Dissertation: The dissertation topic should be drawn from a focused area of study, chosen in consultation with the dissertation advisor and other committee members. Students will draw up their dissertation committee, which must consist of at least three members, at least two of whom must be drawn from the core faculty in the program whose interests match the topic chosen for the thesis. Dissertations must be approved by the student's dissertation committee and submitted to the executive committee.

Time to Degree: The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is eight years.

Courses in Culture and Theory

(*Schedule of Classes* designation: **Clt&Thy**)

200A Identity and Difference (4). Introduction to scholarship on social movements, institutions, and theories relating to the rise of identities based on race, gender, ethnicity, class, and sexuality.

200B Power and Resistance (4). Focusing on questions of power and resistance, examines theorists, mostly from the middle twentieth century to the twenty-first century, whose work has led to the study of revolutions and resistance movements and their centrality in cultural theory.

200C Movement and Displacement (4). Focusing on epistemologies of contemporary cultural theory, probes the genealogies of ideas of movement and settlement. Examines ways in which epistemologies of movement and displacement produce texts and contexts of knowledge formation.

280 Independent Study (4) F, W, S. Limited to students who have not yet received the M.A. degree. May be repeated for credit.

289 Topics in Culture and Theory (4) F, W, S. Seminars on various topics in Culture and Theory. May be repeated for credit as topics vary.

290 Research and Prospectus Seminar (2) F, W, S. Bi-weekly seminar required for third- and/or fourth-year students. Students make presentations of dissertation prospectus for discussion. All graduate students welcome to attend and participate. Meant especially for students preparing for formal presentation of prospectus. Satisfactory/Unsatisfactory only. May be repeated for credit.

299 Dissertation Research (4 to 12) F, W, S. Dissertation research in Culture and Theory. Satisfactory/Unsatisfactory only. May be repeated for credit.

Supporting courses in participating programs and departments: In addition to the courses listed above, the following courses are open to Culture and Theory students:

Critical Theory: Humanities 260A-B-C; 270

Asian American Studies: 200A, B; 201

Women's Studies: 200A, B; 201; 210A; 260A

Chicano/Latino Studies: 212; 213; 217; 220E-F; 230; 289

Other departmental courses: These are existing courses, most of whose topics vary in nature, that are open to Culture and Theory graduate students when they are taught by Core or Affiliate faculty, and when they treat one of the fields covered in the core course sequence. Each quarter the Culture and Theory program office will compile a list of available, relevant departmental courses taught by Core and Affiliate Faculty. The course lists are arranged in a set of rubrics in order to make it easier for students to devise a coherent program of study in consultation with their advisors. Students are not, however, limited, to these rubrics and may devise a problem or areas of their own for the six-course "problem" requirement: Philosophical Foundations of Critical Theory; Critical Theory/Theory at the Border of Disciplines; Intersections of Gender/Race/Class Sexuality; Feminism; Critical Race Studies; Nation, Colonialism, Postcolonialism, Globalization; Reading, Visuality, Textuality; Theorizing the Aesthetic, the Ethical, the Political; Media/Mass, Popular and High Cultures; Disciplinary, Interdisciplinary Methodologies.

DEPARTMENT OF EAST ASIAN LANGUAGES AND LITERATURES

443 Humanities Instructional Building; (949) 824-2227

Martin W. Huang, **Department Chair**

Faculty

Chungmoo Choi, Ph.D. Indiana University, *Associate Professor of Korean Culture* (modern Korea, postcolonial and colonial discourse, popular culture, anthropology)

Edward Fowler, Ph.D. University of California, Berkeley, *Professor of Japanese* (modern Japanese literature, cultural studies, film)

James Fujii, Ph.D. University of Chicago, *Associate Professor of Japanese and Comparative Literature* (modern Japanese literature; critical theory and cultural studies)

Michael A. Fuller, Ph.D. Yale University, *Associate Professor of Chinese* (Chinese poetry and poetics, the cultural and intellectual contexts for poetry, aesthetic theory, linguistic issues in classical Chinese)

Hu Ying, Ph.D. Princeton University, *Associate Professor of Chinese* (narrative literature, translation theory, feminist theory)

Martin W. Huang, Ph.D. Washington University, *Department Chair of East Asian Languages and Literatures and Professor of Chinese* (narrative theories and traditional Chinese fiction)

Kyung Hyun Kim, Ph.D. University of Southern California, *Associate Professor of Korean Culture and of Film and Media Studies* (East Asian cinema, modern Korea, cultural theory)

Susan B. Klein, Ph.D. Cornell University, *Associate Professor of Japanese* (premodern and modern theater and dance, Japanese religions, feminist critical theory)

Bert Scraggs, Ph.D. University of Pennsylvania, *Assistant Professor of Chinese* (modern Sinophone fiction and film, postcoloniality, translation, and cultural studies)

Serk Bae Suh, Ph.D. University of California, Los Angeles, *Assistant Professor of East Asian Languages and Literatures* (modern Korean and Japanese literature; cultural studies; modern Korean and Japanese intellectual history; colonial and postcolonial studies with emphasis on Japonism in Korea from 1905 to 1945 and the Korean minority in Japan)

Affiliated Faculty

Ackbar Abbas, M. Phil. University of Hong Kong, *Professor of Comparative Literature and of Film and Media Studies* (globalization, Hong Kong and Chinese culture, postcoloniality, critical theory)

Qitao Guo, Ph.D. University of California, Berkeley, *Associate Professor of History* (Late Imperial China, social and cultural history)

Kenneth L. Pomeranz, Ph.D. Yale University, *UCI Chancellor's Professor of History* (modern Chinese)

Anne Walthall, Ph.D. University of Chicago, *Co-Director of the Minor in Asian Studies and Professor of History* (early modern and modern Japan)

Jeffrey Wasserstrom, Ph.D. University of California, Berkeley, *Department Chair and Professor of History* (modern China, student movements and comparative revolutions)

Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Associate Professor of Art History* (Modern Japanese art, Asian American art, art and nationalism)

Contemporary East Asian societies are vibrant and complex, and they are heirs to rich cultural traditions that continue to inform the present. The four majors offered by the Department of East Asian Languages and Literatures provide students the opportunity to explore these societies and cultures in all their diversity, and to pursue their study of East Asia across national and regional boundaries. The Department houses both undergraduate and graduate (Ph.D.) programs.

Undergraduate Program

The Department offers four undergraduate majors: the B.A. degree program in East Asian Cultures; the B.A. degree program in Chinese Studies (with two emphases: Chinese Language and Literature, and Chinese Culture and Society); the B.A. degree program in Japanese Language and Literature; and the B.A. degree program in Korean Literature and Culture. In addition, minors are offered in Chinese Language and Literature, Japanese Language and Literature, and Korean Literature and Culture.

Major in East Asian Cultures. The curriculum for the major in East Asian Cultures focuses on the regional dynamics of cultural and social transformations in East Asia. Students benefit from a multidisciplinary approach to the study of intra-regional relationships between East Asian countries in order to situate them in their broader global contexts. By integrating the study of East Asia with theoretical issues that shape the study of world culture in general, students gain the dual perspectives derived from examining East Asian cultures on their own terms and from recognizing the affinities these civilizations share, and the conflicts they encounter in their interactions with the rest of the world.

Major in Chinese Studies. The major in Chinese Studies offers two emphases: Chinese Language and Literature, and Chinese Culture and Society. The Language and Literature emphasis enables students to understand the extensive and rich literary, historical, social, and aesthetic achievements of China by studying its language, literature,

film, religion, and other cultural accomplishments in depth. The Culture and Society emphasis stresses a multidisciplinary examination of modern Chinese culture and society that includes the perspectives of both the humanities and the social sciences. The major emphasizes the complementarity of these approaches in understanding the complexity of the forces that have shaped contemporary China.

Major in Japanese Language and Literature. The curriculum for Japanese Language and Literature enables students to understand the extensive and rich literary, historical, social, and aesthetic achievements of Japan by studying its language, literature, film, religion, and other cultural accomplishments in depth.

Major in Korean Literature and Culture. The curriculum for Korean Literature and Culture enables students to understand the extensive and rich literary, historical, social, and aesthetic achievements of Korea by studying its language, literature, film, religion, and other cultural accomplishments in depth.

PLANNING A PROGRAM OF STUDY

The student should plan a coherent program that both fulfills the requirements of the major and covers the student's areas of interest in allied fields outside East Asian Languages and Literatures.

Students who plan to enroll in a language course in Chinese, Japanese, Korean, or Vietnamese will be placed on the basis of a written test and oral interview in the respective language, regardless of their language background or proficiency, unless they have taken previous course work in the same language at UCI. (The number of years of high school-level study is taken into account only as a reference.) The written test is typically administered through the Testing Office; the oral interview, by the appropriate faculty, who will evaluate students' oral/aural abilities in the target language and consider results from the written placement test and any prior exposure to the language to determine their proper placement level. In the case of some languages, students in the first-year levels will be placed in either heritage classes (for students who have had exposure to the language in question through family ties) or non-heritage classes (for students with no exposure).

The faculty encourages students who are serious about improving their East Asian language ability in reading, writing, and speaking to take advantage of opportunities to immerse themselves in the relevant language by studying abroad through the University's Education Abroad Program (EAP) or through the International Opportunities Program (IOP). Students can gain substantially from first-hand experience of the culture they have studied academically while still making progress toward their UCI degree. Programs are available for one quarter, one semester, or one year. More information is available from academic counselors; see also the Study Abroad Center section of the *Catalogue*.

CAREERS FOR THE MAJOR

Studies in the East Asian programs will give students the preparation needed to pursue a career involving these important Pacific Rim nations. In an era in which the United States is seeking to come to grips with the challenges and opportunities presented by this vital area of the world, the training in language, literature, and culture offered by the departmental majors will serve students well in a variety of endeavors, such as international business, law, government service, journalism, teaching, and other careers involved with public affairs.

Focused undergraduate study in the language and literary and cultural traditions of an East Asian country is also a valuable preparation for those students intent upon pursuing graduate study in any field of East Asian language or culture.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities,

a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE B.A. DEGREE

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Language Other Than English Placement and Progression: See page 253.

Departmental Requirements for the Majors

Four separate majors: East Asian Cultures, Chinese Studies, Japanese Language and Literature, and Korean Literature and Culture.

East Asian Cultures

- A. Chinese 2C, Japanese 2C, or Korean 2C.
- B. Two quarters of East Asian Languages and Literatures 155, with different topics.
- C. East Asian Languages and Literatures 190
- D. Nine additional upper-division courses in the areas of East Asian literature, culture, history, art history, linguistics, film and media, religion, philosophy, gender studies, or comparative literature, at least three of which must pertain to a country other than the one of language specialization. Up to four of these courses (or more by petition) may be taken outside the Department, with the approval of the undergraduate advisor.

Chinese Studies: *Emphasis in Chinese Language and Literature*

- A. Chinese 3C or equivalent.
- B. Chinese 100A-B-C.
- C. Chinese 101A, B, C.
- D. East Asian Languages and Literatures 190.
- E. One upper-division course dealing with the literature or culture of another East Asian country.
- F. Four additional courses in Chinese literature, history, art history, linguistics, comparative literature, film and media, religion, gender studies, or philosophy, of which one may be a lower-division East Asian course offered by the Department.

Chinese Studies: *Emphasis in Chinese Culture and Society*

- A. Chinese 2C or equivalent.
- B. History 171D and 171E.
- C. East Asian Languages and Literatures 190.
- D. Three upper-division courses on China offered by the Department.
- E. Two approved upper-division courses dealing with the literature, religion, culture, history, or society of another East Asian country.
- F. Two approved upper-division courses in the School of Social Sciences dealing with China.
- G. Two additional courses in Chinese language, literature, history, art history, linguistics, comparative literature, film and media, religion, gender studies, or philosophy, of which one may be a lower-division East Asian course offered by the Department. (Courses from the School of Social Sciences may be substituted with departmental approval by petition.)

Japanese Language and Literature

- A. Japanese 3C or equivalent.
- B. East Asian Languages and Literatures 190.
- C. Two upper-division courses dealing with premodern Japanese literature or culture, or Japanese 100A and 100B.

- D. One upper-division course dealing with modern Japanese literature and culture, or Japanese 101A.
- E. One upper-division course dealing with the literature or culture of another East Asian country.
- F. Six additional courses in Japanese literature, culture, history, art history, linguistics, film and media, religion, philosophy, gender studies, or comparative literature, of which one may be a lower-division East Asian course offered by the Department.

Korean Literature and Culture

- A. Korean 3C or equivalent.
- B. East Asian Languages and Literatures 130, 140, and 190.
- C. Two courses in Korean history from History 173D, 173E, 173F.
- D. Four courses in Korean literature, culture, history, art history, linguistics, film and media, religion, philosophy, gender studies, or comparative literature, of which one may be a lower-division East Asian course offered by the Department.
- E. Three upper-division courses dealing with the literature or culture of another East Asian country.

Residence Requirement for the Majors: At least five upper-division courses required for the major must be completed successfully at UCI. Students are encouraged, however, to complete up to a year of their language study in approved programs of study abroad.

Requirements for the Minors

Three separate minors: Chinese Language and Literature, Japanese Language and Literature, and Korean Literature and Culture.

Chinese Language and Literature: A three-quarter sequence selected from Chinese 3A-B-C, 100A-B-C, or 101A, B, C; and four courses selected from the East Asian Languages and Literatures offerings on Chinese topics and/or the upper-division courses in Chinese.

Japanese Language and Literature: Either Japanese 3A-B-C, 100A-B, or 101A, B, C; and four courses (or five courses, if the 100A-B sequence has been chosen) selected from the East Asian Languages and Literatures offerings on Japanese topics and/or the upper-division courses in Japanese.

Korean Literature and Culture: Korean 2A-B-C or equivalent; East Asian Languages and Literatures 130 and 140; one course dealing with Korean visual culture (examples: Korean cinema, visual art); and four upper-division courses selected from the East Asian Languages and Literatures offerings on Korean topics.

Residence Requirement for the Minors: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Program

The Department offers a Ph.D. degree program in East Asian Languages and Literatures, with concentrations in Chinese, Japanese, and East Asian Cultural Studies. The M.A. degree may be awarded to Ph.D. students in progress toward the doctoral degree.

The graduate program emphasizes rigorous training in language and textual analysis, with equal attention given to the historical, social, and cultural dimensions of literary study. In addition to more traditional vocabularies of criticism and theory, the curriculum encourages exploration of recent challenges to established conceptual and methodological frameworks. The program builds on the foundation of a faculty whose research interests engage major issues in Chinese, Japanese, and Korean literature and culture, while developing connections with the larger community of scholarship at UCI.

Because the graduate program is designed to prepare students for both college-level teaching and advanced research, each student will be required to serve, under direct faculty supervision, as a teaching assistant in an appropriate undergraduate course offered through the Department. As noted below, one quarter's worth of this teaching may be counted as part of the required course work toward completion of the degree.

Assuming that a student is enrolled full-time and enters the program with no major deficiencies in background or training, the normative time needed to complete the Ph.D. degree is seven years from matriculation. The maximum time permitted is eight years. For students admitted with an M.A. degree or its equivalent from another institution, certain course requirements may be waived upon the approval of a faculty advisory committee, with a consequent reduction in normative time for completion of the Ph.D.

The following graduate emphases are available: Asian American (see the Asian American Studies section); Critical Theory (see the Humanities Special Programs section); Feminist Studies (see the Women's Studies section); Visual Studies (see the Visual Studies section); and Comparative Literature (see below, following the Ph.D. program requirements).

MASTER OF ARTS IN EAST ASIAN LANGUAGES AND LITERATURES

Students are not admitted to an M.A.-only degree program but may be granted an M.A. in recognition of progress toward the Ph.D., normally after six quarters of course work and submission of two approved seminar papers, which will serve as the M.A. examination.

DOCTOR OF PHILOSOPHY IN EAST ASIAN LANGUAGES AND LITERATURES

Requirements for Admission

In addition to meeting the general requirements for admission to graduate study at UCI, specified by the Graduate Division, all students must present the following for review by an admissions committee composed of members of the faculty in East Asian Languages and Literatures: records of prior scholastic performance, including all college transcripts; three letters of recommendation; samples of written work; and aptitude scores from the Graduate Record Examination. Although the Department does not require entering students to have received an undergraduate degree comparable to its own, it recommends as much preparation in an East Asian language as possible. It also welcomes applications from students whose language training may not be as extensive but who have shown promise in the study of related disciplines. The study of appropriate European languages is encouraged as well.

General Requirements

Upon admission to the program, the student is assigned a graduate advisor, in consultation with whom an advisory committee consisting of two additional faculty members is constituted. The student and committee plan a program of study consisting of 15 graduate courses.

Before advancement to candidacy (normally after three years of graduate study), the student must have (1) completed required course work as detailed below; (2) prepared one paper of publishable quality; (3) completed language requirements as listed below; (4) prepared five research reports on current scholarly articles to be decided upon in consultation with the faculty advisor; and (5) passed the qualifying examinations on four topics to be selected in consultation with the faculty advisory committee no more than two quarters before the examinations are to be taken. At least one of the topics should be related directly to the student's projected area of specialization in dissertation research.

Students who complete the qualifying examinations successfully are advanced to candidacy for the Ph.D. degree. The normative time for advancement to candidacy is four years. They then write their doctoral dissertation on a topic developed in consultation with the faculty advisory committee. Some period of study abroad, for enhancement of language proficiency and/or dissertation research, is strongly encouraged.

Concentration in Chinese

Course Work. Each student is required to complete three courses from Chinese 201–204; Chinese 211A-B or 212A-B; Chinese 213A-B; Chinese 214; and seven additional courses (of which one may be in the graduate teaching program) as determined upon consultation with faculty advisors. At least three of these additional courses must be taken outside the Department on a relevant topic in literary or cultural theory. Courses taken to fulfill language requirements may not be counted toward the course work requirement.

Language Requirements. Before advancement to candidacy, all students must have completed four years of modern Chinese, two years of classical Chinese, and three years of modern Japanese, and have demonstrated reading proficiency in another appropriate language. Much of this work may, of course, have been completed prior to admission. In addition, the requirement for a second year of classical Chinese may be fulfilled by taking three reading courses in classical literature.

Concentration in Japanese

Course Work. Each student is required to complete three courses from Japanese 201–205; Japanese 211A-B or 212A-B; Japanese 213A-B; Japanese 214; and seven additional courses (of which one may be in the graduate teaching program) as determined upon consultation with faculty advisors. At least three of these additional courses must be taken outside the Department on relevant topics in literary or cultural theory. Courses taken to fulfill language requirements may not be counted toward the course work requirement.

Language Requirements. Before advancement to candidacy, all students must have completed four years of modern Japanese and one year of classical Japanese, and have demonstrated reading proficiency in another appropriate language. In addition, students emphasizing classical Japanese are required to take one year of classical Chinese. Much of this work may, of course, have been completed prior to admission.

Concentration in East Asian Cultural Studies

Course Work. Each student is required to complete four Theory and Cultural Studies graduate courses; four graduate courses in Chinese, Japanese, or Korean; and seven additional courses (of which one may be in the graduate teaching program) as determined upon consultation with faculty advisors. At least three of these additional courses must be taken outside the Department on relevant topics. Courses taken to fulfill language requirements may not be counted toward the course work requirement.

Other Requirements. Before advancement to candidacy, all students must have completed examinations in four areas as determined upon consultation with faculty advisors. These areas will vary according to the interests of the student; examples might be Colonial and Postcolonial Theories; Modernity and East Asia; Critique of Asian Studies as a field; Gender, Class and East Asia; Visual Culture and Japan; and Theorizing Minority Status in East Asia. All students must have completed four years of Chinese, Japanese, or Korean, or the equivalent. Three years or the equivalent in a second East Asian language is recommended. Much of this work may, of course, have been completed prior to admission.

Graduate Emphasis in Comparative Literature

A student must submit an application for the emphasis to the Graduate Advisor in East Asian Languages and Literatures, and the Department tracks the student's progress and fulfillment of requirements. Upon graduation, students receive a letter from the Graduate Advisor certifying completion of the emphasis.

Course Work. Students take at least five graduate courses in the Department of Comparative Literature, three of which may be counted toward the seven electives required for the Ph.D. in East Asian Languages and Literatures. One of the five courses should be Criticism 220A or 220C, or Comparative Literature 200; at least three of the courses should have a Comparative Literature (CL) designation; and one of the courses could be Humanities 270 (Critical Theory).

Qualifying Examination and Dissertation. One topic on the Ph.D. Qualifying Examination should be on a Comparative Literature topic and should be prepared with a professor from the Comparative Literature program who will serve as a member of the student's examination committee. The student should be able to demonstrate some expertise in comparative critical methodologies as well as knowledge of a literature and tradition other than those in East Asian. One member of the student's dissertation committee will normally be from the Comparative Literature program.

Courses in East Asian Languages and Literatures

(Schedule of Classes designation: E Asian)

UNDERGRADUATE

20 Asian Religions (4). An introduction to Asian religions (Hinduism, Buddhism, Confucianism, Taoism, Shamanism) including both elite doctrinal aspects and forms of more popular religiosity. May be taken for credit three times as topics vary. (VIII)

55 Introduction to East Asian Cultures (4). Interdisciplinary courses organized each year around a broad theme designed to introduce students to the cultures of East Asia. Topical organization of courses addresses issues that have been of importance historically and are reshaping East Asia today. May be taken three times for credit as topics vary. (IV, VIII)

110 Topics in Chinese Literature and Society (4). Studies in Chinese texts in their social and cultural context(s). Conducted in English. May be taken for credit three times as topic varies. (VIII)

116 Topics in East Asian Religions (4). Selected topics in the religions of East Asia, e.g., Buddhism, Daoism, Shintô, Christianity, popular religions. May be taken for credit three times as topics vary. (VIII)

117 Topics in East Asian Philosophy (4). Selected topics in the philosophies of East Asia, e.g., Yoga, Buddhism, Vedanta, Confucianism, Taoism, and Shinto. Same as Philosophy 117. May be repeated for credit as topics vary. (VIII)

120 Topics in Japanese Literature and Society (4) F. Studies in Japanese texts in their social and cultural context(s). Conducted in English. May be taken for credit three times as topic varies. (VIII)

125 Topics in East Asian Applied Linguistics (4). In-depth examination of selected topics in applied linguistics, with a particular emphasis on language acquisition and language pedagogy. May be taken for credit three times as topics vary. Concurrent with East Asian Languages and Literatures 225.

130 Korean Society and Culture (4). Introductory background to the social and cultural forces that affect the lives of the Koreans, including those in the United States. Considers traditional values and contemporary issues within a historical framework. Same as Anthropology 163K and Sociology 175A. (VIII)

140 Topics in Korean Literature and Society (4) F. Students in Korean texts in their social and cultural context(s). Conducted in English. May be taken for credit three times as topics vary. (VIII)

150 Topics in East Asian Literature in Translation (4). East Asian literary works in translation. Taught in English. May be repeated for credit as topics vary. (VIII)

155 Cultural Studies in East Asia (4). Interdisciplinary and theoretical introduction to issues in cultural studies that are pertinent to the study of East Asia. All readings in English. May be taken for credit three times as topics vary. (VIII)

160 East Asian Cinema (4). Study of East Asian cinema from historical, theoretical, and comparative perspectives. Taught in English. May be repeated for credit as topics vary. Same as Film and Media Studies 160 when topic is appropriate. (VIII)

170 Gender in East Asia (4). Explores the construction of gender in East Asian cultures and literatures. Pays close attention to the specificity of historical, cultural, and literary contexts of East Asia as it investigates various theoretical and critical perspectives on gender and sexuality. May be taken for credit three times as topics vary. (VIII)

190 Junior-Senior Colloquium (4) W. Specialized courses dealing with primary sources; required reports and papers. Each colloquium reflects the instructor's intellectual interest and is conducted as a discussion group. Limited to 15 students. Open to upper-division East Asian Cultures, Chinese Studies, Japanese Language and Literature, Korean Literature and Culture majors only. May be taken for credit three times as topics vary. (VIII)

192 Junior-Senior Seminar (4). Specialized courses that require analysis of a literary or cultural topic or problem through research and writing of two short and one long original research papers for a total of 4,000 words minimum. Each seminar is offered in a quarter following East Asian Languages and Literatures 190 and is related to the colloquium's subject. Prerequisite: East Asian Languages and Literatures 190 in preceding quarter or consent of instructor; satisfactory completion of the lower-division writing requirement. May be taken for credit three times as topics vary. (VIII)

198 Directed Group Study (1 to 4). Directed group study on special topics. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

199 Independent Study (1 to 4). Investigation of special topics through directed reading in translation. Paper required. Prerequisite: consent of instructor. May be taken for credit for a total of 12 units as topics vary.

GRADUATE

216 Topics in East Asian Religions (4). Selected topics in the religions of East Asia, e.g., Buddhism, Daoism, Shintô, Islam, shamanism. May be taken for credit three times as topics vary.

220 Topics in East Asian Cultural Studies (4). Seminar, with topics varying from year to year. Research paper required. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

225 Topics in East Asian Applied Linguistics (4). In-depth examination of selected topics in applied linguistics, with a particular emphasis on language acquisition and language pedagogy. May be taken for credit three times as topics vary. Concurrent with East Asian Languages and Literatures 125.

260 Topics in East Asian Cinema (4). An examination of the possibilities of East Asian cinematic narrative. Possible topics: cinematic history; cinema in popular culture; comparisons with literary texts; major auteurs. Emphasis on technical as well as on thematic aspects. Includes readings in film theory. Prerequisite: East Asian Languages and Literatures 160 or consent of instructor. May be repeated for credit as topics vary.

290 Independent Study (2 to 4). Directed research on topic determined in consultation with faculty member. A term paper or project is required. May be counted toward course requirements for the Ph.D. May be repeated for credit.

299 Dissertation Research (4 to 12). For students who have been admitted to doctoral candidacy. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

399 University Teaching (4). Limited to Teaching Assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

Courses in Chinese

(Schedule of Classes designation: Chinese)

UNDERGRADUATE

1A-B-C Fundamentals of Mandarin Chinese (5-5-5) F, W, S. Students develop basic linguistic and cultural competence in Chinese with emphasis on communication skills of listening, speaking, reading, and writing. Taught in Mandarin Chinese using Pinyin romanization system and both traditional and simplified forms of Chinese characters. Placement test required. Prerequisite for 1A: placement into 1A or equivalent; for 1B: Chinese 1A with a grade of C or better, or equivalent; for 1C: Chinese 1B or S1AB with a grade of C or better, or equivalent. Chinese 1A-B-C and Chinese S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of Mandarin Chinese (7.5-7.5) Summer. First-year Mandarin Chinese in an intensive setting. Equivalent of Chinese 1A-B-C during academic year. Placement test required. Prerequisite for S1AB: placement into 1A or equivalent; for S1BC: Chinese S1AB or 1B with a grade of C or better, or equivalent. If a student already received credit for 1B, only five units will be awarded. Chinese S1AB-BC and Chinese 1A-B-C may not both be taken for credit. (S1BC: VI)

2A-B-C Intermediate Mandarin Chinese (5-5-5) F, W, S. Both authentic and pedagogically prepared materials are used to further develop students' ability to communicate in culturally, socially, and linguistically appropriate manners. Taught in Chinese using Pinyin romanization system and both traditional and simplified forms of Chinese. Placement test required. Prerequisite for 2A: Chinese 1C or S1BC with a grade of C or better, or equivalent; for 2B: Chinese 2A with a grade of C or better, or equivalent; for 2C: Chinese 2B with a grade of C or better, or equivalent. (VIII)

3A-B-C Advanced Mandarin Chinese (4-4-4) F, W, S. A continuation of Chinese 2A-B-C emphasizing conceptualization, self-expression, and academic skills in Chinese. Authentic texts from modern Chinese prose and newspapers are used. Taught in Mandarin Chinese using both traditional and simplified forms of Chinese characters. Placement test required. Prerequisite for 3A: Chinese 2C with a grade of C or better, or equivalent; for 3B: Chinese 3A with a grade of C or better, or equivalent; for 3C: Chinese 3B with a grade of C or better, or equivalent. (VIII)

100A-B-C Classical Chinese (4-4-4) F, W, S. Introduction to classical Chinese grammar and vocabulary with emphasis on reading basic texts. Prerequisite: Chinese 3C, Japanese 3C, Korean 3C, or the equivalent. (VIII)

101A, B, C Fourth-Year Mandarin Chinese (4, 4, 4) F, W, S. Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of specific literary texts. Prerequisite: Chinese 3C or equivalent. (VIII)

115 Chinese Literature: Advanced Texts (4). Designed for students with near-fluency in reading Chinese. Readings may include both literary and philosophical work by important writers, but the emphasis is on literary texts and writings that interpret those texts. Prerequisites: Chinese 101A, B, C or consent of instructor. May be taken for credit three times as topic varies. (VIII)

199 Independent Study (1 to 4). Investigation of special topics through directed reading in Chinese. Paper required. Prerequisite: consent of instructor. May be taken for credit for a total of 12 units.

GRADUATE

201 Readings in Traditional Chinese Narrative and Prose (4). Close reading of selected premodern prose texts such as historical narratives, novels, short stories, and essays. Prerequisite: Chinese 101C or equivalent. May be repeated for credit as topics vary.

202 Readings in Traditional Chinese Poetry (4). Close readings of selected premodern poetic texts. Prerequisite: Chinese 100C or equivalent. May be repeated for credit as topics vary.

203 Readings in Modern Chinese Literature (4). Close readings of selected modern literary texts. Prerequisite: Chinese 101C or equivalent. May be repeated for credit as topics vary.

204 Readings in Chinese Literary and Cultural Theory (4). Close readings of selected texts in premodern criticism and theory. Prerequisite: Chinese 100C or equivalent. May be repeated for credit as topics vary.

211A-B Studies in Traditional Chinese Narrative and Prose (4-4). Seminar, with topics varying from year to year. Research paper required. Prerequisite: Chinese 100C or equivalent. May be repeated for credit as topics vary.

212A-B Studies in Traditional Chinese Poetry (4-4). Seminar, with topics varying from year to year. Research paper required. Prerequisite: Chinese 100C or equivalent. May be repeated for credit as topics vary.

213A-B Studies in Modern Chinese Literature (4-4). Seminar, with topics varying from year to year. Research paper required. Prerequisite: Chinese 101C or equivalent. May be repeated for credit as topics vary.

214 Studies in Chinese Literature and Cultural Theory (4). Seminar, with topics varying from year to year. Research paper required. Prerequisite: Chinese 100C and/or Chinese 101C, as specified. May be repeated for credit as topics vary.

230 Topics in Chinese Literature and Culture (4). Seminar, with topics varying from year to year. Research paper required. Prerequisite: Chinese 101 or equivalent. May be repeated for credit as topics vary.

290 Independent Study (4). Directed research on topic determined in consultation with faculty member. A term paper or project is required. May be repeated for credit.

299 Dissertation Research (4 to 12). For students who have been admitted to doctoral candidacy. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

Courses in Japanese

(Schedule of Classes designation: Japanese)

UNDERGRADUATE

1A-B-C Fundamental Japanese (5-5-5) F, W, S. Students develop listening, speaking, reading, and writing abilities in Japanese for meaningful communication. Content deals with daily life, society, and culture in Japan. Approximately 180 kanji (Chinese characters) are introduced in addition to the hiragana and katakana orthography. Placement test required. Prerequisite for 1A: placement into 1A or equivalent; for 1B: Japanese 1A with a grade of C or better, or equivalent; for 1C: Japanese 1B or S1AB with a grade of C or better, or equivalent. Japanese 1A-B-C and Japanese S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of Japanese (7.5-7.5) Summer. First-year Japanese in an intensified form. Same as Japanese 1A-B-C during academic year. Placement test required. Prerequisite for S1AB: placement into 1A or equivalent; for S1BC: Japanese S1AB or 1B with a grade of C or better, or equivalent. If a student already received credit for 1B, only five units will be awarded for S1BC. Japanese S1AB-BC and Japanese 1A-B-C may not both be taken for credit. (S1BC: VI)

2A-B-C Intermediate Japanese (5-5-5) F, W, S. Students develop listening, speaking, reading, and writing abilities in Japanese for meaningful communication. Content deals with daily life, society, and culture, including social issues in Japan. Approximately 180 kanji (Chinese characters) in addition to the 180 characters learned in 1A-B-C are introduced. Placement test required. Prerequisite for 2A: Japanese 1C or S1BC with a grade of C or better, or equivalent; for 2B: Japanese 2A with a grade of C or better, or equivalent; for 2C: Japanese 2B or S2AB with a grade of C or better, or equivalent. Japanese 2A-B-C and Japanese S2AB-BC may not both be taken for credit. (VIII)

S2AB-BC Intermediate Japanese (7.5-7.5) Summer. Second-year Japanese in a intensified form. Same as Japanese 2A-B-C during the academic year. Prerequisite for S2AB: Japanese S1BC or 1C with a grade of C or better, or equivalent; for S2BC: Japanese S2AB or 2B with a grade of C or better, or equivalent. If a student already received credit for 2B, only five units will be awarded for 2BC. Japanese S2AB-BC and Japanese 2A-B-C may not both be taken for credit. (VIII)

3A-B-C Advanced Japanese (4-4-4) F, W, S. Students are taught to conceptualize in Japanese as they learn to understand, read, write, and speak. Authentic Japanese texts are used. Approximately 360 kanji (Chinese characters) in addition to the 270 characters learned in 1A-B-C and 2A-B-C are introduced. Placement test required. Prerequisite for 3A: Japanese 2C or S2BC with a grade of C or better, or equivalent; for 3B: Japanese 3A with a grade of C or better, or equivalent; for 3C: Japanese 3B with a grade of C or better, or equivalent. (VIII)

100A-B Classical Japanese (4-4) F, W or W, S. Introduction to classical Japanese grammar and vocabulary with emphasis on reading and analysis of basic texts. Prerequisite for 100A: Japanese 3C with a grade of C or better, or equivalent, or consent of instructor; for 100B: Japanese 100A with a grade of C or better, or equivalent, or consent of instructor. (VIII)

101A, B, C Fourth-Year Japanese (4, 4, 4) F, W, S. Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of texts. Prerequisite: Japanese 3C or equivalent. (VIII)

115 Japanese Literature: Advanced Texts (4). Designed for students with near-fluency in reading Japanese. Texts include both fiction and nonfiction by important writers, and may be supplemented and contextualized where needed by literary criticism and cultural-studies texts in English. Prerequisites: Japanese 101A, B, C or consent of instructor. May be taken for credit three times as topic varies. (VIII)

180 Topics in Japanese Literature (4). Special topics through directed reading in Japanese. Paper required. Prerequisite: consent of instructor. May be taken for credit three times as topic varies. (VIII)

199 Independent Study (1 to 4). Investigation of special topics through directed reading in Japanese. Paper required. May be repeated for credit provided topic varies. Prerequisite: consent of instructor. May be taken for credit for a total of 12 units.

GRADUATE

201 Readings in Traditional Japanese Prose (4). Close reading of selected premodern prose texts, including tales, journals, travel journals, essays. Prerequisite: Japanese 100B or equivalent. May be repeated for credit as topics vary.

202 Readings in Traditional Japanese Poetry or Drama (4). Close reading of selected premodern poetic or dramatic texts. Prerequisite: Japanese 100B or equivalent. May be repeated for credit as topics vary.

203 Readings in Modern Japanese Literature (4). Texts include both fiction and nonfiction by important writers, and may be supplemented where needed by literary criticism and cultural-studies texts in English. Prerequisite: Japanese 101C or equivalent, or consent of instructor. May be repeated for credit as topics vary.

204 Readings in Traditional Japanese Literary and Cultural Theory (4). Close reading of selected texts involving literary criticism and/or aesthetics. Prerequisite: Japanese 100B or equivalent. May be repeated for credit as topics vary.

205 Readings in Japanese Religion (4). Close readings of selected Japanese religious texts. Prerequisite: Japanese 101C or equivalent, or consent of instructor. May be repeated for credit as topics vary.

211A-B Studies in Traditional Japanese Prose (4-4). Seminar, with topics varying from year to year. Research paper required. Prerequisite: Japanese 100B or equivalent. May be repeated for credit as topics vary.

212A-B Studies in Traditional Japanese Poetry or Drama (4-4). Seminar, with topics varying from year to year. Research paper required. Prerequisite: Japanese 100B or equivalent. May be repeated for credit as topics vary.

213A-B Studies in Modern Japanese Literature (4-4). A two-quarter, in-depth look at a major author and/or issue in modern Japanese literature. Seminar format. The first quarter is devoted to reading of the requisite texts; the second quarter, to the writing of a research paper. Prerequisite: Japanese 203 or consent of instructor. May be repeated for credit as topics vary.

214 Studies in Japanese Literary and Cultural Theory (4). Seminar, with topics varying from year to year. Research paper required. May be repeated for credit as topics vary.

215 Studies in Japanese Religion (4). Seminar, with topics varying from year to year. Research paper required. Prerequisite: Japanese 101C or equivalent, or consent of instructor. May be repeated for credit as topics vary.

230 Topics in Japanese Literature and Culture (4). A topical study that addresses important issues in Japanese literature and culture. May focus on a specific writer or writers, or on a specific issue or set of related issues. Prerequisite: Japanese 203 or consent of instructor. May be repeated for credit as topics vary.

290 Independent Study (4). Directed research on topic determined in consultation with faculty member. A term paper or project is required. May be repeated for credit.

299 Dissertation Research (4 to 12). For students who have been admitted to doctoral candidacy. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

Courses in Korean

(*Schedule of Classes* designation: Korean)

UNDERGRADUATE

1A-B-C Fundamentals of Korean (5-5-5) F, W, S. Natural approach with emphasis on the fundamental skills of listening, reading, and writing. Conducted in both English and Korean. Placement test required. Prerequisite for 1A: placement into 1A or equivalent; for 1B: Korean 1A with a grade of C or better, or equivalent; for 1C: Korean 1B or S1AB with a grade of C or better, or equivalent. Korean 1A-B-C and Korean S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of Korean (7.5-7.5) Summer. First-year Korean in an intensified form. Same as Korean 1A-B-C during academic year. Placement test required. Prerequisite for S1AB: placement into 1A, or equivalent; for S1BC: S1AB or Korean 1B with a grade of C or better, or equivalent. If a student already received credit for 1B, only five units will be awarded for 1BC. Korean S1AB-BC and Korean 1A-B-C may not both be taken for credit. (S1BC: VI)

2A-B-C Intermediate Korean (5-5-5) F, W, S. Designed to develop writing and reading skills as well as communicative skills in authentic situations. Students also introduced to aspects of Korean culture as related to lesson topics. Basic Chinese characters are introduced. Placement test required. Prerequisite for 2A: Korean 1C or S1BC with a grade of C or better, or equivalent; for 2B: Korean 2A with a grade of C or better, or equivalent; for 2C: Korean 2B with a grade of C or better, or equivalent. (VIII)

3A-B-C Advanced Korean (4-4-4) F, W, S. Focuses on developing advanced reading, writing, and translation skills. Placement test required. Prerequisite for 3A: Korean 2C with a grade of C or better, or equivalent; for 3B: Korean 3A with a grade of C or better, or equivalent; for 3C: Korean 3B with a grade of C or better, or equivalent. (VIII)

101A, B, C Fourth-Year Korean (4, 4, 4). Continued emphasis on comprehension, grammar, and proficiency in reading, composition, and conversation through intensive study and analysis of a variety of modern texts. Prerequisite: Korean 3C or equivalent. (VIII)

115 Korean Literature: Advanced Texts (4). Designed for students with near-fluency in reading Korean. Readings include modern Korean literary works (poetry, prose, and drama) by important writers. Emphasis is on the interpretation of the texts and writings that interpret those texts in the original language. Prerequisites: Korean 101A, B, C or consent of instructor. May be taken for credit three times as topics vary. (VIII)

180 Topics in Korean Literature (4). Special topics through directed readings in Korean. Paper required. Prerequisite: consent of instructor. May be taken for credit three times as topic varies. (VIII)

199 Independent Study (1 to 4). Investigation of special topics through directed reading in Korean. Paper required. Prerequisite: consent of instructor. May be taken for credit for a total of 12 units.

NOTE: For Vietnamese language courses, see Humanities Language Learning Program, page 318.

