4). Study of financial statements and their related footnotes; tools and procedures common to financial statement analysis; the relationships among business transactions, environmental forces (political, economic, social), and reported financial statement information; how financial statement information can help solve certain business problems. Prerequisites: Management 30A and 30B.

195 Strategic Cost Management and Management Control (4). Study of cost management to strengthen an organization's strategic position; preparation and use of relevant information for management decision making; management control systems design and performance evaluation. Prerequisites: Management 30A and 30B.

196 Decision Analysis (4). Making good decisions fast is important in a world where information is ubiquitous and technologies change at an incredible pace. Conceptual framework and information technology tools to approach these situations with clarity and confidence and improve both professional and personal decision-making skills. Prerequisite: Management 101.

197 Probability Models in Management (4). Probability models that characterize random phenomena in real-world applications. Applications of these probability models to business disciplines including operations management and finance. Discrete-time Markov chains, Poisson processes, birth and death processes, queuing models, and random walk. Prerequisite: Management 101.

198A-B-C Administrative Internship (4-4-4). Selected undergraduates participate as interns in three-quarter seminar. Students serve as managers within administrative units on campus with course work complementing the intern experience. Topics include: management ethics, study of non- and for-profit institutions, and changing nature of the work force.

199 Independent Study (1 to 4). Individual study under the direction of a selected faculty member. Prerequisite: consent of instructor. May be repeated for credit.

FULL-TIME M.B.A. PROGRAM

MBA200 Management of Complex Organizations (4). An introduction to management. In learning about the job of the manager, students examine some of the basic concepts of strategic and organizational management, including competitive analysis, corporate strategy, organizational design, and techniques for improving organizational effectiveness. Satisfactory/Unsatisfactory only.

MBA201A Statistics for Management (4). Methods of statistical inference, emphasizing applications to administrative and management decision problems. Topics: classical estimation and hypothesis testing, regression, correlation, analysis of variance, decision analysis, and forecasting. Prerequisite: basic statistics with probability.

MBA201B Management Science (2). An introduction to computer-based models for decision making. Topics include optimization (linear programming, integer programming, network flow models) and computer simulation. Uses spreadsheets extensively, including Excel built-in and add-in packages.

MBA202 Organizational Analysis for Management (4). Develops a better understanding of the causes and consequences of individual and group behavior, and the frameworks by which to analyze and understand complex organizations; and enhances the skills required to manage and lead an organization.

MBA203A Financial Accounting for Management (4). Nature and purpose of accounting, principal accounting instruments, and valuation problems.

MBA203B Managerial Accounting for Management (4). Involves developing and using financial and non-financial information to help organizations make planning, budgeting, control, operating, and performance evaluation decisions. Prerequisite: Management MBA203A.

MBA204A Microeconomics for Management (4). Provides basic tools for analyzing economic decisions of consumers and firms, the determinants and consequences of market structure and market failure. Topics include demand and supply analysis, production and cost theory, perfect competition, monopoly, and introductory game theory.

MBA204B Macroeconomics for Management (4). Focuses on the use of macroeconomic analysis to manage the business cycle for competitive advantage. Such "business cycle-sensitive" management is explored within the context of marketing, operations management, HRM, merger and acquisition activity, and capital financing and expenditures. Prerequisite: Management MBA204A.

MBA205 Marketing Management (4). Introduction to the field of marketing. Objectives include developing familiarity with fundamental concepts, theories, and techniques in marketing and acquainting students with the type of decisions made by marketing managers including customer targeting, product, pricing, distribution, promotion, and research.

MBA206 Business and Government (4). Introduces students to the many non-market issues that affect today's managers, such as: environment protection, health and safety, intellectual property protection, antitrust, and lobbying. Takes an interdisciplinary approach using economics, political science, public policy and law.

MBA207 Information Technology for Management (4). Focuses on the technological and managerial issues surrounding the development and use of IT in organizations. Examines role of technology in organizations, how technology can be used to execute an organization's business strategy, and to enable new, innovative business strategies.

MBA208 Operations Management (4). Introduction to strategic and tactical issues in production and operations management. A blend of quantitative and qualitative considerations. Topics: product planning, process design, capacity management, production planning, inventory control, distribution management, just-in-time manufacturing, quality management.

MBA209A Managerial Finance (4). Introduces students to financial theory and concepts. The main topics covered are time value of money, valuation of stocks and bonds, capital budgeting, portfolio theory, capital structure choice. Prerequisites: Management MBA201A, MBA203A, MBA204A.

MBA210 Business Strategy (4). The study of the functions and responsibilities of senior management and the decisions that determine the direction of the organization and shape its future. Methods include application of concepts, frameworks, and analytical techniques to the strategic issues which real-world companies face. Prerequisites: Management MBA202, MBA205, MBA209A.

ELECTIVES

MBA209B Investments (4). Foundations of investment management. Theory and empirical evidence related to portfolio theory, market efficiency, asset pricing models, factor models, and option pricing theory. Students are expected to combine market research results and electronic information sources to create optimal investment strategies. Prerequisite: Management MBA209A.

MBA211 M.B.A. Proseminar (0). Provides students in the Merage School full-time M.B.A. program with information and practical skills for success in the program and for business career planning.

MBA213 New Venture Management: A Course in Entrepreneurship (4). Focuses on survival and growth of new ventures. Methods include analysis of live cases, guest speakers, discussion, and field projects with contemporary entrepreneurs to learn about successful new venture management and surviving the liabilities of newness. Prerequisites: Management MBA202 and MBA205.

MBA214 Entrepreneurship: Planning the New Venture (4). Project course in which student teams develop a business plan to launch a new venture. The final business plan is presented to a panel of private investors, venture capitalists, entrepreneurs, experienced executives, and faculty. Prerequisites: Management MBA202, MBA205, MBA210.

MBA215 Global Competitive Strategy (4). Examines the challenges and opportunities for international business focusing on how and why companies go global, global industry structure and competition, international market development and market entry, and the management of international business risks. Extensive use of cases and discussions. Prerequisites: Management MBA202, MBA205, MBA210.

MBA216 Management of High-Technology Companies (4). Focuses on the unique array of managerial problems that derive from operating in high-velocity, high-change environments. Methods include rigorous case analyses, readings, and visiting experts to enhance knowledge.

MBA217 Management Consulting (4). Designed to provide a practical introduction to consulting by addressing organizational and business diagnostics, the roles played by consultants in changing business processes, client relations, markets for consulting services, the economic of the consulting business.

MBA218 Business Dynamics (4). Addresses how managers can successfully face the continuous challenges to their survival in a time-efficient, strategically sound manner. Builds on the core strategy course by tackling an extended range of strategic responses to dynamic and competitive environments. Prerequisites: Management MBA200, MBA202, MBA210.

MBA220 Organizational Change (4). Focuses in the implementation of change. Focus is on identifying the features of successful change in organizations of varying sizes and configurations, with an emphasis on the reasons why individuals resist or embrace change. Prerequisites: Management MBA200, MBA202.

MBA224 Strategic Human Resources Management (4). Focuses on managing human resources, with an emphasis on how firms' human resources system choices match various organizational strategies and contribute to firm performance. Topics include the design of staffing, training and development, performance appraisal, and rewards systems. Prerequisite: Management MBA200.

MBA225 Negotiations (4). Using a combination of theory and practice via negotiation simulations, students expand their repertoire of negotiating skills and develop their ability to analyze different negotiation situations and contexts. Prerequisites: Management MBA200, MBA202.

MBA228 International Management (4). Introduction to the effects of different national cultures and political/economic systems on the assumptions, expectations, organizational practices, and organizational forms relevant to cross-national organizational work. Prerequisites: Management MBA200, MBA202.

MBA229 Leadership Strategies (4). Provides insights/perspectives about the study and development of leadership. Helps students answer three questions: Where am I currently as a leader? What tools can I use to improve my leadership? What is my plan for the future as a leader? Prerequisites: Management MBA200, MBA202.

MBA231A Financial Statement Analysis and Reporting I (4). Develops an initial set of skills essential to using financial statements for business analysis by examining earnings management, revenue recognition, the reporting of assets, and how financial reporting is related to the business environment and managerial incentives. Prerequisite: Management MBA203A.

MBA231B Financial Statement Analysis and Reporting II (4). Extends financial statement analysis to the reporting of liabilities and stockholders' equity and their interaction with managerial incentives and the business environment. Useful to anyone with interests in equity, business, or financial analysis, investment and commercial banking, accounting, consulting. Prerequisite: Management MBA231A.

MBA234 Financial Statement Analysis (4). Develops an initial set of skills essential to using financial statements for business analysis. Topics include financial information "quality," earnings management, revenue recognition, forecasting financial information, and equity valuation. Prerequisite: Management MBA203A.

MBA235 Advanced Managerial Accounting (4). Design of cost information and systems used to plan and control organizational activities; procedures used to account for unit, process, and program costs; cybernetic evaluation of costing procedures; cost estimation, analysis, and accounting via computers.

MBA236 Accounting Control and Corporate Governance (4). Equips M.B.A. students with skills to deal with the challenges and opportunities organizations face in dealing with the separation of ownership and control.

MBA242 Portfolio Management (4). Advanced portfolio decision making. Topics include index models, portfolio performance measures, bond portfolio management and interest immunization, stock market anomalies and market efficiency. Prerequisites: Management MBA201B, MBA209B.

MBA243 Bonds and Fixed Income (4). During the past decade, there has been a tremendous amount of innovation in the design and use of debt securities. Focuses on techniques and methodologies for valuing different types of debt as well as their uses. Prerequisite: Management MBA209B.

MBA244 Multinational Finance (4). Focuses on financial issues facing multinational corporations, the most important of which is the management of foreign exchange risk. Other topics covered are investments and financing decisions in international capital markets. Prerequisites: Management MBA201B, MBA204B, MBA209A, MBA209B, or consent of instructor.

MBA245 Financial Institutions (4). Focuses on financial intermediaries such as banking and brokerage. Explains the risks faced by institutions and the integration through electronic markets. Covers issues such as online trading, global capital markets, securitization, deposit insurance, and bank regulations. Prerequisite: Management MBA209B.

MBA246A Introduction to the Real Estate Process (4). Introductory survey course providing an understanding of the real estate market. Topics include real estate economics, valuation, feasibility, investment, tax considerations, financing, development and corporate real estate asset management. Hands-on lectures, with guest lectures by real estate professionals.

MBA246C Real Estate Capital Markets (4). Understanding the four sectors of real estate capital markets: public debt, private debt, public equity, private equity; fundamental drivers of real estate investment, key players, investment types drive capital solutions, underwriting strategies and vehicle structuring, debts vs. equity source characteristics and implications for returns.

MBA246D The Real Estate Development Process (4). Nature and composition of development community and development process. Emphasis on role of conflicting interests, values and goals, and market uncertainty. Special attention paid to deal structuring and risk management. Lectures, guest lectures, team projects evaluating actual development project.

MBA246E Mortgage-Backed Securities and Structured Debt (4). Theory and operation of the mortgage-backed securities market. Historical introduction, technical analysis, examination of operations of residential/commercial mortgage-backed securities markets (RMBS, CMBS), evaluations of the “buy side,” mezzanine financing, CDOs, related vehicles. Guest lecturers from industry supplement lectures.

MBA246F Seminar in Management of the Real Estate Enterprise (4). Beyond “The Deal” to management of the real estate enterprise itself. Explores aspects of decision-making focused upon strategic objectives: goal setting, legal/tax structures, family-owned firms, going public, corporate ethics, capital structure, diversification, core competencies, technology. Guest professionals.

MBA246G Applied Real Estate Security Analysis and Portfolio Management (4). Provides an understanding of the public REIT market and its place in modern investment strategies, presents methods for analyzing and valuing companies, and introduces basic concepts for constructing and managing a real estate investment portfolio.

MBA248 Corporate Valuation (4). Combination of lectures and cases designed to confront students with real-world problems. Expands concepts covered in the introductory corporate finance course and focuses on estimating the value of firms and projects in diverse settings. Prerequisite: Management MBA209B.

MBA249 Derivatives (4). Studies options, futures, and other derivatives. The first part covers forward, futures, and swaps. The second part examines the pricing of options. Applications of these instruments are emphasized. Prerequisite: Management MBA209B.

MBA250 Consumer Behavior (4). Examines consumer decision-making process with emphasis on application of concepts and research findings from behavioral sciences for solution of marketing problems. Includes models of consumer decision making, information processing theories, and sociological influences on consumer decision making. Prerequisite: Management MBA205.

MBA251A Marketing Research (4). Covers conducting marketing research to generate customer insights that will drive sales, market share, and profitability and/or realize other quantitative objectives. Discusses problem formulation, data collection, statistical analyses, formulating managerial recommendations, implementation, and how research is used by companies. Prerequisite: Management MBA205.

MBA252A Advertising and Communications Management (4). Covers integrated marketing communications which includes advertising, sales promotions, public relations, and direct mail. Topics include elements of a communications plan, marketing research including copy testing and tracking, creating brand value, media strategies, and measuring return on investment. Prerequisite: Management MBA205.

MBA252D New Product Development (4). Designed to introduce the new product development process and techniques to identify markets, develop new product ideas, measure consumer preferences, position and design new products, as well as test them prior to launch. Analytical thinking and techniques are emphasized. Prerequisite: Management MBA205.

MBA254 International Marketing (4). Provides an understanding of the problems and perspectives of marketing across national boundaries, and develops analytical abilities for structuring and controlling marketing programs related to overseas businesses. Financial, legal, and cultural barriers to international marketing are emphasized. Prerequisite: Management MBA205.

MBA255 Database Marketing (4). Database marketing leverages information technology, together with established analytical methodologies, to facilitate highly targeted marketing. Students learn about database marketers' general strategies and objectives, their analytical methods, and the technologies they employ. Prerequisite: Management MBA205.

MBA256 Design Management and Innovation (4). Presents a design-driven approach, from design as organizational vision to strategic innovation to managing the design process. Students are exposed to design fundamentals and work in teams that involve creativity workshops and real-world projects.

MBA257 Marketing on the Internet (4). Examines impact of the Internet on traditional methods of doing marketing, and explores its existing and future uses. Discusses how to capitalize on and increase the Internet's utility as a tool that can increase marketing effectiveness, efficiency, and competitiveness. Prerequisite: Management MBA205.

MBA258 Marketing Strategies for High Technology (4). Framework and tools for managing technology-intensive businesses. Product and pricing policies; network externalities; compatibility concerns; systems competition; technological and market uncertainty; technology licensing strategies; contracting in high-tech markets; product line design; product bundling strategies; usage-based pricing; pricing of networks. Prerequisite: Management MBA205.

MBA259 Strategic Brand Management (4). Addresses important branding decisions faced by organizations. A computer simulation allows students hands-on experience in making decisions about their brand and seeing the results of those decisions. Prerequisite: Management MBA205.

MBA262 Managing Nonprofits (4). Focuses on the similarities and differences between for-profit and nonprofit organizations, with emphasis on the management of nonprofits. Topics include: marketing, fundraising, staffing, management/director relationships, use of volunteers, and emerging career opportunities.

MBA264 U.S. Health Policy (4). Provides an overview of U.S. health policy with a particular emphasis on current policy developments and debates. Students are introduced to the basic tools of policy analysis and apply them to health policy issues.

MBA266 Economics of Health Care Services (4). Uses microeconomics to study the organization, financing, and delivery of medical care in the U.S. The economic criteria of efficiency and equity are used to evaluate the performance of health care markets, government programs, and public policies. Prerequisite: Management MBA204A.

MBA267 Understanding Managed Care (4). Covers all aspects of the “managed care revolution,” emphasizing the latest development and future trends. Topics include market competition and organizational strategy, the changing role of providers, integrated delivery systems, quality management, and the impact of new technologies.

MBA268 Economics of Strategy (4). Uses game theory to analyze and inform strategic decision making. Applications include strategic pricing and investment decisions, with an emphasis on technology and information-based industries. Concepts are presented via simulation exercises, case studies, and outside speakers. Prerequisite: Management MBA204A.

MBA272 Critical IT Decisions for Business Executives (4). Develops frameworks to help business executives make critical IT decisions. Examples include how much to invest in IT, determining management practices to maximize return on IT investment, sourcing strategies for IT and business process outsourcing, strategies for digital environments. Prerequisite: Management MBA207.

MBA274 Database Management and Strategic Applications (4). Examines contemporary business applications of databases including CRM, knowledge management, data-warehousing, data-mining, and business intelligence. Also covers the database design process with a focus on enabling business decision making including capturing the linkages among data and retrieving data. Prerequisite: Management MBA207.

MBA275 Strategic Information Systems (4). Focuses on the strategic and competitive implications of IT, the Internet, and e-business for firms, industries, and countries. Topics include: globalization; IT alignment with business strategy; value of IT; business transformation; national IT policy; strategy and IT in the network era. Prerequisite: Management MBA207.

MBA276 Networks and Telecommunications (4). Designed to provide students with a better understanding of the fundamentals of networking technologies and their applications. Covers TCP/IP and OSI standards, networking concepts, Intranet/Internet topologies, communication protocols, and an overview of the applications that use them to operate.

MBA277 Managing Electronic Business (4). Helps managers to understand the key issues of doing business in the information age. Studies how existing business processes can be made more efficient. Examines strategies, business models, electronic markets, e-supply chains, business-technology integration, new trends, and real-world cases.

MBA278 Information Systems Project Management (4). Concentrates on project management techniques in the context of information systems projects: organizing, planning, budgeting, scheduling, management, leadership, and control. Special emphasis is placed on issues of system implementation and management of organizational change. Prerequisite: Management MBA207.

MBA280 Forecasting (4). Basic theory and techniques used to forecast future activities in technological, economic, social, and political arenas. Impact of forecasting on managerial decision making.

MBA283 Decision Analysis (4). Models of preferences and uncertainty; exercises in creative problem solving. The assessment and use of preference models (von Neumann-Morgenstern expected utility and measurable value functions) for private, public, and not-for-profit decision making. The assessment and use of subjective probabilities in decision making.

MBA285 Supply Chain Management (4). Focuses on the effective coordination of materials, the role of information and technology, and channel conflicts in global supply chains. Recent innovations in global supply chain management are also discussed, including the impact of electronic commerce.

MBA286 Service Operations (4). Analyzes processes from a wide array of services to examine process structure, information and technology requirements, performance, and support of business objectives. Case intensive; cases include hotel, airline, e-commerce, fast food, entertainment, banking, and health care.

MBA287 Project Management (4). Examines the fundamental components of project management and its role in the modern corporation. Emphasis is on how to initiate, implement, control, and terminate a project. Use of computer package for project management.

MBA288 Advanced Topics in Operations Management (4). Delves more deeply into topics that are currently influencing advances in practice of operations management in both manufacturing and service industries. Topics include modeling and analysis of manufacturing systems, yield management, and workforce scheduling. Appropriate applications in Southern California are included.

MBA289 Field Studies in Operations Management (4). Participation in a small group project sponsored by local companies in Southern California. Involves the applications of various concepts taught in operations management and related areas to address real issues faced by the sponsoring companies. Prerequisite: consent of instructor.

MBA290 Special Topic Seminars (2 to 4) F, W, S. Seminar, three hours. Each quarter a number of special topic seminars are offered in the 290 series. These seminars are not sequential and may be repeated for credit providing the topic varies. Examples of possible topics include Communication in Organizations, Power and Authority in Organizations, Health Care Administration, Real Estate Development. May be repeated for credit as topics vary.

MBA292 Business Law (4). Detailed study from a business viewpoint of contract theories, assignments, delegation of duties, third-party beneficiary contracts, defenses to consensual contracts, types of conditions, methods of excusing conditions, remedies, and types of damages.

MBA294 Special Topic ITM Seminars (2 to 4). Each quarter a number of topic Information Technology for Management (ITM) seminars are offered in the 294 series. Examples of possible topics include: Business Intelligence, Technologies for E-commerce. Open to Paul Merage School of Business students only. May be repeated for credit as topics vary.

MBA295B Micromarketing Lab (2). Develop marketing plans for retail locations and neighborhoods based on past purchases and demographics. Topics include retail site selection, targeted advertising, promotion management, and category management. Gain experience with Geographic Information System (GIS) software and retail sales (POS) analysis. Corequisite: Management MBA205.

MBA295C Management Science Laboratory (2). Tightly integrated with Management MBA201B. Provides hands-on experience in setting up spreadsheet models and conducting experiments to aid decision making. Excel built-in tools are covered: Excel-Solver for optimization, Crystal Ball for simulation, and templates for queuing analysis. Corequisite: Management MBA201B.

MBA295D Operations Management Lab (2). Introduces students to some basic skills of modeling and analyzing business processes using commercial process modeling software. Through class projects, provides students with hands-on experience in building simulation models for improving operational performance of business processes. Corequisite: Management MBA208.

MBA298 Experiential Learning (4). Provides students the opportunity to put into practice concepts, skills, and tools acquired in other parts of the M.B.A. program. Seminars augment internship experiences with analyses of relevant administrative issues. Open only to second-year M.B.A. students.

Ph.D. PROGRAM

PHD227 Doctoral Seminar in Organizational Behavior (4). Examines recent research and literature in the field of organizational behavior. Open only to advanced Ph.D. students in organizational behavior and related areas.

PHD291 Ph.D. Special Topics Seminar (2 to 12). Each quarter a number of special topic seminars are offered in the 291 series for Ph.D. students. Examples include topics such as methods seminar, experimental design, qualitative research, structural equation modeling.

PHD297A Doctoral Proseminar (4). Analysis of the central theories and theoretical controversies in the field of management. Examination of the formal education for managerial careers and exploration of issues relating to professional careers in research and scholarship in the field of management. Satisfactory/Unsatisfactory only.

PHD297B Principles of Scientific Inquiry in Business (4). Provides a first exposure to some fundamental issues in the conduct of research and development of the domain of knowledge relevant to their fields. Satisfactory/Unsatisfactory only.

PHD297E Doctoral Seminar in Research Methods (4). Provides foundation in research design and methodology. Topics include statistical analysis, philosophy of science, and experimental design. Prerequisites: Management PHD297A, PHD297B, PHD297C.

PHD297G University Teaching (0 to 4). Designed to prepare students for teaching career; incorporates seminars addressing topics of classroom dynamics, syllabus preparation, teaching techniques; establishes mentor relationship with faculty member in student's teaching area, provides classroom experience and includes option of videotape analysis of teaching style.

PHD297H Experimental Design (4). Advanced course provides experience in planning and implementing an experiment or quasi-experiment, including choice of topic, study design, data analysis, and manuscript preparation. Data analysis topics include ANOVA, ANCOVA, repeated measures, logistic regression, chi-square, and tests of mediation.

PHD299 Individual Directed Study (1 to 12). Individual study under the direction of a selected faculty member. Prerequisite: determined by instructor.

EXECUTIVE M.B.A. PROGRAM

Admission to the Executive M.B.A. Program is a prerequisite for enrollment in the following courses.

EP200 Management of Complex Organizations (7). An introduction to management. In learning about the job of the manager, students examine some of the basic concepts of strategic and organizational management, including competitive analysis, corporate strategy, organizational design, and techniques for improving organizational effectiveness. Satisfactory/Unsatisfactory only.

EP201A Statistics for Management (5). Methods of statistical inference, emphasizing applications to administrative and management decision problems. Topics: classical estimation and hypothesis testing, regression, correlation, analysis of variance, decision analysis, and forecasting.

EP201B Management Science (5). Introduction to management science tools for aiding managerial decision making with emphasis on model applicability, formulation, and interpretation. Use of computer laboratory's management science software packages. Topics: mathematical programming, stochastic processes, queueing systems, simulation.

EP202 Organizational Analysis for Management (5). Develops a better understanding of the causes and consequences of individual and group behavior, and the frameworks by which to analyze and understand complex organizations; and enhances the skills required to manage and lead an organization.

EP203A Financial Accounting for Management (5). Nature and purpose of accounting, principal accounting instruments, and valuation problems. Satisfactory/Unsatisfactory only.

EP203B Managerial Accounting for Management (5). Involves developing and using financial and non-financial information to help organizations make planning, budgeting, control, operating, and performance evaluation decisions.

EP204A Microeconomics for Management (5). Provides basic tools for analyzing economic decisions of consumers and firms, the determinants and consequences of market structure and market failure. Topics include demand and supply analysis, production and cost theory, perfect competition, monopoly, and introductory game theory.

EP204B Macroeconomics for Management (5). Focuses on the use of macroeconomic analysis to manage the business cycle for competitive advantage. Such "business cycle-sensitive" management is explored within the context of marketing, operations management, HRM, merger and acquisition activity, and capital financing and expenditures. Prerequisite: Management EP204A.

EP205 Marketing Management (5). Introduction to the field of marketing. Objectives include developing familiarity with fundamental concepts, theories, and techniques in marketing and acquainting students with the type of decisions made by marketing managers including customer targeting, product, pricing, distribution, promotion, and research.

EP207 Information Technology for Management (5). Focuses on the technological and managerial issues surrounding the development and use of IT in organizations. Examines role of technology in organizations, how technology can be used to execute an organization's business strategy, and to enable new, innovative business strategies.

EP208 Operations Management (5). Introduction to strategic and tactical issues in production and operations management. A blend of quantitative and qualitative considerations. Topics: product planning, process design, capacity management, production planning, inventory control, distribution management, just-in-time manufacturing, quality management.

EP209A Managerial Finance (5). Introduces students to financial theory and concepts. The main topics covered are time value of money, valuation of stocks and bonds, capital budgeting, portfolio theory, capital structure choice. Prerequisites: Management EP201A, EP203A, EP204A.

EP210 Business Strategy (5). The study of the functions and responsibilities of senior management and the decisions that determine the direction of the organization and shape its future. Methods include application of concepts, frameworks, and analytical techniques to the strategic issues which real-world companies face. Prerequisites: Management EP202, EP205, EP209A.

NOTE: For course descriptions *not* shown below, refer to the corresponding course number in the Full-Time M.B.A. Program list.

EP213 New Venture Management: A Course in Entrepreneurship (5). Prerequisites: Management EP202, EP205, EP210.

EP215 Global Competitive Strategy (5). Prerequisites: Management EP202, EP205, EP210.

EP218 Business Dynamics (5). Prerequisites: Management EP200, EP202, EP210.

EP225 Negotiations (5). Prerequisites: Management EP200, EP202.

EP229 Leadership Strategies (5). Prerequisites: Management EP200, EP202.

EP234 Financial Statement Analysis (2 to 5).

EP248 Corporate Valuation (5). Prerequisite: Management EP209B.

EP259 Strategic Brand Management (5). Prerequisite: Management EP205.

EP283 Decision Analysis (5)

EP290A-H Special Topics (2 to 5). May be repeated for credit as topic varies.

EP294 Special Topic ITM Seminars (5). May be repeated for credit as topics vary.

EP295 Global Business (8). Emphasizes and reinforces international perspectives contained in the Executive M.B.A. program curriculum by providing a week-long intensive seminar abroad in the second year. Scholars and business people from the host country instruct students in specially designed class sessions and company visits.

EP299 Individual Study (1 to 8). Individual study under the direction of a selected faculty member. May be repeated for credit as topics vary.

HEALTH CARE EXECUTIVE M.B.A. PROGRAM

Admission to the Health Care Executive M.B.A. Program is a prerequisite for enrollment in the following courses.

HC200 Management of Complex Organizations (7). An introduction to management. In learning about the job of the manager, students examine some of the basic concepts of strategic and organizational management, including competitive analysis, corporate strategy, organizational design, and techniques for improving organizational effectiveness. Satisfactory/Unsatisfactory only.

HC201A Statistics for Management (5). Methods of statistical inference, emphasizing applications to administrative and management health care decision problems. Topics: classical estimation and hypothesis testing, regression, correlation, analysis of variance, decision analysis, and forecasting.

HC201B Management Science (5). Introduction to management science tools for aiding health care managerial decision making, with emphasis on model applicability, formulation, and interpretation. Use of computer laboratory's management science software packages. Topics: mathematical programming, stochastic processes, queueing systems, simulation.

HC202 Organizational Analysis for Management (5). Develops a better understanding of the causes and consequences of individual and group behavior, and the frameworks by which to analyze and understand complex organizations; and enhances the skills required to manage and lead an organization.

HC203A Financial Accounting for Management (4). Nature and purpose of accounting, principal accounting instruments, and valuation problems as they apply to health care organizations.

HC203B Managerial Accounting for Management (5). Involves developing and using financial and non-financial information to help organizations make planning, budgeting, control, operating, and performance evaluation decisions.

HC204A Microeconomics for Management (5). Provides basic tools for analyzing economic decisions of consumers and firms, the determinants and consequences of market structure and market failure. Topics include demand and supply analysis, production and cost theory, perfect competition, monopoly, and introductory game theory.

HC204B Macroeconomics for Management (5). Focuses on the use of macroeconomic analysis to manage the business cycle for competitive advantage. Such "business cycle-sensitive" management is explored within the context of marketing, operations management, HRM, merger and acquisition activity, and capital financing and expenditures. Prerequisite: Management HC204A.

HC205 Marketing Management (5). Introduction to the field of marketing. Objectives include developing familiarity with fundamental concepts, theories, and techniques in marketing and acquainting students with the type of decisions made by marketing managers including customer targeting, product, pricing, distribution, promotion, and research.

HC206 Business and Government (2). Focuses on the relationship between business and government, and the ways in which members of the business community help shape local, state, and federal public policy. Topics include: issues management, lobbying, impact of technology, impact of the media, and privatization.

HC207 Information Technology for Management (5). Focuses on the technological and managerial issues surrounding the development and use of IT in organizations. Examines role of technology in organizations, how technology can be used to execute an organization's business strategy, and to enable new, innovative business strategies.

HC209A Managerial Finance (5). Introduces students to financial theory and concepts. The main topics covered are time value of money, valuation of stocks and bonds, capital budgeting, portfolio theory, capital structure choice. Prerequisites: Management HC201A, HC203A, HC204A.

HC209B Investments (3). Foundations of investment management. Theory and empirical evidence related to portfolio theory, market efficiency, asset pricing models, factor models, and option pricing theory. Students are expected to combine market research results and electronic information sources to create optimal investment strategies. Prerequisite: Management HC209A.

HC210 Business Strategy (5). The study of the functions and responsibilities of senior management and the decisions that determine the direction of the organization and shape its future. Methods include application of concepts, frameworks, and analytical techniques to the strategic issues which real-world companies face. Prerequisites: Management HC202, HC205, HC209A.

NOTE: For course descriptions *not* shown below, refer to the corresponding course number in the Full-Time M.B.A. Program list.

HC213 New Venture Management: A Course in Entrepreneurship (2 to 5). Prerequisites: Management HC202, HC205, HC210.

HC215 Global Competitive Strategy (5). Prerequisites: Management HC202, HC205, HC210.

HC218 Business Dynamics (2 to 5). Prerequisites: Management HC200, HC202, HC210.

HC225 Negotiations (2 to 5). Prerequisites: Management HC200, HC202.

HC234 Financial Statement Analysis (2 to 5). Prerequisite: Management HC203A.

HC246A Introduction to the Real Estate Process (2 to 5). May be repeated for credit as topics vary.

HC248 Creating Wealth (2 to 5). Prerequisite: Management HC209B.

HC259 Strategic Brand Management (3 to 5). Prerequisite: Management HC205.

HC283 Decision Analysis (2 to 5)

HC290 Special Topics (2 to 5). May be repeated for credit as topics vary.

HC294 Special Topic ITM Seminars (3 to 5). May be repeated for credit as topics vary.

HC295 Federal Policy in Health Care (8). National/international one-week residential course exploring political analysis as related to management of health care organizations. Topics include political environment of management, concepts, and processes central to political analysis, bureaucratic politics, politics, and the manager.

HC296 Executive Leadership (7). Focuses on the conceptual, practical, and personal dimensions of executive leadership in health care. Past and current leadership theories are addressed. Individual personal assessment and diagnosis.

HC299 Individual Study (1 to 8). Individual study under the direction of a selected faculty member. May be repeated for credit as topics vary.

FULLY EMPLOYED M.B.A. PROGRAM

Admission to the Fully Employed M.B.A. Program is a prerequisite for enrollment in the following courses.

FE200 Management of Complex Organizations (6). An introduction to management. In learning about the job of the manager, students examine some of the basic concepts of strategic and organizational management, including competitive analysis, corporate strategy, organizational design, and techniques for improving organizational effectiveness. Satisfactory/Unsatisfactory only.

FE201A Statistics for Management (4). Methods of statistical inference, emphasizing applications to administrative and management decision problems. Topics: classical estimation and hypothesis testing; regression, correlation, analysis of variance, decision analysis, and forecasting.

FE202 Organizational Analysis for Management (4). Develops a better understanding of the causes and consequences of individual and group behavior, and the frameworks by which to analyze and understand complex organizations; and enhances the skills required to manage and lead an organization.

FE203A Financial Accounting for Management (4). Nature and purpose of accounting, principal accounting instruments, and valuation problems.

FE203B Managerial Accounting for Management (4). Involves developing and using financial and non-financial information to help organizations make planning, budgeting, control, operating, and performance evaluation decisions.

FE204A Microeconomics for Management (4). Provides basic tools for analyzing economic decisions of consumers and firms, the determinants and consequences of market structure and market failure. Topics include demand and supply analysis, production and cost theory, perfect competition, monopoly, and introductory game theory.

FE204B Macroeconomics for Management (4). Focuses on the use of macroeconomic analysis to manage the business cycle for competitive advantage. Such "business cycle-sensitive" management is explored within the context of marketing, operations management, HRM, merger and acquisition activity, and capital financing and expenditures. Prerequisite: Management FE204A.

FE205 Marketing Management (4). Introduction to the field of marketing. Objectives include developing familiarity with fundamental concepts, theories, and techniques in marketing and acquainting students with the type of decisions made by marketing managers including customer targeting, product, pricing, distribution, promotion, and research.

FE206 Business and Government (4). Introduces students to the many non-market issues that affect today's managers, such as: environmental protection, health and safety, intellectual property protection, antitrust, and lobbying. Takes an interdisciplinary approach using economics, political science, public policy, and law.

FE207 Information Technology for Management (4). Focuses on the technological and managerial issues surrounding the development and use of IT in organizations. Examines role of technology in organizations, how technology can be used to execute an organization's business strategy, and to enable new, innovative business strategies.

FE208 Operations Management (4). Introduction to strategic and tactical issues in production and operations management. A blend of quantitative and qualitative considerations. Topics: product planning, process design, capacity management, production planning, inventory control, distribution management, just-in-time manufacturing, quality management.

FE209A Managerial Finance (4). Introduces students to financial theory and concepts. The main topics covered are time value of money, valuation of stocks and bonds, capital budgeting, portfolio theory, capital structure choice. Prerequisites: Management FE201A, FE203A, FE204A.

FE209B Investments (4). Foundations of investment management. Theory and empirical evidence related to portfolio theory, market efficiency, asset pricing models, factor models, and option pricing theory. Students are expected to combine market research results and electronic information sources to create optimal investment strategies. Prerequisite: Management FE209A.

FE210 Business Strategy (4). The study of the functions and responsibilities of senior management and the decisions that determine the direction of the organization and shape its future. Methods include application of concepts, frameworks, and analytical techniques to the strategic issues which real-world companies face. Prerequisites: Management FE202, FE205, FE209A.

NOTE: For course descriptions *not* shown below, refer to the corresponding course number in the Full-Time M.B.A. Program list.

FE213 New Venture Management: A Course in Entrepreneurship (4). Prerequisites: Management FE202, FE205, FE210.

FE214 Entrepreneurship: Planning the New Venture (4). Prerequisites: Management FE202, FE205, FE210.

FE215 Global Competitive Strategy (4). Prerequisites: Management FE202, FE205, FE210.

FE217 Management Consulting (4)

FE218 Business Dynamics (4). Prerequisites: Management FE200, FE202, FE210.

FE225 Negotiations (4). Prerequisites: Management FE200, FE202.

FE228 International Management (4). Prerequisites: Management FE200, FE202.

FE229 Leadership Strategies (4). Prerequisites: Management FE200, FE202.

FE231A Financial Statement Analysis and Reporting I (4). Prerequisite: Management FE203A.

FE231B Financial Statement Analysis and Reporting II (4). Prerequisite: Management FE231A.

FE234 Financial Statement Analysis (4). Prerequisite: Management FE203A.

FE242 Portfolio Management (4). Prerequisite: Management FE209B.

FE243 Bonds and Fixed Income (4). Prerequisite: Management FE209B.

FE244 Multinational Finance (4). Prerequisite: Management FE209B.

FE246A Introduction to the Real Estate Process (4)

FE246C Real Estate Capital Markets (4)

FE246D The Real Estate Development Process (4)

FE246E Mortgage-Backed Securities and Structured Debt (4)

FE246F Seminar in Management of the Real Estate Enterprise (4)

FE248 Corporate Valuation (4). Prerequisite: Management FE209B.

FE249 Derivatives (4). Prerequisite: Management FE209B.

FE250 Consumer Behavior (4). Prerequisite: Management FE205.

FE251A Marketing Research (4). Prerequisite: Management FE205.

FE252A Advertising and Communications Management Companies (4). Prerequisite: Management FE205.

FE252D New Product Development (4). Prerequisite: Management FE205.

FE253 Advanced Micromarketing (4). Develop marketing plans for retailers and neighborhoods based on past purchases and demographics. Covers retail site selection, category management, promotion management, shelf space allocation, pricing, promotions, targeted advertising, consumer segmentation, media selection, list management, and GIS software. Prerequisite: Management FE205.

FE256 Design Management and Innovation (4)

FE257 Marketing on the Internet (4). Prerequisite: Management FE205.

FE258 Marketing Strategies for High Technology (4). Prerequisite: Management FE205.

FE259 Strategic Brand Management (4). Prerequisite: Management FE205.

FE272 Critical IT Decisions for Business Executives (4). Prerequisite: Management FE207.

FE274 Database Management and Strategic Applications (4). Prerequisite: Management FE207.

FE275 Strategic Information Systems (4). Prerequisite: Management FE207.

FE277 Managing Electronic Business (4)

FE280 Forecasting (4)

FE283 Decision Analysis (4)

FE285 Supply Chain Management (4)

FE286 Service Operations (4)

FE287 Project Management (4)

FE290A-H Special Topics (2 to 4). May be repeated for credit as topic varies.

FE292 Business Law (4)

FE294 Special Topic ITM Seminars (4). May be repeated for credit as topics vary.

FE295 Global Business (8). Emphasizes and reinforces international perspectives contained in the FEMBA curriculum by providing a week-long intensive seminar abroad in the second year. Scholars and business people from the host country instruct FEMBA students in specially designed class sessions and company visits.

FE296 Executive Leadership (6). Focuses on the conceptual, practical, and personal dimensions of executive leadership. Past and current leadership theories are addressed. Individual personal assessment and diagnosis. Satisfactory/Unsatisfactory only.

FE299 Individual Directed Study (1 to 8). Individual study under the direction of a selected faculty member.

DEPARTMENT OF EDUCATION

Deborah Lowe Vandell, **Chair**

2001 Berkeley Place

General Information: (949) 824-5117; gseinfo@uci.edu

Fax: (949) 824-2965

Faculty

Robert J. Beck, Ph.D. University of Chicago, *Professor Emeritus of Education*

Henry J. Becker, Ph.D. The Johns Hopkins University, *Professor Emeritus of Education*

Rebecca Black, Ph.D. University of Wisconsin, *Assistant Professor of Education* (online culture, adolescent literacy, second-language acquisition)

Liane Brouillette, Ph.D. University of Colorado, Boulder, *Associate Professor of Education* (educational leadership, qualitative research, arts in education)

Margaret Burchinal, Ph.D. University of North Carolina, Chapel Hill, *Professor of Education and of Psychology and Social Behavior* (statistics, childcare, and pre-kindergarten education)

Penny Collins, Ph.D. Ontario Institute for Studies in Education, University of Toronto, *Associate Professor of Education* (psychology of reading, reading acquisition, and reading disabilities)

Gilberto Q. Conchas, Ph.D. University of Michigan, *UCI Chancellor's Fellow and Associate Professor of Education* (race and social equality, sociocultural processes)

AnnMarie M. Conley, Ph.D. University of Michigan, Ann Arbor, *Assistant Professor of Education* (development of achievement, motivation, math and science learning)

Thurston Domina, Ph.D. City University of New York, *Assistant Professor of Education and Sociology* (educational policy, social inequality)

Greg Duncan, Ph.D. University of Michigan, *UCI Distinguished Professor of Education and Economics* (economics of education, program valuation, child development)

George Farkas, Ph.D. Cornell University, *Professor of Education* (achievement gap, educational inequality, early childhood, after-school programs)

Alan R. Hoffer, Ph.D. University of Michigan, *Professor Emeritus of Education*

Joseph Mahoney, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of Education* (child/adolescent social development, out-of-school time, social/educational intervention and policy)

Michael E. Martinez, Ph.D. Stanford University, *Co-Director of the CSU/UCI Joint Ed.D. Program and Professor of Education* (psychology of learning, intelligence, assessment)

Jack McCullough, Ph.D. United States International University, *Lecturer with Security of Employment Emeritus*

Carol Booth Olson, Ph.D. University of California, Los Angeles, *Senior Lecturer with Security of Employment* (UCI Writing Project, language arts education)

Leticia Oseguera, Ph.D. University of California, Los Angeles, *Assistant Professor of Education* (race/ethnic, gender, and class relations, educational access and persistence, quantitative methods)

Rita W. Peterson, Ph.D. University of California, Berkeley, *Senior Lecturer with Security of Employment Emerita*

Stephanie Reich, Ph.D. Vanderbilt University, *Assistant Professor of Education* (social emotional development, parent-child interactions, peer networks)

Lindsey Richland, Ph.D. University of California, Los Angeles, *Assistant Professor of Education and of Psychology and Social Behavior* (cognitive development, mathematics and science learning)

Judith Haymore Sandholtz, Ph.D. Stanford University, *Associate Professor of Education* (teacher development, teacher education, curriculum and instruction)

Rossella Santagata, Ph.D. University of California, Los Angeles, *Assistant Professor of Education* (culture, learning, and development; teacher knowledge and professional development; video technology and teacher learning; mathematics teaching)

Timothy M. Tift, M.A. Pepperdine University, *Lecturer with Security of Employment Emeritus*

Deborah Lowe Vandell, Ph.D. Boston University, *Department Chair of Education and Professor of Education and of Psychology and Social Behavior* (after-school programs, early childhood education, teacher-child relationships)

Elizabeth van Es, Ph.D. Northwestern University, *Assistant Professor of Education* (teacher cognition, professional development, teacher learning communities)

Mark Warschauer, Ph.D. University of Hawaii, *Professor of Education and Informatics* (language, literacy, technology)

Maria Estela Zarate, Ph.D. University of California, Los Angeles, *Assistant Professor of Education* (college access issues, Latino educational issues, education policy)

Affiliated Faculty

Jonathan Alexander, Ph.D. Louisiana State University, *Campus Writing Coordinator and Associate Professor of English* (writing studies, new media, and sexuality studies)

Elizabeth Cauffman, Ph.D. Temple University, *Associate Professor of Psychology and Social Behavior and of Education* (adolescent development, mental health, juvenile justice)

Chuansheng Chen, Ph.D. University of Michigan, *Professor of Psychology and Social Behavior and of Education* (cross-cultural psychology, socialization of achievement, adolescent development)

Cynthia Feliciano, Ph.D. University of California, Los Angeles, *Assistant Professor of Chicano/Latino Studies and Sociology* (race/ethnicity, education, immigration)

David John Frank, Ph.D. Stanford University, *Professor of Sociology and Education* (environmental sociology, sexuality and homosexuality, education)

Wendy A. Goldberg, Ph.D. University of Michigan, *Professor of Psychology and Social Behavior and of Education* (developmental psychology, children and their families, transition to parenthood, social policy)

Manuel N. Gómez, Ph.D. University of Southern California, *Vice Chancellor for Student Affairs and Adjunct Professor of Education* (higher education, culture, ethnicity, sociology)

Susan C. Jarratt, Ph.D. University of Texas at Austin, *Professor of Comparative Literature, Education, and Women's Studies* (histories and theories of rhetoric, composition pedagogy and teacher preparation, feminist theory and pedagogy)

Julia Reinhard Lupton, Ph.D. Yale University, *UCI Chancellor's Fellow, Director of the Humanities Core Course, and Professor of English, Comparative Literature, and Education* (Renaissance literature, literature and psychology)

Virginia Mann, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences and Education* (speech perception and its development, the development of reading ability, developmental dyslexia)

Robin Scarcella, Ph.D. University of Southern California, *Director of the Academic English/English as a Second Language Program and Professor of Academic English and English as a Second Language, Humanities* (linguistics, language development emphasis)

Program Directors and Coordinators

Nancy Christensen, Ed.D. University of California, Irvine, *Director of Communications and Coordinator of the UCI Ph.D. in Education Program*

Judith Conroy, M.A. University of California, Irvine, *Director of the Department of Education Student Affairs*

Dennis Evans, Ed.D. University of Southern California, *Academic Coordinator, Emeritus*

Christina Giguiere, M.A. University of California, Irvine, *Coordinator of the Multiple Subjects Credential Program*

Karol Gottfredson, M.A. State University of New York, Albany, *Coordinator of the Intern Program and Spring Cohort*

Sue Marshall, Ph.D. University of California, Los Angeles, *Director of Undergraduate Programs in Education*

Pat McCabe, M.A. California State University, Long Beach, *Coordinator of the Single Subject Credential Program*

Susan M. Meyers, M.S. University of Wisconsin, *Director of Teacher Credential Programs and Director of the Master of Arts in Teaching Program*

Lecturers

Bruce Baron, M.S. Pepperdine University, *Lecturer* (social science education)
 Kimberly Burge, Ed.D. University of California, Irvine, *Senior Lecturer* (arts education)
 Jacqueline D'Warte, M.Ed. Sydney University, *Lecturer* (language literacy)
 Susan Guilfoyle, M.S. University of Southern California, *Lecturer* (reading, language and literacy)
 Valerie Henry, Ed.D. University of California, Irvine, *Lecturer* (mathematics education)
 Bradley Hughes, Ph.D. University of California, Irvine, *Lecturer with Security of Employment, Ecology and Evolutionary Biology* (science education)
 Jeffrey Johnston, M.S. University of Illinois; M.A. University of Southern California, *Lecturer* (ethics in education, elementary physical education and health education)
 Claudia Pineda, Ed.D. Harvard University, *Lecturer* (adolescent behavior, social behavior)
 Jeanne Stone, M.A. California State University, Long Beach, *Lecturer* (language arts and mathematics education)

Overview

The Department of Education is a unique interdisciplinary academic unit. The Department is committed to promoting educational success in and out of school for ethnically and economically diverse learners from preschool through college (P–20) through collective research, teaching, and service activities. The multidisciplinary faculty includes scholars in psychology, sociology, economics, linguistics, language and literacy, policy, race and ethnicity, and the achievement gap. Their research addresses core issues in contemporary education: (1) equity of opportunity for ethnically, linguistically, and economically diverse learners; (2) teaching and learning in science and math; (3) early childhood education and development; (4) out-of-school learning; and (5) effective interfaces between technology and education.

The Department integrates the themes of Learning, Cognition, and Development; Social Context and Educational Policy; and Language, Literacy, and Technology across its programs, including the minor in Educational Studies, Credential, the Master's in Teaching, and the Ph.D. in Education. Scholarly work arises from the common belief that education environments, both in and out of school, are the locus of change in the quality of life and the availability of productive life choices for learners of all ages.

Teaching and Service Credential Programs

The Department of Education offers teacher and school administrator professional preparation programs for California teaching and service credentials.

The Department is authorized by the Commission on Teacher Credentialing (CTC) to offer full-time programs for California's two basic teaching credentials—the Multiple Subjects Credential and the Single Subject Credential. There are two paths available to obtain each of these teaching credentials: the Intern Teacher Credential program (subject to school district demand) and the Student Teacher Credential program. Additionally, in cooperation with University Extension, the Department offers Administrative Services Credential programs and a Reading Certificate program.

MULTIPLE SUBJECTS TEACHING CREDENTIAL

A Multiple Subjects Teaching Credential authorizes teaching in multiple-subjects environments, as is commonly the format in California elementary schools, as well as designated classrooms with English Language Learners.

A Preliminary Multiple Subjects Teaching Credential is awarded by the State upon completion of a baccalaureate degree and the State-approved UCI teacher education program that includes student or intern teaching and a teaching performance assessment.

Students must also complete the following:

Prior to Admission:

Verify basic skills by passing the CBEST exam or (for multiple subjects) by passing the CSET subtests I, II, III, and IV;

Obtain a Certificate of Clearance from the State of California;

Obtain a TB test with negative results.

Prior to Student Teaching:

Verify subject matter competency by passing the CSET exam or completing a Subject-Matter Preparation Program.

For Credentialing:

Complete a college-level course or pass an examination on the U.S. Constitution;

Obtain a CPR certificate in Adult, Child, and Infant Training;

Pass the Reading Instruction Competency Assessment (RICA).

SINGLE SUBJECT TEACHING CREDENTIAL

A Single Subject Credential authorizes teaching in a single-subject environment, as is commonly the format in California high schools and middle/intermediate schools. UCI offers Single Subject Teaching Credentials in art, English, languages other than English, mathematics, music, sciences, and social science.

A Preliminary Single Subject Teaching Credential is awarded by the Commission on Teacher Credentialing (CTC) upon completion of a baccalaureate degree and the State-approved UCI teacher education program that includes student teaching or intern teaching (subject to school district demand) and a teaching performance assessment. Students must also complete a college-level course or pass an examination on the U.S. Constitution, pass the California Basic Educational Skills Test (CBEST), obtain a CPR certificate, and verify subject-matter competence.

California requires all credential candidates to demonstrate subject-matter competence. Single subject candidates achieve this by passing the appropriate CSET examination in their subject area or by completing a CTC-approved subject-matter program in the teaching area. UCI offers a CTC-approved subject-matter program in Mathematics. While a major in Mathematics is not required to complete the subject-matter preparation program, the Mathematics major with a specialization in Mathematics for Education is designed to satisfy most of the subject-matter preparation requirements. Students who plan to take the CSET should consult early with an academic counselor in the Department of Education about undergraduate courses and degree programs in the student's selected discipline that will help prepare for the examination (e.g., undergraduate concentrations for secondary teaching offered in biological sciences, chemistry, mathematics, physics, social sciences, and Spanish). Single Subject students must pass all subtests of the CSET or complete an approved subject-matter program prior to student or intern teaching.

Prior to Admission:

Verify basic skills by passing the CBEST exam;

Obtain a Certificate of Clearance from the State of California;

Obtain a TB test with negative results.

Prior to Student Teaching:

Verify subject-matter competency by passing the required CSET exams or by completing a subject-matter preparation program in the content area.

For Credentialing:

Complete a college-level course or pass an examination on the U.S. Constitution;

Obtain a CPR certificate in Adult, Child, and Infant Training.

NOTE: For the Intern Teacher Program, applicants must verify subject-matter competency prior to admission.

INTERN TEACHER PROGRAM

Through the intern program, a candidate may earn a stipend from a sponsoring school district for one year of teaching while completing credential requirements. To serve as an intern, the student must be admitted to the Department of Education Intern Teacher program, receive an internship offer from a participating school district, and be eligible for an Intern Credential. Intern candidates are selected by UCI and receive internship offers from participating school districts based upon qualifications of the candidate and the current needs of the school districts. Eligibility requirements for an Intern Credential include a baccalaureate degree, current TB test clearance, Certificate of Clearance, passage of the CBEST, verification of subject-matter competence, passage of a course or college-level examination on the U.S. Constitution, and CPR certification.

Spring Start Multiple Subjects candidates are required to take the following courses: 173, 308, 311, 313, 319, 320, 322, 323, 324, 325, 327, 328, 329, 330, 331, and 332.

Spring Start Single Subject candidates are required to take the following courses: 173, 307 or 317, 310, 315, 319, 334, 338, 340, or 341 (students enroll in the section of their proposed credential authorization), 342, 347, 348, 349, 350 (or 108), and 352.

A grade of B or better is required in all courses and in intern teaching for successful completion of the program. If competence has been demonstrated by the conclusion of the intern teaching program and all Department and CTC requirements are met, the student is eligible for a preliminary credential recommendation by UCI.

For further information see an academic counselor or the intern program coordinator in the Department of Education.

STUDENT TEACHER PROGRAM

Candidates who enroll in the Multiple Subjects Student Teacher Credential program at UCI generally are required to take the following courses: Education 173, 301, 303, 304 or 306, 308, 320, 322, 323, 324, 325, 326, 327, 329, 330, and 348.

Candidates who enroll in the Single Subject Student Teacher Credential program at UCI generally are required to take the following courses: Education 173, 302, 305, 307 or 309, 310, 334, 336–341 (students enroll in the section of their proposed credential authorization), 342, 346, 347, 348, 349, 350, and 352.

Student teaching for Multiple Subjects candidates (grades K–6) is defined as a full-day, four-day-per-week assignment during the first quarter of student teaching and a full-day, five-day-per-week assignment during the second quarter of student teaching. Assignments will include two levels within the K–6 range in elementary schools.

Student teaching for Single Subject candidates (grades 7–12) is defined as a full-day, five-day-per-week assignment, for one full public school semester in an appropriate classroom setting in middle or high schools.

Clearances for student teaching are processed by the Department of Education and are contingent upon a Certificate of Clearance, a current TB test clearance, academic preparation clearances including CBEST, and verification of subject-matter competence.

Advancement to student teaching is limited to those candidates who are adjudged to be professionally ready to assume such responsibilities. Such readiness shall be determined by, but not be limited to, the candidate's academic work, professional deportment, and potential for success in teaching. Failure to be advanced to student teaching will be considered good cause for removal and/or a leave of absence from the program.

A grade of B or better is required in all courses and in student teaching for successful completion of the program. If competence

has been demonstrated by the conclusion of the student teaching program and all other CTC and Departmental requirements are met, the student is eligible for a preliminary credential recommendation by UCI.

STUDENT TEACHER PROGRAM WITH BCLAD (SPANISH) EMPHASIS

Students who are bilingual in Spanish (as ascertained through testing) may be eligible for the Bilingual Crosscultural, Language, and Academic Development (BCLAD, emphasis in Spanish) credential. Students should consult an academic counselor in the Department of Education for more detailed information.

SUPPLEMENTARY AND ADDITIONAL TEACHING AUTHORIZATIONS

After acquiring a basic credential, it is possible to add further teaching authorizations. Consult an academic counselor in the Department of Education for details.

PREPARATION FOR APPLYING TO THE CREDENTIAL PROGRAMS

It is recommended that a candidate begin to prepare for admission at least a year in advance. Eligibility for admission is supported by passing the CBEST, providing evidence of possession of or application for a Certificate of Clearance, a negative TB test, and successfully completing the appropriate subject area examinations or an approved subject-matter preparation program. A considerable amount of time is needed to accomplish or acquire these necessary items.

The Department of Education requires appropriate field experiences or other professional life experiences prior to the program to prepare for the teaching profession and strengthen an admissions file. Course credit for field experience is available through Education 100, 103, and 160/160L, as well as through other University courses and programs. Field experience can also be earned by other appropriate activities, e.g., tutoring, assisting in public school classrooms.

Admission to the Credential Programs

Information is available from the Department of Education, 2000 Berkeley Place. Prospective students may apply online by accessing the Department's Web site at <http://www.gse.uci.edu/>. Admission decisions are based on a broad range of factors including, but not limited to, the following:

Verification of Basic Skills

For Multiple Subjects Candidates:

Pass the CBEST exam or pass subtests I, II, III, and CSET writing skills.

For Single Subject Candidates:

Pass the CBEST.

CBEST must accompany the application for admission.

Verification of Subject Matter

For Multiple Subjects Candidates:

Pass subtests I, II, and III of the CSET for Multiple Subjects.

For Single Subject Candidates:

Pass the appropriate subtests of the CSET, or

Complete a CTC-approved subject-matter preparation program.

Candidates are urged to pass CSET exams as soon as possible. It is not recommended that a person take more than two subtests in one sitting, and it is not uncommon for people to have to retake one or two subtests. Therefore, it is essential to make a strategic plan that involves several test dates. CSET test information and study materials can be found at <http://www.cset.nesinc.com>.

Absence of Criminal Conviction that Would Preclude the Issuance of a Credential. All students are required by law to obtain a Certificate of Clearance from the Commission on Teacher Credentialing (CTC). Applicants must provide evidence of filing for this certificate as part of their application for admission to the credential program.

Written Recommendations. Three letters of recommendation are required for admission. These letters should address (1) your ability to do graduate level work, (2) your capacity to work with or your experience with children, and (3) your ability to work as part of a team and your work habits.

Academic Achievement. Completion of a baccalaureate degree from an accredited institution and a minimum grade point average of 3.0 will support consideration of admission to the credential programs. Undergraduates who enroll in courses leading to a credential are not guaranteed admission to the program; admission through the regular graduate admissions process is required.

ADMINISTRATIVE SERVICES CREDENTIAL

Administrative Services credentials are issued by the State in pupil personnel services, administrative services, health services, library services, and clinical-rehabilitative services. UCI offers programs leading to the Administrative Services Credential generally required for school administrators.

There are two tiers of the Administrative Services Credential. In the first tier, a candidate obtains the Preliminary Administrative Services Credential by completing the approved program of 36 quarter units and a comprehensive examination. This credential also requires a valid basic credential, three years of full-time teaching or services experience, and passage of the CBEST. This credential program is jointly offered by the Department of Education and University Extension.

After an administrative position is obtained, the individual must begin the Professional Clear Administrative Services Credential (tier two) program. The UCI Professional Clear program requires two years of successful full-time school administrative experience in a position, the Preliminary Administrative Services Credential, and six (6) quarter units (Induction and Final Evaluation, Education 398A-B) which provide structured mentoring, self-assessment, and formative/summative evaluation of the candidate.

Students interested in these credentials should make an appointment with the director of the program in University Extension.

Undergraduate Minor in Educational Studies

The minor in Educational Studies is designed to (1) foster exploration of a broad range of issues in the field of education, (2) provide a strong foundation for students who aspire to become teachers in grades pre-K–20, and (3) offer an early-start course-work option for aspiring teachers that leads to the UCI teaching credential program. Students select courses from each of three categories: (1) core courses that provide a foundational knowledge base in the field of education, (2) elective courses, and (3) practicum courses that provide fieldwork or research experience in an educational setting. Within each category, students can explore topics that provide a knowledge base and skills applicable to careers in teaching, to graduate study in education or related fields, and to roles as citizens, parents, and volunteers.

The Department's academic counseling staff can assist students to select a coordinated set of courses based on their stated objectives. Aspiring K–12 teachers also have options for an "early start" to

teaching by completing selected minor courses that will also satisfy requirements for the UCI multiple subjects or single subject teaching credential programs. Students interested in serving community out-of-school programs can select new courses on topics relevant to after-school education. Students who are interested in future graduate study can select undergraduate courses that will lay a foundation for the study of core subject areas in the Department of Education's Ph.D. program.

Requirements

The minor requires completion of a minimum of seven courses (at least five of which must be upper division) totaling 28 units. Students must also complete a minimum of 40 hours of verifiable field experience or research in an educational setting. No more than two non-education courses from the student's major area of study may be used to satisfy the minor requirements.

Core Courses: Three courses selected from Education 50 (Origins, Purposes, and Central Issues in K–12 Education), 107 (Child Development in Education), 108 (Adolescent Development in Education), 124 (Multicultural Education in K–12 Schools), 173 (Cognition and Learning in Educational Settings), 175 (Foundations of Education), 176 (Psychology of Learning, Abilities, and Intelligence).

Elective Courses. Three electives selected from Education 50–199. Courses from the minor Core or Approved Practicum categories that are not used to satisfy those requirements may also be selected as electives.

Approved Practicum Courses. Completion of a minimum of 40 hours of field experience or research in an educational setting. This requirement may be satisfied in one of three ways: (a) 40 hours of field experience completed in conjunction with one or more approved practicum courses listed below; (b) 40 hours of research completed in conjunction with one or more approved practicum courses listed below; or (c) by petition, using verifiable hours from courses that are not on the approved practicum course list or hours from educational fieldwork that is not linked to a UCI course (e.g., tutoring experience, instructional experience in a summer program for children). Students should refer to http://www.gse.uci.edu/AP_UMES_Experience.php for a list of courses or regional programs that offer educational field experience that satisfies option C. Students who satisfy the practicum requirement with option C may need an additional Education course to meet the seven-course and 28-unit minimum for the minor, and must submit a petition for approval of the field work hours, available from the Department's Student Affairs Office.

The following are approved practicum courses:

Education 100 (Educational Strategies for Tutoring and Teacher Aiding); Education 103 (Advanced Tutoring)¹; Education 141A-B-C/Psychology 141J-K-L (Jumpstart: Early Language, Literacy, and Social Development)²; Education 160 (Foundations of Out-of-School Learning, 4 units), 160L (After-School Programs Fieldwork, 1 to 2 units)¹; Education 178 (Poetry in the K–12 Classroom)³; Education 198 (Directed Upper-Division Research in Education, 2 to 8 units)⁴; Humanities 195 (Humanities Out There Practicum)³; Physical Sciences 5/Biological Sciences 14 (California Teach 1: Introduction to Science and Math Teaching)⁵; Physical Sciences 105/Biological Sciences 101 (California Teach 2: Middle School Science and Mathematics Teaching)⁵; Physical Sciences 106/Biological Sciences 102 (California Teach 3: High School Science and Math Teaching)⁵; Psychology 141A (Education and Children); Psychology 145P-Q-R (Attention and Learning Deficits in

Children)²; Social Science 196 (Global Connect Practicum)³.

NOTE: Other approved practicum courses may be available; contact an Education Student Affairs counselor for information.

- ¹ This course provides less than 40 hours of field experience. Students must submit a petition to verify the number of fieldwork hours completed and are urged to consult with an Education Student Affairs counselor about combining this course with other fieldwork experience to reach a total of 40 hours.
- ² One quarter satisfies the 40-hour fieldwork requirement.
- ³ Must be taken for a total of 4 units to satisfy the 40-hour fieldwork requirement.
- ⁴ Consult the faculty sponsor to ensure that the research or independent study project includes experience in an educational setting, and confirm the number of units needed for 40 hours of experience.
- ⁵ Must be taken in combination with one other California Teach seminar for a total of 4 units to satisfy the 40-hour fieldwork requirement.

Residence Requirement. At least four upper-division courses must be successfully completed at UCI.

Statement of Intent. A Statement of Intent is required of all students wishing to enroll in this minor; forms are available in the Department office, 2000 Berkeley Place, or online at http://www.gse.uci.edu/ap_umes.php.

GPA Requirement. For certification in the minor, a student must obtain a minimum overall grade point average of at least C (2.0) in all courses required for the minor program. No more than two courses (8 units) applied to the minor may be taken Pass/Not Pass.

Other Courses. Students should consult a Department of Education Student Affairs counselor about UCI 300-level Education courses that are open to undergraduates or courses from other colleges or universities that can satisfy minor in Educational Studies requirements.

Minor Courses That Also Provide an Early Start Toward a Teaching Credential. The following courses satisfy core or elective requirements for the minor in Educational Studies, and concurrently satisfy some requirements for the UCI Multiple Subjects or Single Subject Teacher Credential programs when the student earns a grade of B or better (may not be taken Pass/Not Pass). Aspiring K-12 teachers should consult a counselor in the Department of Education Student Affairs Office about selecting courses that are best suited to particular teaching credentials and to discuss eligibility for the UCI Teacher Credential program. The following courses provide an early start:

Education 107 (Child Development in Education)¹, 108 (Adolescent Development in Education)², 124 (Multicultural Education in K-12 Schools), 128 (Exceptional Learners), 131 (Educational Technology)³, 137 (Art in the Elementary School)¹, 139 (Technology and Literacy)³, 152F (Teaching Mathematics with Technology)³, 173 (Cognition and Learning in Educational Settings), 176 (Psychology of Learning, Abilities, and Intelligence).

¹ Satisfies a requirement in the UCI Multiple Subjects Credential program only.

² Satisfies a requirement in the UCI Single Subject Credential program only.

³ Students satisfy an educational technologies requirement in the UCI Single Subject Credential program by completing one of the following: Education 131, 139, or 152F.

Graduate Degree Programs

MASTER OF SCIENCE IN CHEMISTRY OR MATHEMATICS WITH A TEACHING CREDENTIAL

In cooperation with the Departments of Chemistry and Mathematics, the Department of Education offers coordinated programs for the California Single Subject Teaching Credential and a Master of Science degree in Chemistry or Mathematics. Additional information is available from the Department of Education Student Affairs Office and the Graduate Affairs Office in the Departments of Chemistry and Mathematics.

MASTER OF ARTS IN SOCIAL SCIENCE WITH A TEACHING CREDENTIAL

In cooperation with the School of Social Sciences, students enrolled in a graduate program offered by the School may choose to pursue a teaching credential while working toward their degree. After completion of the requirements for an M.A. degree, students may apply for admission into the credential program administered by the Department of Education. A detailed description of the program may be obtained from the Department of Education Student Affairs Office and the Social Sciences Graduate Office.

MASTER OF ARTS IN TEACHING IN ELEMENTARY AND SECONDARY EDUCATION

The Department of Education offers an M.A.T. degree program in Elementary and Secondary Education. The 15-month program is designed for candidates with a baccalaureate degree who wish to earn a teaching credential in conjunction with an advanced degree. The M.A.T. program consists of a one-year teacher credential program of the student's choice (Multiple Subjects or Single Subject), and a total of six additional courses usually taken before and after the credential program. The combination of the M.A.T. courses with the UCI credential program provides a theoretical and practical framework with a focus on learning to learn from inquiry into practice.

Admission

Successful candidates must meet the general admission requirements of the UCI Office of Graduate Studies and must be admitted to a credential program offered by the Department of Education. Selection of candidates is based on the overall strength of each applicant's undergraduate preparation, three letters of recommendation from individuals who are familiar with the applicant's ability to pursue graduate study, and scores on the Graduate Record Examination (GRE).

Verification of Basic Skills

For Multiple Subjects Candidates:

Pass the CBEST exam or by passing subtests I, II, III, and CSET writing skills.

For Single Subject Candidates:

Pass the CBEST.

Verification of Subject Matter

For Multiple Subjects Candidates:

Pass subtests I, II, and III of the CSET for Multiple Subjects.

For Single Subject Candidates:

Pass the appropriate subtests of the CSET, or

Complete a CTC-approved subject-matter preparation program.

Candidates are urged to pass CSET exams as soon as possible.

Multiple subjects applicants must pass the three Multiple Subjects CSET exams and the CBEST exam.

Program of Study

During the summer prior to beginning the credential program, students admitted to the M.A.T. program enroll in three courses: Teachers' Lives and the Policy Environment of Teaching (Education 201), Outcomes of Schooling and Student Assessment (Education 202), and Advanced Concepts in Learning and Cognition (Education 203). In the summer following completion of their credential program, M.A.T. candidates enroll in three courses: Critical Assessment of Teaching Practice and Learning (Education 205), Cognition and Pedagogy in Specific School Subjects (Education 206) or Cognition and Pedagogy in Quantitative Literacy (Education 207), and Instructional Design and Educational Technologies (Education 240). Some students elect to complete a teaching credential program, then enter the M.A.T. program the following

summer. NOTE: Education 173 is prerequisite to Education 203; therefore, it is recommended that applicants take this course before enrolling in the first summer courses.

Residency. Full-time study for one year and two summers is required.

Comprehensive Examination

A comprehensive examination is completed by M.A.T. candidates during the second summer. The examination consists of a structured paper comprised of weekly assignments in Education 205 and is reviewed by two faculty in the M.A.T. program.

DOCTOR OF PHILOSOPHY IN EDUCATION

The Department of Education offers a Ph.D. degree in Education. The program seeks applicants from varied backgrounds and experiences who have the potential to become outstanding scholars and researchers in the field of education. The program currently offers three specializations: (1) Learning, Cognition, and Development; (2) Educational Policy and Social Context; and (3) Language, Literacy, and Technology. Students enrolling in the program choose among the specializations based on their research interests. Course work for the program ordinarily takes two to three years to complete and involves a number of core courses, methodology courses, elective courses, and a directed research sequence. Students should advance to candidacy in their third year. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years. Program length may be shorter for students who enter the program with a prior master's degree in an area closely related to their doctoral research.

Students are admitted to the program once per year to begin each fall quarter. Applicants must have completed a bachelor's degree with a grade point average of at least 3.0 and have prior course work related to the specialization for which they express interest. Applicants are required to submit a UCI application, transcripts, a statement of purpose, CV or resume, a writing sample, three letters of reference, and general GRE scores completed within the past five years. Students whose primary language is not English and who did not graduate from a U.S. college or university are also required to submit scores from either the TOEFL examination or the Academic Modules of the International English Language Testing System (IELTS).

Financial support will be offered on a competitive basis in the form of teaching or research assistantships. Students who are not citizens of countries where English is the primary or dominant language who wish to apply for a teaching assistantship will be required to fulfill an English proficiency requirement.

Further information regarding the Ph.D. program, courses, and application requirements is available on the Department of Education's Web site at <http://www.gse.uci.edu>.

Master of Arts in Education

The Department of Education offers an M.A. degree in Education as an option exclusively for students who are admitted to the Ph.D. in Education program. Separate applications for the M.A. in Education will not be accepted. Further information regarding the requirements for the M.A. in Education for students enrolled in the Ph.D. program is available at <http://www.gse.uci.edu>.

Courses in Education

UNDERGRADUATE

50 Origins, Purposes, and Central Issues in K–12 Education (4) F, W, S. An introduction to the role of education in U.S. society and to central issues in K–12 education. Education is studied from four different perspectives: social, historical, philosophical, and political.

55 Knowing and Learning in Mathematics and Science (5) F. Multidisciplinary study of knowing and learning in secondary school mathematics and science. Topics include standards for knowing, scientific epistemologies, mental representations, problem solving, expert-novice studies, assessment, and domain-specific thinking, learning, and teaching. Applied analysis of learning through clinical interviews. Prerequisite: Physical Sciences 5 or Biological Sciences 14. (III)

100 Educational Strategies for Tutoring and Teacher Aiding (4) F, W, S. Placement in a public elementary or secondary school to gain experience as a tutor or teacher aide. Emphasis on cognitive learning and the development of instructional strategies and resources which can be used in effective cross-age and cross-cultural experiences. May be taken for credit three times. Same as Engineering ENGR197A.

103 Advanced Tutoring (4) S. Lectures/discussions and 40 hours public school experience provide advanced strategies for tutoring under-achieving pupils; guidance using case studies to examine a range of factors that contribute to public school failure among elementary, middle, and secondary pupils. Prerequisite: Education 100 or consent of instructor.

104D Preparation for Teaching Fine Arts in K–12 Schools (4) W. Arts education, theory, curriculum and methods for university students specializing in studio art, digital arts, dance, music, and/or drama. Includes lesson planning and teaching strategies based on California and national frameworks and content standards, and fieldwork in K–12 settings. (IX)

104E Multimedia and the Arts in the Multicultural Classroom (4) S. Multiculturalism and underrepresented U.S. minorities and the visual and performing arts: perspectives in artistic perception, creative expression, historical and cultural context, and aesthetic valuing, and media literacy in the interpretation and production of multimedia arts products and applications for K–12 classrooms. Same as Studio Art 149. (VII)

106 Introduction to Early Childhood Education (4) F. Designed to provide an introductory survey of the nature, needs, and education of young children. Explores questions such as "What should we teach young children?" and "How should we teach?"

107 Child Development in Education (4) W. Explores the pathways of normally developing children's growth and change over time. In particular, focuses on how cognitive and social development impact and are driven by educational contexts.

108 Adolescent Development and Education (4) W. Explores the physical, cognitive, emotional, and social development of adolescents, with an emphasis on the practical implications of developmental theory and research findings for teachers and other professionals who work with adolescents in middle or high school contexts.

121 Child Care Research and Policy (4) W. Examines historical changes in child care over the past 50 years, research on how child care experiences relate to child development while children are in child care and after they enter primary school, and the government policies regarding child care. Prerequisite: junior or senior standing.

122A-B-C Foundations of Elementary School Mathematics I, II, III (4-4-4) F, W, S. Provides understanding of fundamental mathematics necessary to teach for conceptual understanding and higher-level reasoning and problem solving. Conceptual understanding of place value, fractions, proportionality, geometry, algebra, functions, probability, statistics, and measurement. Instructional applications of these concepts in grades K-8 teaching.