DEPARTMENT OF ENGLISH

435 Humanities Instructional Building; (949) 824-6712
James Steintrager, **Department Chair**

Faculty

Jonathan Alexander, Ph.D. Louisiana State University, *UCI Chancellor's Fellow, Campus Writing Coordinator, and Professor of English and Education* (writing studies, composition/rhetoric, new media studies, sexuality studies)

Elizabeth Allen, Ph.D. University of Michigan, *Associate Professor of English* (medieval literature and culture)

Stephen A. Barney, Ph.D. Harvard University, *Professor Emeritus of English* (medieval literature and culture, allegory)

Jami Bartlett, Ph.D. University of California, Berkeley, *Assistant Professor of English* (narrative theory, the novel, literature and philosophy)

- Carol Burke, Ph.D. University of Maryland, *Professor of English* (folklore, cultural studies, creative nonfiction)
- James L. Calderwood, Ph.D. University of Washington, *Professor Emeritus of English* (drama, Shakespeare)
- Ronald F. Carlson, M.A. University of Utah, *Director of Fiction, Programs in Writing, and Professor of English and Creative Writing* (fiction writing, the short story, twentieth-century American literature)
- Jerome Christensen, Ph.D. Cornell University, *Professor of English* (British Romanticism, film studies)
- Michael P. Clark, Ph.D. University of California, Irvine, *Vice Provost for Academic Planning and Professor of English* (Colonial American literature, critical theory)
- Miles Corwin, M.A. University of Missouri School of Journalism, *Associate Professor of English* (immersion journalism, covering the criminal justice system and law enforcement, true crime, inner city education, affirmative action)
- Rebecca Davis, Ph.D. University of Notre Dame, *Assistant Professor of English* (Old and Middle English literature, Piers Plowman, medieval religious culture, women's writing, medieval philosophy, representations of nature and animals in literature)
- Robert Folkenflik, Ph.D. Cornell University, *Edward A. Dickson Professor Emeritus of English* (eighteenth-century, novel, biography, and autobiography)
- Linda Georgianna, Ph.D. Columbia University, *Professor Emerita of English* (medieval literature and culture)
- Richard Godden, Ph.D. University of Kent, *Professor of English* (twentieth-century American literature, literature of the American South, the relation between economic and literary forms)
- Daniel M. Gross, Ph.D. University of California, Berkeley, *Director of Composition and Associate Professor of English* (history and theory of rhetoric, early modern literature and culture, Heidegger and rhetoric)
- Erika Hayasaki, B.A. University of Illinois, Urbana-Champaign, *Assistant Professor of English* (literary journalism, narrative nonfiction, immersion journalism, youth culture, crime, poverty, education, urban affairs, death)
- Rebecca Helfer, Ph.D. Columbia University, *Assistant Professor of English* (early modern literature and culture, Spenser, rhetoric)
- Andrea K. Henderson, Ph.D. University of Pennsylvania, *Professor of English* (romantic literature, poetics)
- John Hollowell, Ph.D. University of Michigan, *Senior Lecturer with Security of Employment Emeritus* (rhetorical theory, teaching of composition, American literature)
- Laura H. Y. Kang, Ph.D. University California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English* (feminist epistemologies and theories, cultural studies, ethnic studies)
- Ketu H. Katrak, Ph.D. Bryn Mawr College, *Professor of Drama, Humanities, Comparative Literature, and English* (Asian American literature, postcolonial literature)
- Arlene R. Keizer, Ph.D. University of California, Berkeley, *Director of the Culture and Theory Ph.D. Program and Associate Professor of English and African American Studies* (African American and Caribbean literature and culture, critical race and ethnic studies, feminist theory)
- Michelle Latiolais, M.F.A. University of California, Irvine, *Professor of English and Creative Writing* (creative writing, fiction)
- Rodrigo Lazo, Ph.D. University of Maryland, *Associate Professor of English* (Latino studies, American ethnic and minority literature, Cuba and Cuban American studies)
- James Kyung-Jin Lee, Ph.D. University of California, Los Angeles, *Department Chair and Associate Professor of Asian American Studies, and Associate Professor of English* (Asian American literature, urban studies, modern social movements, U.S. political economy)
- Jayne E. Lewis, Ph.D. Princeton University, *Professor of English* (Restoration and eighteenth-century British literature)
- Julia Reinhard Lupton, Ph.D. Yale University, *Director of the Jewish Studies Minor and Professor of English, Comparative Literature, and Education* (Renaissance literature, literature and psychology)
- Juliet Flower MacCannell, Ph.D. Cornell University, *Professor Emerita of English* (eighteenth-century French literature, modern semiotics, comparative literature)
- Steven Mailloux, Ph.D. University of Southern California, *Professor Emeritus of English* (rhetoric, critical theory, American literature, law and literature)
- James McMichael, Ph.D. Stanford University, *Director of Poetry, Programs in Writing, and Professor of English and Creative Writing* (contemporary poetry, poetry writing, prosody, Joyce)
- Jack Miles, Ph.D. Harvard University, *UCI Distinguished Professor of English* (Biblical studies; religion and literature; religion and science; religion and international relations, especially in the Middle East)
- J. Hillis Miller, Ph.D. Harvard University, *UCI Distinguished Research Professor of English and Comparative Literature* (Victorian literature, critical theory)
- Robert L. Montgomery, Ph.D. Harvard University, *Professor Emeritus of English* (Renaissance literature, critical theory, comparative literature)
- Jane O. Newman, Ph.D. Princeton University, *Professor of Comparative Literature and English* (sixteenth- and seventeenth-century German literature, contemporary theory and criticism, feminism)
- Robert Newsom, Ph.D. Columbia University, *Professor Emeritus of English* (Victorian literature, theory of fictions)
- Ngugi wa Thiong'o, *UCI Distinguished Professor of English and Comparative Literature* (African and Caribbean literatures, theater and film, performance studies, cultural and political theory)
- Margot Norris, Ph.D. State University of New York, Buffalo, *UCI Chancellor's Professor of English and Comparative Literature* (modern Irish, British, American and continental modernism; literature and war)
- Laura O'Connor, Ph.D. Columbia University, *Associate Professor of English and Comparative Literature* (British and American modernism, Irish literary studies, postcolonial theory, poetics)
- Robert L. Peters, Ph.D. University of Wisconsin, *Professor Emeritus of English* (Victorian literature, contemporary poetry)
- R. Radhakrishnan, Ph.D. State University of New York, Binghamton, *UCI Chancellor's Professor of English and Comparative Literature* (postcolonial literature and theory, critical theory, poststructuralism, democracy and minority discourse, nationalisms and diasporas, globalization, feminisms, transnationalism: race, gender, ethnicity)
- Barbara L. Reed, Ph.D. Indiana University, *Senior Lecturer with Security of Employment Emerita, English* (American literature, children's literature)
- Hugh Roberts, Ph.D. McGill University, *Associate Professor of English* (Romantic literature, eighteenth-century literature, Victorian poetry, literary theory, New Zealand literature)
- Michael Ryan, Ph.D. University of Iowa, *Professor of English and Creative Writing* (American literature, creative writing, poetry, poetics)
- Edgar T. Schell, Ph.D. University of California, Berkeley, *Professor Emeritus of English* (medieval and Renaissance literature)
- Gabrielle Schwab, Ph.D. University of Konstanz, *UCI Chancellor's Professor of Comparative Literature and English* (modern literature, critical theory, psychoanalysis)
- Barry Siegel, M.S. Columbia University Graduate School of Journalism, *Director of Literary Journalism and Professor of English* (literary journalism and creative nonfiction)
- Victoria Silver, Ph.D. University of California, Los Angeles, *Director of the Summer M.A. Program and Associate Professor of English* (early modern literature, history and theory of rhetoric, philosophy and literature, religious studies)
- James Steintrager, Ph.D. Columbia University, *Department Chair of English and Professor of English and Comparative Literature* (comparative literature, eighteenth-century French, German, and English literature and aesthetics)
- Michael Szalay, Ph.D. The Johns Hopkins University, *Associate Professor of English* (twentieth-century American literature, film and media studies, corporate culture)
- Brook Thomas, Ph.D. University of California, Santa Barbara, *UCI Chancellor's Professor of English* (American literature, literature and law)
- Harold Toliver, Ph.D. University of Washington, *Professor Emeritus of English* (Renaissance and seventeenth-century literature, theory of genre)
- Irene Tucker, Ph.D. University of California, Berkeley, *Associate Professor of English* (Victorian literature, history and theory of the novel, history of medicine and technology, Hebrew literature, literature and philosophy)
- Ann J. Van Sant, Ph.D. University of California, Berkeley, *Associate Professor of English* (seventeenth- and eighteenth-century literature, eighteenth-century novel, women and fiction, satire)
- Andrzej Warminski, Ph.D. Yale University, *Professor of English and French* (Romanticism, critical theory)
- Henry Weinstein, J.D. University of California, Berkeley, *Senior Lecturer with Potential Security of Employment, Law and English* (media law, literary journalism)
- Amy Wilentz, B.A. Harvard College, *Professor of English* (literary journalism, creative nonfiction, developing nations' journalism, opinion writing)
- Geoffrey Wolff, Novelist and Biographer, *Professor Emeritus of English and Creative Writing* (creative writing, fiction, biography)

Faculty in the Department of English include literary theorists and literary historians, rhetoricians, fiction writers, and poets. Students in the Department thus have the opportunity to explore a variety of models for literary analysis while examining the nature and value of literature. English majors learn to interpret written works with the tools of rhetorical and culture analysis; they become familiar with English and American literary history, as well as non-Anglo-American literatures in English; and they are introduced to the history of criticism and theory. At the same time, they learn to do research using both traditional and electronic resources, and they gain practice at producing effective professional writing, whether critical, journalistic, fictional, or poetic.

CAREERS FOR THE ENGLISH OR LITERARY JOURNALISM MAJOR

The study of literature helps students express their ideas clearly, do independent research, and think analytically and imaginatively. These capabilities will help qualify majors for careers in education, law, technical writing, communications, journalism, public relations, business, and management. Departmental advisors encourage their students to investigate various career options before completing their undergraduate educations.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

Undergraduate Program

All of the Department's areas of study emphasize a variety of critical approaches in the reading and criticism of literature. Two majors, as well as an emphasis in Creative Writing, are offered.

English. This major seeks to introduce students to the entire range of literatures written in English, from British and American to African, Asian, and Australasian literatures. The major emphasizes the differences among historical periods and various genres, and encourages exploration of a broad range of literary theories. It also offers students the opportunity to do significant work in Creative Writing.

Creative Writing This emphasis within the English major provides a setting in which students write original work and subject it to critique in peer workshops led by instructors who are themselves writers. The disciplines of close reading and practical criticism are taken up in the lecture classes.

Literary Journalism. This major was created to meet the needs of a growing number of students who wish to read, study, and write nonfiction prose that has transcended the limits of daily journalism. This is prose that has evolved into a distinct branch of literature, prose that adopts the aims and techniques of the finest fiction. The program provides majors with a solid foundation in nonfiction writing and an equally solid background in areas such as literary history, which together will help make students more informed writers.

Literary Journalism majors take three intensive writing seminars, and are expected to develop a portfolio of work by graduation which they can present as evidence of their skill for purposes of employment or future education. At the same time, majors are asked to take a comprehensive look at the theory, history, and context of literary journalism. Among other forms, they study and write narratives, memoirs, profiles, histories, and personal essays, in subject areas as varied as science, politics, justice, travel, sports, food, and popular culture.

While it differs from an applied journalism major that focuses primarily on newspaper writing, the major in Literary Journalism is excellent preparation for students planning to enter graduate programs in journalism, as well as for those interested in the many careers requiring sophisticated writing and communication skills.

REQUIREMENTS FOR THE B.A. DEGREE

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Departmental Requirements for the English Major

- A. English 28A (or 28D), 28B, and 28C (or 28E).
- B. English 100, 101 (taken in satisfaction of upper-division writing).
- C. English 102A, 102B, 102C, 102D, 105, 106.
- D. At least three more Departmental (English, Literary Journalism, Writing) courses numbered 102 or above, excluding English 150, Writing 139, or Writing 179. An upper-division foreign literature-in-translation course may be substituted for one of the three courses.*

E. Completion of one of the following:

1. Two years of work in a single acceptable modern foreign language (through 2C) or equivalent, plus *either* one course in a foreign literature in which texts are read in the original language *or* two upper-division courses in foreign literatures in translation.*
2. Greek or Latin 1A-B-C and *either* 100A and two 103s, *or* 100B and two 104s.
3. Chinese 3C, Korean 3C, Japanese 3C, or Vietnamese 3C.
NOTE: If a student is exempted from 3C based on examination or equivalent, a course in which texts are read in Chinese, Korean, Japanese, or Vietnamese is required.

* Foreign literature-in-translation courses are offered in Classics, Comparative Literature, East Asian Languages and Literatures, French and Italian, German, and Spanish and Portuguese. Chinese 180, Comparative Literature 150 and 160, East Asian Languages and Literatures 160, Film and Media Studies 160, French 160, German 160, Japanese 180, Korean 180, and Spanish 160 when appropriate, also qualify as foreign language literature-in-translation courses.

Emphasis in Creative Writing: English 100, Writing 101 (NOTE: Writing 101 may be substituted for English 101 in the major requirement); completion of a portfolio; specific course work (below) in either Poetry or Fiction. A further, optional course, Writing 115, may be taken as a tutorial.

Poetry: English 28D, Writing 30, 90; students may additionally take Writing 111 after submitting work in advance.

Fiction: English 28E, Writing 31, 91; students may additionally take Writing 110 after submitting work in advance.

Residence Requirement for the English Major: English 100, 101, two 102s, and 106 must be completed successfully at UCI.

Departmental Requirements for the English Minor

Three courses selected from English 28A, 28B, 28C, 28D, 28E; and at least five Departmental (English, Literary Journalism, Writing) courses numbered 102 or higher (excluding Writing 139), although two courses from the following may be substituted: English 100, English 101, Writing 101.

Residence Requirement for the English Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the department undergraduate chair.

Departmental Requirements for the Literary Journalism Major

- A. Literary Journalism 20, 21.
- B. One course from the English 28 series*.
- C. English 100, 105.
- D. Literary Journalism 101A, 101B (three times, on various topics).
- E. At least three more Departmental courses numbered 102 or above (excluding English 150, Writing 139, or Writing 179), for one of which may be substituted an upper-division foreign literature-in-translation course offered in the School of Humanities (that is, requisite courses in Classics, Comparative Literature, East Asian Languages and Literatures, French and Italian, German, Spanish and Portuguese).
- F. Two upper-division History courses in a single regional or thematic focus area.

* Students can substitute Comparative Literature 60A or 60C for any one English 28 course.

Residence Requirement for the Literary Journalism Major: Literary Journalism 20, 21, 101A, three 101B courses, and English 100 must be completed successfully at UCI.

PLANNING A PROGRAM OF STUDY

Students should plan coherent programs of study with their faculty advisors, including undergraduate seminars, workshops and seminars in writing (for students choosing a Literary Journalism major or Creative Writing emphasis), and courses in allied areas outside the Department. It is possible to combine a cluster of courses in literature with other majors in the sciences and social sciences, and to use an English or Literary Journalism major as preprofessional training in government, law, or medicine. Students who wish advice in planning such programs should consult both the Department and people in their prospective professional areas.

A student who intends to continue with graduate work is urged to study a second foreign language before graduation.

Students are also encouraged to take advantage of the opportunity to study abroad through the Education Abroad Program. See the Study Abroad Center section of the *Catalogue* or an academic counselor for additional information.

Graduate Program

The Department's three principal undergraduate offerings—English and American Literature, the English major with a Creative Writing emphasis, and Literary Journalism—are reflected in the graduate programs, which at this level, may also involve collaboration with the Department of Comparative Literature: M.A. and Ph.D. in English, M.F.A. in English (fiction/poetry), and an emphasis in Creative Nonfiction within the Ph.D. degree in English. The faculty is particularly equipped to guide students with special interests in criticism and theory, an area which candidates for the Ph.D. in English may stress by adding the Schoolwide Critical Theory emphasis. Applicants for graduate degrees in English must submit scores for the Graduate Record Examination (GRE) including the Subject Test in Literature in English. Ordinarily students are not admitted to the English program unless they plan to continue, and are qualified to continue, to the degree of Ph.D. Students are admitted to the M.F.A. program chiefly on the basis of submitted creative work.

Specific requirements for the graduate degrees will be established by consultation between members of the faculty and the candidate. First-year graduate students or candidates for the Master of Fine Arts in English (fiction/poetry) plan a program with an assigned advisor; candidates for the Ph.D. plan with an advisor and

three-person committee. At the time of the M.A. examination, the Graduate Committee evaluates the student's graduate career up to that point and offers advice about future prospects. Candidates for literary degrees are also encouraged to study philosophy, history, foreign languages and literatures, and the fine arts.

Only in exceptional circumstances will students be permitted to undertake programs of less than six full courses during the academic year. The normal expectation is enrollment in three courses each quarter; Teaching Assistants take two courses in addition to earning credit for University Teaching. Students who are not teaching should be able to complete course work in two years. The Ph.D. qualifying examination should be taken within a couple of quarters after courses are finished. The normative time for completion of the Ph.D. in English is seven years.

The Murray Krieger Fellowship in Literary Theory is intended for an outstanding entering graduate student who is pursuing the Ph.D. in English or Comparative Literature and who demonstrates a primary interest in theory as theory relates to literary texts. A range of other fellowships is also available to students in the Department.

Emphasis in Creative Nonfiction

Students admitted to the emphasis in Creative Nonfiction must meet all course, language, and examination requirements for the Ph.D. in English. Their course work must include (a) three writing workshops in nonfiction; (b) three courses in nonfictional literature or rhetoric; and (c) if needed for the projected dissertation, one course outside the Department. Students must also conduct a dissertation defense.

School Emphases

Schoolwide graduate emphases are available in Asian American Studies, Critical Theory, and Feminist Studies. Refer to the appropriate sections of the *Catalogue* for information.

ENGLISH

Master of Arts in English

Each candidate for the M.A. will be assigned to a graduate advisor who will supervise the student's program. The M.A. plan of study includes (1) the completion of course work, as advised, for three quarters or the equivalent; (2) demonstrated proficiency in reading a designated foreign language, modern or classical; and (3) the submission of materials (including a statement about work accomplished and plans for future study, and a sample essay) to the Graduate Committee, who will review and assess the student's progress, recommend whether further study toward the Ph.D. is advisable, and, if so, give advice about areas for further study.

The Department of English sponsors a Summer M.A. Program in English designed for teachers and returning students. The M.A. degree in English is awarded to candidates who complete 32 units of graduate course work through two consecutive summers in the program and submit an acceptable Master's essay. Applicants from outside the State of California may apply for the program.

Master of Fine Arts in English

The Master of Fine Arts (M.F.A.) is a degree in fiction writing or poetry. The M.F.A. degree is normally conferred upon the completion of a three-year residence. Each quarter the candidate will be enrolled in either the poetry or fiction section of the Graduate Writers' Workshop, which will constitute two-thirds of a course load, the other course to be selected in consultation with the student's advisor. It is expected that M.F.A. candidates will complete at least one supervised teaching seminar.

In addition to course work, the candidate is required to present as a thesis an acceptable book-length manuscript of poetry or short stories or a novel. The normative time for completion of the M.F.A. is three years, and the maximum time permitted is four years.

Doctor of Philosophy in English

The program for the Ph.D. in English requires about two years of full-time enrollment in regular courses beyond the B.A.; proficiency in the reading of one acceptable foreign language, modern or classical; satisfactory performance on designated examinations; and the dissertation.

The languages acceptable depends upon the nature of the student's program as determined by the student's advisors. Reading competence in this language must be established in the first year of residence. Competence in the language required for the Ph.D. is verified through examination.

Upon completion of course work the student is examined in three areas: (1) a primary field; (2) a secondary field; and (3) theory and/or criticism.

Upon satisfactorily completing this Qualifying Examination, the student is admitted to candidacy for the degree. As soon after completion of the Qualifying Examination as is practical, the student presents a dissertation prospectus for the approval of the doctoral committee. The dissertation itself must also be approved by the committee, which may or may not require an oral examination on it. All work for the Ph.D. degree must be in courses limited to graduate students. The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is nine years.

Courses in English

(*Schedule of Classes* designation: English)

LOWER-DIVISION

Satisfaction of the UC Entry Level Writing requirement is a prerequisite for all departmental courses. See the Requirements for a Bachelor's Degree section for information on fulfilling this requirement.

Descriptions of the topics to be offered in the undergraduate literary courses during a given year are available in the Department office in the fall.

28 The Nature of Literature F, W, S, Summer. Reading of selected texts to explore the ways in which these modes formulate experience. Students write several short analytic papers in each course; 28D and 28E also require creative writing. Prerequisite: satisfactory completion of the lower-division writing requirement.

28A The Poetic Imagination (4). (IV)

28B Comic and Tragic Vision (4). (IV)

28C Realism and Romance (4). (IV)

28D The Craft of Poetry (4). (IV)

28E The Craft of Fiction (4). (IV)

UPPER-DIVISION

100 History of Literary Theory and Criticism from the Classics to the Present (4) F, W. A series of lectures and discussions beginning with a focus on ancient critics and literary theorists, and pursuing the issues they raise from medieval times to modernity. To be taken by English majors as early as possible in the junior year. Prerequisites: three courses from the English 28 series, or Literary Journalism 20, 21, and an English 28 course.

101 Undergraduate Seminar: Applications in Literary Theory and Criticism (4) F, W, S. Open to upper-division majors in English only. Sections limited to 20 students. Each instructor defines a theoretical, critical, or conceptual topic (e.g., theme, approach, genre) and explores it through an emphasis on literary texts. To be taken as early as possible in the junior year. Prerequisites: three courses from the English 28 series, or Literary Journalism 20, 21, and an English 28 course; and satisfactory completion of the lower-division writing requirement. May be taken for credit twice as topics vary.

102 English and American Literary History F, W, S, Summer. Studies of works representative of historical periods of literature in English, with attention to literary history, treating at a minimum more than one author and more

than one genre. Prerequisites: three courses from the English 28 series, or Literary Journalism 20, 21, and an English 28 course; English majors only. May be repeated for credit as topics vary.

102A Medieval and Renaissance Literature (4)

102B Restoration and Eighteenth-Century Literature (4)

102C Romantic and Nineteenth-Century Literature (4)

102D Twentieth-Century Literature (4)

103 Topics in Literature, Theory, and Criticism (4) F, W, S, Summer. A series of lectures on and discussions of announced topics in literary criticism, theory, history, genres, modes, major authors. Prerequisites: satisfactory completion of the lower-division writing requirement; upper-division standing recommended. May be repeated for credit as topics vary.

105 Multicultural Topics in Literatures in English (4) F, W, S. Focuses on ethnic or minority literatures, or treats issues related to race and cultural identity. Prerequisites: satisfactory completion of the lower-division writing requirement; upper-division standing recommended. May be repeated for credit as topics vary.

106 Advanced Seminar (4). Capstone course. Required of all English majors. Limited to 25 students. Focuses on a topic within the area of literatures in English. Provides intensive work on a single topic in the field of English in a discussion setting. Prerequisites: English 101 or Writing 101 and at least two upper-division English courses; English major and senior standing. May be taken for credit twice as topics vary.

150 Topics in Literature for Nonmajors (4). Major texts in English, American, and Comparative Literature explored for basic humanistic issues and themes, on announced topics. Primarily for upper-division students, but not requiring previous training in literature. May be repeated for credit as topics vary. May not be counted toward the upper-division requirements for majors.

160 English Language Cinema (4). Focuses on any one of the different cinematic traditions in the English-speaking world, from a historical theoretical, or comparative perspective. May be taken for credit twice as topics vary.

187 Selected Topics in English Linguistics (4)

198 Special Topics (4-4-4). Directed group study of selected topics. By consent, by arrangement.

199 Reading and Conference (1 to 4). To be taken only when the materials to be studied lie outside the normal run of departmental offerings, and when the student will have no formal chance to pursue the subject. Prerequisites: consent of the student's advisor, the instructor, and the Department Chair.

Courses in Literary Journalism

(*Schedule of Classes* designation: Lit Jrn)

LOWER-DIVISION

20 Introduction to Literary Journalism (4). Reading of selected texts to explore the ways in which literary journalism and related nonfiction modes formulate experience. Students complete a range of writing projects. Prerequisite: satisfactory completion of the lower-division writing requirement. *Literary Journalism majors have first consideration for enrollment.*

21 Reporting for Literary Journalism (4). Instruction and hands-on training in how to interview, report, research, and collect the types of information needed to write literary journalism. Prerequisite: satisfactory completion of the lower-division writing requirement. *Literary Journalism majors have first consideration for enrollment.*

UPPER-DIVISION

101A Studies in the History, Theory, and Ethics of Literary Journalism (4). Required of upper-division majors in Literary Journalism. Lectures and discussion on topics that explore the historical and theoretical dimensions of literary journalism, with particular emphasis on the evolution of ethics in the field. Prerequisites: Literary Journalism 20, 21, and one course from the English 28 or Comparative Literature 60 series or equivalent.

101B Literary Journalism Core Writing Seminar (4). Limited to 20 students. Writing seminars in announced specialized genres that students will both study and practice. Examples: "The Memoir"; "Review Writing"; "The Editorial"; "Writing Biography"; "The Profile"; "Political Writing." Prerequisites: satisfactory completion of the lower-division writing requirement and Literary Journalism 101A. May be taken for credit three times as topics vary. Students may enroll in a maximum of one 101B course per quarter.

103 Lectures on Topics in Literary Journalism (4). A series of lectures on, and discussions of, announced topics in literary journalism and the literature of fact. Examples: “Writing the Palate”; “Early Modern Women in the Public Sphere”; “Victorian Cultural Critics”; “Writing about War.” Prerequisites: satisfactory completion of the lower-division writing requirement; upper-division standing recommended. May be repeated for credit as topics vary.

198 Special Topics (4-4-4). Directed group study of selected topics. By consent, by arrangement.

199 Reading and Conference (1 to 4). To be taken only when the materials to be studied lie outside the normal run of departmental offerings, or when students have obtained internships at local publications. Prerequisites: consent of the student’s advisor, the instructor, and the Literary Journalism Program Director.

Courses in Writing

(*Schedule of Classes* designation: Writing)

LOWER-DIVISION

30 The Art of Writing: Poetry (4) F, W, S. Beginners’ workshop in the writing of poetry, evaluation of student manuscripts, and parallel readings. Prerequisite: satisfaction of the UC Entry Level Writing requirement. May be repeated once for credit with a different instructor. (I)

31 The Art of Writing: Prose Fiction (4) F, W, S. Beginners’ workshop in fiction writing, evaluation of student manuscripts, and parallel readings. Prerequisite: satisfaction of the UC Entry Level Writing requirement. May be repeated once for credit with a different instructor. (I)

37 Intensive Writing (6) F. Seminar, four and one-half hours. Offers instruction in the process of writing, rhetorical principles, and sentence-level mechanics. Provides guided practice in writing. Readings selected from current fiction and nonfiction; writing assignments require analysis of readings and demonstration of rhetorical principles. Successful completion of Writing 37 with letter grade of C or above satisfies the UC Entry Level Writing requirement and one quarter of the lower-division writing requirement. Students who earn a grade of C- or below must immediately enroll instead in Writing 39A, followed by 39B in a subsequent quarter. Students must satisfy the UC Entry Level Writing requirement before the beginning of their fourth quarter of residency. Prerequisite: students must have taken the Analytical Writing Placement Examination. Enrollment open only to recommended students. Only one course from Writing 37, 39A, or 39AP may be taken for credit. (I)

39A Introduction to Writing and Rhetoric (4) F, W, S, Summer. Seminar, three hours. Deals with the writing of expository essays, principles of rhetoric, paragraph development, and the fundamentals of sentence-level mechanics. Frequent papers, some exercises. Successful completion of Writing 39A with a letter grade of C or above satisfies the UC Entry Level Writing requirement. Students who earn a grade of C- or below must repeat the course, normally in the next quarter of residency. Prerequisite: students must have taken the UC Analytical Writing Placement Examination with placement in Writing 39A. Students must satisfy the UC Entry Level Writing requirement before the beginning of their fourth quarter of residency. Only one course from Writing 37, 39A, or 39AP may be taken for credit.

39AP Introduction to Writing and Rhetoric with Lab (4) F, W, S, Summer. Seminar, three hours; lab, one and one-half hours. Deals with the writing of expository essays, principles of rhetoric, paragraph development, and the fundamentals of sentence-level mechanics. Frequent papers, some exercises. Successful completion of Writing 39AP with a letter grade of C or above satisfies the UC Entry Level Writing requirement. Students who earn a grade of C- or below must repeat the course, normally in the next quarter of residency. Prerequisite: students must have taken the Analytical Writing Placement Examination with placement in Writing 39AP. Students also directed to take the Academic English Placement Test must have completed all Academic English courses required as a result of that test. Students must satisfy the UC Entry Level Writing requirement before the beginning of their fourth quarter of residency, or immediately following completion of their Academic English requirement. Only one course from Writing 37, 39A, or 39AP may be taken for credit.

39B Critical Reading and Rhetoric (4) F, W, S, Summer. Seminar, three hours. Guided practice in the critical reading and written analysis of both popular and academic prose. Readings selected from literary, academic, journalistic, and fictional genres; writing topics require rhetorical analysis of readings and demonstration of rhetorical principles in student writing. Prerequisite: satisfaction of the UC Entry Level Writing requirement. Writing 39B and Writing 37 may not both be taken for credit. (I)

39C Argument and Research (4) F, W, S, Summer. Guided writing practice in argumentation, logic, and inquiry. Readings are selected from current nonfiction and from materials students select from the University Library. Research strategies emphasized. Prerequisite: Writing 37 or 39B. (I)

90 Intermediate Poetry Writing (4). Intermediate workshop in the writing of poetry, evaluation of student manuscripts, and parallel readings. Prerequisite: Writing 30 or equivalent. May be repeated once for credit with a different instructor.

91 Intermediate Fiction Writing (4). Intermediate workshop in the writing of fiction, evaluation of student manuscripts, and parallel readings. Prerequisite: Writing 31 or equivalent. May be repeated once for credit with a different instructor.

UPPER-DIVISION

101 Undergraduate Seminar: Applications in Literary Theory and Criticism for Creative Writing (4). Substitute for English 101 for Creative Writing emphasis students. Prerequisites: English 100; satisfactory completion of the lower-division writing requirement; open to English and Literary Journalism majors only. May be repeated for credit as topics vary.

109 Nonfiction and Journalism (4). The course develops out of Writing 38 for students with special competence for advanced work in journalism. Prerequisite: consent of instructor.

110 Short Story Writing (4) F, W, S. Three-hour workshop in short fiction; discussion of student writing and of relevant literary texts. May be repeated once for credit toward graduation, but not repeated for credit within the major. Prerequisite: consent of instructor.

111 Poetry Writing (4) F, W, S. Three-hour advanced poetry writing workshop; discussion of student writing and of relevant literary texts. May be repeated once for credit toward graduation, but not repeated for credit within the major. Prerequisite: consent of instructor.

113 Novel Writing (4). Three-hour advanced workshop in fiction writing; discussion of student writing and of relevant literary texts. Prerequisite: consent of instructor.

115 Conference in Writing (4). Primarily for writing emphasis seniors. May be repeated for credit toward graduation but not repeated for credit within the major. Prerequisite: consent of instructor.

139 Advanced Expository Writing (4) F, W, S, Summer. Study of rhetorical techniques; practice in writing clear and effective prose. Several essays of varying lengths, totaling at least 4,000 words. Prerequisites: satisfactory completion of the lower-division writing requirement and upper-division standing. May not be counted toward the upper-division requirements for majors or minors. (I)

179 Advanced Composition for Teachers (4). Principles of formal composition and problems of teaching. Selecting handbooks and ancillary reading, marking papers, making assignments, and conducting workshops and tutorials. Prerequisites: satisfactory completion of the lower-division writing requirement and junior standing. Same as Education 179.

Graduate Courses

All graduate courses may be repeated when the topic varies. Descriptions of the topics to be treated in a given academic year are published by the Department in the fall. Enrollment in each graduate course requires the consent of the instructor. The courses are limited to registered graduate students, except for specially qualified fifth-year students seeking teaching credentials, who may enroll if they have first received permission from the Department’s Graduate Committee and if space permits.

In addition to the following courses, graduate students in the Department of English might find Humanities 200 (The Nature and Theory of History) and Humanities 291 (Interdisciplinary Topics) of special interest.

ENGLISH**210 Studies in Literary History (4) F, W, S**

215 Prospectus Workshop (2) F. Workshop for the writing of the graduate student prospectus for those who have completed their qualifying examinations. Topics covered and assignments completed culminate in a presentation of a draft of the prospectus in class. Biweekly discussions.

225 Studies in Literary Genres (4) F, W, S**230 Studies in Major Writers (4) F, W, S****235 Methods of Literary Scholarship (4)**

255 Graduate Workshop in Academic Publishing (4) F, W, S. Reading and critique of student-authored essays with the goal of producing a publishable essay. Instructor leads discussion, meets with students individually, and provides an introduction to appropriate venues for publication and the process of submission, peer review, and revision. Satisfactory/Unsatisfactory only.

290 Reading and Conference (4) F, W, S**291 Guided Reading Course (4)**

299 Dissertation Research (4 to 12) F, W, S. Satisfactory/Unsatisfactory only.

398 Rhetoric/Teaching of Composition (4) F, W. Readings, lectures, and internship designed to prepare graduate students to teach composition. Formal instruction in rhetoric and practical work in teaching methods and grading. Consent of instructor required.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

CRITICISM

220A, B Studies in Literary Theory and Its History (4, 4) F, W. Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English and American theorists. Same as Humanities 220A, B.

240 Advanced Theory Seminar (4) F, W, S**WRITING**

250A-B Graduate Writers' Workshop (Fiction) (4-4) F, W, S. Satisfactory/Unsatisfactory only.

250C Graduate Writers' Workshop (Poetry) (8) F, W, S. Satisfactory/Unsatisfactory only.

251A-B Writing in Conference (Fiction) (4-4) F, W, S. Satisfactory/Unsatisfactory only.

251C Writing in Conference (Poetry) (8) F, W, S. Satisfactory/Unsatisfactory only.

252 Workshop/Nonfiction (4). Reading and critique of student manuscripts in creative nonfiction. The instructor leads discussions and meets with students on an individual basis. Satisfactory/Unsatisfactory only. May be taken for credit three times.

Timothy Tackett, Ph.D. Stanford University, *Department of History*

Yuliya V. Tverdova, M.P.A. Binghamton University, *Department of Political Science*

Undergraduate Program

The program in European Studies provides undergraduates with an opportunity to study Europe from the vantage points of several disciplines in the humanities and social sciences. Because Europe is both a geographical place and an idea which changes throughout history, it has had different meanings at different times and in different places. The study of Europe thus requires an open, pluralistic, and interdisciplinary curriculum that takes a critical approach to the idea (or ideas) of Europe. The program provides a multidisciplinary view of Europe as a whole and of its historical, political, and cultural formation and global implications. It also provides a focus on a specific area of European experience that cuts across traditional disciplinary and national boundaries. Participation in an Education Abroad Program in a European country is strongly recommended for all European Studies majors.

Students may elect to emphasize one of the following areas: **Medieval Studies, Early Modern Europe (1450–1789), Modern Europe (1789–present), Encounters with the Non-European World, British Studies, French Studies, German Studies,**

Italian Studies, The Mediterranean World: Past and Present, Russian Studies, or Spanish/Portuguese Studies. As an alternative, **students may define their own emphasis** in consultation with a program advisor.

Because there are so many emphasis options within the major, students are required to consult the Director on a quarterly basis for academic advising.

CAREER OPPORTUNITIES

A degree in European Studies prepares its graduates to enter advanced degree programs in international business, history, law, and political science. The strong academic skills and professional orientation acquired by European Studies majors are necessary to pursue successful careers in such fields as international banking, law, journalism, management, public relations, publishing, and government service. Humanities graduates in general learn to express ideas clearly, do independent research, and think analytically and imaginatively—the required tools for success beyond the undergraduate career.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE B.A. DEGREE IN EUROPEAN STUDIES

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Requirements for the Major

Completion of two years of language (through the 2C level or equivalent) in French, German, classical Greek, Italian, Latin, Portuguese, Russian, or Spanish.

Fourteen courses, of which five may be lower-division:

- A. History 70B.
- B. European Studies 101A-B.
- C. Six courses from an approved emphasis list (see sample below), four of which must be upper-division.
- D. Four multidisciplinary electives: two courses in European History or Political Science or Social Science outside the student's emphasis, and two courses in European Literature or Arts outside the student's emphasis. NOTE: For the student with a focus on modern Europe, at least one of these courses must be on a pre-1789 topic; for the student with an emphasis in Medieval or Early Modern Europe, one of these courses must be on a post-1789 topic.
- E. European Studies 190, taken to satisfy the upper-division writing requirement.

NOTE: One course from either the approved emphasis list or the elective category must be from the Encounters with the Non-European World emphasis.

NOTE: Courses are sometimes approved in more than one emphasis. Any course that appears on the approved list for a student's emphasis cannot be used as a course outside the emphasis even if it also appears on other lists.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Emphases and Approved Courses: The following list includes a few examples of courses that have been approved for each emphasis. The complete list is extensive and varies from quarter to quarter,

depending upon course scheduling. For complete up-to-date information about approved courses, students are advised to consult the European Studies Web site at http://www.humanities.uci.edu/european_studies/.

Medieval Studies: Women and Gender in Late Medieval Literature (English 102A), Jewish History from Ancient to Early Modern (History 130A).

Early Modern Europe (1450–1789): Art of Venice (Art History 121), Milton (English 103), Tudor England (History 117A).

Modern Europe (1789–present): Modern European Art (Art History 134), German Literature and Culture in Translation (German 150), World War, Cold War, and Reunification: 1939– (History 122C).

Encounters with the Non-European World: Topics in East Asian Philosophy (East Asian Languages and Literatures 117), Topics in African American History (History 150), Indian and Colonial Societies in Mexico (History 161A).

British Studies: Elizabethan and Jacobean Drama (Drama 103), Medieval and Renaissance Literature (English 102A), Stuart England (History 117B).

French Studies: Problems in French Culture (French 110), French Cinema (French 160), Early Modern France: 1500–1774 (History 120C).

German Studies: Emergence of the German Nation: 1815–1890 (History 122A), Hegel to Nietzsche (History 127B).

Italian Studies: Studies in Southern Renaissance Art (Art History 121), Renaissance Europe (History 112A), Introduction to Italian Literature (Italian 101A).

The Mediterranean World: Past and Present: Studies in Greek Art (Art History 103), Classical Mythology (Classics 150), Later Roman Empire (History 105B).

Russian Studies: Twentieth-Century Russia (History 124B), Peoples and Cultures of Post-Soviet Eurasia (Political Science 154F), Topics in Russian Literature (Russian 150).

Spanish/Portuguese Studies: Introduction to Portuguese and Brazilian Literature (Portuguese 120A), Latin American Literature of the Twentieth Century (Spanish 130C), Literature in Translation (Spanish 150).

Requirements for the Minor

Ten courses are required:

- A. History 70B.
- B. European Studies 101A-B.
- C. Three courses selected from a single emphasis (see sample list above and at http://www.humanities.uci.edu/european_studies/).
- D. Four electives: *two* courses in European History or Political Science or Social Science outside the student's emphasis, and *two* courses in European Literature or Arts outside the student's emphasis, approved by petition to the European Studies Committee. NOTE: For the student with a focus on modern Europe, at least one of these courses must be on a pre-1789 topic; for the student with an emphasis in Medieval or Early Modern Europe, one of these courses must be on a post-1789 topic.

NOTE: Courses are sometimes approved in more than one emphasis. Any course that appears on the approved list for a student's emphasis cannot be used as a course outside the emphasis even if it also appears on other lists.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC

Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Courses in European Studies

(Schedule of Classes designation: Euro St)

101A European Studies Core I: Early Europe (Pre–1789) (4). Introduces students to multidisciplinary approaches to important themes in European society, culture, art, literature, and politics, encouraging students to see points of intersection among disciplines. Possible themes: the Concept of Europe in the Renaissance, Self and Other: Europe and Islam, Hybrid Cultures in Medieval Europe. Prerequisite: satisfactory completion of the lower-division writing requirement. Formerly Humanities 101A. (VIII)

101B European Studies Core II: Modern Europe (1789–Present) (4). Introduces students to multidisciplinary approaches to important themes in modern European society, culture, art, literature, and politics, encouraging students to see points of intersection among disciplines. Possible themes: Subjects, Citizens, and Representation; Europe in the World; European Revolutions in Art and Society. Prerequisite: satisfactory completion of the lower-division writing requirement. Formerly Humanities 101B. (VIII)

102 Topics in Early European History and Culture: Pre–1789 (4). Addresses historical and cultural events, issues, and texts (art, literature, music, political theory) from the pre-1789 period in more than one European country. May be repeated for credit as topics vary.

103 Topics in Modern European History and Culture: Post–1789 (4). Addresses historical and cultural events, issues, and texts (art, literature, music, political theory) from 1789 to present in more than one European country. May be repeated for credit as topics vary.

190 Senior Seminar in European Studies (4). Capstone research seminar. Students engage in rigorous, in-depth, interdisciplinary exploration of specific topics, periods, or themes, investigating and analyzing the intersection of material and discursive culture in different historical periods and geographical locations. Topics vary. Prerequisites: European Studies 101A, 101B, and consent of instructor; satisfactory completion of the lower-division writing requirement. Formerly Humanities 190.

199 Independent Study (1 to 4). Directed reading and research in consultation with a faculty advisor. Substantial written work required. Prerequisites: upper-division standing and consent of instructor. May be repeated for credit as topics vary.

DEPARTMENT OF FILM AND MEDIA STUDIES

2000 Humanities Gateway; (949) 824-6780

Victoria E. Johnson, **Department Chair**

Core Faculty

Ackbar Abbas, M. Phil. University of Hong Kong, *Professor of Comparative Literature and of Film and Media Studies* (Hong Kong culture and postcolonialism, visual culture, architecture and cinema, cultural theory, globalization)

Eyal Amiran, Ph.D. University of Virginia, *Associate Professor of Comparative Literature and of Film and Media Studies* (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)

Catherine Benamou, Ph.D. New York University, *Associate Professor of Film and Media Studies* (Latin American and Latina/Latino film and television, Orson Welles and mid-twentieth century off-Hollywood cinema, transnational media flows and spectatorship, urban mediascapes, film historiography and reconstruction)

Sohail Daulatzai, Ph.D. University of Southern California, *Assistant Professor of Film and Media Studies* (Black radicalism, Muslim studies, cultural studies, race, postcolonial theory, U.S. imperial culture, cinema, and hip-hop culture)

Edward Dimendberg, Ph.D. University of California, Santa Cruz, *Professor of Film and Media Studies* (film history, audio-visual media and the built environment, contemporary architecture and urbanism, avant-garde cinema, modernism and modernity)

Kristen Hatch, Ph.D. University of California, Los Angeles, *Assistant Professor of Film and Media Studies* (American film history, film genres, stardom, histories of gender and sexuality, childhood studies, and reception studies)

Lucas Hilderbrand, Ph.D. New York University, *Assistant Professor of Film and Media Studies* (cultural and media studies, histories of technology, documentary, queer studies, audio, intellectual property)

Victoria E. Johnson, Ph.D. University of Southern California, *Department Chair and Associate Professor of Film and Media Studies* (history and critical theory of U.S. television, popular film, and media; politics of geography, race, gender, and sexuality in popular culture; cultural studies)

Kyung Hyun Kim, Ph.D. University of Southern California, *Associate Professor of East Asian Languages and Literatures and of Film and Media Studies* (modern Korea, Asian cinema, critical theory)

Peter Krapp, Ph.D. University of California, Santa Barbara, *Associate Professor of Film and Media Studies* (digital culture, media theory, cultural memory, history, and theory of artificial worlds)

Felicidad “Bliss” Cua Lim, Ph.D. New York University, *Associate Professor of Film and Media Studies* (Philippine and Hong Kong cinema; cinema and temporality; postcolonial and feminist film theory; fantastic cinema and transnational horror; taste cultures)

Catherine Liu, Ph.D. City University of New York Graduate School and Center, *Director of the Humanities Center and Associate Professor of Film and Media Studies and of Comparative Literature* (critical theory, Frankfurt School, surveillance, privacy, intellectual history of psychoanalysis, transnational New Waves, cultural revolutions)

Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Dean of Graduate Study and Research and Associate Professor of Film and Media Studies* (minority, diasporic, and third cinemas; popular culture and social movements; media, race, and sexuality)

Mark S. Poster, Ph.D. New York University, *Professor Emeritus of Film and Media Studies and of History* (theory and history of the media, theory of technology and culture, and Internet studies)

Fatimah Tobing Rony, Ph.D. Yale University, *Associate Professor of Film and Media Studies* (transnational cinema, documentary and ethnographic film, postcolonial studies, feminist film theory, film history and theory, film production)

Jared Sexton, Ph.D. University of California, Berkeley, *Program Director and Associate Professor of African American Studies, and Associate Professor of Film and Media Studies* (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)

Roxanne Varzi, Ph.D. Columbia University, *Associate Professor of Anthropology and of Film and Media Studies* (visual anthropology, Iran, popular culture, war, media and religion)

Affiliated Faculty

Kai Evers, Ph.D. Duke University, *Assistant Professor of German* (twentieth-century German literature and film, modernism and Holocaust literature)

Edward Fowler, Ph.D. University of California, Berkeley, *Professor of Japanese* (modern Japanese literature, cultural studies, film)

Adriana M. Johnson, Ph.D. Duke University, *Associate Professor of Comparative Literature* (Latin American literature and film, subaltern studies, postcolonial studies, politics and culture)

Sally A. Stein, Ph.D. Yale University, *Professor Emerita of Art History* (American art, history of photography, feminist theory)

Frank B. Wilderson III, Ph.D. University of California, Berkeley, *Co-Director of the Humanities and Arts Major and Associate Professor of African American Studies and Drama* (film theory, Marxism, dramaturgy, black political theory)

Undergraduate Program

We live in a world in which we are surrounded by electronic media in the form of images and sounds. Whether printed on roadside billboards, downloaded to our phones, or broadcast into our homes via television, media greatly influence our sense of who we are and how we live. Yet so much of our exposure to the sights and sounds of film, TV, video, advertising, and new technologies is taken for granted. Those sights and sounds are so pervasive, and in many cases so enjoyable, that we rarely pause to consider how we engage and interact with them. An undergraduate education in Film and Media Studies provides students with the opportunity to explore the appeal and operation of these social, historic, institutional, and textual entities we call cinema, television, and new digital technologies, and to interrogate the inter-relationships of visual media and sound and music as forms of media.

The course work for the B.A. degree program in Film and Media Studies trains students to read and understand the audio-visual languages of modern media and new technologies and to analyze images from socioeconomic, political, aesthetic, and historical perspectives. Learning these critical viewing skills involves learning new ways of seeing. The Film and Media Studies curriculum is systematic and comprehensive; upper-division courses have between 20 and 70 students and are typically taught by regular faculty. There are more than 300 Film and Media Studies majors enrolled at UCI.

The Department of Film and Media Studies familiarizes students with the history, theory, and art of cinema, broadcast media, digital media, and other media. Courses focus on a range of topics, including directors, period styles, genres, national cinemas, the history and criticism of radio, television, sound theory and popular music, and developments in new media and digital technologies. Additional courses offer students hands-on experience in video production and screenwriting. The program provides its majors with a thorough understanding of the modern media's roles in contemporary society. Regular course offerings are complemented by film and video screenings and series. Film and Media Studies, in cooperation with other units at UCI, regularly invites scholars, digital artists, directors, producers, and screenwriters to campus to share their work and perspectives with students.

Film and Media Studies at UCI is unique in its concentration on the history, theory, and criticism of cinema, television, popular music and sound, and new technologies. The faculty has published books and articles on these topics and others including fantastic cinema, avant-garde directors, ethnographic film, media and intellectual property, sound in film and media, hip-hop and cinema, television history, and theory of new technologies.

In order to cover the extra costs generated by the purchase and rental of media demanded by the specialized Film and Media Studies curriculum, the School of Humanities charges a laboratory fee to all students taking Film and Media Studies courses.

Film and Media Studies students can complete professional internships in the fields of film, television, or digital media production, distribution, writing, and related areas for elective course credit.

Through the Education Abroad Program (EAP), eligible Film and Media Studies students have the opportunity to study abroad and earn credit toward their degree during the school year. Students also may participate in Travel-Study offered through Summer Session. Information on these programs is available through the Film and Media Studies Office, the Education Abroad Program Office, and the Summer Sessions office.

CAREER OPPORTUNITIES

A degree in Film and Media Studies will provide students with a variety of opportunities leading to a career choice or to further education at the graduate or professional level. Graduates from the program have gone on to a host of different careers. Some have pursued graduate work in critical studies and/or production at leading institutions such as the University of California, Los Angeles, Columbia University, New York University, University of Texas at Austin, and University of Southern California. Many are now at work in various sectors of the entertainment industry as feature film editors, executives in film and video distribution companies, network television producers, and independent filmmakers.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE B.A. DEGREE IN FILM AND MEDIA STUDIES

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Departmental Requirements for the Major

- A. Film and Media Studies 85A-B-C, 101A-B-C, 139 (taken to satisfy upper-division writing).
- B. Film and Media Studies 110 or 111.
- C. Film and Media Studies 117A or 120A.
- D. Four courses from Film and Media Studies 112, 113, 114, 115, 117B*, 117C*, 120B*, 120C*, 130, 143, 144, 145, 146, 150, 151, 160, 161, 162, 185, 190, 191.

* Only two of the courses marked with an asterisk may be applied toward this requirement.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor

Film and Media Studies 85A, 101A-B-C, and three of the following: 85B, 85C, 110, 111, 112, 113, 114, 115, 130, 143, 144, 145, 146, 150, 151, 160, 161, 162, 185, 190, 191.

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Study

In conjunction with the Department of Art History, the Department of Film and Media Studies offers a graduate program in Visual Studies. A description may be found in the Program in Visual Studies section, toward the end of the School of Humanities section.

Courses in Film and Media Studies

(*Schedule of Classes* designation: **Film&Mda**)

LOWER-DIVISION

85A-B-C Image Culture

85A Introduction to Film and Visual Analysis (4) F. Introduces the language and techniques of visual and film analysis. Teaches students to analyze the moving image, emphasizing the ways framing, camera movement, sound, and editing produce meaning, reproduce historical ideologies, foster or disrupt narrative, and cue spectators. **(IV)**

85B Broadcast Media History and Analysis (4) W. History of broadcast media from the radio era to the present day, including social, political, institutional, and audience analysis as well as methods of visual and aural analysis of these media. Prerequisite: Film and Media Studies 85A or consent of instructor. **(IV)**

85C New Media and Digital Technologies (4) S. The study of digital media, computer-mediated communication, and Internet cultures, from historical and theoretical perspectives. Prerequisites: Film and Media Studies 85A-B or consent of instructor. **(IV)**

UPPER-DIVISION

101A-B-C History of Film

101A The Silent Era I (4) W. An investigation of the technological, economic, social, and aesthetic determinants of the cinema in its first 30 years. The formal strategies and historical importance of films by Méliès, the Lumières, Porter, Griffith, Murnau, Lang, Eisenstein, Pudovkin, and others. Prerequisites: Film and Media Studies 85A; open to Film and Media Studies majors and minors only.

101B The Sound Era I (4) S. Explores the formal strategies and socio-historical dynamics of films made between 1930 and 1960, concentrating on representative cinemas and works by Lang, Riefenstahl, Renoir, Welles, De Sica, Ophüls, Kurosawa, and others. Prerequisites: Film and Media Studies 101A with a grade of C- or better; open to Film and Media Studies majors and minors only.

101C The Sound Era II (4) F. Studies narrative strategies and formal possibilities in films made since 1960, framing aesthetic questions in political, social, and economic terms, using selected features from Western and non-Western countries. Prerequisites: Film and Media Studies 101B with a grade of C- or better; open to Film and Media Studies majors and minors only.

110 Film and Media Theory (4) F, W, S, Summer. Survey of major directions in film and media theory. Various theories of mass culture, realism, auteurism, semiotics, feminism, cultural studies, and theories of other media. Offered as a seminar, with an emphasis on developing the student's ability to analyze and articulate a theoretical argument. Prerequisites: Film and Media Studies 85A-B-C, 101A-B-C, 139, and satisfactory completion of the upper-division writing requirement.

111 Film and Media Theory and Practice (4) F, W, S. Seminar on theory and practice focusing on issues in film and media production and editing. Reading and exercises to understand aspects of film and media production (montage, sound, film movement, directing, and *mise en scène*), and how ideology works in tandem with style. Prerequisites: Film and Media Studies 101C, 120A, 139, satisfactory completion of the upper-division writing requirement, and consent of instructor. Open to Film and Media Studies majors only.

112 Genre Study (4) F, W, S. Critical approaches to the serial productions we call "genre" films, the patterns of recognition known as westerns, weepies, musicals, horror films, and others; televisual genres, such as sitcoms, drama, comedy, news, docudrama, police; Internet categories, such as chat-rooms, listservs, Web pages. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

113 Narrative/Image (4) F, W, S. What relations do sound, image, and story assume in film, television, video, and Internet narratives? In what ways do these media interact with and borrow from each other and traditional storytelling media, like print and orality? How have the new media explored non-narrative strategies and to what end? Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

114 Film, Media, and the Arts (4) F, W, S. A synthetic entity, film draws on both established and popular arts. Looks at visual media's exchanges with "high" and "low" culture, exploring its relation to areas such as photography, music, painting, and architecture. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

115 Authorship (4) F, W, S. Theoretical and analytical discussions of visual media authorship, focusing on case studies of directors, producers, scriptwriters, and film, video, and digital artists. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

117A Introduction to Screenwriting (4) F, W, S, Summer. Introduction to the technique and format of the screenplay, with a particular focus on its three act structural elements: coverage, treatment, and 60 beat outline. Prerequisite: Film and Media Studies 85A.

117B Intermediate Screenwriting (4) F, W, S. Exercises in the development of screenplays, with emphasis on formal and structural considerations of character development. Students work with the hero structure and other character development methodologies, such as method acting. Prerequisite: Film and Media Studies 117A.

117C Screenwriting Workshop (4) F, W, S. Continuation and intensification of work initiated in 117B. Students complete a full-length screenplay. Concentrates on both practical and technical concerns, addressing pragmatic and aesthetic questions in intensive small-group discussions. Prerequisite: Film and Media Studies 117B.

120A Basic Production (4) F, W, S, Summer. Introduction to the basic apparatus of video/film production. The elementary essentials of production, including the use of camera and lenses, lighting, editing, and sound. Prerequisite: Film and Media Studies 85A or consent of instructor.

120B Intermediate Production (4) W. Students work on individual and group projects, utilizing skills and insights introduced in Film and Media Studies 120A. Prerequisite: Film and Media Studies 120A or consent of instructor.

120C Production Workshop (4) S. As film and video are collaborative media, students form production groups and ultimately produce final 10–15 minute film/video projects. Prerequisite: Film and Media Studies 120B or consent of instructor.

130 Multicultural Topics in the Media (4) F, W, S. An investigation of media representations of gender, race, and sexuality in the United States. Topics include media images of and by one or more minority groups in the United States, including African Americans, Asian Americans, Chicano/Latinos, Native Americans, and gays and lesbians. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary. (VII)

139 Writing on Film and Media (4) F, W, S. Practical exercises in film, TV, and other media criticism as a form of cultural analysis. Requires at least 4,000 words of assigned composition. Prerequisites: Film and Media Studies 85A and 101A; satisfactory completion of the lower-division writing requirement.

143 Critical Theory of Television (4) F, W, S. Introduction to critical, theoretical, scholarly understandings and analyses of television, which offer in-depth analyses of television programming, audience reception practices, and industry strategies of address. Prerequisites: Film and Media Studies 85A-B or consent of instructor.

144 Studies in New Media (4) F, W, S. Advanced analysis of the technologies, texts, theories, and cultures of computers, videogames, networks, or platforms. Prerequisites: Film and Media Studies 85A-B-C or consent of instructor. May be repeated for credit as topics vary.

145 Popular Culture and Media (4) F, W, S. Considers the forms, ideologies, consumption, and marketing of popular entertainment and technologies. May focus on cultural studies methods, transnational approaches, and synergy between media. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

146 Sound Studies (4) F, W, S. Focuses on the production, theories, and meanings of sound recordings, music, and/or audio technologies. Topics may include the cultures of popular music and audio devices, music television, and theories of film sound. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

150 Audiences and Reception (4) F, W, S. Explores the dynamics of address, interpretation, and appropriation between film and media texts and their viewers. Topics may include reception studies, fandom, audience-defined modes of production, demographics, spectatorial pleasure, and historical approaches to audiences. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

151 Documentary and Experimental Film and Media (4) F, W, S. Examines nonfiction and/or experimental cinemas and media, such as documentary, the historical avant-garde, video art, and activist media. Students consider the specific aesthetics and ideologies of forms distinct from narrative feature films. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

160 National/Regional Cinemas and Media (4) F, W, S. National schools, period styles, or cultural movements beyond U.S. cinema, as defined by national borders or by geographic regions, such as Latin America. May be approached from a comparative perspective. Same as Comparative Literature 160, East Asian Languages and Literatures 160, French 160, German 160, or Spanish 160 when topics are appropriate. May be repeated for credit as topics vary. (VIII)

161 Global/Transnational Cinemas and Media (4) F, W, S. Analyzes the multinational production, circulation, and reception of film and media texts beyond singular national borders or specific geographic regions. Topics may include transnational co-productions, exports, and diasporic reception. May be repeated for credit as topics vary. (VIII)

162 U.S. Cinema (4) F, W, S. Explores the modes of production and distribution, aesthetics, and contexts that have shaped cinema in the United States. Topics may include Classical Hollywood, American Independent Cinema, or periods such as 1970s Cinema. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

185 Television and New Media (4) F, W, S. An advanced seminar focusing on special topics in television and new media. Past examples have included courses on Media Marketing and Brand Identity; Television and Sound; Game Theory; and other issues related to popular culture, broadcast media, and new media technologies. May be repeated for credit as topics vary. Prerequisites: Film and Media Studies 85A-B-C or consent of instructor; open only to Film and Media Studies majors.

190 Special Topics in Film and Modern Media (4) F, W, S. Special issues concerned with film and media history, theory, and criticism. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

191 Special Topics in Critical Practice (4) F, W, S. Integrates critical analysis, historical, and theoretical methods with creative projects to illuminate film and media production and industries. May include courses in adaptation, writing television, media activism, writing the short film, performance studies, and movie title sequences. Prerequisite: Film and Media Studies 85A or consent of instructor. May be repeated for credit as topics vary.

197 Professional Internship (2 or 4) F, W, S. Professional internship in the broadcast, film, video, or Internet industries designed to provide students with closely supervised professional experience to enhance their understanding of media from industrial, historical, and critical perspectives. Journal and final report required. Prerequisites: Film and Media Studies 117A-B-C or 120A-B-C or consent of instructor; upper-division standing. Open only to Film and Media Studies majors and minors with a B average or better in Film and Media Studies course work. Pass/Not Pass only. May be taken for credit for a total of four units.

198 Creative Project (2 or 4) F, W, S. Creative project in screenwriting, filmmaking, videomaking, or Web or Internet design intended to provide advanced production and creative writing training beyond the Film and Media Studies 117A-B-C or 120A-B-C series. Final project required. Prerequisites: Film and Media Studies 85A and 117A-B-C or 120A-B-C or consent of instructor; 101A recommended; upper-division standing. May be taken twice for a credit total of eight units.

199 Directed Research (4) F, W, S. Directed reading and research under supervision of a faculty member in topic areas not covered by regular course offerings. Final research paper required. Prerequisites: upper-division standing and consent of instructor.

GRADUATE

Graduate courses satisfying the requirements of the program in Visual Studies are listed in the Visual Studies section of the *Catalogue*.

399 University Teaching (4) F, W, S. Limited to teaching assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

DEPARTMENT OF FRENCH AND ITALIAN

312 Humanities Hall; (949) 824-6407
Ellen Burt, **Department Chair**

Faculty

Etienne Balibar, Docteur en philosophie, Katholieke Universiteit Nijmegen, *Professor of French* (critical theory, political philosophy), *Winter Quarter*

Ellen S. Burt, Ph.D. Yale University, *Department Chair of French and Italian and Professor of French and Comparative Literature* (eighteenth-century French literature and nineteenth-century poetry)

David Carroll, Ph.D. The Johns Hopkins University, *Professor Emeritus of French* (critical theory and twentieth-century French literature)

James T. Chiampì, Ph.D. Yale University, *Professor of Italian* (Italian Renaissance)

Suzanne Gearhart, Ph.D. The Johns Hopkins University, *Professor Emerita of French* (seventeenth- and eighteenth-century French literature, philosophy and literature)

Elizabeth Guthrie, Ph.D. University of Illinois, *Director of the French Language Program and Senior Lecturer with Security of Employment Emerita* (second-language acquisition and teaching)

Judd D. Hubert, Ph.D. Columbia University, *Professor Emeritus of French* (seventeenth- and nineteenth-century French literature)

Alice M. Laborde, Ph.D. University of California, Los Angeles, *Professor Emerita of French* (eighteenth-century French literature)

Carrie J. Noland, Ph.D. Harvard University, *Professor of French* (twentieth-century poetry; World War II and literature of the avant-garde)
Richard L. Regosin, Ph.D. The Johns Hopkins University, *Professor Emeritus of French* (sixteenth-century French literature)

Affiliated Faculty

Daniel Brunstetter, Ph.D. University of California, Davis, *Assistant Professor of Political Science* (political theory, international relations, French political thought)

Sarah Farmer, University of California, Berkeley, *Associate Professor of History* (modern French history, twentieth-century Europe, social and cultural history)

James Steintrager, Ph.D. Columbia University, *Department Chair of English and Professor of English, Comparative Literature, and French* (eighteenth-century comparative literature, ethical philosophy and literature, systems theory, amatory and erotic fiction)

Andrzej Warminski, Ph.D. Yale University, *Professor of English and French* (Romanticism; history of literary theory; contemporary theory; literature and philosophy)

Undergraduate Program in French

The Undergraduate Program in French offers a broad humanistic course of study designed for students in the liberal arts. The orientation of the program is multidisciplinary, where the study of literature is linked to critical, cultural, and historical concerns. Courses reflect the faculty's interest in the related disciplines of history, philosophy, anthropology, women's studies, cultural studies, and comparative literature, and express its conviction that the study of French literature and culture is enriched by pursuing its relations with other disciplines, fields, and cultures.

Lower-division language courses encourage students to participate in the creative process of language, to think in French as they learn to understand, speak, read, and write. These courses are taught entirely in French, and the approach to teaching stresses the interdependence of the four basic language skills and makes them mutually reinforcing. The Language Laboratory is used to complement classroom activity.

At the intermediate lower-division level, texts of contemporary literary and social interest provide the focus for advanced conversation, reading, and composition. After the second year, advanced courses in conversation and writing enable students to attain a greater degree of proficiency, preparing them for further study in the multidisciplinary upper-division program.

All upper-division offerings are taught in the seminar mode. Because classes are limited in size, they promote and encourage participation and discussion and facilitate direct contact with professors. In the introductory courses in literature, texts are studied in their historical context. The student learns to analyze and interpret different types of creative literature and is introduced to various critical concepts and vocabularies. At the more advanced level, the multidisciplinary courses bring together material and methodologies from the various disciplines in order to address interpretive problems of French literature, culture, and history. In recent years, courses have been offered in literature and political opposition, monsters and madness in Renaissance literature, cubism in painting and poetry, ethnography and literature, French cinema, autobiography, Francophone literature, and Albert Camus and Algeria. The content of courses changes yearly according to the interests of both faculty and students. In the junior or senior year, students have the opportunity, in the context of the capstone seminar (French 185), to pursue a single project in depth, leading to a final research paper. Students may take up to two courses from the Department offerings taught in English.

The Department strongly encourages its students to take advantage of the study-abroad programs in French-speaking countries to improve their language skills and gain invaluable cultural experience in a foreign university setting. The Department recommends

the UC Education Abroad Program which currently runs programs of differing lengths in five locations in France (in Toulouse, Lyon, Grenoble, Bordeaux, and Paris). Credit for courses taken through study-abroad programs is available. Students are advised to discuss their course of study with the Chair before their departure and to arrange to bring home proof of their work.

Placement examinations are not required, although an optional placement examination is available. Students will be placed in French language courses according to their years of previous study. See page 253, Language Other Than English Placement and Progression.

Transfer students who have had a previous course (or courses) in French from another college or university who want to enroll in any French 1A through 2C course at UCI must take a copy of their transcript to the Humanities Undergraduate Study Office in order to receive authorization to enroll in the appropriate course.

Student representatives serve on departmental committees. These representatives also participate in Department meetings and are responsible for student evaluation procedures.

CAREERS FOR THE FRENCH MAJOR

The great majority of students who major in French pursue careers in business and commerce, where they can take advantage not only of their proficiency in French language but also of their knowledge of French literature and culture. Many students also go on to law school, to medical school, and to careers in the diplomatic service. In recent years, graduates have entered the field of education in increasing numbers. The Department's multidisciplinary approach to the study of literature teaches students to think critically and develops analytical skills that can be applied to a wide range of problems. It also helps students to develop the interpretive and writing skills necessary to express their own ideas clearly and persuasively. Whether they enter business or professions such as law, education, or government, French majors acquire the intellectual and communicative skills requisite for success.

The UCI Career Center provides service to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE B.A. DEGREE IN FRENCH

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Language Other Than English Placement and Progression: See page 253.

Departmental Requirements for the Major

- A. French 100A-B, 101A, B, C, 185, and eight other upper-division courses taught in the Department.
- B. Students may take up to two courses from the Department offerings taught in English.

Residence Requirement for the Major: French 185 and at least four upper-division courses (above 101A, B, C) required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor

- A. French 100A-B.
- B. Five French courses, four of these courses must be upper-division; four of these must be taught in French. Prerequisite: French 2C or equivalent.

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

PLANNING A PROGRAM OF STUDY

Students should consult with the faculty to plan a coherent program of courses to fulfill the major requirements. Students also should consult with faculty members concerning career plans in areas such as teaching, industry, journalism, law, and civil service.

Undergraduate Minor in Italian Studies

Language Other Than English Placement and Progression: See page 253.

The minor in Italian Studies is an interdisciplinary curriculum that allows students to go beyond second-year Italian and engage in various aspects of Italian culture by taking courses in Italian literature in the Department of French and Italian and other courses related to Italian history and culture in the Departments of Art History, Comparative Literature, English, Film and Media Studies, History, and Philosophy.

Departmental Requirements for the Minor

Italian 1A-B-C, 2A-B-C; and seven courses selected from the following two lists, when topics are appropriate. At least five of the seven courses must be from list A.

- A. Art History 120, 121, 125; Film and Media Studies 160; History 112A; Italian 13, 101A, 101B, 150; Philosophy 132. (No more than *two* courses may be taken from any department, with the exception of Italian courses.)
- B. Art History 107, 198; Classics 140, 150, 170; History 105A, 105B, 110C, 112D.

Residence Requirement for the Minor: At least four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken at an Italian university through the UC Education Abroad Program, provided they are approved in advance by the Director of the Minor.

The Department strongly encourages its students to take advantage of the study-abroad programs in Italy to improve their language skills and gain invaluable cultural experience in a foreign university setting. The Department recommends the UC Education Abroad Program which currently runs programs of differing lengths in five locations in Italy (in Bologna, Padova, Milan, Siena, and Rome). Credit for courses taken through study-abroad programs is available. Students are advised to discuss their course of study with the Chair before their departure and to arrange to bring home proof of their work.

Graduate Program in French

NOTE: Please contact the Department for information regarding admission to the Ph.D. program.

The Department of French and Italian offers a graduate program in French with a strong theoretical, cultural, and multidisciplinary orientation. In addition to their specialties in the traditionally constituted fields of French literature, the faculty is actively involved in related disciplines such as philosophy, psychoanalysis, anthropology, history, women's studies, cultural studies, and comparative literature. A theoretical and multidisciplinary approach to literature is a demanding one requiring, among other things, a restless critique of its own evaluations and concepts.

In small seminars designed to stimulate intellectual exchange, students and faculty explore literature written in French within the context of relevant historical, cultural, or theoretical issues. They

raise questions engaged by literary discourse and study critically the theories formulated to account for it. Courses tend to cross lines between disciplines and to emphasize both the close reading of texts and modern theories of history, culture, literature, and criticism. Students are encouraged to pursue their work in related fields outside the Department. They are also strongly encouraged to study abroad at some point during their graduate career.

The Department offers two tracks toward the Ph.D. in French: (1) Studies in French and Francophone Literature and Culture; and (2) an Interdisciplinary Option in French and Francophone Studies. The second option reflects the interdisciplinary teaching and research interests of the faculty and the increasingly comparative nature of French and Francophone studies across the country. It should appeal to students interested in double specialization or who already have an interdisciplinary background. This option would prepare students to teach French language and a range of culture and literature courses in French as well as in interdisciplinary humanities programs.

Students will ideally declare their intention to pursue one of the two tracks when they enter the program, but they must make a choice no later than during the oral portion of the M.A. examination in the fall or winter quarter of their second year of studies.

MASTER OF ARTS IN FRENCH

The Master of Arts degree is considered to be a step toward the Ph.D. degree; only students intending to pursue studies for the doctorate are admitted to the program. Performance on the Master's examination, usually given in the second year of graduate study, determines entrance into the doctoral program. Most candidates take a minimum of 11 graduate courses. All entering graduate students are counseled by the graduate advisor. During the winter quarter of each year, the teaching performance and academic record of each student who is a Teaching Assistant are evaluated. All graduate students are also given a written evaluation of their work on a course-by-course basis. Proficiency in a foreign language in addition to French is required for the M.A. degree (proficiency is defined as the equivalent of the level attained at the end of course 2C).

All M.A. candidates are required to pass the Master's examination. Plan I allows particularly well-prepared students to receive special permission to take nine courses and to write a short thesis, for which two course credits are given. Under Plan II candidates take a minimum of 11 courses and have the option of taking a written examination or of writing a research paper. The written examination consists of essays that demonstrate skills of literary analysis and an understanding of theoretical concepts and their application to the study of specific literary texts. The research paper involves a carefully developed and well-documented analysis that reflects extensive critical reading. In all cases students also take an oral examination that focuses on the written essays or the research paper and that seeks as well to test the student's broader knowledge.

The Master's examination is normally given at the end of the winter quarter of the second year of studies. Students who are Teaching Assistants normally take the examination in the fifth quarter of their studies.

Students transferring to the program from other graduate institutions may receive credit for up to two courses, subject to the approval of the Department. A maximum of five courses may be transferable from other UC graduate programs, with departmental approval.

For students who choose the interdisciplinary option when they enter the graduate program, their M.A. paper should have an interdisciplinary orientation, with one member from outside the Department representing their second discipline serving as a member of their M.A. committee.

DOCTOR OF PHILOSOPHY IN FRENCH

Upon successful completion of the Master's examination and admission to the Ph.D. program, or upon admission with a Master's degree from an accredited institution, a Ph.D. Examination Committee is appointed in consultation with the student. The Committee advises the student in the choice of courses to help prepare for the written and oral Qualifying Examinations leading to advancement to candidacy for the Ph.D. degree. The Committee is comprised of five faculty members: three from the Department, one from outside the Department who represents the student's outside area of specialization, and, for the qualifying examination, another faculty member not affiliated with the Department who represents the faculty-at-large. One member of the Committee is expected to direct the dissertation.

Language Requirements: A reading knowledge of two foreign languages relevant to the student's area of specialization and subject to the approval of the Ph.D. Examination Committee.

Course Requirements:

Track 1: Studies in French and Francophone Literature and Culture

A minimum of 15 graduate courses or seminars in French beyond the B.A. and three graduate courses outside the Department in areas related to the field of specialization are required.

A student may pursue the Ph.D. with particular emphasis in one of the following areas: (1) Critical Theory—additional course work in the Department and in the Critical Theory Emphasis program beyond the minimum number of three outside courses is required; (2) Comparative Literature—a minimum of five courses in the Comparative Literature Department is required; (3) Feminist Studies—refer to the Women's Studies section of the *Catalogue* for information.

Track 2: Interdisciplinary Option in French and Francophone Studies

Between 10 and 12 graduate courses or seminars in French beyond the B.A. and six–eight graduate courses outside the Department in a second discipline or program are required. The minimum total number of courses required before advancement to candidacy is 18.

Teaching: Since the overwhelming majority of Ph.D. candidates plan to teach, the Department recognizes its responsibility to train them as teachers. Therefore, as far as it is possible, all candidates without previous teaching experience are required to participate in a program of supervised teaching for at least one year.

Qualifying Examination—Written and Oral: Upon completion of course work, the student takes a series of examinations involving problems of a critical and interpretive nature. The Ph.D. Examination encourages focus and depth at a time when the student's area of specialization and eventual dissertation topic should be taking an increasingly clearer shape. In consultation with the Ph.D. Examination Committee, the student defines the precise nature and scope of four topics for the examination, which consists of written and oral parts. In fulfillment of the written requirement, the student writes three papers on three topics over the course of a quarter. The fourth topic is examined solely at the oral Qualifying Examination, which also devotes time to a presentation of the proposed dissertation topic and to further questions concerning the topics covered by the papers. Upon successful completion of the written and oral Qualifying Examinations, the student is advanced to candidacy for the Ph.D. degree. The normative time for advancement to candidacy is four years.

Dissertation: The dissertation topic chosen by the candidate will normally, but not necessarily, fall within one of the major fields covered by the Qualifying Examination. The dissertation itself must also be approved by the committee, which may or may not require an oral examination on it.

Three faculty members, chosen by the candidate, proposed by the Department, and appointed on behalf of the Dean of the Graduate Division and the Graduate Council, constitute the Doctoral Committee which directs the preparation and completion of the doctoral dissertation. The normative time for advancement to candidacy is four years. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is eight years.

Courses in French

(Schedule of Classes designation: French)

LOWER-DIVISION

1A-B-C Fundamentals of French (5-5-5) 1A (F), 1B (F, W), 1C (W, S). Students are taught to conceptualize in French as they learn to understand, read, write, and speak. Classes are conducted entirely in French and meet daily. Language Laboratory attendance is required. French 1A-B-C and S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of French (7.5-7.5) Summer. First-year French in an intensified form. Same as French 1A-B-C during academic year. Prerequisite for S1AB:none; for S1BC: French S1AB or 1B, or two years of high school French. French S1AB-BC and 1A-B-C may not both be taken for credit. (S1BC: VI)

2A-B-C Intermediate French (4-4-4) 2A (F, S), 2B (F, W), 2C (W, S). Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in French. Prerequisite: normally three years of high school French or one year of college French. French 2A-B-C and S2AB-BC may not both be taken for credit. (VIII)

S2AB-BC Intermediate French (6-6) Summer. Second-year French in an intensified form. Same as French 2A-B-C during academic year. For description, see French 2A-B-C. Prerequisite for S2AB: French S1BC or 1C with a grade of C or better, or three to four years of high school French, or the equivalent; for S2BC: French S2AB or 2B with a grade of C or better, or the equivalent. French S2AB-BC and 2A-B-C may not both be taken for credit. (VIII)

13 Conversation (4) F, W, S. Helps students increase their fluency and enrich their vocabulary. Taught in French. May be taken concurrently with French 2C. Prerequisite: French 2C or equivalent; or concurrent enrollment in French 2C.

50 French Culture and the Modern World (4) F, W, S. Introductory course for non-majors. Focuses on France's role in the modern world and its cultural connections to Asia, the Middle East, Africa, Europe, and the Americas. Taught in English. May be taken for credit three times as topics vary. (IV, VIII)

97 Fundamentals of French (with Emphasis on Reading) (4). Designed primarily for students interested in acquiring a solid reading knowledge of French, and to facilitate the understanding and translating of French texts dealing with a variety of disciplines. Not open to French majors or minors. Does not serve as a prerequisite for any higher-level French courses or fulfill any undergraduate foreign language requirement.

UPPER-DIVISION

100 Composition and Grammar Review

100A Advanced Grammar and Composition (4) F, W. Systematic review of grammar with written compositions on various topics. Students study and practice forms of descriptive and imitative writing, techniques of translation, and textual analysis including *explication de texte* of prose and poetry passages. Prerequisite: French 2C or equivalent.

100B Essay Writing (4) W, S. Trains students to write about literature in French, and introduces them to specific critical approaches and strategies for utilizing library resources, organizing arguments, and developing a coherent essay. Topics for weekly compositions drawn from texts of literary, historical, and social interest. Prerequisite: French 2C or equivalent; French 100A recommended.

101A, B, C Introduction to French Literature (4, 4, 4) F, W, S. Introduction to all of the genres of a narrowly defined period in relationship to a specific literary problem. In French. Prerequisites: French 100A and 100B recommended, but may be taken concurrently with French 101A, B, C. (VIII)

105 Advanced Composition and Style (4). Helps the student attain greater proficiency and elegance in the written language. Prerequisites: French 100B.

110 Problems in French Culture (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

116 Sixteenth-Century French Literature (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

117 Seventeenth-Century French Literature (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

118 Eighteenth-Century French Literature (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

119 Nineteenth-Century French Literature (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

120 Twentieth-Century French Literature (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

125 African Literature of French Expression (4). Introduction to the principal African and Caribbean works written in French. Offers opportunity to study literature and culture in French in a non-European context. Lectures and papers in French. Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

127 Francophone Literature and Culture (4). Literature and cultures of the francophone world. Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

139 Literature and Society (4). In English. Readings of masterpieces of French literature in their social, political, and historical contexts. Requires at least 4,000 words of assigned composition based on French works. Several essays required. French majors have admission priority. Prerequisites: satisfaction of lower-division writing requirement; junior standing or consent of instructor. (VIII)

140 Studies in French Literary Genre (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary.

150 Topics in French Literature and Culture (4). In English. May be repeated for credit as topics vary. (VIII)

160 French Cinema (4) F, W, S, Summer. In English. May have discussion sections in French. May be repeated when topic varies, but can be taken only twice for credit toward the major. Same as Film and Media Studies 160. (VIII)

170 History and Literature (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

171 Politics and Literature (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit as topics vary. (VIII)

180 Junior/Senior Seminar in Theory and Criticism (4). Prerequisite: French 101A or B or C recommended; may be taken concurrently with French 101A, B, C. May be repeated for credit once when topics vary.

185 Junior/Senior Seminar in French Literature and Culture (4). Required intensive writing course for French majors to explore in depth selected topic in French literature and culture. Students complete major independent research project on topic studied, making use of both literary and critical materials in their capstone essay. Taught in French. Prerequisites: four upper-division courses beyond French 100A, B; one of these courses may be taken concurrently with French 185.

199 Special Studies in French (1 to 4) F, W, S. Open only to outstanding students. Research paper required. Prerequisites: consent of instructor and of Department Chair; student must submit a written description of the proposed course to the instructor and the Chair prior to the beginning of classes. May be repeated for credit as topics vary.

GRADUATE

The content of these courses changes yearly, and courses numbered 200 and 216–399 (except 280) may be repeated for credit as topics vary.

In addition to the following courses, graduate students in French might find these Humanities courses of special interest: Humanities 200 (History and Theory); Humanities 220 (Literary Theory and Its History); and Humanities 270 (Advanced Critical Theory).

200 Selected Topics in French Linguistics (4)

216 Studies in Renaissance Literature (4)

217 Studies in Seventeenth-Century Literature (4)

218 Studies in Eighteenth-Century Literature (4)

219 Studies in Nineteenth-Century Literature (4)

220 Studies in Twentieth-Century Literature (4)

225 Francophone Literature and Culture (4). Studies in different francophone literatures and cultures (of Canada, the Caribbean, West and North Africa, and Southeast Asia).

231 Studies in Fiction (4)

232 Studies in Nonfictional Prose (4)

233 Studies in Poetry and Poetics (4)

240 Studies on a Major Writer (4)

250 Studies in Theory and Criticism (4)

254 History and Literature (4)

272 Cultural Studies (4)

280 Directed Study in French Literature (4) F, W. Restricted to graduate students taking the Master's examination the same quarter.

290 Research in French Language and Literature (4-4-4) F, W, S. A project proposal must be prepared by the student and approved by the faculty member who will direct the project. This proposal, with the faculty member's signature, must be given to the Chair for approval and will be put in the student's file. This procedure can be completed before or after registration or at the very latest must be completed by the end of the first week of classes. After the end of the first week no 290s can be approved. M.A. candidates may take this course once; Ph.D. candidates may take it twice.

299 Dissertation Research (4 to 12) F, W, S

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. May be repeated for credit.

Courses in Italian

(Schedule of Classes designation: Italian)

LOWER-DIVISION

1A-B-C Fundamentals of Italian (5-5-5) F, W, S. Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily. Prerequisites: for 1B: Italian 1A with a grade of C or better or the equivalent, or placement into 1B; for 1C: Italian 1B or S1AB with a grade of C or better or the equivalent, or placement into 1C. Italian 1A-B-C and Italian S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Italian Fundamentals (7.5-7.5) Summer. First-year Italian in an intensified form. Students are taught to conceptualize in Italian as they learn to understand, read, write, and speak. Classes are conducted entirely in Italian and meet daily three hours for five weeks each session. Prerequisite: for S1BC: Italian S1AB with a grade of C or better, or Italian 1B or equivalent. Italian S1AB-BC and Italian 1A-B-C may not both be taken for credit. (S1BC: VI)

2A-B-C Intermediate Italian (4-4-4) F, W, S. Texts of contemporary literary or social interest provide the focus for more advanced conversation, reading, and composition. Classes are conducted entirely in Italian. Prerequisite for 2A: Italian 1C with a grade of C or better or S1BC with a grade of C or better or the equivalent, or placement into 2A; for 2B: Italian 2A with a grade of C or better or the equivalent, or placement into 2B; for 2C: Italian 2B with a grade of C or better, or placement into 2C. (VIII)

13 Italian Conversation (4) F, W, S. Helps students increase fluency and comprehension of spoken Italian. Includes an introduction to Italian culture. Taught in Italian. May be taken concurrently with Italian 2C. Prerequisite: Italian 2C or equivalent; or concurrent enrollment in Italian 2C.

99 Special Studies in Italian (4) F, W, S. Both student and instructor arrive at the theme of the course and the critical approach to be followed in consultation. Intended to offer courses in Italian otherwise unavailable. Prerequisites: consent of instructor and Department Chair; student must submit a written description of the course to the Chair prior to the first week of classes to obtain consent. May be repeated for credit when topic changes.

UPPER-DIVISION

101A, B Introduction to Italian Literature (4, 4). Introduction to all of the genres of a narrowly defined period in relationship to a specific literary problem. In Italian. Prerequisite: Italian 2C or equivalent; Italian 13 recommended. (VIII)

140A-B-C Readings in Medieval and Renaissance Literature (4-4-4). In English.

150 Topics in Italian Literature and Culture (4). Taught in English. May be repeated for credit as topics vary.

199 Tutorial in Italian Literature and Culture (4-4-4) F, W, S. The student must submit a written description of the proposed course to the instructor and the Chair prior to the beginning of the course. Prerequisites: consent of instructor and approval of the Department Chair.

DEPARTMENT OF GERMAN

243 Humanities Instructional Building; (949) 824-6406

E-mail: german@uci.edu

Gail K. Hart, **Department Chair**

Core Faculty

- Anke S. Biendarra, Ph.D. University of Washington, *Assistant Professor of German* (twentieth- and twenty-first-century German literature and film, cultural studies)
- Kai Evers, Ph.D. Duke University, *Assistant Professor of German* (twentieth-century German literature and film, modernism and Holocaust literature, theories of violence and catastrophic imagination)
- Gail K. Hart, Ph.D. University of Virginia, *Director of the Campuswide Honors Program and Department Chair and Professor of German* (eighteenth- and early-nineteenth-century German drama and fiction, Schiller, history of punishment)
- Ruth Klüger, Ph.D. University of California, Berkeley, *Professor Emerita of German* (Kleist, nineteenth-century literature, Stifter, Holocaust literature)
- Meredith Lee, Ph.D. Yale University, *Professor Emerita of German* (lyric poetry, eighteenth-century literature, Goethe, music and literature)
- Herbert Lehnert, Ph.D. University of Kiel, *Research Professor of German* (modern German literature)
- Glenn S. Levine, Ph.D. University of Texas, Austin, *Faculty Director of the Center for International Education, Director of the Humanities Language Learning Program, German Language Program Director, and Associate Professor of German* (applied linguistics, foreign language pedagogy, German-Jewish culture and literature, Yiddish language and culture, European culinary history and culture)
- William J. Lillyman, Ph.D. Stanford University, *Research Professor of German* (Romanticism, Goethe, Tieck)
- David T. Pan, Ph.D. Columbia University, *Director of Humanities Core Course and Associate Professor of German* (eighteenth-, nineteenth-, and early twentieth-century German literature and intellectual history)
- Jens Rieckmann, Ph.D. Harvard University, *Professor Emeritus of German* (twentieth-century literature, fin-de-siècle Austria, Hofmannsthal, Thomas Mann)
- Thomas P. Saine, Ph.D. Yale University, *Professor Emeritus of German* (eighteenth-century German literature, Enlightenment, French Revolution, Goethe)
- John H. Smith, Ph.D. Princeton University, *Professor of German and Comparative Literature* (eighteenth- and nineteenth-century literature and intellectual history, literary theory)

Affiliated Faculty

Edward Dimendberg, Ph.D. University of California, Santa Cruz, *Professor of Film and Media Studies* (film history, audio-visual media and the built environment, contemporary architecture and urbanism, avant-garde cinema, modernism and modernity)

Alexander Gelley, Ph.D. Yale University, *Professor of Comparative Literature* (eighteenth- and nineteenth-century European novel, critical theory)

Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor of History* (modern Germany, European women)

Jane O. Newman, Ph.D. Princeton University, *Professor of Comparative Literature and English* (comparative Renaissance and early modern literature and culture [English, French, German, Italian, neo-Latin], Mediterranean Renaissance studies, Baroque, afterlives of antiquity, Walter Benjamin, Erich Auerbach, and pre-modern lessons for the modern and post-modern)

Annette Schlichter, Ph.D. Humboldt University of Berlin, *Associate Professor of Comparative Literature* (feminist theory and criticism, queer theory, critiques of heterosexuality, contemporary American literature, gender and literature, voice studies)

Gabriele Schwab, Ph.D. University of Konstanz, *UCI Chancellor's Professor of Comparative Literature and English* (contemporary comparative literatures, critical theory, psychoanalysis, literature and anthropology)

Martin Schwab, Ph.D. University of Bielefeld, *Director of the Minor in Humanities and Law and Professor of Philosophy and Comparative Literature* (philosophy and aesthetics)

Ulrike Strasser, Ph.D. University of Minnesota, *Director of European Studies and Associate Professor of History* (early modern continental Europe)

The Department of German pursues a program of German studies as part of the humanistic endeavor to understand and evaluate culture. Departmental courses are focused on language, literature, and film *in context*, that is, within the historical, social, intellectual, and political circumstances of their production and continuing reception. Clearly, we come to understand ourselves and our immediate culture much better through the study of different languages and cultural systems. Therefore, university language study is not merely a matter of memorizing vocabulary and practicing pronunciation. It is the serious investigation of a foreign linguistic system and the cultures which are defined by it. It is difficult—in fact, nearly impossible—for us to scrutinize and analyze something we know as intimately as our native language, and yet this is the order by which we formulate our thoughts and the order which may sometimes formulate our thoughts for us. The “foreignness” of a foreign language allows us to objectify an entire linguistic system, to observe its structure and its usage, and then to make comparisons with our own linguistic situation. This kind of knowledge of one’s *native* language is the foundation of critical reflection on texts of any nature—historical, philosophical, literary, political, legal, journalistic, and others. Thus, serious study of a language other than English is absolutely crucial to a university education. The Department teaches its language courses with this principle in mind and seeks to provide its students with a framework for these linguistic and cultural comparisons.

Department literature and film courses offer a variety of critical perspectives from historical, social, or politically engaged readings to feminist and post-structuralist analysis. Topics range from studies of individual authors, periods, and genres to the history of German-language literature and film, the theory of criticism, and the relations of German-language literature to other literatures.

Undergraduate Program

The Department offers a major and a minor in German Studies. The major can be combined as a double major with any other UCI course of study; see an academic counselor for information.

All courses in the Department are taught in German to the extent compatible with the aim of the course. In the lower-division language courses students develop skills in speaking, listening, reading, and writing through an engaging, collaborative, task-based curriculum. The courses place a great deal of emphasis on

meaningful cultural literacy in German, employing a diverse range of authentic texts and materials from the beginning, including avid use of Internet resources. During the second year (intermediate), students benefit from a curriculum based on authentic literary and cultural content (theater, media) and simulation of “real world” situations. These courses have the additional goal of contributing to students’ education in the humanities and developing their skills in critical thinking.

After completion of the intermediate level, students enroll in the German 101–105 series, which emphasizes advanced reading, writing, and speaking skills while providing an introduction to a variety of German texts in literature, culture, film, and business. Courses in this series are taken in preparation for German 115, 117, 118, 119, 120, 130, which provide advanced instruction in periods ranging historically from the Reformation to the present and cover a variety of topics and approaches. A further series of courses (German 140, 150, 160, 170) is taught in English for both German Studies students and those who do not speak the language, and covers topics in German literature and culture, literary theory, linguistics, and criticism as well as German-language cinema.

Students are encouraged to participate in work- and study-abroad programs in German-speaking countries. The Department recommends the University’s Education Abroad Program (EAP) in Göttingen, Germany. Göttingen is an old university city in central Germany, where EAP students complete an advanced language program and enroll in university courses with great success, usually achieving native or near-native fluency during this exciting year abroad. EAP also offers semester- and year-long programs in Berlin and Bayreuth. All EAP courses are accepted for UCI graduation credit and many contribute to fulfillment of the German Studies major and minor requirements.

German placement tests are recommended but not required for students who have successfully completed foreign language classes in high school or elsewhere. To obtain information about the German placement test, please contact the UCI Academic Testing Office at (949) 824-6207. Students with college-level course work should present their transcript to an academic counselor in the Humanities Undergraduate Study Office, 143 Humanities Instructional Building, or call (949) 824-5132 for assistance in determining which UCI course to take.

Apart from the optional placement test, students are placed in German language courses according to the number of years of previous study. In general, one year of high school German is considered equal to one quarter of a UCI German language course.

CAREERS FOR THE GERMAN STUDIES MAJOR

The ability to speak and write German can open up opportunities in communications, foreign trade and banking, transportation, government, science and technology, tourism, library services, and teaching. Because German plays such an important role in modern technology, employers in international law, business, the foreign service, the airline industry, journalism, professional translating, and all levels of education increasingly seek students with a knowledge of German. German is excellent preparation for professional schools. It can be combined successfully with work in the natural sciences, business and management, and the computer sciences, and it is invaluable for advanced work in the humanities and the arts.

Recent graduates of the German Department have begun careers in international law, business, the foreign service, the airline industry, journalism, and all levels of education, including university teaching.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE B.A. DEGREE IN GERMAN STUDIES

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Language Other Than English Placement and Progression: See page 253.

Departmental Requirements for the Major

- A. Six courses selected from German 101, 102, 103, 104, 105, 115, 117, 118, 119, 120, 130.
- B. Three courses selected from German 140, 150, 160, 170 (one of which can be taken in satisfaction of the upper-division writing requirement).*
- C. Three additional courses selected from German 140, 150, 160, 170, Linguistics 3, Comparative Literature, German history, German philosophy, or German political science, as approved by the advisor for the major.*

* German 140, 150, 160, 170 are variable topics courses and may be repeated for credit as topics vary.

Residence Requirements for the Major: At least six of the upper-division courses required for the major must be completed successfully at UCI. Other courses may be taken through the UC Education Abroad Program, providing course content is approved in advance by the Undergraduate Director of the German Department and the Humanities Office of Undergraduate Study.

Education Abroad Option: Up to a maximum of six upper-division courses taken during study abroad may be counted toward the major requirement. All such courses taken abroad must be approved by the Undergraduate Director of the Department of German, and students are advised to consult with the Undergraduate Director both before and after their stay abroad. Course approval typically involves the following: (1) presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the foreign host university, and (2) approval by the German Undergraduate Director and the Humanities Office of Undergraduate Study. In planning their undergraduate career, all students should keep in mind the Residence Requirement (see above), which stipulates that at least six upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor

- A. Four courses selected from German 101, 102, 103, 104, 105, 115, 117, 118, 119, 120, 130.
- B. Three additional courses selected from German 101, 102, 103, 104, 105, 115, 117, 118, 119, 120, 130, 140, 150, 160, 170.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the German Undergraduate Director and the Humanities Office of Undergraduate Study.

Distinguished Visiting Professors

The Department's Distinguished Visiting Professors program brings students into direct contact with some of the outstanding scholars in the field of German Studies. Distinguished Visiting Professors typically visit for one quarter, during which they teach a graduate course and an undergraduate course and present a lecture to which students, faculty, and other members of the University community are invited. Program participants include Bengt Algot Sørensen (Odense), Uwe Ketelsen (Bochum), Peter Pütz (Bonn), Leslie Adelson (Ohio State), Hans Wysling (Zürich), Hans-Wolf Jäger (Bremen), Norbert Oellers (Bonn), Hans Rudolf Vaget

(Smith College), Heinrich Detering (Göttingen), Wolfgang Martens (Munich), Anna Kuhn (UC Davis), Renate Möhrmann (Köln), Ülker Gökberk (Reed College), Stephanie Hammer (UC Riverside), Helmut Schneider (Bonn), Richard Gray (University of Washington), Ursula Mahlendorf (UC Santa Barbara), Sander Gilman (Emory University), Irmela von der Lühe (Freie Universität), Doris Bachmann-Medick (Freie Universität and Universität Göttingen), and Ann Marie Rasmussen, Duke University.

Graduate Program

In its graduate courses the Department stresses theoretical understanding of the nature of literature and culture. Seminars focus on German literary and cultural development after 1700. An emphasis in Critical Theory is available to graduate students in all departments of the School of Humanities. In addition, graduate students in German may choose to complete an emphasis in Comparative Literature, Feminist Studies, or Visual Studies.