124 Multicultural Education in K–12 Schools (4) F, W, S, Summer. Provides a theoretical and empirical overview of educational issues affecting low-income immigrant and U.S.-born minority student populations in an increasingly diverse and changing society. (VII)

- 125 Children, Schools, and Cinema (4).** Using popular films as the vehicle, essential aspects of school dynamics and the interaction of schools with students, teachers, and the public are analyzed. Melding educational studies and film studies provides a deeper understanding of the methods used to transmit information and attitudes about schools to the lay public.
- 126 Ethics and Education (4) F, W, S.** Examination of ethics in education and how ethicists frame moral problems. Presentation of major ethical themes that affect education. Analysis of specific models for dealing with ethical goals and developing morality for K–12 students. Offers models for solving ethical dilemmas within an educational context. Prerequisite: Education 50.
- 128 Exceptional Learners (4) S.** An introductory survey of the nature, needs, and education of K–12 children with exceptionalities. Covers the categories and characteristics of exceptionalities, relevant state and federal legislation, and the role of general education teachers in special education.
- 131 Educational Technology (4) W.** Presents an overview of the types and uses of educational technology to support and enhance the K–12 learning experience. Familiarizes students with lesson planning, instructional design, learning theory, and integrating technology into the curriculum. (IX)
- 132 Reading and Writing Enrichment for After-School Programs (4) S.** Examines literacy development and the implementation of research-based practices to enrich learners' reading and writing skills in after-school programs. A minimum of 20 hours of after-school program fieldwork is required in order to design and implement literacy enrichment activities. (IX)
- 133 New Approaches in Assessment (4) W.** Examines different purposes, forms, and tools for assessing student learning. Topics include summative and formative assessment, testing and standards, student and teacher assessment, uses of technology in assessment, and differences in assessment methods across states and nations.
- 134 Teaching English Internationally (4) W.** Covers methods of teaching English as a foreign language, basic language knowledge for English teachers, the social context of English language teaching around the world, and essential information about securing international employment as an English teacher.
- 135 Exploring Literacy: Critical Literacy—Instructional Methodology and Implications for Practice in Education (4) S.** Focuses on the ways in which readers and writers bring meaning to texts and the interrelationships of language, power, and text. Explores critical literacy through focusing on reading comprehension, writing, discussion, and critical thinking.
- 136 Teaching and Learning Secondary Science (4) W, S.** Explores the field of teaching science, as students are guided through blending theories and classroom methodologies, such as constructivism, experimental inquiry, and interdisciplinary science, while developing skills in presentation, conducting hands-on activities, and offering exciting demonstrations that build curiosity.
- 137 Art in the Elementary School (4) F, W.** Theory and practice in art education for the elementary school classroom. Includes content and pedagogy for future teachers and others interested in the relationship between child development and the production of visual art. (IX)
- 138 Children's Literature in the Elementary Classroom (4) S.** Explores the wealth of children's literature that can be integrated into the elementary classroom. Surveys traditional literature, fiction, nonfiction, and poetry that make curriculum accessible to all students. Focuses on literary elements for both reading and creating text.
- 139 Technology and Literacy (4) S.** Examines relationships of new digital media to literacy in home and school environments. Topics include blogs, wikis, fan fiction, social network sites, online research, video games, instant messaging, e-mail, digital imagery, and multimedia production in connection with learning and literacy. Same as Informatics 165.
- 140A Methods for Elementary Bilingual Teachers (4).** Direct observation of bilingual classrooms in local elementary schools, classroom lectures, discussions, and presentations on the culture and language of the bilingual student.
- 140B Methods for Secondary Teachers of Spanish (4).** Communicative approaches to teaching Spanish at the secondary school level. Theory and practice of oral proficiency acquisition techniques. Requires field work. Emphasis placed on training differences for native versus nonnative Spanish speakers.
- 141A-B-C Jumpstart: Early Language, Literacy, and Social Development (4-4-4) F, W, S.** An experiential course integrated with lecture material in the field of child development and education. Students are expected to attend lectures, complete assignments, and commit a total of eight hours per week as mentors of disadvantaged preschool children. Prerequisite: consent of instructor. Same as Psychology 141J-K-L.
- 150 Changing the High School Experience (4) S.** Analysis of problems in high school education (e.g., student disengagement and underachievement of disadvantaged) and proposals for changing curriculum, instruction, and school organization. Students suggest own reforms and analyze effective/ineffective school practices.
- 151 Language and Literacy (4) S.** Addresses the linguistic principles and processes that underlie oral and written language proficiency. Emphasis is on how to use phonology, morphology, orthography, semantics, syntax, and pragmatics to support literacy and oral language development for K–12 students. Same as Psychology and Social Behavior 192V.
- 152F Teaching Mathematics with Technology (4) S.** Students learn to use current technologies to facilitate student learning of K–12 mathematics, and gain experience in using technology to design and teach mathematics lessons.
- 155 Special Topics in Educational Issues and Asian Americans (4).** Critical analysis of a variety of historical and contemporary educational issues facing Asian Americans. May be repeated for credit as topics vary. (VII)
- 157 Research Methods in Education (4) S.** Covers a variety of research methods, both qualitative and quantitative, in educational contexts. Students have the opportunity to plan, execute, and write up a small research project.
- 160 Foundations of Out-of-School Learning (4) F, W.** Provides an overview of child and adolescent learning through participation in out-of-school activities and settings. Recognizes the importance of matching out-of-school experiences with the interests, needs, and development level of the students served. Observation-based fieldwork included. May be taken a second time if student is a candidate for a Certification in After-School Education and took course prior to fall 2008. (IX)
- 160L After-School Programs Fieldwork (1 to 2) F, W, S.** Students complete education-related fieldwork and document their experience in after-school and out-of-school programs, under the direction of a selected Education faculty member and a supervisor at the after-school program site. Prerequisite: consent of instructor. Pass/Not Pass only. May be repeated for credit for a total of 4 units.
- 170A Issues and Controversies in Secondary History-Social Studies (4) W.** Examines passionate debates about what adolescents should learn in history and social studies classes. Competing priorities between history and current social issues; "heritage" education or critical history; social studies vs. social science; wars over curriculum standards; teaching about moral issues.
- 170B Teaching and Learning Secondary History-Social Studies (4) S.** How adolescents understand history and social issues. Pioneering research on their reasoning about history, politics, and related areas. Examination of typical practices in history and social studies teaching. Improving students' learning through historiographic investigation and information technology resources.
- 172A Issues and Controversies in Secondary Mathematics (4) W.** Examines different perspectives on what mathematical competencies should be emphasized in secondary schools, and how they should be taught. Particular attention to problem solving, algebra and geometry, and issues of equity. Introduction to research on mathematical cognition and teacher beliefs.
- 172B Teaching and Learning Secondary Mathematics (4) S.** How children and adolescents learn to understand mathematics. Research on mathematical cognition, particularly on mathematical problem solving and the learning of algebra, geometry, and calculus. Examination of several innovative instructional programs derived from research on mathematics learning.

173 Cognition and Learning in Educational Settings (4) F, W, S, Summer. Foundational concepts in cognition and development as applied to student learning. Primary topics include historical behaviorism, basic cognitive structure and processes, complex cognition, cognitive development, and motivation. Same as Psychology and Social Behavior 192T. NOTE: Education 173 is a prerequisite for Education 203.

175 Foundations of Education (4). Foundational questions of education are viewed from newly emerging developmental perspectives which treat cognition as embodied action and learning as cultural recapitulation. Historical, sociological, psychological, and philosophical implications of these views toward various aspects of teaching, learning, curriculum, and pedagogy are considered.

176 Psychology of Learning, Abilities, and Intelligence (4) S. Overview of classic positions on the mind, human abilities, and intelligence, especially as related to academic achievement. Contrasting views: psychometric versus information processing; experimental versus correlational research. Prerequisite: introductory course in psychology, or consent of instructor. Same as Psychology and Social Behavior 192U.

177 Geography and Social Issues in K-12 Education (4) S. Examines how K-12 students come to understand the influence of geography on climate, culture, and the environment in which we live. Computer-based resources such as geographic information systems are used to model complex temporal and spatial relationships.

178 Poetry in the K-12 Classroom (2 to 4). Students experience school-day fieldwork in UCI-instructed poetry workshops in bilingual K-12 classrooms. Supporting lectures provide content, pedagogical framework, and practice for fieldwork lessons. Course work includes commenting on student work, composing and presenting field notes, lesson plans, and case studies. May be taken for credit three times.

179 Advanced Composition for Teachers (4). Principles of formal composition and problems of teaching. Selecting handbooks and ancillary reading, marking papers, making assignments, and conducting workshops and tutorials. Prerequisites: satisfactory completion of the lower-division writing requirement and junior standing. Same as Writing 179.

180 Interdisciplinary Topics in Education (4). Analysis of issues in education from interdisciplinary perspectives. Topics covered vary with interests of instructor. May be repeated for credit as topics vary.

181A Principles and Practices of Coaching Sports I (4). Focuses on foundational theories and instructional practices in coaching sports from fourth grade to the collegiate level. Prepares students for the coach's mandatory state certification examination for high school sports in California.

181B Principles and Practices of Coaching Sports II: Field Practicum (4). Building on knowledge gained in Education 181A, focuses on practical experiences of coaching sports. UCI students chose their preferred sport and perform coaching or assistant coaching duties, via a 40-hour volunteer placement in a public school. Prerequisite: Education 181A. (IX)

182 Latina/Latino Access and Persistence in Higher Education (4). Introduction to how social, political, and economic forces impact on Latina/Latino racial/ethnic minorities with regard to their access and persistence in the U.S. higher education system. Investigates historical perspectives and theoretical underpinnings of college access and retention research. Same as Chicano/Latino Studies 182. (VII)

185 Social Development in Education (4). Examination of contextual, psychosocial, and biological factors contributing to the social development of children and adolescents. Theoretical perspectives, empirical findings, and methodological issues are emphasized. Implications of the scientific evidence for practical and policy decision-making surrounding development are discussed.

193 Directed Studies in Early Childhood Education (4) F, W, S, Summer. Intensified advanced study coupled with a practicum in an early childhood education and care center, under the direction of a faculty member who guides and evaluates the study. May be repeated for credit.

198 Directed Research in Education (2 to 8) F, W, S, Summer. Individually or in small groups, students are exposed to or participate in work related to a faculty member's research. Students also attend a weekly seminar and complete a research paper or comparable project. Prerequisite: sophomore, junior, or senior standing. May be taken for a total of 12 units, 8 of which maybe used to satisfy requirements for a minor in Educational Studies.

199 Individual Study (1 to 4 per quarter) F, W, S, Summer. Intensified advanced study in areas in which a student has considerable background, under the direction of a faculty member who will guide and evaluate the study.

GRADUATE COURSES

201 Teachers' Lives and the Policy Environment of Teaching (4). Examines research and biographical studies on the nature of teaching and teacher development. Discusses forms of professional development including communities of practice and national board certification. Examines the influence of political structure and educational policy on the lives of teachers. Limited to M.A.T. students only.

202 Outcomes of Schooling/Student Assessment (4). Focuses on establishment of learning goals and assessment tools that are valid for all students, inform educational decisions, and promote educational success. Provides critical examination of different forms of assessment used in K-12 schools, including developmental assessments and appropriate interventions. Limited to M.A.T. students only.

203 Advanced Concepts in Learning and Cognition (4). Theories of cognition and their application to thinking and learning in school settings. Topics include memory, information processing, knowledge representation, problem solving, meta-cognition, and intelligence. Prerequisite: Education 173 or equivalent undergraduate course in learning theory or educational psychology. Limited to M.A.T. students only.

205 Critical Assessment of Teaching Practice and Learning (4). Student articulates a problem in instructional practice and uses research on cognition, assessment, and other tools to understand the problem. Capstone course emphasizes practices of teacher inquiry, reflection, and professional collaboration. Student's written analyses are evaluated as the program's Comprehensive Examination. Limited to M.A.T. students only.

206 Cognition and Pedagogy in Specific School Subjects (4). Reviews cognitive research on comprehension, conceptualization, reasoning, critical thinking, planning, and problem-solving with applications to pedagogy in a specific area of the secondary curriculum. Required for M.A.T. single subject students, unless substitution of Education 207 is authorized by the Department.

207 Cognition and Pedagogy in Quantitative Literacy (4). Reviews research on cognition in elementary mathematics, including numeracy, fractions, probability, proportionality, measurement, geometry, algebra. Emphasizes instructional approaches consistent with this research knowledge. Required for M.A.T. multiple subjects students, unless substitution of Education 206 is authorized by the Department.

210 Language, Literacy, and Discourse (4). Introduces students to the interdisciplinary study of language, literacy, and discourse across historical and educational contexts. Addresses theories of how people learn, interact, and make meaning through a variety of semiotic resources, including oral communication, print, and digital media. Prerequisite: graduate standing or consent of instructor.

211 Writing Theory and Practice (4). Offers an overview of histories, theories, and research in the field of composition studies from 1950 to the present. Addresses the influences of theory and research on teaching practice at K-12 and college levels. Prerequisite: graduate standing or consent of instructor.

212 Literacy and Technology (4). Examines theoretical, historical, and contemporary relationships of technology and literacy. Topics include online communication, multimodality, video games, the use of technology for literacy instruction in schools, and research approaches for investigating literacy development with technology. Prerequisite: graduate standing or consent of instructor.

213 Second Language Learning (4). Examines the social, psychological, and cognitive processes affecting second language development, including a consideration of the learner's first language, input, interaction, and social identity. Prerequisite: graduate standing or consent of instructor.

214 Technology, Education, and Cultures (4). Examines theoretical, historical, and contemporary relationships of technology and learning. Probes the formation of twentieth- and twenty-first-century technology discourses and their material effects on the lives of students and educators. Prerequisite: graduate standing or consent of instructor.

215 Visual Literacy (4). Examines semiotics and poststructural theories for reading both analog and digital images from photography, cinema, television computers, and the Internet. Poses questions of formal interpretation, authorial intent, textuality, intertextuality, and viewer interpretation in social and cultural settings. Prerequisite: graduate standing or consent of instructor.

216 Language Learning with Digital Media (4). Examines the use of new technologies in second and foreign language teaching. Considers historical and theoretical perspectives, current research, and future directions. Topics include online interaction, computer-assisted testing, corpora and concordancing, second language reading and writing, and affect and identity. Prerequisite: graduate standing or consent of instructor.

218 Special Topics in Language, Literacy, and Technology (4). An advanced seminar designed to engage students in highly interactive examination of current issues in language, literacy, and technology. Topics and content will vary by quarter, depending upon the research interests of the faculty and students. Prerequisite: graduate standing or consent of instructor.

222 Research Epistemologies and Methodologies (4). Introduction to epistemological underpinnings of educational research and to a range of research methodologies in education. Includes examination of quantitative and qualitative studies through reading and analyzing contemporary research. Critique of selected research studies pertinent to educational practice and policy. Doctoral students only.

223 Learning and Memory (4). Examines cognitive learning and memory research with implications for education. Readings incorporate basic cognitive theory and mathematics and science classroom learning theory. Topics include problem solving, reasoning, long-term memory, feedback, transfer, and instructional design. Prerequisite: graduate standing or consent of instructor.

224 Social Development and Education (4). Surveys the theory and empirical evidence concerning human social development from infancy to adolescence. Topics include studying how children conceptualize the social world, interact with caretakers, develop social relationships with peers, and how they impact student success. Prerequisite: graduate standing or consent of instructor.

225 Learning, Development, and Culture (4). Explores issues of learning and development through a cultural lens. The interplay between culture and learning and culture and development is analyzed through the discussion of relevant readings from both psychological and anthropological research traditions. Prerequisite: graduate standing or consent of instructor.

227 Thinking and Learning in Social Contexts (4). Examines thinking and learning from a social perspective. Conceptualizes individuals as active participants in their learning, purposefully seeking and constructing knowledge in meaningful social contexts. Theories explored: sociocultural theory, social constructivism, distributed cognition, situated cognition, learning in communities of practice. Prerequisite: graduate standing or consent of instructor.

229 Theories of Human Development (4). Examines developmental theory as a guide for research and practice in education. The evolution of classical development theories and the emergence of new theoretical models are considered. Theoretical perspectives include ecological systems, life course, psychobiology, attachment, and social-cognitive theories. Prerequisite: graduate standing or consent of instructor.

233 Learning Disabilities (4). Explores psychological and educational characteristics of children and adolescents with learning disabilities. Emphasis on the constitutional and environmental factors that contribute to these disabilities and enable optimal functioning. Emphasis on concept of learning disability and educational implications of research literature. Prerequisite: graduate standing or consent of instructor.

234 Psychometrics (4). Introduction to classical test theory, true and observed scores, measurement error, scaled scores, and reliability. Explores construct validity and validation processes, multi-trait multi-method analysis. Introduces item analysis, Rasch analysis, and item response theory. Prerequisite: graduate standing or consent of instructor.

235 Psychology of Reading Acquisition (4). Surveys theory and empirical evidence concerning acquisition, cognitive processes, and consequences of skilled reading. Explores psychological models of skilled reading, how children acquire reading and writing skills in their home and second languages, cognitive consequences of acquiring literacy skills. Prerequisite: graduate standing or consent of instructor.

236 Applied Linguistics and Literacy (4). Examines research in applied linguistics as related to teaching literacy in K-12 instruction. Provides overview of language knowledge required to understand development and instruction of literacy. Topics include English structures and analysis and instructional approaches that promote literacy development. Prerequisite: graduate standing or consent of instructor.

237 Teacher Thinking and Learning (4). Recent research on teacher cognition, including what knowledge teachers bring to their work and how it is used in practice. Examines the nature and development of teachers' knowledge and the relationship between knowledge and practice. Prerequisite: graduate standing or consent of instructor.

238 Special Topics in Learning, Cognition, and Development (4). An advanced seminar designed to engage students in highly interactive examination of current issues in learning, cognition, and development. Topics and content will vary by quarter, depending upon the research interests of the faculty and students. Prerequisite: graduate standing or consent of instructor. May be taken for credit for a total of 10 times.

239 Cognitive Development and Education (4). Examines interrelationships between cognitive development, domain learning, and education. Explores how young children continuously learn and develop knowledge about the world, spending many waking hours in educational settings, and, outside of school, facing myriad novelties and uncertainties to decode. Prerequisite: graduate standing or consent of instructor.

240 Instructional Design and Education Technology (4). Design of high-quality instructional units consistent with current theory and research in cognitive psychology and constructivist-compatible instructional practice and infused with appropriate uses of computer and video technologies. Students design a complete instructional unit using these principles. Limited to M.A.T. students only.

241A Introduction to Educational, Social, and Behavioral Statistics (4). Introductory course for graduate students with a limited background in statistics. Standard topics are covered, through regression analysis, but emphasis is on understanding results rather than on the formal properties of models. Prerequisite: graduate standing or consent of instructor.

241B Introduction to Structural Equation Modeling for Educational, Social, and Behavioral Analysis (4). An introduction to structural equation modeling for students within limited prior course work in statistics. Standard topics are covered, but emphasis is on the appropriate use of techniques and understanding results rather than on the formal, underlying mathematics of the models. Prerequisites: Education 241A or equivalent; graduate standing or consent of instructor.

250 History of School Innovations and Current School Reform Movements (4). Offers an analysis of major school reform movements, both ongoing and those from the past century. Study of the underlying dynamics affecting the interrelationship between schools and society and the implications of these relationships. Prerequisite: graduate standing or consent of instructor.

251 Educational Policy and Politics (4). An in-depth study of topics relevant to educational reform and policy-making. Topics include: the policy-making process, the role of values and interest groups, policy analysis, equality of educational opportunity, systemic reform, implementation, and politics at the school site. Prerequisite: graduate standing or consent of instructor.

252 Social Organization of Schools and Classrooms (4). Examines research about the organizational practices of schools and teachers and how they affect student outcomes. Topics include class size, tracking, organizational practices influencing school climate, and teachers' approaches to instruction. Prerequisite: graduate standing or consent of instructor.

253 Culture Change, Acculturation, and School Achievement (4). Explores different culture change paths of Mexican people, beginning in Mexico and later in southwest United States. Elaborates on social movements and ethnic identity trajectories marking growth and evolution, especially as culture change relates to acculturation and school achievement patterns.

254 College Access and Persistence (4). Introduction to how social, political, and economic forces impact college access and persistence in the U.S. higher education system. Investigates historical perspectives and theoretical underpinnings of college access and retention research and the link between K–12 schooling and postsecondary stratification. Prerequisite: graduate standing or consent of instructor.

255 Immigration and the New Second Generation (4). Focuses on Asian, Latino, and Black children of immigrants. Investigates how today's second generation adapts, incorporates into the U.S. social structure, transforms the social and economic landscape. Explores assimilation, immigrant families/communities, language, racial/ethnic identities, gender, education, changing U.S. racial structure. Prerequisite: graduate standing or consent of instructor.

256 Critical Case Studies in Education (4). Examines single and multiple case studies as a method for investigating educational theory, practice, and policy. Explores types of questions that can be answered with case study research and designs, data analysis techniques, format, and style of writing case studies. Prerequisite: graduate standing or consent of instructor.

257 Social Capital and Student Achievement (4). Examines strategies that have proven successful in encouraging both high student achievement and a supportive school culture. Extended case studies are used to probe how interpersonal interactions at the school site can work to stimulate or discourage academic commitment. Prerequisite: graduate standing or consent of instructor.

258 Special Topics in Educational Policy and Social Context (4). An advanced seminar designed to engage students in highly interactive examination of current issues in educational policy and social context. Topics and content will vary by quarter, depending upon the research interests of the faculty and students. Prerequisite: graduate standing or consent of instructor. May be taken for credit for a total of 10 times.

259A First-Year Seminar (2 to 4). Graduate seminar for entering Ed.D students. Employment of skills such as conducting literature reviews, types and styles of writing, use of the Internet. Also examines different issues related to educational research and methodologies. Doctoral students only. *Not offered 2009–10.*

259B-C Third-Year Seminar (2 to 4). Graduate seminar for third-year Ed.D students; focus on designing and defending dissertation proposals. Includes faculty colloquia on various topics related to advanced research design and data analysis, educational theory, practice and policy. Doctoral candidates only. *Not offered 2009–10.*

261 Social and Cultural Foundations of Education (4). Provides a critical understanding of the social and cultural foundations of education through reproduction theory. Explores the unique ways in which culture and power intersect within schools and schooling systems to reproduce and resist educational inequality. Prerequisite: graduate standing or consent of instructor.

262 Visual Analysis of Social Science Data (4). Examines techniques for representing social science data graphically as a means of gaining understanding and insight into the data. Topics include principles of information design, depicting numerical data graphically, showing patterns and changes, effective separation and layering of information. Prerequisite: graduate standing or consent of instructor.

263 Social and Educational Intervention (4). Examines theories and practices aimed at preventing social and educational adjustment problems and promoting positive development. Social/educational intervention is addressed from different conceptual frameworks (deficit reduction vs. competence promotion) and methodological approaches (person-centered vs. ecological). A developmental approach to intervention is emphasized. Doctoral students only.

264 Economic Foundations of Education and Social Policy (4). Beginning/intermediate microeconomics course provides students with an introduction to how economists think about household decision-making, markets, benefit-cost analysis, social policy issues in general and education policy in particular. Prerequisite: graduate standing or consent of instructor.

265 Applied Regression Analysis for Education and Social Research (4). Provides students with a working knowledge of multiple regression and the statistical analysis of longitudinal data. Topics include a review of the OLS regression model, event-history methods, and various other techniques for analyzing longitudinal data. Prerequisites: Education 241B or 288B; graduate standing or consent of instructor.

266 Design of Learning Environments (4). Theory and practice of designing innovative learning environments. New models of classroom interaction and technology use for new cognitive and social roles. Design cognition, and social learning theories and research methods for the design and enactment of learning environments. Prerequisite: graduate standing or consent of instructor.

267 Classroom Research Methods (4). Uses students' research problems as the basis for exploring methods—teacher and student observation, interview, case studies, think alouds. Intended for doctoral students with a specific research question and very good grounding in the literature related to their question. Prerequisite: graduate standing or consent of instructor.

270 New Information and Communication Technologies for Administrators (2 to 4). Provides practical and intellectual expertise about instructional software, video and multimedia technologies, computer literacy education, electronic communication networks, and technology for school and district administration. Limited to doctoral students only.

271 Organizational Theory, Planning, and Application (4) F. Basic theories, attributes, and functions of human organizations. Understanding and managing the dynamics of group behavior and human relations. Structuring and leading groups in a variety of organizational settings. Application of organizational theories to central issues in K–12 education. Limited to doctoral students only.

272 Philosophy and Ethics of Educational Leadership (4). Philosophy, ethics, and moral values of educational leadership for school administrators. Theory and philosophy of educational change. Research about ethical and moral leadership in schools. Limited to doctoral students only. *Not offered 2009–10.*

273A Student Assessment (2 to 4). Purposes for conducting educational assessment. Overview of new assessments, including complex constructed responses, portfolios, other "authentic" measurements. How assessment can help to monitor and strengthen educational programs and inform educational policy. Limited to doctoral students only.

274 Studies of Professional and Staff Development (4). Research and theory of effective strategies for professional and staff development. Topics include: adult learning as related to professional growth of teachers, staff development as vehicle for systemic reform, reforms to enhance teacher professionalization and empowerment. Limited to doctoral students only.

275A School Law and Political Relations (4). Legal framework of schools and public education. Political jurisdictions affecting educational policy. Influence of legal aspects. Political and sociological forces directly and indirectly affecting school practices. Theory of individual and group dynamics in achieving compromise, consensus, and coalitions. Prerequisite: graduate standing or consent of instructor.

276B Studies of School Finance and Political Economy (4). Fundamental fiscal concepts applied to schooling. Topics include equity and inequalities in resource allocation, public school revenue sources and expenditure patterns, the politics of school finance, public versus private-sector supply of schooling, and the supply and demand for teachers. Prerequisite: graduate standing or consent of instructor.

277B School Restructuring and Resource Allocation (4). Concepts and research on school change at the site level. Topics include: structure and use of physical environment, organization of school day and use of time, use of teachers and other staff, changes in governance and school-community relations. Prerequisite: graduate standing or consent of instructor.

278A Cultural and Socioeconomic Diversity (4). Contemporary issues of cultural, socioeconomic, and language diversity in public education. Ethnic, racial, and religious composition of the State and local community. Programs and procedures for meeting instructional needs of limited-English-proficient pupils and involving the family in school activities. Prerequisite: graduate standing or consent of instructor.

278B Studies of Diversity and Inequality in Education (4). Study of relationships between individual diversity, social inequality, and education. How differences in socioeconomic status, race, culture, and gender translate in the educational process and affect educational outcomes. Addresses issues such as educational access, social mobility, and social reproduction. Prerequisite: graduate standing or consent of instructor.

279 Research Applied to Administrative Practice (4). Examination of research strategies pertinent to administrative decision-making in education. Includes attention to quantitative and qualitative research methods, experimental design, sampling techniques, questionnaire and interview construction, observation methods, data analysis and interpretation. Special attention to nonexperimental and quasi-experimental research designs. Doctoral students only. *Not offered 2009–10.*

280 Special Topics in Education (2 to 8). Provides practitioners at the advanced degree level with insight and leadership skills for working with increasingly diverse school populations. Content varies with interest of the students and instructors. May focus on specific populations or broader content area such as education reform in California. Doctoral students only. May be taken for credit three times as topics vary.

281 Evaluation of Educational Programs (4). Alternative approaches to formative and summative evaluation of educational programs. Standards for effective evaluations. Epistemological, political, and practical issues in designing and conducting evaluations. Students critique specific studies relevant to educational administration and policy-making and design an evaluation. Corequisite: Education 279. Doctoral students only.

282 Graduate Seminar in the History of the Philosophy of Education (4). Draws upon results in the historical development of the philosophy of education from Plato, Quintillian, Augustine, Locke, Rousseau, to more contemporary thinkers such as Dewey, Freire, Egan, and Rorty.

283 Qualitative Research Methods in Education (4). Examines the design and implementation of qualitative research studies in education. Topics include theoretical foundations of qualitative research, ethical access to research sites and participants, conducting interviews and participant observation, and methods and software for qualitative data analysis. Prerequisite: Education 222 or consent of instructor

284 Survey Research Methods in Education (4). Examination of survey research methods and their applications to educational research and evaluation. Attention to types of surveys, research design and sampling, survey construction, development of survey questions, response formats, data collection, analysis of survey data, and reporting survey results. Doctoral students only.

285 Theories of Learning and Cognition (4). Overview of theories applicable to learning in schools and extracurricular contexts. Cognitive, psychometric, behavioral, and neuroscience perspectives are applied to such topics as memory, knowledge structures, problem solving, motivation, self-referent beliefs, expertise, assessment, and cognitive abilities, including intelligence. Prerequisite: graduate standing or consent of instructor.

286 Discourse Analysis (4). Examines the methodological tradition of discourse analysis as it has been applied by researchers in language and literary education for both in and out-of-school settings. Prerequisite: graduate standing or consent of instructor.

287 Quantitative Data Analysis in Educational Research and Evaluation (4). Instruction and practice in statistical aspects of survey-based evaluations and quantitative research in education. Includes sampling, coding open-ended information, data management, scale construction, statistical analysis, and presentation of findings. Students analyze two data sets—a district-based evaluation and a national survey—using SPSS. Prerequisite: graduate standing or consent of instructor.

288A Educational, Social, and Behavioral Statistics (4). Designed for graduate students with previous course work in statistics, including experience with statistical software such as SPSS. The emphasis is on regression analysis and the general linear model. Students learn to analyze real data using Stata software. Prerequisites: course work in statistics and experience with statistical software such as SPSS; graduate standing or consent of instructor. Formerly Education 288.

288B Structural Equation Modeling for Educational, Social, and Behavioral Analysis (4). Rigorous introduction to structural equation modeling for students with strong prior course work in statistics. Topics include path diagrams, SEM with observed variables, factor analysis, SEM with latent variables. Maximum likelihood estimating, goodness-of-fit measures, nested models, related topics. Prerequisites: Education 288A or equivalent; graduate standing or consent of instructor.

289 Use of Video in Educational Research (4). Provides students with conceptual and methodological tools for using video in educational research. Students work with their own video data or with publicly accessible databases. Prerequisite: graduate standing or consent of instructor.

292 Scholarship Tools and Information and Communication Technologies for Doctoral Students (4). Examination of doctoral study tools, including computer applications, multimedia presentation technologies, digital libraries and electronic search techniques, graduate study resources on the World Wide Web, bibliographic software, and collaborative online communities and listserves. Doctoral students only.

293 Advanced Academic Writing: Preparation for the Qualifying Paper (4). Focuses on the development and refinement of students' qualifying papers related to advancement to candidacy within the CSU/UCI Ed.D program. Organized around assessment criteria for the qualifying papers: theoretical framework, reasoning, writing quality, and scholarly style. Satisfactory/Unsatisfactory only. Doctoral degree candidates only.

294 Dissertation Planning and Design (4). Prepares the doctoral student to write an outstanding dissertation proposal. In workshop-format, students complete a draft dissertation proposal that includes the Introduction, Conceptual Framework, Methodology, and References. Students also develop a timeline for conducting their dissertations. Satisfactory/Unsatisfactory only. Doctoral degree candidates only.

295A-B-C Directed Research (4-4-4). Three-quarter independent study sequence taken under the direction of a faculty member who guides the student's research in the student's chosen area. Includes development of research proposal, human subjects protocol, conference proposal, and final research paper of publishable quality. Prerequisite: graduate standing or consent of instructor.

298 Independent Study (2 to 8). Independent research on topics related to education. May be repeated for credit.

299 Dissertation Research (2 to 8). Specifically designed for students researching and writing their dissertations. Doctoral students only. Satisfactory/Unsatisfactory only. May be repeated for credit.

CREDENTIAL COURSES

301 Directed Elementary Field Experiences in Diverse Schools (1). Field work experiences and seminars to provide introduction to the California Teaching Performance Expectations, including guidelines for professional expectations; observation and participation in classrooms, instructional planning, classroom management, and formative experiences and preparation for the State-mandated Teaching Performance Assessment. Limited to students accepted into the Teacher Credential Program. Satisfactory/Unsatisfactory only.

302 Directed Secondary Field Experiences (2). Introduction to California Teaching Performance Expectations with guidance and support in meeting requirements for a California teaching credential; strategies for gradually increasing participation in schools and classrooms, including interaction with students, assumption of routines, grading papers, and teaching. Limited to students accepted into the Teacher Credential Program.

303 Learning to Learn from Teaching in Elementary Schools (3). Preparation for elementary school teaching that provides analytic tools for observing and reflecting on instruction, examining how student thinking is demonstrated, understanding components of and relationships between the teaching and learning process and planning effective instruction including innovative teaching practices. Limited to students accepted into the Teacher Credential Program. Formerly Education 304.

304 Student Teaching in the Elementary Schools (4 to 12). Student teaching experiences including orientation, seminars that prepare candidates for assumption of classroom instructional responsibilities in accordance with State credentialing requirements. Four full days a week of student teaching in public school elementary classrooms in winter quarter and five full days in spring quarter. Limited to students accepted into the Teacher Credential Program. May be taken for credit twice. Formerly Education 303.

305 Learning to Learn from Teaching (4). Analytic tools for (1) observing and reflecting on observed instruction; (2) examining student thinking and the relationship between teaching and learning; (3) understanding particular components of the teaching/learning process; and (4) planning effective instruction including innovative teaching practices. Limited to students accepted into the Teacher Credential Program.

306 Supervised Teaching in Bilingual Education, Elementary (4 to 12).

Student teaching experiences in bilingual public school classrooms to include orientation, regular seminars, and preparation for bilingual classroom instructional responsibilities in accordance with State credentialing requirements and in conjunction with the public school calendar. Limited to students accepted into the Teacher Credential Program. May be repeated for credit unlimited times.

307 Student Teaching in Intermediate/Secondary School (2 to 16). Student teaching experience to include orientation, seminars, and preparation for and assumption of secondary school classroom instructional responsibilities in accordance with State credentialing requirements and in conjunction with the public school calendar. Five full days a week in both winter and spring quarters. Limited to students accepted into the Teacher Credential Program. May be taken for credit of total of 20 units.

308 Performance Assessment for California Teachers, Multiple Subjects (1).

Preparation and technical support for multiple subjects teacher candidates to complete State-required Teaching Performance Assessment for the California preliminary credential. Includes assistance in planning, teaching/videotaping, assessment and reflection, and document production. Limited to students accepted into the Teacher Credential Program. Satisfactory/Unsatisfactory only. May be taken for credit twice.

309 Supervised Teaching in Bilingual Education, Secondary (4 to 12).

Student teaching experiences in bilingual public school classrooms to include orientation, regular seminars, and preparation for bilingual classroom instructional responsibilities in accordance with State credentialing requirements and in conjunction with the public school calendar. Limited to students accepted into the Teacher Credential Program. May be repeated for credit unlimited times.

310 PACT Teaching Event (1). Preparation and technical support for teacher candidates to complete the required Teaching Performance Assessment for California credential licensure. Structured support for planning, videotaping, and document production occurs in meetings scheduled to coincide with the timeline for the project. Limited to students accepted into the Teacher Credential Program. May be taken for credit twice.

313 Intern Teaching in the Elementary School: Multiple Subject Instruction (4 to 12). Must be admitted to the UCI Department of Education and offered an intern teacher contract from a cooperating school district. Limited to students accepted into the Teacher Credential Program. May be repeated for credit unlimited times.

315 Preparation for Teaching in the Secondary School (4). Secondary curriculum and methodology, including instructional planning, teaching strategies, classroom management, evaluation, cultural and linguistic considerations and interpersonal skills. Application of these to fieldwork experience in preparation for teaching responsibilities assumed in secondary schools. Limited to students accepted into the Teacher Credential Program.

317 Intern Teaching in the Secondary School: Single Subject Instruction (4 to 16). A paid intern practicum (usually one year) cosponsored by an employing school district and the UCI Department of Education. Limited to students accepted into the Teacher Credential Program. May be repeated for credit unlimited times.

319 Directed Field Experiences (4). Observation, participation, and teaching in diverse public school classrooms. Application of theory and pedagogy in field work classrooms. Limited to students accepted into the Teacher Credential Program.

320 Teaching Physical Education in Elementary School (2). Introduction to the issues and practices, including student diversity, academic literacy, and interdisciplinary content, involved in integrating the California physical education curriculum framework and academic content standards with developmentally appropriate teaching strategies for the elementary classroom. Limited to students accepted into the Teacher Credential Program or consent of instructor. May be taken for credit twice.

321 Curriculum and Methods for Elementary School Social Studies (3). Description, scope, sequence, and methods of teaching social studies and inquiry in grades K-8. Includes utilization of California State Framework for Teaching History/Social Science and addresses current aspects and trends in multicultural education. Limited to students accepted into the Teacher Credential Program.

322 Curriculum and Methods for Elementary School Mathematics (4).

Scope, sequence, and methods of teaching mathematics at all levels of elementary school. Presented through lectures, discussions, demonstrations, and exploration of a variety of materials. Covers how to plan lessons, motivate students, diagnose difficulties, and evaluate learning in mathematics. Limited to students accepted into the Teacher Credential Program.

323 Curriculum and Methods for Elementary School Science (4).

Prospective elementary teachers learn how to teach science in grades K-8. Covers State science requirements, a variety of teaching methods, criteria for selecting science curricular materials, and how to plan science lessons, units, experiments, projects, and demonstrations. Limited to students accepted into the Teacher Credential Program. Same as Ecology and Evolutionary Biology 324.

324 Curriculum and Methods for Elementary School Language Arts Integrated with Social Studies (4).

An integrated approach to language arts and social studies instruction at the K-6 level based on California State English/Language Arts and Social Studies Frameworks and Standards. Focus on teaching content through literature and writing and providing access for all learners. Limited to students accepted into the Teacher Credential Program.

325 Teaching the Visual and Performing Arts in Elementary School (2).

Introduction to the issues and practices, including student diversity, academic literacy, and interdisciplinary content, involved in integrating the California visual and performing arts curriculum framework and academic content standards with developmentally appropriate teaching strategies for the elementary classroom. Limited to students accepted into the Teacher Credential Program or consent of instructor.

326 Curriculum and Methods for Elementary School Reading (4).

Teaching an integrated reading/language arts program in the elementary classroom. Implementing theories, principles, and methods which are research and reality-based. Creating a child-centered, language-rich program to meet needs of children in multicultural/multilingual settings. Limited to students accepted into the Teacher Credential Program.

327 Foundations of Equity and Diversity for Elementary School Teachers (2).

Principles of educational equity and diversity. Professional responsibilities of teachers and pedagogy for implementation in elementary school practices and subject matter content that provides all students equitable access to core curriculum. Limited to students accepted into the Teacher Credential Program.

328 Theory and Methods of Instruction of Special Populations in the General Education Classroom, Elementary (2).

Knowledge, skills, and strategies to teach special populations at the elementary level. Categories of disability and exceptionality. Legislation pertaining to the education of special populations. Role of general education teacher in special education process. Differentiated instruction and inclusive environments. Limited to students accepted into the Teacher Credential Program.

329 Theories and Methods of English Language Development Applied to Elementary Students (4).

Theories and methods of English language development and the instruction of English language learners, with a focus on elementary students. Includes language acquisition theory, language and content, assessment strategies, and preparation of curricula and instruction for grades K-6 English language learners. Limited to students accepted into the Teacher Credential or M.A.T. programs, or consent of instructor.

330 Child Development in Education (4).

It is essential for multiple subject teachers to understand how child development impacts and is driven by educational contexts. Examines educational implications of children's cognitive, language, and social development. The roles of families and classrooms are considered. Limited to students accepted into the Teacher Credential Program.

331 Instructional Technology: Resources for the Multiple Subject Classroom (3).

Issues and techniques in uses of computer-based and media technologies in the multiple subject classroom: social implications and professional responsibilities, productivity tools to enhance student thinking skills, and strategies for instruction and management. Limited to students accepted into the Teacher Credential Program.

332 Creating a Supportive and Healthy Environment for Student Learning in the Elementary Classroom (2).

Creation of healthy environments for student learning in elementary classrooms. Personal, family, school, community, environmental factors. Academic, physical, emotional, social well-being of students. Legal responsibilities of teachers related to student health, safety. Communication with family and use of community resources. Limited to students accepted into the Teacher Credential Program.

334 Literacy and Technology in the Secondary Classroom (2). With a view of literacy expanded beyond typological print, students learn: (1) strategies for incorporating, (2) tools for evaluating and selecting, and (3) learning theories for understanding how information and communication technologies and online resources contribute to general and disciplinary literacy. Limited to students accepted into the Teacher Credential Program.

335 Secondary School Curriculum (4) F. An introduction to the historical, philosophical, and legal antecedents of secondary school education. Emphasis on the contextual nature of schooling and how various influences and issues impact the school curriculum. National, state, and local standards regarding specific curricular areas are examined. Limited to students accepted into the Teacher Credential Program.

336 Methods of Teaching Languages other than English in the Secondary Schools (4) F. Prepares future teachers of foreign language or primary/home language. Emphasizes hands-on, practical strategies for communication-based instruction and authentic assessment, in reading, writing, listening, speaking, and culture. Limited to students accepted into the Teacher Credential Program.

337 Methods of Teaching Social Science in the Secondary School (4) F. Theories, strategies, and methodologies related to the teaching of history and social science in the secondary school. Emphasis on the planning, delivery, and assessment of lessons reflecting an understanding of the History-Social Science Framework for California. Limited to students accepted into the Teacher Credential Program.

338 Methods of Teaching English in the Secondary School (2 to 4) F, S. Introduction to teaching reading, writing, and speaking skills in the secondary school. Emphasis upon an integrative approach to the teaching of literature, composition, and grammar consistent with the California State Framework. Practice in the design of lesson plans that are both integrated and cumulative. Limited to students accepted into the Teacher Credential Program. May be taken for a total of 4 units.

339 Methods of Teaching Visual and Performing Arts in the Secondary Schools (4) F. Theory, curriculum, and strategies for teaching visual and performing arts in the secondary school. Emphasis on the planning, delivery, and assessment of lessons consistent with California State Framework and content standards. Limited to students accepted into the Teacher Credential or M.A.T. programs.

340 Methods of Teaching Mathematics in Secondary School (2 to 4). Theories, strategies, and methodologies related to the teaching of mathematics in the secondary school. Emphasis on the planning, delivery, and assessment of lessons reflecting an understanding of the Mathematics Framework for California and the recommendations of professional organizations. Limited to students accepted into the Teacher Credential Program. May be taken for a total of 4 units.

341 Teaching Science in Secondary School (4). Prospective secondary science teachers learn how to teach science in grades 7–12. Covers State science requirements, a variety of teaching methods, criteria for selecting science curricular materials, and how to plan science lessons, units, experiments, projects, and demonstrations. Limited to students accepted into the Teacher Credential Program. Same as Ecology and Evolutionary Biology 241.

342 Applied Instructional Strategies in Secondary Schools (4). Application of pedagogy and research to practice teaching experiences in the secondary schools. A continuation of the methodology course series with an emphasis on the needs of students with culturally diverse backgrounds. Corequisite: Education 307. Limited to students accepted into the Teacher Credential Program. May be taken twice for credit.

343 Pre-Intern Methods of Teaching Subject Matter (1). Preliminary issues in teaching subject matter in the secondary schools. Centered on development of competencies needed to assume intern teaching position and concurrent with intensive fieldwork prior to internship, this course explores theories, strategies, and methodologies related to subject matter teaching with an emphasis on diversity of students. Satisfactory/Unsatisfactory only. Corequisites: Education 315 and 319.

344 Applied Instructional Strategies in Secondary School Sciences (4). Application of pedagogy and research to practice science teaching experiences in the secondary schools. A continuation of the Education 340 series with an emphasis on the needs of students with culturally diverse backgrounds. Limited to students accepted into the Teacher Credential Program. May be taken twice for credit. Same as Ecology and Evolutionary Biology 244.

346 Reading and Writing in the Middle School and High School Classrooms (4). Emphasis is placed upon understanding the literacy processes (listening, speaking, thinking, reading, and writing) as they relate to all Single Subject areas. Teachers are guided to integrate literacy-related strategies with curriculum-based goals supported in the California State Frameworks. Limited to students accepted into the Teacher Credential Program.

347A, B Culture, Diversity, and Educational Equity (2, 2). Survey of the history of and social theories about the origins and consequences of U.S. racial, gender, and social inequality and the effects of poverty and racism on the educational opportunities and outcomes of minority groups in the United States. Limited to students accepted into the Teacher Credential Program. Formerly Education 347.

348 Theory and Methods of Instruction of Special Populations in the General Education Classroom, Secondary (2). Knowledge, skills, and strategies to teach special populations at the secondary level. Categories of disability and exceptionality. Legislation pertaining to the education of special populations. Role of general education teacher in special education process. Differentiated instruction and inclusive environments. Limited to students accepted into the Teacher Credential Program.

349 Theories and Methods of English Language Development Applied to Secondary Students (4). Theories and methods of English language development and the instruction of English language learners, with a focus on secondary students. Includes language acquisition theory, language and content, assessment strategies, and preparation of curricula and instruction for grades 7–12 English language learners. Limited to students accepted into the Teacher Credential or M.A.T. programs, or consent of instructor.

350 Adolescent Development in Education (4). Secondary teachers must understand adolescent physical, cognitive, emotional, and social development, particularly how educators can promote healthy adjustment in their students. Focuses on why and how changes occur in each of these areas as children grow older. Limited to students accepted into the Teacher Credential Program.

351 Instructional Technology: Resources for the Single Subject Classroom (3). Issues and techniques in uses of computer-based and media technologies in the single subject classroom: social implications and professional responsibilities, productivity tools to enhance student thinking skills, and strategies for instruction and management. Limited to students accepted into the Teacher Credential Program.

352 Creating a Supportive and Healthy Environment for Student Learning in the Secondary Classroom (2). Creation of healthy environments for student learning in secondary classrooms. Personal, family, school, community, environmental factors. Academic, physical, emotional, social well-being of students. Legal responsibilities of teachers related to student health, safety. Communication with family and use of community resources. Limited to students accepted into the Teacher Credential Program.

398 Special Topics (3). Meets the induction and program planning requirements for students enrolled in the Professional Administrative Services Credential. Also serves as the final course in the program, wherein the candidate, the University instructor, and a representative of the involved school district assess and evaluate candidate competency. Open to Professional Administrative Services Credential students only. May be taken for credit twice.

399 University Teaching (1 to 4) F, W, S, Summer. Limited to teaching assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

THE HENRY SAMUELI SCHOOL OF ENGINEERING

Rafael L. Bras, **Dean**

305 Rockwell Engineering Center
Undergraduate Counseling: (949) 824-4334
Graduate Counseling: (949) 824-3562

Faculty

- Nicolaos G. Alexopoulos, Ph.D. University of Michigan, Ann Arbor, *Professor Emeritus of Electrical Engineering and Computer Science*
- Alfredo H.-S. Ang, Ph.D. University of Illinois, Urbana, *Professor Emeritus of Civil and Environmental Engineering*, Registered Structural Engineer
- Paul D. Arthur, Ph.D. California Institute of Technology, *Professor Emeritus of Mechanical and Aerospace Engineering*, Registered Professional Engineer
- James Arvo, Ph.D. Yale University, *Associate Professor of Computer Science and of Electrical Engineering and Computer Science*
- Satya N. Atluri, Sc.D. Massachusetts Institute of Technology, *Director of the Center for Aerospace Research and Education and UCI Distinguished Professor of Mechanical and Aerospace Engineering*
- Ender Ayanoglu, Ph.D. Stanford University, *Director of the Center for Pervasive Communications and Computing, Professor of Electrical Engineering and Computer Science, and Conexant-Broadcom Chair*
- Nader Bagherzadeh, Ph.D. University of Texas at Austin, *Professor of Electrical Engineering and Computer Science and of Computer Science*
- Casper W. Barnes, Jr., Ph.D. Stanford University, *Professor Emeritus of Electrical Engineering and Computer Science*
- Michael W. Berns, Ph.D. Cornell University, *Professor of Surgery, Biomedical Engineering, and Developmental and Cell Biology, and Arnold and Mabel Beckman Chair in Laser Biomedicine*
- Neil J. Bershad, Ph.D. Rensselaer Polytechnic Institute, *Professor Emeritus of Electrical Engineering and Computer Science*
- James E. Bobrow, Ph.D. University of California, Los Angeles, *Professor of Mechanical and Aerospace Engineering*
- Elliot Botvinick, Ph.D. University of California, San Diego, *Assistant Professor of Biomedical Engineering and Surgery (Beckman Laser Institute)*
- Ozdal Boyraz, Ph.D. University of Michigan, *Assistant Professor of Electrical Engineering and Computer Science*
- Rafael L. Bras, Sc.D. Massachusetts Institute of Technology, *Dean of The Henry Samueli School of Engineering and UCI Distinguished Professor of Civil and Environmental Engineering*
- James P. Brody, Ph.D. Princeton University, *Associate Professor of Biomedical Engineering*
- Peter J. Burke, Ph.D. Yale University, *Associate Professor of Electrical Engineering and Computer Science and of Biomedical Engineering*
- Filippo Capolino, Ph.D. University of Florence, *Assistant Professor of Electrical Engineering and Computer Science*
- Haris J. Catrakis, Ph.D. California Institute of Technology, *Associate Professor of Mechanical and Aerospace Engineering*
- Zhongping Chen, Ph.D. Cornell University, *Professor of Biomedical Engineering, Electrical Engineering and Computer Science, Chemical Engineering and Materials Science, and Surgery (Beckman Laser Institute)*
- Bernard Choi, Ph.D. University of Texas at Austin, *Assistant Professor of Biomedical Engineering and Surgery (Beckman Laser Institute)*
- Pai Chou, Ph.D. University of Washington, *Associate Professor of Electrical Engineering and Computer Science and of Computer Science-Systems*
- William J. Cooper, Ph.D. University of Miami, *Director of the Urban Water Research Center (UWRC) and Professor of Civil and Environmental Engineering, Chemical Engineering and Materials Science, and Planning, Policy, and Design*
- Jose B. Cruz, Jr., Ph.D. University of Illinois, Urbana-Champaign, *Professor Emeritus of Electrical Engineering and Computer Science*, Registered Professional Engineer
- Donald A. Dabdub, Ph.D. California Institute of Technology, *Professor of Mechanical and Aerospace Engineering*
- Beatriz da Costa, M.F.A. Diplôme National Supérieur d'Expression Plastique, École d'Art d'Aix-en-Provence (France), *Associate Professor of Studio Art, Electrical Engineering and Computer Science, and Informatics*
- Nancy A. Da Silva, Ph.D. California Institute of Technology, *Professor of Chemical Engineering and Materials Science and of Biomedical Engineering*
- Rui J. P. de Figueiredo, Ph.D. Harvard University, *Professor Emeritus of Electrical Engineering and Computer Science*
- Franco De Flaviis, Ph.D. University of California, Los Angeles, *Associate Professor of Electrical Engineering and Computer Science*
- Brian Demsky, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Electrical Engineering and Computer Science and of Computer Science*
- Russell L. Detwiler, Ph.D. University of Colorado, *Assistant Professor of Civil and Environmental Engineering*
- Rainer Doemer, Ph.D. University of Dortmund (Germany), *Assistant Professor of Electrical Engineering and Computer Science*
- Derek Dunn-Rankin, Ph.D. University of California, Berkeley, *Professor of Mechanical and Aerospace Engineering*
- James C. Earthman, Ph.D. Stanford University, *Professor of Chemical Engineering and Materials Science and of Biomedical Engineering*
- Donald K. Edwards, Ph.D. University of California, Berkeley, *Professor Emeritus of Mechanical and Aerospace Engineering*, Registered Professional Engineer
- Said E. Elghobashi, Ph.D., D.Sc. Imperial College, University of London, *Professor of Mechanical and Aerospace Engineering*
- Ahmed Eltawil, Ph.D. University of California, Los Angeles, *Assistant Professor of Electrical Engineering and Computer Science*
- Maria Q. Feng, Ph.D. University of Tokyo, *Professor of Civil and Environmental Engineering and of Electrical Engineering and Computer Science*
- Leonard A. Ferrari, Ph.D. University of California, Irvine, *Professor Emeritus of Electrical Engineering and Computer Science*
- Carl A. Friehe, Ph.D. Stanford University, *Professor Emeritus of Mechanical and Aerospace Engineering*
- Daniel D. Gajski, Ph.D. University of Pennsylvania, *Director of the Center for Embedded Computer Systems, Professor of Electrical Engineering and Computer Science and of Computer Science, and The Henry Samueli "Turing" Chair in Computer Systems Design*
- Manuel Gamero-Castaño, Ph.D. Yale University, *Assistant Professor of Mechanical and Aerospace Engineering*
- Jean-Luc Gaudiot, Ph.D. University of California, Los Angeles, *Department Chair and Professor of Electrical Engineering and Computer Science, and Professor of Computer Science*
- Steven C. George, M.D. University of Missouri, Ph.D. University of Washington, *Department Chair and Professor of Biomedical Engineering, Professor of Chemical Engineering and Materials Science, and William J. Link Chair in Biomedical Engineering*
- Stanley B. Grant, Ph.D. California Institute of Technology, *Department Chair and Professor of Chemical Engineering and Materials Science*
- Enrico Gratton, Ph.D. University of Rome, *Director of the Laboratory for Fluorescence Dynamics and Professor of Biomedical Engineering, Surgery, and Physics*
- Michael M. Green, Ph.D. University of California, Los Angeles, *Professor of Electrical Engineering and Computer Science*
- Gary L. Guymon, Ph.D. University of California, Davis, *Professor Emeritus of Civil and Environmental Engineering*, Registered Professional Engineer
- Medhat A. Haroun, Ph.D. California Institute of Technology, *Professor Emeritus of Civil and Environmental Engineering*, Registered Professional Engineer
- Glenn E. Healey, Ph.D. Stanford University, *Professor of Electrical Engineering and Computer Science*
- Payam Heydari, Ph.D. University of Southern California, *Associate Professor of Electrical Engineering and Computer Science*
- Juan Hong, Ph.D. Purdue University, *Professor Emeritus of Chemical Engineering and Materials Science*
- Elliot E. Hui, Ph.D. University of California Berkeley, *Assistant Professor of Biomedical Engineering*
- Faryar Jabbari, Ph.D. University of California, Los Angeles, *Professor of Mechanical and Aerospace Engineering*
- Syed A. Jafar, Ph.D. Stanford University, *Assistant Professor of Electrical Engineering and Computer Science*
- Hamid Jafarkhani, Ph.D. University of Maryland, College Park, *Professor of Electrical Engineering and Computer Science*

- R. (Jay) Jayakrishnan, Ph.D. University of Texas at Austin, *Associate Professor of Civil and Environmental Engineering*
- Stephen F. Jenks, Ph.D. University of Southern California, *Assistant Professor of Electrical Engineering and Computer Science and of Computer Science*
- Noo Li Jeon, Ph.D. University of Illinois, Urbana-Champaign, *Associate Professor of Biomedical Engineering and of Chemical Engineering and Materials Science*
- Chenyang (Sunny) Jiang, Ph.D. University of South Florida, *Associate Professor of Civil and Environmental Engineering and of Environmental Health, Science, and Policy*
- Wenlong Jin, Ph.D. University of California, Davis, *Assistant Professor of Civil and Environmental Engineering*
- Tibor Juhasz, Ph.D. JATE University of Szeged (Hungary), *Professor of Ophthalmology and Biomedical Engineering*
- K. H. (Kane) Kim, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science and of Informatics*
- Stuart Kleinfelder, Ph.D. Stanford University, *Associate Professor of Electrical Engineering and Computer Science*
- Frithjof Kruggel, M.D., Ph.D. Ludwig-Maximilian University, Munich, *Professor of Biomedical Engineering*
- Fadi Kurdahi, Ph.D. University of Southern California, *Professor of Electrical Engineering and Computer Science and of Computer Science*
- Tomas Lang, Ph.D. Stanford University, *Professor of Electrical Engineering and Computer Science*
- John C. LaRue, Ph.D. University of California, San Diego, *Associate Dean for Student Affairs of The Henry Samueli School of Engineering and Professor of Mechanical and Aerospace Engineering*
- Abraham Lee, Ph.D. University of California, Berkeley, *Professor of Biomedical Engineering and of Mechanical and Aerospace Engineering*
- Chin C. Lee, Ph.D. Carnegie-Mellon University, *Professor of Electrical Engineering and Computer Science*
- Henry P. Lee, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science*
- Guann-Pyng Li, Ph.D. University of California, Los Angeles, *Director of the UCI Division of the California Institute for Telecommunications and Information Technology (Calit2), Director of the Integrated Nanosystems Research Facility, and Professor of Electrical Engineering and Computer Science, Biomedical Engineering, and Chemical Engineering and Materials Science*
- Henry C. Lim, Ph.D. Northwestern University, *Professor of Chemical Engineering and Materials Science*
- Kwei-Jay Lin, Ph.D. University of Maryland, *Professor of Electrical Engineering and Computer Science*
- Feng Liu, Ph.D. Princeton University, *Professor of Mechanical and Aerospace Engineering*
- Marc J. Madou, Ph.D. University of Ghent (Belgium), *UCI Chancellor's Professor of Mechanical and Aerospace Engineering, Biomedical Engineering, and Chemical Engineering and Materials Science*
- Athina Markopoulou, Ph.D. Stanford University, *Assistant Professor of Electrical Engineering and Computer Science*
- J. Michael McCarthy, Ph.D. Stanford University, *Director and Henry Samueli Endowed Chair of the Center for Engineering Science in Design (CESD) and Professor of Mechanical and Aerospace Engineering*
- Michael G. McNally, Ph.D. University of California, Irvine, *Director of the Graduate Program in Transportation Science and Associate Professor of Civil and Environmental Engineering and of Planning, Policy, and Design*
- Kenneth D. Mease, Ph.D. University of Southern California, *Professor of Mechanical and Aerospace Engineering*
- Martha L. McCartney, Ph.D. Stanford University, *Professor of Chemical Engineering and Materials Science*
- Joerg Meyer, Ph.D. University of Kaiserslautern, *Assistant Professor of Electrical Engineering and Computer Science and of Biomedical Engineering*
- Farghalli A. Mohamed, Ph.D. University of California, Berkeley, *Professor of Chemical Engineering and Materials Science, Civil and Environmental Engineering, and Mechanical and Aerospace Engineering*
- Ali Mohraz, Ph.D. University of Michigan, Ann Arbor, *Assistant Professor of Chemical Engineering and Materials Science*
- Ayman Mosallam, Ph.D. The Catholic University of America, *Professor of Civil and Environmental Engineering, Registered Professional Structural Engineer*
- Daniel R. Mumm, Ph.D. Northwestern University, *Assistant Professor of Chemical Engineering and Materials Science*
- Zoran Nenadic, D.Sc. Washington University, *Assistant Professor of Biomedical Engineering and of Electrical Engineering and Computer Science*
- Mikael Nilsson, Ph.D. Chalmers University of Technology, *Assistant Professor of Chemical Engineering and Materials Science*
- Betty H. Olson, Ph.D. University of California, Berkeley, *Professor of Civil and Environmental Engineering, Medicine, and Environmental Health, Science, and Policy*
- Dimitri Papamoschou, Ph.D. California Institute of Technology, *Associate Dean for Academic Affairs of The Henry Samueli School of Engineering and Professor of Mechanical and Aerospace Engineering*
- Gerard C. Pardo, Ph.D. Stanford University, *Professor Emeritus of Civil and Environmental Engineering, Registered Professional Engineer*
- Simon Penny, Graduate Diploma in Sculpture, Sydney College of the Arts, New South Wales (Australia), *Professor of Electrical Engineering and Computer Science, Studio Art, and Informatics*
- Andrew J. Putnam, Ph.D. University of Michigan, *Associate Professor of Chemical Engineering and Materials Science and of Biomedical Engineering*
- Regina Ragan, Ph.D. California Institute of Technology, *Assistant Professor of Chemical Engineering and Materials Science*
- Roger H. Rangel, Ph.D. University of California, Berkeley, *Department Chair and Professor of Mechanical and Aerospace Engineering, and Professor of Chemical Engineering and Materials Science*
- Wilfred W. Recker, Ph.D. Carnegie-Mellon University, *Professor of Civil and Environmental Engineering*
- David J. Reinkensmeyer, Ph.D. University of California, Berkeley, *Professor of Mechanical and Aerospace Engineering and of Biomedical Engineering*
- Stephen G. Ritchie, Ph.D. Cornell University, *Director of the Institute of Transportation Studies and Professor of Civil and Environmental Engineering*
- Diego Rosso, Ph.D. University of California, Los Angeles, *Assistant Professor of Civil and Environmental Engineering and of Chemical Engineering and Materials Science*
- G. Scott Samuelsen, Ph.D. University of California, Berkeley, *Director of the National Fuel Cell Research Center, Director of the Advanced Power and Energy Program, Professor of Mechanical and Aerospace Engineering, and Henry Samueli Endowed Chair, Registered Professional Engineer*
- Brett F. Sanders, Ph.D. University of Michigan, Ann Arbor, *Associate Professor of Civil and Environmental Engineering*
- Jean-Daniel M. Saphores, Ph.D. Cornell University, *Associate Professor of Civil and Environmental Engineering, Planning, Policy, and Design, and Economics*
- Robert M. Saunders, D.Eng. Tokyo Institute of Technology, *Professor Emeritus of Electrical Engineering and Computer Science, Registered Professional Engineer*
- Jan Scherfig, Ph.D. University of California, Berkeley, *Associate Director of the Urban Water Research Center and Professor Emeritus of Civil and Environmental Engineering, Registered Professional Engineer*
- William E. Schmitendorf, Ph.D. Purdue University, *Professor Emeritus of Mechanical and Aerospace Engineering*
- Robin Shepherd, Ph.D. University of Canterbury; D.Sc. University of Leeds, *Professor Emeritus of Civil and Environmental Engineering, Registered Professional Engineer*
- Phillip C.-Y. Sheu, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science and of Biomedical Engineering*
- Frank G. Shi, Ph.D. California Institute of Technology, *Professor of Chemical Engineering and Materials Science and of Electrical Engineering and Computer Science*
- Masanobu Shinozuka, Ph.D. Columbia University, *Department Chair and UCI Distinguished Professor of Civil and Environmental Engineering, Registered Professional Engineer*
- Andrei M. Shkel, Ph.D. University of Wisconsin, Madison, *Associate Professor of Mechanical and Aerospace Engineering, Electrical Engineering and Computer Science, and Biomedical Engineering*
- Athanasios Sideris, Ph.D. University of Southern California, *Professor of Mechanical and Aerospace Engineering*
- William A. Sirignano, Ph.D. Princeton University, *Professor of Mechanical and Aerospace Engineering, and Henry Samueli Endowed Chair*
- Jack Sklansky, D.Sc. Columbia University, *Professor Emeritus of Electrical Engineering and Computer Science, Registered Professional Engineer*
- Keyue M. Smedley, Ph.D. California Institute of Technology, *Professor of Electrical Engineering and Computer Science*

Soroosh Sorooshian, Ph.D. University of California, Los Angeles, *Director of the Center for Hydrometeorology and Remote Sensing (CHRS), and UCI Distinguished Professor of Civil and Environmental Engineering and of Earth System Science*

Allen R. Stubberud, Ph.D. University of California, Los Angeles, *Professor Emeritus of Electrical Engineering and Computer Science, Registered Professional Engineer*

Lizhi Sun, Ph.D. University of California, Los Angeles, *Associate Professor of Civil and Environmental Engineering and of Chemical Engineering and Materials Science*

A. Lee Swindlehurst, Ph.D. Stanford University, *Professor of Electrical Engineering and Computer Science*

Harry H. Tan, Ph.D. University of California, Los Angeles, *Professor Emeritus of Electrical Engineering and Computer Science*

William C. Tang, Ph.D. University of California, Berkeley, *Associate Dean for Research in The Henry Samueli School of Engineering, and Professor of Biomedical Engineering and of Electrical Engineering and Computer Science*

Bruce Tromberg, Ph.D. University of Tennessee, *Director of the Beckman Laser Institute and Professor of Surgery, Biomedical Engineering, and Physiology and Biophysics*

Chen S. Tsai, Ph.D. Stanford University, *UCI Chancellor's Professor of Electrical Engineering and Computer Science*

Wei Kang (Kevin) Tsai, Ph.D. Massachusetts Institute of Technology, *Professor Emeritus of Electrical Engineering and Computer Science*

Lorenzo Valdevit, Ph.D. Princeton University, *Assistant Professor of Mechanical and Aerospace Engineering and of Chemical Engineering and Materials Science*

Vasan Venugopalan, Sc.D. Massachusetts Institute of Technology, *Associate Professor of Chemical Engineering and Materials Science, Biomedical Engineering, and Surgery (Beckman Laser Institute)*

Benjamin F. Villac, Ph.D. University of Michigan, *Assistant Professor of Mechanical and Aerospace Engineering*

Roberto Villaverde, Ph.D. University of Illinois, Urbana, *Professor Emeritus of Civil and Environmental Engineering, Registered Professional Engineer*

Szu-Wen Wang, Ph.D. Stanford University, *Assistant Professor of Chemical Engineering and Materials Science and of Biomedical Engineering*

Yun Wang, Ph.D. Pennsylvania State University, *Assistant Professor of Mechanical and Aerospace Engineering*

H. Kumar Wickramasinghe, Ph.D. University of London (United Kingdom), *Professor of Electrical Engineering and Computer Science, Biomedical Engineering, Chemical Engineering and Materials Science, and Henry Samueli Endowed Chair in Engineering*

Jann N. Yang, D.Sc. Columbia University, *Professor of Civil and Environmental Engineering, Registered Professional Engineer*

Albert Yee, Ph.D. University of California, Berkeley, *Professor of Chemical Engineering and Materials Science, Biomedical Engineering, and Chemistry*

Farzin Zareian, Ph.D. Stanford University, *Assistant Professor of Civil and Environmental Engineering*

Adjunct Professors

Mark Bachman, Ph.D. University of Texas, Austin, *Associate Adjunct Professor of Biomedical Engineering*

Jacob (Jack) Brouwer, Ph.D. Massachusetts Institute of Technology, *Associate Adjunct Professor of Mechanical and Aerospace Engineering*

Xiaogang Gao, Ph.D. University of Arizona, *Adjunct Professor of Civil and Environmental Engineering*

Kuo-lin Hsu, Ph.D. University of Arizona, *Associate Adjunct Professor of Civil and Environmental Engineering*

Bisher Imam, Ph.D. University of Arizona, *Associate Adjunct Professor of Civil and Environmental Engineering*

Daniel D. Joseph, Ph.D. Illinois Institute of Technology, *UCI Distinguished Adjunct Professor of Mechanical and Aerospace Engineering*

Robert H. Liebeck, Ph.D. University of Illinois, Urbana, *Adjunct Professor of Mechanical and Aerospace Engineering*

Vincent McDonell, Ph.D. University of California, Irvine, *Adjunct Professor of Mechanical and Aerospace Engineering*

Sayed (Ali) Mirmajafizadeh, Ph.D. University of South Australia, *Assistant Adjunct Professor of Biomedical Engineering*

Mehran Moshfeghi, Ph.D. Bristol University (England), *Associate Adjunct Professor of Electrical Engineering and Computer Science*

Richard D. Nelson, Ph.D. Michigan State University, *Adjunct Professor of Electrical Engineering and Computer Science*

Henry Samueli, Ph.D. University of California, Los Angeles, *UCI Distinguished Adjunct Professor of Electrical Engineering and Computer Science*

William Randall Seeker, Ph.D. Kansas State University, *Adjunct Professor of Mechanical and Aerospace Engineering*

Andrew A. Shapiro, Ph.D. University of California, Irvine, *Associate Adjunct Professor of Electrical Engineering and Computer Science*

Homayoun Yousefi'zadeh, Ph.D. University of Southern California, *Assistant Adjunct Professor of Electrical Engineering and Computer Science*

Overview

The academic mission of The Henry Samueli School of Engineering has been developed to be consistent with the missions and goals set for it by the State of California, the University of California, and the University of California, Irvine (UCI) campus. Specifically, the academic mission of the School is to provide a stimulating academic environment for individuals interested in the application of science and the development of new technologies for the benefit of society, and to provide a supportive environment for each program to meet its unique objectives.

The individual engineering and related programs have published program objectives that are consistent with the missions and goals of the University of California and UCI, The Henry Samueli School of Engineering, and the Engineering Accreditation Commission (EAC) of ABET, Inc.

The School offers undergraduate majors in Aerospace Engineering (AE), Biomedical Engineering (BME), Biomedical Engineering: Premedical (BMPE), Chemical Engineering (ChE), Civil Engineering (CE), Computer Engineering (CpE), Computer Science and Engineering (CSE, a jointly administered program with the Donald Bren School of Information and Computer Sciences), Electrical Engineering (EE), Engineering (a general program, GE), Environmental Engineering (EnE), Materials Science Engineering (MSE), and Mechanical Engineering (ME). The undergraduate majors in Aerospace, Biomedical, Chemical, Civil, Computer, Electrical, Environmental, and Mechanical Engineering are accredited by the Engineering Accreditation Commission of ABET, Inc. The undergraduate major in Biomedical Engineering: Premedical (BMPE) is not designed to be accredited, therefore is not accredited by ABET, Inc.

Aerospace Engineering considers the flight characteristics, performance, and design of aircraft and spacecraft. An upper-division series of courses in aerodynamics, propulsion, structures, and control follows a common core with Mechanical Engineering. The skills acquired in those courses are integrated in the capstone aerospace design course. The intent of the program is to produce highly proficient engineers who can tackle the aerospace engineering challenges of the future. See page 244.

Biomedical Engineering applies engineering principles to solve complex medical problems and focuses at improving the quality of health care by advancing technology and reducing costs. Examples include advanced biomedical imaging systems, the design of microscale diagnostic systems, drug delivery systems, and tissue engineering. Specializations are available that focus student's technical expertise on biophotonics or biomems. See page 209.

Biomedical Engineering: Premedical shares introductory engineering courses with Biomedical Engineering, but replaces senior engineering laboratories and design courses with biology and organic chemistry courses required by medical schools for admission. The intent of the program is to produce students with a basic engineering background who are qualified to enter medical school. See page 210.

Chemical Engineering applies the knowledge of chemistry, mathematics, physics, biology, and humanities to solve societal problems in areas such as energy, health, the environment, food, textiles, shelter, semiconductors, and homeland security. Employment opportunities exist in various industries such as chemical, petroleum, polymer, pharmaceutical, food, textile, fuel, consumer products, and semiconductor, as well as in local, state, and federal governments. See page 215.

Civil Engineering addresses the challenges of large-scale engineering projects of importance to society as a whole, such as water distribution, transportation, and building design. Specializations are provided in General Civil Engineering, Environmental Hydrology and Water Resources, Structural Engineering, and Transportation Systems Engineering. Alternatively, students can select a concentration in Computer Applications, Engineering Management, Infrastructure Planning, or Mathematical Methods. See page 224.

Computer Engineering addresses the design and analysis of digital computers, including both software and hardware. Computer design includes topics such as computer architecture, VLSI circuits, data base, software engineering, design automation, system software, and data structures and algorithms. Courses include programming in high-level languages such as Python, Java, C, C++; use of software packages for analysis and design; design of system software such as editors, compilers, debuggers, and operating systems; application of computers in solving engineering problems, and laboratories in both hardware and software experiences. See page 234.

Computer Science and Engineering is designed to provide students with the fundamentals of computer science, both hardware and software, and the application of engineering concepts, techniques, and methods to both computer systems engineering and software system design. The program gives students access to multidisciplinary problems in engineering with a focus on total systems engineering. Students learn the computer science principles that are critical to development of software, hardware, and networking of computer systems. From that background, engineering concepts and methods are added to give students exposure to circuit design, network design, and digital signal processing. Elements of engineering practice include systems view, manufacturing and economic issues, and multidisciplinary engineering applications. The program is administered jointly by the Department of Electrical Engineering and Computer Science in The Henry Samueli School of Engineering and by the Department of Computer Science in the Donald Bren School of Information and Computer Sciences. See page 371.

Electrical Engineering is one of the major contributors to the modernization of our society. Many of the most basic and pervasive products and services are either based on or related to the scientific and engineering principles taught at the Department of Electrical Engineering and Computer Science. Students can specialize in three general areas of studies—Electro-optics and Solid-State Devices, Power Electronics and Power Systems, and Systems and Signal Processing—all at the forefront of technological advancement. See page 235.

The major in **Engineering** is a special program of study for upper-division students who wish to combine the study of engineering principles with other areas such as the physical and biological sciences, social and behavioral science, humanities, and arts. Students may construct their own specialization. See page 202.

Environmental Engineering concerns the development of strategies to control and minimize pollutant emissions, to treat waste, and to remediate polluted natural systems. Emphasis areas include air quality and combustion, water quality, and water resources engineering. See page 226.

Materials Science Engineering is concerned with the generation and application of knowledge relating the composition, structure, and synthesis of materials to their properties and applications. During the past two decades, Materials Science Engineering has become an indispensable component of modern engineering education, partly because of the crucial role materials play in national defense, the quality of life, and the economic security and competitiveness of the nation; and partly because the selection of materials has increasingly become an integral part of almost every modern engineering design. Emphasis in the Materials Science Engineering curriculum is placed on the synthesis, characterization, and properties of advanced functional materials; analysis, selection, and design related to the use of materials; the application of computers to materials problems; and the presence of an interdisciplinary theme that allows a qualified student to combine any engineering major with the Materials Science Engineering major. See page 216.

Mechanical Engineering considers the design, control, and motive power of fluid, thermal, and mechanical systems ranging from microelectronics to spacecraft to the human body. Specializations allow students to focus their technical electives in the areas of Aerospace Engineering, Energy Systems and Environmental Engineering, Flow Physics and Propulsion Systems, and Design of Mechanical Systems. See page 245.

The School offers M.S. and Ph.D. degrees in Biomedical Engineering; Chemical and Biochemical Engineering; Civil Engineering; Electrical and Computer Engineering, with concentrations in Computer Graphics and Visualization, Computer Networks and Distributed Computing, Computer Systems and Software, and Electrical Engineering; Engineering, with concentrations in Environmental Engineering, and Materials and Manufacturing Technology; Materials Science and Engineering; and Mechanical and Aerospace Engineering. Specialized research opportunities are available within each of these programs. Bioreaction and bioreactor engineering, recombinant cell technology, and bioseparation processes are research areas in Biochemical Engineering. In Civil Engineering, research opportunities are provided in structural/ earthquake engineering, reliability engineering, transportation systems engineering, environmental engineering, and water resources. Research opportunities in Electrical and Computer Engineering are available in the areas of parallel and distributed computer systems, VLSI design, computer architecture, image and signal processing, communications, control systems, and optical and solid-state devices. Research in combustion and propulsion sciences, laser diagnostics, supersonic flow, direct numerical simulation, computer-aided design, robotics, control theory, parameter identification, material processing, electron microscopy, and ceramic engineering are all available in Mechanical and Aerospace Engineering.

Additional publications describing undergraduate and graduate academic study and research opportunities are available through The Henry Samueli School of Engineering, and the Departments of Biomedical Engineering, Chemical Engineering and Materials Science, Civil and Environmental Engineering, Electrical Engineering and Computer Science, Mechanical and Aerospace Engineering, and the graduate program in Biomedical Engineering.

DEGREES

Aerospace Engineering	B.S.
Biomedical Engineering	B.S., M.S., Ph.D.
Biomedical Engineering: Premedical	B.S.
Chemical and Biochemical Engineering	M.S., Ph.D.
Chemical Engineering	B.S.
Civil Engineering	B.S., M.S., Ph.D.
Computer Engineering	B.S.
Computer Science and Engineering*	B.S.
Electrical and Computer Engineering	M.S., Ph.D.
Electrical Engineering	B.S.
Engineering	B.S., M.S., Ph.D.
Environmental Engineering	B.S.
Materials Science and Engineering	M.S., Ph.D.
Materials Science Engineering	B.S.
Mechanical and Aerospace Engineering	M.S., Ph.D.
Mechanical Engineering	B.S.
Networked Systems*	M.S., Ph.D.

* Offered jointly with the Donald Bren School of Information and Computer Sciences. See the Interdisciplinary Studies section of the *Catalogue* for information.

UNDERGRADUATE STUDY

Student Affairs Office
101 Engineering and Computing Trailer; (949) 824-4334
John LaRue, Associate Dean

PLANNING A PROGRAM OF STUDY

Advising

Academic advising is available from academic counselors and peer advisors in the School's Student Affairs Office, 101 Engineering and Computing Trailer, and from faculty advisors. *Students must realize, however, that ultimately they alone are responsible for the planning of their own program and for satisfactory completion of the graduation requirements.* Students are encouraged to consult with the academic counselors in the Engineering Student Affairs Office whenever they desire to change their program of study. All Engineering majors are required to meet with their faculty advisor at least once each year.

Some engineering students will need *more than four years* to obtain their B.S. degree, particularly if part-time employment or extracurricular activities make heavy demands on their time. Normally, such students can stay on track, and are encouraged to do so, by enrolling in summer sessions at UCI or at other institutions when a petition has been approved in advance.

High-achieving students may declare a second major. Early consultation with the School is advisable.

Required courses may be replaced by other courses of equivalent content if the student substantiates the merits of the courses in the program of study and obtains prior approval from faculty in the School.

Students should be aware that most Engineering courses require the completion of prerequisites. The sample programs shown in each departmental description constitute preferred sequences which take into account all prerequisites.

School policy does not permit the addition or deletion of Engineering courses after the second week of the quarter.

Undergraduate students who have high academic standing, who have completed the necessary prerequisites, and who have obtained permission from the School may qualify to take certain graduate-level courses.

Students are required to complete UCI's lower-division writing requirement (see the Requirements for a Bachelor's Degree section) during the first two years. Thereafter, proficiency in writing and computing (using a higher-level language such as FORTRAN, Python, C, C++, Java, or with MATLAB) is expected in all Engineering courses.

Students can take the following courses on a Pass/Not Pass basis: (a) courses not used to fulfill the major requirements, and (b) general education courses. Students must take courses to fulfill the UC Entry Level Writing requirement for a grade.

Admissions

The sequential nature of the Engineering program and the fact that many courses are offered only once a year make it beneficial for students to begin their studies in the fall quarter. Applicants wishing to be admitted for the fall quarter, 2010 must have submitted their completed application forms during the priority filing period (November 1–30, 2009).

High school students wishing to enter the UCI Engineering program must have completed four years of mathematics through pre-calculus or math analysis and are advised to have completed one year each of physics and chemistry. That preparation, along with honors courses and advanced placement courses, is fundamental to success in the Engineering program and is vital to receiving first consideration for admittance to an Engineering major during periods of restricted enrollments. Students applying for admission for fall quarter should complete their examination requirements during May or June of their junior year or during their senior year, but no later than the December test date. (Typically, this means that students will take either the SAT Reasoning Test or the ACT Assessment plus Writing test in October or November, and will take two SAT Subject Tests in November or December.) Applicants must apply for admission to a specific Engineering major or Engineering Undeclared.

If enrollment limitations make it necessary, unaccommodated Engineering applicants may be offered alternative majors at UCI.

Transfer students may be admitted to The Henry Samueli School of Engineering either from another major at UCI or from another college or university. A student seeking admission to The Henry Samueli School of Engineering from colleges and schools other than UCI must satisfy University requirements for admission with advanced standing and should complete appropriate prerequisites for their major of choice. It is to the student's advantage to complete the Intersegmental General Education Transfer Curriculum (IGETC) or UCI general education and lower-division requirements prior to transfer. Since requirements vary from major to major, those contemplating admission with advanced standing to the School should consult each Department's *Catalogue* section and the UCI Office of Admissions and Relations with Schools, (949) 824-6703, for the specific requirements of each program. All transfer students should arrange for early consultation with The Henry Samueli School of Engineering Student Affairs Office at (949) 824-4334.

Change of Major. Students who wish to change their major to one offered by the School should contact the Engineering Student Affairs Office for information about change-of-major requirements, procedures, and policies. Information is also available at <http://www.changeofmajor.uci.edu>.

Proficiency Examinations

A student may take a course by examination with the approval of the faculty member in charge of the course and the Dean of the School. Normally, ability will be demonstrated by a written or oral

examination; if a portion of the capability involves laboratory exercises, the student may be required to perform experiments as well. The proficiency examination is not available for any course a student has completed at UCI.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

All students in The Henry Samueli School of Engineering must fulfill the following requirements.

University Requirements: See pages 56–62.

School Requirements

The following are minimum subject-matter requirements for graduation:

Mathematics and Basic Science Courses: Students must complete a minimum of 48 units of college-level mathematics and basic sciences.

Engineering Topics Courses: Students must complete a minimum of 72 units of engineering topics. *Engineering topics* are defined as courses with applied content relevant to the field of engineering.

Design Units: All undergraduate Engineering courses indicate both a total and a design unit value. Design unit values are listed at the end of the course description. Each student is responsible for the inclusion of courses whose design units total that required by the program of study.

The Academic Plan and Advising Requirements to remain affiliated with The Henry Samueli School of Engineering: All students enrolled in The Henry Samueli School of Engineering are required to meet annually with their designated faculty advisor and to have an academic plan on file with the Student Affairs Office which has been approved by their academic counselor. Students who do not have a plan on file, or deviate from this plan without approval from an academic counselor will be subject to probation. Students on probation for two consecutive quarters who do not have a plan on file, or deviate from this plan without approval from an academic counselor will be subject to disqualification. Students who fail to meet with a faculty advisor each year will be subject to disqualification.

Duplication of Subject Material: Students who take courses which involve considerable duplication of subject material may not receive full graduation credit for all units thus completed.

Residence Requirement: In addition to the University residence requirement, at least 36 upper-division engineering units specified by each major must be completed successfully at the University of California.

Variations: Variations from the general School degree requirements may be made subject to the approval of the faculty of the School. Students wishing to obtain variances should submit petitions to the School's Student Affairs Office.

Engineering Gateway Freshman-Year Curriculum

Students who know that they want to major in engineering but who are unsure of the specific major should apply for the Engineering Gateway Curriculum and follow the Sample Engineering Gateway Curriculum. Students following the Engineering Gateway Curriculum are required to meet with an academic advisor every quarter and are strongly encouraged to declare a major as soon as possible and then follow the appropriate sample program of study for that major.

Sample Engineering Gateway Curriculum Freshman¹

FALL	WINTER	SPRING
Mathematics 2A	Mathematics 2B	Mathematics 2D
Chemistry 1A	Chemistry 1B, 1LB	Chemistry 1C, 1LC
ENGR1	Physics 7B/7LB	Physics 7D, 7LD
CEE10, MAE10, EECS10 or EECS12 or CSE21 ²	or Physics 7C/7LC	General Education

¹ Students who choose to major in Biomedical Engineering or Biomedical Engineering: Premedical should enroll in BME1 in the fall quarter of the sophomore year. Students who choose to major in Computer Engineering should enroll in EECS20 by the spring or summer quarter preceding their sophomore year.

² Students who are considering the Computer Science and Engineering major should enroll in CSE21.

Students who choose certain majors during the first year may replace Chemistry courses with required major courses.

Students should choose a major by the end of the spring quarter of their freshman year or earlier. Some modification in the program of study might be appropriate if the student chooses a major before the end of the freshman year. In any case, when the major is chosen, the student must meet immediately with an academic counselor to plan the program of study.

Undergraduate Programs

Specific information about courses fulfilling School and major requirements can be found on the following pages. Note that some majors require more units than the School requirements.

Aerospace Engineering	p. 244
Biomedical Engineering	p. 210
Biomedical Engineering: Premedical	p. 210
Chemical Engineering	p. 216
Civil Engineering	p. 225
Computer Engineering	p. 234
Computer Science and Engineering	p. 371
Electrical Engineering	p. 235
Engineering	p. 202
Environmental Engineering	p. 226
Materials Science Engineering	p. 217
Mechanical Engineering	p. 245

MINORS OF INTEREST TO ENGINEERS

Minor in Earth and Atmospheric Sciences

The minor in Earth and Atmospheric Sciences focuses on the application of physical, chemical, and biological principles to understanding the complex interactions of the atmosphere, ocean, and land through climate and biogeochemical cycles. See the Department of Earth System Science in the School of Physical Sciences section of this *Catalogue* for more information.

Minor in Global Sustainability

The interdisciplinary minor in Global Sustainability trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet. See the Interdisciplinary Studies section of this *Catalogue* for more information.

CAREER ADVISING

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information. In addition, special career planning events are held throughout the year including an annual Career Fair. Individual career counseling is available, and students have access to the Career Library which contains information on graduate and professional schools in engineering, as well as general career information.

HONORS

Graduation with Honors. Undergraduate honors at graduation in The Henry Samueli School of Engineering are computed by using 50 percent of the overall UCI GPA and 50 percent of the upper-division Engineering GPA. (Engineering E190 is not used in the calculation of the upper-division GPA.) A general criterion is that students must have completed at least 72 units in residence at a University of California campus. Approximately 1 percent of the graduating class shall be awarded *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*, with no more than 12 percent being awarded honors. Other important factors are considered (see page 52).

Dean's Honor List. The quarterly Dean's Honor List is composed of students who have received a 3.5 GPA while carrying a minimum of 12 graded units.

Gregory Bogaczyk Memorial Scholarship. This scholarship was established in memory of Gregory Bogaczyk, a former UCI Mechanical Engineering student, and is contributed by the Bogaczyk family and friends. An award is given each year to a junior or senior Mechanical Engineering student.

Haggai Memorial Endowed Scholarship. This memorial fund was established in honor of Ted Haggai, an electrical engineer. This scholarship is awarded to an outstanding senior electrical engineering student and member of Tau Beta Pi. Primary consideration will be given to members of Tau Beta Pi who have contributed outstanding service to both UCI and The Henry Samueli School of Engineering.

Christine Jones Memorial Scholarship. This scholarship was established in memory of Christine Jones, an Electrical Engineering graduate, Class of 1989. The primary focus of this scholarship is to provide financial support to a female undergraduate student in The Henry Samueli School of Engineering.

Deborah and Peter Pardo Memorial Scholarship. This scholarship is awarded each year to a graduating senior in Mechanical Engineering or in Aerospace Engineering. The scholarship is based on outstanding service to The Henry Samueli School of Engineering and the community.

Henry Samueli Endowed Scholarship. This premier scholarship, established by Henry Samueli, is awarded to outstanding freshmen and transfer students in The Henry Samueli School of Engineering. Recipients are chosen by the School based on their academic excellence. The award is renewable up to four years for freshmen and up to two years for transfer students.

Additional awards in other categories are made throughout the academic year.

CENTER FOR OPPORTUNITIES AND DIVERSITY IN ENGINEERING

101 Engineering and Computing Trailer; (949) 824-2077
Robin Jeffers, Director

The Center for Opportunities and Diversity in Engineering (CODE) houses a comprehensive recruitment, retention, and placement program in The Henry Samueli School of Engineering which attempts to provide academic support and professional development to students from backgrounds which have traditionally had limited access to the engineering profession. Services provided include advisement, tutoring, study rooms, notification of research opportunities, fellowships, guest speakers, and employment opportunities. At the core of its activity is the focus on community building, and students are encouraged to bond around their common interests and goals.

SPECIAL PROGRAMS AND COURSES

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

Engineering 199

Every undergraduate student in The Henry Samueli School of Engineering has the opportunity to pursue independent research under the direct supervision of a professor in the School. Interested students should consult with a faculty member to discuss the proposed research project. If the project is agreed upon, the student must fill out a 199 Proposal Form and submit it to the Engineering Student Affairs Office.

Undergraduate Research Opportunities Program

The Undergraduate Research Opportunities Program (UROP) encourages and facilitates research and creative activities by undergraduates. Research opportunities are available not only from every discipline, interdisciplinary program, and school, but also from many outside agencies, including national laboratories, industrial partners, and other universities. UROP offers assistance to students and faculty through all phases of the research activity: proposal writing, developing research plans, resource support, conducting the research and analyzing data, and presenting results of the research at the annual spring UCI Undergraduate Research Symposium. Calls for proposals are issued in the fall and spring quarters. Projects supported by UROP may be done at any time during the academic year and/or summer, and the research performed must meet established academic standards and emphasize interaction between the student and the faculty supervisor. In addition, all students participating in faculty-guided research activities are welcome to submit their research papers for faculty review and possible publication in the annual *UCI Undergraduate Research Journal*. For more information, contact the UROP Office, 1100 Student Services II; (949) 824-4189; urop@uci.edu; <http://www.urop.uci.edu/>.

Accelerated M.S. Program or Ph.D. Program in The Henry Samueli School of Engineering

Exceptionally promising UCI undergraduate Engineering students with a minimum cumulative 3.5 GPA may, during their junior or senior year, apply for accelerated admissions into the M.S. or Ph.D. programs within The Henry Samueli School of Engineering. Accelerated admission would allow a student to petition for exemption from UCI's Graduate Record Examination (GRE) requirement for graduate school admission. (The exemption applies only to current UCI students applying for admission to one of the M.S. programs in The Henry Samueli School of Engineering; other graduate schools may still require the GRE.)

Accelerated admission applicants would in all other ways be evaluated in the same manner as other applicants to the School's graduate programs. Occasionally, a candidate for accelerated admission may be required by the faculty to submit GRE scores in support of the graduate application.

Students offered accelerated admission, upon completion of the undergraduate degree program, may petition to credit toward the M.S. degree up to 18 units (with a grade of B or better) of graduate-level course work completed in excess of requirements for the UCI bachelor's degree.

A UCI undergraduate whose ultimate goal is a Ph.D. may apply for the accelerated M.S. program, however, a GRE score must be submitted.

Please see <http://www.eng.uci.edu/grad/admissions> for more detailed information about this program.

Education Abroad Program

Upper-division and graduate Engineering students may participate in a number of programs which offer unique opportunities for education and training abroad. The University's Education Abroad Program (EAP) offers engineering course work for UCI academic credit at a number of universities. Some of the EAP-affiliated engineering schools require proficiency in the host country's language, while others are English speaking. Study abroad may postpone the student's graduation for one or two quarters, depending primarily on the student's language preparation (which can begin in the freshman year), but the added experience can add to the student's maturity and professional competence. EAP students pay regular UCI fees and keep any scholarships they may have. Additional information is available in the Education Abroad Program section.

STUDENT PARTICIPATION AND ORGANIZATIONS

Faculty and committee meetings (except those involving personnel considerations) are open meetings; in addition to designated student representatives, all students are encouraged and expected to participate in the development of School policy. Student evaluation of the quality of instruction for each course is requested each quarter.

Engineering students may join any of a number of student organizations. Most of these organizations are professionally oriented and in many instances are local chapters of national engineering societies. A primary function of these groups is to provide regular technical and social meetings for students with common interests. Most of the groups also participate in the annual Engineering Week activities and in other School functions.

Associated General Contractors (AGC). A student chapter of the national organization, AGC at UCI is an academic engineering club for students interested in the construction field.

American Institute of Aeronautics and Astronautics (AIAA). The AIAA is a technical society of 40,000 professional and student members devoted to science and engineering in the field of aerospace. The local chapter's primary activities include seminars, tours of industries, and mentoring for students by professional members.

American Institute of Chemical Engineers (AIChE). AIChE, a student chapter of the national organization, provides Chemical Engineering majors with the opportunity to interact with faculty and professionals in the field.

American Society for Civil Engineers (ASCE). One of the larger engineering clubs, ASCE at UCI is a student chapter of the national organization. The ASCE focuses its efforts on interactions with professional engineers, sponsorship of Engineering Week activities, and participation in the annual ASCE Southwest Conference.

American Society for Materials (ASM). The student chapter of ASM at UCI provides the opportunity for Materials Science Engineering (MSE) students to meet engineers and scientists from local industry, attend seminars organized by the Orange Coast Chapter of ASM International, and organize discussion sessions that focus on progress and advances in the MSE field and that promote interactions between MSE students and materials faculty.

American Society of Mechanical Engineers (ASME). The student chapter of ASME at UCI provides the opportunity for Mechanical Engineering majors to meet with professors, organize social events, and participate in events and competitions supported by the ASME national organization.

Biomedical Engineering Society. The student chapter of BMES at UCI is an academic club for students in the field of Biomedical Engineering.

Chi Epsilon. This organization is a national engineering honor society which is dedicated to the purpose of promoting and maintaining the status of civil engineering as an ideal profession. Chi

Epsilon was organized to recognize the characteristics of the individual that are fundamental to the successful pursuit of an engineering career.

Electric Vehicle Association/UCI (EVA/UCI). EVA/UCI gives students an opportunity for hands-on work on electric car conversions coupled with design experience.

Engineering Student Council (ESC). The ESC is the umbrella organization that provides a voice for all Engineering student chapters. A significant activity of the Council is organizing UCI's annual Engineering Week celebration.

Engineers Without Borders (EWB). This humanitarian organization combines travel with the idea that engineers can play an instrumental role in addressing the world's assorted challenges. Through the implementation of equitable, economical, and sustainable engineering projects, EWB-UCI works to improve quality of life within developing communities abroad.

Eta Kappa Nu. A student chapter of the National Electrical Engineering Honor Society, Eta Kappa Nu's purpose is to promote creative interaction between electrical engineers and give them the opportunity to express themselves uniquely and innovatively to project the profession in the best possible manner.

Filipinos Unifying Student-Engineers in an Organized Network (FUSION). FUSION is the merging of diverse, distinct, or separate elements into a unified whole. The mission of FUSION is to promote the academic and professional development of student engineers by providing an organized network of support.

Institute of Electrical and Electronic Engineers (IEEE). A student chapter of a multinational organization, IEEE at UCI encompasses academic, professional, and social activities.

Institute of Transportation Engineers (ITE). ITE is a student chapter of a national group of transportation engineering professionals. Offering opportunities to meet both professionals and other students, ITE focuses its activities on an annual project with practical applications.

Mexican-American Engineers and Scientists (MAES). Open to all students, MAES is a student and professional organization with the purpose of aiding students in their academic, professional, and social endeavors.

National Society of Black Engineers (NSBE). The NSBE, with almost 6,000 members, is one of the largest student-managed organizations in the country. The Society is dedicated to the realization of a better tomorrow through the development of intensive programs to increase the recruitment, retention, and successful graduation of underrepresented students in engineering and other technical majors.

Omega Chi Epsilon. The student chapter of the National Chemical Engineering Honor Society aims to recognize and promote high scholarship, original investigation, and professional service in chemical engineering.

Phi Sigma Rho. This national sorority is open to women who are in engineering and engineering technology majors. Its purpose is to provide social opportunities, promote academic excellence, and provide encouragement and friendship.

Pi Tau Sigma. The mechanical engineering honor society, Pi Tau Sigma, is committed to recognizing those of high achievement. The goal of the organization is to promote excellence in academic, professional, and social activities.

Sigma Gamma Tau. The aerospace engineering honor society, Sigma Gamma Tau, is committed to recognizing those of high achievement. The goal of the organization is to promote excellence in academic, professional, and social activities.

Society of Hispanic Professional Engineers (SHPE). SHPE is both a student and professional organization. The UCI SHPE chapter works to recruit, retain, and graduate Latino engineers by providing a comprehensive program which includes high school visitations, coordinated study sessions, and industry speakers and tours. At the professional level there are opportunities for career positions and scholarships for members who are enrolled in undergraduate and graduate engineering and computer science programs.

Society of Automotive Engineers (SAE). Members of the SAE chapter at UCI participate in technical expositions, mini-Baja buggy races, student competitions, and social activities.

Society of Women Engineers (SWE). SWE is a national service organization dedicated to the advancement of women in engineering. UCI's student chapter encourages academic and social support, and membership is open to both men and women in technical majors interested in promoting camaraderie and in helping to make engineering study a positive experience.

Structural Engineers Association of Southern California (SEAOSC). The UCI student chapter of SEAOSC introduces students to the field of structural engineering through tours, speakers, and SEAOSC dinners with professional members of the organization.

Sustainability Energy Technology Club (SETC). With the common theme of energy, club members explore how science and technology can be used as a driving force behind making changes in society with respect to a cleaner environment and less wasteful lifestyles.

Tau Beta Pi. The national Engineering honor society, Tau Beta Pi acknowledges academic excellence in the wide variety of engineering disciplines. Tau Beta Pi at UCI sponsors community service activities, social events, and technical and nontechnical seminars.

Triangle. The national social fraternity is open to engineers, architects, and scientists.

SCHOOLWIDE PROGRAM

Faculty in the Departments of Biomedical Engineering, Chemical Engineering and Materials Science, Civil and Environmental Engineering, Electrical Engineering and Computer Science, and Mechanical and Aerospace Engineering also teach courses in the major in Engineering program.

Descriptions and requirements for the undergraduate majors in Aerospace Engineering (AE), Biomedical Engineering (BME), Biomedical Engineering: Premedical (BMPE), Chemical Engineering (ChE), Civil Engineering (CE), Computer Engineering (CpE), Computer Science and Engineering (CSE), Electrical Engineering (EE), Engineering (a general program, GE), Environmental Engineering (EnE), Materials Science Engineering (MSE), and Mechanical Engineering (ME) may be found in subsequent sections.

General Undergraduate Major in Engineering

101 Engineering and Computing Trailer; (949) 824-4334

The Henry Samueli School of Engineering offers a general undergraduate major in Engineering to upper-division students who wish to pursue broad multidisciplinary programs of study or who wish to focus on a special area not offered in the four departments. Examples of other areas that may be of interest are biochemical engineering, electromechanical engineering, project management, or hydrology. The program of study in any area, aside from the established specializations, is determined in consultation with a faculty advisor.

ADMISSIONS

The general major in Engineering is only open to junior-standing students who have completed the required lower-division courses with a high level of achievement. Freshmen are not eligible to apply for this major. The sequential nature of the Engineering program and the fact that many courses are offered only once a year make it beneficial for students to begin their studies in the fall quarter.

Transfer students. The general Engineering major is a specialized program for students who are seeking careers in areas other than traditional engineering disciplines and is open to upper-division students only. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of calculus, one year of calculus-based physics (with laboratory), one course in computational methods (FORTRAN, C, C++), and one year of chemistry.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN ENGINEERING

Credit for at least 180 units, and no more than 196 units. All courses must be approved by a faculty advisor and the Associate Dean of Student Affairs prior to enrollment in the program.

University Requirements: See pages 56-62.

School Requirements: See page 199.

Major Requirements:

Mathematics and Basic Science Courses: Mathematics 2A-B-D, 2J, and 3D. Physics 7B/7LB or Physics 7C/7LC. With the approval of a faculty advisor and the Associate Dean, students select all additional Mathematics and Basic Science courses.

Engineering Topics Courses: Engineering EECS10. With the approval of a faculty advisor and the Associate Dean, students select all additional Engineering Topics courses.

Design unit values are indicated at the end of each course description. The faculty advisors and the Student Affairs Office can provide necessary guidance for satisfying the design requirements.

PROGRAM OF STUDY

Students should keep in mind that the program for the major in Engineering is based upon a rigid set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Therefore, the course sequence should not be changed except for the most compelling reasons. Students must have their programs approved by an academic counselor in Engineering. A sample program of study is available in the Student Affairs Office.

Courses in Engineering

LOWER-DIVISION

NOTE: With the exception of ENGR54, the courses listed below are open only to students in The Henry Samueli School of Engineering. All other majors must petition for permission to enroll.

ENGR1 Freshman Seminar in Engineering (1). An introduction to the engineering profession. Weekly seminars by both faculty and representatives from industry present an overview of each engineering discipline. Students

learn about current trends and issues in engineering, and career and academic options. (Design units: 0)

ENGR2 Energy Sources, Energy Uses (4). Technical aspects of energy extraction, transport, use, and environmental effects. Devices for energy conversion. (Design units: 0) *Not offered every year.*

ENGR10 Computational Methods in Engineering (4). Procedures and procedure followers, algorithms and flow charts, computer languages, subprograms. Computer macro- and microelements, number systems. Methods of differentiation, integration, curve fitting, list processing. Error analysis. Must qualify in BASIC and FORTRAN at end of course through computer use. Corequisite or prerequisite: Mathematics 2A. Only one course from ENGR10, CEE10, MAE10, EECS10, and EECS12 may be taken for credit. (Design units: 0) *Not offered every year.*

ENGR15 Problem Solving in Engineering (4). Introduction to scientific computing to solve engineering problems. Problem identification, algorithmic design, and solution using appropriate computational tools. Design and application documentation. Corequisite: Mathematics 3D. Prerequisites: CEE10, EECS10, MAE10, EECS12, or ICS 21; Mathematics 2J. ENGR15 and CEE20 may not both be taken for credit. (Design units: 1)

ENGR20 Energy and Society (4). The social, economic, and political aspects of how we obtain energy, get it to where we need it, use it, dispose of the wastes, and pay for these activities. Examination of alternatives. (Design units: 0) *Not offered every year.*

ENGR30 Statics of Rigid Bodies and Structures (4) F, Summer. Addition, resolution, and equivalent system of forces. Distributed forces, centroids, rigid-body equilibrium under concentrated and distributed forces. One-dimensional cables and bars under axial loads. Statical determinacy. Stress, strain, elastic behavior. Numerical analysis of statically determinate and indeterminate trusses. Corequisites or prerequisites: Mathematics 2D and 2J. Prerequisites: Physics 7C; MAE10 or CEE10 or EECS10. Same as MAE30. Only one course from ENGR30, MAE30, and CEE30 may be taken for credit. (Design units: 0)

ENGR54 Principles of Materials Science and Engineering (4) W, Summer. Materials—topics range from superconductors to biodegradable polymers. Structure and properties of materials, including metal, ceramics, polymers, semiconductors, composites, traditional materials. Atomic structure, bonding, defects, phase equilibria, mechanical properties, electrical, optical, and magnetic properties. Brief introduction to materials processing and synthesis. Prerequisites: Chemistry 1A and Physics 7B. (Design units: 0)

ENGR69 Energy Facilities Inspection (0). Inspection of power-generating stations of various types, oil and gas processing facilities, and end-use facilities. One unit of workload credit. Prerequisites: ENGR2, consent of instructor. May be repeated for credit as topics vary. (Design units: 0) *Not offered every year.*

ENGR80 Dynamics (4) W, Summer. Introduction to the kinetics and dynamics of particles and rigid bodies. The Newton-Euler, Work/Energy, and Impulse/Momentum methods are explored for ascertaining the dynamics of particles and rigid bodies. An engineering design problem using these fundamental principles is also undertaken. Prerequisites: Mathematics 2D and Physics 7C. Same as CEE80 and MAE80. (Design units: 0.5)

ENGR92 Engineering and Computer Educational Laboratory (0) F. Comprehensive academic support designed primarily for underrepresented or underprepared students in Engineering, ICS, or selected areas of the physical sciences. Typical program activities: tutoring, study skills, career planning, self-esteem enhancement, library research techniques. Pass/Not Pass only. Students may receive a maximum of 12 units of workload credit only. (Design units: 0)

ENGR93 Public and Professional Service in Engineering (0). Student participation in public and professional service activities related to engineering. One to four units of workload credit only.

ENGR98 Group Study (1 to 4). Group study of selected topics in engineering. Prerequisite: consent of instructor. May be repeated for credit. (Design units: varies)

UPPER-DIVISION

ENGR150 Mechanics of Structures (4) F, S, Summer. Stresses and strains. Torsion. Bending. Beam deflection. Shear force and moment distributions in beams. Yielding and buckling of columns. Combined loading. Transformation of stresses and strain. Yielding criteria. Finite elements analysis of frames. Dynamics of a two-bar truss. Prerequisites: Engineering MAE30 or ENGR30; Mathematics 2J. Same as MAE150. Only one course from ENGR150/MAE150, ENGRH150, CEE150, and CEEH150 may be taken for credit. (Design units: 2)

ENGRH150 Mechanics of Structures (4) F, S, Summer. Covers the same material as ENGR150 but in greater depth. Prerequisites: MAE30, Mathematics 2J. Only one course from ENGRH150, ENGR150/MAE150, CEE150, and CEEH150 may be taken for credit. (Design units: 2)

ENGR169 Energy Systems Field Trip (3). A ten-day to two-week inspection trip to energy extraction facilities, large-scale energy users, research laboratories, and design offices. Prerequisites: ENGR2 and ENGR20 or consent of instructor. (Design units: 0)

ENGR190 Communications in the Professional World (4) F, W, S, Summer. Workshop in technical and scientific writing. Oral presentation with video monitoring. Communication with various publics. Real-world professionalism. Students must be of junior or senior standing in Engineering and have completed the lower-division writing requirement. (Design units: 0)

ENGR195 Special Topics in Engineering (1 to 4). Prerequisites vary. May be repeated for credit as topics vary.

ENGR196 Engineering Thesis (4) F, W, S. Preparation of final presentation and paper describing individual research in Engineering completed in one or more quarters of individual study (i.e., ENGR199). Prerequisites: completion of lower-division writing requirement, consent of ENGR199 instructor, and completion of at least four units of Individual Research in Engineering. (Design units: varies)

ENGRH196 Honors Thesis (4) F, W, S. Preparation of final presentation and paper describing individual research in Engineering. For participants in the Campuswide Honors Program. Prerequisites: ENGRH199 and consent of instructor. (Design units: varies)

ENGR197A Educational Strategies for Tutoring and Teacher Aiding (4). Placement in a public elementary or secondary school to gain experience as a tutor or teacher aide. Emphasis on cognitive learning and the development of instructional strategies and resources which can be used in effective cross-age and cross-cultural experiences. Pass/Not Pass only. May be taken for credit three times. Same as Education 100. (Design units: 0)

ENGR199 Individual Study (1 to 4) F, W, S. Supervised independent reading, research, or design for undergraduate Engineering majors. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. Prerequisite: consent of instructor. May be repeated for credit. (Design units: varies)

ENGRH199 Individual Study for Honors Students (1 to 5) F, W, S. Supervised research in Engineering for participants in the Campuswide Honors Program. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. Prerequisites: consent of instructor; open only to members of Campuswide Honors Program. May be repeated for credit. (Design units: varies)

GRADUATE STUDY

Graduate Student Affairs Office
101 Engineering and Computing Trailer; (949) 824-4334
John LaRue, Associate Dean

ADMISSIONS

For information on requirements for admission to graduate study at UCI, contact the appropriate Engineering department or the Graduate Student Affairs Office in The Henry Samueli School of Engineering. Additional information is available in the Catalogue's Office of Graduate Studies section. Admission to graduate standing in The Henry Samueli School of Engineering is generally accorded to those possessing a B.S. degree in engineering or an allied field obtained with an acceptable level of scholarship from an institution

of recognized standing. Those seeking admission without the prerequisite scholarship record may, in some cases, undertake remedial work; if completed at the stipulated academic level, they will be considered for admission. Those admitted from an allied field may be required to take supplementary upper-division courses in basic engineering subjects. The Graduate Record Examination (GRE) General Test is required of all applicants.

FINANCIAL SUPPORT

Teaching assistantships and fellowships are available to qualified applicants (who should contact the Department to which they are applying for information). Research assistantships are available through individual faculty members. Although not required, it is beneficial for applicants to contact the faculty member directly to establish the potential for research support. Early applications have a strong chance for financial support.

PART-TIME STUDY

Those students who are employed may pursue the M.S. degree on a part-time basis, carrying fewer units per quarter. Since University residency requirements necessitate the successful completion of a minimum number of units in graduate or upper-division work in each of at least three regular University quarters, part-time students should seek the advice of a counselor in The Henry Samueli School of Engineering Graduate Student Affairs Office and the approval of the Graduate Advisor in their program. M.S. programs must be completed in four calendar years from the date of admission. Students taking courses in University Extension prior to enrollment in a graduate program should consult the following section on Transfer of Courses.

TRANSFER AND SUBSTITUTION OF COURSES

Upon petition, a limited number of *upper-division undergraduate or graduate-level courses* taken through University Extension, at another UC campus, or in another accredited university may be credited toward the M.S. degree after admission. The applicability of transfer or substitution courses must be approved by the student's department and the Graduate Dean of the University, in accordance with Academic Senate regulations. Also in accordance with UC Academic Senate policy, transfer credit for the M.S. degree cannot be used to reduce the minimum requirement in strictly graduate (200 series) courses.

Graduate Programs

Specific information about program requirements can be found on the following pages.

Biomedical Engineering	p. 211
Chemical and Biochemical Engineering	p. 218
Civil Engineering	p. 228
Electrical and Computer Engineering	p. 236
Concentration in Computer Graphics and Visualization	p. 237
Concentration in Computer Networks and Distributed Computing	p. 237
Concentration in Computer Systems and Software	p. 237
Concentration in Electrical Engineering	p. 237
Engineering	p. 204
Concentration in Environmental Engineering	p. 205
Concentration in Materials and Manufacturing Technology ..	p. 207
Materials Science and Engineering	p. 219
Mechanical and Aerospace Engineering	p. 246

The M.S. and Ph.D. degree program in Networked Systems is supervised by an interdepartmental faculty group. Information is available in the Interdisciplinary Studies section of the *Catalogue*.

Graduate Concentration in Environmental Engineering

101 Engineering and Computing Trailer; (949) 824-4334
William J. Cooper, **Director and Graduate Advisor**

Faculty

- Rafael L. Bras: Hydrology, eco-hydrology, hydroclimatology, hydro-meteorology, land-atmosphere interactions, fluvial geomorphology, land surface evolution, remote sensing
William J. Cooper: Environmental chemistry, advanced oxidation processes for water treatment, aquatic photochemistry of carbon cycling
Donald Dabub: Mathematical modeling of urban and global air pollution dynamics of atmospheric aerosols, secondary organic aerosols, impact of energy generation on air quality, chemical reactions at gas liquid interfaces
Nancy A. Da Silva: Bioremediation, genetic engineering
Russell L. Detwiler: Groundwater hydrology, contaminant fate and transport, subsurface process modeling, groundwater/surface-water interaction
Derek Dunn-Rankin: Combustion optical particle sizing, particle aerodynamics, laser diagnostics and spectroscopy
Carl A. Friehe (*Emeritus*): Boundary-layer meteorology, atmospheric turbulence, air-sea energy exchange
Stanley B. Grant: Marine and fresh water quality, biocolloid stability and transport, molecular biotechnology
Chenyang (Sunny) Jiang: Water pollution microbiology and environmental biotechnology
Henry C. Lim: Bioreactor control optimization, genetic engineering, bioremediation
Betty H. Olson: Aquatic microbiology, environmental health and molecular biology, water resources
Diego Rosso: Environmental process engineering, mass transfer, wastewater treatment, carbon- and energy-footprint analysis
Scott Samuelsen: Energy, fuel cells, hydrogen economy, propulsion, combustion and environmental conflict; turbulent transport in complex flows, spray physics, NO_x and soot formation, laser diagnostics and experimental methods; application of engineering science to practical propulsion and stationary systems; environmental ethics
Brett F. Sanders: Environmental and computational fluid dynamics, water resources engineering
Jean-Daniel M. Saphores: Environmental and natural resource economics and policy, transportation economics, planning and policy, quantitative methods
Jan Scherfig: Biological treatment, water reclamation and reuse, waste treatment
William A. Sirignano: Combustion, theory and computational methods, multiphase flows, high-speed turbulent reacting flows, flame spread, microgravity combustion, miniature combustors, fluid dynamics, applied mathematics
Soroosh Sorooshian: Hydrology, hydrometeorology and hydroclimate modeling, remote sensing, water sources management
Jun Wu: Air pollution exposure assessment and epidemiology

Environmental Engineering addresses the development of strategies to control anthropogenic emissions of pollutants to the atmosphere, waterways, and terrestrial environment; the remediation of polluted natural systems; the design of technologies to treat waste; fire safety; noise suppression; energy efficiency; and the evaluation of contaminant fate in urban environments. Environmental engineering issues are now an important component in the development of many engineering technologies and consequently are an important aspect of an engineering education. The discipline itself is interdisciplinary and requires a curriculum that provides students with an understanding of fundamentals in air- and water-quality sciences, contaminant fate and transport, and design concepts for pollutant emission control and treatment. To avoid the development of environmental engineering solutions which only transform one form of pollution to another, modern engineering education programs must require exposure and familiarity with a greater number of subjects than ever before.

Environmental engineers with an interdisciplinary background are particularly sought to address the complex infrastructure needs of today's society, where they must be able to communicate with

teams of scientists and engineers from different disciplines. Environmental engineering graduates who meet this description can expect to remain in strong demand in the private and public employment sectors, and their range of career opportunities is highly diverse. Examples of career fields and activities include the development of new technologies to genetically engineer microorganisms for waste treatment, design of combustion and control processes that minimize pollutant emissions and maximize energy efficiency, resolution of complex pollutant transport processes in naturally heterogeneous systems, development of new physical-chemical treatment approaches, and characterization of pollutant transformation mechanisms in natural systems.

Curricular and research subjects of interest in Environmental Engineering include environmental air and water chemistry, environmental microbiology, combustion technologies, aerosol science, transport phenomena, reactor theory, unit operations and systems design, mathematical modeling, energy systems, soil physics, fluid mechanics, hydrology, and meteorology. Interdisciplinary research endeavors commonly bridge many of these different subjects and a current focus is maintained on new and emerging technologies. Curriculum objectives have also been set to maintain a balance between the depth and breadth of program scope for each student.

Students may pursue either the M.S. or Ph.D. degree in Engineering.

Required Background

The interdisciplinary nature of the program allows students with a variety of backgrounds to undertake studies in this field. Students with a background in engineering—particularly chemical, civil, environmental, and mechanical engineering—as well as scientists from biology, chemistry, environmental science, and physics, are encouraged to participate.

Students admitted to the program are expected to have had rigorous undergraduate exposure to a number of relevant subject areas including air quality, environmental chemistry, fluid mechanics, microbial processes, and reactor theory and design. The degree to which each student meets the program's background requirement is determined by participating faculty at the time of admission. Students with an insufficient background who are offered admission will be required to take a set of appropriate prerequisite courses. Prerequisite work typically involves at least two and frequently as many as five or six upper-division, undergraduate courses each of which must be completed with a final grade of B or better. Occasionally, lower-division work in chemistry, mathematics, or physics is required. The student's specific prerequisite course work requirement, if any, is stated the letter of admission.

The background requirement establishes a common foundation for graduate study in the program. Not all students are required to take prerequisite course work; those who are may do so following matriculation in the graduate program. In addition, M.S. students may use a limited amount of upper-division course work taken to meet the background requirement in partial fulfillment of graduate degree requirements.

Although this list is not exhaustive, commonly required prerequisite courses within each of the required background areas are as follows:

Air Quality: Engineering MAE110, MAE162, or MAE164.

Environmental Chemistry: CEE162 or Earth System Science 102.

Environmental Microbiology: CBEMS112 or CBEMS116/216.

Fluid Mechanics: CEE170, CBEMS120A, or MAE130A.

Reactor Theory and Design: CBEMS110.

Core Requirement

Students must complete an advanced mathematics course, either CBEMS230 (Applied Engineering Mathematics I), CEE283 (Mathematical Methods in Engineering Analysis), or MAE200B (Engineering Analysis II).

Areas of Emphasis

Each student selects a primary area of emphasis within Environmental Engineering: Water Quality, Water Resources, or Air Quality and Combustion. To achieve the interdisciplinary objectives of the program, students are required to take at least two electives outside their primary area, one each in two different areas. These outside electives may also be taken from approved courses in other academic units, including the Schools of Social Ecology, Physical Sciences, and Medicine. Electives within each of the emphasis areas in Engineering are listed below.

Water Quality: CBEMS210 (Reaction Engineering), CBEMS214 (Bioremediation), CBEMS216 (Field Practicum), CBEMS218 (Bioengineering with Recombinant Organisms), CBEMS220 (Transport Phenomena), CBEMS234 (Bioreactor Engineering), CEE263 (Advanced Biological Treatment Processes), CEE265 (Advanced Physical-Chemical Treatment Processes), Earth System Science 262 (Global Biogeochemical Cycles).

Water Resources: CEE271 (Flow in Unsaturated Media), CEE272 (Stochastic Geohydrology), CEE274A (Transport Phenomena in Saturated Porous Media), CEE274B (Transport Phenomena in Unsaturated Porous Media and Fractures), CEE275 (Coastal Engineering), CEE276 (Surface Water Hydrology), CEE277 (Transport in Rivers and Estuaries), CEE278 (Flow in Rivers and Estuaries), CEE279A (Computations in Environmental Hydrologies), Earth System Science 203 (Earth System Change).

Air Quality and Combustion: MAE210 (Advanced Fundamentals of Combustion), MAE215 (Advanced Combustion Technology), MAE230A (Advanced Incompressible Fluid Dynamics I), MAE231 (Fundamentals of Turbulence), MAE232 (Atmospheric Turbulence), MAE233 (Turbulent Free Shear Flows), MAE260 (Issues Related to Atmospheric Processes), MAE261 (Air Pollution Modeling), MAE264 (Combustion Particulates and Aerosols), Earth System Science 220 (Earth System Climatology).

MASTER OF SCIENCE DEGREE

Two options are available for M.S. degree students: a thesis option and a comprehensive examination option. Both options require the completion of 36 units of study. Study plans for both options must also include two graduate courses from outside the student's primary area of emphasis.

Plan I. Thesis Option

A thesis option is available to students who prefer to conduct a focused research project. Students selecting this option must complete an original research investigation and a thesis, and obtain approval of the thesis by a thesis committee. Of the 36 required units, at least 20 must be graduate courses (numbered 200–289), including either CBEMS230, MAE200B, or CEE283. A maximum of eight M.S. research units and up to eight units of upper-division undergraduate elective courses may be applied to the degree with the prior approval of a faculty advisor.

Plan II. Comprehensive Examination Option

Alternatively, students may select a comprehensive examination option in which they must successfully complete 36 units of study and pass a comprehensive examination. At least 24 units must be graduate courses (numbered 200–289), including either CBEMS230, MAE200B, or CEE283. Up to 12 units may be taken as upper-division undergraduate elective courses.

DOCTOR OF PHILOSOPHY DEGREE

The Ph.D. concentration in Environmental Engineering requires the achievement of original and significant research that advances the discipline. Doctoral students are selected on the basis of an outstanding record of scholarship and potential for research excellence.

The doctoral study program is tailored to the individual student in consultation with a faculty advisory committee. There are no specific course requirements, however, additional mathematics courses beyond those required for an M.S. degree may be required. Within this flexible framework, the School maintains specific guidelines that outline the milestones of a typical doctoral program. All doctoral students should consult the Environmental Engineering program guidelines for details, but there are several milestones to be passed: admission to the Ph.D. program by the faculty, passage within the first year of a preliminary examination, formal advancement to candidacy by passing a qualifying examination in the third year (or second year for students who entered with a master's degree), completion of a significant research investigation, and the submission and oral defense of an acceptable dissertation.

Committees for preliminary and Ph.D. qualifying examinations and the doctoral committee must have at least one Environmental Engineering faculty member from outside the student's area of emphasis. The student's dissertation topic must be approved by the student's doctoral committee. The degree is granted upon the recommendation of the doctoral committee and the Dean of Graduate Studies. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

M.S. and Ph.D. in Engineering with a Concentration in Materials and Manufacturing Technology

101 Engineering and Computing Trailer; (949) 824-4334
Chin C. Lee, Director and Graduate Advisor

Faculty

Mark Bachman (*Adjunct*): Microfabrication technology, integrated microsystems, sensors, biomedical microdevices
Ozdal Boyraz: Silicon photonics, nonlinear optics in silicon, cascaded cavity silicon Raman lasers
Peter J. Burke: Quantum electronics, high-speed semiconductor technology
Zhongping Chen: Optical sensor and imaging, MEMS and biophotonic system, and biomedical devices
James C. Earthman: Fatigue behavior and cyclic damage, automated materials testing, high-temperature fracture, biomaterials, cellular networks
Franco De Flaviis: Microwave materials and devices, MEMS devices and fabrication processes
Noo Li Jeon: Biomaterials
John C. LaRue: Fluid mechanics, micro-electrical-mechanical systems (MEMS), turbulence, heat transfer, instrumentation
Abraham Lee: Micro and nanofluidic chips, droplet-based reactors for bioassays and materials synthesis, cell and biomolecular based sensors, nanoparticles and vesicles for drug delivery and targeted therapeutics
Chin C. Lee: Electronic packaging, thermal management, semiconductor devices, and microwaves
Henry P. Lee: Optoelectronic materials, growth, and devices
Guann Pyng Li: Optoelectronic devices, integrated circuit fabrication and testing, high-speed semiconductor technology
Marc J. Madou: Fundamental aspects of micro/nano-electro-mechanical systems (MEMS/NEMS), biosensors, nanofluidics, biomimetics
Martha L. McCartney: Electron microscopy, ceramics, interfacial engineering
Farhalli A. Mohamed: Mechanical properties, creep, superplasticity, correlations between property and microstructure
Daniel R. Mumm: Thermo-mechanical behavior of materials, interfaces and microstructure, materials for power and propulsion, cellular materials, morphing structures, micro/nano-mechanics
Richard Nelson (*Adjunct*): Applications: MEMS, nanosystems; materials: structural, mechanical, electrical, and optical properties of materials for the construction of new devices and integrated systems
Regina Ragan: Self-assembly, nanoelectronics, nanophotonics, chemical and biological sensors, organic/inorganic interfaces and nanofabrication
Andrew A. Shapiro (*Adjunct*): Electronic properties of materials; electronic packaging materials, processes, and characterization

Andrei M. Shkel: Design and advanced control of micro-electro-mechanical systems (MEMS), precision micro-sensors and actuators for telecommunication and information technologies, MEMS-based health monitoring systems, disposable, diagnostics devices, prosthetic implants
Frank G. Shi: Optoelectronics packaging, packaging materials, photonic glass and nanocomposites
Lizhi Sun: Micromechanics and nanomechanics, dislocation dynamics, composites and thin films, multiscale modeling, elastography
Chen S. Tsai: Integrated optic devices, circuits, materials; acoustic microscopy with applications to materials, device characterization
Lorenzo Valdevit: Multifunctional sandwich structures, thermal protection systems, morphing structures, active materials, MEMS, electronic packaging, cell mechanics
Albert Yee: Nanofabrication of soft materials, physics of polymer thin films, nanomechanical properties of polymers, ultra-low-k dielectrics, fracture and toughening of polymer nanocomposites

Materials and Manufacturing Technology (MMT) is concerned with the generation and application of knowledge relating the composition, structure, and processing of materials to their properties and applications, as well as the manufacturing technologies needed for production. During the past two decades, MMT has become an important component of modern engineering education, partly because of the increased level of sophistication required of engineering materials in a rapidly changing technological society, and partly because the selection of materials has increasingly become an integral part of almost every modern engineering design. In fact, further improvements in design are now viewed more and more as primarily materials and manufacturing issues. Both the development of new materials and the understanding of present-day materials demand a thorough knowledge of basic engineering and scientific principles including, for example, crystal structure, mechanics, mechanical behavior, electronic, optical and magnetic properties, thermodynamics, phase equilibria, heat transfer, diffusion, and the physics and chemistry of solids and chemical reactions.

The field of MMT ranks high on the list of top careers for scientists and engineers. The services of these engineers and scientists are required in a variety of engineering operations dealing, for example, with design of semiconductors and optoelectronic devices, development of new technologies based on composites and high-temperature materials, biomedical products, performance (quality, reliability, safety, energy efficiency) in automobile and aircraft components, improvement in nondestructive testing techniques, corrosion behavior in refineries, radiation damage in nuclear power plants, fabrication of steels, and construction of highways and bridges.

Subjects of interest in Materials and Manufacturing Technology cover a wide spectrum, ranging from metals, optical and electronic materials to superconductive materials, ceramics, advanced composites, and biomaterials. In addition, the emerging new research and technological areas in materials are in many cases interdisciplinary. Accordingly, the principal objective of the graduate curriculum is to integrate a student's area of emphasis—whether it be chemical processing and production, electronic and photonic materials and devices, electronic manufacturing and packaging, or materials engineering—into the whole of materials and manufacturing technology. Such integration will increase familiarity with other disciplines and provide students with the breadth they need to face the challenges of current and future technology.

Students with a bachelor's degree may pursue either the M.S. or Ph.D. degree in Engineering with a concentration in Materials and Manufacturing Technology (MMT). If students choose to enter the Ph.D. program, directly, it is a requirement that they earn an M.S. degree along the way toward the completion of their Ph.D. degree.

Recommended Background

Given the nature of Materials and Manufacturing Technology as an interdisciplinary program, students having a background and suitable training in either Materials, Engineering (Biomedical, Civil,

Chemical, Electrical, and Mechanical), or the Physical Sciences (Physics, Chemistry, Geology) are encouraged to participate. Recommended background courses include an introduction to materials, thermodynamics, mechanical properties, and electrical/optical/magnetic properties. A student with an insufficient background may be required to take remedial undergraduate courses following matriculation as a graduate student.

Core Requirement

Because of the interdepartmental nature of the concentration, it is important to establish a common foundation in Materials and Manufacturing Technology (MMT) for students from various backgrounds. This foundation is sufficiently covered in MMT courses that are listed below and that deal with the following topics:

MSE205 (Materials Physics); CEE242 (Advanced Strength of Materials); MAE252 (Fundamentals of Microfabrication); MAE247/EECS278 (Micro-Systems Design).

Electives

These electives are grouped into four areas of emphasis.

Chemical Processing and Production: Chemistry 213 (Chemical Kinetics), CBEMS210 (Reaction Engineering), CBEMS220 (Transport Phenomena), CBEMS230 (Applied Engineering Mathematics I), CBEMS240 (Chemical Engineering Thermodynamics), MSE210 (Materials Characterization Techniques and Analysis).

Electronic and Photonic Materials and Devices: BME210 (Cell and Tissue Engineering), EECS174 (Fundamentals of Semiconductor Devices), EECS188 (Optical Electronics), EECS274 (Biomedical Microdevices), EECS276 (Solid-State Electronics), EECS277A-B (Advanced Semiconductor Devices I, II), EECS277C (Nanotechnology), EECS285A (Optical Communications), EECS285B (Lasers and Photonics), EECS280A-B (Advanced Engineering Electromagnetics I, II), MSE272 (Microelectronic and Photonic Materials and Technology).

Electronic Manufacturing and Packaging: EECS273 (Electronics Packaging), CBEMS280 (Optoelectronics Packaging), EECS279/MAE249 (Micro-Sensors and Actuators), EECS285A (Optical Communications), EECS285B (Lasers and Photonics), EECS285C (Integrated and Fiber Optics), MSE272 (Microelectronic and Photonic Materials and Technology), MAE253 (BIOMEMS).

Materials Engineering: Chemistry 225 (Polymer Chemistry: Synthesis and Characterization of Polymers), Chemistry 226 (Polymer Materials: Polymer Structure-Property Relationship), Physics 238A-B-C (Condensed Matter Physics), MSE210 (Materials Characterization Techniques and Analysis), MSE251 (Dislocation Theory), MSE252 (Theory of Diffusion), MSE254 (Polymer Science and Engineering), MSE255A (Design with Ceramic Materials), MSE255B (Science of Composite Materials), MSE256A (Mechanical Behavior of Engineering Materials), MSE256B (Fracture of Engineering Materials), MSE266 (Science of Nanoscale Materials and Devices), MSE268 (Principles of Coatings, Thin Films, and Multi-layers), MSE259 (Transmission of Electron Microscopy), MSE263 (Computer Techniques in Experimental Materials Research).

It should be noted that specific course requirements within the area of emphasis are decided based on consultation with the Director of the MMT concentration.

MASTER OF SCIENCE DEGREE

A minimum of 36 units is required for the M.S. degree. Two options are available, a thesis option and a comprehensive examination option. For the thesis option, students are required to complete an original research project and write an M.S. thesis. A committee of three full-time faculty members is appointed to guide the development of the thesis. Students must also obtain approval for a complete program of study from the program director. At least 21

units must be taken from courses numbered 200–289, among which at least 12 units are from MMT core courses and at least nine units are in the area of emphasis approved by the faculty advisor and the graduate advisor. Up to eight units of CBEMS296, EECS296, MAE 296, BME 296, or CEE296 and up to eight units of upper-division undergraduate elective courses taken as a graduate student at UCI can be applied toward the 36-unit requirement. For the comprehensive examination option, students are required to complete 36 units of study. At least 24 units must be taken from courses numbered 200–289, among which at least 12 units are from MMT core courses and at least 12 units are in the area of emphasis approved by the faculty advisor and the graduate advisor. Up to eight units of upper-division undergraduate elective courses taken as a graduate student at UCI can be applied toward the 36-unit requirement. In the last quarter, an oral comprehensive examination on the contents of study will be given by a committee of three faculty members including the advisor and two members appointed by the program director. Part-time study for the M.S. degree is available and encouraged for engineers working in local industries. Registration for part-time study must be approved in advance by the MMT program director and the Graduate Dean.

DOCTOR OF PHILOSOPHY DEGREE

The Ph.D. degree in Engineering with a concentration in Materials and Manufacturing Technology requires a commitment on the part of the student to dedicated study and collaboration with the faculty. Ph.D. students are selected on the basis of outstanding demonstrated potential and scholarship. Applicants must hold the appropriate prerequisite degrees from recognized institutions of high standing. Students entering with a master's degree may be required to take additional course work, to be decided in consultation with the graduate advisor and the program director. Students without a master's degree may be admitted into the Ph.D. program. However, these students will be required to complete the degree requirements above for the master's degree prior to working on doctoral studies. After substantial academic preparation, Ph.D. candidates work under the supervision of faculty advisors. The process involves immersion in a research atmosphere and culminates in the production of original research results presented in a dissertation.

Milestones to be passed in the Ph.D. program include the following: acceptance into a research group by the faculty advisor during the student's first year of study, successful completion of the Ph.D. preliminary examination during year two, development of a research proposal, passing the qualifying examination during year three, and the successful completion and defense of the dissertation during the fourth or fifth year. There is no foreign language requirement.

The preliminary examination, to be taken during the second year of the Ph.D. program, is based on the core courses in MMT and courses taken in the area of emphasis. The examination committee is appointed by the MMT Director with subsequent approval by the School's Associate Dean of Student Affairs. Students must advance to candidacy in their third year (second year for those who entered with a master's degree). The degree is granted upon the recommendation of the doctoral committee and the Dean of Graduate Studies. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

Graduate Courses in Engineering

ENGR250 Calit2 Seminar: Trends in Optical Communication (1 to 4).

Addresses the current status and future trends of fiberoptic materials, components, systems, and manufacturing that are the foundation of the ongoing fiberoptic communication revolution, through weekly seminar presentations by leading experts from both industry and academia. Prerequisites: graduate standing and consent of instructor.

ENG260A Technology for Life (3). Engineering techniques including physics, chemistry, biology, and micro/nano technology for enabling life sciences research in the areas of genomics/proteomics, cells, tissues/organs, and biomolecules. Prerequisite: One course from Physics 106, Chemistry 128L, Biological Sciences M118L, BME145, BME146, or equivalent, or consent of instructor.

ENGR260B Technology of Life (3). Engineering perspectives of evolution in life sciences including the physics, chemistry, and mechanics of various life systems such as DNA, RNA, biomolecules, cells, organs. Prerequisite: One course from Physics 146A, Chemistry 128, Biological Sciences D114, BME50A, BME50B, or equivalent, or consent of instructor.

ENGR295 Special Topics in Engineering (1 to 4). Prerequisites vary. May be repeated for credit as topics vary.

ENGR296 Master of Science Thesis Research (4 to 12). Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. in Engineering. Prerequisite: consent of instructor. May be repeated for credit.

DEPARTMENT OF BIOMEDICAL ENGINEERING

3120 Natural Sciences II; (949) 824-3941

Steven C. George, **Department Chair**

Faculty

Michael W. Berns: Photomedicine, laser microscopy, biomedical devices
Elliot Botvinick: Laser microbeams, cellular mechanotransduction, mechanobiology

James P. Brody: Bioinformatics, micro-nanoscale systems

Zhongping Chen: Biomedical optics, optical coherence tomography, bioMEMS, and biomedical devices

Bernard Choi: Biomedical optics, *in vivo* optical imaging, microvasculature, light-based therapeutics

Steven C. George: Physiological and multi-scale integrative modeling, gas exchange, computational methods, tissue engineering

Enrico Gratton: Design of new fluorescence instruments, protein dynamics, single molecule, fluorescence microscopy, photon migration in tissues

Elliot E. Hui: Microscale tissue engineering, bioMEMS, cell-cell interactions, global health diagnostics

Noo Li Jeon: Soft lithography in fabricating devices, bioMEMS, microfluidics, biomaterials, tissue engineering, cell migration

Tibor Juhasz: Laser-tissue interactions; high-precision microsurgery with lasers; laser applications in Ophthalmology; corneal biomechanics

Frithjof Kruggel: Biomedical signal and image processing, anatomical and functional neuroimaging in humans, structure-function relationship in the human brain

Abraham Lee: Lab-on-a-Chip health monitoring instruments, drug delivery micro/nanoparticles, integrated cell sorting microdevices, lipid vesicles as carriers for cells and biomolecules, high throughput droplet bioassays, and microfluidic tactile sensors

Joerg Meyer: Computer graphics, scientific visualization, large-scale rendering, biomedical imaging, digital image processing, virtual reality

Zoran Nenadic: Adaptive biomedical signal processing, control algorithms for biomedical devices, brain-machine interfaces, modeling and analysis of biological neural networks

Andrew J. Putnam: Cellular signaling in engineered extracellular micro-environments; biomaterials; cell and tissue engineering

William C. Tang: Microelectromechanical systems (MEMS) nanoscale engineering for biomedical applications; microsystems integration, microimplants, microbiomechanics, microfluidics

Bruce Tromberg: Photon migration, diffuse optical imaging, non-linear optical microscopy, photodynamic therapy

Affiliated Faculty

Mark Bachman: Micro-electro-mechanical systems (MEMS) BIOMEMS, and optoelectronics nonstandard chip processing, physics of small systems

Pierre Baldi: Bioinformatics/computational biology and probabilistic modeling/artificial intelligence and machine learning

Lubomir Bic: Distributed computing, parallel processing in biological systems

Bruce Blumberg: Biorobotics, functional genomics

Peter Burke: Biomedical nanotechnology

Dan M. Cooper: Impact of exercise on exhaled biological gases; novel methods of assessing physical activity in infants and children using biomems; impact of oxygen gradients on neutrophil trafficking

Robert Corn: Surface chemistry, surface spectroscopy, surface biochemistry and biosensing

Carl Cotman: Computational methods in brain aging, Alzheimer's disease
Nancy A. Da Silva: Molecular biotechnology, metabolic engineering, environmental biotechnology

James Earthman: Biomaterials, dental, and orthopaedic implants

Gregory Evans: Tissue engineering, adult stem cells, embryonic stem cells, nerve regeneration

Charles Fowlkes: Bioimage analysis, computational modeling, gene regulation, development

Ron Frostig: Optical methods for brain imaging, functional organization of the cortex

John P. Fruehauf: In-vitro cancer models using 3-D tissue systems to predict drug response

Steven Gross: In-vivo function of molecular motors, optical tweezers

Zhibin Guan: Chemistry of biomaterials

Gultekin Gulsen: Diffuse optical tomography, fluorescence tomography, MRI, multi-modality imaging

Ranjan Gupta: In-vivo models for chronic nerve injury; in-vitro models for nerve injury

Christopher C. W. Hughes: Tissue engineering, growth and patterning of blood vessels

James V. Jester: Mechanics of wound healing and the inter-relationship of mechanical force, cell-matrix interaction, and gene expression; cellular basis of corneal transparency and the role of water-soluble proteins in isolated cell light scattering; three-dimensional and temporal imaging of cells in intact living tissue

Joyce Keyak: Bone mechanics, finite element modeling, quantitative computed tomography, osteoporosis, tumors, radiation therapy

Baruch D. Kuppermann: Diabetic retinopathy, age-related macular degeneration, the ocular complications of AIDS, drug delivery to the posterior segment of the eye, ocular imaging, retinal cell toxicology

Young Jik Kwon: Gene therapy, drug delivery, cancer-targeted therapeutics, stem cell bioreactors, biomaterials, cell and tissue engineering, mathematical modeling

Arthur D. Lander: Systems biology of morphogenesis; spatially dynamic models of development, signaling and growth; developmental control

Richard Lathrop: Computational methods in protein engineering

Thay Lee: Orthopaedic biomechanics, investigating the shoulder, knee, and spine focusing on sports, trauma, and total joint replacement

Guann-Pyng Li: Microelectromechanical systems for biomedical applications

Shin Lin: Electronic and optical measurements of physiological and bioenergetic changes associated with mind-body practices and therapies

John Longhurst: Cardiovascular neural reflex control mechanisms from somatic and visceral regions including the heart and abdominal organs; integrative, central neural regulation of the autonomic outflow, with reference to cardiovascular reflex responses and including regulation of cardiovascular function by acupuncture

John S. Lowengrub: Mathematical material science, mathematical fluid dynamics, mathematical biology, computational mathematics, cancer modeling, nanomaterials, quantum dots, complex fluids

Ray Luo: Computational structural biology, mathematical biology, molecular mechanisms of p53 cancer mutants

Marc J. Madou: Fundamental aspects of micro/nano-electro-mechanical systems (MEMS/NEMS), biosensors, nanofluidics, biomimetics

Sayed (Ali) Mirnajafizadeh: Biomechanics of porcine and bovine pericardial heart valve bioprotheses, design and development of bioreactors for mechanical training of tissue engineered constructs for cardiovascular application, functional tissue engineering

Sabee Molloi: Medical x-ray imaging physics, application of digital radiography to cardiac imaging, coronary artery flow measurement, digital image processing

J. Stuart Nelson: Phototherapy, dermatology, cell biology, biomedical device development

Qing Nie: Cell and developmental biology, systems biology and computational biology, and computational mathematics

David Reinkensmeyer: Skeletal muscle control, biorobotics, rehabilitation

Phillip C.-Y. Sheu: Semantic computing, complex biomedical systems

Andrei Shkel: Silicon integrated micro-electro-mechanical sensors and actuators

- Padhraic Smyth: Applied statistics, pattern recognition, bioinformatics, image analysis, time-series analysis, data mining, and machine learning
- Roger F. Steinert: Lasers for refractive and cataract surgery; artificial lenses and artificial corneas
- Adam Summers: Impact of material properties on the form and structure of organisms
- Vasan Venugopalan: Application of laser radiation for medical diagnostics, therapeutics, and biotechnology; laser-induced thermal, mechanical, and radiative transport processes
- Szu-Wen Wang: Biomolecular engineering, nanostructured biomaterials, drug delivery
- H. Kumar Wickramasinghe: Nano-bio measurements and technology, ultrafast DNA sequencing, single cell assays, nanoscale delivery and measurements within living cells
- Brian Wong: Biomedical optics, tissue engineering, and development of surgical instrumentation
- Albert Yee: Nanofabrication of soft materials, physics of polymer thin films, nanomechanical properties of polymers, ultra-low-k dielectrics, fracture and toughening of polymer nanocomposites
- Tau-Mu Yi: Quantitative description of G-protein signaling, and the analysis of the robustness of biological networks
- Fan-Gang Zeng: Cochlear implants and auditory neuroscience

Affiliated faculty are from the Schools of Biological Sciences, Physical Sciences, and Medicine; the Donald Bren School of Information and Computer Sciences; and The Henry Samueli School of Engineering.

Biomedical engineering combines engineering expertise with medical needs for the enhancement of health care. It is a branch of engineering in which knowledge and skills are developed and applied to define and solve problems in biology and medicine. Students choose the biomedical engineering field to be of service to people, for the excitement of working with living systems, and to apply advanced technology to the complex problems of medical care. Biomedical engineers may be called upon to design instruments and devices, to bring together knowledge from many sources to develop new procedures, or to carry out research to acquire knowledge needed to solve new problems.

During the last 20 years, we have witnessed unprecedented advances in engineering, medical care, and the life sciences. The combination of exploding knowledge and technology in biology, medicine, the physical sciences, and engineering, coupled with the changes in the way health care will be delivered in the next century, provide a fertile ground for biomedical engineering. Biomedical engineering, at the confluence of these fields, has played a vital role in this progress. Traditionally, engineers have been concerned with inanimate materials, devices, and systems, while life scientists have investigated biological structure and function. Biomedical engineers integrate these disciplines in a unique way, combining the methodologies of the physical sciences and engineering with the study of biological and medical problems. The collaboration between engineers, physicians, biologists, and physical scientists is an integral part of this endeavor and has produced many important discoveries in the areas of artificial organs, artificial implants, and diagnostic equipment.

The Department offers a B.S. degree in Biomedical Engineering, a four-year engineering curriculum accredited by the Engineering Accreditation Commission of ABET, Inc. This program prepares students for a wide variety of careers in Biomedical Engineering in industry, hospitals, and research laboratories or for further education in graduate school.

The Department also offers a B.S. degree in Biomedical Engineering: Premedical, a four-year engineering curriculum taken with required premedical courses. It is one of many majors that can serve as preparation for further training in medical, veterinary, or allied health professions. It is also suitable for students interested in pursuing graduate work in Biomedical Engineering and other biomedical areas such as physiology, neurosciences, and bioinformatics. The

curriculum has less engineering content but more biological sciences than the Biomedical Engineering major. The undergraduate major in Biomedical Engineering: Premedical is not designed to be accredited, therefore is not accredited by ABET, Inc.

Areas of graduate study and research include biophotonics, biomedical nanoscale systems, biomedical computational technologies, and tissue engineering.

Undergraduate Major in Biomedical Engineering

Program Educational Objectives: Graduates of the Biomedical Engineering Program will (1) promote continuous improvement in the field of biomedical engineering; (2) communicate effectively the relevant biomedical engineering problem to be solved across the engineering, life science, and medical disciplines; (3) apply critical reasoning as well as quantitative and design skills to identify and solve problems in biomedical engineering; (4) lead and manage biomedical engineering projects in industry, government, or academia that involve multidisciplinary team members. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

Biomedical Engineering students learn engineering and principles of biology, physiology, chemistry, and physics. They may go on to design devices to diagnose and treat disease, engineer tissues to repair wounds, develop cutting-edge genetic treatments, or create computer programs to understand how the human body works.

The curriculum emphasizes education in the fundamentals of engineering sciences that form the common basis of all engineering subspecialties. Education with this focus is intended to provide students with a solid engineering foundation for a career in which engineering practice may change rapidly. In addition, elements of bioengineering design are incorporated at every level in the curriculum. This is accomplished by integration of laboratory experimentation, computer applications, and exposure to real bioengineering problems throughout the program. Students also work as teams in senior design project courses to solve multidisciplinary problems suggested by industrial and clinical experience.

NOTE: Students may complete only one of the following programs: the major in Biomedical Engineering, the major in Biomedical Engineering: Premedical, or the minor in Biomedical Engineering.

ADMISSIONS

High School Students: See page 198.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one year of chemistry (with laboratory), and one additional approved course for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements

Mathematics and Basic Science Courses: Students must complete a minimum of 48 units of mathematics and basic sciences including:

Core Courses: Mathematics 2A-B, 2D, 2J, 3D, 2E, and Statistics 8; Chemistry 1A-B-C and 1LB-LC; Physics 7B/7LB or Physics 7C/7LC; Physics 7D-E, 7LD; Biological Sciences 194S.

Engineering Topics Courses: Students must complete a minimum of 28 units of engineering design including:

Core Courses: ENGR15, EECS12, EECS70A, BME1, BME50A-B, BME110A-B-C, BME111, BME120, BME121, BME130, BME140, BME150, BME160, BME170, BME180A-B-C, BME197.

Engineering Electives: Students select, with the approval of a faculty advisor a minimum of 12 units of engineering topics needed to satisfy school and major requirements.

(The nominal Biomedical Engineering program will require 189 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary).

Optional Specialization in Biophotonics: requires BME135, BME136, and either BME137 or EECS180. These courses will also satisfy the Engineering Electives requirement.

Optional Specialization in Micro and Nano Biomedical Engineering: requires one course from BME145 or EECS179; and two courses from BME146, BME147, or BME148. These courses will also satisfy the Engineering Electives requirement.

PLANNING A PROGRAM OF STUDY

The sample program of study chart shown is typical for the major in Biomedical Engineering. Students should keep in mind that this program is based upon a sequence of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their program approved by their faculty advisor. Biomedical Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisors.

Undergraduate Major in Biomedical Engineering: Premedical

The major program objective is to prepare students for medical school. The curriculum is designed to meet the requirements for admission to medical schools, but is also suitable for those planning to enter graduate school in biomedical engineering, physiology, biology, neurosciences, or related fields. It has less engineering content and more biological sciences than the accompanying Biomedical Engineering major. It is one of many majors that can serve as preparation for further training in medical, veterinary, or allied health professions.

The Biomedical Engineering: Premedical curriculum provides future physicians with a quantitative background in biomechanics, bioelectronics, and biotransport. Such a background is increasingly important because of the heavy utilization of biomedical technology in modern medical practice. The curriculum includes courses in the sciences that satisfy the requirements of most medical schools. The education experience is enriched through a design course where students work as teams to solve Biomedical Engineering problems inspired by the clinical arena at the UCI Medical Center.

ADMISSIONS

High School Students: See page 198.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one year of chemistry (with laboratory), and one additional approved course for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN BIOMEDICAL ENGINEERING: PREMEDICAL

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements

Mathematics and Basic Science Courses: Students must complete a minimum of 48 units of mathematics and basic sciences including: Mathematics 2A-B, 2D, 2J, and 3D; Chemistry 1A-B-C, 1LB-LC, 51A-B-C, and 51LA-LB; Physics 7B/7LB or Physics 7C/7LC; Physics 7D-E and 7LD. Students select, with the approval of a faculty advisor, any additional basic science course needed to satisfy school and major requirements.

Engineering Topics Courses: Students must complete the following engineering topics including: Biological Sciences 97, 98, 99, D103 or D104, 100L, D111L, E112L or M114L or M116L, 194S; EECS12; BME1, BME50A-B, BME110A-B, BME111, BME120, BME121, BME130, BME150, BME160. Students select, with the approval of a faculty advisor, at least three additional engineering topics courses needed to satisfy school and major requirements.

(The nominal Biomedical Engineering: Premedical program will require 190 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary).

MINOR IN BIOMEDICAL ENGINEERING

The minor in Biomedical Engineering requires a total of nine courses—two advanced mathematics courses, five core Biomedical Engineering courses, and two Biomedical Engineering electives. Some of these courses may include prerequisites that may or may not be part of a student's course requirements for their major. Private biomedical industry has indicated a keen interest in engineers that have a more traditional engineering degree (i.e., electrical engineering), but also possess some in-depth knowledge of biomedical systems. Hence, the minor in Biomedical Engineering is designed to provide a student with the introductory skills necessary to perform as an engineer in the biomedical arena.

Admissions. Students interested in the minor in Biomedical Engineering must apply through The Henry Samueli School of Engineering Student Affairs Office and must have a UCI cumulative GPA of 2.5 or higher.

NOTE: Students may not receive both a minor in Biomedical Engineering and a specialization in Biochemical Engineering within the Chemical Engineering major.

Requirements for the Minor in Biomedical Engineering

Mathematics Courses: Mathematics 2J, 3D.

Engineering Topics Courses: BME1, BME50A-B, BME120, BME121.

Technical Electives: Students select, with the approval of a faculty advisor, two technical elective courses: BME110A, BME110B, BME130, BME135 (same as Biological Sciences D130), BME136, BME140, BME160, BME199, CBEMS124, CBEMS126, CBEMS154, EECS179, EECS188.

Graduate Study in Biomedical Engineering

The Biomedical Engineering faculty have special interest and expertise in four thrust areas: Biophotonics, Biomedical Nanoscale Systems, Biomedical Computational Technologies, and Tissue Engineering. Biophotonics faculty are interested in photomedicine, laser microscopy, optical coherence tomography, medical imaging, and phototherapy. Biomedical Nanoscale Systems faculty are interested in molecular engineering, polymer chemistry, molecular motors, design and fabrication of microelectromechanical systems (MEMS), integrated microsystems to study intercellular signaling, and single molecule studies of protein dynamics. Biomedical Computation faculty are interested in computational biology, biomedical signal and image processing, bioinformatics, computational methods in protein engineering, and data mining.

The Department offers the M.S. and Ph.D. degrees in Biomedical Engineering.

Required Background

Because of its interdisciplinary nature, biomedical engineering attracts students with a variety of backgrounds. Thus, the requirements for admission are tailored to students who have a bachelor's degree in an engineering, physical science, or biological science discipline, with a grade point average of 3.0 or higher in their upper-division course work. The minimum course work requirements for admission are six quarters of calculus through linear algebra and ordinary differential equations, three quarters of calculus-based physics, three quarters of chemistry, and two quarters of biology. Students without a physics, chemistry, or engineering undergraduate degree may be required to take additional relevant undergraduate engineering courses during their first year in the program; any such requirements will be specifically determined by the BME Graduate Committee on a case-by-case basis and will be made known to the applicant at the time of acceptance to the program.

The recommended minimum combined verbal and quantitative portion of the GRE is 1200, or a minimum combined MCAT score in Verbal Reasoning, Physical Sciences, and Biological Sciences problems of 30. A minimum score of 600 on the Test of English as a Foreign Language (TOEFL) is recommended of all international students whose native language is not English. In addition, all applicants must submit three letters of recommendation.