The graduate program in German is essentially a Ph.D. program; however, the Department will consider admitting students who plan to pursue a terminal M.A. The M.A. requires a minimum of one year in academic residence, passing of the comprehensive examination, and must be completed in no more than two years of full-time graduate study. For those in the Ph.D. program, the Department will decide after completion of the M.A., at the latest, whether to permit the student to continue in the Ph.D. program or recommend discontinuation. In those cases where the student enters the UCI graduate program in German with an M.A. from another institution, the Department will evaluate the student's progress during the first year of study before deciding to recommend continuation or discontinuation.

For students who enter with normal academic preparation and pursue a full-time program of study, the normative time to degree for the Ph.D. is six years or less.

MASTER OF ARTS IN GERMAN

Before entering the program, a candidate is expected to have the equivalent of the Department of German's undergraduate major. Students with a bachelor's degree in another subject may be considered for admission. Normally their course of study will have to be extended in order to make up for the deficiency. However, each case is considered individually by the faculty. The minimum course requirement for the M.A. degree is nine courses, eight of which must be taken within the Department of German. Reading knowledge of a foreign language other than German also is required for the M.A. degree. Whenever possible, a candidate is urged to complete this requirement before entering the program. Further requirements follow.

Students entering with a B.A. must complete their requirements for the M.A. by the end of the second year of study (six quarters) at the latest.

The Preparation of a Reading List. All candidates should prepare as early as possible a list of works read in the field of German literature, both primary texts and critical works. This list should preferably be augmented by critical texts and by works from other literatures which, in the candidate's opinion, relate to the German works on the list. Since it should ultimately contain representative selections from various eras of German literature and some works of criticism, a tentative list must be discussed with the graduate advisor before the end of the fall quarter of the year in which the candidate expects to receive the M.A. Candidates should indicate on the list a number of works with which they are especially familiar. In its final form (including works read during the course of study both in and out of class) the list will be submitted together with the master's essay two weeks before the oral examination. It is the student's responsibility to keep the reading list current.

M.A. Comprehensive Examination (consists of two parts):

1. **The Master's Essay.** The purpose of the written part of the M.A. comprehensive examination is to show the candidate's methodological progress in interpreting German literature. It consists of an essay in which a text is elucidated and related to (a) pertinent works by the same author, (b) its social and historical context, and (c) other works of German or other literatures with which the candidate is familiar. The level of the discussion will normally be enhanced by the candidate's knowledge of the relevant secondary literature. The topic of the essay should be tentatively formulated and reported to the graduate advisor before the end of the second quarter of the student's residence.
2. **The Oral Examination.** During the oral examination the following items will be discussed: (a) the essay, and (b) the reading list. The discussion based on the reading list will focus on works which the student knows well, but may broaden into other areas.

One Year of Residence.

DOCTOR OF PHILOSOPHY IN GERMAN

The Department requires a minimum of 22 approved courses from students entering with a bachelor's degree. These may include courses in philosophy, history, comparative literature, and others suitable for the individual student's program of study. The student also will participate in each of the German Department's colloquia. The student will augment the reading list and keep it current during the whole course of study. At least two years of residence are required.

Students entering with the master's degree will be advised individually as to remaining course requirements.

Since the majority of Ph.D. candidates choose careers as teachers, the German Department recognizes its obligation to offer them preparatory experience. Therefore, all candidates for the Ph.D. are required to teach under the supervision of a faculty member at least one course in each of three quarters (for which they will receive credit as German 399). Three of these courses may be counted toward the 22 courses required for the Ph.D.

Faculty Mentors. Each graduate student will be assigned a faculty mentor to consult at least once each quarter about progress, the program, academic questions, or any other issues pertaining to the student's graduate career. A student may change mentors for any reason (indeed, without giving a reason) at any time after meeting with either the graduate advisor or chair.

First-Year Review. Students ending their first year of study at UCI must undergo a more comprehensive review procedure. This applies to students entering with either a B.A. or an M.A. After the review, students will be apprised of the departmental evaluation and advised on a future course of study or recommended for discontinuation of the program.

Annual Review. All students will undergo an annual review by the faculty of the Department. Each spring the faculty will meet to discuss students' progress in the program. Annual review and evaluation of student performance and progress assure both the student and the Department that each student is meeting the academic standards, teaching standards (for teaching assistants and associates, readers, and "ABD" lecturers), and professional standards of conduct expected of graduate students in the program. The review process provides an opportunity to assess and make recommendations regarding any deficiencies in student performance and progress. The following factors will be considered in determining graduate student performance and progress: grade point average, time to degree, foreign language requirement, and teaching performance.

Grade Point Average. All graduate students in German, including those in both the master's program and the doctoral program, are expected to maintain a 3.3 GPA. A GPA below 3.3 in any quarter falls below the academic standard expected by the Department. Pursuant to the terms of appointment, a student whose GPA falls below 3.3 in any given quarter and whose cumulative GPA is not 3.3 by the end of the academic year may be ineligible for funding, and faculty may recommend the student be disqualified from the program.

Foreign Language Requirements. Students must demonstrate reading knowledge of two languages or extensive competence in one language other than German and English. Choice of language(s) depends on the student's area of specialization. Students are expected to demonstrate satisfactory progress. Progress is normally demonstrated by passing language examinations administered by a member of the faculty (in the German Department or other language department) versed in the language, or by registering for and passing language courses equivalent to the intermediate level (as approved by the graduate advisor). Full-time students must demonstrate near-native speaking abilities in German and English. Students with significant deficiencies in language competency that will adversely affect their academic progress normally will not be admitted to doctoral candidacy. Students in the doctoral program will meet language requirements on a schedule established by their doctoral committees, but in all cases the requirements must be met prior to taking the Ph.D. qualifying examination. If these requirements are not met in a timely manner, faculty may recommend disqualification from the program.

Qualifying Examination. In order to advance to candidacy, the student must take and pass a qualifying examination. At least two months prior to the planned date of the exam, students must submit a comprehensive reading list, prepared in consultation with their committee chair, to the examination committee. The committee may make recommendations to the list. On the basis of that list, students must design four courses. One course should be designed as an Introduction to German Literature and Culture. The other three courses, drafted in consultation with the student's committee chair, are graduate seminars and must ensure breadth and depth of coverage of German literature and culture. They may be organized around topics, genres, authors, or periods. At least one of these courses must comprise the student's intended area of dissertation research. The four courses must be clearly distinct and have minimal overlap. These courses must include reading lists of required and optional texts, main secondary literature, a written justification/course description, and a basic syllabus (for a thirteen-week semester course). No more than one course may be a modification of a seminar taken in the Department. These courses must be submitted to the committee members at least two weeks prior to an oral examination date. The oral exam will be a three-hour exploration of the reading list, focusing on the courses. Upon successful completion of the qualifying examination, the candidate will have advanced to Ph.D. candidacy.

Dissertation Prospectus. Students must submit a dissertation prospectus to their advisor and, following approval by the advisor, circulate it to the entire committee. There will be a two-hour oral defense of the prospectus before the committee. It is expected that the prospectus be submitted two quarters after completion of the qualifying examination or within one year at the latest.

Dissertation Chapter Review. Students must submit a substantial piece of writing (approximately 45 pages) from their dissertation ordinarily in the form of a chapter and a comprehensive bibliography. In consultation with their dissertation committee chair, they schedule a date and time for the oral review with the committee,

which lasts approximately two–three hours. Prior to the oral review the student will make a public presentation, open to the UCI community and guests, in the form of a lecture with questions and answers.

Doctoral Colloquium. Students who have advanced to candidacy and are in residence must attend a colloquium for doctoral candidates. The colloquium will be held at least two times per quarter. Students will be expected to present sections of their prospectus or dissertation.

Dissertation Defense. The oral defense of the dissertation focuses on the adequacy of the student’s research and thesis.

Two Years of Residence.

Normative Time to Degree and Expected Programs of Study

For students entering with a B.A.:

Year 1: Course work

Year 2: Course work; M.A. completed

Year 3: Course work; Qualifying Examination (latest, fall of year four); advance to candidacy

Year 4: Dissertation prospectus and defense

Year 5: Dissertation chapter review and public presentation

Year 6: Completion of dissertation; defense

For students entering with an M.A.:

Year 1: Course work

Year 2: Course work; Qualifying Examination (latest, fall of year three); advance to candidacy

Year 3: Dissertation prospectus and defense

Year 4: Dissertation chapter review and public presentation

Year 5: Completion of dissertation; defense

Courses in German

(Schedule of Classes designation: German)

LOWER-DIVISION

1A-B-C Fundamentals of German (5-5-5) F, W, S. Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and beginning study of German. With a learner-centered approach, the courses help students develop speaking, listening, reading, writing, and cultural skills and knowledge. Prerequisite for 1A: none; for 1B: German 1A with a grade of C or better, one to two years of high school German, or equivalent; for 1C: German 1B or S1AB with a grade of C or better, two to three years of high school German, or equivalent. German 1A-B-C and S1AB-BC may not both be taken for credit. (1C: VI)

S1AB-BC Fundamentals of German (7.5-7.5) Summer. First-year German in a time-intensive form. Equivalent to German 1A-B-C during the academic year. For description, see German 1A-B-C. Prerequisite for S1AB: none; for S1BC: German S1AB or 1B with a grade of C or better, or equivalent. German S1AB-BC and 1A-B-C may not both be taken for credit. (S1BC: VI)

2A-B-C Intermediate German (4-4-4) F, W, S. Emphasizes the development of meaningful communicative skills in German for the purposes of interaction with German speakers and intermediate study of German. With a learner-centered approach, the courses help students develop reading, writing, speaking, listening, grammatical, and cultural skills and knowledge. First-year grammar is reviewed and expanded. Prerequisite for 2A: German 1C or S1BC with a grade of C or better, three to four years of high school German, or equivalent; for 2B: German 2A with a grade of C or better, or equivalent; for 2C: German 2B or S2AB with a grade of C or better, or equivalent. German 2A-B-C and S2AB-BC may not both be taken for credit. (VIII)

S2AB-BC Intermediate German (6-6) Summer. Second-year German in a time-intensive form. Equivalent to German 2A-B-C during the academic year. For description see German 2A-B-C. Prerequisite for S2AB: German S1BC or 1C, three to four years of high school German, or equivalent; for S2BC: German 2B or S2AB with a grade of C or better, or equivalent. German S2AB-BC and German 2A-B-C may not both be taken for credit. (VIII)

50 Science, Society, and Mind (4) F, W, S. Historical, philosophical, and literary reflections by German writers on the rise of the modern sciences. In English. Designed primarily for nonmajors. May be taken three times for credit as topics vary. (IV, VIII)

53 Advanced Conversation (2) S. Includes reading of political and cultural material. Conducted in German. May be repeated for credit. Prerequisite or corequisite: German 2C or consent of instructor.

97 Fundamentals of German (with Emphasis on Reading) (4) F, W, S. Designed primarily for students interested in acquiring a solid reading knowledge of German, and to facilitate the understanding and translating of German texts dealing with a variety of disciplines. Not open to German majors or minors. Does not serve as prerequisite for any higher-level German courses or fulfill any undergraduate foreign language requirement. May be taken for credit three times.

99 Special Studies German (1 to 5) F, W, S. Consultation with instructor necessary prior to enrollment. Prerequisite: consent of instructor.

UPPER-DIVISION

NOTE: Upper-division courses normally are taught in German. Exceptions are German 140, 150, 160, and 170.

101 Introduction to German Literature and Culture (4) F. Sample interpretations of texts in their cultural and historical contexts. Introduction to critical language in German. Prerequisite: German 2C with a grade of C or better or equivalent, or consent of instructor. May be repeated for credit as topics vary. (VIII)

102 German Culture and Society (4). Interdisciplinary introduction to German culture from the perspective of its aesthetic, social, and political aspects. Methodological problems arising from an analysis of culture in its historical context. Prerequisite: German 2C with a grade of C or better or equivalent, or consent of instructor. May be repeated for credit as topics vary. (VIII)

103 German Film (4). Introduction to the history and interpretation of German film within its cultural and social contexts. Enhances German grammar knowledge and vocabulary and develops sophisticated speaking, writing, and reading skills. Prerequisite: German 2C with a grade of C or better or equivalent, or consent of instructor. May be repeated for credit as topics vary. (VIII)

104 Introduction to Germanic Linguistics (4). Introduces German or other Germanic-language linguistic, sociolinguistic, or ethnography-of-communication topics. Taught in German. Prerequisite: German 2C with a grade of C or better, or consent of instructor. May be repeated for credit as topics vary. (VIII)

105 German for Business and Economics (4). Explores the structure of the German economy and business practices while developing verbal and written skills important for professional life in Germany. Taught in German. Prerequisite: German 2C with a grade of C or better or equivalent, or consent of instructor. (VIII)

115 Advanced German for Business and Economics (4). Explores the structure of the German economy and business practices while developing advanced verbal and written skills important for professional life in Germany. Taught in German. Prerequisite: German 105 or consent of instructor. May be repeated for credit as topics vary. (VIII)

117 Topics in German Literature and Culture 750–1750 (4). Specific course content determined by individual faculty members. Example: Luther and the European Renaissance. Prerequisite: at least one course selected from German 101, 102, 103, or 104 or equivalent, or consent of instructor. May be repeated for credit as topics vary. (VIII)

118 Studies in the Age of Goethe (4). Individual authors such as Lessing, Goethe, Schiller, Kleist, and Hölderlin, or the drama of the “angry young men” of the German 1770s. Prerequisite: at least one course selected from German 101, 102, 103, or 104 or equivalent, or consent of instructor. May be repeated for credit as topics vary. (VIII)

119 Studies in Nineteenth-Century German Literature and Culture (4). Individual authors such as Büchner, Grillparzer, Keller, and Nietzsche, or broader social-literary phenomena. Prerequisite: at least one course selected from German 101, 102, 103, or 104 or equivalent, or consent of instructor. May be repeated for credit as topics vary. (VIII)

120 Studies in Twentieth-Century German Literature and Culture (4). Individual authors such as Thomas Mann, Brecht, and Kafka, or topics addressing questions of genre and/or social-literary problems. Prerequisite: at least one course selected from German 101, 102, 103, or 104 or equivalent, or consent of instructor. May be repeated for credit as topics vary. (VIII)

130 Topics in German Literature and Culture (4). Literary and cultural topics not fully contained within the periods listed above, such as "German Comedy" and "Turn-of-the-Century Vienna." Prerequisite: at least one course selected from German 101, 102, 103, or 104 or equivalent, or consent of instructor. May be repeated for credit as topics vary. (VIII)

140 Topics in Literary Theory and Criticism (4). In English. Theoretical dimensions of literary criticism and the German philosophical tradition. Topics such as Marxism, Freudian thought, the German Idealistic tradition of aesthetics, Historicism, twentieth-century hermeneutics, Frankfurt School, and *Rezeptionsaesthetik* are explored in a selection of theoretical, critical, and literary texts. Prerequisites when offered as an upper-division writing course: upper-division standing and satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary. (VIII)

150 German Literature and Culture in Translation (4). In English. Major works in Germanic literature and culture in context. Prerequisites when offered as an upper-division writing course: upper-division standing and satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary. (VIII)

160 German Cinema (4). Historical, theoretical, and comparative perspectives on German cinema. Same as Film and Media Studies 160 when topic is appropriate. Prerequisites when offered as an upper-division writing course: upper-division standing and satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary. (VIII)

170 Topics in German Linguistics (4). Explores linguistic, sociolinguistic, or ethnography-of-communication topics of German or other Germanic languages (Swedish, Icelandic, Yiddish, and others). Taught in English. Prerequisites when offered as an upper-division writing course: upper-division standing and satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary. (VIII)

199 Individual Study (1 to 4) F, W, S. May be repeated for credit as topics vary.

GRADUATE

All graduate courses offered in the Department fall under the generic titles German 200, 210, 220, and 230. Course titles and contents change according to the instructor teaching them; courses offered under these numbers may be repeated for credit provided the content has changed. Complete course descriptions are available quarterly from the Department at <http://www.humanities.uci.edu/german/courses>. Course offerings for the entire School of Humanities are available at <http://www.humanities.uci.edu/SOH/graduate/courses.php>.

200 Literary Criticism (4)

210 Literary Theory (4)

220 Selected Topics in German Linguistics (4)

230 Literary and Cultural History (4)

290 Independent Study (4). Counted toward course requirements for the M.A. or Ph.D. A term paper or project is required. Letter grade only. May be repeated for credit.

298 Independent Directed Reading (4 to 12). For students preparing for doctoral examination. Satisfactory/Unsatisfactory only.

299 Dissertation Research (4 to 12). For students who have been admitted to doctoral candidacy. Satisfactory/Unsatisfactory only.

398A-B The Teaching of German (2-2) F, W. Required of all Teaching Assistants in the German Department. Also open to present and prospective teachers of German who are not Teaching Assistants.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

UNDERGRADUATE PROGRAM IN GLOBAL CULTURES

152 Humanities Instructional Building; (949) 824-9290

Mark S. Poster, *Departments of Film and Media Studies and of History*

Brook Thomas, *Department of English*

Armin Schwegler, *Department of Spanish and Portuguese*

Jacobo Sefamí, *Department of Spanish and Portuguese*

Bert Winther-Tamaki, *Department of Art History*

Undergraduate Program

Global Cultures is an innovative undergraduate major (and minor) in the School of Humanities with an exciting mission: to explore the problems and processes of globalization from a humanistic perspective. The major provides students with twenty-first-century analytical skills and knowledge that is critical to understanding the complexities of the diverse world in which we live. In the process, Global Cultures equips students with the knowledge and tools that lead to successful careers in a wide range of professions and fields.

Global Cultures faculty offer high-quality lectures and, in advanced courses, interactive small group seminars. The major favors a multidisciplinary approach that draws on multiple departments and programs, housed in both the Humanities (including Art History, English, Film and Media Studies, History, Philosophy, Religious Studies, Spanish and Portuguese, and many more) and the Social Sciences (Anthropology, Chicano/Latino Studies, Political Science, Sociology, among others).

Up-to-date examples of the highly diverse courses taught in the major may be found at http://www.humanities.uci.edu/global_cultures/. The curricular offerings of Global Cultures are extraordinarily broad. With this intellectually stimulating learning environment, the major attracts students from a wide range of backgrounds. Global Cultures faculty provide these students with a critical understanding and a strong foundation for practice in a variety of occupations, both domestic and international.

The major requires a total of 14 courses. Six of these courses are specific, and eight are electives (see below). Students are encouraged to augment their foreign language competence beyond the School minimum. Participation in the UC Education Abroad Program is strongly recommended for all Global Cultures majors.

Students majoring or minoring in Global Cultures must choose a primary emphasis (six courses) and a secondary emphasis (two courses) from the list below. Each emphasis essentially consists of a geographic focus. Students may also design their own emphasis in consultation with a program advisor and with the approval of the Global Cultures Committee. All emphases are chosen in consultation with a faculty advisor and/or the approval of the Global Cultures Committee. Examples of how current students are combining their primary and secondary emphases are available at http://www.humanities.uci.edu/global_cultures/.

EMPHASES

Hispanic, U.S. Latino/Latina, and Luso-Brazilian Cultures:

Examines the historical, political, and cultural formations of regions where Spanish and Portuguese are spoken, including Spain, Portugal, Spanish- and Portuguese-speaking countries in the Western Hemisphere, and the Latino/Latina population in the United States.

Africa (Nation, Culture) and its Diaspora: Examines Africa as a diverse geographical and political expression, including its historical, political, and cultural formation locally, regionally, and globally.

Asia (Nation, Culture) and its Diaspora: Examines Asia as a diverse geographical and political expression, including its historical and cultural formation locally, regionally, and globally.

Europe and its Former Colonies: Examines Europe and its former colonies as a diverse geographical and political expression, including its historical and cultural formation locally, regionally, and globally.

Atlantic Rim: Explores the movement of people and cultures in relationship to the historical and contemporary experience of societies that are adjacent to the Atlantic Ocean, including, among others, west Africa, the Americas, the Caribbean, and western and northern Europe, as well as the British archipelago.

Pacific Rim: Explores the movement of people and cultures in relationship to the historical and contemporary experience of societies that are adjacent to the Pacific Ocean, including, among others, India, China, Japan, Korea, Vietnam, the United States, Central and South America, and Malaysia.

Inter-Area Studies: Includes comparative studies of the geographical regions outlined in the above six emphases, for instance, the analysis of Africans in Asia, or the cultural, historical, and political connections between the Atlantic and the Pacific Rim.

Students may also design their own emphasis by combining two or more regional emphases in a non-traditional fashion. For instance, a student may wish to study what is known as “Creole” (oral) literatures, found in multiple locations in Africa, Asia, and the Americas.

STUDY ABROAD OPTION

Students are encouraged to study abroad, and may be able to satisfy a significant portion of their major requirements abroad. For maximum number of courses allowed and other pertinent details, see http://www.humanities.uci.edu/global_cultures/.

All courses taken abroad must be approved. Course approval typically involves the following: (1) presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the foreign host university, and (2) submission of a UCI Humanities Petition form (available online, and to be completed after student’s return to UCI) to the Undergraduate Director of the Program in Global Cultures, and to the Office of Undergraduate Study. Students are advised to consult with the Office of Humanities Undergraduate Study (HIB 143) and the Global Cultures Director both before and after their stay abroad. NOTE: See also the residence requirement below.

CAREER OPPORTUNITIES

The major prepares students particularly well for careers in all fields in which analysis, judgment, argument, and a wide (global) rather than narrow perspective are important. The Global Cultures major equips students with a knowledge that is critical to understanding the complexities of the diverse world in which we live.

The following careers are especially well suited for Global Cultures majors: business (national as well as international), law,

management, education (primary and secondary teaching), politics, public policy, academia, print media, television, foreign service, tourism, travel industry, and graduate studies in a wide variety of fields (business, law, education, public policy, and others).

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE B.A. DEGREE IN GLOBAL CULTURES

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Requirements for the Major

- A. History 21A, 21B, 21C.
- B. Global Cultures 103A-B.
- C. Global Cultures 191.
- D. Seven upper-division courses, five of which must focus on one emphasis and two on a second emphasis chosen from the approved course lists at http://www.humanities.uci.edu/global_cultures. Quarterly consultation with a faculty advisor is also required.
- E. One additional upper- or lower-division course which must focus on the primary or secondary emphasis chosen from the approved course lists at http://www.humanities.uci.edu/global_cultures/.

Students are encouraged to augment their language other than English competence beyond the School minimum. Participation in the UC Education Abroad Program is strongly recommended for all Global Cultures majors.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI. By petition, two of the five may be taken through the UC Education Abroad Program, provided that course content is approved—usually in advance—by the Director of the Global Cultures Program.

Requirements for the Minor

- A. Two courses from History 21A, 21B, 21C.
- B. Global Cultures 103A-B.
- C. Three upper-division courses from one emphasis.
- D. One upper-division course from a second emphasis.

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Emphases and Approved Courses: The lists of approved courses are extensive and vary from quarter to quarter, depending upon course scheduling. For complete up-to-date information, consult http://www.humanities.uci.edu/global_cultures.

Courses in Global Cultures

(*Schedule of Classes* designation: GIBICIt)

103A-B Global Cultures I, II (4-4). Introduction to the processes by which economies, cultural practices, national entities, groups, individuals, and personal identities have undergone globalization. **103A:** General background and methodological tools for understanding problems and processes of globalization. May be repeated for credit as topics vary. **103B:** Explores how globalization has manifested itself in specific topics, periods, or societies. May be repeated for credit as topics vary. (VIII)

191 Global Cultures Senior Seminar (4). Students explore a topic(s) concerning the processes and/or problems of globalization from an interdisciplinary perspective and build on their critical and analytical skills when investigating cultural and other phenomena that cut across national borders. Research assignments, class presentations, final seminar paper. Prerequisites: Global Cultures 103A-B; upper-division standing or consent of instructor. May be repeated for credit as topics vary.

199 Independent Study (1 to 4). Directed reading and research in consultation with a faculty advisor. Substantial written work required. May be repeated for credit as topics vary.

DEPARTMENT OF HISTORY

200 Murray Krieger Hall; (949) 824-6521

Jeffrey N. Wasserstrom, **Department Chair**

Faculty

Marc Baer, Ph.D. University of Chicago, *Associate Professor of History* (Ottoman and Islamic history, Middle East history, and history of religion)

Sharon B. Block, Ph.D. Princeton University, *Associate Dean of Humanities Undergraduate Study and Associate Professor of History* (early American, feminist theory and gender studies)

Carolyn P. Boyd, Ph.D. University of Washington, *Professor Emerita of History* (Europe, Spain)

Dickson D. Bruce, Jr., Ph.D. University of Pennsylvania, *Professor Emeritus of History* (American culture, African American history)

Vinayak Chaturvedi, Ph.D. University of Cambridge, *Associate Professor of History* (South Asia, social and intellectual history)

Yong Chen, Ph.D. Cornell University, *Associate Professor of History* (Asian American history)

Touraj Daryaee, Ph.D. University of California, Los Angeles, *Associate Director, Dr. Samuel M. Jordan Center for Persian Studies and Culture, Professor of History, and Howard Baskerville Professor in the History of Iran and the Persianate World* (ancient and medieval Iranian history, Iranian languages and literature, Zoroastrianism)

Alice Fahs, Ph.D. New York University, *Director of the Humanities Honors Program and Associate Professor of History* (U.S. intellectual/cultural history)

Sarah Farmer, Ph.D. University of California, Berkeley, *Associate Professor of History* (twentieth-century European cultural)

Richard I. Frank, Ph.D. University of California, Berkeley, *Professor Emeritus of History and Classics* (Roman empire, Classics)

James B. Given, Ph.D. Stanford University, *Professor of History* (medieval Europe)

Qitao Guo, Ph.D. University of California, Berkeley, *Associate Professor of History* (Late Imperial China, social and cultural)

Douglas M. Haynes, Ph.D. University of California, Berkeley, *Director of the ADVANCE Program for Faculty Equity and Diversity and Associate Professor of History* (social and cultural history of modern Britain, social history of modern medicine)

Lamar M. Hill, Ph.D. University of London, *Professor Emeritus of History* (Tudor-Stuart Britain)

Karl G. Hufbauer, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (social history of science)

David Iglar, Ph.D. University of California, Berkeley, *Associate Professor of History* (U.S. environmental, American West, Pacific)

Jon S. Jacobson, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (European international)

Winston James, Ph.D. London School of Economics and Political Science, University of London, *Professor of History* (Caribbean, African American, and African diaspora)

Michael P. Johnson, Ph.D. Stanford University, *Professor Emeritus of History* (American social and political)

Mark A. LeVine, Ph.D. New York University, *Professor of History* (modern Middle Eastern history, Islamic studies, histories of empire and globalization)

Lynn Mally, Ph.D. University of California, Berkeley, *Professor of History* (modern Russian and Soviet)

Samuel C. McCulloch, Ph.D. University of California, Los Angeles, *Professor Emeritus of History* (British empire and commonwealth)

Nancy A. McLoughlin, Ph.D. University of California, Santa Barbara, *Assistant Professor of History* (medieval Europe)

Jessica Millward, Ph.D. University of California, Los Angeles, *Assistant Professor of History* (U.S., African American gender and women)

Laura Mitchell, Ph.D. University of California, Los Angeles, *Director of History Graduate Studies and Associate Professor of History* (sub-saharan Africa, colonial southern Africa, environmental history, transregional networks of exchange)

Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor of History* (modern Germany, European women)

Keith L. Nelson, Ph.D. University of California, Berkeley, *Professor Emeritus of History* (American foreign relations)

Spencer C. Olin, Ph.D. Claremont Graduate School, *Professor Emeritus of History* (American social and political)

Rachel O'Toole, Ph.D. University of North Carolina, Chapel Hill, *Assistant Professor of History* (Latin America; ancient, colonial, national, and contemporary)

Kenneth L. Pomeranz, Ph.D. Yale University, *UCI Chancellor's Professor of History* (modern Chinese)

Mark S. Poster, Ph.D. New York University, *Professor Emeritus of Film and Media Studies and of History* (modern European intellectual)

Ana Rosas, Ph.D. University of Southern California, *Assistant Professor of History and Chicano/Latino Studies* (Chicana/Chicano history; comparative immigration and ethnic history; gender studies; oral history)

Jaime E. Rodríguez, Ph.D. University of Texas, *Professor Emeritus of History* (Latin America, Mexico)

Emily S. Rosenberg, Ph.D. State University of New York, Stony Brook, *Professor of History* (U.S. international relations, U.S. and the world, gender and international relations)

Vicki L. Ruiz, Ph.D. Stanford University, *Dean of the School of Humanities and Professor of History and Chicano/Latino Studies* (women, Chicano/Chicana labor)

Sharon V. Salinger, Ph.D. University of California, Los Angeles, *Dean of the Division of Undergraduate Education and Professor of History*

Patricia Seed, Ph.D. University of Wisconsin, Madison, *Professor of History* (world history, cartography)

Ulrike Strasser, Ph.D. University of Minnesota, *Director of European Studies and Associate Professor of History* (early modern continental Europe)

Timothy Tackett, Ph.D. Stanford University, *Professor Emeritus of History* (Old Regime Europe, French Revolution)

Heidi Tinsman, Ph.D. Yale University, *Associate Professor of History* (Latin America)

Steven C. Topik, Ph.D. University of Texas, *Professor of History* (Latin America)

Anne Walthall, Ph.D. University of Chicago, *Co-Director of the Minor in Asian Studies and Professor of History* (early modern and modern Japan)

Jeffrey N. Wasserstrom, Ph.D. University of California, Berkeley, *Department Chair and Professor of History* (modern China, student movements and comparative revolutions)

Jonathan M. Wiener, Ph.D. Harvard University, *Professor of History* (recent American, theory and history)

Affiliated Faculty

Edwin Amenta, Ph.D. University of Chicago, *Professor of Sociology*

Simon A. Cole, Ph.D. Cornell University, *Department Chair and Associate Professor of Criminology, Law and Society*

Catherine Fisk, J.D. University of California, Berkeley; LL.M. University of Wisconsin at Madison, *UCI Chancellor's Professor of Law* (labor and employment law, civil rights)

Dorothy Fujita-Rony, Ph.D. Yale University, *Associate Professor of Asian American Studies* (U.S. history, Asian American studies)

Kavita Philip, Ph.D. Cornell University, *Associate Professor of Women's Studies* (science and technology studies, South Asian studies, political ecology, critical studies of race, gender, colonialism, new media, and globalization)

Christopher Tomlins, Ph.D. Johns Hopkins University, *UCI Chancellor's Professor of Law* (American legal history, law and Society, and law and humanities)

Undergraduate Program

The undergraduate program in History is designed to develop critical intelligence and to foster an awareness of ourselves and our world through the study of the past. The Department presents a variety of approaches to history, and each emphasizes basic

disciplinary skills: weighing evidence, constructing logical arguments, and exploring the role of theory in historical analysis and human action.

The Department offers a number of lower-division courses open to nonmajors as well as majors, most of which fulfill part of the UCI general education requirement. The Department requires all majors to take an introductory course in three of six regional histories—United States history, European history, Latin American history, Transregional history, Asian history, or Middle East and African history. These courses are also open to nonmajors.

Students who are interested in the study of history but are majoring in other disciplines may minor in History. The minor incorporates elements of the Department's program for majors but allows students enough flexibility to pursue programs in other departments and schools.

Upper-division courses range from the examination of individual nation-states (e.g., Chinese history), to studies of the relations among nation-states (e.g., Emergence of the Modern Middle East), to historical analyses of political, socio-economic, and cultural factors (e.g., Women in the United States). Students are also provided the opportunity for small-group learning experiences in a series of colloquia in social history, political history, international history, intellectual history, social thought, and comparative history. The colloquia are conducted as discussion groups and involve close reading and analysis of secondary texts. The research seminar is a one-quarter seminar in primary materials that culminates in the writing of a research paper. In addition, students have the option of pursuing a full-scale research project with a faculty advisor after completing the research seminar.

The faculty strongly encourages History majors and minors to take advantage of the University's study abroad programs and to experience a different culture for a quarter or longer while making progress toward their UCI degree. Moreover, students who are interested in the history of a particular country or region should seriously consider participation in University of California programs within that country or area. UCI's Study Abroad Center, which includes both the Education Abroad Program (EAP) and the International Opportunities Program (IOP), assists students in taking advantage of the many worldwide opportunities. See the Study Abroad Center section of the *Catalogue* or an academic counselor for additional information.

CAREERS FOR THE HISTORY MAJOR

The training and discipline derived from historical studies provide a valuable experience for all educated persons seeking to understand themselves and their world. Many students who complete undergraduate degrees in the Department of History go on to graduate school in a variety of fields, including history, law, business, international relations, and teacher education. Students interested in teaching history at the intermediate and high school levels should consult with the Department of History, the School of Humanities Undergraduate Counseling Office, or the Department of Education.

The study of history is valuable preparation for many other careers as well. The strong academic and professional orientation acquired by History majors is necessary to pursue successful careers in such diverse fields as advertising, banking, journalism, management, public relations, publishing, and government service.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE B.A. DEGREE IN HISTORY

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Departmental Requirements for the Major

Thirteen courses are required:

- A. Three courses from History 70A, B, C, D, E, F, chosen from three different regions (Problems in History 70A Asia, 70B Europe, 70C United States, 70D Latin America, 70E Middle East and Africa, 70F Transregional History).
- B. Three upper-division History courses with a regional or thematic focus decided upon in consultation with a faculty advisor, at least one of which is devoted to the period prior to 1800.
- C. Two additional upper-division History courses outside the regional or thematic focus area.
- D. History 100, taken to satisfy upper-division writing, and History 190. (Students have the option of pursuing a full-scale research project in History 192 in consultation with a faculty advisor. History 192 can only be taken after completing History 190).
- E. Three additional lower- or upper-division History courses.

Residence Requirement for the Major: One course from the History 70 series, History 100, History 190, and three upper-division History courses must be completed successfully at UCI. By petition, two of the six may be taken through the UC Education Abroad Program, provided that course content is approved in advance by the Chair of the History Undergraduate Program Committee.

Departmental Requirements for the Minor

Seven courses are required:

- A. A year-long survey in world history (History 21A, 21B, 21C), United States history (History 40A, 40B, 40C), or three courses from History 70A, B, C, D, E, F, chosen from three different regions (Problems in History 70A Asia, 70B Europe, 70C United States, 70D Latin America, 70E Middle East and Africa, 70F Transregional History).
- B. Four upper-division History courses.

Residence Requirement for the Minor: Students who select the History 70 series must complete at least one 70 series course at UCI. At least four upper-division History courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the Chair of the Undergraduate Program Committee.

Graduate Program

The M.A. and Ph.D. degree programs in History are designed to provide students with both advanced historical skills and a rigorous grounding in historical theory. This combination of theoretical study with training in historical method reflects the Department's conviction that scholars should be encouraged to deal with significant questions about the past and to approach these questions in a methodologically sophisticated way. This approach requires that the student develop the critical abilities necessary to deal with primary sources, secondary syntheses, and the interrelationship of history and theory. Candidates for a Ph.D. in History are expected to gain teaching experience as an integral part of their graduate training. Ordinarily this is accomplished through service as a teaching assistant.

Basic to the curriculum is the Department's course in History and Theory which deals with both theoretical texts and historical studies that have utilized theoretical concepts and models. The course

directs attention to the diverse implications of modernity, to the groups who dominated and were dominated by it, and to the costs and benefits of the process. These matters can be studied most satisfactorily by the historian whose theoretical self-consciousness and methodological facility have been systematically and carefully developed.

The colloquium, a reading course that examines a field's historiography, enriches the student's knowledge of the main areas of historical research and develops critical reading skills. A colloquium series is offered annually in American history; biennially (depending on demand) in modern European history, early modern European history, Latin American history, South and Southeast Asian history, East Asian history, Chinese history, world history, Middle Eastern and North African history, and ancient history; and occasionally in medieval history. A student may prepare a dissertation in any of these fields.

In addition to the History and Theory sequence and the major field colloquia, students also take a proseminar/research seminar sequence during their first year. The proseminar provides an orientation to the literature on a broad historical subject, and the associated seminar offers guidance in research and writing on problems within this broad area. Students awarded M.A. degrees at other institutions before entering the graduate program at UCI may be exempted from this requirement, subject to evaluation of their M.A. theses.

During the second year of study, Ph.D. students normally take a colloquium series in their second field. They also take a two-quarter research seminar where they have an opportunity to work on problems of their own choosing; students who entered the program with an M.A. degree must also take this seminar. In addition, independent reading and research courses are provided for advanced, specialized study in tutorial form.

The immediate objective for the doctoral student is to develop two fields of competence in addition to History and Theory. Competence in the two fields is demonstrated by the satisfactory completion of three courses in each of these areas. A comprehensive oral examination on the student's major field follows fulfillment of all degree requirements. However, those students who elect a second field administered by another program or department (e.g., Critical Theory, Asian American Studies, Feminist Studies) must complete requirements, which sometimes include a written examination, for that field. Competence in History and Theory is demonstrated by satisfactory completion of History 200A and 200B. History 200C may be taken as an elective.

The subsequent objective, to write a distinctive dissertation, is of crucial importance. To assist in accomplishing both objectives, the Department offers intensive consultation with the faculty as well as a lively intellectual atmosphere. Students have long shared in the decision-making processes of the Department, which engages the entire historical community at UCI in the collective pursuit of excellence. Students profit also from a vigorous visiting speakers program that brings scholars from other campuses and other nations to meet and interact with UCI students and faculty.

Requirements for Admission. Although it is desirable that an applicant have the equivalent of an undergraduate major in History, the Department also considers students who have previously specialized in other subject areas and who show promise of sustained and self-disciplined work in history. Typically, a minimum undergraduate grade point average of 3.3 (B+) is required for admission, with evidence of better work in history. In addition, all applicants are asked to submit three letters of recommendation and scores from the Graduate Record Examination. An example of written work in history from undergraduate courses is also required. A departmental interview may also be required. Students are accepted for admission for fall quarter only, and the deadline for application

for fall admission is January 2. The application deadline to be considered for fellowships is December 15.

MASTER OF ARTS IN HISTORY

Program of Study. Each candidate for the M.A. will choose a graduate advisor who will supervise the student's program. Nine courses are required for the degree: three in a colloquium series, a proseminar and related first-year research seminar, a secondary emphasis of two related courses (History and Theory 200A and 200B, or other), and two electives that support preparation for the M.A. exam or thesis. Students who decide to pursue the Ph.D. after completion of the M.A. program need to consider Ph.D. course requirements when selecting courses.

Time Limits. The M.A. requires a minimum of one year in academic residence and can be completed during that term if full-time study is undertaken. However, it is expected that many M.A. students are employed and need to enroll on a part-time basis. Therefore, students are allowed up to three years of graduate study to complete the degree.

Plan I: Thesis. The master's thesis represents a revision of the first-year research paper, equivalent to a scholarly article of 40–50 typescript pages, under the supervision of a professor in the student's major field and reviewed and approved by a three-member thesis committee, at least two of which must be History faculty members.

Plan II: Comprehensive Examination. At the end of the final quarter the M.A. candidate must pass a comprehensive written or oral examination administered by three faculty members covering the student's major field (e.g., America, Early Modern Europe) and focused upon material assigned in the three-quarter colloquium series.

Language Requirement. Students in the M.A. program whose major field requires use of foreign language sources demonstrate competence in a foreign language in the process of writing the first-year research paper and thesis. Other M.A. students do not have to meet a foreign language or alternative skills requirement.

DOCTOR OF PHILOSOPHY IN HISTORY

Ph.D. students are advised to begin their graduate work at UCI, since those who have taken the M.A. elsewhere will be expected to enroll in the same courses that are required of all incoming students, with the exception of the First-Year Research Seminar. Subject to evaluation of their M.A. theses, these students will be exempted from this requirement. In the second and third years, the greater experience of those who enter with an M.A. may work to their advantage in speeding them to the qualifying examination.

First-Year Review. To be admitted formally into the doctoral program, students must satisfactorily pass a departmental evaluation at the end of their first year of study; this includes students who entered with an M.A. from another institution.

Emphasis in Creative Nonfiction. In addition to meeting admission requirements, applicants must submit an additional writing sample that demonstrates aptitude for the program. During their program of study, students take three of the writing workshops or their equivalents that are offered through the International Center for Writing and Translation. They also write a dissertation that meets traditional intellectual standards for academic rigor and is accessible to an audience beyond the academy.

Emphasis in the History of Gender and Sexuality. To complete this emphasis, students take three courses emphasizing feminist studies and/or queer theory in three different fields. At least two of these courses must be taken in the History Department; the third course may be either a History Department course or one of the three core graduate seminars offered through the Department of Women's Studies.

Program of Study. The Department requires doctoral students to prepare themselves in three different areas:

1. History and Theory.
2. The first field (such as Modern Europe), which is designed as a teaching field as well as the focus of the student's dissertation.
3. The second field (such as American History or Critical Theory), which is designed as a second teaching field.

The courses required in this preparation include the History and Theory sequence, colloquium series in both fields, First-Year Proseminar/Research Seminar sequence, and the Second-Year Research Seminar. The normal academic load is three courses per quarter. However, students may be eligible for approved part-time status, which allows them to take a lighter course load at reduced fees for a maximum of two academic years.

Every doctoral student will be assisted by a departmental advisor in the student's general area of study who will be responsible for approving defined fields, guiding the student to consultant faculty, and supervising the examination.

Ph.D. students can be awarded an M.A. after fulfilling requirements for residence and one language and successfully completing 36 units, including 28 in required courses. They also take a two-hour oral examination with an advisor.

Language Requirements. All students, except as specified below, must demonstrate a reading knowledge of two foreign languages prior to taking the Ph.D. candidacy qualifying examination. Competency in a language may be established either by passing a departmental examination (proctored in the department office) or through extensive language use in one of the research seminars. The specific languages that may be used to satisfy this requirement depend on the students' first fields, subject to their advisors' approval.

Students may substitute for one of their language requirements a sequence of two graduate courses in an allied discipline or relevant methodology (e.g., critical theory, political theory, cultural anthropology, Asian American studies, feminist theory, art history, linguistics, statistics, quantitative methods), at the discretion of their major field advisors. Students choosing this option are normally expected to write a substantial paper and must demonstrate that the allied discipline or methodology used to fulfill the requirement is of value to historical inquiry. The course(s) taken to satisfy a language requirement may not count toward fulfilling the requirement for the second field.

Qualifying Examination and Dissertation. In preparation for the oral Qualifying Examination, the student will present to the Ph.D. Candidacy Committee a portfolio of three papers totaling at least 45 pages on subjects related to the major field (but not from required colloquia courses). Successful completion of this examination results in the student's advancement to Ph.D. candidacy. The normative time for advancement to candidacy is three years. Within one academic quarter of the oral examination, new candidates must meet in a colloquy with their Doctoral Committee to present their dissertation proposal. Once the Doctoral Committee approves the proposal, the student begins intensive work on the dissertation. The research and writing involved in this effort may require from one to four years. At the end of this period an oral defense of the dissertation, focusing on the adequacy of the student's research and thesis, is normally held.

For students who enter with normal academic preparation and pursue a full-time program of study, the normative time to degree for the Ph.D. is seven years. The maximum time permitted is nine years.

Courses in History

(*Schedule of Classes* designation: History)

LOWER-DIVISION

INTRODUCTORY COURSES

Courses of general interest for all students. No prerequisites. Designed to survey particular fields or themes and to introduce methods and premises of historical study. Many of these courses fulfill part of the UCI general education requirement.

11 Introduction to Peace and Conflict (4). Examines the causes and effects of international violence, focusing on World War I, World War II, and the Cold War. Relates what is known about the dynamics of war to what is understood by conditions of peace. Required for the minor in Conflict Resolution. (IV, VIII)

12 Introductory Topics in History (4). Introduces methods and premises of historical study. Topics include introductions to cultural, political, economic, social, and religious history. May be repeated for credit as topics vary. (IV)

15 American Ethnic History

15A Native American History (4). Introduction to multiple topics: indigenous religious beliefs and sociopolitical organization, stereotypical "images," intermarriage, the fur trade, Native leaders, warfare, and contemporary issues. (IV, VII)

15C Introduction to Asian American Studies I (4). Examines and compares the diverse experiences of major Asian American groups since the mid-nineteenth century. Topics include: origins of emigration; the formation and transformation of community; gender and family life; changing roles of Asian Americans in American society. Same as Asian American Studies 60A and Social Sciences 78A. (III, VII)

18A Introduction to Jewish Cultures (4). Introduction to the diversity of Jewish cultures from ancient to modern times. Surveys the Jewish experience in various societies and civilizations: ancient Mediterranean, Middle East and North Africa, Europe, and the Americas. (IV, VIII)

21 World History

21A World History: Beginnings to 1650 (4). Treats major themes of world historical development through the mid-seventeenth century, focusing on the Eurasian world, but with secondary emphasis on Africa and the Americas. (IV, VIII)

21B World History: 1650–1870 (4). Examines three major transformations that made the world of 1870 dramatically different from that of 1650: e.g., the scientific revolution, industrialization, and the formation of modern states and nations. (IV, VIII)

21C World History Since 1870 (4). Considers several major currents of modern history: technological change and its social effects; changes in gender relations; totalitarianism; peasant revolutions and the crisis of colonialization; international migration; and ecological problems. (IV, VIII)

36 The Formation of Ancient Greek Society. An overview of ancient Greek civilization and its interactions with other cultures of the Mediterranean world. Focuses on major institutions and cultural phenomena as seen through the study of ancient Greek literature, history, archaeology, and religion. Same as Classics 36A, B, C.