Exceptionally promising UCI undergraduates may apply for admission through The Henry Samueli School of Engineering's accelerated M.S. and M.S./Ph.D. program, however, these students must satisfy the course work and letters of recommendation requirements described above.

Core Requirement

All students are required to take a set of core courses which total 23 units: BME210, BME220, BME221, BME230A, BME230B, BME240.

Elective Requirement

The remaining 13 units required to fulfill the course requirements for the M.S. and Ph.D. degree are comprised of elective courses offered within The Henry Samueli School of Engineering and the Schools of Biological Sciences, Physical Sciences, and Medicine.

A minimum of eight of the elective units must be taken from The Henry Samueli School of Engineering. The group of elective courses must be approved by the BME Graduate Committee, for M.S. students, or, for Ph.D. students, the student's graduate advisory committee, and are chosen to meet the specific needs of each student. The electives must provide breadth in biomedical engineering, but also provide specific skills necessary to the specific research the student may undertake as part of the degree requirements.

Areas of Emphasis

Although a student is not required to formally choose a specific research focus area, four research thrust areas have been identified for the program: Biophotonics, Biomedical Nanoscale Systems, Biomedical Computational Technologies, and Tissue Engineering. These areas capitalize on existing strengths within The Henry Samueli School of Engineering and UCI as a whole, interact in a synergistic fashion, and will train biomedical engineers who are in demand in both private industry and academia.

Biophotonics. This research area includes the use of light to probe individual cells and tissues and whole organs for diagnostic and therapeutic purposes. The research areas include both fundamental investigation on the basic mechanisms of light interaction with biological systems and the clinical application of light to treat and diagnose disease. Current and future foci of the faculty are (1) microscope-based optical techniques to manipulate and study cells and organelles; (2) development of optically based technologies for the non-invasive diagnosis of cells and tissues using techniques that include fiber-optic-based sensors, delivery systems, and imaging systems; and (3) development of optically based devices for minimally invasive surgery.

Nanoscale Systems. This class of research areas encompasses the understanding, use, or design of systems that are at the micron or submicron level. Current strengths within The Henry Samueli School of Engineering and the UCI faculty as a whole include biomaterials, micro-electromechanical systems (MEMS), and the design of new biomedical molecules. The focus of biomedical engineering research in this area is the integration of nanoscale systems with the needs of clinical medicine. Projected areas of growth include (1) micro-electromechanical systems (MEMS) for biomedical devices and biofluid assay; (2) programmable DNA/molecular microchip for sequencing and diagnostics; and (3) biomaterials and self-assembled nanostructures for biosensors and drug delivery.

Biomedical Computational Technologies. Biomedical computational technologies include both advanced computational techniques, as well as advanced biomedical database systems and knowledge-base systems. Computational technologies that will be developed in this research area include (1) methods for biomedical analysis and diagnosis such as physical modeling of light-tissue interactions, atomic-level interactions, image processing, pattern recognition, and machine-learning algorithms; (2) language instruction and platform standardization; and (3) machine-patient interfaces. Areas of research related to biomedical database systems include the development of new technologies which can capture the rich semantics of biomedical information for intelligent reasoning.

Tissue Engineering. The term *tissue engineering* was officially coined at a National Science Foundation workshop in 1988 to mean "the application of principles and methods of engineering and life sciences toward fundamental understanding of structure-function relationships in normal and pathological mammalian tissues and the development of biological substitutes to restore, maintain, or improve tissue function." Tissue engineering draws on experts from chemical engineering, materials science, surgery, genetics, and related disciplines from engineering and the life sciences. Much of the current research in the field involves growing

cells in three-dimensional structures instead of in laboratory dishes. For the most part, cells grown in a flat dish tend to behave as individual cells. But grow a cell culture in a three-dimensional structure, and the cells begin to behave as they would in a tissue or organ. Tissue engineers are testing different methods of growing tissue and organ cells in three-dimensional scaffolds that dissolve once the cells reach a certain mass. The hope is that these cell cultures will mature into fully functional tissues and organs.

MASTER OF SCIENCE DEGREE

The M.S. degree requires conducting a focused research project and completing designated course work. Students must select a thesis advisor and complete an original research investigation including a written thesis, and obtain approval of the thesis by a thesis committee.

In addition, students must successfully complete a minimum of 36 units of course work beyond the bachelor's degree, at least 28 of which must be at the 200 level including the 23 units of core course requirements. A maximum of eight M.S. research units (i.e., BME296) may be applied toward the 36-unit requirement. The degree will be granted upon the recommendation of the Chair of the Department of Biomedical Engineering and The Henry Samueli School of Engineering Associate Dean of Student Affairs.

DOCTOR OF PHILOSOPHY DEGREE

The Ph.D. degree requires the achievement of an original and significant body of research that advances the discipline. Students with a B.S. degree may enter the Ph.D. program directly, provided they meet the background requirements described above. The Graduate Committee will handle applicants on a case-by-case basis, and any specific additional courses required by the student will be made explicit at the time of admission.

Each student is matched with a faculty advisor, and an individual program of study is designed by the student and a faculty advisory committee. Two depth courses are required beyond that of the M.S. degree in preparation for the qualifying examination. Four milestones are required: (1) successful completion of 36 units of course work beyond the bachelor's degree, at least 28 of which must be at the 200 level including the 23 units of core course requirements; (2) successful completion of a preliminary examination at the Ph.D. competency level; (3) formal advancement to candidacy by successfully passing a qualifying examination; and (4) completion of a significant body of original research and the submission of an acceptable written dissertation and its successful oral defense.

The preliminary examination will normally be taken at the end of the first year (May). A student must take it within two years of matriculating in the program, and must either have passed all of the core courses or have an M.S. degree prior to taking the examination. The Preliminary Examination Committee prepares the examination and sets the minimum competency level for continuing on in the Ph.D. program. Students who fail to pass at the Ph.D. level may retake the examination the following year. Students who fail the second attempt will not be allowed to continue in the program. However, they may be eligible to receive a Master's degree upon completion of an original research investigation including a written thesis (refer to Master of Science Degree requirements). In the event a Ph.D. student decides not to continue in the program, the thesis-only option for the M.S. degree will still be enforced. After passing the preliminary examination at the Ph.D. competency level, students are matched with a BME faculty advisor and design an individual program of study with their advisor.

Advancement to candidacy must be completed by the end of the summer of the second year following the passing of the preliminary examination. (Special exceptions can be made, but a formal request with justification must be supplied in writing to the Associate Chair of Biomedical Engineering and Director of Graduate

Studies.) Students who do not pass the qualifying examination within two quarters after the summer of their second year will be ineligible to continue in the program. The qualifying examination follows campus and The Henry Samueli School of Engineering guidelines and consists of an oral and written presentation of original work completed thus far, and a coherent plan for completing a body of original research. The qualifying examination is presented to the student's graduate advisory committee, which is selected by the student and faculty advisor and must have a minimum of five faculty (including the faculty advisor). Of these five faculty, three must be BME faculty. In addition, one faculty member must have his/her primary appointment outside the Department of Biomedical Engineering. The fifth member must have his/her primary appointment outside of The Henry Samueli School of Engineering.

The Ph.D. is awarded upon submission of an acceptable written dissertation and its successful oral defense. The degree is granted upon the recommendation of the graduate advisory committee and the Dean of Graduate Studies. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

GRADUATE PROGRAM IN MATHEMATICAL AND COMPUTATIONAL BIOLOGY

The graduate program in Mathematical and Computational Biology (MCB) is a one-year "gateway" program designed to function in concert with selected department programs, including the Ph.D. in Biomedical Engineering. Detailed information is available online at <http://mcsb.bio.uci.edu/> and in the School of Biological Sciences section of the *Catalogue*.

Courses in Biomedical Engineering

LOWER-DIVISION

BME1 Introduction to Biomedical Engineering (3) F. Introduction to the central topics of biomedical engineering. Offers a perspective on bioengineering as a discipline in a seminar format. Principles of problem definition, team design, engineering inventiveness, information access, communication, ethics, and social responsibility are emphasized. (Design units: 1)

BMEH10 Honors Engineering within the Cell (4) S. An engineer's view of cellular processes. Introduction to the cell; structure and function of DNA, RNA, and protein; thermodynamics; energy and catalysis, conversion of chemical energy to mechanical motion; feedback and control of gene expression; networks and cell-to-cell signaling. Prerequisite: admission to the Campuswide Honors Program.

BMEH11 Honors Molecular Biotechnology (4) S. Overview of engineering applications of cellular analyses; engineering of cells for manufacturing or sensing purposes. Analysis of DNA and protein; DNA sequencing; PCR; cloning; transgenic cells and animals; stem cells, antibodies, engineering and production of fusion proteins. Prerequisite: admission to the Campuswide Honors Program.

BME50A-B Cell and Molecular Engineering (4-4) W, S. Physiological function from a cellular, molecular, and biophysical perspective. Applications to bioengineering design. (Design units: 2-2)

UPPER-DIVISION

BME110A-B-C Biomechanics I, II, III (4-4-4) F, W, S. Introduction to continuum mechanics of both living and non-living systems. Laws of motion and free-body diagrams. Stresses, deformation, compatibility conditions, and constitutive equations. Properties of common fluids and solids. Field equations and boundary conditions. Applications to bioengineering designs. Prerequisites: Physics 7D, 7LD, 7E. BME110A-B and BMEH110A-B may not both be taken for credit. BME110A-B-C must be taken in the same academic year. (Design units: 1-1-1)

BMEH110A-B Honors Biomechanics I, II (4-4) F, W. Covers the same material as BME110A-B but in greater depth. Prerequisites: Physics 7D, 7LD, 7E and admission to the Campuswide Honors Program. BMEH110A-B and BME110A-B may not both be taken for credit. (Design units: 1-1)

BME111 Design of Biomaterials (4) S. Natural and synthetic polymeric materials. Metal and ceramics implant materials. Materials and surface characterization and design. Wound repair, blood clotting, foreign body response, transplantation biology, biocompatibility of material. Artificial organs and medical devices. Government regulations. Corequisite or prerequisite: BME 50B. (Design units: 3)

BME120 Quantitative Physiology: Sensory Motor Systems (4) F. A quantitative and systems approach to understanding physiological systems. Systems covered include the nervous and musculoskeletal systems. Prerequisite: Mathematics 3D or equivalent, or consent of instructor. Concurrent with BME220. (Design units: 2)

BME121 Quantitative Physiology: Organ Transport Systems (4) W. A quantitative and systems approach to understanding physiological systems. Systems covered include the cardiopulmonary, circulatory, and renal systems. Prerequisite: Mathematics 3D or equivalent, or consent of instructor. Same as CBEMS104. Concurrent with BME221, CBEMS204. (Design units: 1)

BME130 Biomedical Signals and Systems (4) F. Analysis of analog and digital biomedical signals; Fourier series expansions; difference and differential equations; convolution. System models: discrete-time and continuous-time linear time-invariant systems; Laplace and Fourier transforms. Analysis of signals and systems using computer programs. Prerequisites: Mathematics 2J and 3D; Mathematics 7 recommended. (Design units: 1)

BME135 Photomedicine (4). Studies the use of optical and engineering-based systems (laser-based) for diagnosis, treating diseases, manipulation of cells and cell function. Physical, optical, and electro-optical principles are explored regarding molecular, cellular, organ, and organism applications. Prerequisites: Physics 3A-B-C or 7A-B-D, or EECS12 or consent of instructor. Same as Biological Sciences D130. (Design units: 0)

BME136 Engineering Optics for Medical Applications (4). Fundamentals of optical systems design, integration, and analysis used in biomedical optics. Design components: light sources, lenses, mirrors, dispersion elements, optical fibers, detectors. Systems integration: microscopy, radiometry, interferometry. Optical system analysis: resolution, modulation transfer function, deconvolution, interference, tissue optics, noise. Prerequisites: BME130, BME135; EECS180 or consent of instructor. Concurrent with BME236. (Design units: 3)

BME137 Introduction to Biomedical Imaging (4). Introduction to imaging modalities widely used in medicine and biology, including x-ray, computed tomography (CT), nuclear medicine (PET and SPET), ultrasonic imaging, magnetic resonance imaging (MRI), optical tomography, imaging contrast, imaging processing, and complementary nature of the imaging modalities. Prerequisite: BME130, EECS150A, or EECS150B; or equivalent. (Design units: 1)

BME140 Design of Biomedical Electronics (4) W. Analog and digital circuits in bioinstrumentation. AC and DC circuit analysis, design and construction of filter and amplifiers using operational amplifier, digitization of signal and data acquisition, bioelectrical signal, design and construction of ECG instrument, bioelectrical signal measurement and analysis. Prerequisites: BME130 and EECS70A. (Design units: 3)

BME145 MEMS and Nanotechnology for Biomedicine and Biotechnology (4). Basic concepts of MEMS and nanotechnology, its application to biotechnology/biomedicine. Introduction to scaling laws as applied toward living systems and artificial devices; micro- and nanofabrication; sensor and actuator principles; drug delivery, implantable systems, minimally invasive surgery, total analysis systems. (Design units: 1)

BME146 Miniaturization in Biotechnology and Biological Science (4). Introduction of BIOMEMS to engineering and science students. Study of various sensing technique fundamentals. Introduction to various biosensors. Introduction to biological principles using examples; nanomachining and biomimetics. (Design units: 1)

BME147 Microfluidics and Lab-on-a-Chip (4). Essential concepts of fluid transport at the micro and nano scales. Design, fabrication, and operation principles of microfluidic devices for bioassays. Applications discussed include health monitoring, cell-based assays, genetic analysis, drug discovery, drug delivery, molecular diagnostics and biotetection. Prerequisites: BME111 and EECS179, or consent of instructor. (Design units: 1)

BME148 Microimplants (4). Essential concepts of biomedical implants at the micro scale. Design, fabrication, and applications of several microimplantable devices including cochlear, retinal, neural, and muscular implants. Prerequisites: BME111 and EECS179, or consent of instructor. Concurrent with BME248. (Design units: 1)

BME150 Biotransport Phenomena (4). Fundamentals of heat and mass transfer, similarities in rate equations. Applications to biological mass transport at cellular and systems level. Methods and instruments used to measure quantitatively mass transfer processes, including microcirculation. Emphasis on practical application of fundamental principles. Prerequisites: BME110A-B. BME150 and CBEMS125C may not both be taken for credit. (Design units: 1)

BME160 Tissue Engineering (4) S. Quantitative analysis of cell and tissue functions. Emerging developments in stem cell technology, biodegradable scaffolds, growth factors, and others important in developing clinical products. Applications to bioengineering design. Prerequisites: BME50A-B, BME121. (Design units: 2)

BME170 Biomedical Engineering Laboratory (4) S. Introduction to measurement and analysis of biological systems using engineering tools and techniques. Laboratory experiments involve living systems with emphasis on biophotonics, BIOMEMS, and physiological systems. Labs include Spectroscopy, BIOMEMS Fabrication and Characterization, Principles of the Pulse Oximeter, and Neuroengineering. Prerequisites: BME111, BME120, BME121, BME130, BME140. (Design units: 1)

BME180A-B-C Biomedical Engineering Design (3-3-3) F, W, S. Design strategies, techniques, tools, and protocols commonly encountered in biomedical engineering; clinical experience at the UCI Medical Center and Beckman Laser Institute; industrial design experience in group projects with local biomedical companies; ethics, economic analysis, marketing, and FDA product approval. Prerequisites: BME111, BME120, BME121, BME140. Open only to senior BME majors. In-progress grading. BME180A-B-C must be taken in the same academic year. (Design units: 3-3-3)

BME195 Special Topics in Biomedical Engineering (1 to 4). Prerequisites vary. May be repeated for credit. (Design units: varies)

BME197 Seminars in Biomedical Engineering (1) F. Presentation of advanced topics and reports of current research efforts in Biomedical Engineering. Prerequisite: senior standing. Concurrent with BME298. (Design units: varies)

BME199 Individual Study (1 to 4). Independent research conducted in the laboratory of a Biomedical Engineering core faculty member. A formal written report of the research conducted is required at the conclusion of the quarter. Prerequisites: Biological Sciences 194S and consent of instructor. May be repeated for credit. (Design units: varies)

GRADUATE

BME200 Introduction to Biomedical Engineering (3). Offers a perspective on bioengineering as a discipline in a seminar format. Principles of problem definition, team design, engineering inventiveness, information access, communication, ethics, and social responsibility are emphasized.

BME210 Cell and Tissue Engineering (4). A biochemical, biophysical, and molecular view of cell biology. Topics include the biochemistry and biophysical properties of cells, the extracellular matrix, biological signal transduction, and principles of engineering new tissues.

BME213 Systems Cell and Developmental Biology (4). Introduces concepts needed to understand cell and developmental biology at the systems level, i.e., how the parts (molecules) work together to create a complex output. Emphasis on using mathematical/computational modeling to expand/modify insights provided by intuition. Same as Developmental and Cell Biology 232.

BME220 Quantitative Physiology: Sensory Motor Systems (4). A quantitative and systems approach to understanding physiological systems. Systems covered include the nervous and musculoskeletal systems. Concurrent with BME120.

BME221 Quantitative Physiology: Organ Transport Systems (4). A quantitative and systems approach to understanding physiological systems. Systems covered include the cardiopulmonary, circulatory, and renal systems. Same as CBEMS204. Concurrent with BME121 and CBEMS104.

BME223 Advanced Cardiovascular Biomechanics (3). Considers the modern developments in cardiovascular biomechanics at an advanced mathematical level. Selected topics in the dynamics of the heart and blood vessels, pulsatile blood flow, microcirculation, and muscle mechanics. Also considers modeling of boundary value problems in cardiovascular engineering.

BME230A Applied Engineering Mathematics I (4). Analytical techniques applied to engineering problems in transport phenomena, process dynamics and control, and thermodynamics.

BME230B Applied Engineering Mathematics II (4). Advanced engineering mathematics for biomedical engineering. Focuses on biomedical system identification. Includes fundamental techniques of model building and testing such as formulation, solution of governing equations (emphasis on basic numerical techniques), sensitivity theory, identifiability theory, and uncertainty analysis.

BME233 Dynamic Systems in Biology and Medicine (4). Introduces elements of system theory and application of these principles to analyze biomedical, chemical, social, and engineering systems. Students use analytical and computational tools to model and analyze various dynamic systems such as population dynamics, Lotka-Volterra equation, and others.

BME236 Engineering Optics for Medical Applications (4). Fundamentals of optical systems design, integration, and analysis used in biomedical optics. Design components: light sources, lenses, mirrors, dispersion elements, optical fibers, detectors. Systems integration: microscopy, radiometry, interferometry. Optical system analysis: resolution, modulation transfer function, deconvolution, interference, tissue optics, noise. Prerequisites: BME130, BME135; EECS180 or consent of instructor. Concurrent with BME136.

BME240 Introduction to Clinical Medicine for Biomedical Engineering (3). An introduction to clinical medicine for graduate students in biomedical engineering. Divided between lectures focused on applications of advanced technology to clinical problems and a series of four rotations through the operating room, ICU, interventional radiology/imaging, and endoscopy. Formerly Engineering 240.

BME248 Microimplants (4). Essential concepts of biomedical implants at the micro scale. Design, fabrication, and applications of several microimplantable devices including cochlear, retinal, neural, and muscular implants. Prerequisites: BME111 and EECS179, or consent of instructor. Concurrent with BME148.

BME261 Biomedical Microdevices I (3). In-depth review of microfabricated devices designed for biological and medical applications. Studies of the design, implementation, manufacturing, and marketing of commercial and research bio-MEMS devices. Formerly BME261A.

BME262 Microfluidics (3). An advanced course on microfluidics research and its application in Biomedical Engineering. Offers in-depth perspective on different fabrication methods and different microfluidic devices that are used in Biomedical Engineering. The principles of microfabrication, surface treatment, device design, and application are covered. Prerequisites: advanced courses in mathematics, physics, and chemistry.

BME263 Microsystem Technologies for Biomolecular Assays (3). Introduction to state-of-the-art micro Total Analysis Systems (mTAS) for biomolecular assays, device design principles for microscale sample preparation, flow transport, biomolecular manipulation/separation/detection, technologies for integrating these devices into microsystems. Applications include clinical medicine, health monitoring, biotechnology, biodetection.

BME295 Special Topics in Biomedical Engineering (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topics vary.

BME296 Master of Science Thesis Research (1 to 12). Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. in Engineering. Prerequisite: consent of instructor. May be repeated for credit.

BME297 Doctor of Philosophy Dissertation Research (1 to 12). Individual research or investigation conducted in the pursuit of preparing and completing the dissertation required for the Ph.D. in Engineering. Prerequisite: consent of instructor. May be repeated for credit.

BME298 Seminars in Biomedical Engineering (1) F, W, S. Presentation of advanced topics and reports of current research efforts in biomedical engineering. Designed for graduate students in the biomedical engineering program. Satisfactory/Unsatisfactory only. May be repeated for credit. Concurrent with BME197.

BME299 Individual Research (1 to 12). Individual research or investigation under the direction of an individual faculty member. Prerequisite: consent of instructor. May be repeated for credit.

DEPARTMENT OF CHEMICAL ENGINEERING AND MATERIALS SCIENCE

916F Engineering Tower; (949) 824-3426
Stanley B. Grant, **Department Chair**

Faculty

Nancy A. Da Silva: Molecular biotechnology, metabolic engineering, environmental biotechnology

James C. Earthman: Fatigue behavior and cyclic damage, automated materials testing and diagnostics, high-temperature fracture, biomaterials, green materials

Stanley B. Grant: Environmental engineering, coastal water quality, coagulation and filtration of colloidal contaminants, environmental microbiology

Henry C. Lim: Bioreaction and bioreactor engineering

Martha L. McCartney: Grain boundary engineering of ceramics, superplastic ceramics, solid oxide fuel cell materials, ceramics for nuclear waste storage

Farghalli A. Mohamed: Mechanical properties, creep, superplasticity, correlations between properties of materials and their microstructure, mechanical behavior at the nanoscale

Ali Mohraz: Guided and self assembly of colloids, soft matter physics, microstructured materials synthesis for energy and biomimetic application, colloids for environmental remediation

Daniel R. Mumm: Enabling materials for energy systems and propulsion (solid oxide fuel cells, thermal barrier coatings, electrochemical ceramics), interface mechanics, materials behavior at high temperature, lightweight/multi-functional structures, nanostructural materials, electron microscopy and microanalysis

Mikael Nilsson: Chemical processes in the nuclear fuel cycle; solvent extraction and chemical separations; actinide chemistry; phase transport phenomena in multiphase system

Andrew J. Putnam: Cellular signaling in engineered extracellular micro-environments; biomaterials; cell and tissue engineering

Regina Ragan: Self-assembly of hybrid organic/inorganic nanostructures for nanoelectronic and sensing applications; correlating electron transport and optical properties with atomic and molecular structure

Frank G. Shi: Materials for optoelectronics devices and packaging, device packaging technologies

Vasan Venugopalan: Application of laser radiation for medical diagnostics, therapeutics and biotechnology; laser-induced thermal, mechanical, and radiative transport processes

Szu-Wen Wang: Biomolecular engineering, interfacial engineering, nanostructured biomaterials, drug delivery

Albert Yee: Nanofabrication of soft materials, physics of polymer thin films, nanomechanical properties of polymers, ultra-low-k dielectrics, fracture and toughening of polymer nanocomposites

Affiliated Faculty

Zhongping Chen: Biomedical optics, optical coherence tomography, bioMEMS, and biomedical devices

William J. Cooper: Environmental chemistry, advanced oxidation processes for water treatment, aquatic photochemistry of carbon cycling

Steven C. George: Physiological and multi-scale integrative modeling, gas exchange, computational methods, tissue engineering

G. Wesley Hatfield: Molecular mechanisms of biological control systems

Young Jik Kwon: Gene therapy, drug delivery, cancer-targeted therapeutics, stem cell bioreactors, biomaterials, cell and tissue engineering, mathematical modeling

Guann-Pyng Li: High-speed semiconductor technology, optoelectronic devices, integrated circuit fabrication and testing

John S. Lowengrub: Mathematical materials science, mathematical fluid dynamics, mathematical biology, computational mathematics, cancer modeling, nanomaterials, quantum dots, complex fluids

Marc J. Madou: Fundamental aspects of micro/nano-electro-mechanical systems (MEMS/NEMS), biosensors, nanofluidics, biomimetics

Roger H. Rangel: Fluid dynamics and heat transfer of multiphase systems including spray combustion, atomization, and metal spray solidification; applied mathematics and computational methods

Peter M. Rentzepis: Physical chemistry and picosecond spectroscopy

Diego Rosso: Environmental process engineering, mass transfer, wastewater treatment, carbon- and energy-footprint analysis

Kenneth J. Shea: Organic, polymer, and analytical chemistry

Lizhi Sun: Mechanics and materials, composites, micro- and nano-mechanics, elastography xdx

Lorenzo Valdevit: Multifunctional sandwich structures, thermal protection systems, morphing structures, active materials, MEMS, electronic packaging, cell mechanics

H. Kumar Wickramasinghe: Nanoscale measurements and characterization, scanning probe microscopy, storage technology, nano-bio measurement technology

Affiliated faculty are from The Henry Samueli School of Engineering, the School of Medicine, and the School of Physical Sciences.

The Department of Chemical Engineering and Materials Science offers the B.S. degree in Chemical Engineering, the B.S. degree in Materials Science Engineering, the M.S. and Ph.D. degrees in Chemical and Biochemical Engineering, and the M.S. and Ph.D. degrees in Materials Science and Engineering.

Undergraduate Major in Chemical Engineering

Program Educational Objectives: Graduates of the program will (1) demonstrate a broad knowledge in the field of chemical engineering; (2) demonstrate critical reasoning and the requisite quantitative skills in seeking solutions to chemical engineering problems; (3) demonstrate skills for effective communication and teamwork; (4) effectively lead chemical engineering projects in industry, government, or academia; (5) exhibit a commitment to lifelong learning. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

Chemical Engineering uses knowledge of chemistry, mathematics, physics, biology, and humanities to solve societal problems in areas such as energy, health, the environment, food, clothing, shelter, and materials and serves a variety of processing industries whose vast array of products include chemicals, petroleum products, plastics, pharmaceuticals, foods, textiles, fuels, consumer products, and electronic and cryogenic materials. Chemical engineers also serve society in improving the environment by reducing and eliminating pollution.

The undergraduate curriculum in Chemical Engineering builds on basic courses in chemical engineering, other branches of engineering, and electives which provide a strong background in humanities and human behavior. Elective programs developed by the student with a faculty advisor may include such areas as applied chemistry, biochemical engineering, chemical reaction engineering, chemical processing, environmental engineering, materials science, process control systems engineering, and biomedical engineering.

ADMISSIONS

High School Students: See page 198.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one year of general chemistry (with laboratory), and one additional approved course for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN CHEMICAL ENGINEERING

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements:

Mathematics and Basic Science Courses: Mathematics 2A-B, 2D, 2J, 3D, and 2E; Chemistry 1A-B-C, 1LB-LC; 51A-B-C, 51LA-LB or H52A-B-C, H52LA-LB, 130B-C or 131A-B; Physics 7B/7LB or Physics 7C/7LC; and Physics 7D and 7LD.

Engineering Topics Courses: Students must complete a minimum of 18 units of engineering design. Engineering MAE10 or CEE10 or EECS10, ENGR54, CBEMS45A-B-C, CBEMS110, CBEMS125A-B-C, CBEMS130, CBEMS135, CBEMS140A-B, and CBEMS149A-B. Students select, with the approval of a faculty advisor, any additional engineering topics courses needed to satisfy school and department requirements.

Technical Elective Courses: Students select, with the approval of a faculty advisor, a minimum of 22 units of technical electives. Students may select an area of specialization and complete the associated requirements, as shown below.

(The nominal Chemical Engineering program will require 192 units of courses to satisfy all university and major requirements. Students typically need at least 17 units of engineering topics from technical electives to meet school requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

Engineering Professional Topics Course: ENGR190W.

Specialization in Biochemical Engineering: requires CBEMS112 or CBEMS134 and a minimum of 8 units from CBEMS124, CBEMS132, CBEMS199 or H199 (up to 4 units), CEE166, Biological Sciences 98, Biological Sciences 99, or Biological Sciences M128.

Specialization in Environmental Engineering: requires one course from CBEMS116, CBEMS199 or H199 (at least 3 units), CEE161. Also requires a minimum of two courses from CEE162, CEE163, CEE168, CEE171, CEE172, MAE110, MAE115, MAE164.

Specialization in Materials Science: requires a minimum of 12 units from ENGR150 (requires ENGR30, not included in total), CBEMS154, CBEMS155, CBEMS157, CBEMS158, CBEMS163, CBEMS174, CBEMS175, CBEMS191, CBEMS199 or H199 (up to 4 units), MAE155.

PLANNING A PROGRAM OF STUDY

The sample program of study chart shown is typical for the major in Chemical Engineering. Students should keep in mind that this program is based upon a sequence of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their program approved by their faculty advisor. Chemical Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisors.

Undergraduate Major in Materials Science Engineering

During the first several years following graduation, the graduates of the Materials Science and Engineering undergraduate program are expected to reach these objectives: (1) utilize a solid background and broad knowledge in the application of the four primary elements of Materials Science and Engineering (*structure, properties, processing, and performance*) to engineered systems; (2) apply, whenever appropriate, design concepts and constraints that relate to materials (electronic, atomistic, molecular, microstructural, mesoscopic, macroscopic) as well as the design of engineering processes and systems (safety, economic, manufacturability, environmental, ethical, and social); (3) show a sense of community, ethical responsibility, and professionalism in handling duties and performing tasks; (4) demonstrate independence and critical thinking in seeking optimum solutions for problems related to materials selections, and design; (5) communicate effectively with others (orally, in writing, and by listening); (6) work efficiently as a team player to solve open-ended problems that deal with materials selections and designs; (7) exhibit a commitment to continue the process of education and self-learning not only in the field of Materials Science and Engineering but also in other related fields.

Since the beginning of history, materials have played a crucial role in the growth, prosperity, security, and quality of human life. In fact, materials have been so intimately related to the emergence of human culture and civilization that anthropologists and historians have identified early cultures by the name of the significant materials dominating those cultures. These include the stone, bronze, and iron ages of the past. At the present time, the scope of materials science and engineering has become very diverse; it is no longer confined to topics related to metals and alloys but includes those relevant to ceramics, composites, polymers, biomaterials, nanostructures, intelligent materials, and electronic devices. In addition, present activities in materials science and engineering cover not only areas whose utility can be identified today, but also areas whose utility may be unforeseen. The services of materials scientists and engineers are required in a variety of engineering operations dealing, for example, with emerging energy systems, design of semiconductors and optoelectronic and nano devices, development of new technologies based on composites and high-temperature superconductivity, biomedical products, performance (e.g., quality, reliability, safety, energy efficiency) in automobile and aircraft components, improvement in nondestructive testing techniques, corrosion behavior in refineries, radiation damage in nuclear power plants, and fabrication of advanced materials.

The undergraduate major in Material Science Engineering (MSE) provides students with a thorough knowledge of basic engineering and scientific principles. The undergraduate curriculum in MSE includes (a) a core of Chemistry, Physics, and Mathematics; (b) basic Engineering courses; (c) Materials and Engineering core;

and (d) technical courses in Materials Science, Engineering, and Sciences.

Because of the interdisciplinary nature of MSE and its intimate relations with other Engineering disciplines (Aerospace, Biomedical, Chemical, Civil, Computer, Electrical, Environmental, and Mechanical Engineering), qualified students will be able to satisfy in a straightforward manner the degree requirements of their Engineering major and the MSE major.

ADMISSIONS

High School Students: See page 198.

Transfer Students: Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one year of general chemistry (with laboratory), and one additional approved course for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN MATERIALS SCIENCE ENGINEERING

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements:

Mathematics and Basic Science Courses:

Core Courses: Mathematics 2A-B, 2D, 2J, 3D, and 2E; Chemistry 1A-B-C and 1LE; and Physics 7B/7LB or Physics 7C/7LC; Physics 7D-E and 7LD.

Basic Engineering or Science Elective Courses: Students must complete one course from: Biology 93, Chemistry 51A, Physics 51A, Mathematics 7, BME50A, CEE20, EECS70B, MAE52, MAE80 or CEE80.

Engineering Topics Courses: Students must complete a minimum of 22 units of engineering design.

Core Courses: Engineering MAE10, MAE30/ENGR30 (or CEE30), CBEMS45B-C or MAE91, CBEMS50L, CBEMS125A or MAE130A, CBEMS125B or MAE120, CBEMS155, CBEMS155L, CBEMS160, CBEMS164, CBEMS165, CBEMS169, CBEMS175, CBEMS189A-B-C, CBEMS190A-B-C, ENGR54, ENGR150, MAE150L, EECS70A.

Engineering Electives: Students must complete a minimum of 19 units from BME50A, BME110A-B, BME111, BME120, CBEMS110, CBEMS130, CBEMS154, CBEMS157, CBEMS158, CBEMS163, CBEMS174, CBEMS191, CBEMS199 or CBEMSH199, EECS70B, EECS170LA, EECS170B, EECS174, EECS176, EECS180, MAE106, MAE145, MAE147, MAE151, MAE152, MAE155, MAE157, MAE165, or MAE170. Students select, with the approval of a faculty advisor, any additional engineering topics courses needed to satisfy school and department requirements.

Engineering Professional Topics Course: ENGR190W.

(The nominal Materials Science Engineering program will require 187 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary. Dual engineering majors are reminded that they are required to satisfy all requirements of both majors individually. Students

should not assume that courses for one, such as senior design, will satisfy the requirements of the other, without prior approval.)

Students interested in Materials Science Engineering are advised to take CBEMS5. Students majoring in MSE may elect, with approval of their faculty advisor, to use available engineering electives to complete one of the following specializations.

Specialization in Biomaterials: Requires a minimum of 14 units from CBEMS154, CBEMS199 or H199, BME50A, BME110A-B, BME111, BME120.

Specialization in Electronics Processing and Materials:

Requires a minimum of 14 units from CBEMS174, CBEMS199 or H199 (up to 3 units), EECS70B, EECS170LA, EECS174, EECS175, and MAE165.

Specialization in Materials and Mechanical Design: Requires a minimum of 14 units from CBEMS199 or H199 (up to 3 units), MAE106, MAE145, MAE147, MAE151, MAE152, MAE155, MAE157, and MAE170.

MINOR IN MATERIALS SCIENCE ENGINEERING

The interdisciplinary field of materials science and engineering has become critical to many emerging areas of advanced technology and their applications. As a result, there are needs and opportunities for engineers and scientists with education and training in materials science and engineering. The goal of the minor in Materials Science Engineering (MSE) is to provide students at UCI with such education and training that will enable them, upon graduation, to not only participate in projects or programs of an interdisciplinary nature but also address challenging societal needs and complex technological advances.

Admission. Admission in the MSE minor requires a minimum 2.5 overall UCI GPA. Students will need to apply through the Department of Chemical Engineering and Materials Science. Students are required to complete all prerequisites for required courses and selected electives. In particular, students need to complete the following courses before applying: Chemistry 1A and Chemistry 1LE; Mathematics 2D, 2J, 2E, 3D; Physics 7B/7LB or Physics 7C/7LC; and Physics 7D, 7LD.

Requirements

The minor in Materials Science Engineering requires a total of seven courses—five required courses and two electives:

Required courses: ENGR54 and CBEMS155; and select three of the following four courses: CBEMS165*, CBEMS169, CBEMS175, and CBEMS199 (contingent upon the availability of research positions in the Materials Science Engineering faculty's research groups).

* For students who plan to pursue a graduate degree in MSE, it is highly recommended that they take CBEMS165 in addition to two of the following courses: CBEMS169, CBEMS175, or CBEMS199.

Electives: Take two from the following courses: ENGR150, CBEMS154, CBEMS157, CBEMS158, CBEMS163, CBEMS174, CBEMS191, EECS170A-B, BME110A-B, BME111, BME120, MAE151, MAE155, MAE157, MAE165, Chemistry 130A, Chemistry 225, Mathematics 112A (or MAE140), Physics 112A, Physics 133, Physics 135.

PLANNING A PROGRAM OF STUDY

A sample program of study chart for the major in Materials Science Engineering is available in the Undergraduate Student Affairs Office. Students should keep in mind that this program is based upon a sequence of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their program approved by their faculty advisor. Materials Science Engineering majors

must consult at least once every year with the academic counselors in the Undergraduate Student Affairs Office and with their faculty advisors.

Graduate Study in Chemical and Biochemical Engineering

Chemical engineering uses the knowledge of chemistry, mathematics, physics, biology, and social sciences to solve societal problems such as energy, health, environment, food, clothing, shelter, and semiconductors. It serves a variety of processing industries whose vast array of products include chemicals, petroleum products, plastics, pharmaceuticals, foods, textiles, fuels, consumer products, and electronic and cryogenic materials. It also serves society to improve the environment by reducing and eliminating pollution. Chemical engineering is an engineering discipline that has its strongest ties with the molecular sciences. This is an important asset since sciences such as chemistry, molecular biology, biomedicine, and solid-state physics are providing the seeds for future technologies. Chemical engineering has a bright future as the discipline which will bridge science with engineering in multidisciplinary environments.

Biochemical Engineering is concerned with the processing of biological materials and processes that use biological agents such as living cells, enzymes, or antibodies. Biochemical Engineering, with integrated knowledge of the principles of biology and chemical engineering, plays a major engineering role in the rapidly developing area of biotechnology. Career opportunities in Biochemical Engineering are available in a variety of industries such as biotechnology, chemical, environmental, food, petrochemical, and pharmaceutical industries.

The principle objectives of the graduate curriculum in Chemical and Biochemical Engineering are to develop and expand students' abilities to solve new and more challenging engineering problems and to promote their skills in independent thinking and learning in preparation for careers in manufacturing, research, or teaching. These objectives are reached through a program of course work and research designed by each student with the assistance, advice, and approval of a primary faculty advisor and a faculty advisory

committee. Programs of study leading to the M.S. and Ph.D. degrees in Chemical and Biochemical Engineering are offered.

MASTER OF SCIENCE DEGREE

Two plans are available for the M.S. degree: a thesis option and a comprehensive examination option. Opportunities are available for part-time study toward the M.S. degree.

Students who enter the program with a B.S. degree in chemical engineering must take at least six graduate-level courses (22 units), while students who enter without undergraduate preparation in chemical engineering are required to take three to five additional prerequisite courses (Mathematics 105A-B-C and Engineering CBEMS40B or CBEMS45B-C, CBEMS110, CBEMS112, and CBEMS120A or CBEMS125A). A detailed program of study for each entering student is formulated in consultation with a faculty advisor and must be approved by the graduate advisor.

Plan I: Thesis Option

The thesis option requires completion of 38 units of study (eight of which can be taken for study in conjunction with the thesis research topic); the completion of an original research project; the writing of the thesis describing it; and successful defense of the thesis.

Plan II: Comprehensive Examination Option

The comprehensive examination option requires a minimum of 36 quarter units in approved courses, at least 28 of which must be from graduate courses in the 200 series in Chemical Engineering and Materials Science.

DOCTOR OF PHILOSOPHY DEGREE

The doctoral program is tailored to the individual needs and background of the student. The detailed program of study for each Ph.D. student is formulated in consultation with an advisory committee which takes into consideration the objectives and preparation of the candidate. The program of study must be approved by the faculty of the School.

There are no specific course requirements, but there are several milestones to be passed: acceptance into a research group by the faculty advisor, successful completion of the Ph.D. preliminary examination, formal advancement to candidacy in the third year (second year for students who entered with a master's degree) by passing the qualifying examination which assesses the candidate's preparation for research and evaluates the proposed original research, successful completion of the research, and presentation and successful defense of the dissertation. There is no foreign language requirement. Ph.D. students have to meet departmental research requirements as a research assistant or equivalent, with or without salary. The degree is granted upon the recommendation of the Doctoral Committee and the Dean of the Graduate Division. For at least the final two years of the doctoral program it is expected that the student will be a full-time resident in the School. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree. The maximum time permitted is seven years.

Graduate Study in Materials Science and Engineering

Materials Science and Engineering focuses on the development of new materials and new applications for materials in engineering. Current research programs include nanomaterials, nanostructures, nanoelectronics, nanodevices, nanocharacterization, device/system packaging materials, materials for advanced energy and fuel cells, biocompatible materials, soft materials such as biological materials and polymeric materials, electronic and photonic materials, hybrid materials, interfacial engineering of materials, and multifunctional materials. Faculty with relevant research are affiliated with the

Integrated Nanofabrication Research Facility (INRF), the National Fuel Cell Research Center (NFCRC), the California Institute for Telecommunications and Information Technology (Calit2), and the Materials Characterization Nanofabrication Facility (MCNF), among others.

The MSE graduate degree program is hosted by the Department of Chemical Engineering and Materials Science (ChEMS). Faculty who may serve as advisors are listed as affiliated with the ChEMS Department and include faculty with strong materials science and engineering research programs from other departments. The formal degree that is awarded upon successful completion of the program is either the M.S. or Ph.D. in Materials Science and Engineering.

Recommended Background

Given the nature of Materials Science and Engineering as a cross-disciplinary program, students having a background, and suitable training, in Materials, Engineering (Mechanical, Electrical, Civil, Chemical, Aerospace), and the Physical Sciences (Physics, Chemistry, Geology) are encouraged to participate. A student with an insufficient background may be required to take remedial undergraduate courses. Recommended background courses include an introduction to materials, thermodynamics, mechanical behavior, and electrical/optical/magnetic behavior.

Specific Fields of Emphasis

The Materials faculty at UCI have special interest and expertise in all areas of modern materials and technologies, including biomaterials, energy materials, advanced ceramics, polymers and nanocomposite materials, structural and nanostructured metallic materials, micro/nano-device materials, device/system packaging materials, multifunctional materials.

Required Courses

Students are required to take one course from each area for the M.S. degree and as a basis for the Ph.D. preliminary examination.

Crystal Structure and Defects: MSE200 (Crystalline Solids: Structure, Imperfections, and Properties).

Electrical and Optical Behavior: MSE 205 (Materials Physics).

Mechanical Behavior: one course from MSE251 (Dislocation Theory), MSE256A (Mechanical Behavior of Engineering Materials), MSE256B (Fracture of Engineering Materials), MSE256C (Fatigue of Engineering Materials), MSE261 (High-Temperature Deformation of Engineering Materials).

Thermodynamics and Kinetics: one course from MSE252 (Theory of Diffusion), MSE253 (Kinetic Phenomena in Materials), MSE265 (Phase Transformations), CBEMS240 (Thermodynamics).

Electives

Faculty advisors should be consulted on the selection of elective courses. All graduate courses offered in CBEMS are potential electives. Graduate-level courses offered in other Engineering departments and relevant graduate courses from other schools may also be taken as electives.

MASTER OF SCIENCE DEGREE

The M.S. degree reflects achievement of an advanced level of competence for professional practice of materials science and engineering. Two options are available: a thesis option and a comprehensive examination option.

Plan I: Thesis Option

For the M.S. thesis option, students are required to complete a research study of great depth and originality and obtain approval for a complete program of study. A committee of three full-time faculty members is appointed to guide development of the thesis. A minimum of 36 units is required for the M.S. degree. For the thesis

option, at least 21 units must be taken from courses numbered 200–289, among which 12 units are from MSE core courses and at least 9 units are from graduate elective courses approved by the graduate advisor. The remaining 15 units can include (a) 3 units of 298 (Department Seminar), (b) up to 8 units of 296 (M.S. Thesis Research), (c) more 200–289 graduate electives, (d) up to 8 units of upper-division undergraduate courses if these upper-division courses are approved by the MSE graduate advisor. Full-time graduate students must enroll in the departmental seminar each quarter unless exempt by petition.

Plan II: Comprehensive Examination Option

For the comprehensive examination option, students are required to complete 36 units of study and a comprehensive examination. At least 24 units must be taken from courses numbered 200–289, among which 12 units are from MSE core courses and at least 12 units are from graduate elective courses approved by the graduate advisor. The remaining 12 units can include (a) 3 units of 298 (Department Seminar), (b) up to 6 units of 299 (Research Rotations), (c) more 200–289 graduate electives, (d) up to 8 units of upper-division undergraduate courses if these upper-division courses are approved by the MSE graduate advisor. Full-time graduate students must enroll in the departmental seminar each quarter unless exempt by petition.

DOCTOR OF PHILOSOPHY DEGREE

The Ph.D. degree in Materials Science and Engineering requires a commitment on the part of the student to dedicated study and collaboration with the faculty. Ph.D. students are selected on the basis of outstanding demonstrated potential and scholarship. Applicants must hold the appropriate prerequisite degrees from recognized institutions of high standing. After substantial preparation, Ph.D. candidates work under the supervision of faculty advisors. The process involves extended immersion in a research atmosphere and culminates in the production of original research results presented in a dissertation. Milestones to be passed in the Ph.D. program in order to remain in good standing include the following: acceptance into a research group by the faculty advisor at the end of the student's first year of study; successful completion of the Ph.D. preliminary examination by the end of the second year; preparation for pursuing research and the development of a research proposal culminating in passing the Qualifying Examination by the end of the third year of the Ph.D. program. The Qualifying Examination includes faculty evaluation of a written research dossier and an oral presentation. Students must advance to candidacy in their third year (second year for students who entered with a master's degree).

The core course requirements for the Ph.D. are the same as for the M.S. Students must enroll in the departmental seminar each quarter unless exempt by petition. Ph.D. students must take two additional elective courses beyond the M.S. degree requirements. These courses are to be taken after the first year of graduate work, should be relevant to the Ph.D. dissertation topic, and must be selected in consultation with the research advisor and approved by the MSE graduate advisor. The preliminary examination is based on the four core courses for the M.S. Students who have completed an MSE M.S. degree elsewhere must have a written approval by the graduate advisor to waive required MSE core courses, if they have taken the equivalent courses elsewhere.

Final examination involves the oral presentation and defense of an acceptable dissertation in a seminar attended by students and faculty. The Ph.D. degree is granted upon the recommendation of the *Doctoral Committee and the Dean of the Graduate Division*. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

Relationship of M.S. and Ph.D. programs. Students applying with the objective of a Ph.D. are admitted to the M.S./Ph.D. program only if they are likely to successfully complete a Ph.D. program. These students do not formally reapply to the Ph.D. program after completing the M.S. degree. Students who apply to the M.S.-only program must formally apply for the Ph.D. program if they desire to continue on for a Ph.D. Financial support is usually reserved for those students who plan to complete the Ph.D. The normative time to complete M.S. and Ph.D. degrees is two and five years, respectively.

Courses in Chemical Engineering and Materials Science

UNDERGRADUATE

NOTE: The undergraduate courses listed below are open only to students in The Henry Samueli School of Engineering. All other majors must petition for permission to enroll.

CHEMICAL ENGINEERING

CBEMS5 Exploring Materials Science and Engineering (1) S. Introduces students to the field of Materials Science and Engineering and how materials engineers analyze problems and design solutions. Topics covered include how materials work, how nature designs materials, and how engineering solutions involving materials impact society.

CBEMS40A Process Engineering Calculations (5) F. Quantitative calculations and applications to process industries using mass and energy balances, Stoichiometric equations, multiple bypasses and recycle streams in process industries, and introduction to the first law of thermodynamics. Prerequisites: Mathematics 2B, Chemistry 1B, and Physics 7A, 7LA. CBEMS40A and CBEMS45A may not both be taken for credit. (Design units: 0)

CBEMS40B Chemical Engineering Thermodynamics (5) S. Basic concepts and use of the thermodynamic functions of free energy, enthalpy, and entropy; properties of pure and mixtures; application of dynamic process and efficiencies. Solution thermodynamics and applications to oxidation reactions. Equilibrium phase diagrams and liquid to solid phase transformations. Prerequisites: CBEMS40A, Mathematics 2J; CEE10 or EECS10 or MAE10. Only one course from CBEMS40B, CBEMS45B, and MAE91 may be taken for credit. (Design units: 1)

CBEMS45A Chemical Processing and Materials Balances (4) F. Introduction to chemical engineering and the industries where chemical engineers play vital roles. Problem-solving skills and techniques. Quantitative calculations and applications using mass and energy balances. Stoichiometric equations, multiple bypasses, and others in process industries. Prerequisites: Mathematics 2B; Chemistry 1B; Physics 7C. CBEMS45A and CBEMS40A may not both be taken for credit. (Design units: 0)

CBEMS45B Chemical Processing and Energy Balances (3) W. Principles of thermodynamics: definitions, basic concepts, and laws; property relationships; construction of thermodynamic charts and tables; energy balances; phase and chemical equilibria; combined mass and energy balances. Prerequisites: CBEMS45A or consent of instructor; Mathematics 2J; EECS10 or MAE10. Only one course from CBEMS45B, CBEMS40B, and MAE91 may be taken for credit. (Design units: 0)

CBEMS45C Chemical Engineering Thermodynamics (4) S. Elements of chemical engineering thermodynamics, including equilibrium and stability; equations of state; generalized correlations of properties of materials; properties of ideal and non-ideal mixtures; thermodynamics of real solutions; ideal and non-ideal phase equilibria; chemical equilibria for ideal and non-ideal solutions. Prerequisite: CBEMS45B with a grade of C- or better, or consent of instructor. CBEMS45C and MAE115 may not both be taken for credit. (Design units: 1)

CBEMS50L Principles of Materials Science and Engineering (2) S. Introduction to the experimental techniques to characterize the properties of engineering materials. Emphasis on understanding the influence of microstructure on elastic, plastic, and fracture behavior. Topics include microstructure characterization, heat treatment, grain size effect, precipitation hardening, and impact loading. Corequisite: ENGR54. (Design units: 0)

CBEMS104 Quantitative Physiology: Organ Transport Systems (4). A. quantitative and systems approach to understanding physiological systems. Systems covered include the cardiopulmonary, circulatory, and renal systems. Prerequisite: Mathematics 3D or equivalent, or consent of instructor. Same as BME121. Concurrent with CBEMS204 and BME221. (Design units: 1)

CBEMS110 Reaction Kinetics and Reactor Design (4) F. Introduction to quantitative analysis of chemical reactions and chemical reactor design. Reactor operations including batch, continuous stirred tank, and tubular reactor. Homogeneous and heterogeneous reactions. Prerequisites: Mathematics 3D; Chemistry 1C; CBEMS40B or CBEMS45B-C. (Design units: 2)

CBEMS112 Introduction to Biochemical Engineering (3). Application of engineering principles to biochemical processes. Topics include: microbial pathways, energetics and control systems, enzyme and microbial kinetics, and the design and analysis of biological reactors. Prerequisites: Chemistry 1C, Mathematics 3D; and CBEMS110 or consent of instructor. (Design units: 1)

CBEMS116 Field Practicum in Environmental Engineering (4). Application of concepts from engineering and microbiology to the characterization and analysis of microbial pollution in coastal waters. Topics include public health microbiology, microbial diversity and ecology, molecular diagnostics of waterborne pathogens. Laboratory exercises and a field-scale experiment. Corequisite: CBEMS110 or CEE162. Concurrent with CBEMS216. (Design units: 2)

CBEMS120A Momentum Transfer (4) F. Macroscopic and differential mass balances; macroscopic and differential linear and angular momentum balances, mechanical energy balances; Ideal fluids, Newtonian and non-Newtonian fluids and turbulence. Applications to chemical processes. Prerequisites: CBEMS40A, Mathematics 3D. CBEMS120A and CBEMS125A may not both be taken for credit. (Design units: 1)

CBEMS120B Heat and Mass Transfer (4) W. Macroscopic and differential energy balances. Heat transfer coefficients, convective and radiative heat transfer, applications to equipment design, macroscopic and differential species balances, mass transfer with and without chemical reactions, mass transfer equipment design. Prerequisite: CBEMS120A. CBEMS120B and CBEMS125B may not both be taken for credit. (Design units: 1)

CBEMS124 Transport Phenomena in Living Systems (3). An introduction to transport phenomena in cellular and whole organ systems. Application of transport theory including advection and diffusion to the movement of molecules in biological systems, including the cardiovascular system (heart and microcirculation), and the lung. Prerequisite: CBEMS120A or CBEMS125A or consent of instructor. (Design units: 0)

CBEMS125A Momentum Transfer (4) F. Fluid statics, surface tension, Newton's Law of viscosity, non-Newtonian and complex flows, momentum equations, momentum transport, laminar and turbulent flow, velocity profiles, flow in pipes, flow around objects, design of piping systems, pumps and mixing and other applications to chemical and related industries. Prerequisites: CBEMS45A-B-C; Mathematics 3D. Only one course from CBEMS125A, CBEMS120A, MAE130A, MAE1130A, CEE170, and CEEH170 may be taken for credit. (Design units: 1)

CBEMS125B Heat Transfer (3) W. Principles of conduction, radiation, and convection of heat; phenomenological rate laws, differential and macroscopic energy balances; heat transfer rates, steady state and unsteady state conduction, convection; applications to chemical and related industries. Prerequisite: CBEMS125A with a grade of C- or better. Only one course from CBEMS125B, CBEMS120B, and MAE120 may be taken for credit. (Design units: 1)

CBEMS125C Mass Transfer (3) S. Molecular and continuum approaches to diffusion and convection in fluids and multi-component mixtures; mass transfer rates; steady state, quasi-steady state and transient mass transfer; effect of reactions on mass transfer; convective mass transfer coefficients; simultaneous mass, heat and momentum transfer; applications to chemical and related industries. Prerequisite: CBEMS125B. CBEMS125C and BME150 may not both be taken for credit. (Design units: 1)

CBEMS126 Biomedical Photonics (3). Biophysical principles governing the interaction of laser radiation with biological materials, cells, and tissues. Utilization of these principles in several biomedical therapeutic and diagnostic applications is also covered and discussed in detail. Prerequisites: CBEMS120A-B or CBEMS125A-B-C; or consent of instructor. Concurrent with CBEMS226. (Design units: 0)

CBEMS130 Separation Processes (4) W. Application of equilibria and mass and energy balances for design of separation processes. Use of equilibrium laws for design of distillation, absorption, stripping, and extraction equipment. Design of multicomponent separators. Prerequisite: CBEMS40B or CBEMS45B-C. (Design units: 3)

CBEMS132 Bioseparation Processes (3). Recovery and purification of biologically produced proteins and chemicals. Basic principles and engineering design of various separation processes including chromatography, electrophoresis, extraction, crystallization, and membrane separation. Prerequisites: CBEMS40A-B or CBEMS45A-B-C; CBEMS120A or CBEMS125A. (Design units: 1)

CBEMS134 Introduction to Bioreactor Engineering (3). Unique features of bioreactors. Analyses and design of bioreactors of batch, fed-batch, and continuous flow types. Microbial reactors with and without cell recycles. Bioreactor operations for industrial-important biological products and for biological treatment of wastewater. Prerequisites: CBEMS110. (Design units: 1.5)

CBEMS135 Chemical Process Control (4) F. Dynamic responses and control of chemical process equipment, dynamic modeling of chemical processes, linear systems analysis, analyses and design of feedback loops and advanced control systems. Prerequisites: CBEMS110; CBEMS120B or CBEMS125B-C. (Design units: 1)

CBEMS140A Chemical Engineering Laboratory I (4) F. Experimental study of thermodynamics, fluid mechanics, and heat and mass transfer. Operation and evaluation of process equipment, data analysis. Prerequisites: CBEMS110; CBEMS120B or CBEMS125C; each with a grade of C- or better. (Design units: 1)

CBEMS140B Chemical Engineering Laboratory II (4) W. Continuation of CBEMS140A covering mass transfer operations such as distillation, absorption, extraction. Rate and equilibria studies in simple chemical systems with and without reaction. Study of chemical process. Prerequisites: CBEMS130 with a grade of C- or better; CBEMS135; CBEMS140A. (Design units: 3)

CBEMS145 Chemical Engineering Design (5) S. Application of chemical engineering science techniques to design of chemical processes. Introduction to systematic design of separations and the integration of energy requirement. Integration of process economics and optimization. Consideration of retrofit design, design of nontraditional chemical processes, process safety. Prerequisites: CBEMS110, CBEMS120B or CBEMS125C, CBEMS130. CBEMS145 and CBEMS149A may not both be taken for credit. (Design units: 5)

CBEMS149A Chemical Engineering Design I (3) Summer. Introduction to process design; flow sheets for chemical processes; synthesis of multicomponent separation sequences and reaction paths; synthesis of heat exchange networks; computer-aided design and simulation of processes and components. Prerequisites: CBEMS110, CBEMS125C, CBEMS130. CBEMS149A and CBEMS145 may not both be taken for credit. (Design units: 2)

CBEMS149B Chemical Engineering Design II (3). Application of chemical engineering basics to practical design problems; process economics; process safety; environmental impacts; a major team-design project with progress reports, oral presentation, and a technical report with engineering drawings and economics. Prerequisite: CBEMS149A. (Design units: 3)

CBEMS154 Polymer Science and Engineering (4). An introduction to physical aspects of polymers, including configuration and conformation of polymer chains and characterization techniques; crystallinity viscoelasticity, rheology and processing. Prerequisites: Chemistry 1A-B-C and ENGR54, or consent of instructor. (Design units: 1)

CBEMS155 Mechanical Behavior and Design Principles (4) W. Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, yielding, necking, creep, and fracture of materials. Introduction to experimental techniques to characterize the properties of materials. Design parameters. Prerequisite: ENGR54. Same as MAE156. (Design units: 2)

CBEMS155L Mechanical Behavior Laboratory (1) W. Introduction to experimental techniques to characterize mechanical properties of materials. Emphasis on the correlations between property and microstructure. Experiments include: plastic stability in tension, effect of grain size and flow stress at low and high temperatures, strain rate effects, impact test, superplasticity, creep of materials. Corequisite: CBEMS155. Prerequisite: ENGR54.

CBEMS157 Composite Materials Design (3). Introduction to fiber-reinforced composites for mechanical applications. Properties of reinforcing fibers. Manufacture of fibers and composites. Micromechanics of fiber composites. Strength criteria and failure modes. Macromechanics in design of laminated composite structures. Prerequisites: ENGR54 and ENGR150. (Design units: 3)

CBEMS158 Ceramic Materials (3). A technical elective for students interested in the materials area. Topics covered include structure and properties of ceramics and design with ceramics. Prerequisite: ENGR54. (Design units: 1)

CBEMS159 Plasticity and Metal Forming (3). Stress and strain analysis, plasticity equations, yielding, integration of plasticity equations, plastic instability, application of plasticity theory to some forming processes. Prerequisites: ENGR54, ENGR150, and MAE30. (Design units: 1)

CBEMS160 Advanced Laboratory in Chemistry and Synthesis of Materials (4) S. Lecture, two hours; laboratory, eight hours. Synthesis and characterization of organic and inorganic materials including polymers and oxides. Techniques include electron and scanning probe microscopy, gel permeation chromatography, x-ray diffraction, porosimetry, and thermal analysis. Prerequisites: ENGR54 or Chemistry 130A-B or 131A-B. Same as Chemistry 156. (Design units: 0)

CBEMS162 Environmental Effects and Corrosion (3). Covers the principles of environmental degradation and corrosion including environmental effects, electrochemical aspects, eight forms of corrosion, corrosion testing, oxidation at elevated temperatures, susceptibilities of various engineering materials, and prevention of environmental degradation. Prerequisites: ENGR54 and CBEMS50L. (Design units: 2)

CBEMS163 Computer Techniques in Experimental Materials Research (3). Principles and practical guidelines of automated materials testing. Computer fundamentals, programming languages, data acquisition and control hardware, interfacing techniques, programming strategies, data analysis, data storage, safeguard procedures. Prerequisite: consent of instructor. Concurrent with MSE263. (Design units: 1)

CBEMS164 X-Ray Diffraction, Electron Microscopy, and Microanalysis (4) F. Material characterization using x-ray diffraction and scanning electron microscopy (SEM). Topics include x-ray diffraction and analysis; SEM imaging and microanalysis. Prerequisite: ENGR54. (Design units: 1)

CBEMS165 Diffusion and Phase Transformations (3) S. Thermodynamics and kinetics of phase transformations, phase diagrams, diffusional and diffusionless transformations. Prerequisites: ENGR54; CBEMS40B or CBEMS45C or MAE91 with a grade of C- or better. (Design units: 0)

CBEMS166 Science of Nanoscale Materials and Devices (3). Covers the properties of nanoscale materials and aspects of current research on next-generation electronic devices. Topics include nanofabrication, characterization of nanostructure materials, and device concepts that take the advantage of quantum mechanical phenomena on the nanoscale. Prerequisites: ENGR54 and Physics 7D. Concurrent with MSE266. (Design units: 0)

CBEMS167 Environmentally Sustainable Manufacturing (3). Multidisciplinary case study approach to environmentally sustainable manufacturing with a focus on electronic products. Engineering, economic, public policy, and industrial ecology aspects. Design, manufacture, policy, and environmental impact reviewed as a function of the entire life-cycle of the materials from extraction through disposal or recycling. Prerequisite: senior standing or consent of instructor. Concurrent with MSE267. (Design units: 0)

CBEMS169 Electronic and Optical Properties in Materials (4). Covers the electronic, optical, and dielectric properties of crystalline and amorphous materials to provide a foundation of the underlying physical principles governing the properties of existing and emerging electronic and photonic materials. Prerequisites: Physics 7D and 7E, Mathematics 2J and 3D. (Design units: 1)

CBEMS170 Materials Processing (4). Principles of control of structure, properties, and shape in material processing. Design considerations in manufacturing processes. Materials covered: polymers, ceramics, semiconductors, and metals. Special topic lectures in self-assembly and nanofabrication are included. Prerequisite: ENGR54. (Design units: 1)

CBEMS174 Semiconductor Device Packaging (3). Introduction to the semiconductor device packaging and assembly processes. Electrical, thermal, optical, and mechanical aspects of package design and reliability. Special topics on optoelectronics packaging are covered. Prerequisite: CBEMS40A or CBEMS45B or consent of instructor. (Design units: 1)

CBEMS175 Design Failure Investigation (4) W. Survey of the mechanisms by which mechanical devices may fail, including overload, fatigue, corrosion, and wear. Use of fractography and other evidence to interpret failure modes and specify design/manufacturing changes. Students redesign failed parts or structures based on actual parts and/or case histories. Prerequisite: ENGR54. (Design units: 2)

CBEMS189A-B-C Senior Design Project (1-2-2) F, W, S. Group supervised senior design projects that deal with materials selection in engineering design and that involve case studies in ethics, safety, design, failure modes, new products, and patents. Activities conclude with a presentation of the projects. In-Progress grading. Prerequisite: consent of instructor. CBEMS189A-B-C must be taken in the same academic year and concurrently with CBEMS190A-B-C. (Design units: 1-2-2)

CBEMS190A-B-C Materials Selection and Design (2-1-1). F, W, S, Summer. Meaning and phases of design. Design considerations. Safety issues and engineering ethics. Codes and standards. Materials selection in design. Materials selection to meet specific requirements. Statistical considerations. Engineering economics. Seminars on materials selection and design by industry leaders and faculty. Prerequisite: senior standing. CBEMS190A-B-C must be taken in the same academic year and concurrently with CBEMS189A-B-C. (Design units: 3)

CBEMS191 Materials Outreach (3). Demonstration of major concepts in Materials Science and Engineering. Concepts of materials engineering covered include: deformation mechanisms in crystalline solids, effects of heat treatment on mechanical properties, thermal barrier materials, composites design, mechanical behavior of polymers, superconductivity in ceramics. Prerequisite: ENGR54. May be taken for credit four times. (Design units: 1)

CBEMS195 Special Topics in Chemical Engineering and Material Science (1 to 4). Prerequisites vary. May be repeated for credit as topics vary.

CBEMS198 Group Study (1 to 4). Group study of selected topics in engineering. Prerequisite: consent of instructor. May be repeated for credit as topics vary. (Design units: varies)

CBEMS199 Individual Study (1 to 4). For undergraduate Engineering majors in supervised but independent readings, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. Prerequisite: consent of instructor. May be taken up to eight units for letter grade. (Design units: varies)

CBEMSH199 Individual Study for Honors Students (1 to 5). Supervised research in Chemical Engineering for participants in the Campuswide Honors Program. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. Prerequisite: consent of instructor. Open only to members of Campuswide Honors Program who are Chemical Engineering majors. May be repeated for credit as topics vary. (Design units: varies)

GRADUATE

CHEMICAL AND BIOCHEMICAL ENGINEERING

CBEMS204 Quantitative Physiology: Organ Transport Systems (4). A quantitative and systems approach to understanding physiological systems. Systems covered include the cardiopulmonary, circulatory, and renal systems. Same as BME221. Concurrent with CBEMS104 and BME121.

CBEMS210 Reaction Engineering (4). Advanced topics in reaction engineering, reactor stability analysis, diffusional effect in heterogeneous catalysis, energy balance, optimization of reactor operation, dispersed in phase reactors. Prerequisite: CBEMS110 or consent of instructor.

CBEMS216 Field Practicum in Environmental Engineering (4). Application of concepts from engineering and microbiology to the characterization and analysis of microbial pollution in coastal waters. Topics include public health microbiology, microbial diversity and ecology, molecular diagnostics of waterborne pathogens. Laboratory exercises and a field-scale experiment. Concurrent with CBEMS116.

CBEMS218 Bioengineering with Recombinant Microorganisms (3). Engineering and biological principles important in recombinant cell technology. Host/vector selection, plasmid propagation, optimization of cloned gene expression, metabolic engineering, protein secretion, experimental techniques, modeling of recombinant cell systems. Prerequisites: CBEMS110, CBEMS112; or consent of instructor.

CBEMS220 Transport Phenomena (4). Heat, mass, and momentum transfer theory from the viewpoint of the basic transport equations. Steady and unsteady state; laminar and turbulent flow; boundary layer theory, mechanics of turbulent transport with specific application to complex chemical engineering situations. Prerequisites: CBEMS120A-B or CBEMS125A-B-C; or consent of instructor.

CBEMS221 Drug Delivery (3). Introduction to design of drug delivery systems. Includes physicochemical and pharmacokinetic considerations in drug formulations, types of therapeutics, routes of administration, biomaterials, and novel drug delivery systems. Prerequisites: undergraduate introductory chemistry and biology.

CBEMS222 Physicochemical Hydrodynamics (3). Principles of the interaction between fluid flow and physical, chemical, and biochemical processes. Focus is on transport and reaction of solutes and colloidal particles in environmental settings. Example applications range from contaminant transport in ocean systems to particle separation. Prerequisite: CBEMS220 or consent of instructor.

CBEMS226 Biomedical Photonics (3). Biophysical principles governing the interaction of laser radiation with biological materials, cells, and tissues. Utilization of these principles in several biomedical therapeutic and diagnostic applications is also covered and discussed in detail. Prerequisites: CBEMS120A-B or CBEMS125A-B-C; or consent of instructor. Concurrent with CBEMS126.

CBEMS230 Applied Engineering Mathematics I (4). Analytical techniques applied to engineering problems in transport phenomena, process dynamics and control, and thermodynamics. Prerequisites: CBEMS110; CBEMS120A-B or CBEMS125A-B-C; or consent of instructor.

CBEMS232 Bioseparation Processes (3). Recovery and purification of biologically produced proteins and chemicals. Basic principles and engineering design of various separation processes including chromatography, electrophoresis, extraction, crystallization, and membrane separation. Prerequisite: CBEMS112 or consent of instructor.

CBEMS234 Bioreactor Engineering (3). Modeling, optimization, and control of biochemical and biological reactors. Statics and dynamics of bioreactors containing recombinant cells and multiple species. Prerequisite: consent of instructor.

CBEMS240 Advanced Engineering Thermodynamics (4). Introduction to modern thermodynamics and applications, with a focus on aspects relevant to chemical and materials engineering. Mathematical tools; equilibrium and stability; microscopic rigorous equations of state; molecular-level thermodynamics of real mixtures; and phase and chemical equilibrium. Prerequisite: CBEMS40B or CBEMS45B-C; or consent of instructor.

CBEMS249 Special Topics in Chemical Engineering and Materials Science (1 to 4). Prerequisites vary. May be repeated for credit as topics vary. Formerly CBE249.

CBEMS280 Optoelectronics Packaging (3). Basic and current issues in the packaging of integrated circuits (IC) and fiber-optic devices are discussed. Prerequisite: consent of instructor.

CBEMS295 Seminars in Engineering (1 to 4). Seminars scheduled each year by individual faculty in major field of interest. Satisfactory/Unsatisfactory grading only. Prerequisite: consent of instructor. May be repeated for credit.

CBEMS296 Master of Science Thesis (4 to 12). Individual research or investigation conducted in preparation for the thesis required for the M.S. degree. May be repeated for credit.

CBEMS297 Doctor of Philosophy Dissertation Research (4 to 12). Individual research or investigation conducted in preparation for the dissertation required for the Ph.D. degree. May be repeated for credit.

CBEMS298 Seminars in Engineering (1). Presentation of advanced topics and reports of current research efforts in chemical engineering and materials science. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

CBEMS299 Individual Research (1 to 12). Individual research or investigation under the direction of an individual faculty member. Prerequisite: consent of instructor. May be repeated for credit.

MATERIALS SCIENCE**MSE200 Crystalline Solids: Structure, Imperfections, and Properties**

(3). Principles and concepts underlying the study of advanced materials including alloys, composites, ceramics, semiconductors, polymers, ferro-electrics, and magnetics. Crystal structure and defects, surface and interface properties, thermodynamics and kinetics of phase transformations, and material processing, related to fundamental material properties. Prerequisites: Chemistry 1A-B-C, Physics 7A, 7LA.

MSE205 Materials Physics (3). Covers the electronic, optical, and dielectric properties of crystalline materials to provide a foundation of the underlying physical principles governing the properties of existing and emerging electronic and photonic materials.

MSE210 Materials Characterization Techniques and Analysis (3). Introduction to microcharacterization techniques, and their application to the study of bulk and thin-film materials; methods of analysis, including electron beam-induced excitations (SEM, SAM, EDX, STEM), x-ray and photon-induced interactions (PEX, ESCA), ion processes (RSB, SIMS, PIXE), sub-micron optical techniques, and electromagnetic field-induced methods (STM, AFS). Prerequisites: Chemistry 1A-B-C, Physics 7A, 7LA.

MSE220 Analytical Methods in Materials Science (3). Selected topics in modern analysis and their application to material problems in such areas as thermodynamics, crystallography, deformation and fracture, diffusion, phase transformations. Prerequisite: graduate standing or consent of instructor.

MSE251 Dislocation Theory (3). Theory of elasticity and symmetry of crystals, plasticity and slip systems, stress field of dislocation, dislocation reaction, theories of yielding and strengthening, application of reaction-rate kinetics to thermally activated dislocation motion. Prerequisite: ENGR54 or consent of instructor.

MSE252 Theory of Diffusion (3). Solid-state diffusion, analysis of diffusion in solids, thermodynamics of diffusion, application of diffusion theory to phase transformation and deformation problems. Prerequisite: ENGR54 or consent of instructor.

MSE254 Polymer Science and Engineering (3). An introduction to organic and physical chemistry polymers, including synthetic methods, reaction mechanisms; configuration and conformation of polymer chains and characterization techniques; viscoelasticity and rheology. Special topics in biopolymers and polymer surfaces. Prerequisite: CBEMS154.

MSE255A Design with Ceramic Materials (3). Dependence of ceramic properties on bonding, crystal structure, defects, and microstructure. Ceramic manufacturing technology. Survey of physical properties. Strength, deformation, and fracture of ceramics. Mechanical design with brittle, environment-sensitive materials exhibiting time-dependent strengths. Prerequisite: ENGR54 or consent of instructor.

MSE255B Science of Composite Materials (3). Properties of intentionally inhomogeneous materials, especially composites manufactured for extreme environments, elevated temperatures, wear resistance. Chemical compatibility of constituents, microstructural stability, environmental effects. Micromechanics of particulate and fiber-reinforced composites. Strength criteria, toughness, and failure mechanisms. Thermomechanical effects. Prerequisites: ENGR54 and ENGR150 or consent of instructor.

MSE256A Mechanical Behavior of Engineering Materials (3). Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, creep, and fatigue, study of rate-controlling mechanisms and failure modes, fracture of materials. Prerequisite: ENGR54.

MSE256B Fracture of Engineering Materials (3). Fracture mechanics and its application to engineering materials. Elastic properties of cracks, the stress intensity factor, the crack tip plastic zone, the J Integral approach, fracture toughness testing, the crack tip opening displacement, fracture at high temperatures, fatigue crack growth. Prerequisite: CBEMS155 or MAE156; or consent of instructor.

MSE259 Transmission Electron Microscopy (4). The theory and operation of the transmission electron microscope (TEM), including the basic construction, electron optics, electron diffraction and reciprocal space, formation of image and image contrast, interpretation of images and electron diffraction information, microanalysis, and specimen preparation. Includes laboratory component. Prerequisite: MSE200 or consent of instructor.

MSE261 High-Temperature Deformation of Engineering Materials (3). Theoretical and practical aspects of creep and superplasticity in metallic and non-metallic systems are presented. Topics include: creep testing methods, diffusional creep, deformation mechanism maps, and superplasticity in non-metallics. Prerequisites: ENGR54, CBEMS155 or MAE156; or consent of instructor.

MSE263 Computer Techniques in Experimental Materials Research (3). Principles and practical guidelines of automated materials testing. Computer fundamentals, programming languages, data acquisition and control hardware, interfacing techniques, programming strategies, data analysis, data storage, safeguard procedures. Prerequisite: consent of instructor. Concurrent with CBEMS163.

MSE264 Scanning Electron Microscopy (3). The theory and operation of the scanning electron microscope (SEM) and x-ray microanalysis. Topics covered include the basic design and electron optics, electron beam-specimen interactions, image formation and interpretation, x-ray spectrometry, and other related topics and techniques. Includes laboratory. Prerequisite: MSE200 or consent of instructor.