36A Early Greece (4). (IV)

36B Late Archaic and Classical Greece (4). (IV)

36C Fourth-Century and Hellenistic Greece (4). (IV)

37 The Formation of Ancient Roman Society. A survey of the principal aspects of Roman civilization from its beginnings to the so-called Fall of the Roman Empire in C.E. 476. Focuses on political history and ideology, social history, literature, art and architecture, and religion. Same as Classics 37A, B, C.

37A Origins to Roman Republic (4). (IV)

37B Roman Empire (4). (IV)

37C The Roman Legacy (4). (IV)

40 The Formation of American Society. An introduction to the social, economic, political, and cultural development of the United States from the fifteenth century to the present. Any one quarter of history 40A, 40B, or 40C satisfies the American History portion of the UC American History and Institutions requirement.

40A The Formation of American Society: 1492–1790 (4). (IV)

40B The Formation of American Society: The Nineteenth Century (4). (IV)

40C The Formation of American Society: The Twentieth Century (4). (IV)

50 Crises and Revolutions (4). Study of turning points in world history, illustrating themes and methods of historical analysis. May be taken for credit three times as topics vary. (IV, VIII)

60 The Making of Modern Science (4). Surveys the history of science and mathematics since the Scientific Revolution, examining central developments both chronologically and thematically, as well as investigating their significance for contemporary philosophical debates about the role and status of current scientific theories. Same as Logic and Philosophy of Science 60. (IV)

70 Problems in History. An introduction to the historical problems, the issues of interpretation, the primary sources, and the historical scholarship of the history of Asia, Europe, the U.S., Latin America, the Middle East, and Africa, as well as transregional history, with an emphasis on developing skills in historical essay-writing. May be repeated for credit as topics vary, but each region may only apply once toward the three required courses from the History 70 series for the History major or minor.

70A Problems in History: Asia (4). (IV, VIII)

70B Problems in History: Europe (4). (IV, VIII)

70C Problems in History: United States (4). (IV)

70D Problems in History: Latin America (4). (IV, VIII)

70E Problems in History: Middle East and Africa (4). (IV, VIII)

70F Problems in History: Transregional History (4). (IV, VIII)

UPPER-DIVISION

HISTORICAL STUDIES

Courses in which students gain experience in analysis, interpretation, and writing.

100 Writing About History (4). Specialized courses focusing on history writing and research skills. Each class reflects the instructor's intellectual interests and is conducted as a discussion group. Limited to 18 students. Several short writing assignments and one longer project meeting the upper-division writing requirement. Prerequisites: History major and satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary.

101 History of the World Economy (4). Beginning with a discussion of different economic "worlds" of the 1400s, traces the complex processes by which these worlds began to influence each other, ending with the twentieth-century world economy. Topics include imperialism, industrial revolution, migration, slave trade. (VIII)

102B Topics in Environmental History (4). Explores the many historical interfaces between climate change, modes of production, and culture. Topics include the environmental history of warfare, imperialism, and famine in the nineteenth century and the history of environmental thought. (VIII)

103 Topics in International Conflicts (4). A study of international conflicts from military, social, economic perspectives with a focus on the preparation for and conduct of war and the consequences. May be repeated for credit as topics vary. Formerly History 100A. (VIII)

ANCIENT HISTORY

105 The Roman Empire. Creation of a bureaucratic empire; rule by gentry and officers; official culture and rise of Christianity; social conflict and political disintegration.

105A Early Roman Empire (4)

105B Later Roman Empire (4)

EUROPEAN HISTORY

110 Medieval Europe

110A Europe in the Early Middle Ages (4). Survey of Europe between 300 A.D. and 900 A.D. Topics include the breakup of the Roman Empire, barbarian invasions, spread of Christianity, rise of Islam, the Carolingian Empire, and the Vikings. (VIII)

110B Europe in the Central Middle Ages (4). Survey of European history from ca. 900 to ca. 1300. Topics discussed include the growth of the economy, feudalism, the crusades, the rise of towns, the development of the church, popular heresy, and the rise of large-scale polities. (VIII)

110C Europe in the Later Middle Ages (4). Survey of European history from ca. 1300 to ca. 1500. Topics include the Black Death, the crisis of the economy, the Hundred Years' War, peasant and urban uprisings, and the Great Schism. (VIII)

110D Topics in Medieval Europe (4). May be repeated for credit as topics vary.

112 Early Modern Europe

112A Renaissance Europe (4). Survey of the Renaissance in Italy and northern Europe.

112C Europe of the Old Regime (4). Survey of the social, cultural, and political history of Europe from the middle of the seventeenth century to the French Revolution. (VIII)

112D Topics in Early Modern Europe (4). Theme-based approach to the main social, political, and cultural developments in Europe between the fifteenth and eighteenth centuries. Topics include Renaissance humanism, Reformation and Counter-Reformation, scientific revolution, court culture and nation building, interactions with non-European peoples, and cities and commerce. May be repeated for credit as topics vary. (VIII)

114 Topics in Modern European History (4). Course content changes with instructor. Topics include the Inquisition; science and religion in modern Europe; sex and society in modern Europe; French revolutions; culture in interwar Europe; the Holocaust; the fall of communism in Eastern Europe. May be repeated for credit as topics vary. (VIII)

115 Survey of European History

115A Europe: 1350–1750 (4). The period 1350–1750 begins with the devastation of the Great Plague and ends with a renewed "enlightened" Europe invested in global colonial ventures. In short, an exploration of the emergence of the modern world. (VIII)

115C Europe: Twentieth Century (4). Europe from World War I to the collapse of the U.S.S.R. World War I and its impact on the modern world; rise of an international Communist movement; regimes created by Mussolini, Hitler, Stalin; World War II; the killing of Europe's Jews; Cold War and collapse of communism. (VIII)

116 Medieval England

116A England in the Early Middle Ages (4). Survey of English history from ca. 400 to ca. 1200. Topics include the Anglo-Saxons, the Viking settlement, the Norman Conquest, the Angevin Empire, and the development of royal, legal, and administrative mechanisms. (VIII)

116B Later Medieval England (4). Survey of English history between ca. 1200 and ca. 1500. Topics include the Magna Carta, the Barons' War, the Welsh and Scottish wars, the development of Parliament, the Hundred Years' War, and the War of the Roses. (VIII)

117B Stuart England (4). Survey of English history from the early-seventeenth century until the early-eighteenth century. Concentrates on the causes of the English Revolution and the Revolution itself, the Restoration, and the Protestant ascendancy. (VIII)

118 Great Britain

118A Modern Britain: 1700 to 1850 (4). Examines the major developments in British politics, socioeconomic structure, and culture from 1700–1850. The development of the British nation-state and the fashioning of a national identity. Explores basic questions about British national identity. (VIII)

118B Modern Britain: 1850 to 1930 (4). Examines the social, economic, and political history of Britain from 1850–1930. Post-industrialism, urbanization, population and economic change, increased political participation by working classes and women, consolidation of the empire and the breakup of the United Kingdom. (VIII)

118C Modern Britain: 1930 to Present (4). Explores Britain from the Second World War to the resignation of Margaret Thatcher. Examines Britain's devolution from world power to member of the European Community; transition from a manufacturing to service-based economy; changing demographic and racial composition in light of decolonization. (VIII)

120 France. Emphasis on social, economic, and cultural history of France since the Great Revolution.

120B The French Revolution: 1774–1815 (4). (VIII)

120C France in the Nineteenth Century (4). (VIII)

120D France in the Twentieth Century: 1914 to Present (4). (VIII)

120E History of Paris (4). The development of Paris from the beginnings through the present, with emphasis on the last three centuries. The city is examined from the political, social, ecological, and architectural points of view as well as through the perspective of urban planning. (VIII)

122 Germany. Political, social, and economic history from 1815 to the present.

122A Emergence of the German Nation: 1815–1890 (4). (VIII)

122B Hitler and the Germans (4). Focuses on Hitler's rise to power and Nazi society. Examines Germany's defeat in World War I; the political and cultural experimentation of the 1920s; the causes of Hitler's success; and life in Germany under the Nazis. (VIII)

122C World War, Cold War, and Reunification: 1939– (4). (VIII)

123 Spain

123C Twentieth-Century Spain: 1898–Present (4). Examination of political, social, and cultural conflict under the parliamentary monarchy and the II Republic; the Spanish Civil War and the popular revolution of 1936; Spanish fascism and the Franquist dictatorship; and the transition to constitutional democracy after 1975. (VIII)

123D Topics in Spanish History (4). Topics include Spain in the nineteenth century, the Spanish Civil War, and dictatorship and democracy in modern Spain. May be repeated for credit as topics vary. (VIII)

124 Russia. Political and social developments from traditional Russia to the present Soviet society.

124A Imperial Russia: 1689–1905 (4). (VIII)

124B Twentieth-Century Russia (4). (VIII)

126 The World Wars

126A The Era of World War I: 1900–1939 (4). (VIII)

126B The Era of World War II: 1933–45 (4). (VIII)

126C The Cold War and After: Europe and the World, 1945–91 (4). (VIII)

127 European Cultural and Intellectual History. Main currents of Western thought, emphasizing English, French, and German thinkers.

127B Hegel to Nietzsche (4). (VIII)

127C Freud to Sartre (4). (VIII)

127D Contemporary European Thought (4)

128 European Women and Gender History

128A Women and Gender in Early Modern Europe: 1400–1700 (4). Explores what it meant to be a woman in early modern Europe. Students examine women's lives in early modern Europe while developing skills of historical interpretation. Topics include: notions of masculinity and femininity; "proto-feminism"; marriage and sexuality; female piety and witchcraft. (VIII)

128C Topics in the History of Women in Europe (4). May be repeated for credit as topics vary. (VIII)

JEWISH, MUSLIM, MIDDLE EAST, AND AFRICAN HISTORY

130 Jewish History

130A Jewish History, Ancient to Early Modern Times (4). The history of the Jewish people from their origins in the ancient world to the 1700s. Social, religious, and intellectual life of Jewish communities in the Middle East, North Africa, and Europe. (VIII)

130B Modern Jewish History (4). History of the Jews in Europe, the Middle East, North Africa, and the United States from the early-eighteenth century to recent times. Emancipation, assimilation, religious reform, antisemitism, Zionism, socialism, the Holocaust, and modern Israel are the major themes. (VIII)

130C Topics in Jewish History (4). May be repeated for credit as topics vary. (VIII)

131 Iran

131A Ancient Iranian Religion (4). Reviews major trends in the history of ancient Iranian religions or those religions which ancient Iranian beliefs and views have influenced, such as Zoroastrianism, Manichaeism, and Mithraism. (VIII)

131B Ancient Iran (4). A survey of the history of greater Iran in antiquity. (VIII)

131C Medieval Iran (4). A survey of Iranian history in the context of Late Antique and Medieval Islamic history. (VIII)

131D Modern Iran (4). Covers the history of Iran from the end of the Safavid Empire in the eighteenth century to the present. (VIII)

131E Topics in Iranian History (4). Topics include the cultural, political, intellectual, social, and/or economic histories of Iran. May be repeated for credit as topics vary. (VIII)

132A Israel and Palestine (4). Origins of Zionism in the nineteenth century, Arab-Jewish conflicts in Palestine, emergence of Palestinian nationalism, the formation of the Israeli nation after 1948, and the development of the Palestinian movement. Focus on Palestinian and Israeli society and culture. Formerly History 132. (VIII)

132B The Emergence of the Modern Middle East (4). Offers a survey of the history of the Middle East from the nineteenth century to the present time. Formerly History 133A. (VIII)

132G Topics in Islamic History (4). Examines the evolution of Islam as a religion within the social, political, and economic histories of various Muslim societies throughout its 14 centuries. Introduction to major concepts, practices, and texts of Islam, and key historical events associated with them. May be repeated for credit as topics vary. Formerly History 131. (VIII)

132H Topics in Middle Eastern History (4). Topics include the cultural, political, intellectual, social, and/or economic histories of one or many regions of the Middle East. May be repeated for credit as topics vary. (VIII)

134 Africa

134A Africa: Societies and Cultures (4). Introduction to the variety of cultures, political organizations, social structures, and artistic expressions created by Africans over a broad time span. The indigenous development of African societies in distinct regions of the continent. Issues, themes, processes for understanding history of Africa. (VIII)

134B Modern Africa (4). Explores the last 200 years of history in Africa, from the end of the Atlantic slave trade through colonization to independence. (VIII)

134C Topics in the History of Africa (4). May be repeated for credit as topics vary. (VIII)

134D Topics in South African History (4). Introduction to important historical events and processes in Southern Africa. Focuses on particular themes and explores how those themes change over time. Topics include: changing ideas about race, the development of class structures, identity formation, the role of gender. (VIII)

134E History of the African Diaspora (4). Examines the causes and consequences of the multiple diasporas of African peoples since the sixteenth century in the Atlantic world, especially the Americas and Europe. Same as African American Studies 137.

HISTORY OF SCIENCE AND TECHNOLOGY

135 History of Science

135B Navigation (4). Explores the basics of oceanography, the evolution of ships and sailing in the ancient Mediterranean world, the North Atlantic, Polynesia, the South China Sea, the Arab Indian Ocean, the global oceanic world, and the discovery of celestial and terrestrial navigation.

135C Exploring the Cosmos (4). After briefly considering the invention of astronomy in antiquity and the Copernican revolution, examines the development of solar science; the triumph of the view of the expanding universe; and a medley of themes in post-1945 astrophysics and cosmology.

135D History of Cartography (4). Examines how technology has assisted in creating visual representations of place, space, and time beginning in ancient Babylonia to the present day.

135E Topics in the History of Science and Technology (4). May be repeated for credit as topics vary.

135F History of Technology (4). Explores the historical and contemporary products and processes that have improved and abused the forces of nature. Examines the earliest technicians, the transmission of technological ideas and practices, and the relationship between society and technological change.

HISTORY OF MEDICINE AND HEALTH CARE

136 History of Medicine and Health Care

136B Race and Medicine (4). Examines racial politics in the development of American medicine from 1870 to present. Racial subordination and the American Medical Association, discrimination in medical education and black medical schools, the National Medical Association, black doctors and war, health care inequities and AIDS.

136D Topics in the History of Medicine and Health Care (4). May be repeated for credit as topics vary.

136E History of Epidemics and Infectious Disease (4). Examines how epidemics tax political, economic, and spiritual resources and challenge prevailing medical theories and practices. Looks at how society has responded to epidemics and disease throughout history, beginning in antiquity and ending in the present.

139 History and Prose Composition (4). Requires at least 4,000 words of assigned composition based upon historical works. History majors are given admission priority. Prerequisites: satisfaction of the lower-division writing requirement; junior standing or consent of instructor. May be repeated for credit as topics vary.

AMERICAN HISTORY

140 The Development of the American Nation. Growth of a distinctively American society out of the colonial heritage, with emphasis on social and economic bases of culture and politics, sectionalism, industrialization, and the United States as a world power.

140A Early America: 1492–1740 (4). Examines the history of the land that became the first 13 states of the United States, from early attempts at exploration and discovery to the economic growth and demographic heterogeneity that marked the white settlements of the early 1700s.

140B Revolutionary America: 1740–1790 (4). An exploration of why 13 continental colonies, whose commercial and cultural connections with Britain far exceed their interaction with one another, resisted imperial reform after 1763 to the point of war in 1775 and independence the following year.

140F The United States in the 1890s (4). A social, cultural, political history of U.S. in 1890s. Topics include racial politics of Jim Crow; Spanish-American War and conquest of the Philippines; “New Women” and gendering of modern culture; rise of cities, urban reform, labor resistance to new capitalist order.

142 American Social and Economic History

142A California in Modern America (4). California as a case study of national trends and as a unique setting: its specific problems and culture. Major themes include: colonization, immigration, race relations, agricultural development, industrialization, urbanization, working class movements, social conflict, and political reform.

142B Topics in American Social and Economic History (4). May be repeated for credit as topics vary.

144 American Intellectual and Cultural History

144A Early American Cultural and Intellectual History (4). Examination of ideas and culture during the early American period, with emphasis on the relationship of ideas to their social, political contexts. From contact to Puritanism to the Revolutionary era, with attention to constructions of class, race, gender.

144F Utopian Experiments in American History (4). Focus on the cooperative dimension of the American experience; the large number of intentional experiments in community living and alternative lifestyles in the nineteenth and twentieth centuries. Examination of both the ideological foundations of communitarianism and specific historical case studies.

144G Topics in American Cultural and Intellectual History (4). May be repeated for credit as topics vary.

145 American Working-Class History (4). Traces formation of the American working-class and examines its response to the changing structures of economic/political power determined by nineteenth-century industrial capitalism and twentieth-century imperialism. Issues/intersections of race, culture, and gender are examined.

146 Women and Gender Relations in the United States. An examination of changes in gender relations and in the conditions of women’s lives from the 1700s on. Emphasis on race and class, cultural images of women and men, sexuality, economic power, and political and legal status.

146D Sex in the U.S. to 1860 (4). Perspectives on sexual behavior in colonial and U.S. history to c. 1860. Mainstream and non-mainstream sexual practices, beliefs, identities. Asks why various ideas of sexual behavior developed and how they related to religious, racial, ethnic, political, cultural belief systems. (VII)

146E Gender in Nineteenth-Century America (4). A social and cultural history of women’s lives in nineteenth-century America, examining how racial, sexual, class identities were constructed by women themselves and by their surrounding culture. Topics include slavery, anti-slavery movement, domesticity, experience of the Civil War. (VII)

146H Topics in Women and Gender Relations in the United States (4). May be repeated for credit as topics vary. (VII)

148B Topics in Multicultural U.S. History (4). Examines the variety of cultural expressions through which the people who came to inhabit the United States historically signify their collective identities. May be repeated for credit as topics vary. (VII)

150 Topics in African American History (4). May be taken twice for credit as topics vary. Same as African American Studies 138. (VII)

150A Early African American History (4). Introduction to the main social, political, and political contours of the African American experience from the importation of Africans into the Americas, from the seventeenth through the eighteenth centuries. May be taken twice for credit as topics vary. Same as African American Studies 133A.

150B African American History 1900–Present (4). Examines different dimensions—economic, cultural, political, and social—of the African American experience since 1900, including pattern and forms of struggle against racist oppression and exploitation. May be taken twice for credit as topics vary. Same as African American Studies 133B.

150C New World Slave Societies (4). Examines the origins, development, operation, and end of slave societies in the Americas, including the pattern and forms of slave resistance. Focuses primarily upon the U.S., the Caribbean (Hispanic and non-Hispanic), and Brazil. Same as African American Studies 132A.

150D Slavery in the United States (4). Explores the origins, development, and operation of the institution of slavery in the U.S. from colonial times to the end of the Civil War. Experiences in the North and South are explored, right through to the end of slavery. Same as African American Studies 132B.

151 Chicana/Chicano History

151A Chicana/Chicano History: Pre-Colonial to 1900 (4). Examines social history of the southwest region from antiquity to 1900. Discusses major questions, theory and research methods pertinent to Chicanas/Chicanos. Themes include: indigenous empires, conquest, colonialism, social stratification, ideology, marriage, sexuality, industrial capitalism, accommodation and resistance. Same as Chicano/Latino Studies 132A. (VII)

151B Chicana/Chicano History: Twentieth Century (4). Examines social history of the Southwest with emphasis on Mexican-origin people. Discusses major questions, theory and research methods pertinent to Chicana/Chicano history. Themes explored include: immigration, xenophobia, class struggle, leadership, generational cohorts, unionization, education, barrioization, ethnicity, patriarchy, sexuality. Same as Chicano/Latino Studies 132B. (VII)

151C Latinas in the Twentieth Century U.S. (4). Latinas in the U.S. from 1900 to present, offering a diversity of their cultures, regional histories, sexualities, generations, and classes. Same as Chicano/Latino Studies 135. (VII)

152 Topics in Asian-American History (4). Introduction to important themes in the history of people of Asian ancestry in the United States from the nineteenth century to the present. May be repeated for credit as topics vary. (VII)

152A Asian American Labor (4). Explores history of Asian Americans and work from the nineteenth century to the present. Areas of study include migration, colonialism, family, social organization, and work culture. Same as Asian American Studies 137. (VII)

152B Asian American and African American Relations (4). Addresses relationships of Asian American and African American communities in the United States. Topics include race, class, gender, labor, economic systems, political mobilization, community, civil rights, activism, cultural expression. Same as Asian American Studies 167 and African American Studies 117. (VII)

153 American Legal History (4). Introduction to American legal case materials, to legal categories and ways of thinking, and to selected topics in U.S. legal history. Does *not* offer a chronological survey of the development of law in the United States.

158 History of American Foreign Relations

158A U.S. as a Global Power (4). Examines post-World War II cultural, economic, and strategic patterns that have shaped U.S. relations with the world. Presents diverse perspectives on issues such as nationalism, anti-communism, secrecy and covert action, economic influences, the media's role, and race, gender, and class-related stratifications. (VIII)

158B Rise of U.S. Empire (4). Examines growth of U.S. empire from the eighteenth century to World War II. Considers settler colonialism; acquisition of colonies, protectorates, and dependencies; and "market empire." Emphasizes imperial justifications, techniques, and interactions, as well as the recurring domestic debates over imperial projects. (VIII)

LATIN AMERICAN HISTORY

161 Mexico

161A Indian and Colonial Societies in Mexico (4). Examines the history of Colonial Mexico from prehistoric times to the eighteenth century. Focuses on the social, economic, and political evolution of the new Mexican society which resulted from the "meeting" of two cultures. (VIII)

161C Twentieth-Century Mexico (4). Examines the history of contemporary Mexico beginning with the Mexican Revolution and concluding with the present administration. Social, economic, and political effects of the Revolution; formation of a "one-party democracy"; economic transformation of the nation; the present crisis. Same as Chicano/Latino Studies 133B. (VIII)

162 Brazil (4). Overview of social, economic, and political developments since 1500.

163 The World of Coffee (4). History of consumption and production of coffee over the centuries and coffee's cultural, economic, social, political consequences. Coffee's social life as a drug, symbol of hospitality, religious rite, sociability and bourgeois lifestyle, commodity, and source of livelihoods, imperial revenues, corporate profits. (VIII)

164A Caribbean History: Colonization to Emancipation (4). Exploration of the history of the archipelago from pre-Columbian times to the end of slavery; examining the impact of European colonization, decimation of the indigenous populations, African slavery, resistance, and emancipation; the unity and diversity of experience in region. Same as African American Studies 134A.

164B Caribbean History: Emancipation to Independence (4). Post-emancipation and anti-colonial struggles ending with political independence for most of the region. Examines social, political, economic, cultural dimensions of post-emancipation period, including large-scale migration to Central America, the U.S., and Britain; the region's global cultural and political contribution. Same as African American Studies 134B.

165 Race and Empire in Colonial Latin America (4). Explores how native people of Latin America with enslaved and free Africans incorporated and defied Spanish and Portuguese colonization. Focuses on religious adaptations, resistance movements, legal systems, and the emergence of multicultural communities to explain how race shaped European empires. (VIII)

169 Topics in Latin American History (4). May be repeated for credit as topics vary. (VIII)

ASIAN HISTORY

170 East Asia: Traditions and Transformations

170D Premodern East Asia (4). Introduction to the histories of China, Korea, and Japan from the earliest states to about 1600. Topics include: state formation and dissolution; the role of ideology and how it changes; religious beliefs and values; agriculture, commerce, and industry; changing family relations. (VIII)

170E East Asia: 1600–1895 (4). Introduction to China, Korea, and Japan from about 1600 to 1895. Establishment of Qing Chinese, late Choson Korean, and Tokugawa Japanese sociopolitical orders and their characteristics, plus major cultural developments. Responses to Western impact and the rise of Meiji Japan. (VIII)

170F East Asia Since 1895 (4). Introduction to the turbulent modern histories of China, Korea, and Japan since 1895. An overarching concern is to understand the evolution of modern East Asia and its place for humankind's future. (VIII)

170G Topics in the History of Asia (4). Topics include the cultural, political, economic, social, intellectual, and religious history of Asia. May be repeated for credit as topics vary. (VIII)

171 China

171D Chinese History to 1800 (4). A survey of the history of China to 1800. (VIII)

171E Chinese History: 1800–1949 (4). An examination of Chinese society and thought from the late-eighteenth century to the 1949 revolution. Focuses on the role of intellectuals; popular culture; women in Chinese society; developments in commerce and urban life; rebellion; foreign imperialism. (VIII)

171G Topics in the History of China (4). Topics include the cultural, political, economic, social, intellectual, and religious history of China. May be repeated for credit as topics vary. (VIII)

172 Japan

172D Age of the Samurai (4). Topics include the simultaneous elaboration of a civilian aristocratic tradition and the military ethos, the conflict between martial and economic values in the context of an expanding economy, and the development of Japan's indigenous religions, art, and literature. (VIII)

172E Imperial Japan (4). Topics in the rise of modern Japan include the relationship between centralization and imperialism, democracy and fascism, industrialization and feminism in the context of the complex and competing forces that shaped Japan's experience in the modern world. (VIII)

172F Postwar Japan (4). From the ashes of defeat to economic superpower, from poverty to material consumerism, from the ethic of diligence and fortitude to hedonism. Addresses what these changes have meant for ordinary people, as well as government policy and Japan's international position. (VIII)

172G Topics in the History of Japan (4). Topics include the cultural, political, economic, social, intellectual, and religious history of Japan. May be repeated for credit as topics vary. (VIII)

173 Korea

173D Korean History to 1800 (4). A general survey of the history of Korea to 1800. Focuses on internal sociopolitical development, major cultural trends, and foreign relations. Students are introduced to various interpretive approaches in the historiography. (VIII)

173E Korean History: 1800–1945 (4). An examination of Korean society and culture in tumultuous transition, focusing on some new challenges for the Choson Dynasty and its abortive reform effort, external imperialist pressures, and the Japanese colonial rule. (VIII)

173F Korean History Since 1945 (4). Topics include the national liberation, origins of conflict between two rival regimes, South Korea's emergence as a major player in the international political economy, some salient characteristics of the North Korean Marxist state, triumph of democracy, and prospect for reunification. (VIII)

173G Topics in the History of Korea (4). Topics include the cultural, political, economic, social, intellectual, and religious history of Korea. May be repeated for credit as topics vary. (VIII)

SOUTH AND SOUTHEAST ASIA

174G Topics in the History of South Asia (4). Topics include the cultural, political, economic, social, intellectual, and religious history of South Asia. May be repeated for credit as topics vary. (VIII)

175 Southeast Asia

175F War in Vietnam (4). A comprehensive view of Vietnamese and American perspectives on the U.S. war in Vietnam, offering an in-depth historical background to Vietnam's internal dynamics, American perceptions of Vietnam, military and political strategies, and the experiences of Vietnamese and Americans directly involved. (VIII)

175G Topics in the History of Southeast Asia (4). Topics include the cultural, political, economic, social, intellectual, and religious history of Southeast Asia. May be repeated for credit as topics vary. (VIII)

SPECIAL STUDIES

Topics with particular methodological foci. Content varies; departmental office has quarterly list of topics. May be repeated for credit as topics vary.

180 Special Studies in Social History (4)

181 Special Studies in Economic History (4)

182 Special Studies in Intellectual-Cultural History (4)

183 Special Studies in International History (4)

184 Special Studies in Comparative History (4)

185 Special Studies in Social Theory (4)

HISTORICAL RESEARCH FOR HISTORY MAJORS

190 Colloquium (4). Specialized courses dealing primarily with close reading and analysis of primary and secondary works; required reports and papers. Each colloquium reflects the instructor's intellectual interests and is conducted as a discussion group. Limited to 18 students. Prerequisites: History 100, upper-division standing, and History major. May be repeated for credit as topics vary.

192 Research Seminar (4). Specialized courses that require analysis of a historical problem through research in primary sources and the preparation of an original research paper. Prerequisites: History 100 and 190, upper-division standing, and History major. May be repeated for credit as topics vary.

198 Directed Group Study (4). Special topics through directed reading. Paper required. Prerequisite: consent of instructor.

199 Independent Reading (1 to 4). Investigation of special topics through directed reading. Paper required. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

GRADUATE COURSES

In addition to the following courses, graduate students in History might find Humanities 220 (Literary Theory and Its History) and Humanities 270 (Advanced Critical Theory) to be of interest.

HISTORY AND THEORY

200A, B, C History and Theory (4, 4, 4) F, W, S. Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. Completion of History 200A and 200B is required for all History Ph.D. students. History 200C is optional. Same as Humanities 200A, B, C.

202 Proseminar (4). Topical courses devoted to the literature of a broad historical subject, e.g., the absolutist state, the French Revolution, comparative industrialization, women's history. May be repeated for credit as topics vary.

203 First-Year Research Seminar (4). Course devoted to research and writing on questions connected with proseminar topics. Normally required of all entering graduate students. Includes review of the current state of the literature and practical experience in conducting research and writing a research paper. Prerequisite: History 202.

204A-B Second-Year Research Seminar (4-4). Two-quarter sequence required of all Ph.D. students. Normally taken during the second year of the Ph.D. program; not required for M.A. students. Includes review of the current state of the literature and practical experience in conducting research and writing a research paper.

220 The Literature and Interpretations of Early-Modern Europe. *Not offered every year.*

220A Society and Economy (4)

220B Political History (4)

220C Intellectual and Cultural History (4)

230 The Literature and Interpretations of Modern European History. *Not offered every year.*

230A Europe: 1789-1848 (4)

230B Europe: 1850-1914 (4)

230C Europe: 1914-1989 (4)

240 The Literature and Interpretations of World History. *Not offered every year.*

240A Approaches to World History (4)

240B Topics in World History (4)

240C Advanced Research in World History (4)

250 The Literature and Interpretations of Latin American History. *Not offered every year.*

250A Colonial Period (4)

250B Nineteenth Century (4)

250C Twentieth Century (4)

260 The Literature and Interpretations of American History

260A Seventeenth and Eighteenth Centuries (4)

260B Nineteenth Century (4)

260C Twentieth Century (4)

273 Research Methods in Chinese History (4). Introduces major tools for research in Qing and twentieth-century Chinese history as well as an introduction to research tools for earlier periods. *Not offered every year.*

274 Seminar in Chinese History. May be repeated for credit as topics vary.

274A Chinese History: 1100-1750 (4)

274B Chinese History: 1600-1937 (4)

274C Chinese History: 1850-Present (4)

275 The Literature and Interpretations of Middle Eastern and North African History. *Not offered every year.*

275A Approaches to Islam in the Middle East/Maghrib (4)

275B Ottoman and Modern Middle East (4)

275C The Maghrib Since 1500 (4)

280 Literatures and Interpretations of East Asian History. *Not offered every year.*

280A China (4)

280B Japan (4)

280C Korea (4)

284A Seminar in French History (4) F. The development of French society and culture from the Old Regime to the present. May be used to fulfill the First-Year Research Seminar requirement. *Not offered every year.*

SPECIAL STUDIES

290 Special Topics (4) F, W, S. Lectures, readings, and discussion on subjects more limited in scope than those included in the year-long colloquium series. May be repeated for credit as topics vary.

291 Directed Reading (4 to 12) F, W, S. Reading courses focused on specialized topics. Prerequisite: consent of instructor.

295 Special Methods (4). Development of particular research skills.

298 Experimental Group Study (4). Open to four or more students. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

299 Dissertation Research (4 to 12) F, W, S. Specifically designed for students researching and writing their dissertations. Prerequisite: consent of instructor; advancement to Ph.D. candidacy.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

UNDERGRADUATE PROGRAM IN HUMANITIES AND ARTS

152 Humanities Instructional Building; (949) 824-9290

Frank B. Wilderson III, **Co-Director (Humanities)**

Jennifer Fisher, **Co-Director (Arts)**

Core Faculty

Stephen Barker, *Department of Drama*

David Brodbeck, *Department of Music*

Julia Bryan-Wilson, *Department of Art History*

Jennifer Fisher, *Department of Dance*

Martha Gever, *Department of Studio Art*

Simon Leung, *Department of Studio Art*

Lynn Mally, *Department of History*

Ian Munro, *Department of Drama*

Carrie J. Noland, *Department of French and Italian*

Frank B. Wilderson III, *Program in African American Studies and Department of Drama*

Undergraduate Program

The major in Humanities and Arts allows motivated students to create their own interdisciplinary major with one focus in the School of Humanities and the other in the School of the Arts. Students work toward a critical and historical mastery of aesthetic theories and practices while learning about the process of making

creative work. A humanist background will equip them to participate more effectively as artists, citizens, and critics in a world where critical thinking and creativity are vital to success in a variety of work environments.

Humanities and Arts students are given the opportunity to work closely with faculty from different academic disciplines. They are able to design a highly individualized course of study and have the opportunity of completing a senior project thesis with one of the Humanities and Arts affiliate faculty. This major's focus on the connection between practice and analysis distinguishes it from the broader and more diverse scope of more general interdisciplinary programs. The scholarly work of many UCI faculty in the Humanities and Arts lies at an intersection between the two academic units, and the major translates this intellectual and creative activity into a coherent curriculum and projects current forms of scholarship and artistic practice into the classroom.

CAREER OPPORTUNITIES

There is a steadily growing market in private industry for students whose training combines skills sharpened by both the Humanities and Arts. Business demands graduates with strong writing and analytic skills, talents stressed in the Humanities. This major promotes creativity and confidence, as well as putting original ideas into practice, something emphasized in the Arts. Graduates of this program will be very attractive to teacher-training programs, academic Ph.D. programs, and businesses in creative industries. Graduates may find work in professional fields directly allied with the Arts, including museum work, art foundations, art criticism, journalism, theatre, and the entertainment industry.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

Application Process for the Humanities and Arts Major

New students are not admitted directly to the Humanities and Arts major. Continuing students apply to change their major to Humanities and Arts no earlier than the fall quarter of their sophomore year. Complete information about changing majors to Humanities and Arts is available at <http://www.changeofmajor.uci.edu>. Students must submit a transcript and meet the change-of-major criteria for each of the two departments they propose to combine. In addition, a program of study, approved by the designated faculty member in the Claire Trevor School of the Arts and in the School of Humanities, is required for admission to Humanities and Arts. Students are strongly encouraged to consult with the Humanities Student Affairs Office early in their decision to apply to Humanities and Arts.

REQUIREMENTS FOR THE B.A. DEGREE IN HUMANITIES AND ARTS

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Requirements for the Major

- A. Humanities 1A-B-C.
- B. One lower-division survey in a specialization in the Arts, chosen from Dance 90A-B-C, Drama 40A, B, C, Music 14A-B-C, Studio Art 9A, B, C.
- C. Six units of “studio courses” in Dance, Drama, or Studio Art *or* six units of “ensemble courses” in Music.
- D. Humanities and Arts 100 (taken to satisfy upper-division writing).
- E. Humanities and Arts 101.

F. Sixteen additional units of upper-division Humanities courses focusing on a specific theme, region, or period, chosen with the approval of the Humanities and Arts faculty advisors.

G. Sixteen additional units of upper-division Arts courses focusing on a specific medium (e.g., photography) or practice (e.g., modern dance). Students must have their proposed program of study approved by their advisors each year.

It is expected that students will choose their courses from one major in the Humanities and one major in the Arts. Students with well-developed interests can shape their curriculum more precisely to their needs.

Residence Requirement for the Major: At least five upper-division courses required for the major must be completed successfully at UCI.

Courses in Humanities and Arts

(*Schedule of Classes* designation: HumArts)

100 The Arts in Theory and Practice (4). Writing seminar explores writings on art from different times and cultures. How have artists and critics in different cultural contexts tried to explain the principles and theories that guide their work? How can students use their concepts to assess art works? Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Arts and Humanities 100.

101 Topics in Arts and Humanities (4). This interdisciplinary course examines themes relevant to both the Arts and the Humanities. May be repeated for credit as topics vary. Same as Arts and Humanities 101.

199 Independent Study (1 to 4). Directed reading and research in consultation with a faculty member. Substantial written work required. Prerequisites: consent of instructor and approval of Faculty Advisor. May be repeated for credit as topics vary.

SPECIAL PROGRAMS

Minor in Humanities and Law

208 Humanities Office Building II; (949) 824-4032
Martin Schwab, **Director**

Participating Faculty

Ermanno Bencivenga, *Department of Philosophy*
Yong Chen, *Department of History*
James B. Given, *Department of History*
Gail K. Hart, *Department of German*
Lamar M. Hill, *Department of History*
Bonnie Kent, *Department of Philosophy*
Alejandro Morales, *Departments of Chicano/Latino Studies and Spanish*
Martin Schwab, *Departments of Philosophy and Comparative Literature*
Victoria Silver, *Department of English*
Preston Kyle Stanford, *Department of Logic and Philosophy of Science*
Brook Thomas, *Department of English*

The minor in Humanities and Law is comprised of courses in the School of Humanities that UCI graduates have found to be useful in developing skills and knowledge that prepare them for law-related careers. One set of courses develops skills in critical reading, writing, and analysis that are necessary in dealing with legal issues. Another set presents theoretical and analytical perspectives on ethical, political, and social issues relevant to the law. A final set focuses on specific legal issues from a humanistic perspective. Lower-division requirements primarily develop foundational skills in the first set, whereas upper-division requirements build on these skills by addressing the concerns from the other sets. The minor does not include how-to courses on particular legal practices.

Requirements for the Minor

- A. Philosophy 29 or Classics 75.
- B. Either one of the following four-course combinations: Humanities 1A-B-C (or the Humanities Core Alternative) and one

course from Philosophy 4, 5, or 9 (if not used for the Humanities Core Alternative), or Philosophy 1, 4, and either 5 or 9, plus one course from Philosophy 10, 11, 12, 13, or 9 (if not taken above).

- C. Six courses from among a list of quarterly approved courses, at least one each from philosophy, history, and literature or classics. Consult the Humanities and Law Web site (<http://www.humanities.uci.edu/humlaw>) for currently approved courses.

Students considering a career in law are strongly encouraged to take advantage of other law-related courses offered across the campus and of extracurricular activities such as the Pre-Law Society.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Interdisciplinary Minor in Asian Studies

5285 Social Science Plaza B; (949) 824-7521
Dorothy J. Solinger, **Co-Director**

259 Murray F. Krieger Hall; (949) 824-6521
Anne Walthall, **Co-Director**

Participating Faculty

Victoria A. Beard, *Department of Planning, Policy, and Design*
Tom Boellstorff, *Department of Anthropology*
Vinayak Chaturvedi, *Department of History*
Chuansheng Chen, *Departments of Psychology and Social Behavior and of Education*
Chungmoo Choi, *Department of East Asian Languages and Literatures*
Edward Fowler, *Department of East Asian Languages and Literatures*
James Fujii, *Departments of East Asian Languages and Literatures and of Comparative Literature*
Michael A. Fuller, *Department of East Asian Languages and Literatures*
Susan Greenhalgh, *Department of Anthropology*
Qitao Guo, *Department of History*
Hu Ying, *Department of East Asian Languages and Literatures*
Martin W. Huang, *Department of East Asian Languages and Literatures*
Kyung Hyun Kim, *Departments of East Asian Languages and Literatures and of Film and Media Studies*
Susan B. Klein, *Department of East Asian Languages and Literatures*
Karen Leonard, *Department of Anthropology*
Alka Patel, *Department of Art History*
Kenneth L. Pomeranz, *Department of History*
Kamal Sadiq, *Department of Political Science*
David A. Smith, *Department of Sociology*
Dorothy J. Solinger, *Department of Political Science*
Yang Su, *Department of Sociology*
Serk Bae Suh, *Department of East Asian Languages and Literatures*
Robert Uriu, *Department of Political Science*
Anne Walthall, *Department of History*
Jeffrey Wasserstrom, *Department of History*
Wang Feng, *Department of Sociology*
Bert Winther-Tamaki, *Department of Art History*
Roberta Wue, *Department of Art History*
Mei Zhan, *Department of Anthropology*

The countries and cultures of Asia are significant participants in the world community. They present compellingly different models for social organization, historical development, and cultural commitments. The many countries of this large and complex region provide challenges and opportunities whether one plans to be a scholar, a business person, or a diplomat. The minor in Asian Studies draws upon the expertise of faculty throughout UCI to create opportunities for students to explore Asian topics in a variety of fields, to develop advanced language skills, and to acquire a broader perspective as they apply the disciplinary training of their major field to effective and informed studies of Asian subjects. The minor is open to all UCI students.

Requirements for the Minor

Students choose one country and language of specialization. At the present the Asian Studies minor focuses on China, Japan, or Korea.

Requirements for the minor are met by taking eight courses (of which no more than four may be lower-division) as specified below.

- A. One course selected from History 170D, 170E, 170F (Premodern East Asia, East Asia 1600–1895, East Asia Since 1895). Students may petition to substitute other History courses that focus on Asia.
- B. Three quarters of course work in one Asian language of specialization beyond the first-year level. Approved courses are
1. Second-, third- or fourth-year language: Chinese 2A-B-C, 3A-B-C, 101A, B, C; Japanese 2A-B-C, 3A-B-C, 101A, B, C; Korean 2A-B-C, 3A-B-C, 101A, B, C; other sequences in Asian languages as available. NOTE: These courses require placement examinations given by the Department of East Asian Languages and Literatures. Students who, for example, place out of Chinese 2B would then take Chinese 2C, 3A-B to meet the requirement.
 2. Classical Chinese (Chinese 100A-B-C), *or* Classical Japanese (100A-B) plus a third quarter of Japanese language study.
 3. Literature courses taught in the original language: Chinese 115, Japanese 115, Korean 115, or graduate seminars. NOTE: These courses have a prerequisite of completion of the fourth-year language sequence or its equivalent.
- C. Four additional courses selected from an approved list available in the Asian Studies Office in 152 Humanities Instructional Building and online at <http://www.humanities.uci.edu/asianstudies/>.
1. At least two of these courses must be taken in one (or more) department(s) other than the student's major department.
 2. The courses must cover at least two different Asian countries, one of which is the country of language specialization.
 3. No more than two of the courses may be lower-division (and only one may be lower-division if any combination of 2A-B-C/3A-B-C is used for the language required above).

NOTE: A maximum overlap of two courses is permitted between this minor and a student's major.

Residence Requirement for the Minor: Four upper-division (or graduate) courses must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Interdisciplinary Minor in Jewish Studies

307 Humanities Instructional Building; (949) 824-6716
Julia Reinhard Lupton, **Director**

Participating Faculty

Marc Baer, Ph.D. University of Chicago, *Associate Professor of History* (history of religion, Ottoman and Islamic history, Middle-East history, ethnicity and identity, gender, Jews of the Ottoman Empire)
Erwin Chemerinsky, J.D. Harvard Law School, *Dean of the School of Law and UCI Distinguished Professor of Law and Political Science* (Constitutional law, federal practice, civil rights and civil liberties, appellate litigation)
James T. Chiampì, Ph.D. Yale University, *Professor of Italian* (Italian Renaissance literature, Dante, Italian-Jewish literature)
Touraj Daryaee, Ph.D. University of California, Los Angeles, *Associate Director, Dr. Samuel M. Jordan Center for Persian Studies and Culture, Professor of History, and Howard Baskerville Professor in the History of Iran and the Persianate World* (ancient and medieval Iranian history, Iranian languages and literature, Zoroastrianism, numismatics, world history)

- Kai Evers, Ph.D. Duke University, *Assistant Professor of German* (twentieth-century literature, film, and theory, Holocaust)
- Sarah Farmer, Ph.D. University of California, Berkeley, *Associate Professor of History* (Modern French history, twentieth-century Europe, political and cultural history, World War II and Holocaust in France)
- Alexander Gelley, Ph.D. Yale University, *Professor of Comparative Literature* (eighteenth- and nineteenth-century European novel, critical theory, German Jewish literature and culture)
- James B. Given, Ph.D. Stanford University, *Professor of History* (Medieval Europe, social and political history, heresy, Inquisition, medieval anti-semitism)
- David Theo Goldberg, Ph.D. City University of New York, *Director of the UC Humanities Research Institute and Professor of Comparative Literature and of Criminology, Law, and Society* (South Africa, race and racism, social and political theory, legal studies, Jewish identity)
- Sara Goodman, Ph.D. Georgetown University, *Assistant Professor of Political Science* (citizenship, immigration, integration, Western Europe, ethnicity)
- Ruth Klüger, Ph.D. University of California, Berkeley, *Professor Emerita of German* (Kleist, nineteenth-century literature, Stifter, Holocaust literature)
- Glenn S. Levine, Ph.D. University of Texas, Austin, *Faculty Director of the Center for International Education, Director of the Humanities Language Learning Program, German Language Program Director, and Associate Professor of German* (applied linguistics, theoretical linguistics, foreign language pedagogy, German-Jewish literature, Yiddish language and literature)
- Mark A. LeVine, Ph.D. New York University, *Professor of History* (Middle East history, cultures and religions of the modern Middle East, Palestine and Israel)
- Julia Reinhard Lupton, Ph.D. Yale University, *Director of the Jewish Studies Minor and Professor of English, Comparative Literature, and Education* (Shakespeare, Renaissance literature, religious studies, public sphere, Renaissance literature and the Jews)
- Seymour Menton, Ph.D. New York University, *Research Professor of Spanish and Portuguese* (Latin American novel and short story, Hebrew language, Jews and Latin American literature)
- Robert G. Moeller, Ph.D. University of California, Berkeley, *Professor of History* (modern Germany, European women, Holocaust in post-World War II Germany)
- Kristen R. Monroe, Ph.D. University of Chicago, *Director of the Interdisciplinary Center for the Scientific Study of Ethics and Morality and Professor of Political Science* (political theory, political psychology, political economy, rationality, altruism, genocide)
- Maria C. Pantelia, Ph.D. Ohio State University, *Professor of Classics and Director, Thesaurus Linguae Graecae*® (Greek epic, Hellenistic poetry, digital technologies in the humanities, ancient Judaic literature)
- James I. Porter, Ph.D. University of California, Berkeley, *Professor of Classics and Comparative Literature* (philosophy, literary and cultural criticism and aesthetics, history of the classical disciplines, reception of Homer, Jewish thought and anti-Semitism)
- Patricia Seed Ph.D. University of Wisconsin, Madison, *Professor of History* (modern dance, the history of cartography, Iberian Jewish science)
- Jacobo Sefamí, Ph.D. University of Texas at Austin, *Professor of Spanish* (modern and contemporary Latin American poetry, Mexican literature, Spanish American literature, Latin American Jewish literature)
- Irene Tucker, Ph.D. University of California, Berkeley, *Associate Professor of English* (Victorian literature, history and theory of the novel, history of medicine and technology, Hebrew literature, literature and philosophy)

The minor in Jewish Studies is an interdisciplinary program which introduces students to the many facets of Jewish cultures through the study of the history, philosophy, art, literature, languages, and social and political institutions of Jews from ancient to modern times. The minor provides students with grounding in areas of fundamental importance to the Humanities and Social Sciences, supporting and enriching the students' majors. The minor may be taken in tandem with any major and prepares students for graduate programs in Jewish Studies. The interdisciplinary approach of Jewish studies exposes students to a wide range of disciplines, and like other established liberal arts fields, provides a foundation for pursuing a range of careers.

Requirements for the Minor

- A. History 18A.
- B. At least four upper-division courses from the following list: German 104 (Linguistic Introduction to Yiddish); German 130 (Twentieth-Century German-Jewish Literature and Culture); German 150 (Holocaust Literature and Film); German 150 (History and Culture of the Jews); History 122B (Hitler and the Germans); History 130A (Jewish History from Ancient to Early Modern); History 130B (Modern Jewish History); History 130C (Jews and Muslims); History 132 (Israel and Palestine); History 183 (Imagining the Future: Israel and Palestine in the Twenty-First Century); History 190 (Medieval Heresy); History 190 (Comparative Religious Conversion); History 190 (The Holocaust); History 190 (Jerusalem: Religion and Conflict in Middle Eastern History); Spanish 110A (Medieval Iberia: Christians, Muslims, and Jews in Medieval Spain).
- C. Three additional courses from the list above and which may include Hebrew 1A-B-C, Hebrew 2A-B-C, Religious Studies 5A.

Students should consult an academic counselor or check the program Web site (<http://www.humanities.uci.edu/jewishstudies/>) for currently approved courses. With the approval of the Director, other relevant courses may satisfy the requirements for the minor.

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Interdisciplinary Minor in Latin American and Caribbean Studies

143 Humanities Instructional Building; (949) 824-5132

Faculty

- Ana María Amar Sánchez, *Department of Spanish and Portuguese*
 Stanley Bailey, *Department of Sociology*
 Frank D. Bean, *Departments of Sociology and Economics*
 Carolyn P. Boyd, *Department of History*
 Susan K. Brown, *Department of Sociology*
 Frank Cancian, *Department of Anthropology*
 Leo Chávez, *Department of Anthropology*
 Raúl Fernández, *Department of Chicano/Latino Studies*
 Robert Garfias, *Department of Anthropology*
 Lucía Guerra-Cunningham, *Department of Spanish and Portuguese*
 Ivette N. Hernández-Torres, *Department of Spanish and Portuguese*
 Helen Ingram, *Department of Planning, Policy, and Design*
 Winston James, *Department of History*
 Adriana M. Johnson, *Department of Comparative Literature*
 Rodrigo Lazo, *Department of English*
 Horacio Legrás, *Department of Spanish and Portuguese*
 William M. Maurer, *Department of Anthropology*
 Seymour Menton, *Department of Spanish and Portuguese*
 Michael J. Montoya, *Departments of Anthropology and Chicano/Latino Studies*
 Alejandro Morales, *Departments of Chicano/Latino Studies and of Spanish and Portuguese*
 Rachel O'Toole, *Department of History*
 Jaime E. Rodríguez, *Department of History*
 Vicki L. Ruiz, *Departments of History and Chicano/Latino Studies*
 Rubén Rumbaut, *Departments of Sociology and Education*
 Nancy Lee Ruyter, *Department of Dance*
 Armin Schwegler, *Department of Spanish and Portuguese*

 Jacobo Sefamí, *Department of Spanish and Portuguese*
 Caesar D. Sereseres, *Department of Political Science*
 Etel Solingen, *Department of Political Science*
 Luis Suárez-Villa, *Department of Planning, Policy, and Design*
 Heidi Tinsman, *Department of History*
 Steven C. Topik, *Department of History*

Luis P. Villarreal, *Department of Molecular Biology and Biochemistry*
 Roberto Villaverde, *Department of Civil and Environmental Engineering*
 Juan Villegas, *Department of Spanish and Portuguese*
 Douglas R. White, *Department of Anthropology*

The minor in Latin American and Caribbean Studies is an interdisciplinary curriculum designed to provide for an awareness, knowledge, and appreciation of Latin American issues in the areas of language, history, culture, literary studies, sociology, anthropology, political science, social ecology, health, folk medicine, and creative (art, dance, drama, music) accomplishments. The minor is open to all UCI students.

Requirements for the Minor

Spanish 2A-B-C (Intermediate Spanish) or Portuguese 120A, B, C (may not overlap with other minor requirements), or demonstrated equivalent knowledge of Spanish or Portuguese.

Humanities 100 (Latin America and the Caribbean).

One course in Latin American literature (Spanish-American or Luso-Brazilian). Representative courses include Comparative Literature 100A, 132, 144 (when topic is on Latin American literature and history); Spanish 101B (Introductory Studies in Latin American Literature and Cultures), 130A (Latin American Colonial Literature and Cultures), 130B (Latin American Literature of the Nineteenth Century), 130C (Latin American Literature of the Twentieth Century), 150 (Literature in Translation), 160 (Topics in Luso-Hispanic Film Studies, when topic is on Latin America), 186 (Selected Topics in Latin American Literature and Culture); Portuguese 120A, B, C (Introduction to Portuguese and Brazilian Literature), 121 (Topics in Luso-Brazilian Literature), 190 (Individual Studies).

One course in Latin American history. Representative courses include History 161A (Indian and Colonial Societies in Mexico), 161C (Twentieth-Century Mexico), 162 (Brazil), 169 (Topics in Latin American History), 190 (Colloquium, when topic is on Latin America).

One course in Latin American social sciences. Representative courses include Anthropology 125A (Economic Anthropology), 125X (Transnational Migration), 162A (Peoples and Cultures of Latin America); Political Science 153A (Latin American Politics); Social Science 172F (Latin American and Latino Cultures I).

One course in Chicano studies. Representative courses include Chicano/Latino Studies 111A (Critical Issues in Chicano Studies); Political Science 126A (Mexican-Americans and Politics); Spanish 110C (U.S. Latino Literature and Cultures), 140A, B (Chicano Literature), 142 (Chicano Culture), 186 (Selected Topics in Latin American Literature and Culture, when topic is on Chicano literature).

Four courses in Latin American studies selected from any of the representative courses listed above in the literature, history, and social sciences requirements. Other representative courses include Spanish 110A (Peninsular Literature and Cultures, when topic is on Latin America), 110B (Latin American Literature and Cultures); Anthropology 121J (Urban Anthropology, when the topic is on Latin American countries); Biological Sciences 199 (Independent Study in Biological Sciences Research, when topic is medicinal biology and herbs in Mexico).

With the approval of the director, other relevant courses also may satisfy the requirements for the minor.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Additional Interdisciplinary Minors

Information about the following two minors is available in the School of Social Sciences section of the *Catalogue*.

The **minor in Conflict Resolution** provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels.

The **minor in Chicano/Latino Studies** is designed to provide an awareness, knowledge, and appreciation of the language, history, culture, literature, sociology, anthropology, politics, social ecology, health, medicine, and creative (art, dance, film, drama, music) accomplishments in the Chicano/Latino communities.

Information about the following minors is available in the Interdisciplinary Studies section of the *Catalogue*.

The **minor in Civic and Community Engagement** seeks to provide students with the knowledge, skills, attitudes, and values to engage as citizens and active community members in the twenty-first century. The minor is distinguished both by *what* students learn, and by *how* they learn it.

The **minor in Global Sustainability** trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet.

The **minor in the History and Philosophy of Science** explores how science is actually done and how it has influenced history, and is concerned with determining what science and mathematics are, accounting for their apparent successes, and resolving problems of philosophical interest that arise in the sciences.

The **minor in Native American Studies** focuses on history, culture, religion, and the environment. The three core courses serve as an introduction to the Native American experience from the perspective of different historical periods and frameworks of analysis.

Concentration in Medieval Studies

174 Murray Krieger Hall; (949) 824-5441
 Elizabeth Allen, **Coordinator**

The concentration in Medieval Studies allows undergraduate students in the Schools of Humanities and the Arts to augment their major by completing a coherent program of courses in the area of medieval studies. The concentration is available to students in any major offered by the Schools and is particularly well-suited to majors in English, Comparative Literature, European Studies, History, Philosophy, and the Arts.

Students in the concentration must complete at least two quarters of Humanities 110, the Core Course in Medieval Studies. Students may substitute Art History 114 or History 110A, 110B, or 110C, when topic is appropriate for Humanities 110. These courses are interdisciplinary examinations of such topics as Medieval Cities, The Dark Ages, Medieval Liturgy and Theater, Medieval Women, and The Plague. In addition, students must complete at least four additional courses in medieval studies selected from an approved quarterly list. One of these four courses may be satisfied by completing a senior essay in some area of medieval studies.

Academic English/English as a Second Language Program

200 Humanities Instructional Building; (949) 824-6781

Robin Scarcella, Ph.D. University of Southern California, *Director of the Academic English/English as a Second Language Program and Professor of Academic English and English as a Second Language and of Education (linguistics, language development emphasis)*

Humanities 20A-B-C-D through 29 are for students who have been admitted to UCI and whose scores on the Academic English placement test indicate the need for additional work in Academic English/English as a second language. Students may receive up to 12 baccalaureate credits for AE/ESL course work. Students may receive workload credit for courses taken beyond this 12-unit limit but will not receive additional credits applicable to the bachelor's degree.

Humanities 20A-B-C-D Essentials of Academic Writing (4-4-4-4). Grammar, sentence structure, paragraph and essay organization of formal written English. Pass/Not Pass only. Corequisite: Humanities 22A, if indicated by results of the AE/ESL Placement Test. Prerequisite for 20B: Placement Test or passing 20A; for 20C: Placement Test or passing 20B; for 20D: Placement Test or passing 20C.

Humanities 22A Essentials of Academic English Reading and Vocabulary (2). Intensive reading exercises with occasional practice in extensive reading, focusing on comprehension, development of vocabulary, syntax, rhetorical features, reading strategies, and study skills. Pass/Not Pass only. Corequisite: concurrent enrollment with Humanities 20A-B-C-D if indicated by results of AE/ESL Placement Test. Prerequisite: AE/ESL Placement Test.

Humanities 22B ESL Reading and Vocabulary (2). Extensive reading and discussion with emphasis on journal articles, textbook chapters, notetaking, and the interpretation of charts, diagrams, tables, and figures. Primarily for graduate students. Pass/Not Pass only. Prerequisite: consent of instructor.

Humanities 23A ESL Basic Pronunciation I (2). Designed for international graduate students with basic oral English communication skills. Listening and speaking skills in five fundamental areas: pronunciation, intonation, word stress, listening comprehension, and informal campus communication. Presentations of personal experiences and reports on campus services. Pass/Not Pass only. May be taken for credit three times. Formerly Humanities 21A.

Humanities 23B ESL Intermediate Conversation II (2). Designed for international graduate students with intermediate oral communication skills. Further development of listening and speaking skills: review of English sounds, sentence stress, and rhythm. Oral reports, debates, and reports on graphs and surveys. Pass/Not Pass only. May be taken for credit three times.

Humanities 23C ESL Advanced Communication III (2). Designed for international graduate students with advanced communication skills. Further development of listening and speaking skills: review of minimal pairs, consonant blends, intonation, stress and rhythm. Oral presentations on graphs, syllabi, academic terms, and a video presentation on academic work. Prerequisite: Humanities 23A or 23B, or consent of instructor. Pass/Not Pass only. May be taken for credit three times. Formerly Humanities 21B.

Humanities 24 ESL International TA Workshop (2). Designed for advanced-level international students preparing to be teaching assistants. Extensive practice in oral and written communication skills associated with teaching introductory-level college courses and participating in academic presentations and discussions. Review and analysis of language problems. Prerequisite: Humanities 23B or 23C, or consent of instructor. Pass/Not Pass only. May be taken for credit three times.

Humanities 29 Special Topics in ESL (2). Directed and individualized work in English as a second language not covered in the Humanities 20, 21, 22 sequence. Pass/Not Pass only.

Humanities 139 Advanced Academic Writing Across the Curriculum (4). Designed for transfer students who speak English and another or other languages at home and who experienced English language difficulties in a college composition course. Focuses on developing academic reading and writing skills including essay content, organization, vocabulary, and grammar. Academic content also covered. Prerequisite: satisfactory completion of the lower-division writing requirement.

Courses in Humanities

(*Schedule of Classes* designation: Human)

LOWER-DIVISION

The following set of courses has no necessary relation to the undergraduate interdisciplinary major in Humanities. Most of the courses are open to any UCI student. Humanities 1A-B-C is required for the major in Humanities, as it is a requirement of any

student majoring in the School of Humanities. Also, Humanities 199 is required of any undergraduate in the School who is approved to complete an interdisciplinary major in Humanities.

1A-B-C The Humanities Core Course (8-8-8) F, W, S. This course is restricted to students who are beginning their first year of college-level work. Each year it deals with problems of concern to the humanistic disciplines including interdisciplinary perspectives on major themes in history, literature, and philosophy. Focuses on major texts and works of art from a range of different cultural traditions. A writing program is integral to the course and counts for half the grade each quarter. Students are taught to think, speak, and write clearly about the issues raised in the texts and addressed in lectures. Students held for the UC Entry Level Writing requirement will earn an additional two units of workload credit, and *must* take the course for a letter grade. 1A is prerequisite to 1B, and 1B is prerequisite to 1C. (1A-B-C: **I, IV; 1C: VII**)

7 Introduction to Humanities (1). Introduces students to UCI School of Humanities majors through weekly speakers from departments and programs representing their field of study. Students will gain an understanding of UCI Humanities majors, fields of study, research, and career opportunities. Prerequisite: lower-division standing or consent of instructor. Pass/Not Pass only.

10 Masterpieces of Literature (4). Students closely read major works of world literature that are significant (1) in their own right, (2) for a specific literary tradition, and (3) because of their reception in other cultural contexts. Literature written in English and English translation. May be repeated for credit as topics vary. (**IV, VIII**)

UPPER-DIVISION

100 Latin America and the Caribbean (4). This foundational course in Latin American and Caribbean studies begins with discussions of the social, cultural, economic, and political process tracing the events from Pre-Columbus to present which have circumscribed the insertion of this region into the world economy. (**VIII**)

110 Core Course in Medieval Studies (4). A seminar in selected topics in medieval studies. Interdisciplinary. Open to all students, and designed especially for those electing the concentration in Medieval Studies. May be taken for credit four times as topic varies. (**VIII**)

H120 Honors Proseminar (4) F, W, S. Interdisciplinary Honors courses organized each year around a single topic or problem designed to compare and contrast modes of analysis in history, literary studies, and philosophy. Required of participants in the Humanities Honors Program. Prerequisites: consent of instructor and the Humanities Honors Program Committee. May be taken three times for credit as topics vary.

H140 Senior Honors Seminar (4) F. Directed by the Humanities Honors Thesis Advisor and required of students in the Humanities Honors program and Humanities majors in the Campuswide Honors Program. Designed to facilitate the exchange of ideas and research strategies among Honors students and to begin the process of writing the senior honors thesis. Prerequisites: senior standing and consent of the Honors Program Committee.

H141 Senior Honors Thesis (4) W. Directed independent research required of participants in the Humanities Honors Program and Humanities majors in the Campuswide Honors Program. Prerequisites: Humanities H140; consent of Honors Program Committee.

H142 Senior Honors Colloquium (4) S. Completion, presentation, and discussion of Senior Honors Theses. Satisfies upper-division writing requirement. Prerequisites: Humanities H141 and consent of Humanities Honors Program Committee.

149 Rhetoric and Public Speech (4) F. A course in public speaking as rhetorical practice. Key concepts include situation, audience, public, argument, persuasion, style, and ethics. Includes analysis of significant speeches by public figures from a range of social positions, and practice in composing and delivering speeches. Prerequisite: satisfactory completion of the lower-division writing requirement.

183A International Studies Forum (2). A faculty-student forum featuring lecturers from a variety of institutions with discussion issues related to international studies. May be taken for credit four times. Same as International Studies 183A, Social Ecology 183A, and Social Science 183A.

183B Seminar in Mediation (4). Students develop mediation skills and refine knowledge in the practice and theory of conflict resolution. Students who complete this course may serve as mediators in the Campus Mediation Program. Course is a prerequisite to completing Independent Study as an intern practicing mediation with the OC Human Relations Commission in small claims court. Same as Social Ecology 183B, International Studies 183B, and Social Science 183B.

183C Seminar in Conflict Resolution (4). Designed for students who are pursuing the minor in Conflict Resolution and/or International Studies major. Provides a forum in which students refine skills and theory in the study of cooperation and conflict, from local to global arenas. Students write a research paper. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Social Ecology 183C and Social Science 183C.

195 Humanities Out There (H.O.T) Practicum (0 to 2) F, W, S. H.O.T. sponsors five-week workshops on selected topics in the humanities. Each workshop sends out a team of undergraduates to a K–12 classroom to develop college skills for Santa Ana students. Requirements: five training sessions; five tutoring sessions; two electronic journals; short paper. Pass/Not Pass only. May be taken for credit for a total of eight units.

197 Individual Field Study (varying credit) F, W, S. Individually arranged field study. Prerequisite: consent of instructor.

198 Directed Group Study (1 to 4) F, W, S. Directed group study on special topics. Prerequisite: consent of instructor. Pass/Not Pass only. May be repeated for credit as topics vary.

199 Directed Research (1 to 4) F, W, S. Directed research for senior Humanities students. Prerequisite: senior standing and consent of instructor. May be repeated for credit as topics vary.

GRADUATE

Graduate courses in Humanities are under the direction of the School's Associate Dean for Graduate Study and are designed for all graduate students in the School of Humanities.

Humanities 200 and 220 introduce study in various disciplinary areas, either to students planning a degree in history or one of the literature departments or to those seeking familiarity with disciplines other than their own.

200A, B, C History and Theory (4, 4, 4) F, W, S. Introduction to role of theory in historical writing, focusing on several major theorists, their relation to their setting, the structure of their thought, and its application to significant historical issues. Same as History 200A, B, C.

220A, B Studies in Literary Theory and Its History (4, 4) F, W. Introduction to criticism and aesthetics for beginning graduate students. Readings from continental, English, and American theorists. Restricted to graduate students only. Same as English CR 220A, B.

260A-B-C Critical Theory Workshop (4) F, W, S. A year-long Critical Theory Workshop, conducted by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class.

270 Advanced Critical Theory (4) F, W, S. Seminars on various topics in critical theory. Students should have taken introductory courses before enrolling in these seminars. May be repeated for credit as topics vary.

298 Group Study (4) F, W, S. Open to four or more students. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

399 University Teaching (4) F, W, S. Limited to Teaching Associates in the Humanities Core Course. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

Humanities Language Learning Program

Glenn Levine, Director

The learning of languages other than English is a crucial component of humanistic inquiry and essential to fostering global literacy in students and to internationalizing the University of California, Irvine. The mission of the Humanities Language Learning Program (HLLP) is to support the learning and teaching of languages other than English on the UC Irvine campus, provide instruction in

languages not associated with undergraduate or graduate degree programs, foster intellectual and pedagogical connections between the fields of applied linguistics and the humanities, and provide local and national leadership in raising the profile and prominence of language learning as part of a university education in a rapidly changing, globally interconnected world.

The following languages are offered through the HLLP: Arabic, Persian, Hebrew, Russian (see also Program in Russian Studies), and Vietnamese.

Language Other Than English Placement and Progression: See page 253.

Arabic 1A-B-C Fundamentals of Arabic (5-5-5) F, W, S, Summer. Uses real world texts (newspapers, poetry, video, and literary texts) to provide students with a firm foundation in the orthography, grammar, syntax, and vocabulary of written and spoken Modern Standard Arabic. Introduces students to Arab world cultures. Prerequisites: for 1B, Arabic 1A with a grade of C or better or the equivalent; for 1C: Arabic 1B with a grade of C or better or the equivalent. (1C: VI)

Arabic S1AB-BC Fundamentals of Arabic (7.5-7.5) Summer. Using the latest pedagogical materials as well as real-world texts (newspapers, poetry, literatures), provides students with a firm foundation in the orthography, grammar, syntax, and vocabulary of written and spoken Modern Standard Arabic. Course may also be delivered online. Prerequisites: for S1BC, Arabic 1B or S1AB with a grade of C or better, or the equivalent. For equivalencies consult with the instructor (S1BC: VI)

Arabic 2A-B-C Intermediate Arabic Language and Culture (4-4-4) F, W, S. Designed for students who are interested in advancing with their Arabic language skills. Students learn the standard Arabic writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy. Prerequisites: for 2A, Arabic 1C with a grade of C or better, placement into 2A, or equivalent; for 2B: Arabic 2A with a grade of C or better, placement into 2B, or equivalent; for 2C: Arabic 2B with a grade of C or better, placement into 2C, or equivalent. (VIII)

Arabic S2AB-BC Intermediate Arabic Language and Culture (6-6) Summer. Second-year Arabic in a time-intensive form. Equivalent to Arabic 2A-B-C during academic year. For description see Arabic 2A-B-C. Prerequisites: for S2AB, Arabic 1C with a grade of C or better or equivalent; for S2BC: Arabic S2AB with a grade of C or better or equivalent. (VIII)

Arabic 150 Modern Arabic Literature in Translation (4). In English. Major works in Arabic literature and culture in context. May be repeated for credit as topics vary. (VIII)

Arabic 199 Independent Study (4) F, W, S. Research paper required. Prerequisite: consent of instructor.

Hebrew 1A-B-C Fundamentals of Hebrew (5-5-5) F, W, S. Introduction to modern spoken and written Israeli Hebrew. Students learn the Hebrew writing system and the basics of Hebrew grammar through the latest pedagogical materials as well as real-world texts. Topics in Jewish culture and Biblical Hebrew are included. Prerequisites: for 1B, Hebrew 1A with a grade of C or better or the equivalent; for 1C: Hebrew 1B with a grade of C or better or the equivalent (1C: VI)

Hebrew 2A-B-C Intermediate Hebrew (4-4-4) F, W, S. Emphasizes development of meaningful communicative skills in Hebrew for the purposes of interaction with Hebrew speakers and critical study of Hebrew culture. With a learner-centered approach, the courses help students develop reading, writing, speaking, listening, grammatical, and cultural skills. Prerequisite for 2A: Hebrew 1C with a grade of C or better, three years of high school Hebrew, or equivalent; for 2B: Hebrew 2A with a grade of C or better, or equivalent; for 2C: Hebrew 2B with a grade of C or better, or equivalent. (VIII)

Hebrew 199 Independent Study (4) F, W, S. Research paper required. Prerequisite: consent of instructor.

Persian 1A-B-C Fundamentals of Persian (5-5-5) F, W, S. Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills and fosters college-level literacy in Persian culture. Prerequisites: for 1B, Persian 1A; for 1C, Persian 1B. Persian 1A-B-C and Persian S1AB-BC may not both be taken for credit. (1C: VI)

Persian S1AB-BC Fundamentals of Persian (7.5-7.5) Summer. First-year Persian in an intensified form. Designed for students with little or no exposure to Persian. Students learn the modern writing system and grammar of Persian. Facilitates basic reading, writing, and speaking skills. Fosters college-level literacy in Persian culture. Prerequisite for S1BC: Persian S1AB or 1B with a grade of C or better. Persian S1AB-BC and 1A-B-C may not both be taken for credit. (S1BC: VI)

Persian 2A-B-C Intermediate Persian Language and Culture (4-4-4) F, W, S. Designed for students who are interested in advancing with their Persian language skills. Students learn the standard Persian writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level cultural literacy. Prerequisite for 2A: Persian 1C with a grade of C or better, placement into 2A, or equivalent; for 2B: Persian 2A with a grade of C or better, or placement into 2B, or equivalent; for 2C: Persian 2B with a grade of C or better, or placement into 2C, or equivalent. (VIII)

Persian S2AB-BC Intermediate Persian Language and Culture (6-6) Summer. Students learn the modern Persian writing system and grammar. Facilitates intermediate-level reading, writing, and speaking skills. Fosters college-level literacy in Persian culture. Prerequisites: for S2AB, Persian 1C with a grade of C or better, or equivalent; for S2BC: Persian S2AB with a grade of C or better, or equivalent. (VIII)

Russian. See the Program in Russian Studies.

Vietnamese 1A-B-C Fundamentals of Vietnamese (5-5-5) F, W, S. Natural approach with emphasis on four fundamental skills of listening, speaking, reading, and writing. Conducted in Vietnamese. Prerequisite for 1B: Vietnamese 1A with a grade of C or better, or equivalent; for 1C: Vietnamese 1B with a grade of C or better, or equivalent, or S1AB with a grade of C or better. (1C: VI)

Vietnamese S1AB-BC Fundamental Vietnamese (7.5-7.5) Summer. First-year Vietnamese in intensified form. Intended for students with little or no knowledge of the Vietnamese language. Emphasis is on mastery of the basic language skills of understanding, speaking, reading, and writing. Prerequisite for S1AB: none; for S1BC: S1AB, or two years of high school Vietnamese, or one semester of college-level Vietnamese. Vietnamese S1AB-BC and Vietnamese 1A-B-C may not both be taken for credit. (S1BC: VI)

Vietnamese 2A-B-C Intermediate Vietnamese (5-5-5) F, W, S. Designed to develop writing and reading skill as well as communicative skills in authentic situations. Students are introduced to aspects of Vietnamese culture as related to lesson topics. Prerequisite for 2A: Vietnamese 1C or S1BC with a grade of C or better, or equivalent; for 2B: Vietnamese 2A with a grade of C or better, or equivalent; for 2C: Vietnamese 2B with a grade of C or better, or equivalent. Placement test required. (VIII)

Vietnamese 3A-B-C Advanced Vietnamese (4-4-4). Focuses on the development of effective speaking, reading, and writing with an emphasis on correct syntax and appropriate word usage in spoken language. Prerequisite: Vietnamese 2C or equivalent. (VIII)

Vietnamese 115 Vietnamese Literature: Advanced Texts (4). A reading course for students with near-fluency in reading Vietnamese. Readings may include both literary and more broadly culturally significant works by important writers, but emphasis is literary texts and writings that interpret those texts. Prerequisite: Vietnamese 3C or consent of instructor. May be taken for credit three times as topics vary. (VIII)

Vietnamese 143 Linguistic Structure of Vietnamese (4). Detailed analysis of essential grammatical aspects of Vietnamese. Comparison with other languages. Course not designed to teach Vietnamese per se but to study the language from the perspective of theoretical linguistics. Prerequisite: Linguistics 3 or equivalent. Formerly East Asian Languages and Literatures 143.

Vietnamese 150 Vietnamese Literature and Culture in Translation (4). In English. Major works in Vietnamese literature and culture in context. May be repeated for credit as topics vary. (VIII)

Ph.D. with Interdisciplinary Emphasis in Humanities

Graduate students enrolled in Ph.D. programs in the School of Humanities may elect an interdisciplinary modification of their major degree program with the permission of the departments and/or programs concerned. Such students would do 60 percent of their graduate work in the Ph.D. program in which they are already

enrolled and 40 percent in another Ph.D. program in the School of Humanities. Those interested in an interdisciplinary degree should contact the Associate Dean for Graduate Study and the graduate advisors in both departments in which they wish to pursue their studies.

Emphasis in Critical Theory

179 Humanities Instructional Building; (949) 824-6720
<http://www.hnet.uci.edu/cte/>

Participating Faculty

Ackbar Abbas, *Departments of Comparative Literature and of Film and Media Studies*

Dina Al-Kassim, *Department of Comparative Literature*

Luis F. Avilés, *Department of Spanish and Portuguese*

Etienne Balibar, *Department of French and Italian*

Stephen Barker, *Department of Drama*

Ermano Bencivenga, *Department of Philosophy*

Ellen S. Burt, *Departments of French and Italian and of Comparative Literature*

David Carroll, *Department of French and Italian*

Juli Carson, *Department of Studio Art*

Vinayak Chaturvedi, *Department of History*

Chungmoo Choi, *Department of East Asian Languages and Literatures*

Michael P. Clark, *Department of English*

Suzanne Gearhart, *Department of French and Italian*

Alexander Gelley, *Department of Comparative Literature*

David Theo Goldberg, *Departments of Comparative Literature and of Criminology, Law and Society*

Daniel M. Gross, *Department of English*

Lucía Guerra-Cunningham, *Department of Spanish and Portuguese*

James D. Herbert, *Department of Art History*

Laura H. Y. Kang, *Departments of Women's Studies, Comparative Literature, and English*

Kyung Hyun Kim, *Departments of East Asian Languages and Literatures and of Film and Media Studies*

Felicidad "Bliss" Cua Lim, *Department of Film and Media Studies*

Julia Reinhard Lupton, *Departments of English, Comparative Literature, and Education*

Steven Mailloux, *Department of English*

William M. Maurer, *Department of Anthropology*

J. Hillis Miller, *Departments of Comparative Literature and English*

Yong Soon Min, *Department of Studio Art*

Carrie J. Noland, *Department of French and Italian*

Margot Norris, *Departments of English and Comparative Literature*

Laura O'Connor, *Departments of English and Comparative Literature*

David T. Pan, *Department of German*

Kavita Philip, *Department of Women's Studies*

Mark S. Poster, *Departments of Film and Media Studies and History*

R. Radhakrishnan, *Departments of English and Comparative Literature*

Fatimah Tobing Rony, *Department of Film and Media Studies*

Annette Schlichter, *Department of Comparative Literature*

Gabriele Schwab, *Departments of Comparative Literature and English*

Martin Schwab, *Departments of Philosophy and Comparative Literature*

Jared Sexton, *Department of Film and Media Studies and Program in African American Studies*

David W. Smith, *Department of Philosophy*

John H. Smith, *Departments of German and Comparative Literature*

Sally A. Stein, *Department of Art History*

James Steintrager, *Departments of English and Comparative Literature*

Ulrike Strasser, *Department of History*

Rei Terada, *Department of Comparative Literature*

Brook Thomas, *Department of English*

Andrzej Warminski, *Department of English*

An emphasis in Critical Theory, under the supervision of the Committee on Critical Theory, is available for doctoral students in all departments at UCI upon approval of the student's faculty advisor or associate dean in accordance with departmental policy. Ph.D. students may, with Committee approval, complete the emphasis in addition to the degree requirements of their graduate program. Although there is no change in the existing Ph.D. program requirements or procedures, if the student wishes to have a letter (signed

by the Dean and by the Director of Critical Theory) testifying that the student has satisfactorily added this theoretical dimension to the graduate program, then additional requirements must be met. Critical theory at UCI is understood in the broad sense as the study of the shared assumptions, problems, and commitments of the various discourses in the humanities. The faculty regards critical theory not as an adjunct to the study of one of the traditional humanistic disciplines but as a necessary context for the study of any humanistic discipline.

Admission to the emphasis may be granted by the Critical Theory Committee in response to the student's petition. The petition normally is submitted by the middle of the second year of graduate study, after completion of the Critical Theory Workshop, and upon the recommendation of the Workshop's instructor or a faculty representative of the student's department.

Requirements: (1) a three-quarter Critical Theory Workshop, conducted preferably by a team of instructors, conceived as a reading group, and developed with the input of all participants, where significant texts are discussed and analyzed in class. No term papers are required, and the course is graded Satisfactory/Unsatisfactory only. Students receive credit for this course only in the spring quarter. For the first two quarters, the course is 0 units with IP grading; (2) three Humanities 270 courses offered under the supervision of the Committee. At least three such courses will be offered each quarter; (3) participation in two mini-seminars (six–eight hours) offered by visiting scholars (and sponsored by the Committee) on the visiting scholar's ongoing research; and (4) a dissertation that reflects the students' preparation in critical theory; alternatively, a research paper written under the guidance of one or more of the Emphasis faculty and submitted to the Director.

DEPARTMENT OF PHILOSOPHY

220 Humanities Office Building II; (949) 824-6525

E-mail: philos@uci.edu

Sven Bernecker, **Department Chair**

Faculty

- Ermanno Bencivenga, Ph.D. University of Toronto, *Professor of Philosophy* (logic, history of philosophy, philosophy of language)
- Sven Bernecker, Ph.D. Stanford University, *UCI Chancellor's Fellow and Department Chair and Professor of Philosophy* (epistemology, philosophy of mind, Kant and German Idealism)
- M. Oreste Fiocco, Ph.D. University of California, Santa Barbara, *Assistant Professor of Philosophy* (metaphysics, epistemology, philosophy of language, ethics)
- Margaret Gilbert, D. Phil. Oxford University, *Professor of Philosophy and Abraham I. Melden Chair in Moral Philosophy* (moral and political philosophy, philosophy of social science, social ontology, and collective intentionality)
- Sean Greenberg, Ph.D. Harvard University, *Assistant Professor of Philosophy* (history of Early modern philosophy)
- Aaron James, Ph.D. Harvard University, *Associate Professor of Philosophy* (ethics, political philosophy)
- S. Nicholas Jolley, Ph.D. Cambridge University, *Professor Emeritus of Philosophy* (early modern philosophy, political philosophy)
- Bonnie Kent, Ph.D. Columbia University, *Professor of Philosophy* (ethics, medieval philosophy)
- J. Karel Lambert, Ph.D. Michigan State University, *Professor Emeritus of Philosophy* (logic, philosophy of science, metaphysics)
- Alan Nelson, Ph.D. University of Illinois at Chicago, *Professor Emeritus of Philosophy* (history of philosophy, philosophy of science)
- Casey Perin, Ph.D. University of California, Berkeley, *Associate Professor of Philosophy* (ancient philosophy, epistemology, seventeenth- and eighteenth-century philosophy)
- Gerasimos Santas, Ph.D. Cornell University, *Professor Emeritus of Philosophy* (ancient philosophy, history of philosophy, ethics)
- Martin Schwab, Ph.D. University of Bielefeld, *Director of the Minor in Humanities and Law and Professor of Philosophy and Comparative Literature* (nineteenth- and twentieth-century continental philosophy)

- David W. Smith, Ph.D. Stanford University, *Professor of Philosophy* (phenomenology, Husserl, ontology, philosophy of mind)
- Nicholas White, Ph.D. Harvard University, *Professor Emeritus of Philosophy and Classics* (Greek philosophy, ethics, epistemology)
- Peter Woodruff, Ph.D. University of Pittsburgh, *Professor Emeritus of Philosophy* (philosophy of logic, metaphysics)

Affiliated Faculty

- Francisco J. Ayala, Ph.D. Columbia University, *University Professor and Donald Bren Professor of Biological Sciences*
- Matthew D. Foreman, Ph.D. University of California, Berkeley, *Professor of Mathematics and of Logic and Philosophy of Science*
- Donald Hoffman, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences*
- Kristen R. Monroe, Ph.D. University of Chicago, *Professor of Political Science*
- Terence Parsons, Ph.D. Stanford University, *Professor of Philosophy, UCLA* (philosophy of language, Medieval philosophy)
- Roger N. Walsh, M.B.B.S., Ph.D. University of Queensland, *Professor of Psychiatry and Human Behavior*

Philosophy addresses itself to questions that arise insistently in every area of human experience and in every discipline within the university. Each discipline inevitably poses problems concerning the nature of the standards appropriate to it and the place of its subject matter within the total framework of human knowledge. If we are to understand science or art or literature, or such human practices as religion and moral thought, we are bound to address ourselves to philosophical issues relating to their nature, the uses of reason appropriate to them, and the contributions they make to our understanding and appreciation of ourselves and the world in which we live.

CAREERS FOR THE PHILOSOPHY MAJOR

The study of argument and the precision and clarity of thought and writing required of Philosophy majors are excellent preparation for a variety of careers. Many undergraduates trained in Philosophy go on to professional schools in medicine, business, or law. The analytical skills developed in Philosophy courses are especially useful in legal education; indeed, many UCI Philosophy graduates have been successful at top law schools. Former Philosophy students have also used their skills to advantage in careers in government, business, teaching, law enforcement, and computer programming. Many Philosophy majors also continue their education at the graduate level, either in philosophy or a related discipline.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

Undergraduate Program

Instruction in philosophy relies essentially upon discussion in which students are active participants. Wherever possible, therefore, classes are limited in size in order to permit sustained interchanges between students and instructor.

Some of the courses offered are of general interest to all students. Others are designed to explore issues that arise in selected and special disciplines such as art or science. The undergraduate advisor should be consulted for advice about courses best suited to the specialized needs of particular students.

The program of course offerings is also designed for those Philosophy majors whose intention may be either to enter some professional school upon graduation (e.g., law) or to engage in graduate work in philosophy.

The faculty encourages Philosophy majors and minors to seriously consider expanding their perspective through an experience of

study abroad. The Study Abroad Center, which includes the Education Abroad Program (EAP) and the International Opportunities Program (IOP), assists students in taking advantage of many worldwide opportunities for study and research. Specifically, those interested in analytic philosophy could consider the EAP programs in the United Kingdom, Canada, Sweden, Australia, and New Zealand, and those interested in Continental philosophy could consider the EAP programs in France, Germany, and Italy. See the Study Abroad Center section of the *Catalogue* or an academic counselor for additional information.

REQUIREMENTS FOR THE B.A. DEGREE IN PHILOSOPHY

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Departmental Requirements for the Major

- A. Philosophy 30 or 104.
- B. Philosophy 10, 12, and either 11 or 13.
- C. Philosophy 101, 102, 103.
- D. Five additional quarter courses from Philosophy 100, 105–199. Students planning to go on to graduate school are strongly advised to take Philosophy 105A and 105B.

Residence Requirement: At least five upper-division courses required for the major must be completed successfully at UCI.

Departmental Requirements for the Minor

- A. Three courses selected from Philosophy 1, 4, 5, 30 *or* from 10, 11, 12, 13, 30 *or* from 20, 21, 22, 23, 30.
- B. Four additional upper-division courses selected from Philosophy 100–199. (Philosophy 199 may be taken for four units only.)

Residence Requirement for the Minor: Four upper-division courses must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

Graduate Program

The Ph.D. program in Philosophy is jointly and cooperatively administered by the Department of Philosophy in the School of Humanities and the Department of Logic and Philosophy of Science (LPS) in the School of Social Sciences. The graduate program has two distinct tracks—the Philosophy track and the LPS track—both of which begin from a common core of shared requirements in history of philosophy, logic, ethics, and metaphysics/epistemology. Students are advised to apply to the track whose faculty, areas of specialization, and curriculum most closely correspond to their interests. The Philosophy track is described here. See the Department of Logic and Philosophy of Science for a description of the LPS track.

UCI's Philosophy Department is committed to providing students a well-rounded graduate education, including central areas of contemporary philosophy and a solid foundation in the history of philosophy. While many of our students choose to specialize in the history of Philosophy or the Continental tradition, areas in which the Department enjoys international recognition, students with other areas of specialization are welcome and well represented. Those with interests in mathematics, the natural sciences, or the social sciences are encouraged to take courses in Logic and Philosophy of Science and to include LPS faculty members on their dissertation committees. The cooperative two-track program provides students the benefits of faculty expertise in a host of areas.

Every year the Philosophy Department invites distinguished philosophers from other universities to present their work to faculty and graduate students. Participation in this colloquium series, though not mandatory, contributes significantly to graduate education. Colloquia sponsored by Logic and Philosophy of Science might also be of interest to Philosophy track students.

Every new graduate student is assigned a faculty member whose purpose is to oversee the student's progress through the major requirements for the advanced degree. The student consults with this faculty member each quarter about progress and any administrative or academic difficulties. Each student's overall record is evaluated by the Philosophy Department each year, customarily during the first two weeks of April. When the student has satisfied the residency requirement and the distribution, tools of research, and portfolio requirements, the Candidacy Committee supervises the qualifying examination and the development of a dissertation project, and the subsequent writing of the dissertation itself. The Chair of this committee is the principal person with whom the graduate student will consult on the dissertation.

MASTER OF ARTS IN PHILOSOPHY

There is no list of courses required for the M.A. degree. The M.A. program in Philosophy takes one year at a minimum. The student may elect to follow either of the following routes to the degree: write a thesis on a subject to be chosen in consultation with an advisor and defend the thesis in an oral examination, or satisfy the logic and portfolio requirements for the Philosophy track. Refer to the Graduate Division section for information on the minimum number of courses required for the M.A. degree.

Advancement to candidacy for the M.A. degree is not automatic, but requires formal application to the Dean of the Graduate Division via the Philosophy Department Office. Application must be made with the recommendation of the Philosophy Department and must take place before the beginning of the quarter in which the student expects to receive the degree.

DOCTOR OF PHILOSOPHY IN PHILOSOPHY

There is no set number of courses required for the Philosophy track, so that work can be tailored to the individual student's needs and interests. However, as a prerequisite for the Ph.D. degree, every student is required to have some experience in teaching.

Normative time to degree in the Philosophy track is seven years for the normally qualified student. Time to advancement to candidacy is four years. Time in candidacy is three years. Maximum time to degree permitted is nine years. A master's degree is not a prerequisite for the Ph.D. The following items are requirements for the Ph.D. degree.

First-Year Seminar. An examination of some standard works in the history of philosophy, value theory, metaphysics, or epistemology; limited to and required of all first-year Philosophy graduate students in the School of Humanities.

Distribution Requirements. Students are required to take a range of courses designed to expose them to the various historical periods and fields of philosophy. When course offerings are announced, students are notified about which courses can be used to satisfy which requirements. In some cases, the requirement satisfied will ultimately depend on the content of the student's term paper(s).

The Distribution Requirements are:

1. **History.** To satisfy this requirement, students must receive a grade of B or better in at least four courses covering at least three of the following areas: Ancient, Medieval, Modern Empiricism, Modern Rationalism, Kant, Nineteenth Century, and Twentieth Century.

2. **Field.** To satisfy this requirement, students must receive a grade of B or better in two courses in value theory, one course in logic, and one course in metaphysics/epistemology.

These requirements must be completed by the end of the seventh quarter in residence.

Tools of Research. This requirement allows students to pursue the tool which they and their advisors deem most useful for their area of concentration, either a language other than English or some course of study outside philosophy. To satisfy this requirement, a student must pass an examination in a single appropriate language other than English or receive a grade of B or better in each of three appropriate graduate-level courses in a discipline other than philosophy.

The two-hour foreign language examination (administered by the Philosophy Department) requires students to translate, with the aid of a dictionary, passages from one or two philosophical authors. For the second option, courses of study outside philosophy will be approved (by the Philosophy Department Director of Graduate Studies) when they bear on a student's area of philosophical concentration. Though the courses must be in a discipline other than philosophy, they may in fact be taught in the Philosophy Department or the LPS Program (e.g., a course in mathematical logic taught by an LPS faculty member).