MSE265 Phase Transformations (3). Advanced thermodynamics and kinetics of phase transformations and phase transitions. Prerequisite: CBEMS165 or CBEMS 240 or equivalent.

MSE266 Science of Nanoscale Materials and Devices (3). Covers the properties of nanoscale materials and aspects of current research on next-generation electronic devices. Topics include nanofabrication, characterization of nanostructure materials, and device concepts that take the advantage of quantum mechanical phenomena on the nanoscale. Prerequisite: ENGR54 and consent of instructor. Concurrent with CBEMS166.

MSE267 Environmentally Sustainable Manufacturing (3). Multidisciplinary case study approach to environmentally sustainable manufacturing with a focus on electronic products. Engineering, economic, public policy, and industrial ecology aspects. Design, manufacture, policy, and environmental impact reviewed as a function of the entire life-cycle of the materials from extraction through disposal or recycling. Prerequisite: graduate standing. Concurrent with CBEMS167.

MSE268 Principles of Coatings, Thin Films, and Multi-layers (3). Principles and concepts underlying the engineering of coating systems, thin films, and multi-layers. Microstructure control, processing approaches, mechanical behavior and thermomechanical characteristics and characterization. Interfacial stability, cracking, delamination, and thermal stress issues. Control of functional properties. Prerequisite: ENGR54.

MSE269 Biosensors (3). Provides an introduction to the field of biosensors: basic design concepts, fabrication, and performance of biologically selective sensing devices. Topics include the immobilization of biological components to transducers, electrochemical, optical, mass sensitive, and electronic-based transducers. Prerequisites: undergraduate chemistry and biology.

MSE270 Materials Processing (4). Principles of control of structure, properties, and shape in material processing. Design considerations in manufacturing processes. Materials covered: polymers, ceramics, semiconductors, and metals. Special topics lectures in self-assembly and nanofabrication are included. Prerequisite: consent of instructor.

DEPARTMENT OF CIVIL AND ENVIRONMENTAL ENGINEERING

E4130 Engineering Gateway; (949) 824-5333
Masanobu Shinozuka, Department Chair

Faculty

Alfredo H.-S. Ang (*Emeritus*): Structural and earthquake engineering, risk and reliability engineering

Rafael L. Bras: Hydrology, eco-hydrology, hydroclimatology, hydro-meteorology, land-atmosphere interactions, fluvial geomorphology, land surface evolution, remote sensing

William J. Cooper: Environmental chemistry, advanced oxidation processes for water treatment, aquatic photochemistry of carbon cycling

Russell L. Detwiler: Groundwater hydrology, contaminant fate and transport, subsurface process modeling, groundwater/surface-water interaction

Maria Q. Feng: Structural engineering and intelligent control of structural systems

Gary L. Guymon (*Emeritus*): Water resources, groundwater, modeling uncertainty
 Medhat A. Haroun (*Emeritus*): Numerical and experimental modeling of the seismic behavior of structural systems for the design and retrofit of liquid storage tanks, bridge-supporting elements, and buildings
 R. (Jay) Jayakrishnan: Transportation systems analysis
 Chenyang (Sunny) Jiang: Water pollution microbiology, environmental biotechnology, aquatic microbial ecology
 Wenlong Jin: Intelligent transportation systems, traffic flow theory, transportation network analysis
 Michael G. McNally: Travel behavior, transportation systems analysis
 Ayman S. Mosallam: Advanced composites and hybrid systems, seismic repair and rehabilitation of structures, blast mitigation and diagnostic/prognostic techniques for infrastructure security
 Betty H. Olson: Molecular applications for optimizing biological processes in wastewater treatment, environmental health, drinking water microbiology
 Gerard C. Pardoen (*Emeritus*): Structural analysis, experimental structural dynamics
 Wilfred W. Recker: Transportation systems modeling, traffic control, and urban systems analysis
 Stephen G. Ritchie: Transportation engineering, advanced traffic management and control systems, development and application of emerging technologies in transportation
 Diego Rosso: Environmental process engineering, mass transfer, wastewater treatment, carbon- and energy-footprint analysis
 Brett F. Sanders: Environmental hydrodynamics, computational fluid dynamics, coastal water quality
 Jean-Daniel M. Saphores: Environmental and natural resource economics and policy, transportation economics, planning and policy, quantitative methods
 Jan Scherfig (*Emeritus*): Water reclamation, waste treatment processes, environmental engineering
 Robin Shepherd (*Emeritus*): Structural dynamics, earthquake-resistant design
 Masanobu Shinozuka: Continuum mechanics, structural dynamics, system reliability, risk assessment, remote sensing and GIS for disaster assessment
 Soroosh Sorooshian: Hydrology, hydrometeorology and hydroclimate modeling, remote sensing, water sources management
 Lizhi Sun: Mechanics and materials, composites, micro- and nano-mechanics, smart materials and structures, elastography
 Roberto Villaverde (*Emeritus*): Structural dynamics and earthquake engineering
 Jann N. Yang: System identification and damage detection, structural health monitoring, structural control, earthquake engineering, structural dynamics
 Farzin Zareian: Structural engineering, performance-based earthquake engineering, structural reliability, structural control

Affiliated Faculty

James S. Famiglietti: Hydrology and climate system modeling, remote sensing of the terrestrial and global water cycles
 Xiaogang Gao: Hydroclimatology, hydrology, fluid dynamics, engineering mathematics
 Kuo-lin Hsu: Remote sensing of precipitation, hydrologic systems modeling, stochastic hydrology, water resources systems planning
 Bisher Imam: Watershed processes, applications of remote sensing and GIS in hydrology and water resources
 Farghalli A. Mohamed: Mechanical properties, creep, superplasticity, correlations between properties of materials and their microstructure, mechanical behavior at the nanoscale

Affiliated faculty are from the School of Physical Sciences and The Henry Samueli School of Engineering.

Civil Engineering is described as the art of sustainably harnessing the natural environment to meet human needs. The success of this endeavor is evident all around us. The arid plain which greeted the early settlers in Southern California has been transformed into a thriving regional community largely by the application of civil engineering.

The goal of the Civil Engineering curriculum is to prepare graduates for a career in practice, research, or teaching. At the undergraduate level a common core of fundamental subjects is provided, and students are required to specialize in their senior year. Specializations

are offered in General Civil Engineering, Environmental Hydrology and Water Resource Engineering, Structural Engineering, and Transportation Systems Engineering. Concentrations are offered in Computer Applications, Engineering Management, Infrastructure Planning, and Mathematical Methods. Graduate opportunities are in three major thrust areas: structural analysis, design, and reliability; transportation systems engineering; and water resources and environmental engineering.

The career opportunities in civil engineering are varied. Graduates may look forward to long-term careers in major corporations, public bodies, the military, private consulting firms, or to being self-employed in private practice. History has shown a civil engineering education to be a good ground for many administrative and managerial positions.

Environmental Engineering involves designing environmental protection or remediation strategies for multiple resources—water, air, and soil, often with combinations of physical, chemical, and biological treatment methods in the context of a complex regulatory framework.

The goal of the Environmental Engineering curriculum is to prepare graduates with a strong basic science background, particularly in chemistry and biology, and to provide students with a broad exposure to several environmental engineering science disciplines. Courses relating to transport processes, water quality control, air quality control, and process design are included in the core.

Career opportunities in environmental engineering are diverse. Graduates generally find careers related to pollution control and the remediation of air, water, and soil environments.

Undergraduate Major in Civil Engineering

Program Educational Objectives: Graduates of the program will

(1) be knowledgeable of the historical context, the state-of-the-art, and emerging issues in the field of civil engineering and its role in contemporary society; (2) demonstrate critical reasoning and requisite quantitative skills to identify, formulate, and resolve civil engineering problems, and to create designs that reflect economic, environmental, and social sensitivities; (3) display a systems viewpoint, critical thinking, effective communication and interpersonal skills, a spirit of curiosity, and conduct reflecting a professional and ethical manner; (4) exhibit a commitment to lifelong learning and professional development, involvement in professional activity and public service, and achievement of professional licensure; (5) reflect a broad intellectual training for success in multidisciplinary professional practice, in civil engineering or diverse related careers, and toward achieving leadership roles in industry, government, and academia. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The curriculum provides the opportunity to obtain a firm foundation in engineering science and to develop the techniques of analysis and design, which are basic for the successful practitioner. Emphasis is placed on developing problem-solving skills.

ADMISSIONS

High School Students: See page 198.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one year of chemistry (with laboratory), and one additional approved course for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN CIVIL ENGINEERING

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements:

Mathematics and Basic Science Courses: Mathematics 2A-B, 2D, 2J, 3D, and 2E; Chemistry 1A-B and 1LB; Physics 7B/7LB or Physics 7C/7LC; Physics 7D and 7LD; and CEE11.

Engineering Science Elective: Students must complete one course from the following: Chemistry 1C and 1LC, Physics 7E, CBEMS40B, Earth System Science 25, EECS70A, ENGR54, or MAE91.

Additional mathematics and basic science course work may be required depending on the student's applied program.

Engineering Topics Courses: Students must complete a minimum of 24 units of engineering design. Engineering CEE10 or EECS10 or EECS12, CEE20, CEE30, CEE80 or MAE80, CEE81A-B, CEE110, CEE111, CEE121, CEE130, CEE130L, CEE150, CEE150L, CEE151A, CEE151C, CEE161, CEE170 or MAE130A, CEE171, and CEE181A-B-C.

Engineering Design Elective: Students must complete one course from the following: CEE122, CEE123, CEE151B or CEE172. Students completing the specialization in Structural Engineering must take CEE151B. *Engineering Design Elective* cannot be counted toward the course requirement for a specialization and/or concentration.

Technical Electives: Students must select one of the areas of specialization or concentration and complete the associated requirements, as shown below. Students select, with the approval of a faculty advisor, any additional engineering topics courses needed to satisfy school and departmental requirements.

Engineering Professional Topics Courses: Environmental Analysis and Design E8, Economics 20A-B.

(The nominal Civil Engineering program will require 186 units of courses depending on specialization or concentration to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

Specialization in General Civil Engineering: Requires one course each from four of the following five options: (1) CEE122 or CEE123; (2) CEE152, CEE153, CEE155, or CEE156; (3) CEE162 or CEE168; (4) CEE172, CEE176, or CEE178; or (5) CEE55 or courses from an approved list.

Specialization in Environmental Hydrology and Water Resources: Requires four courses from CEE162, CEE163, CEE172, CEE173, CEE176, CEE178, or courses from an approved list.

Specialization in Structural Engineering: Requires CEE151B for the Engineering Design Elective, CEE153 and three courses from CEE152, CEE155, CEE156, and MAE157, or courses from an approved list.

Specialization in Transportation Systems Engineering: Requires CEE122 and CEE123, and two courses from CEE124, CEE125, EECS70A, MAE140, MAE170, MAE171, or courses from an approved list.

The Department does not control the scheduling of most courses associated with the following concentrations. Students considering these options should be aware that some of these courses may not be available on a regular basis.

Concentration in Computer Applications: Requires at least five courses or 20 units selected from ICS 6D or Mathematics 6D, ICS 21, ICS 22, ICS 23, ICS 52, EECS40, and selected ICS, EECS, and other courses from an approved list.

Concentration in Engineering Management: Requires Management 5 and five other courses selected from ENGR190, ENGR193, Management 101, 102, 107, 160, 185, and other courses from an approved list. Prospective students must first be admitted to The Paul Merage School of Business undergraduate minor in Management.

Concentration in Infrastructure Planning: Requires at least six courses selected from CEE123, Planning, Policy, and Design 107, 108, 109, 110, 133, 139, and other courses from an approved list.

Concentration in Mathematical Methods: Requires Mathematics 13 and 140A, and four other courses selected from Mathematics 6D, Mathematics 7, MAE 140, MAE185 or Mathematics 105A and 105LA, Mathematics 105B and 105LB, 107, 112A-B-C, 118A-B-C, 130B-C, 131A-B-C, and other courses from an approved list.

In addition, students must aggregate a minimum of 24 design units. Design unit values are indicated at the end of each course description. The faculty advisors and the Student Affairs Office can provide necessary guidance for satisfying the design requirements.

At most an aggregate total of 6 units of 199 or H199 courses may be used to satisfy degree requirements.

PROGRAM OF STUDY

Sample Program of Study — Civil Engineering

Students must obtain approval for their program of study and must see their faculty advisor at least once each year.

The sample program of study chart shown is typical for the accredited major in Civil Engineering. Students should keep in mind that this program is based upon a rigid set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Therefore, the course sequence should not be changed except for the most compelling reasons. (Students who select the Environmental Engineering specialization within the Civil Engineering major should follow the Civil Engineering sample program.) Students must have their programs approved by their faculty advisor. Civil Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisors.

Undergraduate Major in Environmental Engineering

Program Educational Objectives: Graduates of the program will (1) be knowledgeable of the historical context, the state-of-the-art, and emerging issues in the field of environmental engineering and its role in contemporary society; (2) demonstrate critical reasoning and requisite quantitative skills to identify, formulate, and resolve environmental engineering problems, and to create designs that reflect legal, social, ecological, and economic sensitivities; (3) display a systems viewpoint, critical thinking, effective communication and interpersonal skills, a spirit of curiosity, and conduct reflecting a professional and ethical manner; (4) exhibit a commitment to lifelong learning and professional development in industry, government, and/or academia; (5) recognize the multidisciplinary nature of environmental engineering and the limitations of disciplinary perspectives in the context of environmental analysis, design, engineering, policy, and management. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The curriculum includes a core of mathematics, physics, chemistry, and biology, as well as engineering mechanics and methods courses. Students may select from a variety of environmental engineering courses to fulfill the remaining portion of the program and to focus their environmental engineering training in one or more of the following areas: water supply and resources, waste water management, or atmospheric systems and air pollution control. Design

experiences are integrated into environmental engineering courses, and seniors enroll in a capstone design course.

ADMISSIONS

High School Students: See page 198.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one year of general chemistry (with laboratory), and one additional approved course for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN ENVIRONMENTAL ENGINEERING

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements:

Mathematics and Basic Science Courses: Mathematics 2A-B, 2D, 2J, 3D, and 2E; Physics 7B/7LB or Physics 7C/7LC; Physics 7D and 7LD; Chemistry 1A-B-C and 1LB-LC, Chemistry 51A and 51LA. With approval of a faculty advisor, students select 4 units of Earth System Science and 4 units of Biological Sciences. Additional mathematics and basic science course work may be required depending on the student applied program.

Engineering Topics Courses: Students must complete a minimum of 19 units of engineering design.

Core Courses: Engineering CEE10 or EECS10 or EECS12 or MAE10, CEE11, CEE20, CEE81A-B or MAE52, CEE30, CEE80 or MAE80, CBEMS40A-B or MAE91, CEE110, CEE130 and 130L, CEE150 and 150L, CEE170 or MAE130A or CBEMS120A, CEE162, CEE168, CEE181A-B-C or CBEMS145.

Engineering Elective Courses: Students must take two courses each from two of the following three groups and one course from the remaining groups.

Water Supply and Resources: CEE171, CEE172, CEE173, CEE176, CEE178, Earth System Science 132.

Environmental Processes: CEE161, CEE163, CEE167.

Atmospheric Systems and Air Pollution Control: MAE110, MAE115, MAE164, Earth System Science 112.

All additional engineering topics courses needed to satisfy school and major requirements must be approved by the faculty advisor. Environmental Engineering is an inherently interdisciplinary program. Students interested in pursuing a dual degree with Environmental Engineering may be able to substitute appropriate course work for required courses stated above.

Please consult with an Engineering academic or faculty advisor.

Engineering Professional Topics Courses: Environmental Analysis and Design E8, Economics 20A-B.

(The nominal Environmental Engineering program requires 190 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

At most an aggregate total of 6 units of 199 or H199 courses may be used to satisfy degree requirements.

PROGRAM OF STUDY

The sample program of study chart shown is typical for the major in Environmental Engineering. Students should keep in mind that this program is based upon a sequence of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their programs approved by their faculty advisor. Environmental Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisors.

Students must obtain approval for their program of study and must see their faculty advisor at least once each year.

Graduate Study in Civil Engineering

Civil Engineering addresses the technology of constructed environments and, as such, embraces a wide range of intellectual endeavors. The Department of Civil and Environmental Engineering focuses its graduate study and research program on four areas: Structural Engineering, including aspects of soil mechanics, structural dynamics, earthquake engineering, and reliability and risk assessment; Transportation Systems Engineering, including traffic operations and management, advanced information technology applications, travel behavior, and transportation systems analysis; Hydrology and Water Resources Engineering, including hydrology, water resources, contamination management, and pollution control technologies; and Environmental Processes, including physical, chemical, and biological processes in relation to water and wastewater treatment, water reuse, pollutant fate and transport, waste disposal and the ecology of natural waters as well as global climate change and energy.

The Department offers the M.S. and Ph.D. degrees in Civil Engineering.

At the point of application a student is required to identify a thrust area. Specifically, the four thrust areas that have been identified for the Civil Engineering Graduate program are: Structural Engineering, Transportation Systems Engineering, Hydrology and Water

Resources Engineering, and Environmental Processes. Once admitted, an advisor will be assigned according to the thrust area a student has chosen. Financial support through research or teaching assistantships and a variety of fellowships and scholarships is available to qualified students.

Structural Engineering: The Structural Engineering area emphasizes the application of analytical, numerical, and experimental approaches to the investigation of constructed facilities and systems that support or resist various loads. The objective of the program is to prepare graduates for leadership positions in industry and academic institutions by providing an opportunity to learn state-of-the-art methodologies applied to significant structural engineering problems. Specific interests include sensors and structural health monitoring, composites for infrastructure applications, reliability and risk assessment of civil engineering systems, structural control, system identification and damage detection, performance-based earthquake engineering, smart materials and structures, multi-scale mechanistic analysis, and sustainable green materials and infrastructural systems.

Transportation Systems Engineering: Among leading centers for transportation research, the Department of Civil and Environmental Engineering offers a graduate research area that is distinguished by its interdisciplinary approach to the study of current and emerging urban transportation issues and by its unique relationship with the UC Irvine Institute of Transportation Studies. The research area focuses on the planning, design, operation, and management of complex transportation systems. Emphasis is on the development of fundamental knowledge in engineering, systems analysis, modeling, and planning, combined with advanced computational techniques and information technologies, to address transportation problems affecting urban travel and goods movement.

Hydrology and Water Resources Engineering: This area focuses on the distribution and transport of water among and between land, atmosphere, and oceans, the supply of water for municipal, agricultural, and environmental uses, and water-related hazards such as flooding and drought. Mathematical and computational modeling is germane to research activity in this area as well as professional practice, so course work is designed to develop theory-based mathematical modeling skill, on the one hand, as well as computational modeling skill on the other. Course work emphasizes important fundamentals such as mass, energy and momentum conservation principles, applied to hydrologic systems, and also increasingly important remote sensing and information technologies. Interdisciplinary study is an important dimension to hydrology and water resources, particularly in the areas of water quality, ecology, infrastructure systems, technology, and policy. Consequently, students are encouraged to take courses in these areas.

Environmental Processes: This area covers physical, chemical, and biological processes in relation to water and wastewater treatment, water reuse, pollutant fate and transport, waste disposal and the ecology of natural waters. Engineering fundamentals such as transport processes and unit operations are central to this area, along with applied sciences such as advanced oxidation chemistry, microbial biotechnology, and ecology. Another central theme is global climate change and energy, particularly in relation to municipal treatment systems. The recommended course work includes transport processes, water and wastewater treatment processes, molecular tools applied to water systems, applied microbial ecology, environmental chemistry, and carbon footprint analysis.

Students may also pursue M.S. and Ph.D. degrees in Engineering through The Henry Samueli School of Engineering graduate concentration in Environmental Engineering.

MASTER OF SCIENCE DEGREE

The M.S. degree reflects achievement of an advanced level of competence for the professional practice of civil engineering. Two plans are available to those working toward the M.S. degree: a thesis option and a course work option. Opportunities are available for part-time study toward the M.S. degree.

Plan I: Thesis Option

The thesis option requires completion of 36 units of study (eight of which can be taken for study in conjunction with the thesis research topic); the completion of an original research project; the writing of the thesis describing it; and presentation of the thesis research findings in a public seminar. Of the 36 units, a minimum of 20 units must be in nonresearch, graduate-level courses. The remaining units may be earned as graduate-level course work, individual research, or upper-division undergraduate units (maximum six units).

Plan II: Course Work Option

The course work option requires the completion of 36 units of study, at least 30 of which must be in nonresearch graduate-level courses. The remaining six units may be earned as graduate-level course work, individual research, or upper-division undergraduate units.

Concurrent Master's Degree Program with Planning, Policy, and Design

The Department of Civil and Environmental Engineering (CEE) and the Department of Planning, Policy, and Design (PPD) in the School of Social Ecology offer a concurrent degree program that allows students to earn both a master's in Civil Engineering (M.S.) and a master's in Urban and Regional Planning (M.U.R.P.) in two years (instead of in more than three years). The concurrent degree program requires 72 units of study and is organized around two tracks: (1) transportation systems, and (2) environmental hydrology and water resources. The program core comprises 15 graduate courses for the transportation systems track, and 13 graduate and two undergraduate courses for the environmental hydrology and water resources track.

Students choose between a thesis option and a comprehensive examination option. The thesis option requires completion of 72 units of study (eight of which may be taken in conjunction with the thesis research); completion of an original research project and the writing of a thesis to describe it; completion of required core courses; and completion of enough units of approved electives to meet the total requirement of 72 units. The comprehensive examination option also requires completion of 72 units of study as well as a professional report, which represents a substantial piece of planning practice, as the capstone event. These units of study include core courses and enough units of approved electives to meet the total requirement of 72 units, with no redundancy of core courses in either CEE or PPD. Electives may include as many as eight units of independent study or approved undergraduate courses.

Undergraduates seeking admission to the concurrent master's degree program should have a strong record of course work in disciplines related to civil engineering and urban planning, and they must meet the requirements for admission in both departments. For more information about these requirements, see <http://www.eng.uci.edu/cee/grad/requirements>, and <http://www.seweb.uci.edu/ppd/admissions.uci>.

DOCTOR OF PHILOSOPHY DEGREE

The Ph.D. degree indicates attainment of an original and significant research contribution to the state-of-the-art in the candidate's field, and an ability to communicate advanced engineering concepts. The doctoral program is tailored to the individual needs and background of the student. The detailed program of study for each Ph.D. student is formulated in consultation with a faculty advisor

who takes into consideration the objectives and preparation of the candidate. The program of study must be approved by the faculty advisor and the Graduate Advisor of the Department.

There are no specific course requirements. Within this flexible framework, the School maintains specific guidelines that outline the milestones of a typical doctoral program. All doctoral students should consult the Civil Engineering program's guidelines for details, but there are several milestones to be passed: admission to the Ph.D. program by the faculty; early assessment of the student's research potential (this includes a preliminary examination), research preparation, formal advancement to candidacy by passing the qualifying examination in the third year (second year for students who entered with a master's degree), completion of a significant research investigation, and the submission and oral defense of an acceptable dissertation. There is no foreign language requirement. Ph.D. students have to meet departmental research requirements as a research assistant or equivalent, with or without salary. The degree is granted upon the recommendation of the Doctoral Committee and the Dean of Graduate Studies. For at least the final two years of the doctoral program it is expected that the student will be a full-time resident in the School. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

THE INSTITUTE OF TRANSPORTATION STUDIES

The Institute of Transportation Studies at Irvine (ITS) is part of a multicampus research unit of the University of California. ITS Irvine consists of faculty, staff, and graduate and undergraduate students engaged at the forefront of knowledge in interdisciplinary transportation research and education. Currently, the Institute involves faculty and students from The Henry Samueli School of Engineering, the School of Social Sciences, the School of Social Ecology, The Paul Merage School of Business, and the Donald Bren School of Information and Computer Sciences. Collaborations with colleagues from outside the University are common. The mission of the Institute is to create and disseminate significant new knowledge to help solve society's pressing transportation problems, both in California and globally. It achieves this through cutting-edge activities in research, education, and professional outreach. A characteristic of ITS Irvine transportation research is a systems approach, focusing on the areas of planning, policy, economics (including pricing and finance), operations (including traffic, transit, logistics and freight, and safety), energy and the environment, and information technologies. The Institute has close ties to the University's Transportation Science interdisciplinary graduate degree program. Students choosing to focus their studies in transportation will find strong interdisciplinary opportunities between the Department and ITS. See the Office of Research section of the *Catalogue* for additional information.

THE URBAN WATER RESEARCH CENTER

The Urban Water Research Center focuses on five integrating water issues in urban areas: (1) supply, demand, and distribution; (2) water quality; (3) urban ecology; (4) water reuse; and (5) institutions and public policy. In each of these areas the Center enables the issues to be addressed in an integrated way from the biological and earth, economical, engineering public policy, and public health points of view. The Center is the collaborative effort of the Department of Civil and Environmental Engineering, the Department of Earth System Science, and the School of Social Ecology.

Courses in Civil and Environmental Engineering

LOWER-DIVISION

NOTE: The undergraduate courses listed below are open only to students in The Henry Samueli School of Engineering. All other majors must petition for permission to enroll.

CEE10 Methods I: Computation Methods in Civil and Environmental Engineering (4) F. Introduction to engineering analysis, design, and problem solving from a computational perspective. Fundamentals of computers and structured programming. Develop initial design and programming skills using a high-level programming language (primarily C++ with a brief introduction to FORTRAN). Laboratory sessions. Corequisite or prerequisite: Mathematics 2A. Only one course from CEE10, ENGR10, EECS10, EECS12, and MAE10 may be taken for credit. (Design units: 1)

CEE11 Methods II: Probability and Statistics (4) S. Modeling and analysis of engineering problems under uncertainty. Engineering applications of probability and statistical concepts and methods. Prerequisites: CEE10 or equivalent (EECS10, EECS12, MAE10, ICS21); Mathematics 2J or 3A. (Design units: 1)

CEE20 Engineering Problem Solving (4) S. Introduction to Matlab and its application for engineering analysis and problem solving involving: roots of nonlinear equations, systems of equations, least-squares fitting of curves to data, and integration of ordinary differential equations. Corequisite: Mathematics 3D. Prerequisites: CEE10 or equivalent (EECS10, MAE10, EECS12, ICS21); Mathematics 2J. CEE20 and ENGR15 may not both be taken for credit. (Design units: 1)

CEE30 Statics (4) F, Summer. Addition and resolution of forces, distributed forces, equivalent system of forces centroids, first moments, moments and products of inertia, equilibrium of rigid bodies, trusses, beams, cables. Corequisite or prerequisite: Mathematics 2D. Prerequisite: Physics 7A. Only one course from CEE30, ENGR30, and MAE30 may be taken for credit. (Design units: 0)

CEE55 Land Measurements and Analysis (4). Introduction to surveying and land measurements. Use of the level and transit equipment, legal descriptions, subdivisions, topographic surveys, mapping vertical and horizontal curves. Analysis of surveying field data using manual methods, computer programs, and the COGO software system. Laboratory sessions. Prerequisite: CEE10. (Design units: 0)

CEE60 Contemporary and Emerging Environmental Challenges (4) F. Introduces contemporary and emerging environmental challenges, illustrates links between human behavior, environmental policy and engineering practices, examines policy options in the context of current institutions; and introduces tools and frameworks to reach sound economic, social, and environmental solutions. (III) (Design units: 0)

CEE80 Dynamics (4) W, Summer. Introduction to the kinetics and dynamics of particles and rigid bodies. The Newton-Euler, Work/Energy, and Impulse/Momentum methods are explored for ascertaining the dynamics of particles and rigid bodies. An engineering design problem using these fundamental principles is also undertaken. Prerequisites: Mathematics 2D and Physics 7C. Same as ENGR80 and MAE80. (Design units: 0.5)

CEE81A Civil Engineering Practicum I (3) S. Introduction to civil engineering through presentations and designs of structural, environmental, and transportation systems. Introduction to visualization and communication of design concepts. Fundamentals of Computer-Aided Design (CAD) using AutoCad, CAD for geomatics, introduction to Geographic Information Systems (GIS). Laboratory sessions. (Design units: 2)

CEE81B Civil Engineering Practicum II (2) W. Introduction to the state-of-the-art and future areas of the profession, including applications of advanced technology and computers. Presentations on information and control technology, smart materials, structures, transportation and environmental systems. Laboratory sessions. (Design units: 0)

UPPER-DIVISION

CEE110 Methods III: Modeling, Economics, and Management (4) S. Analysis, modeling and management of civil engineering systems. Statistics and system performance studies, probabilistic models and simulation, basic economics and capital investments, project elements and organization, managerial concepts and network technique, project scheduling. Emphasis on real-world examples. Laboratory sessions. Prerequisites: CEE11. (Design units: 1)

CEE111 Methods IV: Systems Analysis and Decision-Making (4) W. Analysis and optimization for decision-making in civil and infrastructural systems. Topics include: linear programming formulations and solution algorithms, network models, and logistical models. Emphasis is on project-level and managerial decision-making and selection from alternative designs. Prerequisite: CEE110. (Design units: 1)

CEE121 Transportation Systems I: Analysis and Design (4) F. Introduction to analysis and design of fundamental transportation system components, basic elements of geometric and pavement design, vehicle flow and elementary traffic, basic foundations of transportation planning and forecasting. Laboratory sessions. Prerequisites: CEE11 and CEE81A. (Design units: 2)

CEE122 Transportation Systems II: Operations and Control (4) W. Introduction to fundamentals of urban traffic engineering, including data collection, analysis, and design. Traffic engineering studies, traffic flow theory, traffic control devices, traffic signals, capacity and level of service analysis of freeways and urban streets. Laboratory sessions. Prerequisites: CEE11, CEE121. (Design units: 2)

CEE123 Transportation Systems III: Planning and Forecasting (4) S. Theoretical foundations of transportation planning, design, and analysis methods. Theory and application of aggregate and disaggregate models for land use development, trip generation, and destination, mode, and route choice. Transportation network analysis. Planning, design, and evaluation of system alternatives. Laboratory sessions. Corequisite: CEE110. Prerequisite: CEE121. (Design units: 2)

CEE124 Transportation Systems IV: Freeway Operations and Control (4) S. Fundamentals of traffic on urban freeways, including data collection, analysis, and design. Traffic engineering studies, traffic flow theory, freeway traffic control devices, capacity and level of service analysis of freeways and highways. Laboratory sessions. Prerequisite: CEE121. (Design units: 2)

CEE125 Transportation and the Environment (4) F. Analysis of the impacts of motor vehicle transportation on the environment. Introduction to life cycle analysis applied to transportation. Basic economic tools for transportation externalities. Transportation planning, urban form, health, and the environment. Transportation sustainability. (Design units: 0)

CEE130 Soil Mechanics (3) W. Mechanics of soils, composition and classification of soils, compaction, compressibility and consolidation, shear strength, seepage, bearing capacity, lateral earth pressure, retaining walls, piles. Prerequisites: CEE150; CEE170. (Design units: 0)

CEE130L Soil Mechanics Laboratory (2) W. Laboratory procedures of soil testing for engineering problems. Corequisite: CEE130. (Design units: 0)

CEE150 Mechanics of Materials (4) F, Summer. Stresses and strains, strain-stress diagrams, axial deformations, torsion, bending and shear stresses in beams, shear force and bending moment diagrams, combined stresses, principal stresses, Mohr's circle, deflection of beams, columns. Prerequisite: CEE30. Only one course from CEE150, CEEH150, ENGR150, ENGRH150, and MAE150 may be taken for credit. (Design units: 1)

CEE150L Mechanics of Materials Laboratory (1) F. Experimental methods and fundamentals for mechanics of materials analysis. Corequisite: CEE150. Prerequisite: CEE30. CEE150L and MAE150L may not both be taken for credit. (Design units: 0)

CEEH150 Honors Mechanics of Materials (4) F. Covers the same material as CEE150 but in greater depth. Prerequisite: CEE30 or ENGR30 or MAE30. Only one course from CEEH150, CEE150, ENGRH150, ENGR150, and MAE150 may be taken for credit. (Design units: 1)

CEE151A Structural Analysis (4) W. Fundamentals of structural analysis. Deformation of statically determinate structures. Influence lines. Structural systems. Loads: dead, live, wind, and seismic. Prerequisite: CEE150. (Design units: 0)

CEE151B Structural Timber Design (4) S. Design of timber structures. Beams, columns, beam-columns, roof, and connections. Prerequisite: CEE151A. (Design units: 3)

CEE151C Reinforced Concrete Design (4) F. Ultimate strength design. Design of reinforced concrete beam sections. Design for shear and deflection. Design of columns. Design of isolated and combined footings. Laboratory sessions. Prerequisites: CEE130, CEE151A. (Design units: 3)

CEE152 Computer Methods in Structural Analysis and Design (4). Matrix techniques for indeterminate framed structures. Computer implementation using the stiffness method. Software packages for design of reinforced concrete, steel, and/or timber structures. Prerequisites: CEE151C and CEE153. (Design units: 2)

CEE153 Statically Indeterminate Structures (4). Fundamentals of statically indeterminate structures; strain energy and virtual work; energy theorems; deflections, moment-area methods, conjugate beam, method of virtual work, Castigliano theorem; method of consistent deformations; slope-deflection method; approximate methods; influence lines for indeterminate structures. Prerequisite: CEE151A. (Design units: 0)

CEE155 Structural Steel Design (4). Design in steel of tension members, beams, columns, welded and bolted connections; eccentrically loaded and moment resistant joints; plate girders. Plastic design; load and resistance factor design. Composite construction; introduction to computer-aided design. Laboratory sessions. Prerequisite: CEE151B. (Design units: 4)

CEE156 Foundation Design (4). Applications of soil mechanics principles to the analysis and design of shallow foundations, retaining walls, pile foundations, and braced cuts. Design criteria: bearing capacity, working loads and tolerable settlements, structural integrity of the foundation element. Damage from construction operations. Prerequisites: CEE130, CEE151C. (Design units: 3)

CEE161 Water Quality and Treatment (4) S. Water and the urban environment. Environment regulations. Water quality parameters. Water use, treatment, and reuse. Introduction to modeling and designing of treatment systems. Extensive use of mass balances for system evaluation. Prerequisites: Chemistry 1A; Engineering CEE11; MAE130A or CEE170. (Design units: 2)

CEE162 Introduction to Environmental Chemistry (4) W. Basic concepts from general, physical, and analytical chemistry as they relate to environmental engineering. Particular emphasis on the fundamentals of equilibrium and kinetics as they apply to acid-base chemistry, gas solubility, and redox reactions. Laboratory sessions. Prerequisite: Chemistry 1A-B. (Design units: 0)

CEE163 Biological Treatment Processes (3). Fundamentals and analysis of natural biological processes in the aquatic environment. Design of biological treatment processes with emphasis on suspended growth systems, gas transfer, disinfection. Topics include aerobic and anaerobic treatment systems, biodegradation of contaminants in the environment. Design projects included. Prerequisites: CEE161, CEE162. (Design units: 2)

CEE167 Ecology of Coastal Waters (4) W. Examines the ecological processes of the coastal environment. Investigates the causes of coastal ecosystem degradation and strategies to restore the ecosystem balance or prevent further coastal ecosystem health degradation. Prerequisites: Chemistry 1A-B and Environmental Analysis and Design E8. Same as Environmental Analysis and Design E168.

CEE168 Pollution Prevention and Waste Minimization (3) W. Study of the methods and impacts of selecting alternative technologies, processes, and/or products so as to reduce the sources of pollution and waste. Includes discussion of recycling, environmental regulations, life-cycle assessment, and economic analysis. Prerequisites: Chemistry 1C and Mathematics 3D. (Design units: 2)

CEE170 Introduction to Fluid Mechanics (4) F. Fluid properties; fluid statics; fluids in motion; control volume approach for mass, momentum, and energy conservation; dimensional analysis; surface resistance. Prerequisites: Physics 7A and Mathematics 3D; CEE80/ENGR80/MAE80. Only one course from CEE170, CEEH170, CBEMS120A, CBEMS125A, MAE130A, and MAEH130A may be taken for credit. (Design units: 0)

CEEH170 Honors Introduction to Fluid Mechanics (4) F. Covers the same material as CEE170 but in greater depth. Prerequisites: Physics 7A and Mathematics 3D; CEE80/ENGR80/MAE80. Only one course from CEEH170, CEE170, CBEMS120A, CBEMS125A, MAE130A, and MAEH130A may be taken for credit. (Design units: 0)

CEE171 Infrastructure Hydraulics (4) W. Continuity, energy, and momentum principles applied to flow in closed conduit and open channel infrastructure. Analysis of hydraulic networks. Deterministic and probabilistic factors affecting hydraulic design. Hydrologic design protocols for hydraulic systems. Prerequisites: CEE11; CEE170 or MAE130A. (Design units: 2)

CEE172 Groundwater Hydrology (4). Topics include conservation of fluid mass, storage properties of porous media, matrix compressibility, boundary conditions, flow nets, well hydraulics, groundwater chemistry, and solute transport. Design projects and computer applications included. Prerequisites: CEE170 or MAE130A or consent of instructor. (Design units: 2)

CEE173 Computer Tools for Watershed Modeling (4). Basic principles of hydrologic modeling are practiced in detail. Concepts of watershed, flood-plains delineation, hydrologic impact, design studies, and GIS tools are discussed. Focus on the USACE (HEC) software tools (HEC-HMS) and HEC-RAS along with their associated GIS interfaces. Prerequisites: CEE176 and CEE170. Concurrent with CEE273.

CEE176 Surface Water Hydrology (3). Analysis of elements in the hydrologic cycle including precipitation, infiltration, and runoff. Frequency analysis of hydrologic phenomena. Consideration of precipitation/runoff relationships. Unit hydrograph theory. Hydrologic and hydraulic routing methods. Stochastic methods in hydrology. Prerequisite: CEE171. (Design units: 2)

CEE178 River and Estuarine Flow (3). Continuity, momentum, and energy principles applied to open channels. Flow control. Steady and unsteady flow. Flow resistance. Shallow-water wave theory. Flood waves in rivers and tidal oscillations in coastal wetlands. Computational techniques for flow modeling. Prerequisite: CEE171. (Design units: 1)

CEE181A-B-C Senior Design Practicum (2-2-2) F, W, S. Team designs a land development project including infrastructural, environmental, circulation aspects. Focus on traffic impact studies, design of road layouts, geometry, signals, geotechnical and hydrological analysis, design of structural elements, economic analysis. Oral/written interim and final design reports. Laboratory sessions. In-Progress grading. Corequisites: CEE121 and CEE151C. Prerequisites: CEE81A, CEE81B, CEE110, CEE161. CEE181A-B-C must be taken in the same academic year. (Design units: 1-2-2)

CEE195 Special Topics in Civil and Environmental Engineering (1 to 4). Corequisite and prerequisite: varies. May be repeated for credit as topics vary. (Design units: varies)

CEE198 Group Study (1 to 4). Group study of selected topics in Civil and Environmental Engineering. Prerequisite: consent of instructor. May be repeated for credit as topics vary. (Design units: varies)

CEE199 Individual Study (1 to 4). For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. May be repeated for credit for a total six units. (Design units: varies)

CEE199P Individual Study (1 to 4). Same description as CEE199. Pass/Not Pass grading only. May be repeated for credit as topics vary. (Design units: varies)

CEEH199 Individual Study for Honors Students (1 to 5). Independent reading, research, or design under the direction of a faculty member or group of faculty members in Civil Engineering. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. Open only to members of the Campuswide Honors Program who are Civil or Environmental Engineering students. May be repeated for credit as topics vary. (Design units: varies)

GRADUATE

CEE220A Travel Demand Analysis I (3) W. Fundamentals of transportation systems analysis. Theoretical aspects of travel demand. Travel behavior. Modeling of performance characteristics and costs of transportation modes. In-depth presentation of travel demand modeling techniques. Development of travel choice models including mode, route, and destination choice. Equilibrium. Prerequisite: knowledge of probability and statistics.

CEE220B Travel Demand Analysis II (3) S. Methods of discrete choice analysis and their applications in the modeling of transportation systems. Emphasis on the development of a sound understanding of theoretical aspects of discrete choice modeling that are useful in many applications in travel demand analysis. Prerequisite: CEE220A.

CEE221A Transportation Systems Analysis I (3) F. Introduction to mathematical methods and models to address logistics and urban transportation problems. Techniques include stochastic models, queueing theory, linear programming, and introductory non-linear optimization. Prerequisite: basic knowledge of probability theory.

CEE221B Transportation Systems Analysis II (3) S. Advanced mathematical methods and models to address logistics and urban transportation problems. Topics include network flows, advanced optimization techniques, dynamic network models, and geometric models. Prerequisites: CEE221A; graduate standing or consent of instructor.

CEE222 Transit Systems Planning (3) F. Planning methods for public transportation in urban areas. Technological and operating characteristics of vehicles, facilities, and systems. Short-range planning techniques: data collection and analysis, demand analysis, mode choice, operational strategies, financial analysis. Design of systems to improve performance.

CEE223 Artificial Intelligence Techniques in Transportation (3) F. Concepts, characteristics, and applications of selected artificial intelligence techniques in transportation engineering, including artificial neural networks, knowledge-based expert systems, and genetic algorithms. Prerequisites: graduate standing or consent of instructor. Formerly CEE223B.

CEE224A Transportation Data Analysis I (3). Statistical analysis of transportation data sources. Analysis of categorical and ordinal data. Regression and advanced multivariate analysis methods such as discriminant analysis, canonical correlation, and factor analysis. Sampling techniques, sample error and bias, survey instrument design. Prerequisites: knowledge of probability and statistics; graduate standing or consent of instructor.

CEE225B Transportation Planning Models II (3) S. Design and application of comprehensive transportation models. Network development, demand modeling, and equilibrium assignment. Model calibration, validation, prediction, and evaluation. Regional modeling, site impact analysis, and circulation studies. Design of transportation alternatives.

CEE226A Traffic Flow Theory I (3) F. Traffic measurement and fundamental speed-density-flow relationships. Kinematic models. Shock waves. Statistical-kinetic theory of traffic. Introductory car-following principles and stability. Gap acceptance. Platoon dispersion. Two-fluid model. Queueing processes. Multi-regime and catastrophe models. Higher-order continuum models. Microscopic and macroscopic simulation. Prerequisites: knowledge of basic probability and statistics; graduate standing or consent of instructor.

CEE226B Traffic Flow Theory II (3). Advanced mathematical analysis of vehicular flow. Detailed treatise on car-following models. Fourier and Laplace analysis of stability problems. Perturbation analysis. Derivation of macroscopic traffic flow relationships from microscopic considerations. Advanced hydrodynamic theory. Prerequisite: CEE226A.

CEE227A Transportation Logistics I: Introduction to Logistics and Supply Chain Management (3) W. Logistics network configuration, inventory management and risk pooling, the value of information, distribution strategies, international supply chain management, coordinated product and supply chain management, customer value and supply chain management, information technology, decision support systems.

CEE228A Urban Transportation Networks I (3) S. Analytical approaches and algorithms to the formulation and solution of the equilibrium assignment problem for transportation networks. Emphasis on user equilibrium (USE), comparison with system optimal, mathematical programming formulation, supply functions, estimation. Estimating origin-destination matrices, network design problems. Prerequisite: CEE220A or equivalent.

CEE229A Traffic Systems Operations and Control I (3) W. Introduction to operation, control, and analysis of arterial and freeway traffic systems. Control concepts, detectors, local controllers, system masters, incident-detection techniques, advanced traffic measurement technologies, intelligent vehicle-highway systems, advanced transportation management systems, advanced traveler information systems.

CEE229B Traffic Systems Operations and Control II (3) S. Introduction to control theory. Control formulations for corridor and network systems with freeways and arterials. Real-time control and demand management. Development and application of microscopic and macroscopic simulation models for integrated traffic systems. Dynamic models of Intelligent Transportation Systems. Prerequisites: CEE229A.

CEE231 Foundation Engineering (3) W. Essentials for design and analysis of structural members that transmit superstructure loads to the ground. Topics include subsurface investigations, excavation, dewatering, bracing, footings, mat foundations, piles and pile foundations, caissons and cofferdams, other special foundations. Prerequisite: CEE156 or equivalent.

CEE242 Advanced Strength of Materials (3) W. Beams on elastic foundations. Combined axial and lateral loads. Curved beams. Unsymmetric bending. Shear center. Stresses and strains. Basic equations for theory of elasticity. Energy principles. Theory of torsion. Combined bending and torsion.

CEE243 Mechanics of Composite Materials (3) S. Stress-strain relationship for orthotropic materials; invariant properties of an orthotropic lamina; biaxial strength theory for an orthotropic lamina; mechanics of materials approach to stiffness; elasticity approach to stiffness; classical lamination theory; strength of laminates; statistical theory of fatigue damage. Prerequisite: consent of instructor.

CEE245 Experimental Modal Analysis (3) S. A thorough coverage of modal analysis techniques including digital signal processing concepts, structural dynamics theory, modal parameter estimation techniques, and application of modal measurement methods suitable for practical vibration analysis problems. Prerequisite: CEE247 or equivalent.

CEE247 Structural Dynamics (3) F. Vibration of discrete and continuous mass elastic systems. Isolation and transmissibility. Dynamic recording instruments. Introduction to nonlinear theory of vibration. Response of structures to earthquake, traffic, and wind loads. Response spectra concepts. Normal mode analysis. Numerical integration techniques. Prerequisite: CEE80 or consent of instructor.

CEE249 Earthquake Engineering (3) W. Earthquake magnitude, intensity, and frequency. Seismic damage to structures. Earthquake load prediction including response spectra, normal mode, and direct integration techniques. The basis of building code earthquake load requirements for buildings. Seismic response of special structures. Lifeline engineering. Prerequisite: consent of instructor.

CEE250 Finite Element Method in Structural Engineering (3) S. Finite element concepts in structural engineering including variational formulations, shape functions, elements assembly, convergence, and computer programming. Stiffness of truss, beam, and frame members; two- and three-dimensional solids; plate and shell elements. Static, vibration, stability, and inelastic analyses. Prerequisite: consent of instructor.

CEE254 Advanced Reinforced Concrete Behavior and Design (3) F. Flexural strength of reinforced concrete elements. Flexural ductility of unconfined and confined members with axial loads. Shear and torsional behaviors. Strength of reinforced concrete ductile frames and shear walls. Reinforced concrete detailing. Prerequisite: consent of instructor.

CEE255 Advanced Behavior and Design of Steel Structures (3) F. Advanced principles of structural steel design. Analysis and design of beam-column members, braced and unbraced frames for buildings, and plate girders. Review of seismic design provisions. Design of connections. Prerequisite: CEE 153 or consent of instructor.

CEE258 Earthquake-Resistant Structural Design (3) S. Objectives of seismic design. Cyclic load-distortion characteristics of typical structural elements. Desirable structural form. Ductility and methods of achieving it. Use of energy dissipators. Project involving design of multistory, multibay rigid-jointed plane frame. Prerequisite: consent of instructor.

CEE259 Structural Stability (3) S. Introduction to structural stability emphasizing behavior of simple structural components that illustrate various modes of instability: Euler columns, beam columns, beam torsional and lateral instability, circular ring buckling. Elementary matrix methods compatible with the finite element models now used in industry for complex structures. Prerequisite: consent of instructor.

CEE262 Environmental Chemistry II (4) W. Advanced concepts from physical and organic chemistry as they relate to environmental engineering. Emphasis on equilibrium and kinetics as they apply to redox reactions, coordination, adsorption, gas phase reactions, and ion exchange. Laboratory on GC, GC-MS, and ion chromatography. Prerequisite: CEE162.

CEE263 Advanced Biological Treatment Processes (3) W. Analysis of natural biological processes in the aquatic environment. Design of biological treatment processes with emphasis on suspended growth systems. Aerobic and anaerobic treatment systems, biodegradation of contaminants in the environment. Construction and use of computer models for process design and operation. Prerequisites: CEE161 and CEE162.

CEE265 Advanced Physical-Chemical Treatment Processes (4) S. Theory and dynamics of physical and chemical separation processes in water and wastewater treatment. Topics include coagulation, sedimentation, filtration, gas transfer, membrane separations, and adsorption. Prerequisites: CEE161 and CEE162.

CEE268 Pollution Prevention Through Manufacturing, Materials Selection, and Product Design (3) S. Study of manufacturing, materials selection, and product design alternatives that yield less solid, air, and/or water pollutants. Analytical tools, such as life-cycle analysis and economic analysis, that can be used to compare alternatives are discussed. A case study approach is utilized.

CEE271 Flow in Unsaturated Porous Media (3) W. Fluid flow in the unsaturated zone (zone of aeration) of the subsurface. Soil-water physics, flow in regional groundwater systems, miscible displacement, mathematical modeling techniques. Prerequisite: CEE172 or consent of instructor.

CEE273 Computer Tools for Watershed Modeling (4) W. Basic principles of hydrologic modeling are practiced in detail. Concepts of watershed, flood-plains delineation, hydrologic impact, design studies, and GIS tools are discussed. Focus on the USACE (HEC) software tools (HEC-HMS) and HEC-RAS) along with their associated GIS interfaces. Concurrent with CEE173.

CEE275 Topics in Coastal Engineering (3) S. Linear wave theory. Wave properties: particle kinematics, energy propagation, shoaling, refraction, reflection, diffraction, and breaking. Wave statistics and spectra. Selected topics from: design of coastal structures; harbor engineering; littoral transport and shoreline morphology; and hydrodynamics of estuaries. Prerequisites: CEE11, CEE171, or consent of instructor.

CEE276 Surface Water Hydrology (3). Analysis of elements in the hydrologic cycle including precipitation, infiltration, and runoff. Frequency analysis of hydrologic phenomena. Consideration of precipitation/runoff relationships. Units hydrograph theory. Hydrologic and hydraulic routing methods. Stochastic methods in hydrology. Prerequisite: consent of instructor.

CEE277 Transport in Rivers and Estuaries (3) W. Mathematical formulation of river and estuary water-quality models. Concepts of turbulent diffusion and shear flow dispersion, computational methods for transport modeling. Prerequisite: CEE278 or consent of instructor.

CEE279A Computations in Environmental Hydraulics (3) W. Numerical solution methods for flow and transport in rivers and estuaries. Stability, accuracy, and convergence properties of schemes. Finite-difference and finite-volume formulations. High-resolution and monotonicity-preserving schemes for shallow-water flow and transport. Prerequisite: CEE278 or consent of instructor.

CEE283 Mathematical Methods in Engineering Analysis (3) F. Matrices; eigenvalue problems; techniques for the solution of ordinary and partial differential equations; boundary value problems; special functions; introduction to numerical methods.

CEE284 Engineering Decision and Risk Analysis (3) F. Develops applications of statistical decision theory in engineering. Presents the fundamental tools used in engineering decision making and analysis of risk under conditions of uncertainty. All concepts are presented and illustrated thoroughly with engineering problems. Prerequisite: CEE11 or consent of instructor.

CEE285 Reliability of Engineering Systems I (3) W. Develops the basic concepts for the definition and assessment of safety and reliability of engineering systems. Includes probabilistic modeling of engineering problems, assessment of component reliability, systems reliability, and introduction to probability-based design. Prerequisite: CEE11 or consent of instructor.

CEE287 Random Vibrations (3) W. Stochastic response of linear, single, and multidegree of freedom systems. Probabilistic approach to dynamic response of structures to random loading such as earthquake and wind gusting. Prerequisite: consent of instructor.

CEE289 Analysis of Hydrologic Systems (3). Application of systems theory in hydrologic, land surface, and biogeochemical modeling. Design, identification, and calibration of conceptual models. Principles of dynamic systems and modeling approaches, theory of linear systems and mathematical concepts of differential calculus, theoretical concepts of parameter estimation and optimization theory. Same as Earth System Science 238.

CEE295 Seminars in Engineering (1 to 12) F, W, S. Seminars scheduled each year by individual faculty in major field of interest. Prerequisite: consent of instructor. May be repeated for credit.

CEE296 Master of Science Thesis Research (4 to 12) F, W, S. Individual research or investigation conducted in preparation of the thesis required for the M.S. degree in Engineering. Prerequisite: consent of instructor. May be repeated for credit.

CEE297 Doctor of Philosophy Dissertation Research (4 to 12) F, W, S. Individual research or investigation conducted in preparation for the dissertation required for the Ph.D. degree in Engineering. Prerequisite: consent of instructor. May be repeated for credit.

CEE298 Special Topics in Civil Engineering (1 to 4) F, W, S. Presentation of advanced topics and special research areas in civil engineering. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

CEE299 Individual Research (1 to 12) F, W, S. Individual research or investigation under the direction of an individual faculty member. Prerequisite: consent of instructor. May be repeated for credit.

DEPARTMENT OF ELECTRICAL ENGINEERING AND COMPUTER SCIENCE

305 Engineering Tower; (949) 824-4821

Jean-Luc Gaudiot, **Department Chair**

Faculty

Nicolaos G. Alexopoulos: High-frequency integrated circuit antennas, wireless communication, materials

James Arvo: Computer graphics, intelligent user interfaces

Ender Ayanoglu: Communication systems, communication theory, communication networks

Nader Bagherzadeh: Parallel processing, computer architecture, computer graphics, VLSI design

Neil J. Bershad (*Emeritus*): Communication and information theory, signal processing

Ozdal Boyraz: Silicon photonics and optical communications systems

Peter J. Burke: Nano-electronics, bio-nanotechnology

Filippo Capolino: Optics/electromagnetics in nanostructures and sensors; antennas/microwaves, RF and wireless systems

Pai Chou: Hardware/software co-design, embedded systems, wireless sensor systems, medical devices, and real-time systems

Beatriz da Costa: Robotic art, tactical media, biotech initiatives, urban ecologies, surveillance projects, collaborative practice, social change

Rui J. P. de Figueiredo: Machine intelligence and neural and soft computing; applications to signal/image processing and biomedical engineering; applied mathematics

Franco De Flaviis: Microwave systems, wireless communications and electromagnetic circuit simulations

Brian Densky: Compiler programming, language software engineering and fault tolerance

Rainer Doemer: System-level design, embedded computer systems, design methodologies, specification and modeling languages

Ahmed Eltawil: Design of system and VLSI architectures for broadband wireless communication; implementations and architectures for digital processing

Leonard A. Ferrari (*Emeritus*): Machine vision, signal processing, computer graphics

Daniel D. Gajski: Embedded systems, software/hardware design, design methodologies and tools, science of design

Jean-Luc Gaudiot: Parallel processing, computer architecture, processor architecture

Michael M. Green: Analog/mixed-signal IC design, broadband circuit design, theory of nonlinear circuits

Glenn E. Healey: Machine vision, computer engineering, image processing, computer graphics, intelligent machines

Payam Heydari: Design and analysis of analog, RF, and mixed-signal integrated circuits; analysis of signal integrity and high-frequency effects of on-chip interconnects in high-speed VLSI circuits

Syed A. Jafar: Wireless communication and information theory

Hamid Jafarkhani: Communication theory, coding, wireless networks, multimedia networking

Stephen F. Jenks: Parallel and distributed processing, multithreading, embedded systems

K. H. (Kane) Kim: Real-time object-component-/service-oriented programming and system engineering, ultra-reliable distributed and parallel computing, real-time distributed simulation

Stuart Kleinfelder: First integrated sensor/readout arrays for visual, IR, X-ray, and charged particles

Fadi J. Kurdahi: VLSI system design, design automation of digital systems

Tomas Lang: Numerical processors and multiprocessors, parallel computer systems
 Chin C. Lee: Electronic packaging, microwave devices and measurements, thermal management, integrated optics
 Henry P. Lee: Photonics, fiber-optics and compound semiconductors
 Guann-Pyng Li: High-speed semiconductor technology, optoelectronic devices, integrated circuit fabrication and testing
 Kwei-Jay Lin: Real-time systems, distributed systems, service-oriented computing
 Athina Markopoulou: Networking—reliability and security, multimedia networking, and measurement and control, design and analysis of network protocols and algorithms, Internet reliability and security, multimedia streaming, network measurements and control
 Joerg Meyer: Computer graphics, scientific visualization, large-scale rendering, digital image processing, biomedical imaging, virtual reality
 Simon Penny: Electronic media art: practice, history, and theory; technologies for embodied interaction; cultural applications of emerging technologies; multi-camera machine vision, immersive environments, robotics and motion control
 Phillip C.-Y. Sheu: Database systems, interactive multimedia systems
 Jack Sklansky (*Emeritus*): Digital radiology, pattern recognition, medical imaging, neural learning, computer engineering
 Keyue M. Smedley: Power electronics and analog circuit design
 Allen R. Stubberud (*Emeritus*): Control systems, digital signal processing, estimation and optimization
 A. Lee Swindlehurst: Signal processing, estimation and detection theory, applications in wireless communications, geo-positioning, radar, sonar, biomedicine
 Harry H. Tan (*Emeritus*): Communication and information theory, stochastic processes
 Chen S. Tsai: Integrated and fiber optics, devices, and materials, integrated acoustooptics and magneto-optics, integrated microwave magnetics, Ultrasonic Atomization for Nanoparticles Synthesis, silicon photonics
 Wei Kang (Kevin) Tsai (*Emeritus*): Data communication networks, control systems
 H. Kumar Wickramasinghe: Nanoscale measurements and characterization, scanning probe microscopy, storage technology, nano-bio measurement technology

Affiliated Faculty

Lubomir Bic: Parallel processing, dataflow systems, database machines
 Mark Bachman: Micro-electro-mechanical systems (MEMS), BIOMEMS, and optoelectronics nonstandard chip processing, physics of small systems
 Harut Barsamian: Computer systems, architecture and technology
 Zhongping Chen: Biomedical optics, optical coherence tomography, bioMEMS, biomedical devices
 Nikil D. Dutt: VLSI design automation tools, design methodologies, design languages, high-level synthesis
 Magda S. El Zarki: Computer networking, telecommunications networks, wireless networking
 Maria Q. Feng: Structural engineering and intelligent control of structural systems
 Michael Franz: Compilers
 Michael Goodrich: Computer security, algorithm design, data structures, Internet algorithmics, geometric computing, graphic drawing
 Daniel Hirschberg: Analyses of algorithms, concrete complexity, data structures, models of computation
 Scott Jordan: Pricing and differentiated services in the Internet, resource allocation in wireless networks, telecommunications policy
 Aditi Majumder: Computer graphics
 Gopi Meenakshisundaram: Geometry and topology for computer graphics, image-based rendering, object representation, surface reconstruction, collision detection, virtual reality, telepresence
 Sharad Mehrotra: Data management
 Sabee Molloi: Physics of medical imaging
 Mehran Moshfeghi: Video and image processing, distributed systems, Internet computing, medical imaging and information systems
 Orhan Nalcioğlu: Nuclear magnetic resonance imaging and spectroscopy, digital radiography, computed tomography, medical imaging
 Richard D. Nelson: Sensors, microelectronics, photonics, medical imaging, micro-electro-mechanical systems (MEMS)
 Zoran Nenadic: Adaptive biomedical signal processing, control algorithms for biomedical devices, brain-machine interfaces, modeling and analysis of biological neural networks

Alexandru Nicolau: Architecture, parallel computation, programming languages and compilers
 Peter M. Rentzepis: Physical chemistry, picosecond spectroscopy
 Henry Samuli: Digital signal processing, communications systems engineering, CMOS integrated circuit design for applications in high-speed data transmission systems
 Issac Scherson: Parallel computing architectures, massively parallel systems, parallel algorithms, interconnection networks, performance evaluation
 Carlton H. Scott: Operations research, production management, total quality management, statistics
 Andrew Shapiro: Electronic and optoelectronics
 Frank G. Shi: Optoelectronic packaging and materials
 Andrei M. Shkel: Design and advanced control of micro-electro-mechanical systems (MEMS)
 Tatsuya Suda: Computer networks, distributed systems, performance evaluation
 William C. Tang: Micro- and nanotechnology for wireless communication and micro biomechanics
 Homayoun Yousefi'zadeh: Communications networks

Affiliated faculty are from the Schools of Physical Sciences and Medicine, the Donald Bren School of Information and Computer Sciences, and The Henry Samuli School of Engineering.

Electrical Engineering and Computer Science is a broad field encompassing such diverse subject areas as computer systems, distributed computing, computer networks, control, electronics, photonics, digital systems, circuits (analog, digital, mixed-mode, and power electronics), communications, signal processing, electromagnetics, and physics of semiconductor devices. Knowledge of the mathematical and natural sciences is applied to the theory, design, and implementation of devices and systems for the benefit of society. The Department offers two ABET-accredited undergraduate degrees: Electrical Engineering and Computer Engineering. In addition, the Department offers a joint undergraduate degree in Computer Science and Engineering, in conjunction with the Donald Bren School of Information and Computer Sciences; information is available in the Interdisciplinary Studies section of the *Catalogue*.

Some electrical engineers focus on the study of electronic devices and circuits that are the basic building blocks of complex electronic systems. Others study power electronics and the generation, transmission, and utilization of electrical energy. A large group of electrical engineers studies the application of these complex systems to other areas, including medicine, biology, geology, and ecology. Still another group studies complex electronic systems such as automatic controls, telecommunications, wireless communications, and signal processing.

Computer engineers are trained in various fields of computer science and engineering. They engage in the design and analysis of digital computers and networks, including software and hardware. Computer design includes topics such as computer architecture, VLSI circuits, computer graphics, design automation, system software, data structures and algorithms, distributed computing, and computer networks. Computer Engineering courses include programming in high-level languages such as C++ and Java; use of software packages for analysis and design; design of system software such as compilers, debuggers, and operating systems; and application of computers in solving engineering problems. Laboratories in both hardware and software experiences are integrated within the Computer Engineering curriculum.

The undergraduate curricula in Electrical Engineering and Computer Engineering provide a solid foundation for future career growth, enabling graduates' careers to grow technically, administratively, or both. Many electrical and computer engineers will begin work in a large organizational environment as members of an engineering team, obtaining career satisfaction from solving meaningful problems that contribute to the success of the organization's overall goal. As their careers mature, technical growth most naturally results from the acquisition of an advanced degree and further

development of the basic thought processes instilled in the undergraduate years. Administrative growth can result from the development of management skills on the job and/or through advanced degree programs in management.

Graduates of Electrical Engineering, Computer Engineering, and Computer Science and Engineering will find a variety of career opportunities in areas including wireless communication, voice and video coding, biomedical electronics, circuit design, optical devices and communication, semiconductor devices and fabrication, power systems, power electronics, computer hardware and software design, computer networks, design of computer-based control systems, application software, data storage and retrieval, computer graphics, pattern recognition, computer modeling, parallel computing, and operating systems.

Undergraduate Major in Computer Engineering

Program Educational Objectives: Graduates of the program will (1) demonstrate the successful practice of, or accomplish advanced study in, computer engineering, including its scientific principles, rigorous analysis, and creative design; (2) have a broad-based knowledge of relevant, state-of-the-art and emerging issues in engineering with emphasis on computer engineering, demonstrated through productive careers in public or private sectors, or the attainment of advanced degrees; (3) demonstrate skills for effective communication and responsible teamwork, show professional attitudes and ethics suitable for a multidisciplinary working environment, and engage in lifelong learning. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The undergraduate Computer Engineering curriculum includes a core of mathematics, physics, and chemistry. Engineering courses in fundamental areas fill in much of the remaining curriculum.

ADMISSIONS

High School Students: See page 198.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one course in computer programming (C, C++, Python, Java), and two additional approved courses for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN COMPUTER ENGINEERING

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements:

Mathematics and Basic Science Courses: Mathematics 2A-B, 2D, 2J, 3D, and 6D; Physics 7B/7LB or Physics 7C/7LC; Physics 7D-E, 7LD, 51A, 52A-B; Engineering EECS145.

Engineering Topics Courses: Students must complete a minimum of 26 units of engineering design.

Core Courses: Engineering EECS12, EECS20, EECS31, EECS31L, EECS40, EECS70A, EECS70B, EECS70LB, EECS111, EECS112, EECS112L, EECS113, EECS114, EECS115, EECS118, EECS129A-B, EECS140, EECS148, EECS150A, EECS150B, EECS170A, EECS170LA, EECS170B, EECS170LB. With the approval of a faculty advisor, students select any additional engineering topics courses needed to satisfy school and department requirements.

Engineering Elective Courses: Students select, with the approval of a faculty advisor, a minimum of three courses of engineering topics. At least two courses must be chosen from EECS104, EECS105, EECS106, EECS107, EECS116, EECS117, EECS123, and Computer Science 142A. Additionally, EECS101, EECS141A, EECS141B, EECS152A, EECS152B, EECS170D, EECS199 or EECSH199 (up to 3 units) are approved as technical electives.

Engineering Professional Topics Course: ENGR190W.

At most an aggregate total of 6 units of 199 or H199 courses may be used to satisfy degree requirements; 199 and H199 courses are open to students with a 3.0 GPA or higher.

(The nominal Computer Engineering program will require 188 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

PLANNING A PROGRAM OF STUDY

The sample program of study chart shown is typical for the major in Computer Engineering. Students should keep in mind that this program is based upon a sequence of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their program approved by their advisor. Computer Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisor.

Sample Program of Study — Computer Engineering

FALL	WINTER	SPRING
Freshman		
Mathematics 2A	Mathematics 2B	Mathematics 2D
EECS12	Physics 7B/7LB	Physics 7D, 7LD
General Education	or Physics 7C/7LC	EECS20
General Education	General Education	General Education
Sophomore		
Mathematics 2J	Mathematics 3D	Mathematics 6D
Physics 7E, 52A	Physics 51A, 52B	EECS40
EECS31	EECS70A	EECS70B, 70LB
	EECS31L	General Education
Junior		
EECS170A, 170LA	EECS170B, 170LB	EECS150B
EECS145	EECS150A	EECS111
EECS114	EECS112	EECS112L
General Education	EECS140	EECS148
Senior		
EECS129A	EECS129B	Engineering Elective
EECS115	ENGR190W	General Education
EECS118	EECS113	General Education
Engineering Elective	General Education	Engineering Elective

Students must obtain approval for their program of study and must see their faculty advisor at least once each year.

Undergraduate Major in Computer Science and Engineering (CSE)

This program is administered jointly by the Department of Electrical Engineering and Computer Science (EECS) in The Henry Samueli School of Engineering and the Department of Computer Science in the Donald Bren School of Information and Computer Sciences. For information, see the Interdisciplinary Studies section of the *Catalogue*, page 371.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN COMPUTER SCIENCE AND ENGINEERING

University Requirements: See pages 56–62.

Major Requirements: See pages 371–372 in the Interdisciplinary Studies section of the *Catalogue*.

Undergraduate Major in Electrical Engineering

Program Educational Objectives: Graduates of the program will (1) analyze, solve, and apply design principles to Electrical Engineering problems; (2) achieve productive careers in industry, government, or academia; (3) participate in activities designed to further their knowledge and skills within the profession (e.g., conferences, workshops, professional development, and advanced study). (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The undergraduate Electrical Engineering curriculum is built around a basic core of humanities, mathematics, and natural and engineering science courses. It is arranged to provide the fundamentals of synthesis and design that will enable graduates to begin careers in industry or to go on to graduate study. UCI Electrical Engineering students take courses in network analysis, electronics, electronic system design, signal processing, control systems, electromagnetics, and computer engineering. They learn to design circuits and systems to meet specific needs and to use modern computers in problem analysis and solution.

Electrical Engineering majors have the opportunity to select a specialization in Electro-optics and Solid-State Devices; Power Systems; and Systems and Signal Processing. In addition to the courses offered by the Department, the major program includes selected courses from the Donald Bren School of Information and Computer Sciences.

ADMISSIONS

High School Students: See page 198.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one course in computational methods (C, C++), and two additional approved courses for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN ELECTRICAL ENGINEERING

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements:

Mathematics and Basic Science Courses: Mathematics 2A-B, 2D, 2J, 3D, and 2E; Chemistry 1A; Physics 7B/7LB or Physics 7C/7LC; Physics 7D-E, 7LD, 51A-B, 52A-B-C; Engineering EECS145.

Engineering Topics Courses: Students must complete each of the following courses and accumulate a minimum of 28 units of engineering design, including at least one course with more than 50 percent design content: Engineering ENGR54 or ENGR80, EECS10, EECS31, EECS31L, EECS70A, EECS70B and EECS70LB, EECS140, EECS150A, EECS150B, EECS160A, EECS160LA, EECS170A, EECS170LA, EECS170B, EECS170LB, EECS170C, EECS170LC, EECS170D (or EECS115), EECS180, EECS189A-B. Students select, with the approval of a faculty advisor, any additional engineering topics courses needed to satisfy school and department requirements.

Technical Elective Courses: Students select, with the approval of a faculty advisor, a minimum of five courses of technical elective courses. Students may select an area of specialization and complete the associated requirements, as shown below.

Engineering Professional Topics Course: ENGR190W.

At most an aggregate total of 6 units of 199 or H199 courses may be used to satisfy degree requirements; 199 and H199 courses are open to students with a 3.0 GPA or higher.

(The nominal Electrical Engineering program will require 189 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

Specialization in Electro-optics and Solid-State Devices: 11 units selected from Engineering EECS170D (if not used to satisfy major requirements), EECS174, EECS175A-B, EECS187, EECS188, EECS198 (Special Topics in Electro-optics or Solid State Materials/Devices), EECS199 or EECSH199 (up to 3 units).

Specialization in Power Electronics and Power Systems: 12 units selected from Engineering EECS160B, EECS161, EECS161L, EECS163, EECS163L, EECS166A, EECS166B, EECS199 or EECSH199 (up to 3 units).

Specialization in Systems and Signal Processing: 12 units selected from Engineering EECS101, EECS141A, EECS141B, EECS152A, EECS152B, EECS160B, EECS163, EECS163L, EECS198 (Special Topics in Computer Graphics or Digital Signal Processing Laboratory), or EECS199 or EECSH199 (up to 3 units).

PROGRAM OF STUDY

The sample program of study chart shown (on the next page) is typical for the accredited major in Electrical Engineering. Students should keep in mind that this program is based upon a rigid set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Therefore, the course sequence should not be changed except for the most compelling reasons. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their programs approved by their advisor. Electrical Engineering majors must consult with the academic counselors in the Student Affairs Office and with their faculty advisors at least once a year.

Sample Program of Study — Electrical Engineering

FALL	WINTER	SPRING
Freshman		
Mathematics 2A EECS10 General Education General Education	Mathematics 2B Physics 7B/7LB or Physics 7C/7LC Chemistry 1A General Education	Mathematics 2D Physics 7D, 7LD General Education General Education
Sophomore		
Mathematics 2J Physics 7E, 52A EECS31	Mathematics 3D Physics 51A, 52B EECS70A EECS31L	Mathematics 2E Physics 51B, 52C EECS70B, 70LB

Students must obtain approval for their program of study and must see their faculty advisor at least once each year.

Graduate Study in Electrical and Computer Engineering

The Department offers M.S. and Ph.D. degrees in Electrical and Computer Engineering with a concentration in Electrical Engineering, Computer Networks and Distributed Computing, Computer Systems and Software, or Computer Graphics and Visualization. Because most graduate courses are not repeated every quarter, students should make every effort to begin their graduate program in the fall.

Detailed descriptions of the four concentrations are as follows.

ELECTRICAL ENGINEERING CONCENTRATION (EE)

The Electrical Engineering faculty study the following areas: optical and solid-state devices, including quantum electronics and optics, integrated electro-optics and acoustics, design of semiconductor devices and materials, analog and mixed-signal IC design, microwave and microwave devices, and scanning acoustic microscopy; systems engineering and signal processing, including communication theory, machine vision, signal processing, power electronics, neural networks, communications networks, systems engineering, and control systems. Related communication networks topics are also addressed by the Networked Systems M.S. and Ph.D. degrees (listed in the Interdisciplinary Studies section of the *Catalogue*).

COMPUTER GRAPHICS AND VISUALIZATION CONCENTRATION (CGV)

The concentration in Computer Graphics and Visualization provides students with a solid base in the design, development, and evaluation of scientific and information visualization systems. Both hardware and software aspects are addressed with a particular focus on the development of algorithms and techniques for the representation of complex scientific data. The main research activities of the faculty in this concentration are in the fields of computer graphics, scientific visualization, computer-aided geometric design, imaging, image processing, and virtual reality. Application areas include computational physics, computational chemistry, computational fluid dynamics, computational and molecular biology, medical and biomedical imaging, civil and environmental engineering,

photorealistic rendering, animation, remote sensing, industrial design, and media and arts.

COMPUTER NETWORKS AND DISTRIBUTED COMPUTING CONCENTRATION (CNDC)

The concentration in Computer Networks and Distributed Computing is concerned with the design and evaluation of computer networks and distributed computer systems, and their integration into a comprehensive computing network. Both hardware and software aspects of these systems are covered. Specific topics include computer communication protocols; performance modeling and analysis of computer networks; computer network hardware; reliability, security, and fault tolerance in computer networks and distribution computer systems; distributed operating systems; distributed software architectures, distributed data bases, network-based parallel computing, and programming languages for parallel/distributed processing. Related topics are addressed by the Networked Systems M.S. and Ph.D. degrees (listed in the Interdisciplinary Studies section of the *Catalogue*) and within the Donald Bren School of Information and Computer Sciences.

COMPUTER SYSTEMS AND SOFTWARE CONCENTRATION (CSS)

The Computer Systems and Software Concentration is concerned with the set of engineering principles which are used for design and construction of information-processing systems and software. The engineering design procedures are based on both the computational principles and theories discovered in the field of computer science and new highly integrated component devices made by electrical engineers. The main research activities of the faculty in this concentration are in the areas of fault-tolerant computing, parallel and distributed computer systems, ultra-reliable real-time computer systems, VLSI architectures, computer design automation, numerical processing, and intelligent management.

MASTER OF SCIENCE DEGREE GENERAL REQUIREMENTS

Two plans are offered for the M.S. degree: a thesis option and a comprehensive examination option. For either option, students are required to develop a complete program of study with advice from their faculty advisor. The graduate advisor must approve the study plan. Part-time study toward the M.S. degree is available. The program of study must be completed within four calendar years from first enrollment.

Plan I: Thesis Option

The thesis option requires completion of 36 units of study; an original research investigation; the completion of an M.S. thesis; and approval of the thesis by a thesis committee. The thesis committee is composed of three full-time faculty members with the faculty advisor of the student serving as the chair. Required undergraduate core courses and graduate seminar courses, such as EECS292, EECS293, EECS294, and EECS295, may not be counted toward the 36 units. No more than four units of EECS299 and three units of undergraduate electives may be counted toward the 36 units. Up to 12 of the required 36 units may be from EECS296 (M.S. Thesis Research) with the approval of the student's thesis advisor. Additional concentration-specific requirements are as follows; a list of core and concentration courses is given at the end of this section.

Electrical Engineering Concentration: At least seven concentration courses in the Electrical Engineering concentration (EE) must be completed.

Computer Networks and Distributed Computing Concentration: Four core courses in the Computer Networks and Distributed Computing concentration (CNDC) must be completed with a grade of B

(3.0) or better. At least three additional core or concentration courses must also be completed.

Computer Systems and Software Concentration: Four core courses in the Computer Systems and Software concentration (CSS) must be completed with a grade of B (3.0) or better. At least three additional core or concentration courses must also be completed.

Computer Graphics and Visualization Concentration: Four core courses in the Computer Graphics and Visualization concentration (CGV) must be completed with a grade of B (3.0) or better. At least three additional core or concentration courses must also be completed.

Plan II: Comprehensive Examination Option

The comprehensive examination option requires the completion of 36 course units and a comprehensive examination. Also, students should take at least 12 courses. Only one EECS299 can be counted if the EECS299 course is three or more units. Undergraduate core courses and graduate seminar courses, such as EECS292, EECS293, EECS294, and EECS295, may not be counted toward the 36 units and 12 courses requirement. No more than three units of EECS299 and six units of undergraduate electives may be counted. In fulfillment of the comprehensive examination element of the M.S. degree program, students will complete two term paper-length reports on the current state-of-the-art of two separate technical fields corresponding to the concentration area. The term papers are completed as part of the end-of-course requirements for EECS294 (Electrical and Computer Colloquium), two units of which are needed to fulfill degree requirements. Each term paper must be completed with a grade of B or better; and each Colloquium section used to meet M.S. degree requirements must be completed with a satisfactory grade. Both Colloquium sections must be completed at the student's first opportunity upon enrollment in the ECE graduate program. Additional concentration-specific requirements are as follows; a list of core and concentration courses is given at the end of this section.

Electrical Engineering Concentration: Students enrolled in the Electrical Engineering (EE) concentration who choose the Comprehensive Examination option must select one of the following plans of study.

Circuits and Devices Plan of Study: At least four courses from the following list must be completed: EECS270A, EECS270B, EECS277A, EECS277B, EECS280A, EECS285A. At least five additional courses from the list of EE concentration courses must be completed.

Systems Plan of Study: At least four courses from the following list must be completed*: EECS240, EECS241A, EECS250, EECS251A, EECS260A, EECS267A. At least five additional courses from the list of EE concentration courses must be completed.

*If all six courses are not offered in an academic year, students who graduate in that year can petition to replace the courses that are not offered by EECS242 and/or EECS244.

Computer Networks and Distributed Computing Concentration: Four core courses in the Computer Networks and Distributed Computing concentration (CNDC) must be completed with a grade of B (3.0) or better. At least four additional core or concentration courses must also be completed.

Computer Systems and Software Concentration: Four core courses in the Computer Systems and Software concentration (CSS) must be completed with a grade of B (3.0) or better. At least four additional core or concentration courses must also be completed.

Computer Graphics and Visualization Concentration: Four core courses in the Computer Graphics and Visualization concentration

(CGV) must be completed with a grade of B (3.0) or better. At least four additional core or concentration courses must also be completed.

List of Concentration Courses

Electrical Engineering Concentration: EECS202A-B, EECS203A, EECS206, EECS210, EECS213, EECS215, EECS217, EECS240, EECS241A-B, EECS242, EECS243, EECS244, EECS245, EECS248A-B, EECS250, EECS251A-B, EECS252, EECS260A, EECS260B, EECS261A-B, EECS262, EECS266, EECS267A-B, EECS270A, EECS270B-C-D, EECS272, EECS274, EECS275A-B, EECS276, EECS277A-B-C, EECS278, EECS279, EECS280A, EECS280B, EECS282, EECS285A, EECS285B-C.

(courses denoted with * are also core courses)

Computer Networks and Distributed Computing Concentration: EECS211*, EECS213*, EECS215*, EECS217*, EECS218*, EECS219, EECS221, EECS222A-B-C-D, EECS223, EECS224, EECS248A*, EECS248B, EECS261B, Computer Science 233, 234, 236.

Computer Systems and Software Concentration: EECS210, EECS211*, EECS213*, EECS215*, EECS217*, EECS218*, EECS221, EECS222A-B-C-D, EECS223, EECS224, EECS225, EECS228, EECS229, EECS248A*.

Computer Graphics and Visualization Concentration: EECS 202A, EECS 202B, EECS203A, EECS204*, EECS205, EECS206, EECS210, EECS207A, EECS208, EECS209A, EECS211*, EECS213*, EECS215*, EECS218*, EECS248A*, EECS250, ICS 266, ICS 285.

DOCTOR OF PHILOSOPHY DEGREE GENERAL REQUIREMENTS

The doctoral program in Electrical and Computer Engineering is tailored to the individual background and interest of the student. There are several milestones to pass: admission to the Ph.D. program by the Graduate Committee; Ph.D. preliminary examination on the background and potential for success in the doctoral program; departmental teaching requirement which can be satisfied through service as a teaching assistant or equivalent; original research work; development of a research report and dissertation proposal; advancement to Ph.D. candidacy in the third year (second year for students who entered with a master's degree) through the Ph.D. qualifying examination conducted on behalf of the Irvine Division of the Academic Senate; completion of a significant research investigation; and completion and approval of a dissertation. A public Ph.D. dissertation defense is also required. During the Ph.D. study, four quarters of EECS294 must be completed.

The Ph.D. preliminary examination is conducted twice a year, in the spring and fall quarters. Detailed requirements for each concentration are specified in the departmental Ph.D. preliminary examination policies, available from the EECS Graduate Admissions Office. The depth examination is conducted during each spring quarter. A student must pass the Ph.D. preliminary examination within two complete academic year cycles after entering the Ph.D. program. A student has only two chances to take and pass the Ph.D. preliminary examination. A student who fails the Ph.D. preliminary examination twice will be asked to withdraw from the program, or will be dismissed from the program, and may not be readmitted into the program.

The Ph.D. degree is granted upon the recommendation of the Doctoral Committee and the Dean of Graduate Studies. Part-time study toward the Ph.D. degree is not permitted. The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

Courses in Electrical Engineering and Computer Science

LOWER-DIVISION

NOTE: The undergraduate courses listed below are open only to students in The Henry Samueli School of Engineering. All other majors must petition for permission to enroll.

EECS10 Computational Methods in Electrical and Computer Engineering (4) F, W, Summer. An introduction to computers and structured programming. Binary Data Representation. Hands-on experience with a high-level structured programming language. Introduction to algorithm efficiency. Applications of structured programming in solving engineering problems. Prerequisite or corequisite: Mathematics 2A. Only one course from EECS10, EECS12, CEE10, ENGR10, and MAE10 may be taken for credit. (Design units: 0)

EECS12 Introduction to Programming (4) W. An introduction to computers and programming. Python programming syntax/style, types. Numbers and sequences. Control flow. I/O and errors/exceptions. Function calling, parameter passing, formal arguments, return values. Variable scoping. Corequisite: Mathematics 2A. Only one course from EECS10, EECS12, CEE10, ENGR10, and MAE10 may be taken for credit. (Design units: 0)

EECS20 Computer Systems and Programming in C (4) S, Summer. Introduction to computer systems. Data representation and operations. Simple logic design. Basic computer organization. Instruction set architecture and assembly language programming. Introduction to C. Functions and recursion. Data structures, pointers, and linked lists. Prerequisite: EECS12. (Design units: 1)

EECS31 Introduction to Digital Systems (4) F, S, Summer. Digital representation of information. Specifications of combinational and sequential systems. Analysis and design of networks of gates and flip flops. Standard modules and their use. Introduction to algorithmic systems: datapath and control. Prerequisite: EECS10, MAE10, or CSE21/ICS 21. Same as CSE31. (Design units: 2)

EECS31L Introduction to Digital Logic Laboratory (3) W, S, Summer. Introduction to common digital building blocks: gates, memory circuits, MSI components. Operating characteristics, specifications, and applications. Design of simple combinational and sequential digital systems (processors and state machines). Construction and debugging techniques using hardware description languages and CAD tools. Prerequisites: EECS31/CSE31; EECS10 or EECS12 or CSE22/ICS 22. Same as CSE31L. Formerly EECS31LB. (Design units: 3)

EECS40 Object-Oriented Systems and Programming (4) S, Summer. Primitive types and expressions. The class and method definition. Information hiding and encapsulation. Objects and reference. Overloading. Constructors. Inheritance basics. Programming with inheritance. Dynamic binding and polymorphism. Exception handling. An overview of streams and file input/output. Prerequisite: EECS20. (Design units: 2)

EECS70A Network Analysis I (4) W, S, Summer. Modeling and analysis of electronic networks. Basic network theorems. Sinusoidal steady state and transient analysis of RLC networks and the impedance concept. Corequisite: Mathematics 2J or 3D. Prerequisites: Physics 7D; EECS10, MAE10, or CSE21/ICS 21. Same as CSE70A. (Design units: 1)

EECS70B Network Analysis II (4) S, Summer. Laplace transforms, complex frequency, and the s-plane. Network functions and frequency response, including resonance. Bode plots. Two-port network characterization. Corequisite: EECS70LB. Prerequisites: EECS10, CEE10, or MAE10; EECS70A. (Design units: 1)

EECS70LB Networks Analysis II Laboratory (1) S, Summer. Laboratory to accompany EECS70B. Corequisite: EECS70B. Prerequisites: EECS10, CEE10, or MAE10; EECS70A. (Design units: 1)

UPPER-DIVISION

EECS101 Introduction to Machine Vision (3). The use of digital computers for the analysis of visual scenes; image formation and sensing, color, segmentation, shape estimation, motion, stereo, pattern classification, computer architectures, applications. Computer experiments are used to illustrate fundamental principles. Prerequisite: EECS150A or consent of instructor. (Design units: 2)

EECS104 Fundamentals of Computer Graphics (4). Instruction in the fundamental algorithms and data structures used in computer image generation and manipulation including: output primitives, linear transformations, windowing, hidden-line removal, and shading. Prerequisite: EECS40 or CSE22. (Design units: 2)

EECS105 Fundamentals of Scientific Visualization (4). Introduces visualization techniques for various types of measured or computer-simulated data. Typical applications for these visualization techniques include the study of airflows around car bodies, medical data, and molecular structures. Prerequisite: EECS104 or consent of instructor. (Design units: 2)

EECS106 Fundamentals of Computer-Aided Geometric Design (4). Interactive graphics techniques for defining and manipulating geometrical shapes used in computer animation, car body design, aircraft design, and architectural design. Prerequisite: EECS104 or consent of instructor. (Design units: 2)

EECS107 Fundamentals of Digital Image Processing (4). Introduces theory and practice of digital image processing. Topics presented include two-dimensional signal processing theory, image acquisition, representation, elementary operations, enhancement, filtering, coding, compressing, restoration, and analysis, as well as image processing hardware. Prerequisite: EECS152A or consent of instructor. EECS107 and Computer Science 111 may not both be taken for credit. (Design units: 2)

EECS111 System Software (4) S. Multiprogramming, interrupt, processes, kernel, parallelism, critical sections, deadlocks, communication, multiprocessing, multilevel memory management, binding, name management, file systems, protection, resource allocation, scheduling. Experience with concurrent programming, synchronization mechanisms, interprocess communication. Prerequisites: EECS112; ICS 23 or EECS114. Only one course from EECS111 and CSE104/Computer Science 143A may be taken for credit. (Design units: 2)

EECS112 Organization of Digital Computers (4) W. Building blocks and organization of digital computers, the arithmetic, control, and memory units, and input/output devices and interfaces. Microprogramming and microprocessors. Prerequisite: EECS31L/CSE31L. Same as CSE132. Only one course from EECS112/CSE132, EECSH112/CSEH132, and Computer Science 152 may be taken for credit. (Design units: 4)

EECS112L Organization of Digital Computers Laboratory (3) S. Companion laboratory to EECS112. Specification and implementation of a processor-based system using a hardware description language such as VHDL. Hands-on experience with design tools including simulation, synthesis, and evaluation using testbenches. Prerequisite: EECS112. (Design units: 3)

EECSH112 Honors Organization of Digital Computers (4) W. Building blocks and organization of digital computers, the arithmetic, control, and memory units, and input/output devices and interfaces, including advanced microarchitecture topics such as: pipelining, superscalar, multithreading, reconfigurable and microprocessor design. Prerequisite: EECS31L/CSE31L. Same as CSEH132. Only one course from EECSH112/CSEH132, EECS112/CSE132, and Computer Science 152 may be taken for credit. (Design units: 4)

EECS113 Processor Hardware/Software Interfaces (4). Hardware/software interfacing, including memory and bus interfaces, devices, I/O, and compiler code generation/instruction scheduling. Experience microcontroller programming and interfacing. Specific compiler code generation techniques covered including local variable and register allocations, instruction dependencies and scheduling, and code optimization. Prerequisites: EECS112/CSE132 and EECS112L. (Design units: 3)

EECS114 Engineering Data Structures and Algorithms (4) F. Introduces abstract behavior of classic data structures, alternative implementations, informal analysis of time and space efficiency. Also introduces classic algorithms and efficient algorithm design techniques (recursion, divide-and-conquer, branch-and-bound, dynamic programming). Prerequisite: EECS40. EECS114 and EECSH114 may not both be taken for credit. (Design units: 2)

EECSH114 Honors Engineering Data Structures and Algorithms (4). Covers the same material as EECS114 but in greater depth. Prerequisite: EECS40. EECSH114 and EECS114 may not both be taken for credit. (Design units: 2)

EECS115 Introduction to VLSI (4) F. A first course in the design of Very Large Scale Integrated (VLSI) systems and chips. Review of CMOS VLSI technology. Analysis and synthesis of basic and complex CMOS gates. Introduction to CAD methodology and usage of CAD tools. Prerequisite: EECS112/CSE132; EECS170B or CSE112. Same as CSE151. (Design units: 4)

EECS116 Introduction to Data Management (4). Introduction to the design of databases and the use of database management systems (DBMS) for applications. Topics include entity-relationship modeling for design, relational data model, relational algebra, relational design theory, and Structured Query Language (SQL) programming. Prerequisite: either ICS 52 or Informatics 43 with a grade of C or better (for ICS or Informatics majors); either ICS 23/ICS H23 or EECS114 with a grade of C or better (for Computer Engineering majors). Same as Computer Science 122A. (Design units: 1)

EECS117 Parallel Computer Systems (3). General introduction to parallel computing focusing on parallel algorithms and architectures. Parallel models: Flynn's taxonomy, dataflow models. Parallel architectures: systolic arrays, hypercube architecture, shared memory machines, dataflow machines, reconfigurable architectures. Parallel algorithms appropriate to each machine type are also discussed. Prerequisites: EECS20 and EECS112/CSE132. (Design units: 1)

EECS118 Introduction to Knowledge Engineering and Software Engineering (4). Introduction of basic concepts in knowledge engineering and software engineering. Knowledge representation and reasoning, search, planning, software life cycle, requirements engineering, software design languages, declarative programming, testing, maintenance, and connections between knowledge engineering and software engineering. Prerequisite: EECS40 or equivalent. (Design units: 2)

EECS123 Introduction to Real-Time Distributed Programming (4). Introduction to the techniques for programming applications involving timing-sensitive actions. Hands-on experiences with object-oriented programming styles. Timing requirements, timing specification, response times, deadlines, application programming interfaces to real-time operating systems and middleware, remote procedure call, and distributed objects. Prerequisites: CSE104/Computer Science 143A or EECS111, and EECS112. (Design units: 2)

EECS129A-B Computer Engineering Senior Design Project (2-2) F, W. Conception, planning, implementation, programming, testing of an approved project. Options include: parallel processing, VLSI design, microprocessor-based design, among others. Prerequisite: senior standing. In-progress grading. Formerly EECS129. (Design units: 2-2)

EECS140 Engineering Probability (4) S. Sets and set operations; nature of probability, sample spaces, fields of events, probability measures; conditional probability, independence, random variables, distribution functions, density functions, conditional distributions and densities; moments, characteristic functions, random sequences, independent and Markov sequences. Prerequisite: Mathematics 2D. (Design units: 0)

EECS141A Communication Systems I (3). Introduction to analog communication systems including effects of noise. Modulation-demodulation for AM, DSB-SC, SSB, VSB, QAM, FM, PM, and PCM with application to radio, television, and telephony. Signal processing as applied to communication systems. Prerequisites: EECS150A and EECS140. Formerly EECS141. (Design units: 1)

EECS141B Communication Systems II (3). Signal space analysis. Optimum receivers for digital communication. Maximum *a posteriori* and maximum likelihood detection. Matched filter and correlation receiver. PAM, QAM, PSK, FSK and MSK and their performance. Introduction to equalization, synchronization, information theory, and error control codes. Prerequisite: EECS141A. (Design units: 1)

EECS144 Antenna Design for Wireless Communication Links (4). Analysis and synthesis of antennas and antenna arrays. Adaptive arrays and digital beam forming for advanced wireless links. Friis transmission formula. Wireless communication equations for cell-site and mobile antennas, interference, slow and fast fading in mobile communication. Prerequisite: EECS180 or consent of instructor. (Design units: 0)

EECS145 Electrical Engineering Analysis (4) F. Vector calculus, complex functions, and linear algebra with applications to electrical engineering problems. Prerequisites: Mathematics 2J and 3D. (Design units: 0)

EECS148 Introduction to Computer Networks (4). Network architectures, models, protocols, routing, flow control, and services. Queuing models for network performance analysis. Prerequisites: EECS40 or CSE22 or consent of instructor; EECS112 or consent of instructor; EECS140 or Mathematics 67. (Design units: 2)

EECS150A Continuous-Time Signals and Systems (4) W. Characteristics and properties of continuous-time (analog) signals and systems. Analysis of linear time-invariant continuous-time systems using differential equation and convolutional models. Analysis of these systems using Laplace transforms, Fourier series, and Fourier transforms. Examples from applications to telecommunications. Prerequisites: EECS70A/CSE70A; EECS145. (Design units: 0)

EECS150B Discrete-Time Signals and Systems (4) S. Analysis of discrete-time linear-time-invariant (DTLTI) systems in the time domain and using z-transforms. Introduction to techniques based on Discrete-Time, Discrete, and Fast Fourier Transforms. Examples of their application to digital signal processing and digital communications. Prerequisite: EECS70A/CSE70A. Same as CSE120A. EECS150B/CSE120A and EECSH150B may not both be taken for credit. (Design units: 0)

EECSH150B Discrete-Time Signals and Systems (4) S. Foundations of discrete-time linear-time-invariant (DTLTI) systems for analysis and design of digital signal processors. Introduction to time-domain techniques based on z-transforms, and Discrete-Time-, Discrete-, and Fast-Fourier Transforms. Unification of concepts achieved by filter design example. Prerequisite: EECS70A/CSE70A. EECSH150B and EECS150B/CSE120A may not both be taken for credit. (Design units: 1)

EECS152A Digital Signal Processing (3). Nature of sampled data, sampling theorem, difference equations, data holds, z-transform, w-transform, digital filters, Butterworth and Chebyshev filters, quantization effects. Prerequisite: EECS150B/CSE120A. Same as CSE135A. (Design units: 2)

EECS152B Digital Signal Processing Design and Laboratory (3). Students plan and perform 10 core laboratory exercises covering signal synthesis and analysis with various filter and frequency transform processes. Models of radio and radar/sonar signal processing are included. Prerequisite: EECS152A/CSE135A. Same as CSE135B. (Design units: 3)

EECS160A Introduction to Control Systems (4) F. Modeling, stability, and specifications of feedback control systems. Root locus, Bode plots, Nyquist criteria, and state-space methods for dynamic analysis and design. Corequisite: EECS160LA. Prerequisites: EECS10, CEE10, or MAE10; EECS170B, EECS170LB; EECS150A. (Design units: 2)

EECS160LA Control Systems I Laboratory (1) F. Laboratory accompanying EECS160A. Corequisite: EECS160A. (Design units: 1)

EECS160B Sampled-Data and Digital Control Systems (3). Sampled-data and digital control systems. Sampling process and theory of digital signals; z-transform and modeling; stability; z-plane, frequency response, state-space techniques of digital control system synthesis. Prerequisites: EECS31; EECS160A, EECS160LA. (Design units: 2)

EECS161 Electric Machines and Drives (3) S. Magnetic circuits and transformers. Fundamentals of energy conversion. Application to synchronous, induction, commutator, and special purpose machines. Electric drives. Corequisite: EECS161L. Prerequisite: EECS70B or consent of instructor. (Design units: 2)

EECS161L Electric Machines and Drives Laboratory (1) S. Laboratory exercises supplementing the content of EECS161. Corequisite: EECS161. (Design units: 0)

EECS163 Power Systems (4). Generation, transmission, and use of electrical energy. Fault calculation, protection, stability, and power flow. Corequisite: EECS163L. Prerequisite: EECS70B. (Design units: 1)

EECS163L Power Systems Laboratory (1). Experiments and field trips relevant to studies in power systems. Corequisite: EECS163. (Design units: 0)

EECS166A Industrial and Power Electronics (4). Power switching devices, pulse width modulation (PWM) methods, switching converter topologies, control, and magnetics. Prerequisites: EECS170C; EECS160A or consent of instructor. Concurrent with EECS267A. (Design units: 2)

EECS166B Advanced Topics in Industrial and Power Electronics (3). Practical design of switching converters, electromagnetic compatibility, thermal management, and/or control methods. Prerequisite: EECS166A or consent of instructor. (Design units: 1)

EECS170A Electronics I (4) F. The properties of semiconductors, electronic conduction in solids, the physics and operation principles of semiconductor devices such as diodes and transistors, transistor equivalent circuits, and transistor amplifiers. Corequisite: Physics 7E. Prerequisites: EECS70A, Physics 7D. (Design units: 1)

EECS170LA Electronics I Laboratory (1) F. For CpE and EE majors. Laboratory accompanying EECS170A to perform experiments on semiconductor material properties, semiconductor device physics and operation principles, and transistor amplifiers to improve experimental skills and to enhance the understanding of lecture materials. Corequisites: EECS170A, Physics 7E. Prerequisites: EECS70A, EECS70B, Physics 7D. (Design units: 1)

EECS170B Electronics II (4) W. Design and analysis of single-stage amplifiers, biasing circuits, inverters, logic gates, and memory elements based on CMOS transistors. Corequisite: EECS170LB. Prerequisites: EECS70B, EECS170A, EECS170LA. EECS170B and EECSH170B may not both be taken for credit. Formerly ECE113B. (Design units: 2)

EECSH170B Honors Electronics II (4). Covers the same material as EECS170B but in greater depth. Corequisite: EECS170LB. Prerequisites: EECS70B, EECS170A, EECS170LA. EECSH170B and EECS170B may not both be taken for credit. (Design units: 2)

EECS170LB Electronics II Laboratory (1) W. Laboratory accompanying EECS170B. Corequisites: EECS170B. Prerequisites: EECS170A, EECS170LA. (Design units: 1)

EECS170C Electronics III (4) S. Principles of operation, design, and utilization of integrated circuit modules, including multi-stage amplifiers, operational amplifiers, and logic circuits. Corequisites: EECS170LC. Prerequisites: EECS170B, EECS170LB. (Design units: 2)

EECS170LC Electronics III Laboratory (1) S. Laboratory accompanying EECS170C to provide hands-on training in design of digital/analog circuits/subsystems. Corequisites: EECS170C. Prerequisites: EECS170B, EECS170LB. (Design units: 1)

EECS170D Integrated Electronic Circuit Design (4) F. Overview of design and fabrication of modern digital integrated circuits. Fabrication of CMOS process; transistor-level design simulation, functional characteristics of basic digital integrated circuits, different logic families including static and dynamic logic, layout and extraction of digital circuits; automated design tools. Prerequisites: EECS170C and EECS170LC. (Design units: 4)

EECS170E Analog and Communications IC Design (4). Advanced topics in design of analog and communications integrated circuits. Topics include: implementation of passive components in integrated circuits; overview of frequency response of amplifiers, bandwidth estimation techniques, high-frequency amplifier design; design of radio-frequency oscillators. Prerequisite: EECS170C. (Design units: 3)

EECS174 Semiconductor Devices (4). Metal-semiconductor junctions, diodes, bipolar junction transistors, MOS structures, MOSFETs, CMOS technology, LEDs, and laser diodes. Prerequisite: EECS170A. (Design units: 1)

EECS175A Very Large Scale Integration (VLSI) Project (4) S. Students create VLSI design projects from conception through architecture, floor planning, detailed design, simulation, verification, and submission for project fabrication. Emphasis on practical experience in robust VLSI design techniques. Prerequisites: EECS170D; EECS115 or consent of instructor. Concurrent with EECS275A. (Design units: 4)

EECS175B Very Large Scale Integration (VLSI) Project Testing (4) F. Test and document student-created Complementary Metal Oxide Semiconductor (CMOS) Very Large Scale Integration (VLSI) projects designed in EECS175A. Emphasis on practical laboratory experience in VLSI testing techniques. Prerequisite: EECS175A or consent of instructor. Concurrent with EECS275B. (Design units: 0)

EECS176 Fundamentals of Solid-State Electronics and Materials (4). Physical properties of semiconductors and the roles materials play in device operation. Topics include: crystal structure, phonon vibrations, energy band, transport phenomenon, optical properties and quantum confinement effect essential to the understanding of electronic, optoelectronic, and nanodevices. Prerequisite: EECS170A. (Design units: 1)

EECS179 Microelectromechanical Systems (MEMS) (4). Small-scale machines, small-scale phenomena, MEMS fabrication, MEMS CAD tools, MEMS devices and packaging, MEMS testing. Prerequisite: Physics 51A or consent of instructor. (Design units: 2)

EECS180 Engineering Electromagnetics (4) F. Electromagnetic fields and solutions to problems in engineering applications; Maxwell's equations and plane wave propagation, reflection, and transmission. Corequisites: Mathematics 2D and 3D. Prerequisite: Physics 7E. (Design units: 1)

EECS182 Monolithic Microwave Integrated Circuit (MMIC) Analysis and Design (4). Design of microwave amplifiers including low-noise amplifier, multiple stage amplifiers, power amplifiers, and introduction to broadband amplifiers. The goal is to provide the basic knowledge for the design of microwave amplifiers ranging from wireless system to radar system. Prerequisite: EECS180 or consent of instructor. (Design units: 3)

EECS187 Engineering Electrodynamics (4). Time-varying electromagnetic fields including waveguides, resonant cavities, radiating systems. Motion of charged particles in electromagnetic fields, radiation by moving charges. Scattering and dispersion. Prerequisite: EECS180. (Design units: 1)

EECS188 Optical Electronics (4) W. Photodiodes and optical detection, photometry and radiometry, geometric optics, lens theory, imaging system, EM wave propagation, optical waveguides and fibers, heterojunction structures, laser theory, semiconductor lasers, and optical transmission system. Prerequisite: consent of instructor. (Design units: 1)

EECS189A-B Electrical Engineering Senior Design Project (2-2) F, W. Design projects for seniors in the Electrical Engineering program. Each project is supervised by a faculty member. Prerequisites: EECS170C, EECS150A, EECS180, and senior standing. EECS189A: In-Progress grading. (Design units: 2-2)

EECS195 Special Topics in Electrical and Computer Engineering (1 to 4). Prerequisites vary. May be repeated for credit as topics vary. (Design units: varies)

EECS198 Group Study (1 to 4). Group study of selected topics in engineering. Prerequisites vary. (Design units: varies)

EECS198L Group Laboratory (1 to 4). Group laboratory for experimentation or design in connection with special projects or EECS198 courses. Corequisite: EECS198. (Design units: varies)

EECS199 Individual Study (1 to 4). For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. May be taken for credit for a total of six units. (Design units: varies)

EECS199P Individual Study (1 to 4). Same description as EECS199. Pass/Not Pass grading only. May be repeated for credit as topics vary. (Design units: varies)

EECSH199 Individual Study for Honors Students (1 to 5). For undergraduate honor students majoring in Electrical Engineering. Independent reading, research, or design under the direction of a faculty member or group of faculty members in Electrical and Computer Engineering. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. Prerequisite: consent of instructor; open only to Campuswide Honors students. May be taken for credit four times. (Design units: varies)

GRADUATE

EECS202A Principles of Imaging (4) F. Linear systems, probability and random processes, image processing, projection imaging, tomographic imaging. Prerequisite: Physics 51B or 61B or equivalent. Same as Physics 233A. Concurrent with Physics 147A.

EECS202B Techniques in Medical Imaging I: X-ray, Nuclear, and NMR Imaging (4) W. Ionizing radiation, planar and tomographic radiographic and nuclear imaging, magnetism, NMR, MRI imaging. Prerequisite: EECS202A. Same as Physics 233B. Concurrent with Physics 147B.

EECS202C Techniques in Medical Imaging II: Ultrasound, Electrophysiological, Optical (4) S. Sound and ultrasound, ultrasonic imaging, physiological electromagnetism, EEG, MEG, ECG, MCG, optical properties of tissues, fluorescence and bioluminescence, MR impedance imaging, MR spectroscopy, electron spin resonance and ESR imaging. Prerequisite: EECS202B. Same as Physics 233C. Concurrent with Physics 147C.

EECS203A Digital Image Processing (3). Pixel-level digital image representation and elementary operations; Fourier and other unitary transforms; compression, enhancement, filtering, and restoration; laboratory experience is provided. Prerequisite: EECS152A.

EECS204 Advanced Computer Graphics (4). Provides the fundamental understanding of mathematical and physical models used in computer graphics applications: physics of color image formation, polygon approximations, ray tracing, radiosity and image-based modeling and rendering, visualization and geometric modeling. Prerequisite: EECS104 and ICS 183, or consent of instructor.

EECS205 Advanced Scientific Visualization (4). Introduces advanced visualization techniques for various types of measured or computer-simulated data. Typical applications for these visualization techniques include the study of airflows around car bodies, medical data, and molecular structures. Prerequisite: EECS105 or consent of instructor.

EECS207A Advanced Digital Image Processing (4). Introduces image and texture segmentation and symbolic representation, three-dimensional modeling, relational structures, three-dimensional object recognition, three-dimensional scene analysis and interpretation. An application area of particular interest is biomedical imaging. Prerequisite: EECS107 or consent of instructor.

EECS209A Rendering Techniques for Biomedical Imaging (4). Image acquisition techniques (overview), combining different modalities (CT/MRI/fMRI/PET), 2-D image enhancement techniques, image storage (wavelet compression), feature detection, 3-D surface reconstruction, volume rendering, scalability, final project (hands-on experience).

EECS210 Modeling and Rendering for Image Synthesis (3). Provides the fundamental understanding of mathematical and physical models used in image synthesis applications: geometric models, physics of color image formation, polygon approximations, ray tracing, and radiosity.

EECS211 Advanced System Software (3). Study of operating systems including interprocess communication, scheduling, resource management, concurrency, reliability, validation, protection and security, and distributed computing support. System software design languages and modeling analysis. Prerequisite: EECS112 and EECS111; or consent of instructor.

EECS213 Computer Architecture (3). Problems in hardware, firmware (microprogram), and software. Computer architecture for resource sharing, real-time applications, parallelism, microprogramming, and fault tolerance. Various architectures based on cost/performance and current technology. Prerequisites: EECS112, EECS112L.

EECS215 Design and Analysis of Algorithms (3). Computer algorithms from a practical standpoint. Algorithms for symbolic and numeric problems such as sorting, searching, graphs, and network flow. Analysis includes algorithm time and space complexity.

EECS217 VLSI System Design (4) S. Overview of integrated fabrication, circuit simulation, basic device physics, device layout, timing; MOS logic design; layout generation, module generation, techniques for very large scale integrated circuit design. Prerequisite: EECS112.

EECS218 Distributed Computer Systems (3) S. Design and analysis techniques for decentralized computer architectures, communication protocols, and hardware-software interface. Performance and reliability considerations. Design tools. Prerequisites: EECS211 and EECS213. Same as Networked Systems 261.

EECS219 Distributed Software Architecture and Design (3). Practical issues for reducing the software complexity, lowering cost, and designing and implementing distributed software applications. Topics include the distributed object model distributed environment, platform-independent software agents and components, the middleware architecture for distributed real-time and secure services. Prerequisite: EECS211.

EECS220 Advanced Digital Signal Processing Architecture (3). Studies the latest DSP architectures for applications in communication (wired and wireless) and multimedia processing. Emphasis given to understanding the current design techniques and to evaluate the performance, power, and application domain of the latest DSP processors. Prerequisite: EECS 213 or consent of instructor.

EECS221 Topics in Computer Engineering (3). New research results in computer engineering. May be repeated for credit.

EECS222A System-on-Chip Description and Modeling (3). Computational models for System-on-Chip (SoC). System-level specification and description languages and execution semantics. Concepts, requirements, examples. SoC modeling at different levels of abstraction. Modeling of IP (intellectual property), design constraints, test benches. Simulation semantics and algorithms. Co-simulation methodology.

EECS222B System-on-Chip Design and Exploration (3). System-on-Chip design flow and methodology. Design space exploration. Co-design of hardware and software, hardware/software partitioning. System-on-Chip architecture exploration and synthesis. On-chip network and communication design and synthesis. On-chip software/hardware interface generation. Prerequisite: EECS222A or consent of instructor.

EECS222C System-on-Chip Software Synthesis (3). System-on-Chip software concepts, requirements, examples for engineering applications including automotive and communication. Software synthesis methodology. Algorithmic specification, design constraints. Applications using embedded operating systems. Static, dynamic, scheduling. Input/output, interrupt handling. Code generation, retargetable compilation. Instruction set simulation. Debugging and prototyping. Prerequisite: EECS222A or consent of instructor.

EECS222D System-on-Chip Hardware Synthesis (3). Hardware IP specification. Cycle-accurate languages and modeling. Target architectures, data path, and control unit. Design tasks and design methodology. Behavioral synthesis. Resource allocation, operation scheduling, binding. Communication protocol and interface synthesis. Arbiter, transducer, controller design and synthesis. Net list generation. Prerequisite: EECS222A or consent of instructor.

EECS223 Real-Time Computer Systems (3). Time bases, clock synchronization, real-time communication protocols, specification of requirements, task scheduling. Validation of timelines, real-time configuration management. Prerequisites: EECS211 and EECS213.

EECS224 Fault-Tolerant Computing (4). Various aspects of fault-tolerant computing systems. Includes hardware and software failures, reliability, and mechanism to recover from failures. Prerequisite: EECS211.

EECS225 Advanced Data Engineering (3). Advanced data models, data analysis, intelligence and integration, distributed database management systems, parallel databases, multimedia and visual databases, Web database management, advanced database applications. Prerequisite: EECS116 or Computer Science 122A.

EECS228 Numerical Processors (3). Number representations. Fast algorithms and implementations for addition, multiplication, division, and square root. Floating-point processors. On-line arithmetic. Function evaluation. CORDIC processors. Residue arithmetic. Prerequisite: EECS112.

EECS240 Random Processes (3). Extensions of probability theory to random variables varying with time. General properties of stochastic processes. Convergence. Estimation, including nonlinear and linear minimum mean square error and maximum likelihood. Spectral density and linear filters. Poisson processes and discrete-time Markov chains. Prerequisite: EECS140.

EECS241A Digital Communications I (3). Concepts and applications of digital communication systems. Baseband digital transmission of binary, multi-amplitude, and multidimensional signals. Introduction to and performance analysis of different modulation schemes.

EECS241B Digital Communications II (3). Concepts and applications of equalization, multicarrier modulation, spread spectrum, and CDMA. Digital communications through fading memory channels. Prerequisite: EECS241A.

EECS242 Information Theory (3). Fundamental capabilities and limitations of information sources and information transmission systems. An analytical framework for modeling and evaluating communication systems: entropy, mutual information asymptotic equipartition property, entropy rates of a stochastic process, data compression, channel capacity, differential entropy, the Gaussian channel. Prerequisite: EECS240.

EECS243 Error Correcting Codes (3) S. Different techniques for error correcting codes and analyzing their performance. Linear block codes; cyclic codes; convolutional codes. Minimum distance; optimal decoding; Viterbi decoding; bit error probability. Coding gain; trellis coded modulation. Prerequisite: EECS240.

EECS244 Wireless Communications (3). Introduction to wireless communications systems. Wireless channel modeling. Single carrier, spread spectrum, and multi-carrier wireless modulation schemes. Diversity techniques. Multiple-access schemes. Transceiver design and system level tradeoffs. Brief overview of GSM, CDMA (IS-95) and 2.5, 3G cellular schemes. Prerequisite: EECS241B.

EECS245 Space-Time Coding (3). A fundamental study of: capacity of MIMO channels, space-time code design criteria, space-time block codes, space-time trellis codes, differential detection for multiple antennas, spatial multiplexing, BLAST. Prerequisite: EECS242.

EECS246 Network Coding: Theory and Applications (3). Theoretical frameworks for network coding: linear, algebraic, and random network coding; linear programming and combinatorial frameworks. Network code design. Benefits and costs. Practical network coding. Applications to wireless networks, content distribution, security, and other areas. Prerequisites: EECS248A/Networked Systems 201/Computer Science 232 and an introductory course in linear algebra. Same as Networked Systems 256.

EECS248A Internet (4) F. A broad overview of basic Internet concepts. Internet architecture and protocols, including addressing, routing, TCP/IP, quality of service, and streaming. Prerequisite: EECS148, Computer Science 132, or consent of instructor. Same as Computer Science 232 and Networked Systems 201.

EECS248B Performance Analysis of Computer Communication Networks (3) W. Mathematical modeling and optimization of network performance and design. Data link layer and media access protocols. Queuing models for communication networks. Routing and congestion control. Prerequisite: EECS248A. Same as Networked Systems 250.

EECS250 Digital Signal Processing I (3). Fundamental principles of digital signal processing, sampling, decimation and interpolation, discrete Fourier transforms and FFT algorithms, transversal and recursive filters, discrete random processes, and finite-word effects in digital filters. Prerequisites: EECS152A or equivalent.

EECS251A Detection, Estimation, and Demodulation Theory (3). Fundamentals of hypothesis testing and Bayes and Maximum Likelihood Estimation. ARMA and state variable models for random time series analysis. Wiener and Kalman filtering and prediction. Adaptive algorithms for identification and tracking of parameters of time-varying models. Prerequisite: EECS240.

EECS260A Linear Systems I (3). State-space representation of continuous-time and discrete-time linear systems. Controllability, observability, stability. Realization of rational transfer functions. Prerequisite: EECS160A.

EECS261A Linear Optimization Methods (3). Formulation, solution, and analysis of linear programming and linear network flow problems. Simplex methods, dual ascent methods, interior point algorithms and auction algorithms. Duality theory and sensitivity analysis. Shortest path, max-flow, assignment, and minimum cost flow problems. Prerequisite: Mathematics 2J or consent of instructor.

EECS267A Industrial and Power Electronics (4) W. Power switching devices, pulse width modulation (PWM) methods, switching converter topologies, control, and magnetics. Prerequisite: EECS170C, EECS160A, or consent of instructor. Concurrent with EECS166A.

EECS267B Topics in Industrial and Power Electronics (3). Practical design of switching converters, electromagnetic compatibility, thermal management, and/or control methods. Prerequisite: EECS267A or consent of instructor.

EECS270A Advanced Analog Integrated Circuit Design I (3). Basic transistor configurations; differential pairs; active load/current sources; supply/temperature-independent biasing; op-amp gain and output stages; amplifier frequency response and stability compensation; nonidealities in op-amps; noise and dynamic range in analog circuits. Prerequisites: EECS170C and 170LC, or equivalent; or consent of instructor.

EECS270B Advanced Analog Integrated Circuit Design II (3) W. Advanced transistor modeling issues; discrete-time and continuous-time analog Integrated Circuit (IC) filters; phase-locked loops; design of ICs operating at radio frequencies; low-voltage/low-power design techniques; A/D and D/A converters; AGC circuits. Prerequisite: EECS270A or consent of instructor.

EECS270C Design of Integrated Circuits for Broadband Applications (3) S. Topics include: broadband standards and protocols; high-frequency circuit design techniques; PLL theory and design; design of transceivers; electrical/optical interfaces. Prerequisite: EECS 270A or consent of instructor.

EECS270D Radio-Frequency Integrated Circuit Design (3) S. Topics include: RF component modeling; matching network design; transmission line theory/modeling; Smith chart and S-parameters; noise modeling of active and passive components; high-frequency amplifier design; low-noise amplifier (LNA) design; mixer design; RF power amplifier. Prerequisite: EECS270A or consent of instructor.

EECS272 Topics in Electronic System Design (3). New research results in electronic system design. May be repeated for credit.

EECS273 Electronics Packaging (3) Materials, processes, techniques, and principles in interconnect and packaging of electronic products after the device-containing semiconductor wafer is fabricated. The electronic, optical, thermal, mechanical, and reliability properties of the materials are evaluated in the context of modern electronics manufacturing processes. Prerequisite: consent of the instructor.

EECS274 Biomedical Microdevices (MEMOS) (3). Construction, lithographic patterning and etching, sealing and connecting, molding, and testing of microdevices. Prerequisite: EECS179 or consent of instructor.

EECS275A Very Large Scale Integration (VLSI) Project (4) S. Students create VLSI design projects from conception through architecture, floor planning, detailed design, simulation, verification, and submission for project fabrication. Emphasis on practical experience in robust VLSI design techniques. (Successful students are expected to take EECS275B.) Prerequisite: EECS170D, EECS115, or consent of instructor. Concurrent with EECS175A.

EECS275B Very Large Scale Integration (VLSI) Project Testing (4) F. Test and document student-created Complementary Metal Oxide Semiconductor (CMOS) Very Large Scale Integration (VLSI) projects designed in EECS275A. Emphasis on practical laboratory experience in VLSI testing techniques. Prerequisite: EECS275A or consent of instructor. Concurrent with EECS175B.

EECS277A Advanced Semiconductor Devices I (3) W. Advanced complementary metal-oxide-semiconductor field-effect transistors (CMOSFET), device scaling, device modeling and fabrication, equivalent circuits, and their applications for digital, analog, RF. Prerequisite: EECS174.

EECS277B Advanced Semiconductor Devices II (3) S. Metal-semiconductor field-effect transistors (MESFET), heterojunction bipolar transistors (HBT), microwave semiconductor devices, equivalent circuits, device modeling and fabrication, microwave amplifiers, transmitters, and receivers. Prerequisite: EECS174.

EECS277C Nanotechnology (3). Fabrication and characterization techniques of electrical circuit elements at the nanometer scale. Quantized conductance, semiconductor quantum dots, single electron transistors, molecular wires, carbon nanotubes, self-assembly of nano-circuit elements, quantum methods of information processing. Prerequisites: EECS170A and Physics 51A; or consent of instructor.

EECS278 Micro-System Design (4) W. Covers the fundamentals of the many disciplines needed for design of Micro-Electro-Mechanical Systems (MEMS): microfabrication technology, structural mechanics on micro-scale, electrostatics, circuit interface, control, computer-aided design, and system integration. Same as MAE247.

EECS279 Micro-Sensors and Actuators (4) S. Introduction to the technology of Micro-Electro-Mechanical Systems (MEMS). Fundamental principles and applications of important microsensors, actuation principles on micro-scale. Introduction to the elements of signal processing; processing of materials for micro sensor/actuator fabrication; smart sensors and microsensor/microactuator array devices. Same as MAE249.

EECS280A Advanced Engineering Electromagnetics I (3). Stationary electromagnetic fields, Maxwell's equations, circuits and transmission lines, plane waves, guided waves, and radiation. Prerequisite: EECS180 or equivalent.

EECS280B Advanced Engineering Electromagnetics II (3) W. Two- and three-dimensional boundary value problems, dielectric waveguides and other special waveguides, microwave networks and antenna arrays, electromagnetic properties of materials, and electromagnetic optics. Prerequisite: EECS280A or equivalent.

EECS282 Monolithic Microwave Integrated Circuit (MMIC) Analysis and Design II (3) S. Design of microwave amplifiers using computer-aided design tools. Covers low-noise amplifiers, multiple stage amplifiers, broadband amplifiers, and power amplifiers. Hybrid circuit design techniques including filters and baluns. Theory and design rules for microwave oscillator design. Prerequisite: EECS 180, EECS182, or consent of instructor.

EECS285A Optical Communications (3). Introduction to fiber optic communication systems, optical and electro-optic materials, and high-speed optical modulation and switching devices. Prerequisite: EECS180 or consent of instructor.

EECS285B Lasers and Photonics (3) W. Covers the fundamentals of lasers and applications, including Gaussian beam propagation, interaction of optical radiation with matters, and concepts of optical gain and feedback. Applications are drawn from diverse fields of optical communication, signal processing, and material diagnosis. Prerequisite: undergraduate course work in electromagnetic theory and atomic physics.

EECS292 Preparation for M.S. Comprehensive Examination (1 to 3) F, W, S. Individual reading and preparation for the M.S. comprehensive examination. Satisfactory/Unsatisfactory only. May be repeated for credit.

EECS293 Preparation for Ph.D. Preliminary Examination (1 to 6) F, W, S. Individual reading and preparation for the Ph.D. preliminary examination. Satisfactory/Unsatisfactory only. May be repeated for credit.

EECS294 Electrical Engineering and Computer Science Colloquium (1 to 4) F, W, S. Invited speakers discuss their latest research results in electrical engineering and computer science. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

EECS295 Seminars in Engineering (1 to 4) F, W, S. Scheduled each year by individual faculty in major field of interest. Prerequisite: consent of instructor. May be repeated for credit.

EECS296 Master of Science Thesis Research (4 to 12) F, W, S. Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. degree in Engineering. Prerequisite: consent of instructor. May be repeated for credit.

EECS297 Doctor of Philosophy Dissertation Research (4 to 12) F, W, S. Individual research or investigation conducted in preparing and completing the dissertation required for the Ph.D. degree in Engineering. Prerequisite: consent of instructor. May be repeated for credit.

EECS298 Topics in Electrical Engineering and Computer Science (3) F, W, S. Study of Electrical and Computer Engineering concepts. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

EECS299 Individual Research (1 to 12) F, W, S. Individual research or investigation under the direction of an individual faculty member. Prerequisite: consent of instructor. May be repeated for credit.

DEPARTMENT OF MECHANICAL AND AEROSPACE ENGINEERING

S4221 Engineering Gateway; (949) 824-5406
Roger H. Rangel, Department Chair

Faculty

Satya N. Atluri: Continuum mechanics, computational mechanics, meshless methods, damage tolerance and structural integrity, computational nanoscience and technology
James E. Bobrow: Robotics, applied nonlinear control, optimization methods
Haris J. Catrakis: Turbulence and the dynamics of flows, theories, mathematical models, variational principles, computing, direct numerical and large-eddy simulations, imaging, optimal flows, multiscale flows
Donald Dabdub: Mathematical modeling of urban and global air pollution, dynamics of atmospheric aerosols, secondary organic aerosols, impact of energy generation on air quality, chemical reactions at gas-liquid interfaces
Derek Dunn-Rankin: Combustion, optical particle sizing, particle aerodynamics, laser diagnostics and spectroscopy
Donald K. Edwards (*Emeritus*): Heat and mass transfer
Saïd E. Elghobashi: Direct numerical simulation of turbulent, chemically reacting and dispersed two-phase flows
Carl A. Friehe (*Emeritus*): Fluid mechanics, turbulence, micrometeorology, instrumentation
Manuel Gamero-Castaño: Electric propulsion, electrospray, atomization, aerosol diagnostics
Faryar Jabbari: Robust and nonlinear control theory, adaptive parameter identification
John C. LaRue: Fluid mechanics, micro-electrical-mechanical systems (MEMS), turbulence, heat transfer, instrumentation
Feng Liu: Computational fluid dynamics and combustion, aerodynamics, aeroelasticity, propulsion, turbomachinery aerodynamics and aeromechanics
Marc J. Madou: Fundamental aspects of micro/nano-electro-mechanical systems (MEMS/NEMS), biosensors, nanofluidics, biomimetics
J. Michael McCarthy: Machine design and kinematic synthesis of spatial mechanisms and robots

Kenneth D. Mease: Flight guidance and control, nonlinear dynamical systems
Dimitri Papamoschou: Compressible mixing and turbulence, jet noise reduction, diagnostics for compressible flow, acoustics in moving media
Roger H. Rangel: Fluid dynamics and heat transfer of multiphase systems including spray combustion, atomization, and metal spray solidification; applied mathematics and computational methods
David J. Reinkensmeyer: Robotics, mechatronics, biomedical engineering, rehabilitation, biomechanics, neural control of movement
G. Scott Samuelsen: Energy, fuel cells, hydrogen economy, propulsion, combustion and environmental conflict; turbulent transport in complex flows, spray physics, NOx and soot formation, laser diagnostics and experimental methods; application of engineering science to practical propulsion and stationary systems; environmental ethics
William E. Schmitendorf (*Emeritus*): Control theory and applications
Andrei M. Shkel: Design and advanced control of micro-electro-mechanical systems (MEMS); precision micro-sensors and actuators for telecommunication and information technologies; MEMS-based health monitoring systems, disposable diagnostic devices, prosthetic implants
Athanasios Sideris: Robust and optimal control theory and design, neural networks, learning systems and algorithms
William A. Sirignano: Combustion theory and computational methods, multiphase flows, high-speed turbulent reacting flows, flame spread, microgravity combustion, miniature combustors, fluid dynamics, applied mathematics
Lorenzo Valdevit: Multifunctional sandwich structures, thermal protection systems, morphing structures, active materials, MEMS, electronic packaging, cell mechanics
Benjamin F. Villac: Spaceflight dynamics, navigation and control, validated computational methods
Yun Wang: Fuel cells, computational modeling, thermo-fluidics, two-phase flows, electrochemistry, Computational Fluid Dynamics (CFD), turbulent combustion

Affiliated Faculty

Jacob Brouwer: Fuel cell thermodynamic and dynamic modeling; integrated high-temperature fuel cell systems, solid oxide fuel cell materials synthesis and testing; fuel processing; renewable energy
Daniel D. Joseph: Fluid dynamics of miscible fluids, irrotational motions of viscous and viscoelastic liquids, cavitation induced by viscous stresses, flow induced microstructures in solid liquid flows, rheological and flow properties of polymer solutions seeded with silica nanoparticles
Joyce H. Keyak: Orthopaedic surgery
Abraham Lee: Micro-electro-mechanical systems (MEMS), microfluidics, catheter-based microsurgical devices, microactuators for medical and optical applications, microfabrication processes, directed nanoscale self-assembly for biomolecular transducers
Robert H. Liebeck: Aircraft design
Vincent G. McDonell: Droplet transport; measurement, simulation, control, and analysis of liquid spray and gas fired combustion systems; alternative fuels
Farhalli A. Mohamed: Mechanical properties, creep, superplasticity, correlations between properties of materials and their microstructure, mechanical behavior at the nanoscale
William Randall Seeker: Energy systems, air pollution formation and control processes and technology, chemical; kinetics, combustion science, emissions monitoring, experimental combustion diagnostics
Edriss Titi: Partial differential equations, nonlinear analysis
Frederic Yui-Ming Wan: Applied mathematics

Affiliated faculty are from the Schools of Physical Sciences and Medicine and The Henry Samueli School of Engineering.

The Department of Mechanical and Aerospace Engineering offers two undergraduate B.S. degree programs: one in Mechanical Engineering and the other in Aerospace Engineering. M.S. and Ph.D. degree programs in Mechanical and Aerospace Engineering are also offered.

Mechanical engineers design, manufacture, and control machines ranging from robots to aircraft and spacecraft, design engines and power plants that drive these machines, analyze the environmental impact associated with power generation, and strive to promote environmental quality. To achieve their goals, mechanical engineers use mathematics, physics, and chemistry together with engineering science and technology in areas such as fluid mechanics, heat

transfer, dynamics, controls, and atmospheric science. Mechanical Engineering students at UCI learn the problem-solving, modeling, and testing skills required to contribute to advances in modern technology.

Mechanical Engineering undergraduates complete required courses that provide engineering fundamentals and technical electives that allow students to study particular areas of interest. Specializations are available in Aerospace Engineering, Energy Systems and Environmental Engineering, Flow Physics and Propulsion Systems, and Design of Mechanical Systems. Independent research opportunities allow students to pursue other avenues for focusing their studies.

Aerospace Engineering deals with all aspects of aircraft and spacecraft design and operation, thus requiring the creative use of many different disciplines. Aerospace engineers work on the forefront of technological advances and are likely to be leaders in scientific discoveries.

The undergraduate curriculum in Aerospace Engineering includes courses in subsonic and supersonic aerodynamics, propulsion, controls and performance, light-weight structures, spacecraft dynamics, and advanced materials. In the senior capstone course, students work in teams on the preliminary design of a commercial jet transport.

Career opportunities for Aerospace Engineering graduates are in the broad range of aerospace industries, including manufacturers of aircraft, spacecraft, engines, and aircraft/spacecraft components; makers of aircraft/spacecraft simulators; and government research laboratories.

Undergraduate Major in Aerospace Engineering

Program Educational Objectives: graduates of the program will have the professional and scientific education that allows them to be successful as career engineers and in the most demanding graduate programs. Specifically, they will be able to (1) function in professional environments in industry, government, and academia applying and building upon engineering science knowledge, problem-solving skills, and communication skills; (2) function as members of teams and in leadership roles applying ethical standards including the AIAA code of ethics within and beyond traditional Aerospace Engineering disciplines; and (3) remain current with technology and contemporary scientific and societal issues, and consequently improve skills and knowledge through a lifelong process of learning. (Program educational objectives are those aspects of engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

The undergraduate Aerospace Engineering curriculum includes a core of mathematics, physics, and chemistry. Engineering courses in fundamental areas constitute much of the remaining curriculum. A few technical electives allow the undergraduate student to specialize somewhat or to pursue broader understanding. A senior capstone design experience culminates the curriculum.

ADMISSIONS

High School Students: See page 198.

Transfer Students. Preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following **required** courses: one year of calculus, one year of calculus-based physics (mechanics, electricity, and magnetism with laboratory), one course in general chemistry (with laboratory), and two additional approved courses for the major.

Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer. Students who enroll at UCI in need of completing lower-division course work

may find that it will take longer than two years to complete their degrees. For further information, contact The Henry Samueli School of Engineering at (949) 824-4334.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN AEROSPACE ENGINEERING

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements:

Mathematics and Basic Science Courses: Mathematics 2A-B, 2D, 2J, 3D, and 2E; Chemistry 1A and 1LE; Physics 7B/7LB or Physics 7C/7LC; Physics 7D-E and 7LD; Physics 52A; and one course from Biological Sciences 93, Chemistry 1B, Earth System Science 25, 55, or Physics 51A.

Engineering Topics Courses: Students must complete a minimum of 24 units of engineering design.

Core Courses: Engineering ENGR54, EECS70A, MAE10, MAE30, MAE80, MAE91, MAE106, MAE108, MAE112, MAE120, MAE130A, MAE130B, MAE135, MAE136, MAE140, MAE146, MAE150, MAE150L, MAE157, MAE158, MAE159, MAE170, and MAE175.

Engineering Elective Courses: Students select, with the approval of a faculty advisor, a minimum of 8 units of engineering electives, incorporating at least 1 unit of design.

Engineering Professional Topics Course: Economics 23.

At most an aggregate total of 4 units of 199 or H199 courses may be used to satisfy degree requirements.

(The nominal Aerospace Engineering program will require 189 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

Design unit values are indicated at the end of each course description. The faculty advisors and the Undergraduate Student Affairs Office can provide necessary guidance for satisfying the design requirements. Selection of elective courses must be approved by the student's faculty advisor and the departmental undergraduate advisor.

REQUIREMENTS FOR THE BACHELOR'S DEGREE IN MECHANICAL ENGINEERING

University Requirements: See pages 56–62.

School Requirements: See page 199.

Major Requirements:

Mathematics and Basic Science Courses: Mathematics 2A-B, 2D, 2J, 3D, and 2E; Chemistry 1A and 1LE; Physics 7B/7LB or Physics 7C/7LC; Physics 7D-E and 7LD; Physics 52A; and one course from Biological Sciences 93, Chemistry 1B, Earth System Science 25, 55, or Physics 51A.

Engineering Topics Courses: Students must complete a minimum of 24 units of engineering design.

Core Courses: Engineering ENGR54; EECS70A; MAE10; MAE30; MAE52; MAE80; MAE91; MAE106; MAE107; MAE108 or MAE180 or CBEMS164; MAE115; MAE120; MAE130A; MAE130B; MAE140; MAE145; MAE147; MAE150; MAE150L; MAE151; MAE155 or MAE156 or MAE157; MAE170; and a minimum of 3 units of MAE189.

Engineering Elective Courses: Students select, with the approval of a faculty advisor, a minimum of 12 units of engineering topics courses. Students may select an area of specialization and complete the associated requirements, as shown below.

Engineering Professional Topics Course: Economics 23.

At most an aggregate total of 4 units of 199 or H199 courses may be used to satisfy degree requirements.

(The nominal Mechanical Engineering program will require 192 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary.)

Specialization in Aerospace Engineering: Completion of a Senior Design Project in this area, MAE108, and two courses selected from Engineering MAE112, MAE135, MAE136, MAE158, MAE159, and MAE175.

Specialization in Energy Systems and Environmental Engineering: Completion of a Senior Design Project in this area and one course selected from Engineering MAE110 or MAE117, and one course selected from MAE164, CEE162, CEE168, CEE173, or CBEMS110.

Specialization in Flow Physics and Propulsion Systems: Completion of a Senior Design Project in this area and two courses selected from Engineering MAE110, MAE112, MAE135, MAE164, MAE185.

Specialization in Design of Mechanical Systems: Completion of a Senior Design Project in this area and two courses selected from Engineering MAE152, MAE171, MAE172, MAE180, MAE183, MAE188.

Design unit values are indicated at the end of each course description. The faculty advisors and the Student Affairs Office can provide necessary guidance for satisfying the design requirements. Selection of elective courses must be approved by the student's faculty advisor and the departmental undergraduate advisor.

PROGRAM OF STUDY

The sample program of study chart shown (on the next page) is typical for the accredited major in Mechanical Engineering. Students should keep in mind that this program is based upon a rigid set of prerequisites, beginning with adequate preparation in high school mathematics, physics, and chemistry. Therefore, the course sequence should not be changed except for the most compelling reasons. Students who are not adequately prepared, or who wish to make changes in the sequence for other reasons, must have their programs approved by their faculty advisor. Mechanical Engineering majors must consult at least once every year with the academic counselors in the Student Affairs Office and with their faculty advisors.

MAE155 may be used instead of MAE156 or MAE157. Students can dual major in Mechanical Engineering and Aerospace Engineering by satisfying the degree requirements for both majors. The ME and AE dual majors may use MAE159 to satisfy the MAE189 requirement; and they should use MAE108 as a Mechanical Engineering Core Course. Students who dual major in Mechanical Engineering and Materials Science Engineering should use CBEMS164 as a Mechanical Engineering Core Course.

Graduate Study in Mechanical and Aerospace Engineering

The Mechanical and Aerospace Engineering faculty have special interest and expertise in four thrust areas: continuum mechanics; power, propulsion, and environment; micro/nanomechanics; and systems and design.

Continuum mechanics faculty study the physics of fluids, physics and chemistry of solids, and structural mechanics. Areas of emphasis in fluid mechanics include incompressible and compressible turbulent flows, multiphase flows, chemically reacting and other nonequilibrium flows, aeroacoustics, aerodynamics, and fluid-solid interaction. In the field of solid mechanics, research and course work emphasize theoretical and computational approaches which contribute to a basic understanding of and new insight into the properties and behavior of condensed matter. General areas of interest are large-strain and large-rotation inelastic solids, constitutive modeling, and fracture mechanics. Computational algorithms center on boundary element methods and the new class of meshless methods. Studies in structural mechanics involve the analysis and synthesis of low-mass structures, smart structures, and engineered materials, with emphasis on stiffness, stability, toughness, damage tolerance, longevity, optimal life-cycle costs and self-adaptivity.

Research in power, propulsion, and environment encompasses aerospace propulsion, combustion and thermophysics, fuel cell technologies, and atmospheric physics and impacts. In aerospace propulsion, particular emphasis is placed in the areas of turbomachinery, spray combustion, combustion instability, innovative engine cycles, and compressible turbulent mixing. The topic of combustion and thermophysics addresses the fundamental fluid-dynamical, heat-transfer, and chemical mechanisms governing combustion in diverse settings. Fuel cell research encompasses the development of fuel-cell technology, hybrid engines, and thermionic

devices. Activities cover the thermodynamics of energy systems, the controls associated with advanced energy systems, and systems analyses. The area of atmospheric physics and impacts deals with the modeling and controlling of chemical pollution, particle dispersion, and noise emission caused by energy-generation and propulsion devices. Research on atmospheric turbulence addresses the energy exchanges between the Earth's land and ocean surfaces and the overlying atmosphere.

Micro/nanomechanics encompasses the thrusts of miniaturization engineering, mechatronics, and biotechnology. Miniaturization engineering is relevant to the development of small-scale mechanical, chemical and biological systems for applications in biotechnology, automotive, robotic, and alternative energy applications. It involves the establishment of scaling laws, manufacturing methods, materials options and modeling from the atom to the macro system. Mechatronic design is the integrated and optimal design of a mechanical system and its embedded control system. Main focus research is the design, modeling, and characterization of Micro Electro Mechanical Systems (MEMS). Particular emphasis is placed on analysis and design of algorithmic methods and physical systems that realize sensor-based motion planning. The thematic area of biotechnology involves the understanding, modeling, and application of fundamental phenomena in mechanical engineering, electrical engineering, and chemistry towards the development of bio-sensors and actuators.

Systems and design research is conducted in the areas of dynamic systems optimization and control, biomechanical engineering, robotics and machine learning, and design engineering. Advanced concepts in dynamics, optimization and control are applied to the areas of biorobotics, flight trajectory design, guidance and navigation, learning systems, micro sensors and actuators, flexible structures, combustion, fuel cells, and fluid-optical interactions. Biomechanical engineering integrates physiology with engineering in order to develop innovative devices and algorithms for medical diagnosis and treatment. The focus of robotics and machine learning is the creation of machines with human-like intelligence capabilities for learning. Faculty in design engineering develop methodologies to address issues ranging from defining the size and shape of components needed for force and motion specifications, to characterizing performance in terms of design parameters, cost and complexity.

Aerospace engineering research efforts combine specialties from each of the four thrust areas toward the design, modeling, and operation of complex systems.

The Department offers the M.S. and Ph.D. degrees in Mechanical and Aerospace Engineering.

MASTER OF SCIENCE DEGREE

Two plans are available to pursue study toward the M.S. degree: a thesis option and a comprehensive examination option. Opportunities are available for part-time study toward the M.S. degree. The Plan of Study for both options must be developed on consultation with a Faculty Advisor and approved by the Department Graduate Advisor.

Plan I: Thesis Option

The thesis option requires completion of 47 units of study; the completion of an original research project with a Faculty Advisor, the writing of the thesis describing it; and approval of the thesis by a thesis committee. This plan is available for those who wish to gain research experience or as preparation for study toward the doctoral degree. To complete the required 47 units, students must complete 32 units (eight courses) in graduate courses numbered MAE200–289, 12 units of MAE296, and 3 units of MAE298. This program of study must be developed in consultation with the graduate advisor.

NOTE: Students who enter prior to fall of 2008 should follow the course requirements outlined within the *Catalogue* of the year they entered. The change in number of units per course is not intended to change the course requirements for the degree or to have any impact in the number of courses students are taking. As such, students will need to continue to meet the same high standards and plan of study requirements as previously required. Students will work with their advisor to create a plan of study encompassing the equivalent topical requirements, as well as the equivalent number of courses to the previous 36 unit requirement (i.e., at least 8 graduate-level courses to meet the 24, 200–289 level unit requirement).

Plan II: Comprehensive Examination Option

The comprehensive examination option requires completion of 47 units of study, 44 units (11 courses) of which must be from graduate courses numbered MAE200–289, and 3 units of which must be MAE298. The program of study must be developed in consultation with the graduate advisor. Up to 8 units in the MAE200–289 range may be replaced by an equal number of units of MAE294, which includes execution and documentation of a research or design project.

NOTE: Students who entered prior to fall of 2008 should follow the course requirements outlined within the *Catalogue* of the year they entered. The change in number of units per course is not intended to change the course requirements for the degree or to have any impact in the number of courses students are taking. As such, students will need to continue to meet the same high standards and plan of study requirements as previously required. Students will work with their advisor to create a plan of study encompassing the equivalent topical requirements, as well as the equivalent number of courses to the previous 36 unit requirements (i.e., at least 11 graduate-level courses to meet the 33, 200–289 level unit requirement).

DOCTOR OF PHILOSOPHY DEGREE

The doctoral program in Mechanical and Aerospace Engineering is tailored to the individual needs and background of the student. The detailed program of study for each Ph.D. student is formulated in consultation with a faculty advisor who takes into consideration the objectives and preparation of the candidate.

Within this flexible framework the Department maintains specific guidelines that outline the milestones of a typical doctoral program. All doctoral students should consult the Departmental Ph.D. guidelines for program details, but there are several milestones to be passed: admission to the Ph.D. program by the faculty; completion of six non-research courses beyond M.S. degree requirements; passage of a preliminary examination or similar assessment of the student's background and potential for success in the doctoral program; course work; meeting departmental teaching requirements, which can be satisfied through service as a teaching assistant or equivalent; research preparation; formal advancement to candidacy in the third year (second year for students who entered with a master's degree) through a qualifying examination conducted on behalf of the Irvine division of the Academic Senate; development of a research proposal; completion of a significant research investigation, and completion and defense of an acceptable dissertation. There is no foreign language requirement. The degree is granted upon the recommendation of the Doctoral Committee and the Dean of Graduate Studies. Students enrolled in the Ph.D. program must take a full-time load (minimum of 12 units). The normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years.

Before seeking admission, Ph.D. applicants are encouraged to communicate directly and in some detail with prospective faculty sponsors. The student's objectives and financial resources must coincide with a faculty sponsor's research interests and research

support. Financial aid in the form of a teaching assistantship or fellowship may not cover the period of several years required to complete the program. During the balance of the period the student will be in close collaboration with the faculty research advisor.

Courses in Mechanical and Aerospace Engineering

LOWER-DIVISION

NOTE: The undergraduate courses listed below are open only to students in The Henry Samueli School of Engineering. All other majors must petition for permission to enroll.

MAE10 Introduction to Engineering Computations (4) F. Introduction to the solution of engineering problems through the use of the computer. Elementary programming in FORTRAN and Matlab is taught. No previous knowledge of computer programming is assumed. Prerequisite or corequisite: Mathematics 2A. Only one course from Engineering MAE10, CEE10, ENGR10, EECS10, and EECS12 may be taken for credit. (Design units: 1)

MAE30 Statics of Rigid Bodies and Structures (4) F, Summer. Addition, resolution, and equivalent system of forces. Distributed forces, centroids, rigid-body equilibrium under concentrated and distributed forces. One-dimensional cables and bars under axial loads. Statical determinacy. Stress, strain, elastic behavior. Numerical analysis of statically determinate and indeterminate trusses. Corequisites or prerequisites: Mathematics 2D and 2J. Prerequisites: Physics 7C; MAE10 or CEE10 or EECS10. Same as ENGR30. Only one course from MAE30, ENGR30, and CEE30 may be taken for credit. (Design units: 0)

MAE52 Computer-Aided Design (4) S. Develops skills for interpretation and presentation of mechanical design drawings and the use of CAD in engineering design. An integrated approach to drafting based on sketching, manual drawing, and three-dimensional CAD techniques is presented. (Design units: 0.5)

MAE57 Manufacturing Processes in Engineering (2). With laboratory. Machines and processes of mechanical manufacturing. Safety and professional procedures emphasized. Use of measuring instruments, hand tools, lathe, mill, drill press, bandsaw, grinder, welding equipment. Pass/Not Pass only. (Design units: 0)

MAE70 Space Exploration (4). Utilizes the challenges in space exploration to demonstrate fundamental principles in physics, engineering, geology, and biology. Topics include propulsion, orbital mechanics, distance and time scales, solar systems basics, planetary geology, and astrobiology.

MAE80 Dynamics (4) W, Summer. Introduction to the kinetics and dynamics of particles and rigid bodies. The Newton-Euler, Work/Energy, and Impulse/Momentum methods are explored for ascertaining the dynamics of particles and rigid bodies. An engineering design problem using these fundamental principles is also undertaken. Prerequisites: Mathematics 2D and Physics 7C. Same as ENGR80 and CEE80. (Design units: 0.5)

MAE91 Introduction to Thermodynamics (4) S, Summer. Thermodynamic principles; open and closed systems representative of engineering problems. First and second law of thermodynamics with applications to engineering systems and design. Prerequisites: Physics 7C, Mathematics 2D. Only one course from MAE91, CBEMS40B, and CBEMS45B may be taken for credit. (Design units: 0.5)

UPPER-DIVISION

MAE106 Mechanical Systems Laboratory (4) S. Experiments in linear systems, including op-amp circuits, vibrations, and control systems. Emphasis on demonstrating that mathematical models can be useful tools for the analysis and design of electro-mechanical systems. Prerequisites: MAE140 and EECS70A. (Design units: 2)

MAE107 Fluid Thermal Science Laboratory (4) F. Fluid and thermal engineering laboratory. Experimental analysis of fluid flow, heat transfer, and thermodynamic systems. Probability, statistics, and uncertainty analysis. Report writing is emphasized and a design project is required. Corequisite: MAE120. (Design units: 1)

MAE108 Aerospace Laboratory (4) F. Analytical and experimental investigation in aerodynamics, fluid dynamics, and heat transfer. Emphasis on study of flow over objects and lift and drag on airfoils. Introduction to basic diagnostic techniques. Report writing is emphasized and a design project is required. Prerequisite: MAE130B. (Design units: 2)

MAE110 Combustion and Fuel Cell Systems (4). Fundamentals of gaseous, liquid, and coal-fired combustion and fuel cell systems. Fuels, fuel-air mixing, aerodynamics, and combustion and fuel cell thermodynamics. Operating and design aspects of practical systems including engines, power generators, boilers, furnaces, and incinerators. Prerequisite: MAE115. (Design units: 2)

MAE112 Propulsion (4) W. Application of thermodynamics and fluid mechanics to basic flow processes and cycle performance in propulsion systems: gas turbines, ramjets, scramjets, and rockets. Prerequisite: MAE135. (Design units: 1)

MAE113 Electric Propulsion (4) S. Space propulsion requirements and maneuvers, stressing those best suited to electric propulsion. An introduction to plasma physics. Electrophysical, electromagnetic and electrostatic accelerators, with emphasis in technologies (ion engines, Hall thrusters and colloidal thrusters) belonging to the latter family. Prerequisite: MAE112. Concurrent with MAE213.