This requirement must be completed by the end of the twelfth quarter in residence.

The Portfolio. A portfolio is an extended writing sample designed to demonstrate a student's ability (a) to understand, analyze, and evaluate positions and arguments in classical and contemporary philosophical literature, and (b) to formulate and defend an original philosophical thesis. These virtues must be displayed at a level of sophistication that indicates the student's ability to write a Ph.D. dissertation.

The portfolio must be submitted to the Graduate Coordinator at the end of the fourth week of the student's seventh quarter in residence. Portfolios will be evaluated by the entire faculty of the Philosophy Department. (Philosophy track students may request that relevant LPS faculty also be present at the evaluation meeting.)

Prospectus Examination. In preparation for the prospectus examination, students choose a dissertation advisor and a dissertation committee. They consult with their thesis advisor and other appropriate faculty to prepare a reading list on their area of concentration and a brief dissertation proposal with a comprehensive bibliography. The exam is an oral exam and must be completed by the end of the tenth quarter in residence. The prospectus exam is to determine whether the dissertation project is viable and promises results that will fulfill standards expected for a dissertation in the profession.

Candidacy Examination. In preparation for the candidacy examination, students prepare at least a draft chapter of their dissertation and update their prospectus and bibliography in consultation with their dissertation advisor and their dissertation committee. Students apply for candidacy by filing appropriate forms, including a list (devised in consultation with their advisor) of appropriate members for their Candidacy Committee; one of these, the External Examiner, must come from outside the Department of Philosophy. The Committee is then appointed by the Philosophy Department, on behalf of the Dean of the Graduate Division and the Graduate Council, to administer the oral candidacy examination on the prospectus and draft chapter(s) to determine whether or not the student will be approved to continue work on the dissertation.

The Candidacy Examination must be completed by the end of the twelfth quarter in residence. The Philosophy Department Chair, on behalf of the Dean of the Graduate Division and the Graduate Council, then appoints a Doctoral Committee (typically taken from

the Candidacy Committee and naturally including the dissertation advisor) to supervise the writing of the dissertation.

Dissertation Defense. Students must defend their dissertation during an oral examination administered by their Doctoral Committee.

THE SALZBURG EXCHANGE PROGRAM

The Department of Philosophy and the Department of Logic and Philosophy of Science jointly administer an Exchange Program with the University of Salzburg. The program has two parts. The Scholarly Exchange provides opportunities for faculty and graduate students in Philosophy and LPS to visit Salzburg and for faculty and graduate students from Salzburg to visit one or the other of the UCI units. The Program also sponsors joint conferences, held alternately in Irvine and in Salzburg; these are co-sponsored by Salzburg and the UCI Interdisciplinary Program in the History and Philosophy of Science.

To be eligible for the Salzburg Exchange, a graduate student must have advanced to candidacy. The selected student spends one semester in Salzburg, usually teaching one course in the general area of the thesis topic. An upper-division course may be taught in English, but lower-division courses must be taught in German. (Some previous visitors have learned serviceable German by attending a Goethe institute during the preceding summer.) Typically, a Salzburg visitor will receive a Salzburg Fellowship intended to cover travel expenses, and a stipend; those who teach while in Salzburg will also receive a salary intended to cover living expenses (including health and dental insurance).

Application should be made to the Philosophy Department's Salzburg Exchange Director by November 1 and should include a curriculum vita and syllabi for possible courses to be taught. The Director and/or the Philosophy Department Graduate Coordinator should be consulted for further information.

OPTIONAL EMPHASIS IN CRITICAL THEORY

The School of Humanities offers an emphasis in Critical Theory that can be appended to the Philosophy track. A student interested in the emphasis begins by taking the three-quarter Critical Theory Workshop. With the recommendation of a workshop instructor or a Critical Theory faculty member in the Philosophy Department, the student may then apply to the Critical Theory Committee for admission to the emphasis. Emphasis students must complete the following requirements in addition to the usual Philosophy track requirements.

The Critical Theory Workshop. Students must successfully complete the three-quarter Critical Theory Workshop. This sequence is conceived as a reading group, normally conducted by a team of instructors, and developed with the input of all participants. Significant texts are discussed and analyzed in class; no term papers are required. (Students receive 0 units and In-progress grades for the fall and winter quarters; passing students receive 4 units and a Satisfactory grade for the spring quarter.

Advanced Critical Theory Requirement. Students must receive a grade of B or better in three Humanities 270 courses offered under the supervision of the Critical Theory Committee. At least three such courses will be offered each year. With the approval of the Philosophy Department, these courses can be used to satisfy the tools of research requirement.

Mini-Seminar Requirement. Students must participate in two committee-sponsored mini-seminars (six–eight hours each) offered by visiting scholars on their ongoing research.

Research Paper Requirement. Students must complete a research paper under the guidance of a three-member committee, selected in consultation with the Director; at least one member must be from outside of the Philosophy Department. This paper may (but need not) be part of the portfolio or dissertation.

Upon completion of the emphasis requirements, a letter certifying that fact, signed by the Dean of Humanities and the Director of the Critical Theory Emphasis, will be added to the student's dossier.

OPTIONAL EMPHASIS IN FEMINIST STUDIES

A graduate emphasis in Feminist Studies also is available. Refer to the Women's Studies section of the *Catalogue* for information.

Courses in Philosophy

(*Schedule of Classes* designation: Philos)

LOWER-DIVISION

1 Introduction to Philosophy (4). A selection of philosophical problems, concepts, and methods, e.g., free will and cause and substance, personal identity, the nature of philosophy itself. (IV)

4 Introduction to Ethics (4). Selected topics from the history of ethics, e.g., the nature of the good life and the moral justification of conduct. (IV)

5 Contemporary Moral Problems (4). Selected moral issues of current interest, e.g., abortion, sexual morality, euthanasia, capital punishment, reverse discrimination, civil disobedience, or violence. (IV)

6 Philosophy and Psychoanalysis (4). An analysis of Freudian psychoanalytic theory and therapy, and its significance for such classical philosophical problems such as the mind-body problem, self-identity and self-deception, psyche and consciousness, innatism, and the origins of moral behavior. (IV)

7 Introduction to Existentialism (4). An analysis of themes in phenomenology and existentialism and their philosophical origins, e.g., consciousness, self and other, freedom and individuality. (IV)

9 Feminist Moral and Political Philosophy (4). Selected topics in moral and political philosophy analyzed from feminist perspectives, e.g., gender-based differences in moral attitudes and virtues, hidden in traditional accounts of political obligation, and feminism and sexual orientation. Prerequisite: Philosophy 4 recommended. (IV)

10 History of Ancient Philosophy (4). Examination of the central philosophical themes developed by the pre-Socratics, Socrates, Plato, Aristotle, the Stoics, the Epicureans, and the Skeptics. (IV)

11 History of Medieval Philosophy (4). A study of some of the major theological and philosophical texts from the Medieval period. Philosophy 10 recommended as background. (IV)

12 History of Modern Philosophy (4). A study of major developments in western philosophy from Descartes to Kant with readings from Descartes, Leibniz, Locke, Berkeley, Hume, and Kant. Philosophy 10 or 11 recommended as background. (IV)

13 History of Contemporary Philosophy (4). A study of recent philosophical developments in Anglo-American and Continental philosophy with readings from such figures as Russell, Moore, Wittgenstein, Quine, Heidegger, and Sartre. Philosophy 12 recommended as background. (IV)

20 Introduction to Human Nature (4). Is our nature determined by how we are created or by what we want to be? Attempts to answer these questions by looking at stories of human origins and scientific accounts of human nature. (IV)

21 Introduction to Philosophy and Religion (4). What is religion? What is its relation to philosophy? Must one be religious in order to be a moral or good person? In examining these issues, attends to both Eastern and Western traditions and perspectives. (IV)

22 Introduction to Law and Society (4). What constitutes a legal system? What does it mean for a society to have a system as a part of the social fabric. Examines the social status of law and its use as a tool for fashioning society. (III)

23 Introduction to Problems of Self and Mind (4). A study of basic problems in metaphysics, such as: What am I? A mind, a soul, a body? A social being? A bioorganism? Am I the same person today, yesterday, and tomorrow? Is there a story of my life that captures my essence? (IV)

29 Critical Reasoning (4). Introduction to analysis and reasoning. The concepts of argument, premise, and conclusion, validity and invalidity, consistency and inconsistency. Identifying and assessing premises and inferences. Deductive versus inductive reasoning, and introduction to the probability calculus. Evaluating definitions. Informal fallacies. Same as Logic and Philosophy of Science 29. (V)

30 Introduction to Symbolic Logic (4). An introduction to the symbolism and methods of the logic of statements, including evaluation of arguments by truth tables, the techniques of natural deduction and semantic tableaux. Same as Logic and Philosophy of Science 30. (V)

31 Introduction to Inductive Logic (4). Philosophical questions concerning the foundations of scientific inference, e.g., the traditional problem of induction, the Goodman paradox, the concept of cause, Mill's method of inductive reasoning, probability calculus, different interpretations of probability, and their interaction in inductive reasoning. Prerequisite: Philosophy 30 or 104. Same as Logic and Philosophy of Science 31. (V)

40 Special Topics in Philosophy (4). Lectures on selected topics at the lower-division level. May be repeated for credit as topics vary.

UPPER-DIVISION

100 Writing Philosophy (4). Discussion of those aspects of writing of special importance in philosophy, e.g., philosophical terminology, techniques for evaluating arguments, philosophical definitions and theories. At least 4,000 words of assigned composition based on philosophical readings. Prerequisites: satisfactory completion of the lower-division writing requirement; junior standing or consent of instructor. Same as Logic and Philosophy of Science 100.

101 Introduction to Metaphysics (4). A study of one or more of the problems of "first philosophy," e.g., substance, free will, causation, abstract entities, identity.

102 Introduction to the Theory of Knowledge (4). A study of one or more of the basic issues in epistemology, e.g., the role of perception in the acquisition of knowledge, the nature of evidence, the distinction between belief and knowledge, and the nature of truth and certainty. Same as Logic and Philosophy of Science 102.

103 Introduction to Moral Philosophy (4). A study of one or more of the problems of contemporary moral philosophy, e.g., the nature of justice, liberalism versus conservatism, happiness and its relation to virtue and right conduct, the objectivity of moral standards.

104 Introduction to Logic (4). Introduction to sentence logic, including truth tables and natural deduction; and to predicate logic, including semantics and natural deduction. Same as Logic and Philosophy of Science 104.

105A Elementary Set Theory (4). An introduction to the basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n-tuples, relations, functions, ordinal and cardinal numbers. Prerequisite: Logic and Philosophy of Science 104 or Mathematics 6B or an upper-division course in Mathematics or consent of instructor. Philosophy 105A and Mathematics 151 may not both be taken for credit. Same as Logic and Philosophy of Science 105A.

105B Metalogic (4). Introduction to formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Löwenheim-Skolem theorems. Prerequisites: Philosophy 105A or consent of instructor. Philosophy 105B and Mathematics 150 may not both be taken for credit. Same as Logic and Philosophy of Science 105B.

105C Undecidability and Incompleteness (4). Introduction to the formal theory of effective processes, including recursive functions, Turing machines, Church's thesis, and proofs of Gödel's incompleteness theorem for arithmetic, and Church's undecidability theorem for first-order logic. Prerequisite: Philosophy 105B or consent of instructor. Philosophy 105C and Mathematics 152 may not both be taken for credit. Same as Logic and Philosophy of Science 105C.

106 Topics in Logic (4). Selected topics in mathematical or philosophical logic. Prerequisite: Philosophy 105B or consent of instructor. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 106.

108 Topics in Induction, Probability, and Decision Theory (4). Selected topics in induction, probability, and decision theory. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 108.

110 Topics in Ancient Philosophy (4). Selected topics from the writings of Plato and Aristotle, e.g., Aristotle's criticisms of Plato's metaphysics, ethics, or politics. May be taken for credit twice as topics vary.

111 Topics in Medieval Philosophy (4). Studies of some of the major issues of concern to Medieval philosophers, e.g., universals, the nature and existence of God, faith, and reason. May be taken for credit twice as topics vary.

112 Topics in Renaissance Philosophy (4). Studies of such authors as Bruno and Montaigne. May be taken for credit twice as topics vary.

113 Topics in Modern Philosophy (4). Focuses on the works of one or more of the central philosophical figures of the modern period (e.g., Descartes, Leibniz, Hobbes, Locke, Hume, Kant) or on the treatment of one or more central philosophical problems by a number of these figures. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 113.

114 Topics in Nineteenth-Century Philosophy (4). Studies of some of the major figures after Kant (e.g., Hegel, Nietzsche, Marx, Kierkegaard), especially in German idealism and social thought. May be repeated for credit as topics vary.

115 Topics in History of Analytic Philosophy (4). Review of one or more central theories or figures in the history of analytic philosophy. Emphasis is on the study of original sources, especially writings of Frege, Russell, Schlick, Carnap, and Quine. Topics include the nature of meaning and truth, the synthetic/analytic distinction, and scientific knowledge. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 115.

116 Topics in Continental Philosophy. Studies of some of the major figures (e.g., Husserl), movements (e.g., phenomenology, existentialism) in early twentieth-century continental European thought. May be repeated for credit as topics vary.

117 Topics in East Asian Philosophy (4). Selected topics in the philosophies of East Asia, e.g., Yoga, Buddhism, Vedanta, Confucianism, Taoism, and Shinto. Same as East Asian Languages and Literatures 117. May be repeated for credit as topics vary. (VIII)

120 Topics in Metaphysics (4). Examines central philosophical questions concerning our own fundamental nature and that of the world around us (e.g., causation and necessity, determination, free will, personal identity, the mind-body problem). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 120.

121 Topics in the Theory of Knowledge (4). One or more topics in the theory of knowledge, e.g., the nature of rational justification, of perceptual knowledge, of *a priori* knowledge. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 121.

122 Topics in Philosophy of Mind (4). Selected topics involving the concept of mind, e.g., the relation between mind and body, the self, personal identity, consciousness, the unconscious. May be repeated for credit as topics vary.

123 Topics in Philosophy of Religion (4). Critical examination of concepts involved in the theological literature, e.g., the nature and existence of God, miracles, the problem of evil, divine command theories in ethics. May be repeated for credit as topics vary.

130 Topics in Moral Philosophy (4). Selected topics in ethics. May be repeated for credit as topics vary.

131 Applied Ethics. Application of moral theories and arguments to important problems facing contemporary society.

131A Applied Ethics (4). Topics may include capital punishment, world hunger, obligations to future generations, environmental ethics, animal rights, economic justice, sexual morality, affirmative action, racism and sexism, or legalization of drugs.

131C Medical Ethics (4). Analysis of moral issues concerning health care. Topics may include: just allocation of scarce medical resources, the doctor/patient relationship, genetic engineering, surrogate motherhood, abortion, euthanasia, or social policy concerning AIDS.

132 Topics in Political and Social Philosophy (4). Selected topics in social and political philosophy, e.g., the functions of government, the justification of political authority, the nature of democracy, the varieties of liberty, and social justice. Readings from classical and contemporary sources. May be repeated for credit as topics vary.

133 Topics in Philosophy of Law (4). Selected topics concerning legal systems and the concept of law, e.g., the nature and purpose of law, the nature of authority, the relationship between law and morality, law and political-economic systems. May be repeated for credit as topics vary.

140 Topics in Philosophy of Science (4). Selected topics in contemporary philosophy of science, e.g., the status of theoretical entities, the confirmation of theories, the nature of scientific explanation. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 140.

141A Topics in Philosophy of Physics (4). Selected topics in the philosophy of physics, e.g., the interpretation of quantum mechanics, the nature of spacetime, the problem of quantum field theories. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 141A.

141B Geometry and Spacetime (4). An examination of the foundations of the special theory of relativity, with emphasis on the geometry of Minkowski spacetime, and its relation to both Euclidean and non-Euclidean (hyperbolic) plane geometries. Prerequisites: multivariable calculus and linear algebra at the undergraduate level. Same as Logic and Philosophy of Science 141B.

141C Philosophy of Quantum Mechanics (4). An examination of the standard von Neumann-Dirac formulation of quantum mechanics. The quantum measurement problem is discussed along with several proposed solutions, including GRW, many-worlds, man-minds, and Bohm's theory. Same as Logic and Philosophy of Science 141C.

141D Probability and Determinism (4). An examination of a cluster of interrelated issues concerning probability, determinism, logic, and the foundations of quantum mechanics. Prerequisites: multivariable calculus and linear algebra at the undergraduate level. Same as Logic and Philosophy of Science 141D.

142 Writing/Philosophy of Biology (4). Philosophy of biology, e.g., scientific method in biology, the structure of evolutionary theory, teleology, ethics, and evolution. Course work includes one 4,000-word and four 1,000-word papers. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Biological Sciences E142 and Logic and Philosophy of Science 142.

143 Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 143 and Psychology 123P.

144 Topics in Philosophy of Social Science (4). Selected topics in the philosophy of the social sciences, e.g., is their goal to understand behavior or to predict and control it?; are they normative and the natural sciences not?; do they incorporate philosophical doctrines about language and mind? May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 144.

145 Topics in Philosophy of Language (4). Selected topics in the philosophy of language, e.g., the nature of meaning, mechanisms of reference, speech acts. May be repeated for credit as topics vary. Same as Linguistics 141 and Logic and Philosophy of Science 145. May be repeated for credit as topics vary.

146 Topics in Philosophy of Logic (4). Selected topics in the philosophy of logic, e.g., the nature of logical truth and our knowledge of it, the status of propositions, definite descriptions, and existential presuppositions. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 146.

147 Topics in Philosophy of Mathematics (4). Selected historical and contemporary topics in the philosophy of mathematics, e.g., mathematical truth and ontology, mathematical knowledge, the nature and role of proof, the workings of mathematics in application. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 147.

150 Phenomenology (4). A study of the foundations of phenomenology in Husserl and its background in Bolzano, Frege, Brentano, Meinong, Kant, and Descartes. Topics include phenomenological method, theory of intentionality, meaning, perception, evidence, ego, other minds, intersubjectivity, and life-world. May be repeated for credit as topics vary.

151 Existentialism (4). A study of such central existentialist thinkers as Heidegger and Sartre. Philosophy 7 or 150 recommended as background.

152 Topics in Feminism (4). A study of selected topics in feminist theory and/or gender studies. May be repeated for credit as topics vary.

190 Special Topics in Philosophy (4). Lectures on selected topics to be given by regular faculty and visiting faculty. May be repeated for credit as topics vary.

199 Directed Special Studies (2 to 4). Independent study on a research topic supervised by a faculty member. May be repeated for credit as topics vary.

GRADUATE COURSES

200 Special Topics in Philosophy (4). Seminars on selected topics to be given by regular faculty and visiting faculty. May be repeated for credit as topics vary.

201 First-Year Seminar (4). Examination of some standard works in history of philosophy, value theory, metaphysics, or epistemology. Limited to and required of all first-year Philosophy graduate students in the School of Humanities.

205A Set Theory (4). The basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n-tuples, relations, functions, ordinal and cardinal numbers. Same as Logic and Philosophy of Science 205A.

205B Metalogic (4). Formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Loewenheim-Skolem theorems. Prerequisite: Philosophy 205A. Same as Logic and Philosophy of Science 205B.

205C Undecidability and Incompleteness (4). Formal theory of effective processes, including recursive function, Turing machines, Church's thesis, and proofs of Goedel's incompleteness theorem for arithmetics, and Church's undecidability for first-order logic. Prerequisite: Philosophy 205B. Same as Logic and Philosophy of Science 205C.

206 Topics in Logic (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 206.

210 Topics in Ancient Philosophy (4). May be repeated for credit as topics vary.

211 Topics in Medieval Philosophy (4). May be repeated for credit as topics vary.

212 Topics in Renaissance Philosophy (4). May be repeated for credit as topics vary.

213 Topics in Modern Philosophy (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 213.

214 Topics in Nineteenth-Century Philosophy (4). May be repeated for credit as topics vary.

215 Topics in Analytic Philosophy (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 215.

216 Topics in Continental Philosophy (4). May be repeated for credit as topics vary.

218 Topics in Contemporary Philosophy (4). May be repeated for credit as topics vary.

220 Topics in Metaphysics (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 220.

221 Topics in Epistemology (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 221.

222 Topics in Mind and Action (4). May be repeated for credit as topics vary.

230 Topics in Ethics (4). May be repeated for credit as topics vary.

232 Topics in Political and Social Philosophy (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 232.

234 Topics in Aesthetics (4). May be repeated for credit as topics vary.

240 Topics in Philosophy of Science (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 240.

241 Topics in Philosophy of Physics (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 241.

242 Topics in Philosophy of Biology (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 242.

243 Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 243 and Psychology 231P.

244 Topics in Philosophy of Social Science (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 244.

245 Topics in Philosophy of Language (4). May be repeated for credit as topics vary. Same as Linguistics 241 and Logic and Science of Philosophy 245.

246 Topics in Philosophy of Logic (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 246.

247 Topics in Philosophy of Mathematics (4). May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 247.

249 Logic and Philosophy of Science Workshop (1 to 4). A two- or three-quarter long workshop on selected topics in logic and philosophy of science. In-progress grading, Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 289.

250 Topics in Existentialism and Phenomenology (4). May be repeated for credit as topics vary.

298 Independent Study (4 to 12). May be repeated for credit.

299 Directed Research (4 to 12). May be repeated for credit.

399 University Teaching (4). Limited to Teaching Assistants. May be repeated for credit.

UNDERGRADUATE PROGRAM IN RELIGIOUS STUDIES

152 Humanities Instructional Building; (949) 824-9290

Core Faculty

Elizabeth Allen, *Department of English*

Marc Baer, *Department of History*

Carol Burke, *Department of English*

James T. Chiampi, *Department of French and Italian*

Susan Bibler Coutin, *Departments of Criminology, Law and Society and Anthropology*

James B. Given, *Department of History*

Qitao Guo, *Department of History*

Lamar M. Hill, *Department of History*

Bonnie Kent, *Department of Philosophy*

Susan B. Klein, *Department of East Asian Languages and Literatures*

James Kyung-Jin Lee, *Departments of Asian American Studies and English*

Karen Leonard, *Department of Anthropology*

Mark A. LeVine, *Department of History*

Jayne Lewis, *Department of English*

Julia Reinhard Lupton, *Departments of English, Comparative Literature, and Education*

Steven Mailloux, *Department of English*

Nancy McLoughlin, *Department of History*

Jack Miles, *Department of English*

Keith L. Nelson, *Department of History*

Alka Patel, *Department of Art History*

Victoria Silver, *Department of English*

Affiliated Faculty

Stanley Bailey, *Department of Sociology*

Linda Freeman Bauer, *Department of Art History*

Victoria Bernal, *Department of Anthropology*

Dickson D. Bruce, Jr., *Department of History*

Vinayak Chaturvedi, *Department of History*

Yong Chen, *Department of History*

Chungmoo Choi, *Department of East Asian Languages and Literatures*

Edward Fowler, *Department of East Asian Languages and Literatures*

Michael A. Fuller, *Department of East Asian Languages and Literatures*

Alexander Gelley, *Department of Comparative Literature*

Linda Georgianna, *Department of English*

Anna Gonosová, *Department of Art History*

Judy C. Ho, *Department of Art History*

S. Nicholas Jolley, *Department of Philosophy*

Aaron Kheriaty, *Department of Psychiatry and Human Behavior*

Cecelia Lynch, *Department of Political Science*

Sanjoy Mazumdar, *Department of Planning, Policy, and Design*

Michael T. McBride, *Department of Economics*

Margaret M. Miles, *Departments of Art History and Classics*

Maria C. Pantelia, *Department of Classics*

Kenneth L. Pomeranz, *Department of History*

Adrian Preda, *Department of Psychiatry and Human Behavior*

Gary Richardson, *Department of Economics*

Michael Ryan, *Department of English*

Thomas P. Saine, *Department of German*

Martin Schwab, *Departments of Philosophy and Comparative Literature*
 John H. Smith, *Departments of German and Comparative Literature*
 Daniel Stokols, *Departments of Planning, Policy, and Design and of Psychology and Social Behavior*
 Ulrike Strasser, *Department of History*
 Timothy Tackett, *Department of History*
 Roxanne Varzi, *Department of Anthropology*
 Roger N. Walsh, *Department of Psychiatry and Human Behavior*

Undergraduate Program

Religious Studies includes an interdisciplinary major and minor that focus on the comparative understanding of the various ways different peoples, across space and through time, have developed their religious ideas, values, systems, beliefs, rituals, and traditions in response to fundamental questions of human existence. The curriculum seeks to provide a wide-ranging academic understanding and knowledge of the religious experience in society through study in the Schools of Humanities, Social Sciences, and Social Ecology, and the Claire Trevor School of the Arts. As an interdisciplinary academic discipline, the study of religion offers a rigorous, systematic, and dispassionate intellectual inquiry into various aspects of religious systems, their practitioners and outlooks, and their goals and expressions. It employs a wide variety of approaches and methods in order to understand the role of religion in both human experience and thought.

Note that students in the Religious Studies major complete an emphasis in either Judaism/Christianity/Islam or in World Religious Traditions.

CAREERS FOR THE RELIGIOUS STUDIES MAJOR

Majoring in Religious Studies is an excellent preparation for living in a multicultural society and for a variety of careers in counseling, teaching, commerce, writing, government, the arts, and professional religious leadership. The major's emphasis on broad understanding, critical thinking skills, and clear written expression provides an effective springboard for graduate study in the humanities and social science or professional schools in medicine, law, or business.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

REQUIREMENTS FOR THE B.A. DEGREE IN RELIGIOUS STUDIES

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Requirements for the Major

- A. Religious Studies 5A, 5B, 5C, 110.
- B. Six upper-division electives, two in each of the following categories, selected from the approved lists published on the Religious Studies Web site (http://www.humanities.uci.edu/religious_studies). For examples of approved courses, see below. One relevant lower-division course may be substituted for an upper-division course, with prior approval.
1. *Judaism/Christianity/Islam*
 2. *World Religious Traditions*
 3. *Thematic Approaches to Religion*
- C. Completion of an emphasis in either Judaism/Christianity/Islam or in World Religious Traditions: select two additional upper-division courses from either category 1 or 2 above.

Studying Abroad: Students are encouraged to study abroad and may be able to satisfy a significant portion of their requirements abroad. Courses taken abroad must be approved by the Director of Religious Studies in order to be applied toward major requirements.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor

- A. Religious Studies 5A, 5B, 5C, 110.
- B. Four upper-division electives selected from the three categories under B above, including at least one course from both categories 1 and 2. Two of the four courses must be outside of the student's major. One relevant lower-division course may be substituted for an upper-division course, with prior approval.

Residence Requirement for the Minor: Four upper-division courses required for the minor must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved by the Director of the Religious Studies program.

Categories and Approved Courses: The following list includes examples of courses that have been approved in the past for each category. The complete list varies from quarter to quarter, depending upon course scheduling. For complete up-to-date information on approved courses, consult the Religious Studies Web site at http://www.humanities.uci.edu/religious_studies.

1. *Judaism/Christianity/Islam:* Sample courses: Religious Studies 130, 140, 141; Anthropology 125Z; Art History 112, 114, 118; English 102A, 103; History 110, 130A, 130B, 130C, 131, 132; International Studies 179; Philosophy 11, 111, 123; Spanish 116; Women's Studies 166A.
2. *World Religious Traditions:* Sample courses: Religious Studies 91, 120; Anthropology 135I; Art History 152, 175; Asian American Studies 150; Classics 45A, 151; East Asian Languages and Literatures 20, 116, 117; Philosophy 117; Sociology 136.
3. *Thematic Approaches to Religion:* Sample courses: Religious Studies 100, 103, 106, 170; Anthropology 134E, 135A; Comparative Literature 132; English 106; History 135B, 180; Philosophy 21, 123; Political Science 149; Social Science 170P; Sociology 56; Women's Studies 60C.

Courses in Religious Studies

(*Schedule of Classes* designation: Rel Std)

LOWER-DIVISION

5A World Religions I (4). An introduction to the history, doctrine, culture, and writing of the three "religions of Abraham": Judaism, Christianity, and Islam. (IV, VIII)

5B World Religions II (4). An introduction to various religious traditions in selected areas of the world—including India and South Asia, East Asia, Africa, and the Americas. (IV, VIII)

5C Inter-Religious Dialogue (4). Lectures and discussion on controversial topics in religion: sexual morality; religious violence; science; treatment of women and girls; religious truth; American Constitutional matters; secularization; the future of religion, and other topics. (IV, VIII)

17 An Economic Approach to Religion (4) Introduction to how basic economic concepts such as demand, supply, consumption, production, competition, free-riding, innovation, regulation, and rent-seeking can be applied to understand observed religious behavior. Same as Economics 17. (III)

21 Philosophy and Religion (4). Examines the intersection of religion and philosophy from a standpoint that does not presuppose previous academic study of either. Both Western and Eastern traditions and perspectives may be explored. May be taken for credit three times as topics vary.

56 Society and Religion (4). A critical and personal examination of the varieties of religious and spiritual experience human beings are undergoing in contemporary society. The role of conscious understanding and unconscious conditioning regarding religion and spirituality. May be taken for credit three times as topics vary.

60 Gender and Religion (4). Introduces the topic of religion in a feminist context by performing cross-cultural exploration of gender, authority, and faith in various traditions. Study includes (but is not limited to) writings of contemporary Jewish, Christian, and Muslim feminists. May be taken for credit three times as topics vary.

90 Aspects of Religion (4). A presentation of selected issues in the study of religion. May be taken for credit three times as topics vary.

91 Aspects of Asian Religions (4). A survey course of a specific Asian religious tradition such as Hinduism, Buddhism, Taoism, Confucianism, or Shinto in its manifestation in Asia or in its transmission to the Americas. May be taken for credit three times as topics vary.

UPPER-DIVISION

100 Topics in the Study of Religion (4). The intersection of religious belief and practices with selected subjects of continuing interest. May be taken for credit three times as topics vary.

103 Topics in the Philosophy of Religion (4). Critical examination of philosophical concepts in religious scripture and theology, e.g., the nature and existence of God, miracles, the problem of evil, divine command theories in ethics. May include both Eastern and Western religious traditions. May be taken for credit three times as topics vary.

106 Topics in Gender and Religion (4). Critical examination of how religious beliefs and practices have shaped (and been shaped by) attitudes toward gender and sexuality in modern and/or premodern society. May be taken for credit three times as topics vary.

110 Theory and Methodologies in the Study of Religion (4). Introduction to major critical thinkers, theories, and methodologies in the study of religions. Includes paper on relevant Religious Studies topic; emphasis on developing the student's ability to analyze and articulate theoretical arguments. Prerequisites: satisfactory completion of the lower-division writing requirement and Religious Studies 5A, 5B, and 5C, or consent of instructor. May be taken for credit three times as topics vary.

115 Religion and World Politics (4). Examines the relationship between religion and world politics historically and today, focusing on connections with peace/war, democracy, human rights, secularism(s), and globalization. Covers major debates, scholarship, concepts, and theories through class exercises, exams, and essays. Prerequisite: Political Science 41A, or International Studies 11 or 12, or Religious Studies 5A, 5B, or 5C. Same as Political Science 146B and International Studies 151B.

120 Asian Religious Traditions (4). Studies involving (but not limited to) Hinduism, Buddhism, Confucianism, Taoism, Shinto, and Shamanism, including both elite and doctrinal aspects and forms of more popular religions. May be taken for credit three times as topics vary.

130 Jewish, Islamic, and Middle Eastern Religious Traditions (4). Character and evolution of Egyptian, Jewish, Zoroastrian, Muslim, and other religious communities of the region from their formative periods to the present era. May be taken for credit three times as topics vary.

140 Early Western Religious Traditions (4). Religious perspectives of the Mediterranean and European regions from the earliest times to approximately 1500 C.E. May be taken for credit three times as topics vary.

141 Recent Western Religious Traditions (4). Studies related to Catholic, Protestant, and Orthodox Christianity as well as alternative belief systems in Europe of the early modern and modern eras. May be taken for credit three times as topics vary.

150 Religion in the Americas (4). Religious belief and social context in North and South America from the earliest human societies to the present. May be taken for credit three times as topics vary.

160 Diaspora Religions (4). Examination of what happens to belief and practice as religious communities are scattered geographically. May be taken for credit three times as topics vary.

170 Comparative Studies in Religion (4). Systematic comparisons of different religious and quasi-religious traditions, their beliefs, and practices. May be taken for credit three times as topics vary.

190 Senior Colloquium (4). Reading and group discussion of selected texts under the direction of an instructor. Paper required. Prerequisite: consent of instructor; a minimum of two students must enroll. May be taken for credit three times as topics vary.

199 Independent Study (1 to 4). Directed reading and research in consultation with a faculty advisor. Substantial written work required. Prerequisites: upper-division standing and consent of instructor. May be repeated for credit as topics vary.

PROGRAM IN RUSSIAN STUDIES

429 Murray Krieger Hall; (949) 824-3961

Lora Mjolsness, **Director**

Faculty

Michael A. Green, Ph.D. University of California, Los Angeles, *Professor Emeritus of Russian* (eighteenth-century Russian theatre and literary theory, Pushkin, Chekhov, Kuzmin, Russian Symbolist theater, cabaret theatre, Russian literature and theater of the 1920s)

Victorina Lefebvre, Ph.D. Lomonosov Moscow State University, *Lecturer in Russian* (methods of teaching, comparative study of Soviet and American culture, Russian language and literature)

Lynn Mally, Ph.D. University of California, Berkeley, *Professor of History* (modern Russian and Soviet history)

Lora Mjolsness, Ph.D. University of Southern California, *Director of the Program in Russian Studies and Lecturer in Russian* (nineteenth- and twentieth-century and contemporary children's literature; Soviet and Russian animation; Russian folklore)

Spanning both Europe and Asia, Russia is one of the world's dominant political entities. Its rich cultural traditions have enhanced world literature, theater, art, and dance. As the world's first socialist state, it became a major political rival of the United States after the Second World War. In the past decade, Russians have abandoned their socialist system and are now in the process of making a rocky transition to capitalism. Although Russia lost sizeable amounts of territory in this transition, the Russian language now serves as the *lingua franca* throughout many areas formerly controlled by the Soviet Union.

While the demand for specialists in various sectors of government has eased, relationships between our countries at other levels of society are growing more active and business opportunities are exciting and rewarding. Other areas in which the need for Russian language competence is evident right now include trade, environmental protection, social services, law, medicine, and technology.

All students in Russian language courses are encouraged to take part in the UC Education Abroad Program and spend a portion of their junior or senior year studying in Russia. Additional information is available in the Study Abroad Center section of this *Catalogue*.

The Russian Studies minor is a multidisciplinary curriculum combining the Humanities, Social Sciences, and Social Ecology. It is designed to introduce students to the rich history and culture of Russia and provide them with the intellectual and linguistic tools necessary for sustained engagement with this area of the world.

REQUIREMENTS FOR THE MINOR

Language Other Than English Placement and Progression:

 See page 253.

Russian 1A-B-C, 2A-B-C, 50 (three different topics); 16 units of upper-division courses selected from the following: Russian 140, 150, 190, 199, appropriate Comparative Literature courses, History 124A, 124B, 190 (when topics are related to Russia), Political Science 152D, 159 (when topics are related to Russia), Anthropology 136D, 164P (same as Political Science 154F). A maximum of four units may be chosen from the following courses devoted in part to Russian themes: History 114, 126A, 126B, 126C, 158A, Political Science 142D, 142F, 143E, and Social Ecology E113 (same as International Studies 121).

Residence Requirement for the Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Courses in Russian

(*Schedule of Classes designation: Russian*)

LOWER-DIVISION

1A-B-C Fundamentals of Russian (5-5-5) F, W, S. Focuses on reading, comprehension, basic composition, and conversation skills, and gives the student an initial exposure to the Russian cultural scene. Prerequisite for 1B: Russian 1A with a grade of C or better, or equivalent; for 1C: Russian 1B with a grade of C or better, or equivalent. (1C: VI)

2A-B-C Intermediate Russian (5-5-5) F, W, S. Students read simple passages from contemporary Russian literary texts and newspapers. Development of oral skills and exposure to Russian culture continue. Prerequisite for 2A: Russian 1C with a grade of C or better, or three years of high school Russian, or equivalent; for 2B: Russian 2A with a grade of C or better, or equivalent; for 2C: Russian 2B with a grade of C or better, or equivalent. (VIII)

50 Russian Culture (4) F, W, S. Study of varied topics in Russian culture, area studies, and society, both in the present and in historical perspective. Topics are not normally repeated for a two-year period. May be taken four times for credit as topics vary. (IV, VIII)

97 Fundamentals of Russian (with Emphasis on Reading) (4). Designed primarily for students interested in acquiring a solid reading knowledge of Russian, and to facilitate the understanding and translating of Russian texts dealing with a variety of disciplines. Not open to Russian Studies minors. Does not serve as prerequisite for any higher-level Russian courses or fulfill any undergraduate foreign language requirement.

99 Special Studies Russian (1 to 5). Prerequisite: consultation with instructor necessary prior to enrollment.

UPPER-DIVISION

140 Topics in Russian Literary Theory (4). Examines the work of individual theorists and schools of literary theory in the nineteenth and twentieth centuries. May be repeated for credit as topics vary. (VIII)

150 Topics in Russian Literature (4) F, W, S. Examines major themes in Russian literature, film, and other media from the eighteenth to twenty-first centuries. Taught in English. May be repeated for credit as topics vary. (VIII)

190 Russian Language Through Film (4). Uses Russian films of the late twentieth century to enhance students' language skills and deepen their cultural knowledge. Work involves intensive conversation, reading and listening comprehension, and the acquisition of written skills and grammatical accuracy. Conducted primarily in Russian. Prerequisite: Russian 2C or consent of instructor. May be repeated for credit as topics vary. (VIII)

198 Directed Group Study (4) F, W, S. Group independent study under direct faculty supervision. Prerequisite: consent of instructor. May be taken two times for credit.

199 Independent Study (1 to 4) F, W, S. Independent study under direct faculty supervision. Prerequisite: consent of instructor. May be taken two times for credit.

DEPARTMENT OF SPANISH AND PORTUGUESE

322 Humanities Hall; (949) 824-6901
Horacio Legrás, **Department Chair**

Faculty

Ana María Amar Sánchez, Ph.D. Universidad de Buenos Aires, *Professor of Spanish* (Latin American literature, mass culture studies and critical theory)

Luis F. Avilés, Ph.D. Brown University, *Associate Professor of Spanish* (Golden Age literature and critical theory)

Anne J. Cruz, Ph.D. Stanford University, *Professor Emerita of Spanish* (Golden Age Spanish and comparative literature)

Lucía Guerra-Cunningham, Ph.D. University of Kansas, *Professor Emerita of Spanish* (Latin American literature, literary theory, and women's studies)

Ivette N. Hernández-Torres, Ph.D. Brown University, *Associate Professor of Spanish* (colonial literature and Caribbean literature)

Horacio Legrás, Ph.D. Duke University, *Department Chair and Associate Professor of Spanish* (Latin American literature and culture)

Seymour Menton, Ph.D. New York University, *Research Professor of Spanish and Portuguese* (Latin American novel and short story)

Santiago Morales-Rivera, Ph.D. Harvard University, *Assistant Professor of Spanish* (contemporary Spanish intellectual history, literature and culture)

Gonzalo Navajas, Ph.D. University of California, Los Angeles, *Professor of Spanish* (eighteenth- through twentieth-century Spanish literature; film and visual arts; aesthetics and contemporary cultures)

Héctor Orjuela, Ph.D. University of Kansas, *Professor Emeritus of Spanish* (Latin American literature, poetry and essay)

Julian Palley, Ph.D. University of New Mexico, *Professor Emeritus of Spanish* (modern Spanish literature)

Armin Schwegler, Ph.D. University of California, Berkeley, *Director of Global Cultures and Professor of Spanish* (history of Spanish, dialectology, historical linguistics, typology, Creoles)

Jacobo Sefamí, Ph.D. University of Texas at Austin, *Professor of Spanish* (Latin American literature, contemporary poetry)

Dayle Seidenspinner-Núñez, Ph.D. Stanford University, *Professor Emerita of Spanish* (medieval Spanish and comparative literature)

Juan Villegas, Ph.D. Universidad de Chile, *Research Professor of Spanish* (literary theory, modern Spanish literature, Latin American theatre and poetry)

Zidia Webb, M.A. Michigan State University, *Lecturer with Security of Employment Emerita, Spanish and Portuguese*

Affiliated Faculty

Alejandro Morales, Ph.D. Rutgers University, *Professor of Chicano/Latino Studies and Spanish* (Latin American and Chicano literature, film studies, creative writing)

Undergraduate Program

BEGINNING SPANISH LANGUAGE COURSES

The beginning and intermediate Spanish language curriculum consists of six courses: Spanish 1A-B-C and 2A-B-C. This series is designed to teach students the four fundamental linguistic skills: speaking, understanding, reading, and writing Spanish. Using the Communicative Approach, these foundation courses have the objective to provide foreign language skills that facilitate successful transitioning into more advanced Spanish. At the same time, these beginning Spanish classes are an excellent portal for study abroad, be that in Spain or in Latin America. For an overview of relevant Education Abroad study sites, visit <http://www.cie.uci.edu/>.

All students must adhere to the placement policies listed hereafter. Students with prior knowledge of Spanish may need to take the Spanish placement test.

Spanish Placement

To enroll in Spanish 1A or any Spanish course through the 3A/3B level:

Heritage speakers: Native or near-native speakers who place into Spanish 2C and whose home language is Spanish are encouraged to enroll in Spanish 2NS, Spanish for Native Speakers.

Students without previous background in Spanish must take a copy of their high school transcript to the Humanities Undergraduate Counseling Office in 143 Humanities Instructional Building (HIB) to activate their eligibility to enroll in Spanish 1A or 1AB.

Students with previous high school background in Spanish wanting to enroll in any Spanish 1A through Spanish 3A/3B course at UCI for the first time must take the placement test. Eligibility to enroll in any Spanish 1A through Spanish 3A/3B course at UCI will be based on the result of that placement test.

Students with a previous course (or courses) in Spanish from another college or university who want to enroll in any Spanish

1A through Spanish 3A/3B course at UCI must take a copy of their college transcripts to the Humanities Undergraduate Counseling Office in order to receive authorization to enroll in the next course.

Students who graduated from a high school in a Spanish-speaking country, or who graduated from a Spanish Academy, must take a copy of their transcripts to Amina Yassine (ayassine@uci.edu), Interim Language Curriculum Director, Humanities Hall 322, to determine where they should be placed.

Students who have already met the UCI language other than English general education or breadth requirement with SAT Subject Test scores, International Baccalaureate (IB) scores, or Advanced Placement (AP) examination and plan to enroll in a Spanish course at UCI are still required to take the Spanish placement test. Students cannot earn units or grade points at UCI in courses from which they have been exempted on the basis of IB or AP credit, even if the placement test result recommends enrollment in such a level.

Students currently enrolled in any Spanish 1A through Spanish 2B course at UCI will be eligible to enroll for the next course within the series without having to take the placement test, provided they receive a C or better.

To enroll in Spanish 3A, 3B, or beyond: An active prerequisite check system is in place for Spanish 3A and 3B. In order to enroll in Spanish 3A or 3B a student must have passed Spanish 2C or 2NS or received a score in the range of 91–99 on the Spanish placement test. Students who score 100 or above on the Spanish placement test may proceed to upper-division Spanish courses upon the recommendation of the Interim Language Curriculum Director, Amina Yassine (ayassine@uci.edu), Humanities Hall 322.

Placement testing is offered throughout the academic year (summer included). For details about registering for a placement test, contact the Academic Testing Center, 3040 Anteater Instruction and Research Building; (949) 824-6207; e-mail: testoff@uci.edu; <http://www.testingcenter.uci.edu>. Placement test results are valid for one calendar year.

BACHELOR'S DEGREE IN SPANISH

The B.A. program in Spanish is devoted to the study of the languages and cultures of Spanish-speaking countries.

Students select one of three emphases: (1) Literature and Culture; (2) Spanish for Future Teachers; or (3) Cinema: Spain, Latin America, and U.S. Latino. Each of these emphases strives to teach students to speak Spanish with fluency, and to carry out academic work in this language. The major, however, goes far beyond mere language learning, as it is designed to offer a broad humanistic education. The courses explore the literatures and cultures of Spain and Latin America from their first manifestations to the present. The faculty approach this rich cultural legacy from an interdisciplinary perspective that puts Latin American and Spanish texts in dialogue with other fields of knowledge such as anthropology, linguistics, history, women's studies, and studies on globalization, among others. The program also offers courses in Spanish and Latin American film, as well as in visual culture. Unless stated otherwise, courses in the three emphases are taught in Spanish.