MAE115 Applied Engineering Thermodynamics (4) F. Application of thermodynamic principles to compressible and incompressible processes representative of practical engineering problems—power cycles, refrigeration cycles, multicomponent mixtures, air conditioning systems, combustion and compressible flow. Design of a thermodynamic process. Prerequisite: MAE91. MAE115 and CBEMS45C may not both be taken for credit. (Design units: 2)

MAE117 Solar and Renewable Energy Systems (4). Basic principles, design, and operation of solar and other renewable energy systems including solar photo-voltaic, solar thermal, hydroelectric, wind, and biomass gasification and combustion. Includes power generation and storage, and renewable fuels for transportation and stationary power generation. Prerequisite: MAE115. (Design units: 1)

MAE118 Sustainable Energy Systems (4). Basic principles, design, and operation of sustainable energy systems including wind, solar photo-voltaic and thermal, hydroelectric, geothermal, oceanic, biomass combustion, advanced coal, and next generation nuclear. Includes power generation, storage, and transmission for stationary power generation. Prerequisite: MAE115. Concurrent with MAE218. (Design units: 1)

MAE120 Heat Transfer (4) S. Fundamentals of heat transfer. Conduction, convection in laminar and turbulent flow, radiation heat transfer, and combined heat transfer. Application to insulation requirements and heat exchangers. Prerequisites: Mathematics 2D, Physics 7C, and MAE91, each with a grade of C- or better; and MAE130B. MAE120 and CBEMS125B may not both be taken for credit. (Design units: 0)

MAE130A Introduction to Fluid Mechanics (4) F. Fundamental concepts; fluid statics; fluid dynamics; Bernoulli's equation; control-volume analysis; basic flow equations of conservation of mass, momentum, and energy; differential analysis; potential flow; introduction to viscous incompressible flow. Prerequisites: Physics 7C, Mathematics 2D, Mathematics 2E, MAE30, and MAE80, each with a grade of C- or better. Only one course from MAE130A, MAEH130A, CEE170, CEEH170, and CBEMS125A may be taken for credit. (Design units: 0)

MAEH130A Honors Introduction to Fluid Mechanics (4). Fundamental concepts; fluid statics; fluid dynamics; Bernoulli's equation; control-volume analysis; basic flow equations of conservation of mass, momentum, and energy; differential analysis; potential flow; introduction to viscous incompressible flow. Prerequisites: Physics 7C, Mathematics 2D, Mathematics 2E, MAE30, and MAE80, each with a grade of C- or better. Only one course from MAEH130A, MAE130A, CEE170A, CEEH170A, and CBEMS125A may be taken for credit. (Design units: 0)

MAE130B Introduction to Viscous and Compressible Flows (4) W. Introduction to the analysis of viscous flows including fully developed laminar and turbulent flow in a pipe, viscous flow over immersed bodies, evaluation of boundary layer characteristics, lift and drag, compressible flow in a duct and normal shock waves. Prerequisites: Mathematics 2D, Physics 7C, and MAE91 each with a grade of C- or better; MAE130A and MAE140. (Design units: 1)

MAE135 Compressible Flow (4) S. Compressibility effects in fluid mechanics. One-dimensional flow with area variation, friction, heat transfer, and shocks. Design of gas supply systems. Two-dimensional flow with oblique shocks and isentropic waves. Supersonic airfoil theory and design, wind-tunnel design. Basic diagnostics. Prerequisites: MAE91, MAE130A, MAE130B. (Design units: 1)

MAE136 Aerodynamics (4) F. Analysis of flow over aircraft wings and airfoils, prediction of lift, moment, and drag. Topics: fluid dynamics equations; flow similitude; viscous effects; vorticity, circulation, Kutta-Joukowski theorem, potential flow; superposition principle, Kutta-Joukowski theorem; thin airfoil theory; finite wing theory; compressibility. Prerequisites: MAE130A, MAE130B. (Design units: 1)

MAE140 Introduction to Engineering Analysis (4) F. Analytical methods in engineering. Nonhomogeneous linear ordinary differential equations. Variable coefficient linear ordinary differential equations. Eigenfunction expansions. Laplace transforms. Introduction to Fourier transforms. Linear partial differential equations. Prerequisites: Mathematics 2E or equivalent; Mathematics 3D. (Design units: 0)

MAE145 Theory of Machines and Mechanisms (4) S. Presents the basic mathematical theory of machines. Focuses on the principles of cam design, gearing and gear train analysis, and the kinematic and dynamic analysis of linkages, together with an introduction to robotics. Prerequisites: Engineering MAE80; Mathematics 2J. (Design units: 2)

MAE146 Astronautics (4) W. Motion in gravitational force fields, orbit transfers, rocketry, interplanetary trajectories, attitude dynamics and stabilization, navigation, reentry, the space environment. Prerequisite: MAE80. (Design units: 1)

MAE147 Vibrations (4) W. Analysis of structural vibrations of mechanical systems. Modeling for lumped and distributed parameter systems. Topics: single- and multi-degree of freedom systems, free and forced vibrations, Fourier series, convolution integral, mass/stiffness matrices, and normal modes with design project. Prerequisites: MAE80, MAE140, Mathematics 2E. (Design units: 1)

MAE150 Mechanics of Structures (4) F, S, Summer. Stresses and strains. Torsion. Bending. Beam deflection. Shear force and moment distributions in beams. Yielding and buckling of columns. Combined loading. Transformation of stresses and strain. Yielding criteria. Finite elements analysis of frames. Dynamics of a two-bar truss. Prerequisites: Engineering MAE30 or ENGR30; Mathematics 2J. Same as ENGR150. Only one course from MAE150/ENGR150, ENGRH150, CEE150, and CEEH150 may be taken for credit. (Design units: 2)

MAE150L Mechanics of Structures Laboratory (1). Experimental techniques for the measurement of mechanical properties of materials and structures. Methods for load, displacement and strain measurements. Tension, bending, compression tests. Determination of strength, stiffness, toughness for metals, polymers, ceramics and composites. Deformation of structures. Corequisite: MAE150. Prerequisite: MAE30. MAE150L and CEE150L may not both be taken for credit.

MAE151 Mechanical Engineering Design (4) W. A comprehensive group design project experience that involves identifying customer needs, idea generation, reverse engineering, preliminary design, standards, prototype development, testing, analysis, and redesign of a product involving fluid, thermal, and mechanical components. Introduces design for manufacturing and the environment. Prerequisites: MAE120, MAE145, and MAE170; senior standing. (Design units: 3)

MAE152 Introduction to Computer-Aided Engineering (4). Elements and principles of computer-aided engineering with modern hardware and software are presented with a design focus. Case studies are used to assist in finite-element method techniques. Prerequisites: ENGR150, MAE120. Formerly MAE152A. (Design units: 2). *Not offered every year.*

MAE155 Composite Materials and Structures (4) S. Motivation for composite materials. Different classifications according to the nature of the matrix (PMC, MMC, CMC) and the reinforcement topology (fibers, whiskers, particulates). Mechanical properties. Failure mechanisms. Designing with composite materials. Advantages and limitations of homogenization techniques for numerical modeling. Prerequisites: ENGR54; MAE150 or CEE150 or ENGR150. Concurrent with MAE255.

- MAE156 Mechanical Behavior and Design Principles (4) W.** Principles governing structure and mechanical behavior of materials, relationship relating microstructure and mechanical response with application to elasticity, plasticity, yielding, necking, creep, and fracture of materials. Introduction to experimental techniques to characterize the properties of materials. Design parameters. Prerequisites: ENGR54. Same as CBEMS155. (Design units: 2)
- MAE157 Lightweight Structures (4) W.** Fundamentals of torsion and bending. Analysis and design of thin-walled and composite beams. Stress analysis of aircraft components. Stiffness, strength, and buckling. Introduction to the Finite Element method and its application to plates and shells. Prerequisite: MAE150 or CEE150 or ENGR150. (Design units: 2)
- MAE158 Aircraft Performance (4) W.** Fundamentals of flight theory applied to subsonic propeller and jet aircraft. Nature of aerodynamic forces, drag and lift of wing and fuselage, high-lift devices, level-flight performance, climb and glide performance, range, endurance, take-off and landing distances, static and dynamic stability and control. Prerequisites: MAE130A. (Design units: 2)
- MAE159 Aircraft Design (4) S.** Preliminary design of subsonic general aviation and transport aircraft with emphasis on layout, aerodynamic design, propulsion, and performance. Estimation of total weight and weight distribution, design of wings, fuselage, and tail, selection and location of engines, prediction of overall performance. Prerequisites: MAE112, MAE136, MAE158. (Design units: 4)
- MAE164 Air Pollution and Control (4).** Sources, dispersion, and effects of air pollutants. Topics include emission factors, emission inventory, air pollution, meteorology, air chemistry, air quality modeling, impact assessment, source and ambient monitoring, regional control strategies. Prerequisites: MAE91; MAE130A or CEE170. (Design units: 2)
- MAE165 Advanced Manufacturing Choices: From Macro to Nanomanufacturing (4).** Selection of manufacturing processes matched to product specifications and design. Principles underlying advanced manufacturing. A decision tree for manufacturing process selection. Examples from a variety of products ranging in size from nanometers to centimeters are considered. Prerequisite: MAE120, MAE156 or MAE157. (Design units: 1)
- MAE170 Introduction to Control Systems (4) F.** Feedback control systems. Modeling, stability, and systems specifications. Root locus, Nyquist, and Bode methods of analysis and design. Prerequisites: Mathematics 2D, Physics 7C, Engineering MAE80, each with a grade of C- or better; and MAE106. MAE170 and MAEH170 may not both be taken for credit. (Design units: 2)
- MAEH170 Honors Introduction to Control Systems (4).** Feedback control systems. Modeling, stability, and systems specifications. Root locus, Nyquist, and Bode methods of analysis and design. Contour integration, advanced frequency-domain concepts, and design tools. Prerequisites: Mathematics 2D, Physics 7C, Engineering MAE80, each with a grade of C- or better; and MAE106. MAEH170 and MAE170 may not both be taken for credit. (Design units: 2)
- MAE171 Digital Control Systems (4).** Methods for analysis and design of discrete-time control systems. Z-transforms, difference equations, discrete Fourier transforms. Sampling theorem and applications. Z-plane stability, frequency response. Digital controller design. Introduction to digital filters. Prerequisite: MAE170. (Design units: 2)
- MAE172 Design of Computer-Controlled Robots (4).** Students design a small robotic device and program it to exhibit sentient behaviors. The basic aspects of mechatronic design are covered, including motor and sensor selection, control strategies, and microcomputer programming for the implementation of control paradigms. Corequisite: MAE180. Prerequisite: MAE170. (Design units: 3)
- MAE175 Dynamics and Control of Aerospace Vehicles (4) S.** Equations of motion, linearization, stability derivatives, and longitudinal and lateral modes of motion. Handling qualities, sensors and actuators, and effects of various feedbacks on stability and performance. Stability augmentation. Autopilot design. Prerequisite: MAE106. (Design units: 3)
- MAE180 Electric Circuits and Interfaces (4) W.** The use of semiconductor devices, digital and linear circuits in the design of interfaces to mechanical engineering systems. The design of interfaces to mechanical engineering system. Emphasis on design and use of microprocessor interfacing for control and data acquisition. Prerequisite: MAE106. (Design units: 3)
- MAE183 Computer-Aided Mechanism Design (4) F.** Focuses on the design of planar, spherical, and spatial mechanisms using computer algebra and graphics. Topics include both exact and approximate analytical design techniques. Students are required to use the existing software (or develop new algorithms) to design various mechanisms for new applications. Prerequisite: Mathematics 2J. (Design units: 4)
- MAE185 Numerical Analysis in Mechanical Engineering (4).** Solution of mechanical-engineering equations by means of numerical methods. Errors in numerical analysis. Nonlinear equations and sets of equations. Numerical differentiation and integration. Ordinary differential equations. Boundary-value problems. Partial differential equations. Prerequisites: MAE10, Mathematics 3D; Mathematics 2E or equivalent. MAE185 and Mathematics 105A may not both be taken for credit. (Design units: 2)
- MAE188 Engineering Design in Industry (4).** Presents the principles of engineering design in the context of an industrial application. Local manufacturing firms define an engineering design project to be completed by students in 10 weeks. Projects include initial brainstorming to final design, with a formal presentation of the result. (Design units: 4)
- MAE189 Senior Project—Special Topics (1 to 4) F, W, S.** Group or individual senior project of theoretical or applied nature involving design. Prerequisites: senior standing and consent of instructor. May be taken for credit for a total of 12 units. (Design units: 1–4)
- MAE195 Seminars in Engineering (1 to 4).** Seminars by individual faculty in major fields of interest. Prerequisite: consent of instructor. May be repeated for credit. (Design units: varies)
- MAE198 Group Study (1 to 4).** Group study of selected topics in engineering. Prerequisite: consent of instructor. May be repeated for credit as topics vary. (Design units: varies)
- MAE199 Individual Study (1 to 4).** For undergraduate Engineering majors in supervised but independent reading, research, or design. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. May be taken for credit for a total of eight units. (Design units: varies)
- MAE199P Individual Study (1 to 4).** Same description as MAE199. Pass/Not Pass grading only. May be repeated for credit as topics vary. (Design units: varies)
- MAEH199 Individual Study for Honors Students (1 to 5).** Independent reading, research, or design under the direction of a faculty member or group of faculty members in Mechanical and Aerospace Engineering. Students taking individual study for design credit are to submit a written paper to the instructor and to the Undergraduate Student Affairs Office in the School of Engineering. Open only to members of the Campuswide Honors Program who are Mechanical or Aerospace Engineering majors. May be repeated for credit. (Design units: varies)

GRADUATE

MAE200A Engineering Analysis I (4) F. Linear algebra, including vector spaces, matrices, linear system of equations, least squares, and the eigenvalue problem. Ordinary differential equations, including analytical and numerical solution methods, stability, and phase portraits.

MAE200B Engineering Analysis II (4) W. Review of ordinary differential equations, including Bessel and Legendre functions. Partial differential equations, including the diffusion equation, Laplace's equation, and the wave equation. Fourier series, Fourier and Laplace transforms and their applications.

MAE206 Nonlinear Optimization Methods (4) S. Numerical methods for constrained and unconstrained optimization. Necessary and sufficient conditions for optimality. Conjugate gradient, variable metric algorithms. Gradient projection, penalty functions, and Lagrange methods. Prerequisite: MAE200A. *Not offered every year.*

MAE207 Methods of Computer Modeling in Engineering and the Sciences (4) S. Unified introduction to finite volume, finite element, field-boundary element, meshless, primal, dual, and mixed methods. Nonlinear problems posed by ordinary as well as partial differential equations. Computer implementations and comparisons of accuracy and convergence.

MAE210 Advanced Fundamentals of Combustion (4) S. Premixed, non-premixed, and heterogeneous reactions, with emphasis on kinetics, thermal ignition, turbulent flame propagation, detonations, explosions, flammability limits, diffusion flame, quenching, flame stabilization, and particle and spray combustion. Prerequisite: MAE224 or MAE230B. *Not offered every year.*

MAE213 Electric Propulsion (4) S. Space propulsion requirements and maneuvers, stressing those best suited to electric propulsion. An introduction to plasma physics. Electrothermal, electromagnetic and electrostatic accelerators, with emphasis in technologies (ion engines, Hall thrusters and colloidal thrusters) belonging to the latter family. Prerequisite: MAE112. Concurrent with MAE113.

MAE214 Fuel-Cell Fundamentals and Technology (4) S. Fuel-cell systems design, operation, and materials. Electrochemistry and electrocatalysis, cell degradation, nature of fuel-cell electrodes and electrolytes, fuels, and fuel processing. Provides broad insight into fuel-cell science, technology, system design, and operation. Prerequisite: MAE110.

MAE215 Advanced Combustion Technology (4) S. Emphasis on pollutant formation and experimental methods. Formation of gaseous pollutants and soot; transformation and emission of fuel contaminants in gas, liquid, and solid fuel combustion; methods employed to measure velocity, turbulence intensity, temperature, composition, and particle size; methods to visualize reacting flows. Prerequisites: MAE110, MAE200A, and MAE230A or MAE270A; or consent of instructor. *Not offered every year.*

MAE216 Statistical Thermodynamics (4) S. Statistics of independent particles, development of quantum mechanical description of atoms and molecules, application of quantum mechanics, evaluation of thermodynamic properties for solids, liquids, and gases, statistical mechanics of dependent particles (ensembles). Prerequisite: MAE91 or equivalent. *Not offered every year.*

MAE217 Generalized Thermodynamics (4) S. Generalized thermodynamics develops the laws of continuum thermodynamics from a set of plausible and intuitive postulates. The postulates are motivated qualitatively by a statistical description of matter and are justified by a posteriori success for the resulting theory. Prerequisites: MAE91, MAE115 or equivalent. *Not offered every year.*

MAE218 Sustainable Energy Systems (4) S. Basic principles, design, and operation of sustainable energy systems including wind, solar photo-voltaic and thermal, hydroelectric, geothermal, oceanic, biomass combustion, advanced coal, and next generation nuclear. Includes power generation, storage, and transmission for stationary power generation. Prerequisite: MAE115. Concurrent with MAE118.

MAE220 Conduction Heat Transfer (4) S. Steady state and transient conduction heat transfer in one- and multi-dimensional geometries. Analytical methods, exact and approximate. Numerical techniques are also included. Prerequisite: MAE120.

MAE221 Convective Heat Transfer (4) S. Laminar and turbulent heat transfer in external and internal flows. Similarity solutions. Integral methods. Free convection. Prerequisite: MAE230B. *Not offered every year.*

MAE223A Numerical Methods in Heat, Mass, and Momentum Transport (Laminar Flows) I (4) F. Introduction to the discretization of various types of partial differential equations (parabolic, elliptic, hyperbolic). Finite-volume discretization for one- and two-dimensional flows. Use of a two-dimensional elliptic procedure to predict sample laminar flows. Corequisite or prerequisite: MAE230A. *Not offered every year.*

MAE223B Numerical Methods in Heat, Mass, and Momentum Transport (Turbulent Flows) II (4) W. Introduction to turbulence. Reynolds-averaging of Navier-Stokes equations. Second-order closure of the average equations. Use of two-dimensional elliptic procedure to predict confined turbulent flows. Prerequisite: MAE223A. *Not offered every year.*

MAE224 Convective Mass Transfer (4) S. Concentrations, velocities, and mass fluxes. Mechanisms of mass transport and transport properties in multi-component media. Mass transfer problems described by ordinary differential equations. Partial differential transport equations and some solutions of technical importance. Interphase mass transfer formulations and solutions. Prerequisite: MAE120. *Not offered every year.*

MAE226 Special Topics in Fluid and Thermal Sciences (1 to 4) S. Special topics of current interest in fluid mechanics, heat and mass transfer, multiphase flows, or combustion. Emphasis could be placed on theory, computational methods, or experimental techniques. Prerequisite: consent of instructor.

MAE230A Inviscid Incompressible Fluid Mechanics I (4) F. Equations of motion. Vector notation. Flow kinematics. Potential flow and complex potential. Vorticity and circulation. Bernoulli's theorem. Crocco's theorem. Conformal, Joukowski, and Schwarz-Christoffel transformations. Prerequisite: MAE130A.

MAE230B Viscous Incompressible Fluid Dynamics II (4) W. Review of mass, momentum, energy equations. Stress tensor, constitutive relations. Exact solutions to laminar flows. Stokes and Oseen flows. Concept of self-similarity. Boundary layer theory: thin-layer approximation, Falkner-Skan, Blasius solutions, integral methods. Jet, wake, cavity flows. Introduction to turbulence: instability, Reynolds averaging, mixing length. Prerequisite: MAE230A.

MAE230C Compressible Fluid Dynamics (4) S. One-dimensional unsteady flow: Riemann invariants, acoustics, shock tube. Two-dimensional flow: shock polars, linear theory, similarity rules, method of characteristics. Three-dimensional flow: slender-body theory. Effects of viscosity and conductivity: laminar boundary layer, Crocco-Busemann relations. Prerequisite: MAE230A or MAE230B.

MAE230D Theoretical Foundations of Fluid Mechanics (4) S. Well-posed problems and boundary, initial, and interface conditions; strong and weak solutions. Similarity, perturbation theory and limit behavior, bifurcations. Wave propagation: dispersive and nondispersive waves, nonlinear acoustics, ship waves, internal gravity waves, water waves. Vortices: mutual interactions and stability. Jets, wakes, cavities. Prerequisites: MAE230A, MAE230B. *Not offered every year.*

MAE231 Fundamentals of Turbulence (4) S. Phenomenon of turbulence. Reynolds equations. Dynamics of turbulence. Free turbulent shear flows. Wall-bounded turbulent shear flows. Turbulent transport of scalar quantities. Spectral dynamics. Mathematical models of turbulence. Prerequisite: MAE230A, MAE230B.

MAE233 Turbulent Free Shear Flows (4) S. Practical and theoretical aspects of turbulent free shear flows. Instability, global scaling laws, mixing, and noise generation in incompressible and compressible shear layers, jets, and wakes. Kelvin-Helmholtz instability, near- and far-field growth rates, effect of compressibility, aeroacoustics of jets. Prerequisites: MAE200B, MAE230A, MAE230B.

MAE236 Nonequilibrium Gas Dynamics (4) S. Molecular description of fluid flow. Boltzmann equation. Chapman-Enskog expansion for flows with translational nonequilibrium. Shock structure. Inviscid flows with chemical and vibrational nonequilibrium. Prerequisite: MAE230C. *Not offered every year.*

MAE237 Computational Fluid Dynamics (4) S. Mathematical, physical, and computational fundamentals of computational fluid dynamics, numerical methods for solving the Euler and Navier-Stokes equations. Topics include: finite-difference and finite-volume discretization, time marching methods, von Neumann analysis, upwinding, flux splitting, TVD, and other high-resolution shock-capturing schemes. Prerequisite: MAE230C or consent of instructor.

MAE238 Experimental Fluid Dynamics (4) S. Concepts and techniques for measurement of fluid motion. Quantitative and qualitative flow visualization. Flow facilities, shadowgraph, schlieren, interferometer, thermal anemometer. Laser diagnostics, fluorescence, Rayleigh, Raman, Mie scattering. Laser-Doppler, particle-image, and image-correlation velocimetry. Three- and four-dimensional digital imaging. Prerequisites: MAE230A, MAE230B. *Not offered every year.*

MAE241 Dynamics (4) W. Kinematics and dynamics of three-dimensional motions. Lagrange's equations, Newton-Euler equations. Applications include robot systems and spinning satellites. Prerequisite: MAE147 or equivalent.

MAE242 Robotics (4) S. Spatial rigid-body transformations. Forward and inverse kinematics. Jacobian of serial and parallel chains. Screw coordinates and transformations. Rate and static analyses using screw theory. Singularity analysis. Trajectory generation. *Not offered every year.*

MAE243 Spaceflight Mechanics (4) S. Accurate force modeling; spacecraft trajectory design problem; two-body dynamics; Lambert problem; orbit perturbations and maintenance; applications to Earth and Moon missions; gravity assists and three-body dynamics; applications to Moon, Mars, and interplanetary missions; libration point missions and dynamical system theory methods.

MAE244 Theoretical Kinematics (4). Spatial rigid body kinematics is presented with applications to robotics. Orthogonal matrices, Rodrigues' formula, Quaternions, Plücker coordinates, screw theory, and dual numbers are studied using modern projective geometry and multi-linear algebra. Applications include trajectory planning, inverse kinematics, and workspace analysis. *Not offered every year.*

MAE245 Spatial Mechanism Design (4) W. Fundamental kinematic theory required for planar, spherical, and spatial mechanism design. The focus is on algebraic methods for the exact solution of constraint equations. *Not offered every year.*

MAE247 Micro-System Design (4) F. Covers the fundamentals of the many disciplines needed for design of Micro-Electro-Mechanical Systems (MEMS): microfabrication technology, structural mechanics on micro-scale, electrostatics, circuit interface, control, computer-aided design, and system integration. Same as EECS278.

MAE249 Micro-Sensors and Actuators (4) S. Introduction to the technology of Micro-Electro-Mechanical Systems (MEMS). Fundamental principles and applications of important microsensors and actuation principles on microscale. Introduction to the elements of signal processing; processing of materials for micro sensor/actuator fabrication; smart sensors and microsensor/ microactuator array devices. Same as EECS279.

MAE250 Biorobotics (4) W. Sensors, actuators, and neural circuits for biological movement control from an engineering perspective. Current approaches to robotic and mechatronic devices that support and enhance human movement in health and following neurologic injuries like stroke and spinal cord injury.

MAE252 Fundamentals of Microfabrication (4) F. Introduces Engineering and Science students to the science of miniaturization. Different options to make very small machines (micro and nano size) are reviewed, materials choices are discussed, scaling laws are analyzed, and many practical applications are listed.

MAE253 BIOMEMS (4) W. Introduction of BIOMEMS to engineering and science students. After study of various sensing technique fundamentals, various biosensors are introduced. The biological principles involved are introduced via examples. Nanomachining and biomimetics are also discussed.

MAE254 Mechanics of Solids and Structures (4) W. Finite deformation kinematics; stress and strain measures; invariance in solid mechanics; objective rates; constitutive theory of elastic and inelastic solids; rate formulations; computational approaches; theories of plates and shells; applications to aerospace vehicles.

MAE255 Composite Materials and Structures (3). Motivation for composite materials. Different classifications according to the nature of the matrix (PMC, MMC, CMC) and the reinforcement topology (fibers, whiskers, particulates). Mechanical properties. Failure mechanisms. Designing with composite materials. Advantages and limitations of homogenization techniques for numerical modeling. Prerequisites: ENGR54; MAE150 or CEE150 or ENGR150. Concurrent with MAE155.

MAE260 Current Issues Related to Tropospheric and Stratospheric Processes (4). Examination of current issues related to the atmosphere, including energy usage; toxicology; effects on humans, forest, plants, and ecosystems; particulate matter (PM10); combustion; modeling, and meteorology; airborne toxic chemicals and risk assessment; application of science to development of public policies. Prerequisite: One course selected from: Chemistry 245, Earth System Science 202, Engineering MAE164, Engineering MAE261, or consent of instructor. Same as Chemistry 241. *Not offered every year.*

MAE261 Air Quality Modeling (4). Fundamental principles necessary to understand the dynamics of air pollutants. Derivation and description of mathematical techniques for the numerical solution of the atmospheric equation. Formulation and development of air quality models. Prerequisites: MAE230A and MAE230B or consent of instructor; MAE10 or equivalent FORTRAN knowledge. *Not offered every year.*

MAE270A Linear Systems I (4) F. Input-output and state-space representations of continuous-time linear systems. State transition matrices. Controllability and observability. Irreducible realizations. State feedback and observer design. Prerequisite: MAE170 or EECS160A.

MAE270B Linear Systems II (4). Advanced topics in linear systems: bases, linear operator representations, and Jordan forms. Review of dynamical systems, and stability. Time-varying systems, discrete-time representations, and multi-input/multi-output systems. Introduction to continuous and discrete

time linear regulator (LQR) problems. Prerequisite: MAE270A. *Not offered every year.*

MAE271 System Identification (4) F. Covers the latest techniques in system identification. Materials covered encompass techniques in both frequency and time domain. Linear and nonlinear dynamic processes, correlation, regression, stochastic approximation, etc., are among the topics covered. Prerequisite: MAE270A. *Not offered every year.*

MAE272 Robust Control Theory (4). Methods for control design of systems with uncertainty. Feedback stability and small gain theorem. Multivariable stability margins and multiplier theory. H-infinity-optimal control, linear matrix inequalities. Prerequisite: MAE270A. *Not offered every year.*

MAE273 Control of Robot Systems (4). Dynamic analysis and control system design of open- and closed-chained mechanisms. Methods for real time control of nonlinear systems. Lyapunov Stability. Advanced motion planning algorithms. Prerequisites: MAE241, MAE270A. *Not offered every year.*

MAE274 Optimal Control (4). Introduction to the principles and methods of optimal control. Topics include: objectives and issues in controlling nonlinear systems; linear variational and adjoint equations; optimality conditions via variational calculus, maximum principle, and dynamic programming; solution methods; applications to control of robots and aerospace vehicles. *Not offered every year.*

MAE275 Nonlinear Feedback Systems (4). Advanced tools for feedback control system analysis and synthesis. Norms, operators, Lp spaces, contraction mapping theorem, Lyapunov techniques along with their extensions. Circle criterion, positivity and passivity. Applications to nonlinear control methods, such as sliding mode or adaptive techniques. Prerequisite: MAE270B. *Not offered every year.*

MAE276 Geometric Nonlinear Control (4). Using the mathematics of differential geometry, a number of the concepts and results of linear systems theory have been extended to nonlinear systems. Describes these extensions and illustrates their use in nonlinear system analysis and design. Prerequisites: MAE200A, MAE270A. *Not offered every year.*

MAE277 Introduction to Neural Control Systems (4). Basic models and learning rules of artificial neural networks: perceptrons, multilayer neural networks and backpropagation, support vector machines, radial basis functions networks, CMAC networks. Introduction to regularization and statistical learning theory. Neural networks in system identification and control.

MAE278 Estimation Techniques for Tracking and Navigation (4). Fixed bearing navigation, least squares, uncertainty modeling, minimum variance and maximum likelihood, covariance analysis and filter efficiency, GPS, orbit determination, Gauss-Markov models, inertial navigation, Kalman filters, Fokker-Planck and Kushner equations, nonlinear-filters. Prerequisites: MAE200A, MAE270A.

MAE279 Special Topics in Mechanical Systems (4). Selected topics of current interest in mechanical systems. Topics include robotics, kinematics, control, dynamics, and geometric modeling. Prerequisites: MAE241, MAE270A. May be repeated for credit as topics vary. *Not offered every year.*

MAE294 M.S. Project (4) F, W, S. Tutorial in which master's-level students taking the comprehensive examination option undertake a master's-level research project. May be repeated for credit.

MAE295 Special Topics in Mechanical and Aerospace Engineering (1 to 4) F, W, S. Special topics by individual faculty in major fields of interest. May be repeated for credit as topics vary.

MAE296 Master of Science Thesis Research (4 to 12) F, W, S. Individual research or investigation conducted in the pursuit of preparing and completing the thesis required for the M.S. in Engineering. Prerequisite: consent of instructor. May be repeated for credit.

MAE297 Doctor of Philosophy Dissertation Research (4 to 12) F, W, S. Individual research or investigation conducted in the pursuit of preparing and completing the dissertation required for the Ph.D. in Engineering. Prerequisite: consent of instructor. May be repeated for credit.

MAE298 Seminars in Mechanical and Aerospace Engineering (1) F, W, S. Presentation of advanced topics and reports of current research efforts in mechanical engineering. Required of all graduate students in mechanical engineering. Satisfactory/Unsatisfactory grading only. May be repeated for credit as topics vary.

MAE299 Individual Research (1 to 12) F, W, S. Individual research or investigation under the direction of an individual faculty member. Prerequisite: consent of instructor. May be repeated for credit.

SCHOOL OF HUMANITIES

Vicki L. Ruiz, **Dean**

143 Humanities Instructional Building
Undergraduate Counseling: (949) 824-5132
Graduate Counseling: (949) 824-4303
<http://www.humanities.uci.edu/>

The School of Humanities is internationally recognized for its outstanding programs in the main areas of humanistic inquiry: literature, history, film, language, the arts, and philosophy. The discrete concerns of these areas of inquiry and the intersections among them are the focus of the School's 25 majors and 30 minors.

At the core of the educational mission of the humanities is the goal of imparting to students ways of seeing, knowing, explaining, describing, and understanding that will allow them to comprehend the world around them. Consider some of the challenges that we all face: the pressures created by demographic change, rapid economic expansion, and ethnic and cultural diversity; the development of new technological forms, particularly those related to computers and the Internet; and the increasingly complex problem of human interaction with the environment. Equipping students to understand and analyze such phenomena is precisely what a liberal education in the humanities accomplishes. In the words of a "Manifesto for the Humanities," prepared for the President of the University of California, it is humanities that provide "the ability to express oneself clearly and accurately; the skill of critical evaluation, both of ideas and actions; the courage to make choices based on shared values and priorities; the opportunity to conduct an intensive conversation with the traditions, present and past, that help make us who we are, and above all, who we will be; and as a result, the ability to understand and make sense of other people and their cultures." Humanistic inquiry is in no way isolated from the "real world," cordoned off in some ivory tower; rather its central goal is to equip students to enter into that real world as critically thinking citizens.

Because language is the humanist's essential tool and the traditional medium of historical record, philosophical speculation, and literary creation and criticism, the School of Humanities places special emphasis on language and training in composition. The campuswide Writing Program is housed in the School of Humanities, as are our distinguished programs in creative writing, literary journalism, and the Program in Academic English/English as a Second Language.

The School of Humanities also offers programs in more than a dozen languages other than English and requires its majors to take two years or the equivalent of a classical or modern language. The serious study of language other than English is crucial to a university education that aims to foster critical thinking, objective self-reflection, and international awareness. In today's world, the ability to understand more than one language can help Humanities graduates empathize with different cultures and consider societies outside of the United States. In addition, understanding of more than one linguistic system can lead to a more critical understanding of a native language. In 2001, the School established the International Center for Writing and Translation, which sponsors research programs that address the importance of conversations across languages. And in 2008, the School created the Humanities Language Learning Program as a central clearinghouse for language pedagogy and for instruction of less commonly taught languages.

A crucial part of the School's curriculum is the Humanities Core Course, which integrates the study of philosophy, literature, film and the arts, and history along with lower-division writing. Interdisciplinary studies are also an essential feature of the Humanities

Honors Program and programs in Film and Media Studies, Comparative Literature, Global Cultures, Religious Studies, and Humanities and Arts. The Department of Asian American Studies, the Department of Women's Studies, and the Interdisciplinary Programs in African American Studies and Latin American and Caribbean Studies are also located in the School. With faculties that draw on the Social Sciences as well, these programs are excellent examples of how the Humanities reaches across boundaries of disciplinary knowledge.

Students majoring in the humanities are particularly well-prepared for careers in all fields in which analysis, judgment, and argument are important. Humanities students have moved into business, the law, education, politics, public policy, academia, and journalism. Employers in all sectors are placing increasing emphasis on the recruitment of college graduates who can write and think critically. These skills are ultimately more important to many employers than a specific form of technical training, and it is these skills that are imparted most effectively in the School of Humanities. For students who leave the School with a solid grounding in critical analysis, research, and communication, the sky is the limit.

DEGREES

African American Studies	B.A.
Art History	B.A.
Asian American Studies	B.A.
Chinese Studies	B.A.
Classical Civilization	B.A.
Classics	B.A., M.A., Ph.D.
Comparative Literature	B.A., M.A., Ph.D.
Culture and Theory	M.A., Ph.D.
East Asian Cultures	B.A.
East Asian Languages and Literatures	M.A., Ph.D.
English	B.A., M.A., M.F.A., Ph.D.
European Studies	B.A.
Film and Media Studies	B.A.
French	B.A., M.A., Ph.D.
German	M.A., Ph.D.
German Studies	B.A.
Global Cultures	B.A.
History	B.A., M.A., Ph.D.
Humanities	B.A.
Humanities and Arts	B.A.
Japanese Language and Literature	B.A.
Korean Literature and Culture	B.A.
Latin	B.A.
Literary Journalism	B.A.
Philosophy	B.A., M.A., Ph.D.
Religious Studies	B.A.
Spanish	B.A., M.A., Ph.D.
Visual Studies	M.A., Ph.D.
Women's Studies	B.A.

Honors at Graduation

Campus criteria for honors at graduation are described in the Division of Undergraduate Education section under Honors Recognition, on page 52. In addition to campus criteria, the School of Humanities uses cumulative GPA as the criterion for the awarding of Honors at Graduation. The official designation of Honors on the diploma and transcript will be based upon the candidate's cumulative GPA and total units completed at the end of the final quarter.

HUMANITECH®

(949) 824-7445

<http://www.humanities.uci.edu/humanitech>

HumanTech's mission is to work with Humanities faculty and graduate students in the discussion, incorporation, problem solving, and facilitation of technology in their teaching and research. This mission is accomplished through a variety of functions: (1) education and outreach for Humanities faculty through faculty workshops, one-on-one consultations, and group consultations; (2) research, collection, and dissemination of information on intellectual property rights, particularly in digital formats; (3) sponsorship of annual teaching colloquia; (4) sponsorship of annual lecture series on intellectual issues regarding the intersection of humanities and technology; (5) liaison with the Humanities bibliographers in the coordination of both the School's and the Library's efforts to support technologically based instruction and research; (6) liaison with the UC system's online library (CDL, or California Digital Library); and (7) liaison with the various technological arms of the UCI campus, such as NACS (Network and Academic Computing Services), the Instructional Resource Center, and EEE (the Educational Electronic Environment).

HUMANITIES CENTER

(949) 824-3638

<http://www.humanities.uci.edu/hctr/>Catherine Liu, **Director**

The UCI Humanities Center supports research and debate on a wide range of issues that draw vital connections between culture, history, literature, technology, media, and the arts. The Humanities Center works to strengthen and enhance the public and academic reputation of UCI by promoting creative, pragmatic, and theoretical engagements with global and local questions of culture and community, progress and tradition.

Through the events it sponsors and the projects it funds, the UCI Humanities Center showcases original Humanities scholarship in action, allowing faculty, students, and the public to pursue conversations that they simply cannot find elsewhere. In addition to its programming, the UCI Humanities Center works to support faculty and graduate student research through two annual grant cycles. Humanities teaching and research anchor the intellectual life and service mission of an outstanding public University. It does so by nurturing dialogue and communication in the academic community, the public sphere, and the democratic process.

HUMANITIES INSTRUCTIONAL RESOURCE CENTER AND COMPUTING FACILITY

The Humanities Instructional Resource Center (HIRC) and the Humanities Computing Facility (HCF) share space in Humanities Hall and provide comprehensive technology support for instruction, research, and faculty and staff development. HIRC and HCF also serve as the center for innovative technology-mediated instruction within the School of Humanities.

HIRC services and facilities include video and audio libraries and audiovisual equipment. HCF includes the computer labs, fee-based laser printing, support for wireless networking in the Humanities quad, and computing consultation. Both facilities provide technology-related research and development assistance for faculty, graduate, and undergraduate students. HCF houses two PC labs, one Macintosh lab, and one drop-in lab (with both Macs and PCs). The facility has more than 100 stations. HCF also provides a wide range of computer services (scanning, document conversion, workshops, and more).

Both HCF and HIRC labs provide a wide variety of instructional resources including, among others, multimedia applications and

development stations, foreign language word processing, Web browsing (including support for non-Roman alphabets), and language learning materials. The labs are available to Humanities students, instructors, and staff for class instruction and drop-in purposes.

Additional information may be obtained from the HIRC Web site at <http://www.humanities.uci.edu/hirc>, or the HCF Computer Consulting Office, 217 Humanities Hall, (949) 824-7609, or the HIRC main offices, 269 Humanities Hall, (949) 824-6344.

HUMANITIES OUT THERE (H.O.T.) PROGRAM

168 Humanities Instructional Building; (949) 824-9735

Lynn Mally, **Director**

H.O.T. is an outreach program between UCI's School of Humanities and local schools. The program consists of a series of five-week workshops on selected topics in the humanities. Each quarter, there are roughly 15 workshops on topics such as U.S. Literature, World Literature, U.S. History, and World History. Each workshop sends out a team of five or more undergraduates to a K-12 classroom, supervised by faculty and advanced graduate students in the humanities.

Requirements for undergraduates include attending at least five training sessions at UCI; attending at least five tutoring sessions at a local school; a number of electronic journal entries; and a three-to five-page paper with an academic focus. Undergraduates can earn two or four units of H.O.T. credit each quarter through Humanities 195.

INTERNATIONAL CENTER FOR WRITING AND TRANSLATION

(949) 824-1948

<http://www.hnet.uci.edu/icwt>

Established in 2001, the International Center for Writing and Translation (ICWT) in the UCI School of Humanities fosters writing, translation, and criticism in multilingual and international contexts. It links existing faculty research interests in cultural literacy to general discussions about linguistic and cultural issues relevant to the diverse, multiethnic, and multilingual student population at UCI and the population of California more generally. The Center's programs are premised on the principle that knowledge is a result of reciprocal contact and linkages based on equality and respect. In this model, the Center is dedicated to highlighting and supporting literary works, languages, performance, and oral traditions of cultures that span the globe.

The following goals are integral to the general mission of the Center: (1) supporting writers working in various languages and diverse genres, including creative nonfiction, through grants and fellowships; (2) fostering research and discussion of the theory, practice, aesthetics, and politics of translation, broadly conceived; (3) supporting translations of work of literary merit; (4) sponsoring conferences, workshops, and public fora on writing and translation, as well as reading and performances; and (5) supporting activities of UCI faculty, students, and the surrounding community involving the far-reaching themes of cultural and media literacy and cross cultural transposition.

DR. SAMUEL M. JORDAN CENTER FOR PERSIAN STUDIES AND CULTURE

(949) 824-1662

<http://www.humanities.uci.edu/persianstudies/>Nasrin Rahimieh, **Director**

The Dr. Samuel M. Jordan Center for Persian Studies and Culture serves as an umbrella organization for various activities related to the study of Iran and the Persianate world conducted at the University of California, Irvine.

Courses, offered by the affiliated faculty, are the backbone of the Center's academic and pedagogical mission. These include courses on language, literature, history, music, and culture at undergraduate and graduate levels.

The academic courses are administered through different departments. The Department of Classics offers courses on Persian language. Courses in ancient, medieval, and modern Persian history are administered by the Department of History. Courses on modern Persian literature and the literature of Iranian diaspora are offered through the Department of Comparative Literature, and courses on Persian music are housed within the Department of Music.

Undergraduate Programs

HUMANITIES UNDERGRADUATE STUDY

143 Humanities Instructional Building; (949) 824-5132
<http://www.humanities.uci.edu/undergrad/>
 Rodrigo Lazo, Associate Dean

In addition to 25 majors and 30 minors, the School also offers a formal concentration in Medieval Studies and courses in Arabic, Hebrew, Italian, Persian, Portuguese, and Russian.

The academic counselors in the Humanities Undergraduate Counseling Office, located in 143 Humanities Instructional Building, help all students in planning a program of study. Transfer students in particular need to consult an academic counselor to determine major requirements. Students who expect to pursue graduate study also should consult with appropriate faculty members to ensure proper preparation.

The academic counselors assist freshmen and sophomores who are interested in the humanities but who have not chosen a major in the School. They are especially knowledgeable about University regulations, requirements in and outside the School, course content, options to major, and other matters that may present difficulties. For the first two years, students in Humanities are encouraged to explore the various disciplines represented in the School. During that time the academic counselors are prepared to help the undeclared student keep options to a major open, plan a coherent program of humanistic study, and reach an eventual decision about the major.

Generally each major stipulates a one-year course that is both an introduction to the discipline and a prerequisite to the major itself. Students who plan wisely will construct programs that include a good number of such courses.

NOTE: In many undergraduate courses in the School of Humanities, additional meetings between individual students and the instructor may be required. Many courses are composed of both lectures and *required* discussion sessions.

Undergraduate students in the School of Humanities participate in the affairs of the School in a number of ways: by serving on committees in various departments, by sitting with the faculty in its meetings, by participating as mentors for new Humanities majors, and by working as peer academic advisors in the Undergraduate Counseling Office.

Humanities Peer Mentor Program

The Humanities Peer Mentor Program is designed to address some of the academic, cultural, and social needs of freshmen in the School of Humanities. The program features two-tiered mentoring, with successful upper-division students mentoring small groups of new students, and the student mentors in turn working with faculty and staff. Another focus of the program is to encourage and assist student mentors to go on to graduate school.

Participants attend workshops on topics such as study skills, library research, time management, and careers, as well as take part in a variety of social events, and keep journals in which they express

their ideas and raise issues for their mentors. Call, (949) 824-5132, for additional information.

HUMANITIES HONORS PROGRAM

143 Humanities Instructional Building; (949) 824-5132
 Alice Fahs, Director

The Honors Program of the School of Humanities is a two-year, upper-division program designed to challenge superior students from all fields by providing special opportunities for interdisciplinary work within an intellectually charged framework. Small seminars and the opportunity for independent research are some of the advantages offered by the program, which is open by invitation to all UCI students regardless of their majors.

Students in the program benefit from their involvement in the campus community of Humanities scholars. They enjoy a close relationship with the faculty and profit from intense interaction with their intellectual peers. A comprehensive advising program involving Honors faculty advisors as well as specially trained Honors peer advisors ensures that Humanities Honors students continually receive timely, individualized advice about their academic careers. Formal as well as informal gatherings, including student-organized social activities ranging from coffee hours to theater parties, augment a wide range of campus activities. Humanities Honors students have the opportunity to become some of the campus's best informed scholars on a broad range of topics, from artificial intelligence to medical ethics, from Shakespeare to Gilbert and Sullivan, from problems of the ancient Near East to the dilemmas of modernity.

Humanities Honors students complete a two-part course of study. In their junior year, students take three quarters of an interdisciplinary Proseminar (Humanities H120) organized about a single topic or problem, such as crime and punishment, the other, the development of religion in the West, the self, nature, or the American dream. The sequence is designed to compare and contrast modes of analysis and critical thinking in history, literary studies, and philosophy. In a small seminar setting, students are encouraged to become reflective about their own chosen disciplines.

In their senior year, students take a sequence beginning in the fall with a Senior Honors Seminar (Humanities H140), and continuing in the winter and spring with the Senior Honors Thesis (Humanities H141) and the Senior Honors Colloquium (H142), prepared as an independent research project under the direction of a faculty member on a topic chosen by the student. Students present their theses in an informal gathering with their faculty advisors in the spring, and a prize is awarded for the year's outstanding thesis.

In both sequences the Honors students benefit from their close association with exceptional scholars and the challenge and support of their intellectual peers.

Students interested in learning how the Humanities Honors Program will fit into their regular courses of study are encouraged to contact the Senior Academic Counselor in Humanities; telephone (949) 824-5132.

CAMPUSWIDE HONORS PROGRAM

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

HUMANITIES INTERSHIP PROGRAM

166 Humanities Instructional Building; (949) 824-1392
<http://www.humanities.uci.edu/intern/>
 Rodrigo Lazo, Director

The Humanities Internship Program is designed to bring highly qualified Humanities majors together with public sector employers

and nonprofit companies in the Orange County area who are looking for employees with excellent skills in writing and communication. Local employers who participate in the program believe that Humanities students' education in critical thinking, writing, communication, and analysis equip them to be successful employees in their firms.

Interns are placed for the academic year and preceding summer, working 10–15 hours a week for hourly salaries of \$12. (No course credit is earned.) Employers offer committed supervisors to student interns, and interns are involved in a meaningful aspect of the firm's ongoing business. The internship relationship can become the basis for long-term employment with the firm.

Interns participate in quarterly meetings with a program coordinator at UCI to discuss their work experiences and benefit from one another's insights. At the end of each quarter of the internship, the student provides an assessment of the experience. The program coordinator also conducts on-site visits with the interns and their supervisors.

The Internship Program is open to all Humanities majors who are in good academic standing and will have completed at least two quarters of academic work at UCI as a Humanities major by the end of the quarter in which they are selected for the program. Only students who will have completed the Humanities Core Course (or the Core Course substitution) by the end of that quarter will be eligible.

Applications are available online and in the Humanities Undergraduate Study Office, 143 Humanities Instructional Building, in mid-to late-winter quarter. The deadline for submission of all application materials is early April.

CENTER FOR INTERNATIONAL EDUCATION

The Center for International Education, which includes the Education Abroad Program (EAP) and the International Opportunities Program (IOP), assists students in taking advantage of the many worldwide opportunities that exist for study, work, internship, volunteering, and research. School of Humanities majors and minors can benefit from a broader perspective of their fields by studying for one year at a university in such countries as China, France, Germany, Italy, Japan, Russia, Spain, or the United Kingdom through EAP. Students can also augment their exposure to other cultures with programs sponsored through IOP. See the Center for International Education section of the *Catalogue* or an academic counselor for additional information.

LANGUAGE OTHER THAN ENGLISH PLACEMENT AND PROGRESSION

The following policies apply to all UCI students taking language other than English courses.

Language Other Than English Progression. Within the beginning and intermediate language instructional sequences (1A-B-C and 2A-B-C, and for Latin and Greek, 1A-B-C and 100A or 100B), students must earn a grade of at least C (or Pass) in order to advance to the next level of instruction, unless an exception is permitted by the appropriate course director and the Associate Dean of Humanities for Undergraduate Study.

Language Other Than English Placement. Placement tests are required for the following languages: Chinese, Japanese, Korean, Spanish (for students with no previous college course work), and Vietnamese. Contact the UCI Academic Testing Center for information; telephone (949) 824-6207; e-mail: testoff@uci.edu; <http://www.testingoffice.uci.edu/>. Placement tests are recommended but not required for French and German language courses. The purpose of placement testing is to ensure success in UCI language courses.

For languages other than English which are not listed above, students entering UCI with previous high school language training are placed as follows: in general, one year of high school work is equated with one quarter of UCI work. Thus, students with one, two, three, or four years of high school language other than English will normally enroll in 1B-, 1C-, 2A-, or 2B-level language courses, respectively. Students who opt to "go back" one quarter will earn credit (i.e., a student with three years of high school language other than English may opt to take 1C instead of 2A). If it has been five or more years since the last high school course, the student may begin at 1A for credit. Exceptions must have the approval of the appropriate course director and the Associate Dean of Humanities for Undergraduate Study. Transfer students will not receive credit for repeating at UCI language other than English courses for which they received credit upon matriculation to UCI even if they are placed by testing into the equivalent of a previously taken course.

Language Other Than English Advanced Placement Credit.

Students cannot earn units or grade points at UCI in courses from which they have been exempted on the basis of Advanced Placement credit. However, since Advanced Placement awards a maximum of 8 units for scores of 4 and 5, students may elect to take 2C or the equivalent for credit.

Native Speakers of Languages Other Than English. A native speaker of a language other than English, defined by the University as someone who attended the equivalent of secondary school in another country where the language of instruction was other than English, may be exempted from taking third-year language study in that language for some majors offered by the School of Humanities. In this case, the student must *substitute* appropriate upper-division courses in the major to replace the number of exempted courses. For example, if a native speaker of French is exempted from French 100A and 100B, that student must replace those two courses with two other upper-division French courses offered by the Department of French and Italian.

Repeating Deficient Foreign Language Other Than English

Grades. First- and second-year language other than English courses and third-year language other than English composition courses are sequential and each is prerequisite to the next. This is generally true also of fourth-year Chinese, Japanese, and Korean. Students wishing to repeat a deficient grade in one of these courses must repeat it *prior* to continuing on to the next level of the language. A student may not take a lower-level course for credit once a more advanced level has been completed with a passing grade.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 56–62.

School Requirements

Satisfactory completion of Humanities 1A-1B-1C taken for letter grades in the freshman year*. College-level course work equivalent to UCI's sixth quarter of study (2C level, or for Latin or Greek, two 103s or 104s) in an acceptable language other than English, taken for a letter grade and passed with a grade of C or better, or equivalent competence.

Quarterly consultation with a faculty advisor is recommended.

*Transfer students in all majors in the School of Humanities may substitute for the Humanities Core Course appropriate course work in English composition, literature, history, and philosophy, as described on the School of Humanities Web site at http://www.humanities.uci.edu/undergrad/requirements/core_alt.html. **No overlap** is permitted between the Humanities Core Course substitution and a student's departmental/major requirements.

Maximum Overlap Between Major Requirements: In fulfilling degree requirements for multiple majors, a maximum of two courses may overlap between any two majors.

Maximum Overlap Between Major and Minor Requirements: In fulfilling minor requirements, a maximum of two courses may overlap between a major and a minor. No course overlap is permitted between minors.

Normal Progress in the Major: School of Humanities majors are expected to take at least one course required for their major program each quarter as well as make progress toward the completion of the School's language other than English requirement.

School Residence Requirement: At least five upper-division courses required for each major must be completed successfully at UCI. Completion of a minor program is optional; however, for certification in a minor, at least four upper-division courses required for the minor must be completed successfully at UCI. See individual major and minor requirements for specific courses and how participation in the Education Abroad Program (EAP) can affect the residence requirement. Exceptions are considered on a case-by-case basis and decided in consultation between the appropriate department or faculty member and the Associate Dean of Humanities for Undergraduate Study.

Off-campus Internship Policy. In most cases, Humanities students are not allowed to earn credit for off-campus internships. However, if a department or program determines that the internship is academically appropriate and promotes the student's academic goals, the student may take the internship as Independent Study and credit will be given.

A maximum of four units total may be earned for internships; however, the units may not be counted toward the student's major requirements. (No credit is given for *paid* internships, such as those offered through the Humanities Internship Program.) The sponsoring department or program and the instructor will in all cases require a substantial academic product, such as a paper, growing out of the internship.

A student who wishes to seek approval for an unpaid off-campus internship and earn course credit must file an Independent Study form with the Humanities Undergraduate Study Office prior to beginning the internship.

Change of Major. Students who wish to change their major to one offered by the School of Humanities should contact the Humanities Undergraduate Counseling Office for information about change-of-major requirements, procedures, and policies. Information is also available at <http://www.changeofmajor.uci.edu>.

Graduate Programs

HUMANITIES GRADUATE STUDY AND RESEARCH

172 Humanities Instructional Building; (949) 824-4303
James Steintrager, *Associate Dean*

The School of Humanities offers graduate degrees in a wide range of disciplines. Individual departments administer most of these, although there are two inter-departmental programs: Culture and Theory and Visual Studies (a joint program between the Departments of Art History and Film and Media Studies). The School's graduate programs are generally aimed at those pursuing a Ph.D. degree, with the Master's degree awarded en route. Exceptions include the Summer M.A. Program in the Department of English, a terminal M.A. option in the Department of German, and the M.A. program in the Department of History. In addition, the Department of English administers the M.F.A. degree in creative writing.

The School of Humanities houses four graduate emphases that may be pursued in conjunction with study toward a degree: Asian American Studies, Critical Theory, Feminist Studies, and Visual

Studies. Several departments may also permit students to do part of their work for the Ph.D. in a related discipline.

A limited number of students are accepted annually to study for teaching credentials. This program is a cooperative effort between the School and the UCI Department of Education.

Graduate students participate in the affairs of the School of Humanities by serving as representatives on various departmental, schoolwide, and campuswide committees.

INTERDISCIPLINARY PROGRAM IN AFRICAN AMERICAN STUDIES

(949) 824-2376

Ulysses Jenkins, Jr., *Director*

Participating Faculty

Bridget R. Cooks, Ph.D. University of Rochester, *Assistant Professor of African American Studies and Art History* (African American art and culture, Black visual culture, museum criticism, film, feminist theory and postcolonial theory).

Sohail Daulatzai, Ph.D. University of Southern California, *Assistant Professor of Film and Media Studies* (cultural studies, postcolonial theory, race, Islam, cultural politics of popular culture: cinema, hip-hop, and sports)

Douglas M. Haynes, Ph.D. University of California, Berkeley, *Director of the ADVANCE Program for Faculty Equity and Diversity and Associate Professor of History* (social and cultural history of modern Britain, social history of modern medicine)

Ulysses Jenkins, Jr., M.F.A. Otis Parsons Art Institute, *Director of the Interdisciplinary Program in African American Studies and Associate Professor of Studio Art* (film as a primary medium)

Victoria E. Johnson, Ph.D. University of Southern California, *Department Chair and Associate Professor of Film and Media Studies* (history and critical theory of U.S. television, popular film, and media; politics of geography, race, gender, and sexuality in popular culture; cultural studies)

Claire Jean Kim, Ph.D. Yale University, *Associate Professor of Asian American Studies and Political Science* (racial and ethnic politics, protest and social movements, contemporary political theory)

Donald McKayle, Choreographer/Director, concert, theatre, film, television, *Graduate Choreography Advisor, Artistic Director of UCI Dance, and Claire Trevor Professor of Dance* (choreography, modern dance)

Ngugi wa Thiong'o, *UCI Distinguished Professor of Comparative Literature and English* (African literature, the politics of culture, performance theory, language in postcolonial theories)

R. Radhakrishnan, Ph.D. State University of New York, Binghamton, *Professor of English and Comparative Literature* (critical theory, cultural studies, twentieth-century literature, diasporic and ethnic literatures and theories)

Jared Sexton, Ph.D. University of California, Berkeley, *Associate Professor of African American Studies and of Film and Media Studies* (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Darryl Taylor, D.M.A. University of Michigan, *Associate Professor of Music* (vocal arts)

Frank B. Wilderson III, Ph.D. University of California, Berkeley, *Assistant Professor of African American Studies and Drama* (film theory, Marxism, dramaturgy, black political theory)

Tiffany Willoughby-Herard, Ph.D. University of California, Santa Barbara, *Assistant Professor of African American Studies*

Undergraduate Program

African American Studies is an interdisciplinary program which offers undergraduate students an opportunity to study those societies and cultures established by the people of the African diaspora. The program's curriculum encourages students to investigate the African American experience from a variety of disciplinary perspectives and theoretical approaches. Among the topics explored in the course offerings are the process of colonization and the forced migration of African people, the positionality of African people in the racialized symbolic and social orders of the western hemisphere, the rhetoric produced by and about African people, and the cultural and aesthetic values associated with "blackness"

and "Africanness." The Program offers a B.A. degree program in African American Studies and a minor.

CAREER OPPORTUNITIES

UCI graduates with a B.A. degree in African American Studies enhance their chances of success in the job market and in the highly competitive arena of graduate and professional school admissions, especially in the fields of medicine and other health professions, law, and business. Employers and admissions officers understand that many of their employees and graduates will one day work in communities with significant African American populations, and for this reason they give due consideration to applicants who have in-depth knowledge of African American culture.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 56–62.

School Requirements: See pages 255–256.

Requirements for the Major

- A. African American Studies 40A, 40B, 40C.
- B. Five courses, one from each of the following five rubrics: Humanities (African American Studies 110–119), Gender/Sexuality (120–129), History (130–139), Fine Arts (140–149), and Social Sciences (150–159).
- C. Four upper-division electives selected from the five rubrics listed above.
- D. African American Studies 162, taken in satisfaction of the upper-division writing requirement, and African American Studies 163.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor

African American Studies 40A, 40B, 40C and four upper-division courses chosen from four of the following five rubrics: Humanities (African American Studies 110–119), Gender/Sexuality (120–129), History (130–139), Fine Arts (140–149), and Social Sciences (150–159).

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Courses in African American Studies

LOWER-DIVISION

40A, B, C African American Studies I, II, III (4, 4, 4). Introduction to the main contours of the African American experience, from the importation of Africans into the Americas to the present. **40A:** Discusses main contours of African American experience from the forced importation of Africans into the Americas in the late fifteenth century to the development of social movements in post-emancipation societies of the late nineteenth and twentieth centuries. **40B:** Introduction to the history of modern racial thinking in Western society and its relationship to the material contexts of racial oppression, with emphasis on its development in British colonies and U.S. **40C:** Introduction to theories of racial blackness in the modern world, with emphasis on developments in British colonies and U.S. Traces emergence of blackness as term of collective identity, social organization, and political mobilization. (III or IV; VII)

50 Introductory Topics in African American Studies (4). Introduction to a broad range of topics in African American studies, exploring history, literature, art, culture, politics, and contemporary social issues. Topical organization of courses addresses issues that have been of importance historically and are reshaping the African diaspora today. May be repeated for credit as topics vary.

UPPER-DIVISION

HUMANITIES

111A African American Art: 1619–1929 (4). Investigates the history and aesthetics of African American art with an emphasis on the politics of cultural representation. Same as Art History 164A. (VII)

111B African American Art: 1930–Present (4). Investigates the history and aesthetics of African American art with an emphasis on the politics of cultural representation. Same as Art History 164B. (VII)

112A Early African American Literature (4). Examines the earliest forms of black literary practices, including the jeremiad, the slave narrative, the novel, the pamphlet, poetry, the short story. How are these literary forms related to the historical experiences of enslavement and emancipation? May be taken twice for credit as topics vary.

112B African American Literature 1900–Present (4). Examines individual literary forms and/or authors, as well as movements such as the Harlem Renaissance and the Black Arts Movement. How does black literary practice represent the conditions of modern subjectivities and environments? May be taken twice for credit as topics vary.

113 African American Cinema and Media (4). Explores the diversity of Black creative production and the historical, social, and economic forces that shaped their emergence. May include Black film, hip-hop culture, fine art, photography, and others. May be taken twice for credit as topics vary.

114 International Cultures (4). Explores the various cultures of the African diaspora and their impacts on a global scale. Examines a diverse range of media, including music (reggae, hip-hop), literature, film, and others and the links between culture and social movements throughout the diaspora. May be taken twice for credit as topics vary.

115 Race and Visual Representation (4). Examines film, documentary, fine art, photography, and other visual media to explore the multiple ways in which ideas about race are projected and woven through the visual landscape and the impacts this has on perpetuating social inequalities. May be taken twice for credit as topics vary. Formerly African American Studies 131.

116 African Literatures (4). Examines literary figures, forms, and movements of African societies. How do these literatures represent indigenous cultural practices, the conditions of modernity, and the relations between both? May be taken twice for credit as topics vary.

117 Asian American and African American Relations (4). Addresses relationships of Asian American and African American communities in the United States. Topics include race, class, gender, labor, economic systems, political mobilization, community, civil rights, activism, cultural expression. Same as Asian American Studies 167 and History 152B. (VII)

118 Topics in African American Humanities (4). Provides students with an opportunity to pursue advanced work in African American studies from one or more humanities approaches (literature, film and media studies, art history, and others). May be taken twice for credit as topics vary.

GENDER/SEXUALITY

120 African American Feminist Theory (4). Explores the development of African American feminist thought through the waves of American feminism from the nineteenth century through the present. Topics include analyses of sexism, racism, and heterosexism across a variety of disciplines including history, literature, and the arts.

122 African American Masculinities (4). Examines historical construction of black masculinities in various regions and periods. Interrogates especially representations of black men and boys in U.S. culture and society in relation to broader politics of race, class, gender, and sexuality.

123 African American Queer Theory (4). Explores intersections of African American studies, women's studies, gay and lesbian studies, and queer theory to challenge dominant views of race, gender, and sexuality. Considers historical and social scientific approaches to topic as well as arts and humanities.

124 Race and Gender (4). Examines the social construction of the categories of race and gender in the international and national contexts of African American communities. Texts address the intersection of economic, social, and scientific theories of difference that formed each category in various historical contexts. May be taken twice for credit as topics vary.

128 Topics in Gender/Sexuality (4). Expressions of genders and sexualities across the spectrum of African American experience and creativity. May be taken twice for credit as topics vary. Formerly African American Studies 170.

HISTORY

132A New World Slave Societies (4). Examines the origins, development, operation, and end of slave societies in the Americas, including the pattern and forms of slave resistance. Focuses primarily upon the U.S., the Caribbean (Hispanic and non-Hispanic), and Brazil. Same as History 150C. Formerly African American Studies 140.

132B Slavery in the United States (4). Explores the origins, development, and operation of the institution of slavery in the U.S. from colonial times to the end of the Civil War. Experiences in the North and South are explored, right through to the end of slavery. Same as History 150D.

133A Early African American History (4). Introduction to the main social, political, and political contours of the African American experience from the importation of Africans into the Americas, from the seventeenth through the eighteenth centuries. May be taken twice for credit as topics vary. Same as History 150A.

133B African American History 1900–Present (4). Examines different dimensions—economic, cultural, political, and social—of the African American experience since 1900, including pattern and forms of struggle against racist oppression and exploitation. May be taken twice for credit as topics vary. Same as History 150B.

134A Caribbean History: Colonization to Emancipation (4). Exploration of the history of the archipelago from pre-Columbian times to the end of slavery; examining the impact of European colonization, decimation of the indigenous populations, African slavery, resistance, and emancipation; the unity and diversity of experience in region. Same as History 164A.

134B Caribbean History: Emancipation to Independence (4). Post-emancipation and anti-colonial struggles ending with political independence for most of the region. Examines social, political, economic, cultural dimensions of post-emancipation period, including large-scale migration to Central America, the U.S., and Britain; the region's global cultural and political contribution. Same as History 164B.

137 History of the African Diaspora (4). Examines the causes and consequences of the multiple diasporas of African peoples since the sixteenth century in the Atlantic world, especially the Americas and Europe. Same as History 134E.

138 Topics in African American History (4). May be taken twice for credit as topics vary. Same as History 150. (VII)

FINE ARTS

141 Topics in African American Dance (4). Offers experience in the rehearsal and performance of African diasporic dance and movement. May be taken twice for credit as topics vary.

142 Topics in African American Drama (4). Considers African American theatrical performance and production, including acting, design and production, dramaturgy, criticism and theory, and stagecraft. May be taken twice for credit as topics vary.

143 Topics in African American Music (4). Examines African American musical forms and traditions, such as blues, jazz, and reggae, in performance and/or critical and theoretical contexts. May be taken twice for credit as topics vary.

144 Topics in Expressive Forms (4). Examines various forms of aesthetic expression in the African diaspora, including dance, music, and the plastic arts, as well as artistic visions of black cyberspace, digital activism, film, video, and aesthetic conceptions of the future. May be taken twice for credit as topics vary. Formerly African American Studies 160.

148 Advanced Studio Topics (4). Provides an intensive and specialized working environment for practice of a variety of fine arts as practiced in African American traditions; painting, drawing, sculpture, photography, video, music, digital arts, and performance. May be taken twice for credit as topics vary. Formerly African American Studies 181.

SOCIAL SCIENCES

151 Comparative Minority Politics (4). Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements. Same as Asian American Studies 132, Chicano/Latino Studies 147, and Political Science 124C. (VII)

152 African American Politics (4). Examines the politics of African Americans in order to gain a broader perspective of the American political process. Major developments in African American politics (including the civil rights movement, Black presidential bids), continuing problem of racism, responsiveness of key governing institutions. Same as Political Science 124E. Formerly African American Studies 121.

153 African American Psychology (4). Historical overview of the development of black psychology and the African American frame of reference. Topics include personality development, psychological assessment, issues in education, black mental health, and the role of the African American psychologist in the community. Same as Psychology 174E. (VII)

154 African American Social Formations (4). Topics which promote critical investigation into the historical, political, and social formations associated with the Black Diaspora. May be taken twice for credit as topics vary.

155 Intercultural Studies (4). Studies relationships between various cultural formations within the Black Diaspora, and the exchange, amalgamations, and tensions between Black Diasporic formations and non-Black formations. Examines expressions of racialization as representation, adaptation, and resistance. May be taken twice for credit as topics vary.

156 African Societies and Politics (4). Examines the violent incorporation of Africa within European modernity. Places the discourses of Pan-Africanism, African Nationalisms, Negritude, African Marxism, and/or African Socialism in juxtaposition to the forces of capitalism, colonialism, and imperialism that restructure African history. May be taken twice for credit as topics vary.

158 Topics in African American Social Sciences (4). Provides students with an opportunity to pursue advanced work in African American studies from one or more social science approaches (psychology, sociology, anthropology, economics, and others). May be taken twice for credit as topics vary.

OTHER COURSES

162 The Black Protest Tradition (4). History and discourses of the black protest tradition. Traces the emergence of black protest against racial slavery and white supremacy from the early colonial period to the present and the complex elaboration of identity politics within black communities in the twentieth century. Prerequisites: satisfactory completion of the lower-division writing requirement; upper-division standing. Formerly African American Studies 139.

163 Seminar in African American Studies (4). Explores theoretical and methodologies issues in Black Studies via concentrated work on a specific ensemble of questions. Emphasis is on generating student responses to the material covered through oral and written reports. May be taken twice for credit as topics vary. Formerly African American Studies 180.

198 Directed Group Study (1 to 4). Special topics through directed reading. Paper required. Prerequisite: consent of instructor. May be taken for credit for a total of 24 units.

199 Independent Study (1 to 4). Investigation of special topics through directed reading. Paper required. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

GRADUATE

399 University Teaching (4) F, W, S. Limited to teaching assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

DEPARTMENT OF ART HISTORY

(949) 824-6635.

Cécile Whiting, *Department Chair*

Faculty

George Bauer, Ph.D. Princeton University, *Professor Emeritus of Art History* (Renaissance and Baroque)

Linda Freeman Bauer, Ph.D. Institute of Fine Arts, New York University, *Professor Emerita of Art History* (Renaissance and Baroque)

Julia Bryan-Wilson, Ph.D. University of California, Berkeley, *Director of the Graduate Program in Visual Studies and Assistant Professor of Art History* (contemporary art and visual culture, feminist and queer theory, performance video)

- Bridget R. Cooks, Ph.D. University of Rochester, *Assistant Professor of African American Studies and Art History* (African American art and culture, Black visual culture, museum criticism, film, feminist theory and postcolonial theory)
- Anna Gonosová, Ph.D. Harvard University, *Associate Professor of Art History* (Byzantine and Medieval art)
- James D. Herbert, Ph.D. Yale University, *Professor of Art History* (modern European art)
- Judy C. Ho, Ph.D. Yale University, *Professor Emerita of Art History* (Chinese art, archaeology, common religion, Buddhist art)
- Philip Leider, M.A. University of Nebraska, *Senior Lecturer with Security of Employment Emeritus, Art History*
- Lyle Massey, Ph.D. University of California, Los Angeles, *Associate Professor of Art History* (Renaissance and early modern art)
- Margaret M. Miles, Ph.D. Princeton University, *Professor of Art History and Classics* (Greek and Roman art, archaeology)
- Alka Patel, Ph.D. Harvard University, *Assistant Professor of Art History* (Asian art, South Asian architecture)
- Amy Powell, Ph.D. Harvard University, *Assistant Professor of Art History* (Northern European art and visual culture, 1300–1700)
- Sally A. Stein, Ph.D. Yale University, *Professor Emerita of Art History* (American art, history of photography, feminist theory)
- Dickran Tashjian, Ph.D. Brown University, *Professor Emeritus of Art History* (American art and literature, American and European avant-garde, art and technology)
- Cécile Whiting, Ph.D. Stanford University, *Department Chair and Professor of Art History* (American art and culture)
- Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Associate Professor of Art History* (Modern Japanese art, Asian American art, art and nationalism)
- Roberta Wue, Ph.D. Institute of Fine Arts, New York University, *Assistant Professor of Art History* (modern Chinese visual culture)

Undergraduate Program

The Department of Art History offers a major and minor in Art History, and administers an interdisciplinary minor in Archaeology. Art History is the study of works of art and other visual artifacts from all regions of the world and all periods of history. Consequently, the undergraduate curriculum in Art History, with its global perspective, is one of the most diverse disciplines in the humanities. Through Art History students learn how to describe and interpret a range of objects including sculpture, painting, photography, architecture, and so-called “new media” such as video and performance art. These skills, along with the program’s intense focus on writing and verbal expression, prepare students to think critically and to express themselves clearly at a time when visual communication is becoming ever more important. Because works of art are always created within a larger cultural context, Art History courses are a good way to understand what other places or times were like. Students may explore, for example, ancient Greece, nineteenth-century Japan, or even the twenty-first century, United States. Majors in Art History are thus welcome to take related courses in other fields of the humanities. Students are encouraged to pursue the study of language beyond the minimum requirements, and because of its international perspective, Art History is a particularly good major for students interested in studying abroad. There are many study centers throughout the world associated with the University’s Education Abroad Program. Special scholarships are available for the Pacific region program.

CAREERS FOR THE ART HISTORY MAJOR

Following their graduation, students with a B.A. in Art History have found employment in art galleries, auction houses, and museums, and they have entered graduate programs with a view to careers in university teaching, curatorial work, and art conservation. Moreover, with its strong emphasis on developing critical skills in writing, speaking, and analysis, Art History also provides an excellent preparation for many other careers. UCI graduates have pursued professional paths ranging from medicine and law, to business and education, to information technologies and architecture. As in the case of arts administration or intellectual property

law, some of these professional pursuits have depended on and continue to make use of training in the arts.

REQUIREMENTS FOR THE BACHELOR’S DEGREE

University Requirements: See pages 56–62.

School Requirements: See pages 255–256.

Departmental Requirements for the Major in Art History

- One year-long Art History introductory series: either 40A, 40B, 40C or 42A, 42B, 42C.
- Eight upper-division Art History courses, with at least one course in Asian art history (150–163) and at least one course in four of the following five areas: Ancient art history (100–109); Medieval art history (110–119); Renaissance/Baroque art history (120–129); Modern art history (130–149, 183); and American art history (163–169).
- Art History 190, taken for upper-division writing credit.
- Completion of one of the following:
 - Two quarters of Art History 198; or
 - One quarter of Art History 198 and one additional upper-division course selected from the list in requirement B above.

Students should enroll in Art History 190 (for upper-division writing) as early as possible in their junior year, after successfully completing UCI’s lower-division writing requirement. It is strongly recommended that students complete Art History 190 before taking Art History 198.

Residence Requirement for the Major: Five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor in Art History

- One year-long Art History introductory series: either 40A, 40B, 40C or 42A, 42B, 42C.
- Three upper-division Art History courses chosen from three of the following six areas: Ancient art history (Art History 100–109), Medieval art history (110–119), Renaissance/Baroque art history (120–129), Modern art history (130–149, 183), Asian art history (150–163), and American art history (163–169).
- Completion of one of the following:
 - One quarter of Art History 198; or
 - One additional upper-division course, in one of the three areas already selected by the student in satisfaction of requirement B above.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the department chair.

Minor in Archaeology

The interdisciplinary minor in Archaeology introduces students to modern archaeological theory and practice. Students are exposed to different approaches and theoretical frameworks used in the reconstruction of cultures based on their material remains and examine the use of such approaches and frameworks in a comparative context that emphasizes one geographic area. Students also become familiar with the importance of understanding the historical, geographic, and environmental contexts in which a particular material culture develops and transforms. The minor helps to prepare students for advanced training in art history, the archaeology of specific geographical regions, cultural resource management, museum

studies, and historical preservation. It emphasizes classical and historical archaeology of the last 5,000 years of human history.

Requirements for the Minor in Archaeology

Completion of seven courses (28 units). Only one course from requirements D–F may be lower division.

- A. Anthropology 2C.
- B. One lower-division survey course on the pre-modern world selected from Anthropology 41A; Art History 40A, 42A; History 21A.
- C. One upper-division social theory course selected from Anthropology 125B, 136B; History 102B; Women's Studies 156B, 165A.
- D. One course on the social study of scientific inquiry selected from Anthropology 128A; History 60; Women's Studies 50A, 50B, 60A.
- E. Geographic specialty: two courses focusing on one particular area from the requirement F list.
- F. Geographic subspecialty: one course from the list below on an area outside the student's geographic specialty.
 - Africa and Asia:* Art History 150, 152, 175; History 130A, 131, 134A, 170D.
 - Greece and Rome:* Art History 100, 103, 107; Classics 36A, 36B, 36C, 37A, 37B, 37C, 140; History 105A, 105B, 105C.
 - Americas:* Anthropology: 141A, 149, 162A, 162B; Art History 164A, 175; History 151A, 161A.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program provided course content is approved in advance by the Humanities Undergraduate Study Office.

Graduate Study

In conjunction with the Department of Film and Media Studies, the Department of Art History offers a graduate program in Visual Studies. A program description and graduate courses may be found in the Program in Visual Studies section, toward the end of the School of Humanities section.

Courses in Art History

LOWER-DIVISION

Lower-division courses provide a comprehensive introduction to broad fields of art history, knowledge of some of the most influential monuments of human history, and an acquaintance with basic methods that art historians use to interpret artifacts in many media from many cultures.

40 History of Western Art. A year-long survey of art and culture in the West from prehistory to the present.

40A Ancient (4) F. An overview of prehistoric, Egyptian, Greek, and Roman art. Considers how and why the peoples of antiquity created art and architecture, as well as the significance within its social, religious, and historical contexts. (IV, VIII)

40B Medieval and Renaissance (4) W. Focuses on the art of the Mediterranean area and Europe between ca. A.D. 350 and 1600. By means of movements and artists, examines the cultural identities of the Christian, Islamic, and early modern worlds. (IV, VIII)

40C Baroque and Modern (4) S. The visual arts from the seventeenth to the twentieth centuries. Explores the changing social purposes and meaning of painting, sculpture, and architecture in relation to historical events and to the artists who made them. (IV, VIII)

42A, B, C History of Asian Art (4, 4, 4) F, W, S. A one-year survey of painting, sculpture, architecture and other artifacts in various regions of Asia. Starts with prehistory in 42A (fall quarter) and concludes with modern art in the twentieth century in 42C (spring quarter). Topics include neolithic excavations, pan-Asiatic transmissions of art, developments of art in China and Japan. *Each course may be taken separately or as part of the series. (IV, VIII)*

UPPER-DIVISION

Upper-division courses explore a wide variety of aims and methods—archaeological, historical, and critical—in the study of art. Deeper understanding is obtained by focusing on shorter historical periods, specific cultural contexts, developments in particular media, or certain theoretical problems.

100 Studies in Ancient Art (4). Topics in Egyptian, Prehistoric, and Etruscan art of the Mediterranean area treated with specific reference to relevant cultural and historical settings. Specialized courses in Greek and Roman art are also taught. May be repeated for credit as topics vary.

103 Studies in Greek Art (4) F, W, S. Topics in Greek art, architecture, and topography from the Prehistoric period through the end of the fourth century B.C.E. May be repeated for credit as topics vary.

107 Studies in Roman Art (4) F, W, S. Topics in Hellenistic and Roman art and architecture; stresses historical and political background. May be repeated for credit as topics vary.

110 Studies in Medieval Art (4) F, W, S. Specialized topics in Medieval art and architecture in Europe, the Mediterranean area, and the Near East between the fourth and fifteenth centuries. Examples: the art of the Migration Period, Medieval City. May be repeated for credit as topics vary.

112 Studies in Early Christian and Byzantine Art (4) F, W, S. Selected topics on the development of the art and architecture of the Later Roman and Byzantine Empires between ca. 300 and 1453. Examples: Early Christian architecture, Byzantine painting. May be repeated for credit as topics vary.

114 Studies in Western Medieval Art (4) F, W, S. Selected topics on the development of art and architecture in Western Europe between ca. 700 and 1400. Examples: Romanesque painting, Gothic architecture. Same as Humanities 110 when topic is appropriate. May be repeated for credit as topics vary.

118 Studies in Medieval Islamic Art (4) F, W, S. Selected topics on the development of art and architecture between the seventh and fifteenth centuries A.D. (first to ninth centuries A.H.) in the Eastern Mediterranean and the Near East after the rise of Islam. May be repeated for credit as topics vary.

120 Studies in Renaissance and Baroque Art (4) F, W, S. Selected topics on the art and architecture of Europe between the fifteenth and eighteenth centuries. Examples: Renaissance and Baroque prints, Bruegel to Rubens. May be repeated for credit as topics vary.

121 Studies in Southern Renaissance Art (4) F, W, S. Selected topics determined by individual faculty members exploring historical developments and individual artists of the fifteenth and sixteenth centuries in Italy and Spain. Examples: Renaissance Venice, Age of Michelangelo. May be repeated for credit as topics vary.

123 Studies in Northern Renaissance Art (4) F, W, S. Selected topics determined by individual faculty members exploring historical developments and individual artists of the fifteenth and sixteenth centuries in Northern Europe. Examples: Late Medieval art, painting from Van Eyck to Bosch. May be repeated for credit as topics vary.

125 Studies in Southern Baroque Art (4) F, W, S. Selected topics determined by individual faculty members exploring historical developments and individual artists of the seventeenth and eighteenth centuries in Italy and Spain. Example: Rome in the seventeenth century. May be repeated for credit as topics vary.

128 Studies in Northern Baroque Art (4) F, W, S. Selected topics determined by individual faculty members exploring historical developments and individual artists of the seventeenth and eighteenth centuries in Northern Europe. Example: the Age of Rembrandt. May be repeated for credit as topics vary.

130 Studies in Eighteenth-Century Art (4) F, W, S. Selected topics determined by individual faculty members exploring historical developments and individual artists of the eighteenth century. Examples: English art, Neoclassicism. May be repeated for credit as topics vary.

134 Studies in Modern European Art. F, W, S. Varying topics within the period 1643 to 1940. Works of art are studied as cultural, social, and political practices. May be repeated for credit as topics vary.

134A European Art: 1643–1789 (4)

134B European Art: 1789–1851 (4). Formerly Art History 133A.

134C European Art: 1851–1907 (4). Formerly Art History 133B.

134D European Art: 1907–1940 (4). Formerly Art History 133C.

134E Topics in Modern European Art (4). Varies with each offering. Consult with the instructor for specific topic.

140 Studies in Contemporary Art. F, W, S. Varying topics within the period 1940 to the present. Works of art are studied as cultural, social, and political practices. May be repeated for credit as topics vary.

140A History of Contemporary Art (4)

140B Issues of Contemporary Art (4)

140C Theories of Contemporary Art (4)

145 Studies in the History of Modern and Contemporary Architecture.

F, W, S. Varying topics from the late eighteenth century to the present.

Architecture and related design practices are studied in relation to social, aesthetic, technological, and political questions. May be repeated for credit as topics vary.

145A Modern Architecture (4)

145B Architecture after 1945 (4)

145C Various Topics (4)

150 Studies in Asian Art (4) F, W, S. Topics include visual studies in China, Japan, Korea, and India. May be repeated for credit as topics vary.

152 Studies in Chinese Art and Religion (4) F, W, S. A study of the rich archaeological finds in mainland China (including tombs and temples) and the development of religious beliefs from the Neolithic through the imperial periods. May be repeated for credit as topics vary.

153 Studies in Early Chinese Painting (4) F, W, S. An examination of the major traditions in painting from the fourth through the thirteenth centuries and the parallel developments in art theory. May be repeated for credit as topics vary.

154 Studies in Later Chinese Painting (4) F, W, S. New developments in Yuan, Ming, and Qing, through modern periods. May be repeated for credit as topics vary.

155 Art of South Asia

155A Art of South Asia: Fourth Century B.C. to Seventh A.D. (4). Examines the visual history of the region defined as "India" today, but necessarily encompassing modern Bangladesh and Pakistan. Culminates with the supposed Golden Age of the Gupta empire and its far-reaching legacies. (VIII)

155B Art of South Asia: Eighth Century A.D. to Sixteenth Century A.D. (4). Begins with the Gupta Period's aesthetic legacies in South Asia's architecture, sculpture, and painting. Goes on to explore the dispersal of Islam throughout South Asia, including the Muslim communities of southern India. (VIII)

155C Art of South Asia: Sixteenth Century A.D. to Twentieth-first Century A.D. (4). Examines the imperial patronage of the Mughal emperors, covering their territorial holdings extending from Afghanistan through western Bangladesh. Continues with the "aftermath" of the Mughal empire and the rise of British commercialism and colonialism. (VIII)

155D Topics in the Art and Architecture of South Asia (4). May be repeated for credit as topics vary. (VIII)

162 Later Japanese Art and Design. Explores stylistic and technical developments in Japanese visual culture. A cross-section of media such as architecture, crafts, painting, photography, and sculpture are studied in relation to Japanese social and political history.

162A Japanese Art: 1615–1868 (4). (VIII)

162B Japanese Art: 1868–1945 (4). (VIII)

162C Japanese Art: 1945–Present (4). (VIII)

163 Asian American Art History (4). F, W, S. Investigation of the Asian American experience expressed by art and visual culture through the twentieth century. Art by Asian Americans of diverse backgrounds as well as the history of visualization of Asian identities in American art/visual culture. May be repeated for credit as topics vary. (VII)

164 African American Art

164A African American Art: 1619–1929 (4). Investigates the history and aesthetics of African American art with an emphasis on the politics of cultural representation. Same as African American Studies 111A. (VII)

164B African American Art: 1930–Present (4). Investigates the history and aesthetics of African American art with an emphasis on the politics of cultural representation. Same as African American Studies 111B. (VII)

164C Topics in African American Art (4). May be repeated for credit as topics vary.

165 Studies in American Art. F, W, S. Varying topics within the period 1620 to 1950. Works of art are studied in their cultural, social, and political contexts.

165A American Art: 1620–1800 (4)

165B American Art: 1800–1900 (4)

165C American Art: 1900–1950 (4)

165D Topics in American Art (4). Varies with each offering. Consult instructor for specific topic. May be repeated for credit as topics vary.

167 Latin American Art History (4) F, W, S. Historical periods vary with each offering and may range from pre-Columbian societies, through the colonial era, to developments in modern and contemporary art. May be repeated for credit as topics vary. (VIII)

175 Studies in Native and Tribal Art (4) F, W, S. Varying topics on the art and culture of native and tribal societies. For example, North American Indians. May be repeated for credit as topics vary.

180 Topics in the Criticism of Art (4) F, W, S. Selected topics discussed on the theoretical and/or practical dimensions of art historical criticism. May be repeated for credit as topics vary.

181 Topics in Museum Studies (4). F, W, S. Addresses the historical and contemporary function of the museum as an instructional device. The function of exhibitions in the public sphere, and the roles of curators, educators, and the public are analyzed. May be repeated for credit as topics vary.

183 Studies in the History of Photography. F, W, S. Varying topics within the history of photography from the early nineteenth century to the present. Photographic practice studied in relation to art history, cultural history, and social history. May be repeated for credit as topics vary.

183A Nineteenth-Century Photographic History (4)

183B Twentieth-Century Photographic History (4)

183C Selected Topics in Photographic History (4). Examples: documentary; pictorialism and art photography; photomontage, photographic books.

185 Topics in Visual Studies (4) F, W, S, Summer. Interdisciplinary topics on the cultural analysis of visual artifacts and practices. May be repeated for credit as topics vary.

190 Practicum for Majors (4) W. Theory and practice of art history with emphasis on formal and social models of analyzing and writing about art. Prerequisite: Art History major, junior standing, and completion of the lower-division writing requirement.

195A-B Senior Research. Students undertake a senior research project under the individual supervision of an Art History faculty member.

195A Senior Research (4) F, W, S. With consultation in regularly scheduled meetings, students select a topic, identify and study relevant texts and materials, and prepare a prospectus for an original thesis. In-progress grading. Prerequisite: Art History 190.

195B Senior Research (4) F, W, S. Students submit an outline and preliminary drafts of section of their paper to the instructor, on a schedule supervised by the instructor. Final 20-page paper includes revisions addressing the instructor's comments and criticisms. Prerequisite: Art History 195A.

198 Proseminar in Art History (4) F, W, S. Discussion and report-oriented seminar with emphasis on reading, writing, and thinking about problems in art history. Topics vary according to the faculty member in charge. Examples: Caravaggio and his followers, Dunhuang painting. Prerequisite: consent of instructor. Prior completion of Art History 190 is strongly recommended. May be repeated for credit as topics vary.

199 Independent Study in Art History (1 to 4) F, W, S. Supervised, but independent reading or research on art historical topics. Prerequisite: consent of supervising instructor. May be taken for credit four times.

GRADUATE

Graduate courses satisfying the requirements of the graduate program in Visual Studies are listed in the Visual Studies section of the *Catalogue*. Graduate students may also enroll concurrently in any upper-division lecture class with the approval of the instructor.

399 University Teaching (4) F, W, S. Limited to teaching assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

DEPARTMENT OF ASIAN AMERICAN STUDIES

(949) 824-4523

Linda Trinh Võ, *Department Chair*

Core Faculty

- Christine B. Balance, Ph.D. New York University, *Assistant Professor of Asian American Studies* (Filipino American studies, performance studies, Asian American popular culture, and queer theory)
- Yong Chen, Ph.D. Cornell University, *Associate Professor of History and Asian American Studies* (Asian American history)
- Dorothy Fujita-Rony, Ph.D. Yale University, *Associate Professor of Asian American Studies and History* (U.S. history, Asian American studies)
- Claire Jean Kim, Ph.D. Yale University, *Associate Professor of Asian American Studies and Political Science* (racial and ethnic politics, protest and social movements, contemporary political theory)
- John M. Liu, Ph.D. University of California, Los Angeles, *Senior Lecturer with Security of Employment, Asian American Studies* (race/ethnic minority relations; economy and society)
- Steven Mailloux, Ph.D. University of Southern California, *UCI Chancellor's Professor of Rhetoric and Asian American Studies* (rhetoric, critical theory, American literature, law and literature)
- Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Professor of Film and Media Studies* (minority, diasporic, and third cinemas; cultural studies of media, nationalism, and globalization; queer theory and racialized sexuality)
- Linda Trinh Võ, Ph.D. University of California, San Diego, *Department Chair and Associate Professor of Asian American Studies* (Asian American communities, Asian American women, Vietnamese Americans, immigration and race relations, social inequalities, urban studies, ethnographic methods)

Affiliated Faculty

- Kei Akagi, B.A. International Christian University, *UCI Chancellor's Professor of Music*
- Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Department Chair of Women's Studies and Associate Professor of Women's Studies and Comparative Literature*
- Kyung Hyun Kim, Ph.D. University of Southern California, *Associate Professor of East Asian Languages and Literatures*
- Jennifer Lee, Ph.D. Columbia University, *Associate Professor of Sociology*
- Daphne Pi-Wei Lei, Ph.D. Tufts University, *Associate Professor of Drama*
- Simon Leung, B.A. University of California, Los Angeles, *Associate Professor of Studio Art*
- Sanjoy Mazumdar, Ph.D. Massachusetts Institute of Technology, *Professor of Planning, Policy, and Design and of Environmental Health, Science, and Policy*
- Yong Soon Min, M.F.A. University of California, Berkeley, *Professor of Studio Art*
- Kaushik Sunder Rajan, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Anthropology*
- Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Associate Professor of Art History*

The Department of Asian American Studies examines the historical and contemporary experiences of Asians in the United States and in a global context. The curriculum seeks to provide an analysis of the cultural, political, and economical organization of Asian American communities. Students are invited to participate and partake in broadening their understanding of multicultural perspectives within U.S. society. The Department offers a B.A. degree program in Asian American Studies, an honors program, a minor, and a graduate emphasis. The Department also contributes to the Culture and

Theory Ph.D. program, which uses the strengths of interdisciplinary programs and departments, particularly African American Studies, Chicano/Latino Studies, Asian American Studies, Critical Theory, and Women's Studies. This interdisciplinary degree uses a problem-oriented rather than a disciplinary approach to issues of race, gender, and sexuality in relation to diasporas, transnational, and postcolonial contexts, all of which are broadly based in the humanities, social sciences, and arts.

In addition to regular UCI faculty, lecturers who teach on a quarterly basis are an integral part of the Department. A current list of participants is available in the office.

Scholarship Opportunities. The Ching-Suei Su Endowed Memorial Scholarship is awarded annually to sophomores or juniors who are majoring in Asian American Studies, East Asian Languages and Literatures, or Linguistics (with an emphasis on an East Asian language) and who demonstrate academic excellence and campus or community service.

Undergraduate Program

CAREER OPPORTUNITIES

Many career opportunities exist for students who graduate with a B.A. degree in Asian American Studies, such as service with national and international organizations which seek knowledge of American multicultural society in general, and of Asian American peoples and cultures in particular; positions as area specialists with state and federal government agencies; careers in the private sector with corporations or private organizations which have a significant portion of their activities in the U.S. and the Pacific Rim; and positions of service and leadership within Asian American communities. Students may also continue their education and pursue professional or graduate degrees.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 56–62.

School Requirements: See pages 255–256.

Departmental Requirements for the Major

- Five core courses: Asian American Studies 60A, 60B, 60C, 100 (taken to satisfy the upper-division writing requirement), 101.
- Eight upper-division electives (two from each of the following areas): Asian American Studies 110–129 (Humanities/Arts), 130–149 (Social Science/Social Ecology), 151–160 (Asian American Sub-groups), 161–170 (Ethnic/Race/Gender Relations).
- One course in history, cultural, or political institutions of Asia selected from the following departments: Anthropology, Art History, East Asian Languages and Literatures, Film and Media Studies, History, Philosophy, Political Science, Sociology, Studio Art.
- One elective course selected from Asian American Studies or from the interdisciplinary programs in African American Studies, Latin American and Caribbean Studies, or Women's Studies. Electives may include four-unit Independent Studies/Special Studies courses: Asian American Studies 190–199. Students may request, by petition, one lower-division course to count as an elective. This course must be primarily focused on issues relevant to Asian American Studies.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Honors Program in Asian American Studies

The Honors Program in Asian American Studies provides an opportunity for outstanding students to develop their research skills through an intensive study of a topic that is of special interest to them. The program is open to senior Asian American Studies majors who have a 3.3 GPA in Asian American Studies (at least five courses) and a 3.0 GPA overall, and who have successfully completed Asian American Studies 100 (Research Methodologies) before spring quarter of their junior year.

Honors students participate in a three-part sequence, Asian American Studies H190A-B-C, in which they develop research skills, pursue fieldwork, and complete an honors thesis on a topic of their choice under the guidance of a departmental faculty member. During fall quarter, the first part of this sequence introduces students to a range of key methodological issues in Asian American Studies. In the second part, students work closely with their Faculty Advisor to develop research and writing skills; the first draft of their thesis is to be completed at the end of winter quarter. During spring quarter, students revise their thesis and complete it by the end of the quarter. The thesis is evaluated by the Faculty Advisor and must also be approved by the Department Chair of Asian American Studies. Upon successful completion of the sequence, students graduate with Honors in Asian American Studies.

Requirements for the Minor

- A. Asian American Studies 60A, 60B, 60C, 101.
- B. Four upper-division courses selected from Asian American Studies 100–169, 190–199.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the Department.

Graduate Emphasis in Asian American Studies

The Department of Asian American Studies offers a graduate emphasis in Asian American Studies, which is available in conjunction with selected departmental graduate programs. Students in the graduate emphasis complete a minimum of four courses, including Asian American Studies 200A and 200B (offered every other year), and two electives, one of which is selected from the student's own department or area of interest, and the other from a discipline outside that department or area.

Subject to the requirements of participating academic units, Ph.D. students in the emphasis should have at least one Asian American Studies core faculty member on their qualifying examination and dissertation committees. With the approval of the Asian American Studies Graduate Committee, affiliated faculty members can sit in place of the core faculty. (There are no requirements concerning qualifying examinations or theses for master's students.)

Applicants to the emphasis must be admitted to a participating UCI graduate program. For complete information about application policies and procedures, as well as the requirements of the emphasis, see one of the Asian American Studies faculty members.

Courses in Asian American Studies

LOWER-DIVISION

60A Introduction to Asian American Studies I (4). Examines and compares the diverse experiences of major Asian American groups since the mid-nineteenth century. Topics include: origins of emigration; the formation and transformation of community; gender and family life; changing roles of Asian Americans in American society. Same as History 15C and Social Science 78A. (III, VII)

60B Introduction to Asian American Studies II (4). Examines the renewal of Asian immigration following World War II. Focuses on domestic and international conditions influencing the liberalization of U.S. immigration laws, and the impact of contemporary Asian immigration on the U.S. political economy and social order. Same as Social Science 78B. (III, VII)

60C Introduction to Asian American Studies III (4). Analyzes the Asian American experience in comparative perspective, which includes comparisons of different ethnic and racial groups, and across gender and class. Possible topics include labor, economy, politics, migration, nation, popular culture, gender, family, sexuality, and multiraciality. Same as Social Science 78C. (III, VII)

UPPER-DIVISION

100 Research Methodologies for Asian American Studies (4). Explores various research methodologies for Asian American Studies combining theoretical knowledge with field research. Goals: conduct field research about immigrants and refugees from Asia. Topics vary: migration and labor, assimilation and cultural preservation, cultural expressions in the diaspora. Prerequisites: satisfactory completion of the lower-division writing requirement.

101 Globalization, Diaspora, and Racialization (4). Studies the relationship between globalization and racialization and comparatively examines the racialization of Asians in the U.S. with the experiences of other Asians in the diaspora. Attention paid to the cultural expressions of racialization as creation, representation, adaptation, and resistance. Same as Social Science 177A.

110 Asian American Writers (4). Literary analysis of Asian American writers' representations of issues of identity, class, history among others. Variety of literary forms—novel, poem, drama, essay—included in a study of a variety of Asian American ethnic groups. May be repeated for credit as topics vary. (VII)

111 Asian American History (4). Introduction to important themes in the history of people of Asian ancestry in the United States from the nineteenth century to the present. May be repeated for credit as topics vary. (VII)

112 Asian American Art History (4). Investigation of Asian American experience expressed by art and visual culture throughout the twentieth century. Art by Asian Americans of diverse backgrounds as well as the history of cultural visualization of Asian identities in American art/visual culture. May be repeated for credit as topics vary. (VII)

114 Asian American Film and Video (4). Topics include histories of Asian American film and video, including documentaries, experimental, short subjects, feature-length independent film, and other forms of cinematic expression. Explores issues of identity (national, racial, gendered, among others). May be repeated for credit as topics vary. (VII)

115 Asian American Media and Arts (4). Includes the study of Asian American history and society through the analysis of a variety of media forms such as painting, music, cinema, video, and other artistic representations. May be repeated for credit as topics vary. (VII)

116 Asian Americans and Popular Culture (4). Focuses on Asian Americans' relationship to popular culture as both producers and consumers. Topics include consumer cultures and subcultures, cyberspace and public space, popular music, indie comics and other print media. (VII)

117 Sexuality in Asian and Asian American Film and Video (4). Analyzes sexuality and gender roles in specific social, historical, and political contexts represented in selected Asian and Asian American films and videos, in terms of feminine/masculine constructions, the body, family roles. (VII)

118 Asian American Performance and Writing (4). Intensive performing workshop producing work inspired by community, personal experience, international issues. Focuses on new ways of understanding ethnicity, class, and gender issues through performance. (VII, IX)

131 Asian American Politics (4). Provides various overviews of politics within Asian American communities. May compare with African American and/or Latino politics. May be repeated for credit as topics vary. (VII)

132 Comparative Minority Politics (4). Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements. Same as African American Studies 151, Chicano/Latino Studies 147, and Political Science 124C. (VII)

133 Asian American Family (4). Examines the representations and experiences of Asian American families from diverse standpoints. Analyzes the similarities and differences among family structures with particular attention to cultural values, gender roles, and domestic violence. Same as Social Science 177D. (VII)

134 Asian American Community Public Health (4). Focuses on major issues and concepts of community health and their application to public health programs for Asian American populations. Analyzes individual, institutional, community, and policy factors that influence a person's health status within a larger environmental context. Same as Public Health 134. (VII)

135 Special Topics in Asian American Social Sciences and Social Ecology (4). Explores a broad range of issues in Asian American social sciences and social ecology. May be repeated for credit as topics vary. (VII)

136 Asian Americans and Public Policy (4). Introduces public policy, basics of policy analysis, and current-day public policy issues. Focuses on Asian Americans in relation to immigration, welfare, urban development policies. (VII)

137 Asian American Labor (4). Explores history of Asian Americans and work from the nineteenth century to the present. Areas of study include migration, colonialism, family, social organization, and work culture. Same as History 152A. (VII)

138 Race and Urban Space (4). Examines how ethnic and racial processes shape and structure interactions in urban settings, such as schools, housing, employment, and public spaces, with attention to the international impact of globalization and postcolonial forces. (VII)

139 Asian Americans and Education (4). Introduces students to the major issues facing Asian Americans in K–16 education and schooling experiences through scientific, historical, and interdisciplinary approaches, in both mainstream and minority education. (VII)

140 Asian Americans and the Law (4). Analyzes from a legal perspective historical events and current issues related to the Asian American community. Focuses on interpreting and understanding case law. (VII)

141 Asian American Psychology (4). Examines the social and psychological concerns of Asian Americans; e.g., coping with racial prejudice, maintaining bicultural identities, dealing with cross-cultural conflicts in interracial relationships, and trying to reconcile generational differences between immigrant parents and their American-born children. Same as Psychology 174A. (VII)

142 Muslim Identities in North America (4). Explores multiple identities of Muslims in North America, including indigenous Muslims (e.g., African American Muslims and Sufis) and immigrants of many national origins. Explores religious, political, cultural, ethnic, class differences among American Muslims, turning to Islamic institutions near UCI to conduct small research projects. Same as Anthropology 125Z. (VII)

143 Religious Traditions of Asian Americans (4). Studies the religious traditions of Asian Americans, focusing on the transplantation of religious institutions, establishment of sacred spaces, celebration of religious holidays, socialization of children, as well as birth, marriage, gender relations, death, family. Same as Sociology 136. (VII)

150 Special Topics in Asian American Studies (4). Analyzes a variety of themes in Asian American Studies—identity, history, culture—from various interdisciplinary perspectives in humanities, arts, social sciences. May be repeated for credit as topics vary. (VII)

151 Asian American Ethnic Groups (4). Topics include study of the history, culture, and social formations of diverse Asian American subgroups such as Pacific Islanders, Hmong, Thai, Indonesian, Indian subcontinental, among others. May be repeated for credit as topics vary. (VII)

151C The Korean American Experience (4). Explores the factors that have distinctly shaped the Korean American experience, including patterns of racial domination, the profile of immigrant flow, immigrant roles in the urban political economy, politics in Korea, and the role of the church. Same as Social Science 178C. (VII)

151D The Vietnamese American Experience (4). Studies the resettlement of Vietnamese in the United States following their exodus from Southeast Asia. Topics discussed include the Vietnam War, the 1975 evacuation, boat and land refugees, the shaping of Vietnamese communities, and Vietnamese American literature. Same as Social Science 178D. (VII)

151E The Japanese American Experience (4). Studies the settlement of Japanese in Hawaii and the continental United States since the late nineteenth century. Topics covered include sugar plantations, development of rural Japanese America, World War II internment, post-War community development, and persistence of Japanese American identity. Same as Social Science 178E. (VII)

151F South Asian American Experience (4). Examines and compares the experiences of South Asian immigrants in the U.S. over time. Looks at the economic, political, and social positions of the immigrants, with special emphasis on religious changes and the changes in the second and later generations. Same as Anthropology 125Y.

151H Southeast Asian American Experience (4). Analyzes experiences of refugees and immigrants from Cambodia, Laos, and Vietnam. Examines political and economic factors for their exodus and how they reconstruct their identities, families, and communities. Issues include educational experiences, public policies, social services, occupational options, homeland relations. Same as Social Science 178H. (VII)

151J Chinese American Experience (4). Analyzes the experiences of Chinese in the United States. Immigration, Chinese exclusion, racial and gender identity. Historical overview and contemporary issues covered. Same as Social Science 178J. (VII)

151K Filipina/Filipino American Experience (4). Explores the experience of Filipina/Filipino Americans from the era of Spanish colonization of the Philippines to present-day community formations in the United States, with special emphasis on the twentieth century. Topics include colonialism, nation, migration, gender, and culture. Same as Social Science 178K. (VII)

161 Ethnic and Racial Communities (4). Examines various theoretical analyses of race and ethnicity, particularly as they apply to Asian Americans. Also explores the relationship of Asian Americans to other racialized minorities in the U.S. Same as Social Science 175B. (VII)

162 Asian American Women (4). Examines the representations and experiences of Asian American women from diverse perspectives. Explores the commonalities and differences among various groups of Asian American women, with particular focus on history, culture, values, and family roles. Same as Social Science 177B. (VII)

163 Asian American Women's Film (4). Explores the social significance of film and video made by Asian American women in relation to issues of race, representation, and social change. These film and video makers use these media to raise complex issues of class, politics, and race interacting with gender. May be repeated for credit as topics vary.

164 Special Topics in Ethnicity, Gender, and Race (4). Topics include analysis and comparison of various themes related to ethnicity, gender, and race within the Asian American communities. May be repeated for credit as topics vary. (VII)

166 Asian Americans and Race Relations (4). Analyzes Asian American race relations and racialized interconnections, as well as Asian Americans in racial hierarchy. Topics include racial categorization, citizenship, immigration, equity. (VII)

167 Asian American and African American Relations (4). Addresses relationships of Asian American and African American communities in the United States. Topics include race, class, gender, labor, economic systems, political mobilization, community, civil rights, activism, cultural expression. Same as African American Studies 117 and History 152B. (VII)

171A Comparative International Migration (4). Examines the migration patterns to the three largest nations that receive immigrants (i.e., permanent settlers)—Australia, Canada, and the United States. Same as Sociology 175D. (VIII)

H190A Asian American Studies Honors Seminar I (4). First of a three-quarter honors sequence. Students explore key methodological issues in Asian American Studies and craft their own research project. Methodologies may include library research, historical research, literary review, cultural analysis, ethnographic interviews, participant observation, and data collection. Prerequisites: successful completion of Asian American Studies 100; 3.3 GPA in Asian American Studies courses and 3.0 GPA overall.

H190B Asian American Studies Honors Tutorial II (4). In the second of the three-part honors sequence, students work closely with a Faculty Advisor on their chosen research project. Emphasis is given to the writing process. At the end of the quarter, students are to complete the first draft of their thesis. Prerequisite: Asian American Studies H190A.

H190C Asian American Studies Honors Tutorial III (4). In the last of the honors sequence, students revise their thesis based on constructive comments from their Faculty Advisor. A final draft of the thesis is evaluated by the Faculty Advisor and the Department Chair of Asian American Studies. Prerequisite: Asian American Studies H190B.

199 Independent Study (1 to 4). Directed reading and research in consultation with a faculty member. Substantial written work required. Prerequisite: consent of sponsoring faculty member. May be repeated for credit.

GRADUATE

200A Theory and Methods in Asian American Studies (4). Introduction to the interdisciplinary intersection of the social sciences, humanities, and other fields that constitute the theory and methodology of Asian American Studies. Focuses on the interventions and contestations within Asian American Studies that have transformed the discipline in recent years. Prerequisite: graduate standing.

200B Contemporary Issues in Asian American Studies (4). Examines the interrelations between history, theory, and race in the aftermath of the twentieth-century decolonial movements, offering an account of race through post-colonial and postnationalist approaches in comparative, multiregional contexts. Considers the interventions made by transnational feminist and racialized queer critiques. Prerequisite: graduate standing.

201 Graduate Topics in Asian American Studies (4). Seminars on various topics in Asian American Studies. Prerequisite: graduate standing. May be repeated for credit as topics vary.

202 Immigration and Globalization (4). Examines immigration to three leading immigrant-receiving nations: the United States, Canada, and Australia, as both cause and consequence of globalization. Specific attention to Asian migration, as well as assimilation and its relationship to multiculturalism. Prerequisite: graduate standing. Same as Sociology 266.

250 Advanced Topics in Asian American Studies (4). Seminar covering various areas of research within Asian American Studies as an interdisciplinary field. Recommended for advanced graduate students.

290 Directed Research (4 to 12). Directed graduate study/research in Asian American Studies. Prerequisite: graduate standing. May be taken for credit for a total of 24 units.

291 Directed Reading (4). Readings focused on specialized topics. Prerequisite: graduate standing and consent of instructor. May be taken for credit for a total of 12 units.

399 University Teaching (4). Limited to teaching assistants. Must be admitted to the graduate emphasis in Asian American Studies. Satisfactory/Unsatisfactory only. May be taken for credit six times.

DEPARTMENT OF CLASSICS

Humanities Office Building II; (949) 824-6735

Andrew Zissos, Department Chair

Faculty

Luci Berkowitz, Ph.D. Ohio State University, *Professor Emerita of Classics* (Greek literary history, computer applications to literature)

Cynthia L. Claxton, Ph.D. University of Washington, *Lecturer in Classics with Security of Employment, Undergraduate Program Director, and Graduate Advisor* (Greek prose, historiography)

Richard I. Frank, Ph.D. University of California, Berkeley, *Professor Emeritus of History and Classics* (Roman history, Classical tradition)

Zina Giannopoulou, Ph.D. University of Illinois, *Assistant Professor of Classics* (literacy theory and Platonic hermeneutics, classical and Hellenistic philosophy, Greek tragedy and epic)

Andromache Karanika, Ph.D. Princeton University, *Assistant Professor of Classics* (Greek epic poetry, Greek lyric, folklore)

Margaret M. Miles, Ph.D. Princeton University, *Professor of Art History and Classics* (Greek and Roman art, archaeology)

Maria C. Pantelia, Ph.D. Ohio State University, *Professor of Classics and Director, Thesaurus Linguae Graecae*® (Greek epic, Hellenistic poetry, digital technologies in the humanities)

James I. Porter, Ph.D. University of California, Berkeley, *Professor of Classics and Comparative Literature* (philosophy, literary and cultural criticism and aesthetics, history of the classical disciplines, reception of Homer)

B. P. Reardon, D.U. Université de Nantes, *Professor Emeritus of Classics* (Late Greek literature, Greek novel)

Patrick Sinclair, Ph.D. Northwestern University, *Professor Emeritus of Classics* (rhetoric, Latin prose, lexicography)

Dana F. Sutton, Ph.D. University of Wisconsin, *Professor Emeritus of Classics* (Greek and Latin drama, Greek poetry, Anglo-Latin literature)

Nicholas White, Ph.D. Harvard University, *Professor Emeritus of Philosophy and Classics* (Greek philosophy, ethics, epistemology)

Andrew Zissos, Ph.D. Princeton University, *Department Chair and Associate Professor of Classics* (Latin epic, medieval Latin, Roman culture)

Undergraduate Program

The Department of Classics aims to provide the undergraduate student with a working knowledge of the origins and heritage of Greco-Roman civilization. The Department is committed to a twofold purpose: (1) disseminating interest in and knowledge of Classical Civilization through the teaching of Greek and Latin language and literature; and (2) helping students, through courses in Classical literature, history, civilization, mythology, and religion taught through English translations, to appreciate the achievements of Greek and Roman culture and their pervasive influence on our own civilization.

The Department offers majors in Classics (with an emphasis in Greek or Latin), Latin, and a major in Classical Civilization in which most of the required courses are in English translation. Students are encouraged to consult with the Classics faculty regarding the appropriate choice of major and design of their programs.

For the Classics major, study of the Classics must be based on competence in both Greek and Latin. The Classics program is designed to provide the student with this competence as rapidly as possible, so that by the end of first-year Greek or Latin the student has already been introduced to some of the major Classical authors in the original language. From then on, courses are devoted to reading and interpreting the literature of ancient Greece and Rome. In addition to their training in the languages, students increase their knowledge of the literature, history, and thought of the ancient world through the close study of some of its finest writers.

The Latin major is designed for those students who want to emphasize Rome and the Latin language as their area of study. By the end of first-year Latin, students will be reading and analyzing some of the most influential works in Latin literature. In addition to gaining an expertise in Latin, students also devote a portion of their study to an examination of the history and culture of ancient Rome by taking upper-division Classical Civilization courses with Rome as their focus and/or additional Latin courses. Courses from other departments in the School of Humanities with a focus on later historical periods heavily influenced by Roman culture (such as the medieval period) may be used to satisfy some of the degree requirements, with prior approval of the Department of Classics.

The major in Classical Civilization is designed for students who do not plan to concentrate on the Classical languages or pursue graduate study in the Classics, yet wish to obtain an undergraduate degree based on a sound knowledge of the Classical world. This major requires one year of study (or its equivalent) in either Greek or Latin and a minimum of 10 courses taught in English translation concerning such topics as Classical literature, civilization, history, archaeology, art, drama, and philosophy.

Students entering UCI with previous Greek or Latin training can be given advanced standing. Usually, one year of high school work is equated with one quarter of UCI work. Thus, students with one, two, three, or four years of high school Latin (or Greek) will enroll in Latin (or Greek) 1B, 1C, and 100A or 100B, respectively. Placement may vary, depending on the extent of the student's preparation. Students with transfer credit for Greek and/or Latin may *not* repeat those courses for credit. Students with high school training in the Classical languages are encouraged to consult with the Classics faculty before enrolling in Classics courses.

The Department adheres to the policy of giving its students an opportunity to participate in the departmental decision-making process. Student representatives, elected from and by the undergraduate majors, participate in all open departmental meetings. Representatives are responsible for maintaining close liaison with their constituency, for representing the students' interest in curriculum and personnel matters, and for the evaluation of both the academic program and the academic staff.

Inquiries regarding language placement, prerequisites, planning a program of study, or other matters related to the Department's offerings should be directed to the Office of the Chair, Humanities Office Building II, telephone (949) 824-6735.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 56–62.

School Requirements: See pages 255–256.

Language Other Than English Placement and Progression: See page 255.

Departmental Requirements for Majors

Three separate majors: Classics (with an emphasis in Greek or Latin), Latin, and Classical Civilization.

Classics (Greek emphasis): Classics 36A, B, C; six upper-division courses in Greek 100–104, 120; Greek 110; three upper-division courses in Latin 100–104; Senior Capstone Requirement: Classics 192A-B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute a senior project. Students may plan a project centering on an area of strong interest and may write a research paper, design a creative project, a primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of Classics 192A. Six units of Classics 198, Classics 199, Greek 198, or Greek 199 may be substituted for Classics 192A-B with prior approval of the departmental undergraduate advisor.

Classics (Latin emphasis): Classics 37A, B, C; six upper-division courses in Latin 100–104; Latin 110; three upper-division courses in Greek 100–104; Senior Capstone Requirement: Classics 192A-B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute a senior project. Students may plan a project centering on an area of strong interest and may write a research paper, design a creative project, a primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of Classics 192A. Six units of Classics 198, Classics 199, Latin 198, or Latin 199 may be substituted for Classics 192A-B with prior approval of the departmental undergraduate advisor.

Latin: Classics 37A, B, C; six upper-division courses in Latin 100–104; Latin 110; three upper-division courses selected from Latin 103–104, Classics 140, 150, 160, 170, 175, or 176 (courses taken in another UCI department may be substituted with prior departmental approval); two of these three courses must be Roman in topic (the third course may have a Greek topic); Senior Capstone Requirement: Classics 192A-B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute a senior project. Students may plan a project

centering on an area of strong interest and may write a research paper, design a creative project, a primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of Classics 192A. Six units of Classics 198, Classics 199, Latin 198, or Latin 199 may be substituted for Classics 192A-B with prior approval of the departmental undergraduate advisor.

Classical Civilization: Latin (or Greek) 1A-B-C, or equivalent; Classics 36A, B, C or 37A, B, C or 45A, B, C; five upper-division Classics courses; two additional upper-division courses in related fields such as Classical history, Classical philosophy, or Classical art (these two courses may be taken in another UCI department); Senior Capstone Requirement: Classics 192A-B (or equivalent) taken during the senior year. Under the guidance of a faculty mentor, students design and execute a senior project. Students may plan a project centering on an area of strong interest and may write a research paper, design a creative project, a primary or secondary school curriculum, or other similar projects. All project proposals must be approved by the end of Classics 192A. Six units of Classics 198 or Classics 199 may be substituted for Classics 192A-B with prior approval of the departmental undergraduate advisor.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for Minors

The Department offers minors in Greek, Latin, and Classical Civilization.

Greek: Greek 1A-B-C; six upper-division courses in Greek 100–104. Greek 120 may be substituted for one course at the 100 level.

Latin: Latin 1A-B-C; six upper-division courses in Latin 100–104.

Classical Civilization: Classics 36A, B, C or 37A, B, C or 45A, B, C; five upper-division Classics courses, one of which may be in a related field such as history, art history, or philosophy.

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

PLANNING A PROGRAM OF STUDY

The Department believes in close consultation with students on academic advising and program planning. Students planning to major (or minor) in Classics or Classical Civilization are strongly urged to consult with the departmental faculty at the earliest possible moment to learn about the various programs.

STUDY ABROAD

The Department of Classics encourages students to take advantage of educational opportunities abroad while making progress toward their UCI degree. Classics and Classical Civilization majors and minors can benefit from a broader perspective of the field by studying for periods ranging from one quarter to one year at any number of universities all over the world through the UC Education Abroad Program. Students can also augment their exposure to Greek, Latin, and Classical civilizations by studying for a summer or during the academic year in Greece or Italy at programs sponsored by other academic institutions through the International Opportunities Program. To determine how study abroad can fit into a Classics or Classical Civilization major, visit UCI's Center for International Education Web site, especially the "Study Abroad in Your Major" section at <http://www.cie.uci.edu/academics/academicplanning.html>. See the Department of Classics Undergraduate Program Director for additional information.

CAREER OPPORTUNITIES

The study of the ancient world is a valuable possession for modern life. The discipline of Classics is an important part of a well-rounded education. Greek and Latin language and literature, history and philosophy, mythology and religion make an excellent basis for exploring all periods of Western culture down to the present day. Classics is an interdisciplinary study, exploring human culture by a variety of methods from a variety of points of view. For this reason, the student who chooses to major in Classics or Classical Civilization may find many professional opportunities open.

Graduate and professional schools in medicine, law, management, and other fields welcome students with training in Classics. So do many business corporations. Business, industry, and technology are well acquainted with the value of an education in Classics. They are aware that students with a strong background in a respected and challenging major such as Classics are disciplined thinkers who can express themselves in clear, coherent, and cogent language, capabilities that are considered valuable in future physicians, lawyers, and managers.

There are also specific vocational opportunities open to the graduate in Classics or Classical Civilization. A major in this field may lead to a career in high school teaching, or (after appropriate further study) in college or university teaching. It is also an excellent preparation for advanced study in other academic disciplines such as archaeology, history, comparative literature, philosophy, and linguistics, as well as for theological studies and for work in a wide range of the humanities and social sciences.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on résumé preparation, job search, and interview techniques. See the Career Center section for additional information.

The University of California Tri-Campus Graduate Program in Classics

UC IRVINE, UC RIVERSIDE, AND UC SAN DIEGO

Michele Salzman, *Chair, Joint Executive Committee*

Faculty

- Georgios Anagnostopoulos, Ph.D. Brandeis University, *Professor of Philosophy*, UCSD (Ancient Greek philosophy, ethics, metaphysics)
 Luci Berkowitz, Ph.D. Ohio State University, *Professor Emerita of Classics*, UCI (Greek literary history, computer application to literature)
 Charles Chamberlain, Ph.D. University of California, Berkeley, *Lecturer in Classics and Comparative Literature*, UCSD (Greek and Latin literature, Aristotle, poetics)
 Cynthia L. Claxton, Ph.D. University of Washington, *Lecturer in Classics with Security of Employment, Undergraduate Program Director, and Graduate Advisor*, UCI (Greek prose, historiography)
 Page duBois, Ph.D. University of California, Berkeley, *Professor of Classics and Comparative Literature*, UCSD (Greek literature, rhetoric, critical theory, cultural studies)
 Anthony Edwards, Ph.D. Cornell University, *Professor of Classics and Comparative Literature*, UCSD (epic, Greek comedy, critical theory)
 Richard I. Frank, Ph.D. University of California, Berkeley, *Professor Emeritus of History and Classics*, UCI (Roman history, Latin elegy and satire, classical tradition)
 Zina Giannopoulou, Ph.D. University of Illinois, *Assistant Professor of Classics*, UCI (literary theory and Platonic hermeneutics, classical and Hellenistic philosophy, Greek tragedy and epic)
 David Glidden, Ph.D. Princeton University, *Professor of Philosophy*, UCR (Greek and Roman philosophy)
 Anna Gonosová, Ph.D. Harvard University, *Associate Professor of Art History*, UCI (Byzantine and Medieval art)
 Monte Johnson, Ph.D. University of Toronto, *Assistant Professor of Philosophy*, UCSD (ancient philosophy)

Dayna Kalleres, Ph.D. Brown University, *Assistant Professor of Literature and the Study of Religion*, UCSD (early to late antique Christian literature and culture)

Andromache Karanika, Ph.D. Princeton University, *Assistant Professor of Classics*, UCI (Greek epic poetry, Greek lyric, folklore)

Edward N. Lee, Ph.D. Princeton University, *Professor Emeritus of Philosophy*, UCSD (Greek philosophy, Plato)

Marianne McDonald, Ph.D. University of California, Irvine, *Professor of Theatre and Classics*, UCSD (Greek and Roman theatre, ancient drama in modern plays, film, and opera)

Margaret M. Miles, Ph.D. Princeton University, *Professor of Art History and Classics*, UCI (Greek and Roman art and archaeology, ancient Sicily, Greek religion)

Alden A. Mosshammer, Ph.D. Brown University, *Professor Emeritus of History*, UCSD (early Christian thought, Greek chronography, early Greek history)

Sheldon Nodelman, Ph.D. Yale University, *Associate Professor of Visual Arts*, UCSD (Classical art and architecture, Roman portraiture, critical theory)

Maria C. Pantelia, Ph.D. Ohio State University, *Professor of Classics and Director, Thesaurus Linguae Graecae®*, UCI (Greek epic, Hellenistic poetry, digital technologies in the humanities)

James I. Porter, Ph.D. University of California, Berkeley, *Professor of Classics and Comparative Literature*, UCI (philosophy, literary and cultural criticism and aesthetics, history of the classical disciplines, reception of Homer)

Wendy Raschke, Ph.D. State University of New York, Buffalo, *Lecturer in Classics*, UCR (Roman satire, Greek art and archaeology)

B. P. Reardon, D.U. Université de Nantes, *Professor Emeritus of Classics*, UCI (Late Greek literature, ancient novel)

Michele Salzman, Ph.D. Bryn Mawr College, *Chair, Joint Executive Committee, UC Tri-Campus Graduate Program in Classics and Professor of History*, UCR (Late antiquity; Roman history and literature, religion, women's studies)

Gerasimos Santas, Ph.D. Cornell University, *Professor Emeritus of Philosophy*, UCI (ancient philosophy, history of philosophy, ethics)

Thomas F. Scanlon, Ph.D. Ohio State University, *Professor of Classics*, UCR (Greek and Roman historiography, ancient athletics)

Gary Shiffman, Ph.D. University of Michigan, *Assistant Professor of Political Science*, UCSD (Greek political theory)

Patrick Sinclair, Ph.D. Northwestern University, *Professor Emeritus of Classics*, UCI (Roman historiography, rhetoric)

Dana F. Sutton, Ph.D. University of Wisconsin, *Professor Emeritus of Classics*, UCI (Greek and Latin drama, Greek poetry, Anglo-Latin literature)

Nicholas White, Ph.D. Harvard University, *Professor Emeritus of Philosophy and Classics*, UCI (ancient philosophy, ethics, epistemology/metaphysics)

Andrew Zissos, Ph.D. Princeton University, *Department Chair and Associate Professor of Classics*, UCI (Latin epic; medieval Latin, Roman culture)

The UC Tri-Campus Graduate Program in Classics is a joint venture that combines faculty in Classics and related disciplines from the three southernmost University of California campuses—UC Irvine, UC Riverside, and UC San Diego.

Students accepted into the program may enroll at any of the three campuses, but normally apply for admission through UCI, which is the main location for instruction and administration. Applications are reviewed by an admissions committee composed of faculty members from all three campuses.

The goal of the program is to provide a graduate education that unites the main currents of modern literary, cultural, and social-scientific theory with the traditional skills and methodologies of classical philology. Candidates for degrees are expected to exhibit facility in Greek and Latin, competence in research, including theoretical approaches to texts and objects, technical mastery of computing for research and teaching, and experience in teaching. These goals are realized through the four core courses (Classics 200A, B, C and 201) and seminars (Classics 220).

All entering students are admitted into the Ph.D. program. With the exception of those granted advanced standing because they hold the M.A. degree in Classics from another institution, entering students may be awarded an M.A. along the way.

Master of Arts in Classics

The requirements for the M.A. degree are two years (six quarters) of course work, passage of a special set of examinations, and completion of a Master's paper. M.A. students must successfully complete a minimum of 12 approved, seminar-level courses. The normal course load is three 200-level courses each quarter distributed as follows: nine quarters of Classics 220; three quarters of Classics 200A, B, C, and 201; a fourth quarter may be substituted for a Classics 220. Up to one quarter of Classics 290 for research and writing of the Master's paper may be substituted for a Classics 220. If remedial work is required in Greek or Latin, with the Graduate Advisor's approval, one enhanced upper-division Greek or Latin course (enrolled as a Classics 280) may be substituted for a Classics 220. With the Graduate Advisor's approval, M.A. students may substitute one external graduate seminar in a relevant area outside of Classics (at any of the three participating campuses) for a Classics 220. A reading knowledge of either German, French, Italian, or an equivalent language, demonstrated by examination or other means, is also required. At the end of a student's M.A. studies, a positive vote of the program faculty is necessary for continuation in the Ph.D. program. The expected time for completion of the M.A. degree is two years.

Doctor of Philosophy in Classics

The requirements for the Ph.D. degree are three years (nine quarters) of course work. Minimum course requirements are four quarters of Classics 200A, B, C, and 201; 12 quarters of Classics 220; two external graduate seminars, from departments or programs outside of Classics. These may be taken from the offerings of any of the three campuses. Students may take up to two quarters of enhanced upper-division Greek or Latin courses (enrolled as 280s) in place of Classics 220s with permission of the Graduate Advisor if remedial work is required in Greek or Latin. Where appropriate, in the third year of course work, a second Classics 200A, B, or C, may be substituted for a 220. Classics 280, Independent Study (supervised research), may be substituted for Classics 220s *only* with the permission of the Graduate Advisor. Up to 12 equivalent graduate-level courses completed elsewhere may be substituted for Tri-Campus Program courses with approval of the Joint Executive Committee. Classics 280 may be used, normally in the fourth year, to provide time to work on the Greek and Latin reading lists and to prepare for Qualifying Examinations, but these courses do not count toward the required 18 courses. Students are encouraged to take courses and seminars in relevant areas outside the program at any of the three campuses. At this stage, and during the fourth year of study, students are expected to have read extensively in the primary texts, in literary history and theory, and in ancient history. In addition, experience in supervised teaching and/or research activity is normally required. In order to qualify as a candidate for the Ph.D. and enter the dissertation stage, a student must pass a set of seven qualifying examinations, including Greek and Latin translation, Greek and Roman history, history of Greek and Roman literature, a "special area" that can be fulfilled by either an extensive research paper or by a three-hour written examination, and an oral examination administered by the candidacy committee to be taken only after the other examinations have been passed. Ph.D. students must also demonstrate reading proficiency in one modern research language (normally German and French or Italian) by the end of their second year either through appropriate course work or by examination. Proficiency in a second modern research language is expected by the end of the third year. The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is six years, and the maximum time permitted is seven years.

The facilities, course offerings, programs, and individual faculty mentorship of all three campuses are available to students in the UC Tri-Campus Graduate Program in Classics. In addition, program resources are enhanced through a cooperative teaching arrangement among the Tri-Campus Program and the Classics graduate program at UC Los Angeles and at the University of Southern California.

Thesaurus Linguae Graecae®

The Thesaurus Linguae Graecae® (TLG®) is a research center at UCI. TLG® has created a digital library of Greek literature, a unique resource for research in Greek literary and linguistic studies. Although administratively separate, TLG® is closely affiliated with the Department of Classics. Information is available in the Office of Research section of this *Catalogue*.

Undergraduate Courses

Several of the Department of Classics' upper-division undergraduate courses are offered as variable-topics courses, that is, the topics addressed change from quarter to quarter. Contact the Department office for a list of recently offered topics.

Courses in Greek

1A-B-C Fundamentals of Greek (5-5-5) F, W, S. 1A-B: Elements of Classical Greek grammar, syntax, and vocabulary. **1C:** Introduction to reading texts. Greek 1A-B-C and Greek S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of Greek (7.5-7.5) Summer. First-year Greek in an intensified form. Same as Greek 1A-B-C during academic year. Will be offered if enrollment warrants; those interested should contact the Department. Prerequisite for S1AB: none; for S1BC: S1AB or 1B, or two years of high school Greek. Greek S1AB-BC and Greek 1A-B-C may not both be taken for credit. (S1BC: VI)

97 Fundamentals of Greek (with Emphasis on Reading) (4). Designed primarily for students interested in acquiring a solid reading knowledge of Greek, and to facilitate the understanding and translating of Greek texts dealing with a variety of disciplines. Not open to Classics majors or minors or Greek minors. Does not serve as a prerequisite for any higher-level Greek courses or fulfill any undergraduate foreign language requirement.

99 Special Studies in Greek (1 to 4) F, W, S. Consultation with instructor necessary prior to registration. May be repeated for credit as topics vary.

100A Readings in Greek Prose (4) F. Selected readings of Greek prose authors with particular emphasis paid to the fundamentals of Greek prose style, together with grammar review. Possible authors include Xenophon, Herodotus, and Plato. Prerequisite: Greek 1C or equivalent, or consent of the Department. (VIII)

100B Readings in Greek Poetry (4) F. Selected readings from Greek poetry with particular emphasis paid to the peculiarities and difficulties of reading Greek poetry, together with an introduction to metrics. Possible authors include Homer and Euripides. Prerequisite: Greek 1C or equivalent, or consent of the Department. (VIII)

103 Seminar in Greek Prose (4) W, S. Specialized and focused study of a particular Greek prose author or topic. Prerequisite: Greek 100A or equivalent, or consent of the Department. May be repeated for credit as topics vary. (VIII)

104 Seminar in Greek Poetry (4) W, S. Specialized and focused study of a particular topic or author of Greek poetry. Prerequisite: Greek 100B or equivalent, or consent of the Department. May be repeated for credit as topics vary. (VIII)

110 Greek Prose Composition (4). Studies in Greek grammar and syntax through composition of sentences and passages in Greek prose. Prerequisite: Greek 100A or equivalent, or consent of the Department.

120 Reading of Selected Portions of the New Testament (4). Portions read may change each time course is offered. May be repeated for credit provided content varies. Prerequisite: Greek 1C or equivalent.

198 Directed Group Study (1 to 4) F, W, S. Special topics in Greek culture and civilization through directed reading and research. Consultation with instructor necessary prior to registration.

199 Independent Studies in Greek (1 to 4) F, W, S. Consultation with instructor necessary prior to registration. May be repeated for credit as topics vary.

Courses in Latin

1A-B-C Fundamentals of Latin (5-5-5) F, W, S. 1A-B: Elements of Latin grammar, syntax, and vocabulary. **1C:** Introduction to reading texts, including study of the poetry of Catullus and selected readings. Latin 1A-B-C and Latin S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of Latin (7.5-7.5) Summer. First-year Latin in an intensified form. Same as Latin 1A-B-C during academic year. Will be offered if enrollment warrants; those interested should contact the Department. Prerequisite for S1AB: none; for S1BC: S1AB or 1B, or two years of high school Latin. Latin S1AB-BC and Latin 1A-B-C may not both be taken for credit. (S1BC: VI)

97 Fundamentals of Latin (with Emphasis on Reading) (4). Designed primarily for students interested in acquiring a solid reading knowledge of Latin, and to facilitate the understanding and translating of Latin texts dealing with a variety of disciplines. Not open to Classics majors or minors or Latin minors. Does not serve as a prerequisite for any higher-level Latin courses or fulfill any undergraduate foreign language requirement.

99 Special Studies in Latin (1 to 4) F, W, S. Consultation with instructor necessary prior to enrollment. May be repeated for credit as topics vary.

100A Readings in Latin Prose (4) F. Selected readings of Latin prose authors with particular emphasis paid to the fundamentals of Latin prose style, together with grammar review. Possible authors include Cicero, Caesar, and others. Prerequisite: Latin 1C or equivalent, or consent of the Department. (VIII)

100B Readings in Latin Poetry (4) F. Selected readings from Latin poetry with particular emphasis paid to the peculiarities and difficulties of reading Latin poetry, together with an introduction to metrics. Possible authors include Vergil and Ovid. Prerequisite: Latin 1C or equivalent, or consent of the Department. (VIII)

103 Seminar in Latin Prose (4) W, S. Specialized and focused study of a particular Latin prose author or topic. Prerequisite: Latin 100A or equivalent, or consent of the Department. May be repeated for credit as topics vary. (VIII)

104 Seminar in Latin Poetry (4) F, W, S. Specialized and focused study of a particular topic or author in Latin poetry. Prerequisite: Latin 100B or equivalent, or consent of the Department. May be repeated for credit as topics vary. (VIII)

110 Latin Prose Composition (4). Studies in Latin grammar and syntax through composition of sentences and passages in Latin prose. Prerequisite: Latin 100A or equivalent, or consent of the Department.

198 Directed Group Study (1 to 4) F, W, S. Special topics in Roman culture and civilization through directed reading and research. Consultation with instructor necessary prior to enrollment.

199 Independent Studies in Latin (1 to 4) F, W, S. Consultation with instructor necessary prior to enrollment. May be repeated for credit as topics vary.

Courses in Classics

LOWER-DIVISION

5 Building English Vocabulary through Greek and Latin Roots (4). Formation and use of English words from Greek and Latin derivatives. Particularly useful for first-year students who wish to augment their vocabulary systematically.

10 Scientific and Specialized Terminology (4). A study of English terms derived from Greek and Latin and important to contemporary medicine, science, and other professions, with emphasis on development of word-building skills. No prior knowledge of Greek or Latin required. For undergraduates, particularly those in the sciences, interested in development of their technical vocabulary.

36A, B, C The Formation of Ancient Greek Society (4, 4, 4). An overview of ancient Greek civilization and its interactions with other cultures of the Mediterranean world. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion. Same as History 36A, B, C.

36A Early Greece (IV)

36B Late Archaic and Classical Greece (IV)

36C Fourth-Century and Hellenistic Greece (IV)

37A, B, C The Formation of Ancient Roman Society (4, 4, 4). A survey of the principal aspects of Roman civilization from its beginnings to the so-called Fall of the Roman Empire in C.E. 476. Focuses on political history and ideology, social history, literature, art and architecture, and religion. Same as History 37A, B, C.

37A Origins to Roman Republic (IV)

37B Roman Empire (IV)

37C The Roman Legacy (IV)

45A, B, C Classical Mythology (4, 4, 4) F, W, S, Summer. An overview of the main myths of the ancient Greeks and Romans and their influence in literature and art throughout time. Includes readings from ancient and modern sources and utilizes modern technology.

45A The Gods (IV)

45B The Heroes (IV)

45C Ancient and Modern Perspectives of Classical Mythology (IV)

75 Introduction to Classical Rhetoric (4). Introduction to the principles of rhetoric among the ancient Greeks and Romans and to the critical analysis of arguments. Students are introduced to the history, law, and politics that provided the context in which ancient rhetoric operated.

99 Special Studies in Classics (1 to 4) F, W, S. Consultation with instructor necessary prior to enrollment.

UPPER-DIVISION

111 The Thesaurus Linguae Graecae (4). Exposes undergraduate students to the history, objectives, and activities of UCI's Thesaurus Linguae Graecae and provides them with basic understanding of the principles and procedures inherent in computer application to literary texts. Prerequisite: one year of ancient Greek, or consent of instructor.

140 Classics and History: The Ancient World (4). Selected topics in society and culture of the Graeco-Roman world. May be repeated for credit provided topic varies. Readings in translation.

150 Classical Mythology (4). Selected myths and legends as used in Classical literature, and their modern interpretations.

151 The Olympians (4). Examination of the origins and development of the Greek Olympian divinities with emphasis upon those who became central figures in pre-Christian religious cults.

160 Topics in Classical Literature in English Translation (4). Subject matter variable. May be repeated for credit provided topic varies.

170 Topics in Classical Civilization (4). Subject matter variable. May be repeated for credit provided topic varies.

175 Multicultural Studies and the Classics (4). Treats the literature and culture of one or more minority groups in California and the United States in relation to Classical literatures. May be repeated for credit as topics vary. (VII)

176 International Studies and the Classics (4). Develops a broader understanding of the formation of different cultures and countries of Classical times and their impact on the modern world. May be repeated for credit as topics vary. (VIII)

192A-B Senior Capstone (2-4) F, W, S. Under the guidance of a faculty mentor, majors design and execute a senior project. This project may be a research paper, dramatic production, school curriculum, etc. All projects must be approved by the faculty mentor. Prerequisite: satisfactory completion of the lower-division writing requirement. **192A:** In-progress grading.

198 Directed Group Study (4-4-4) F, W, S. Special topics in Classical studies through directed reading and research. Consultation with instructor necessary prior to registration.

199 Independent Studies in Classics (1 to 4) F, W, S. Consultation with instructor necessary prior to registration.

TRI-CAMPUS GRADUATE COURSES IN CLASSICS

The topics offered in these courses vary from quarter to quarter. Contact the Department of Classics office for a list of recently offered topics.

200A Contemporary Literary Theory and the Classics (4). An introduction to contemporary literary theory focusing on important critical approaches; topics vary from year to year. May be repeated for credit as topics vary.

200B Diachronic Perspectives on Classical Antiquity (4). Examines ways in which Classical texts and ideas have been received and appropriated for the diverse purposes of ancient and subsequent cultures. May be repeated for credit as topics vary.

200C Greece and Rome in Their Contemporary Cultural Contexts (4). An introduction to the methods and perspectives of social scientific theory which can be used to study the material and social dimensions of the ancient cultures of Greece and Rome. May be repeated for credit as topics vary.

201 Research and Pedagogical Tools for Classicists (4). Covers various technical skills essential for successful research and pedagogy in Classics, including use of digital resources (e.g., bibliographical databases). Introduction to important disciplinary subfields, such as textual criticism and epigraphy. Selection of topics will be at instructor's discretion.

220 Classics Graduate Seminar (4). Subject matter variable; mainly but not exclusively major literary topics. May be repeated for credit as topics vary. Same as Art History 295 when topic is appropriate.

280 Independent Study (4). Supervised independent research. Subject varies.

290 Research in Classics (4-4-4) F, W, S

299 Dissertation Research (4 to 12) F, W, S. May be repeated for credit. Satisfactory/Unsatisfactory only.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. May be repeated for credit.

DEPARTMENT OF COMPARATIVE LITERATURE

320 Humanities Instructional Building; (949) 824-9629

Ackbar Abbas, **Department Chair**

Faculty

Ackbar Abbas, M. Phil. University of Hong Kong, *Department Chair and Professor of Comparative Literature and Professor of Film and Media Studies* (Hong Kong culture and postcolonialism, visual culture, architecture and cinema, cultural theory, globalization)

Dina Al-Kassim, Ph.D. University of California, Berkeley, *Assistant Professor of Comparative Literature* (British, American, French, Arabic, Anglophone and Francophone modernism; postcolonial critique)

Eyal Amiran, Ph.D. University of Virginia, *Associate Professor of Comparative Literature and of Film and Media Studies* (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)

Etienne Balibar, Docteur en philosophie, Katholieke Universiteit Nijmegen, *Professor of French and Comparative Literature* (critical theory, political philosophy)

Ellen S. Burt, Ph.D. Yale University, *Department Chair of French and Italian and Professor of French and Comparative Literature* (nineteenth-century French literature; critical theory)

James Fujii, Ph.D. University of Chicago, *Associate Professor of Japanese and Comparative Literature* (literature and theory of East Asia)

Alexander Gellay, Ph.D. Yale University, *Professor of Comparative Literature* (eighteenth- and nineteenth-century European novel, critical theory)

David Theo Goldberg, Ph.D. City University of New York Graduate School and Center, *Director of the UC Humanities Research Institute and Professor of Comparative Literature and of Criminology, Law and Society* (race, racism, race and the law, political theory, South Africa)

Jonathan M. Hall, Ph.D. University of California, Santa Cruz, *Assistant Professor of Comparative Literature and of Film and Media Studies* (Japanese literary, cultural, and cinematic history; critical theories of East Asia; East Asian cinema; psychoanalytic and queer theory)

Susan Jarratt, Ph.D. University of Texas at Austin, *Professor of Comparative Literature, Education, and Women's Studies* (histories and theories of rhetoric, composition pedagogy and teacher preparation, feminist theory and pedagogy)

Adriana M. Johnson, Ph.D. Duke University, *Assistant Professor of Comparative Literature* (Latin American literature, nineteenth- and twentieth-century Latin America, cultural and postcolonial studies)

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Department Chair of Women's Studies and Associate Professor of Women's Studies and Comparative Literature* (feminist epistemologies and theories, cultural studies, ethnic studies)

Ketu H. Katrak, Ph.D. Bryn Mawr College, *Professor of Humanities and Comparative Literature* (Asian American literature, postcolonial literature)

Catherine Liu, Ph.D. City University of New York Graduate School and Center, *Director of the Humanities Center, Co-Director of the Humanities and Arts Major, and Associate Professor of Film and Media Studies and of Comparative Literature* (critical theory, visual and literary culture, psychoanalysis, narrative theory and melodrama in film and literature, New Waves, cultural revolutions)

Julia Reinhard Lupton, Ph.D. Yale University, *UCI Chancellor's Fellow, Director of the Humanities Core Course, and Professor of English, Comparative Literature, and Education* (Renaissance literature, literature and psychology)

Juliet Flower MacCannell, Ph.D. Cornell University, *Professor Emerita of Comparative Literature* (eighteenth-century French literature, modern semiotics, comparative literature)

Steven Mailloux, Ph.D. University of Southern California, *UCI Chancellor's Professor of Rhetoric and Asian American Studies* (rhetoric, critical theory, American literature, law and literature)

Achille Mbembe, Ph.D. Université de Paris I–Pantheon Sorbonne, *Professor of Comparative Literature* (postcolonialism, African society and culture, race and identity)

J. Hillis Miller, Ph.D. Harvard University, *UCI Distinguished Research Professor of Comparative Literature and English* (Victorian literature, critical theory)

Jane O. Newman, Ph.D. Princeton University, *Director of European Studies and Professor of Comparative Literature* (sixteenth- and seventeenth-century German literature, contemporary theory and criticism, feminism)

Ngugi wa Thiong'o, *UCI Distinguished Professor of Comparative Literature and English* (African and Caribbean literatures, theater and film, performance studies, cultural and political theory)

Margot Norris, Ph.D. State University of New York, Buffalo, *UCI Chancellor's Professor of English and Comparative Literature* (modern Irish, British, American and continental modernism; literature and war)

Laura O'Connor, Ph.D. Columbia University, *Professor of English and Comparative Literature* (Irish literature, twentieth-century poetry, Anglo-American modernism)

James I. Porter, Ph.D. University of California, Berkeley, *Professor of Classics and Comparative Literature* (Greek, Latin, comparative literature)

R. Radhakrishnan, Ph.D. State University of New York, Binghamton, *Professor of English and Comparative Literature* (critical theory, poststructuralism, postcoloniality, globalization, nationalisms, diasporas)

Nasrin Rahimieh, Ph.D. University of Alberta, *Director of the Dr. Samuel M. Jordan Center for Persian Studies and Culture, Acting Professor of Comparative Literature and Women's Studies, and Maseeh Chair in Persian Studies and Culture* (Persian literature and culture, diaspora studies, film and media, religious studies)

John Carlos Rowe, Ph.D. State University of New York, Buffalo, *Professor Emeritus of Comparative Literature* (American literature, modern literature, critical theory)

Annette Schlichter, Ph.D. Humboldt University of Berlin, *Associate Professor of Comparative Literature* (feminist theory and criticism, queer theory, contemporary American literature, gender and literature)

Gabriele Schwab, Ph.D. University of Konstanz, *UCI Chancellor's Professor of Comparative Literature* (modern literature, critical theory, psychoanalysis)

Martin Schwab, Ph.D. University of Bielefeld, *Director of the Minor in Humanities and Law and Professor of Philosophy and Comparative Literature* (philosophy and aesthetics)

John H. Smith, Ph.D. Princeton University, *Department Chair and Professor of German, and Professor of Comparative Literature* (nineteenth-century German philosophy and literature)

James Steintrager, Ph.D. Columbia University, *Associate Dean of Humanities Graduate Study and Research, and Associate Professor of English and Comparative Literature* (comparative literature, eighteenth-century French, German, and English literature and aesthetics)

Rei Terada, Ph.D. Boston University, *Professor of Comparative Literature* (theory, poststructuralism, nineteenth- and twentieth-century poetry)

Jennifer Terry, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies and Comparative Literature* (gender and queer studies, film studies)

Undergraduate Program

Comparative Literature reaches beyond any single national culture to consider relations between various literatures and cultures, methods of study, periods, and media. The Comparative Literature program at UCI trains students to examine literatures, cultures, and media in an international frame by focusing on contextualization and historicization. Another key component of the program is the study of critical theory, which provides the tools to read in a philosophically and theoretically informed manner. Students are exposed to a wide range of topics such as the impact of colonialism on African novels, the relationships between Asian film and literature, literatures and cultures of the Middle East, global women's writing, comparative queer theories, gender and madness, time travel, phenomenology and deconstruction, and images of cannibalism in France and Latin America. All Comparative Literature courses are taught in English. Texts are read in English and English translation but students are enabled to encounter literatures in original languages through the Department's foreign language requirement.

The Department of Comparative Literature offers a major and a minor. Comparative Literature is well suited for students interested in international issues, critical theory, the history of inter- and cross-cultural contact, and the ways in which literatures and cultures dialogue with one another across time and space. Most Comparative Literature classes are small and intimate and emphasize student discussion. The Department also sponsors meetings and activities for majors so that students can get to know one another.

CAREERS FOR THE COMPARATIVE LITERATURE MAJOR

The study of Comparative Literature trains students to do independent research, learn languages, and think and write analytically, always in an international context. This helps qualify majors for careers in education, international relations, law, government, communications and media, or journalism. It is also excellent preparation for an academic career. Graduates from the Department of Comparative Literature at UCI currently teach English, world literature, and modern foreign languages at the high school level. Many have also gone on to complete a Ph.D. in Comparative Literature, which prepares students to teach in departments of English, Classics, modern foreign languages, Near Eastern studies, East Asian studies, and comparative literature, as well as in interdisciplinary programs at various colleges and universities.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 56–62.

School Requirements: See pages 255–256.

Departmental Requirements for the Comparative Literature Major

- A. Comparative Literature 60A, 60B, 60C.
- B. Five upper-division courses in Comparative Literature.
- C. Two additional upper-division Comparative Literature courses or other upper-division courses offered in the School of Humanities.

D. Comparative Literature 190 (capstone seminar; taken in satisfaction of upper-division writing).

E. Competence in a foreign language sufficient for reading and understanding literature and culture in that language may be demonstrated through course work in one of following ways:

1. Two upper-division courses in a foreign literature or culture in which texts are read in the original, *or*
2. One upper-division course in a foreign literature or culture in which texts are read in the original, plus one upper-division course in a literature or culture in translation, *or*
3. Students of Chinese, Japanese, Korean, and Vietnamese may take three years of language training plus one upper-division course in a foreign literature or culture in which texts are read in the original language or in translation, *or*
4. Students who study Greek and Latin fulfill the entire requirement by successfully completing two years of college-level language training.

An independent study course may substitute for any part of the Departmental foreign language requirement when courses in the language or literature desired are not available.

Credits from the UC Education Abroad Program may be substituted for the Departmental language and upper-division requirements.

Requirements for the Optional Specialization in Cultural Studies

Students complete requirements A, C, D, and E above.

For requirement B, students take Comparative Literature 140 plus four courses from the following list: Comparative Literature 105, 130, 132, 141, 142, 143, 144.

Residence Requirement for the Comparative Literature Major:

Comparative Literature 190 and four additional upper-division courses in Comparative Literature or other courses offered in the School of Humanities must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved by the appropriate program advisor or chair.

Departmental Requirements for the Comparative Literature Minor

- A. Comparative Literature 60A, 60B, 60C.
- B. Three upper-division courses in Comparative Literature.
- C. One additional upper-division course in Comparative Literature or another upper-division course offered in the School of Humanities.

Residence Requirement for the Comparative Literature Minor:

Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved by the appropriate program advisor or chair.

PLANNING A PROGRAM OF STUDY

The Department offers close consultation for academic planning. All students should plan courses of study with faculty advisors. Students who wish to pursue double majors, special programs, or study abroad are urged to seek advising as early as possible.

Graduate Program

Comparative Literature faculty are particularly equipped to guide students in critical theory, postcolonial studies, and comparative American studies. Comparative Literature is engaged with disciplines such as psychoanalysis, rhetoric, political theory, narrative theory, and gender studies, and many small seminars in these fields are offered. The M.A. degree is considered to be a step toward the

Ph.D.; only students intending to complete the doctorate are admitted to the program. Applicants must hold a B.A. or equivalent degree and should normally have majored in Comparative Literature, English, or a foreign literature. Majors in other disciplines (e.g., philosophy, history, visual studies, women's studies, ethnic studies) will be considered, provided that a sufficient background in literary and cultural studies and in at least one foreign language is demonstrated.

The Department offers a track in (1) Comparative Literature with an emphasis in a literary tradition, (2) Comparative Literature with an emphasis in Translation Studies, and (3) Comparative Literature with an emphasis in Critical Theory. (See the departmental graduate student handbook for a description of these emphases.) Graduate students in Comparative Literature may also complete an emphasis in Chinese Language and Literature, Classics, East Asian Cultural Studies, French, German, Japanese Language and Literature, or Spanish. Emphases in Asian American Studies, Critical Theory, Feminist Studies, and Visual Studies are available through the School of Humanities. Within these emphases, students enroll in sequences of courses that highlight individual interests and expertise. In consultation with advisors, students may also develop individualized curricula that cut across these and other offerings in the Department and School.

A minor field specialization is recommended. This optional component promotes engagement with a field or methodology outside the student's specialization. It may be of a national, historical, disciplinary, or methodological nature, with the student of western postmodern literary theory and forms engaging in a focused study of ancient Greek or Roman philosophy and culture, for example, or the student of East Asian languages and diasporic literatures may work in anthropology or ethnography. This optional component of the student's program may be fulfilled through course work, independent studies, or a Qualifying Examination topic.

Graduate students in Comparative Literature must demonstrate a command of two foreign languages consistent with their particular focus of study within the program. Competence in two foreign languages is required for the Ph.D. and is verified through examination, a longer translation project, and/or course work.

The Department recognizes that most of its graduate students intend to become teachers, and believes that graduate departments should be training college teachers as well as scholars—indeed, that teaching and scholarship complement one another. Thus candidates for the Ph.D. are expected to acquire experience in teaching, and all Ph.D. candidates gain supervised training as part of the seminar work required for the degree.

Several substantial fellowships are available to graduate students. The Schaeffer Fellowship provides \$20,000 plus fees for up to two years to Ph.D. students in Comparative Literature for whom translation will be a crucial element of their dissertation work. Scholars translating literary or historical texts or archival materials not previously reliably available in English as part of their dissertation research are eligible. Multiple fellowships per year may be awarded. Students interested in the Schaeffer Fellowship should contact the Department prior to applying to the Ph.D. program. The Murray Krieger Fellowship in Literary Theory is intended for an outstanding entering graduate student pursuing the Ph.D. in Comparative Literature or English who demonstrates a primary interest in theory as theory relates to literary texts. A range of other fellowships is also available to students in the Department.

Master of Arts in Comparative Literature