By the end of the first year, students attain mastery of the basic structure of the language and ability to converse on everyday topics, as well as to read and write at an elementary level. In the second year, emphasis is put on gradually raising the level of the student's ability to read and write. Two third-year courses (Spanish 3A and 3B) stress composition and grammar. Furthermore, a course in phonetics (Spanish 113A) aims to perfect pronunciation and presents historical and dialect variants of Spanish. Spanish 107 (Advanced Spanish Grammar) helps students solidify fine points of grammar. In addition to giving students a sense of literary history, the introductory courses in literature (Spanish 101A, 101B), also

to be taken in the third year, introduce students to elements of literary research and writing. The courses in Hispanic culture (Spanish 110A, 110B, 110C) combine a panoramic overview with a close look at a specific country or topic, and require a final research project. Upper-division literature and film courses offer a more detailed analysis of specific texts and require a final research paper.

The faculty encourages students who are serious about improving their Spanish language ability in reading, writing, and speaking to take advantage of opportunities to immerse themselves in the Spanish language by studying in Argentina, Chile, Costa Rica, Mexico, Spain, or other Spanish-speaking countries through various study abroad programs administered through UCI's Study Abroad Center. Programs are available for the summer, one quarter, one semester, or one year. This allows students to complete a significant portion of their bachelor's degree requirements in Spain or Latin America (for details, see Residence Requirements below). While abroad, students are given the opportunity to improve their Spanish in a natural context, and to enjoy exposure to other cultures. Once back at UCI, students who have studied abroad typically use this newly gained knowledge to excel in advanced upper-division courses, and to successfully enter graduate school programs or the career path of their choice. See the Study Abroad Center section of the *Catalogue* or an academic counselor for additional information.

Double Major: Students in the B.A. program often double major. Double majoring in Spanish and a second department provides the best of both worlds: the requirements for the Spanish major give students the linguistic and humanistic skills that will qualify them for diverse career paths, while the second degree provides students with the additional expertise they are seeking. Together, these bachelor's degrees will reward students with a distinctively competitive edge. A double major is especially useful for pre-med, pre-law, and other students (future teachers included) who want an extensive education in the natural or social sciences and a strong liberal arts program as well.

REQUIREMENTS FOR THE B.A. DEGREE IN SPANISH

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Language Other Than English Placement and Progression: See page 253.

Departmental Requirements for the Major

Spanish 2C (or Spanish 2NS, for native speakers) or the equivalent is a prerequisite to Spanish 3A or 3B. Spanish 3A and 3B are the prerequisites for all upper-division courses. Spanish 3A can be taken concurrently with 3B, though it is recommended that students take these two courses in sequence.

Students must choose one of the following emphases:

1. Emphasis in Literature and Culture

A. Spanish 3A, 3B, 101A, 101B, 107 or 113A, 119, 190.

B. Six upper-division courses in Spanish literature, two of which may be substituted by culture and film.

2. Emphasis in Spanish for Future Teachers

A. Spanish 3A, 3B, 15, 101A, 101B, 107, 113A, 113B, 119.

B. Three upper-division Spanish courses.

NOTE: Students who wish to pursue a career in teaching are encouraged to complete the minor in Educational Studies in tandem with the emphasis. The following courses are recommended in fulfillment of the minor in Educational Studies: Education 108,

124, 128, 131, 173, 349; Education 160 and 160L, or two quarters of Humanities 195.

3. Emphasis in Cinema: Spain, Latin America, and U.S. Latino

A. Spanish 3A, 3B, 101A, 101B, 107 or 113A, 119, 190.

B. Film and Media Studies 85A.

C. Five upper-division electives:

1. Four must be in film:
 - (a) One film course may come from any department;
 - (b) Three film courses must be taken in the Department of Spanish and Portuguese.
2. One literature course taught in Spanish, from the Department of Spanish and Portuguese.

Residence Requirement for the Major (all emphases): At least five upper-division courses required for the major must be completed successfully at UCI. By petition, two of the five may be taken through the UC Education Abroad Program, providing course content is approved by the Humanities Office of Undergraduate Study and the Undergraduate Director of the Department of Spanish and Portuguese. See also the Study Abroad Option below.

Departmental Requirements for the Spanish Minor

Language Other Than English Placement and Progression: See page 253.

Seven courses taught in Spanish: Spanish 3A and 3B plus any five Spanish courses beyond 3A and 3B.

NOTE: Spanish 2C or 2NS (or equivalent) is a prerequisite to Spanish minor requirements.

Residence Requirement for the Spanish Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department or committee chair.

Departmental Requirements for the Portuguese Minor

Language Other Than English Placement and Progression: See page 253.

Portuguese 120A, B, C and four courses from Portuguese 121 with different topics.

NOTE: Portuguese 2C (or equivalent) is a prerequisite for Portuguese 120A, B, C.

Residence Requirement for the Portuguese Minor: At least four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, providing course content is approved in advance by the appropriate department chair.

STUDY ABROAD OPTION

Students are encouraged to study abroad, possibly satisfying a significant portion of their major requirements abroad. For the maximum number of courses allowed and other pertinent details, see the Spanish Undergraduate Web site at <http://www.humanities.uci.edu/spanishandportuguese/program/undergrad.php>.

All courses taken abroad must be approved. Approval typically involves the following: (1) presentation of syllabi and other pertinent course materials (term papers, exams, etc.) from the host university, and (2) submission of a UCI Humanities Petition form (available online, and to be completed after the student's return to UCI) to the Undergraduate Director of the Department of Spanish and Portuguese, and to the Humanities Office of Undergraduate

Study (HIB 143). Students are advised to consult with the Undergraduate Director and the Humanities Office of Undergraduate Study, both before and after their stay abroad. See also the Residence Requirement above.

CAREER OPPORTUNITIES

With over 400 million speakers, Spanish is the third most widely spoken language in the world, which explains in part why Spanish has such a growing global reach and rapidly increasing national and international appeal—in business, education, the media, sports, as well as elsewhere. Knowledge of the Spanish language and cultures has thus become highly marketable in many professions (nursing, the entertainment and/or travel industry, tourism, among others).

The Spanish B.A. degree prepares students to have ready access to careers that require advanced knowledge of the Spanish language and the multiple cultures associated with it. At the same time, competitive students in the program obtain a solid preparation for graduate school. The students' graduate career paths vary widely and include literary and/or cultural studies, teaching, nursing, law/business, nonprofit organizations, medicine, sociology, and other specialties.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. For additional information, visit these two sites: <http://www.career.uci.edu>, and <http://www.humanities.uci.edu/spanish/career.htm>.

Graduate Program

All graduate courses in the Department are taught in either Spanish or Portuguese, unless otherwise indicated in the course description.

MASTER OF ARTS IN SPANISH

The Master of Arts degree in Spanish is a two-year program of study designed to expose the beginning graduate student to all periods of peninsular, Latin American, and Chicano/Latino literature and culture. The degree is awarded upon the successful completion of course work and written and oral comprehensive examinations. A minimum of 10 courses must be completed with a letter grade; at least eight of these must be graduate seminars. Students are required to take one course in Theory (239A or B). Proficiency (defined as the equivalent of completing 2C) in a foreign language other than Spanish is required; it is recommended that master's students take Portuguese as their foreign language, although other languages are accepted. Master's candidates must complete a minimum of three quarters of course work in the Department; the maximum time to complete the master's program is two years. Students entering with a bachelor's degree must satisfy the requirements for a master's degree before they proceed toward a Ph.D. This includes the master's level examinations and course work. Normally only students intending to work toward the Ph.D. are admitted to the graduate program.

DOCTOR OF PHILOSOPHY IN SPANISH

The Department of Spanish and Portuguese offers a Ph.D. degree in Spanish with a specialization in Spanish, Spanish-American, or Chicano/Latino literatures and cultures. The program integrates period and genre studies with work in literary and critical theory, linguistics, sociohistorical studies, and cultural studies. The Department seeks to professionalize its Ph.D. candidates not as narrow specialists but rather as scholars and critics acquainted with a range of fields that relate to and enhance their discipline. Graduate emphases in Comparative Literature, Critical Theory, and Feminist Studies are available; other areas of study (for example, film,

history) may be designed with approval from the student's Ph.D. guidance committee. The Department has been traditionally committed to excellence in teaching, both in its own practice and in the formation of its graduates.

Language Requirements

In addition to Spanish and English, all doctoral candidates should have the necessary command of Portuguese to successfully complete a graduate course in Portuguese. An additional foreign language (with proficiency equivalent to the 2C level) is also required; this requirement may be satisfied by examination or course work. The selection of a second foreign language must be approved by the student's guidance committee and is based on the specific research interests and field of study of the candidate.

Course Requirements

A minimum of 20 courses beyond the B.A. or 10 beyond the M.A. are required. One course in linguistics (diachronic or synchronic), and one graduate course in Luso-Brazilian literature are required at the Ph.D. level. Note that these requirements may include course work completed in the master's program; the remaining elective courses are selected with the approval of the student's guidance committee to prepare for the doctoral examination and the dissertation. Students are encouraged to take more than the minimum number of required courses.

A student who transfers into the doctoral program from elsewhere must take a minimum of 10 graduate courses at UCI, of which seven must be in the Department of Spanish and Portuguese. With regard to students who enter the Ph.D. program with their master's degree from another institution, the Ph.D. guidance committee will determine the number of courses that will be accepted.

A student may pursue the Ph.D. with an emphasis in Comparative Literature by taking a minimum of five courses in the Comparative Literature program.

Time to Degree

The normative time for completion of the Ph.D. is seven years; four years to candidacy, three years in candidacy. The maximum time permitted is eight years.

Teaching

The Department recognizes its responsibility to train all Ph.D. candidates as teachers and requires that all doctoral students with no prior teaching experience complete a minimum of three quarters of language teaching (Spanish 399). Moreover, all doctoral students are encouraged to complete a teaching practicum by co-teaching an upper-division course with a professor and enrolling in Spanish 292, which is graded Satisfactory/Unsatisfactory only.

Qualifying Examination

Upon completion of course work, the Ph.D. student advances to candidacy by passing the written and oral qualifying examinations by unanimous decision. The qualifying examination requires the student to develop two topics in close consultation with the examination committee. One topic must present a critical problem from a historical perspective, while the other may focus on a more specific area within the student's major field of interest. Students are encouraged to incorporate theoretical and interdisciplinary components into the formulation of their topics. A two-hour oral examination that includes discussion of the written examinations is also required. The normative time for advancement to candidacy is four years.

Dissertation

A dissertation topic is chosen by the candidate in consultation with the dissertation director and committee, and normally falls within the major field covered by the qualifying examinations. The candidate presents a study plan to the dissertation committee, which approves the proposal and a preliminary research outline. The

student submits drafts of chapters to the dissertation director who corrects and approves the drafts and circulates them to other committee members for commentary.

Courses in Spanish

(Schedule of Classes designation: Spanish)

Enrollment Authorization: See page 253 for Language Other Than English Placement information and pages 327–328 for specific Spanish placement. Students with prior college courses(s) must take a copy of their college transcripts to the Humanities Undergraduate Counseling Office for enrollment authorization.

NOTE: Spanish 1A, S1AB, and 1AB are open only to students who have no prior knowledge of Spanish. Students must take a copy of their high school transcript to the Humanities Undergraduate Counseling Office, 143 Humanities Instructional Building, to activate their eligibility to enroll in Spanish 1A, S1AB, or 1AB. Equivalent sequences/courses may not be repeated for credit.

Lower-Division Course Equivalencies

Spanish 1 Series

1A	1B	1C
1AB		
S1AB		S1BC

Sample Scenarios

Have taken: S1AB	May enroll in: S1BC; or 1B (for 2.5 units); or 1C (if grade of B or better earned in S1AB)	May not enroll in: 1A
1A	S1AB (for 2.5 units); or 1B; or S1BC (if grade of B or better earned in 1A)	
1B	1C; or S1BC (for 5 units)	S1AB
1AB	1C; or S1BC (for 5 units)	1A, 1B, or S1AB

Spanish 2 Series

2A	2B	2C or 2NS
2AB		
S2AB		S2BC

Sample Scenarios

Have taken: S2AB	May enroll in: S2BC; or 2B (for 2 units); or 2C (if grade of B or better earned in S2AB)	May not enroll in: 2A
2A	S2AB (for 2 units); or 2B; or S2BC (if grade of B or better earned in 2A)	
2B	2C; 2NS; or S2BC (for 4 units)	S2AB
2AB	2C; 2NS; or S2BC (for 4 units)	2A, 2B, or S2AB

NOTE 1: 2C and 2NS are level-equivalent.

NOTE 2: 2BZ and 2MD are independent, intermediate-level courses; prerequisite: 1C or placement into 2A.

LOWER-DIVISION

1A-B-C Fundamentals of Spanish (5-5-5) F, W, S. Communicative approach with emphasis on conversational skills: the students and their environment, their experiences, and their opinions about issues. Reading and writing skills also introduced. Prerequisite for Spanish 1A: authorization or placement into 1A; for 1B: 1A or placement into 1B; for 1C: 1AB, 1B, or S1AB with a grade of B or better or placement into 1C. (1C: VI)

1AB Intensive Spanish Fundamentals (10) F, W, S. An intensive, proficiency-oriented, and task-based approach, designed to develop basic oral communicative abilities in Spanish. Reading and writing skills, along with an introduction to Hispanic cultures. Prerequisite: placement into Spanish 1A.

S1AB-BC Fundamentals of Spanish (7.5-7.5) Summer. First-year Spanish in an intensified form. Same as Spanish 1A-B-C during academic year. Prerequisite for Spanish S1AB: placement into 1A; for S1BC: S1AB or 1B, or placement into 1B or 1C. *If a student already received credit for 1B or 1AB only 5 units will be awarded for S1BC.* (S1BC: VI)

2A-B-C Intermediate Spanish (4-4-4) F, W, S. Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar review. Prerequisite for 2A: Spanish 1C or S1BC or placement into 2A; for 2B: Spanish 2A, 2BZ, or 2MD, or placement into 2B; for 2C: Spanish 2B, 2AB, or S2AB with a grade of B or better, or placement into 2C. (VIII)

2AB Intermediate Intensive Spanish (8) F, W, S. Intensive intermediate course designed to improve student's abilities in reading, writing, speaking and comprehension, including a thorough introduction to Hispanic cultures. Throughout the course the grammatical component of the language is gradually reviewed and tested. Prerequisite: 1C, S1BC, or placement into Spanish 2A. (VIII)

S2AB-BC Intermediate Spanish (6-6) Summer. Second-year Spanish in a time-intensive form. Equivalent to Spanish 2A-B-C during academic year. For description, see Spanish 2A-B-C. Prerequisite for S2AB: Spanish 1C or S1BC or placement into 2A; for S2BC: Spanish 2B or S2AB. *If a student already received credit for 2B or 2AB only 4 units will be awarded for S2BC.* (VIII)

2BZ Spanish for Business Professionals (4) F, W, S. Primarily designed for those who need to understand Spanish correspondence and business functions. Helps to improve communication skills essential for interacting with Spanish-speaking clients. Spanish 2BZ is a stand-alone course, independent of the 2A-B-C series. Prerequisite: Spanish 1C or placement into 2A. (VIII)

2MD Spanish for Medical Professionals (4). F, W, S. Emphasis on medical terminology. Grammatical structures and vocabulary needed to interview and converse with Spanish-speaking patients. Spanish 2MD is a stand-alone course, independent of the 2A-B-C series. Prerequisite: Spanish 1C or placement into 2A. (VIII)

2NS Spanish for Native Speakers (4) F, W, S. Course for writing concise compositions in Spanish with emphasis on contrastive features and interferences from English. Learning-by-doing approach to teaching of Spanish grammar, vocabulary, and orthography. Prerequisite: Spanish 2B, 2AB, or S2AB with a grade of B or better, or placement into 2C and advanced (native-like) oral proficiency in Spanish. Spanish 2NS and 2C may not both be taken for credit. (VIII)

NOTE: In order to enroll in Spanish 3A or 3B a student must have passed Spanish 2C or 2NS or received a score of 91 or above on the Spanish placement test.

3A Grammar and Composition (4) F, W, S. Focuses on intermediate to advanced grammar and composition in an orderly fashion. Emphasis is placed on key elements of grammar, to constitute about 70 percent of the course, and composition writing, to constitute about 30 percent of the workload. May be taken concurrently with Spanish 3B. Prerequisite: Spanish 2C, S2BC, or 2NS. (VIII)

3B Composition and Grammar (4) F, W, S. Focuses on intermediate to advanced grammar and composition in an orderly fashion. Emphasis is placed on key elements of grammar, to constitute about 30 percent of the course, and composition writing, to constitute about 70 percent of the workload. May be taken concurrently with Spanish 3A. Prerequisite: Spanish 2C, S2BC, or 2NS. (VIII)

15 Advanced Spanish Conversation (4) F, W, S. Designed to improve the fluency of non-native speakers of Spanish. Concentrates on the expansion of vocabulary, as well as listening and speaking skills. Not open to native or semi-native speakers of Spanish. Prerequisite: Spanish 2C with a grade of C or better or the equivalent.

44 Hispanic Literatures for Nonmajors (4) F, W, S, Summer. Focuses on major Spanish and Latin American literary texts within a historical and theoretical perspective. Taught in English with literary texts read in the original language. Prerequisites: Spanish 2C or 2NS or equivalent; English majors only. (VIII)

50 Latin America, U.S. Latino, and Iberian Cultures (4) F, W, S, Summer. Introduction (for non-majors) to the culture of the Spanish- and Portuguese-speaking worlds (Europe, Latin America, U.S., Africa). May focus on any time period. Taught in English. May be taken for credit three times as topics vary. (IV, VIII)

97 Fundamentals of Spanish (with Emphasis on Reading) (4). Designed primarily for students interested in acquiring a solid reading knowledge of Spanish, and to facilitate the understanding and translating of Spanish texts dealing with a variety of disciplines. Not open to Spanish majors or minors. Does not serve as prerequisite for any higher-level Spanish courses or fulfill any undergraduate foreign language requirement. Taught in English. Prerequisite: consent of instructor.

UPPER-DIVISION

101A Introduction to Iberian Literature and Culture (4). Introduction to the major authors and movements of Iberian literature and culture from the Middle Ages to the present. Prerequisites: Spanish 3A and 3B. (VIII)

101B Introductory Studies in Latin American Literature and Culture (4). A historical overview of Latin American literature and culture mainly focused on canonical texts. Among topics: colonialism and postcolonialism, the nation, *indigenismo*, gender, literary movements. Also introduces literary analysis, research methods, and cultural critique. Prerequisites: Spanish 3A and 3B. (VIII)

104 Writing in Spanish (1). Designed to improve writing skills in Spanish. Materials and writing strategies in the workshop are directly tied to the materials covered in the 100-level course(s) in which the student is enrolled. Corequisite: concurrent enrollment in an upper-division course taught in Spanish and consent of instructor. May be taken for credit four times.

107 Advanced Spanish Grammar (4). Designed primarily for students who have demonstrated a substantial level of proficiency in their studies of the Spanish language. Takes a thorough approach to advanced grammatical problems, in order to assist students in their mastery of the elements of the Spanish language. Prerequisites: Spanish 3A and 3B.

110A Peninsular Literature and Cultures (4). Prerequisites: Spanish 3A and 3B. May be repeated for credit as topics vary. (VIII)

110B Latin American Literature and Cultures (4). Prerequisites: Spanish 3A and 3B. May be repeated for credit as topics vary. (VIII)

110C U.S. Latino Literature and Cultures (4). Focuses on some aspect—literature, art, cultural production, history—of the multifaceted Latino cultures that have developed within the United States. Can focus on one group, such as Caribbean Americans, Chicanos, Central Americans, or take a comparative perspective of several groups. Prerequisites: Spanish 3A and 3B, or consent of instructor. Same as Chicano/Latino Studies 134. (VII)

113A Spanish Phonetics (4). Introduction to fundamental notions of Spanish phonetics. Particular attention is paid to problems of pronunciation that arise in native and non-native speakers of Spanish due to interference between Spanish and English. Phonology (the system that underlies phonetics) and Spanish dialectology also included. Prerequisites: Spanish 3A and 3B.

113B Introduction to Spanish Linguistics (4). Application of basic notions of linguistics to Spanish, Spanish phonology, morphology, syntax, and semantics. Special attention to the application of linguistics to the teaching of Spanish. Prerequisites: Spanish 3A and 3B.

116 Medieval Spanish Literature and Culture (4). Medieval literature in Spain from ninth century to 1500. Works of lyric and epic poetry, prose fiction, and nonfiction. Substantial historical and cultural background explored. Prerequisites: Spanish 3A and 3B. May be repeated for credit as topics vary. (VIII)

119 Textual Analysis and Interpretation (4). Focus on analysis and interpretation of literary texts, with emphasis on narrative, poetry, theater/performance, and visual media. Also introduces students to the major currents in theoretical thought, such as cultural studies, postmodernism, and others. Oral presentations and short essays are required. Taught in Spanish. Prerequisites: Spanish 3A and 3B. (VIII)

121 Golden Age Literature and Culture (4). Golden Age literature in Spain including the Renaissance and Baroque periods. Works of poetry, narrative, and theater. Historical and cultural background. Prerequisites: Spanish 3A and 3B. May be taken for credit three times as topics vary. (VIII)

122 Eighteenth- and Nineteenth-Century Spanish Literature and Culture (4). The main literary and ideological trends in eighteenth- and nineteenth-century Spain, including the enlightenment, romanticism, realism, and naturalism. Prerequisites: Spanish 3A and 3B. May be taken for credit three times as topics vary.

123 Twentieth- and Twenty-First-Century Spanish Literature and Culture (4). Twentieth- and twenty-first-century Spanish authors. Works of poetry, narrative, or theater. Historical context of the period and principles of literary theory. Prerequisites: Spanish 3A and 3B. May be taken for credit three times as topics vary.

130A Latin American Colonial Literature and Culture (4). Prerequisites: Spanish 3A and 3B. May be repeated for credit as topics vary. (VIII)

130B Latin American Literature and Culture of the Nineteenth Century (4). Prerequisites: Spanish 3A and 3B. May be repeated for credit as topics vary. (VIII)

130C Latin American Literature and Culture of the Twentieth Century (4). Prerequisites: Spanish 3A and 3B. May be repeated for credit as topics vary. (VIII)

140A, B Chicano Literature (4, 4). Focus on contemporary Chicano literature, in relation to Chicana literature, women's literature, American literature, and Latino literature. Same as Chicano/Latino Studies 110A, B. (VII)

142 Chicano Culture (4). Current research and perspectives on different aspects of Chicano culture: political, economic, sociological, artistic, and folkloric. Prerequisites: Spanish 3A and 3B, or consent of instructor. May be taken twice for credit as topics vary. Same as Chicano/Latino Studies 111B. (VII)

150 Literature in Translation (4). Study of texts by modern and contemporary Peninsular, Latin American, and/or U.S. Latino writers in translation. Taught in English. Not applicable toward Spanish major or minor requirements. May be repeated for credit as topics vary. (VIII)

151 Introduction to Translation (4). Introduction to basic techniques of Spanish-English written translation. The skills needed for translation are developed through the analysis of pertinent aspects of language structure, such as syntax, vocabulary, and style. Prerequisites: Spanish 3A and 3B. (VIII)

160 Topics in Luso-Hispanic Film Studies (4). Study of Peninsular, Latin American, and/or U.S. Latino film. Taught in English or Spanish. Prerequisite: Spanish 3A and 3B when course is taught in Spanish. May be taken for credit three times as topics vary. Same as Film and Media Studies 160. (VIII)

185 Selected Topics in Peninsular Literature and Culture (4). Selection of representative topics in Spanish and/or Portuguese literature and culture. Prerequisites: Spanish 3A and 3B. May be repeated for credit as topics vary. (VIII)

186 Selected Topics in Latin American Literature and Culture (4). Selection of representative topics in the history of Latin American literature and culture. Prerequisites: Spanish 3A and 3B. May be repeated for credit as topics vary.

187 Selected Topics in Spanish Linguistics (4). Major topics in Spanish linguistics. Prerequisites: Spanish 3A and 3B. May be repeated for credit as topics vary.

190 Colloquium (4). Specialized, discussion-based course dealing primarily with a research topic that reflects the instructor's current intellectual interests. Required oral presentation(s) and final research paper. Limited to 15 students. Prerequisites: Spanish 107 or 113A and junior or senior Spanish major or consent of instructor.

199 Independent Study (1 to 4) F, W, S. Research paper required. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

GRADUATE

The content of most courses changes every year. In addition to the following courses, graduate students might find Humanities 200A, B, C (History and Theory) and Humanities 220A, B, C (Studies in Literary Theory and Its History) of special interest.

201 History of the Spanish Language (4) W. Diachronic survey of phonological changes from Latin to Old Spanish to Modern Spanish. Focuses on Castilian including Romance languages and other peninsular dialects for comparative purposes. Morphological changes.

204 Spanish in Contact (4). Sociohistorical and linguistic overview of Spanish in contact with Basque, Catalan, English, German, American Indian, and African languages in Spain, Latin America, and the United States. Examines theories about language contact, and linguistic changes in Spanish phonology and grammar.

205 Spanish Dialectology (4) S. Phonological, morphological, and syntactic variations in Spanish as spoken in the Hispanic world, from synchronic and diachronic points of view. The study of Spanish as spoken in the United States.

212 Studies in Medieval Iberia (4) F. May be repeated for credit as topics vary.

214 Studies in Golden Age Literature and Culture (4) W. May be repeated for credit as topics vary.

218 Studies in Enlightenment and Romanticism (4) F. May be repeated for credit as topics vary.

219 Studies in Nineteenth Century (4) S. May be repeated for credit as topics vary.

220 Studies in Twentieth Century (4) W. May be repeated for credit as topics vary.

221 Topics in Iberian Studies (4) S. Cross-cultural connections and interactions between different ethnicities in the Iberian Peninsula. May be repeated for credit as topics vary.

231 Studies in Colonial Latin America (4) W. May be repeated for credit as topics vary.

232 Studies in Nineteenth-Century Latin America (4) S. May be repeated for credit as topics vary.

233 Studies in Twentieth-Century Latin America (4). May be repeated for credit as topics vary.

234 Topics in Latin America (4) S. Special topics in Latin American literatures and cultures. Topics may cover areas such as gender, national literatures, mass culture, ethnicity, and others. May be repeated for credit as topics vary.

235 Topics in Trans-Oceanic Studies (4) F. Focuses on meaningful connections between different geographical and cultural areas. May be repeated for credit as topics vary.

239A-B Introduction to Literary Theory I-II (4-4) F. May be repeated for credit as topics vary.

239C Special Topics in Theory (4). F, W, S. Focus on issues related to critical theory, theory of literature, cultural criticism and visual arts as they pertain specifically to Latin America, Spain, Portugal, and Brazil. Topics vary. Examples: Latin American cultural studies; theory, film, and media in post-war Spain.

245 Studies in Luso-Hispanic Film (4) F. May be repeated for credit as topics vary.

251 Studies in Chicano Literature and Culture (4) W. May be repeated for credit as topics vary.

252 Studies in U.S. Latino Literature and Culture (4) F. May be taken for credit as topics vary.

260 Seminar in Spanish (4) W. Topics vary. May be repeated for credit when topic changes.

270 Creative Writing Workshop in Spanish/English (4) F, W, S. Discussion of theory and practice of creative writing. Focus on critical analysis of participant's work in progress. Texts may be written in Spanish and/or English and may be written in poetry or prose format. May be repeated for credit as topics vary. Prerequisite: consent of graduate advisor.

290 Individual Study (4) F, W, S. May be repeated for credit as topics vary.

291 Directed Reading (4) F, W, S. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

292 Teaching Practicum (4) F, W, S. Satisfactory/Unsatisfactory only.

293 Creative Writers' Project Consultation (4) F, W, S. May be repeated for credit as topics vary.

299 Dissertation Research (4 to 12) F, W, S. Satisfactory/Unsatisfactory only.

399 University Teaching (4) F, W, S. Limited to Teaching Assistants. May be repeated for credit.

Courses in Portuguese

(Schedule of Classes designation: Portug)

LOWER-DIVISION

1A-B-C Fundamentals of Portuguese (4-4-4) F, W, S. Basic grammar, conversation, and composition with an initial exposure to the varied cultures of the Portuguese-speaking world. (1C: VI)

2A-B-C Intermediate Portuguese (4-4-4). Conversation, reading, and composition skills are developed using texts of literary and social interest. Emphasis on grammar and review. Prerequisites for 2A: Portuguese 1C with a grade of C or better or the equivalent, or consent of instructor; for 2B: Portuguese 2A with a grade of C or better, or equivalent; for 2C: Portuguese 2B with a grade of C or better, or equivalent. (VIII)

UPPER-DIVISION

120A, B, C Introduction to Portuguese and Brazilian Literature (4, 4, 4) F, W, S. General introduction to selected authors and works in relation to literary currents and to specific historical and cultural contexts. Taught in Portuguese. **120A:** Middle ages to eighteenth century. **120B:** Nineteenth century. **120C:** Twentieth century. Prerequisite: Portuguese 2C with a grade of C or better or the equivalent, or consent of instructor. (VIII)

121 Topics in Luso-Brazilian Literature (4) F, W, S. In English. Contextualized study of a major author, current, or genre in Brazilian, Portuguese, and/or Lusophone African literature. Examples: Gender, Race, and Sexualities in Postcolonial Lusophone Literatures; Women and Writing in Brazil and Portugal; The Short Story. May be repeated for credit as topics vary. (VIII)

190 Individual Studies (4-4-4) F, W, S

GRADUATE

243 Studies in Luso-Brazilian Literature and Culture (4) F. May be repeated for credit as topics vary.

290 Individual Study (4) F, W, S

GRADUATE PROGRAM IN VISUAL STUDIES

2000 Humanities Gateway; (949) 824-9431, 824-1124

Felicidad "Bliss" Cua Lim, **Director**

Faculty

Eyal Amiran, Ph.D. University of Virginia, *Associate Professor of Comparative Literature and of Film and Media Studies* (digital media theory, twentieth-century literature, narrative and textual theory, psychoanalysis, modern and postmodern intellectual history)

George Bauer, Ph.D. Princeton University, *Professor Emeritus of Art History* (Renaissance and Baroque)

Linda Freeman Bauer, Ph.D. Institute of Fine Arts, New York University, *Professor Emerita of Art History* (Renaissance and Baroque)

Catherine L. Benamou, Ph.D. New York University, *Associate Professor of Film and Media Studies* (Latin American and Latina/Latino film and television, Orson Welles and mid-twentieth century off-Hollywood cinema, transnational media flows and spectatorship, urban mediascapes, film historiography and reconstruction)

Julia Bryan-Wilson, Ph.D. University of California, Berkeley, *Associate Professor of Art History* (contemporary art and visual culture, feminist and queer theory, performance, video)

Bridget R. Cooks, Ph.D. University of Rochester, *Assistant Professor of African American Studies and Art History* (African American art and culture, Black visual culture, museum criticism, film, feminist theory and postcolonial theory)

Sohail Daulatzai, Ph.D. University of Southern California, *Assistant Professor of Film and Media Studies* (Black radicalism, Muslim studies, cultural studies, race, postcolonial theory, U.S. imperial culture, cinema and hip-hop culture)

Edward Dimendberg, Ph.D. University of California, Santa Cruz, *Professor of Film and Media Studies* (film history, audio-visual media and the built environment, contemporary architecture and urbanism, avant-garde cinema, modernism and modernity)

Anna Gonosová, Ph.D. Harvard University, *Associate Professor of Art History* (Byzantine and Medieval art and architecture)

Kristen Hatch, Ph.D. University of California, Los Angeles, *Assistant Professor of Film and Media Studies* (American film history, film genres, stardom, histories of gender and sexuality, childhood studies, and reception studies)

James D. Herbert, Ph.D. Yale University, *Professor of Art History* (Modern European art)

Lucas Hilderbrand, Ph.D. New York University, *Assistant Professor of Film and Media Studies* (histories of technology, copyright, documentary, queer cultures and media, obscenity, and video art)

Judy C. Ho, Ph.D. Yale University, *Professor Emerita of Art History* (Chinese art, archaeology, common religion, Buddhist art)

Victoria E. Johnson, Ph.D. University of Southern California, *Department Chair and Associate Professor of Film and Media Studies* (history and critical theory of U.S. television, popular film, and media; politics of geography, race, gender, and sexuality in popular culture; cultural studies)

Peter Krapp, Ph.D. University of California, Santa Barbara, *Associate Professor of Film and Media Studies* (digital culture, media history, cultural memory, history and theory of artificial worlds)

Felicidad "Bliss" Cua Lim, Ph.D. New York University, *Director of the Graduate Program in Visual Studies and Associate Professor of Film and Media Studies* (Philippine cinema; temporality; postcolonial studies; feminist film theory; fantastic cinema; politics of genre; taste cultures)

Catherine Liu, Ph.D. City University of New York Graduate School and Center, *Director of the Humanities Center and Associate Professor of Film and Media Studies and of Comparative Literature* (critical theory, Frankfurt School, surveillance, privacy, intellectual history of psychoanalysis, transnational New Waves, cultural revolutions)

Lyle Massey, Ph.D. University of California, Los Angeles, *Associate Professor of Art History* (Renaissance and early modern art)

Margaret M. Miles, Ph.D. Princeton University, *Professor of Art History and Classics* (Greek and Roman art, archaeology)

Glen Mimura, Ph.D. University of California, Santa Cruz, *Associate Dean of Graduate Study and Research and Associate Professor of Film and Media Studies* (minority, diasporic, and third cinemas; popular culture and social movements; media, race, and sexuality)

Alka Patel, Ph.D. Harvard University, *Associate Professor of Art History* (Asian art, South Asian architecture)

Mark S. Poster, Ph.D. New York University, *Professor Emeritus of Film and Media Studies and of History* (modern European intellectual history, media studies)

Amy Powell, Ph.D. Harvard University, *Assistant Professor of Art History* (Northern European art and visual culture, 1300–1700)

Fatimah Tobing Rony, Ph.D. Yale University, *Associate Professor of Film and Media Studies* (documentary and ethnographic film, race and representation, postcolonial studies, film history and theory, film production)

Sally A. Stein, Ph.D. Yale University, *Professor Emerita of Art History* (American art, photography and mass media, feminist theory)

Dickran Tashjian, Ph.D. Brown University, *Professor Emeritus of Art History* (American art and literature, American and European avant-garde, art and technology)

Cécile Whiting, Ph.D. Stanford University, *Department Chair and Professor of Art History* (American art and culture)

Bert Winther-Tamaki, Ph.D. Institute of Fine Arts, New York University, *Associate Professor of Art History* (Modern Japanese art, Asian American art, art and nationalism)

Roberta Wue, Ph.D. Institute of Fine Arts, New York University, *Assistant Professor of Art History* (late imperial and modern Chinese art, photography and visual culture)

Affiliated Faculty

Ackbar Abbas, M. Phil. University of Hong Kong, *Professor of Comparative Literature and of Film and Media Studies* (globalization, Hong Kong and Chinese culture, postcoloniality, critical theory)

David Carroll, Ph.D. The Johns Hopkins University, *Professor Emeritus of French* (literary theory and twentieth-century French literature)

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English* (feminist epistemologies and theories, cultural studies, ethnic studies)

Kyung Hyun Kim, Ph.D. University of Southern California, *Associate Professor of East Asian Languages and Literatures and of Film and Media Studies* (East Asian cinema, modern Korea, cultural theory)

- Susan B. Klein, Ph.D. Cornell University, *Associate Professor of Japanese* (premodern and modern theatre and dance, Japanese religions, feminist critical theory)
- Catherine Lord, M.F.A. State University of New York, Buffalo (Visual Studies Workshop), *Professor of Studio Art* (critical theory, feminism, photography)
- Julia Reinhard Lupton, Ph.D. Yale University, *Director of the Jewish Studies Minor and Professor of English, Comparative Literature, and Education* (Renaissance literature, literature and psychology)
- William M. Maurer, Ph.D. Stanford University, *Department Chair and Professor of Anthropology and Professor of Law* (anthropology of law, globalization, transnationalism, citizenship and nationalism, finance capital, identity, Caribbean)
- Alejandro Morales, Ph.D. Rutgers University, *Professor of Chicano/Latino Studies and Spanish* (Latin American and Chicano literature, film studies, creative writing)
- Gonzalo Navajas, Ph.D. University of California, Los Angeles, *Professor of Spanish* (eighteenth- through twentieth-century Spanish literature; film and visual arts; aesthetics and contemporary culture)
- Robert F. Nideffer, Ph.D. University of California, Santa Barbara, *Professor of Studio Art* (virtual environments and behavior, interface theory and design, technology and culture, contemporary social history, gaming studies)
- Nancy Lee Ruyter, Ph.D. Claremont Graduate School, *Professor of Dance* (dance history, Spanish dance, choreography, and research methods)
- Jared Sexton, Ph.D. University of California, Berkeley, *Program Director and Associate Professor of African American Studies and Associate Professor of Film and Media Studies* (race and sexuality, policing and imprisonment, contemporary U.S. cinema and political culture, multiracial coalition, critical theory)
- Jonathan M. Wiener, Ph.D. Harvard University, *Professor of History* (recent American history, theory and history)

Graduate Program

The graduate program in Visual Studies, administered jointly by the faculties of the Department of Art History and the Department of Film and Media Studies, offers students the opportunity to pursue a doctorate in the cultural analysis of visual artifacts and experiences. Visual Studies synthesizes methodological insights from both component disciplines in order to examine the social practices of visual representation and visuality itself. The program leads to a Ph.D. degree in Visual Studies. While the program (in certain instances) grants an M.A. to students en route to their Ph.D., it admits only those students intending to complete their doctorate at UCI.

In addition, an emphasis in Visual Studies, described later in this section, is available to Ph.D. and M.F.A. students in all departments at UCI.

ADMISSION

The program is open to students applying with either a bachelor's or a master's degree, and applicants must meet the general requirements for admission to graduate study at UCI. A recent sample of academic writing—such as a representative undergraduate paper, or the master's thesis or a major research paper written at the master's level—should be submitted with the application packet.

The deadline for application is December 15, and the program accepts applicants for admission for the fall quarter only. Additional information is available from the Director of the Visual Studies program.

LANGUAGE REQUIREMENTS

All students are required to demonstrate a reading knowledge of at least one foreign language and are strongly encouraged to develop competence in a second. Students consult with the Director and/or their principal advisor(s) to determine the appropriate language on which the student will be tested, based on their interests and program of study. Advisors, moreover, may require the demonstration of reading knowledge in additional languages according to the scholarly demands of the student's specific field. All language

requirements must be satisfied before students are awarded a master's degree or, if they enter with an M.A., before they are advanced to candidacy for the Ph.D. degree.

COURSE REQUIREMENTS

Beyond the core series (Visual Studies 290A-B-C), students are required to complete an additional 11 courses for a total of 14 courses. Out of this total, at least 10 courses (including the core series and Visual Studies 297) must be within the program in Visual Studies, and at least two courses are to be from outside the Visual Studies discipline. In order to establish a level of expertise in one conventionally defined discipline, students must take (among their 10 courses noted above), at least three courses that have a strong component of art history *or* at least three courses that have a strong component of film studies.

Students admitted with an M.A. in a related field may petition the Visual Studies Graduate Committee to have some of their course requirements waived and advance early; such petitions will be considered in close consultation with the primary advisor and on a case-by-case basis (though all students must take the core sequence). Under normal circumstances, up to two courses may be waived. A maximum of four courses may be waived, in which case no more than two waived courses may count as required Visual Studies courses. The petitioned courses must be reviewed and approved first by the Visual Studies Graduate Committee and thereafter by the Graduate Division. Students wishing to waive course work must petition by the end of the fall quarter of their first year in the program. While students may accrue units both for University Teaching (Art History 399 or Film and Media Studies 399), and Reading for the Preliminary Examination (Visual Studies 298), these do not count toward the required number of courses.

PRELIMINARY EXAMINATION

By the end of the second year, students must reach agreement with one of the program's professors to serve as principal advisor. During the fall quarter of the following year—in most cases, the final quarter of standard course work—the student will work informally with the principal advisor who will supervise one examination field; two additional faculty members supervising examination fields, at least one of whom must be a member of the Visual Studies faculty; a fourth member from the Visual Studies faculty who will not supervise an examination field but will participate in the oral examination; and a designated “outside” member who must be a member of the UCI faculty but cannot hold either a primary or joint appointment in Visual Studies, Art History, or Film and Media Studies. Except in extraordinary circumstances (to be adjudicated by the program's Graduate Committee), students are required to include at least one member from Art History and one from Film and Media Studies among the three faculty members supervising the examination fields.

The student and principal advisor define three fields to be examined by the faculty. The fields should combine historical breadth and some variety in media. Over the course of the following two quarters, students normally enroll in eight to twelve units per quarter of Reading for the Preliminary Examination (Visual Studies 298) during which time they prepare reading lists in close consultation with their principal advisor and field supervisors, and complete the reading of those lists. The examination takes place near the end of those two quarters of study, normatively at the end of the academic year. Submission and approval of the M.A. paper is a prerequisite for enrolling in Visual Studies 298 (Reading for the Preliminary Examination) for students entering the Visual Studies Program without an M.A. Normally, the M.A. paper submission should be completed by spring quarter of the second year.

The first part of the examination consists of a written component, in which the student is called upon to respond to questions posed in the three examination fields. The student's written responses are circulated to all committee members. An oral examination follows, normally within two weeks, and consists of questions prompted both by the student's reading lists and by the written examinations. Based on the student's written and oral performance, the committee will determine whether the student has successfully passed the examination. If the committee is not satisfied with the student's performance, it may also decide to reexamine the student on one or more fields after a specific interval. Except in extraordinary circumstances, no student will be given more than two chances to pass any given section of the examination.

The winter quarter after students take their exams, they are required to take Visual Studies 297, a writing practicum in which they finalize a prospectus that defines the scope, approach, and rationale for a proposed dissertation and begin research on the dissertation. The prospectus must be finished by the end of the winter quarter at the latest. Advancement to candidacy for the Ph.D. degree is contingent upon successful completion of this course, and provided that all language requirements have been satisfied. The dissertation committee meets with the student in the spring quarter following successful completion of Visual Studies 297 to review the prospectus and the progress of the student, and determines whether to recommend advancement at that time. The normative time for advancement to candidacy is four years.

DISSERTATION

The student and the principal advisor consult to determine the composition of a doctoral committee of three members including the principal advisor, which then must unanimously approve the prospectus before the student proceeds with the dissertation. The doctoral committee, on the basis of the candidate's past academic performance and proposed dissertation topic, may require additional course work or other forms of preparation for the dissertation. The doctoral committee, under the direction of the principal advisor, supervises the student's research program and ultimately approves the dissertation. The normative time for completion of the Ph.D. program is seven years, and the maximum permitted is eight years.

GRADUATE EMPHASIS IN VISUAL STUDIES

In addition to the doctoral program in Visual Studies described above, the Program in Visual Studies also offers an emphasis in Visual Studies available to Ph.D. and M.F.A. students in all departments at UCI. Satisfactory completion of the emphasis is certified by the Director of Visual Studies and is noted in the student's dossier.

Admission to the Program

Students must first be admitted to, or currently enrolled in, a Ph.D. or M.F.A. program at UCI. Applicants must submit to the Director of Visual Studies a summary of prior undergraduate and graduate course work related to Visual Studies, institutions attended, and major(s), together with a brief statement of purpose, including career objectives, areas of interest and research, record of research, teaching, professional accomplishments, and/or creative work. Lack of prior course work does not preclude admission, so long as a compelling statement of research interests, congruent with the emphasis, makes the case. Admission to the emphasis is on a rolling basis. The Director tracks students' progress toward fulfillment of the emphasis requirements and meets with students to advise them on a program of study, as required.

Emphasis Requirements

Minimum course work for the graduate emphasis in Visual Studies consists of four courses: Visual Studies 290C and three additional elective Visual Studies seminars.

For doctoral students, the qualifying examination and dissertation topic should incorporate Visual Studies as a central concern. One area of the Ph.D. qualifying examination should be on a Visual Studies topic, and one member of the candidate's qualifying examination committee and dissertation committee is normally a member of the Visual Studies faculty. There are no requirements concerning qualifying examinations or theses for M.F.A. students.

Graduate Courses in Visual Studies

(*Schedule of Classes designation: Vis Std*)

Graduate students may also enroll concurrently in any upper-division lecture course with the approval of the instructor.

290A-B-C Foundations of Visual Studies. A three-quarter series that examines canonical texts and explores current directions in the two disciplines that constitute Visual Studies at UCI (Art History and Film and Media Studies), as well as in Visual Studies as an emergent field in its own right.

290A Art History: Theories and Methods (4)

290B Film and Media Studies: Theories and Methods (4)

290C Visual Studies: Theories and Methods (4)

294 Getty Consortium Seminar (4). Special graduate seminar offered at the Getty Research Institute in Los Angeles, involving faculty and graduate students from the five graduate programs in Art History or Visual Studies located in southern California (UCI, UCLA, UCR, UCSB, and USC). May be repeated for credit as topics vary.

295 Graduate Seminar in Visual Studies (4). May be repeated for credit as topics vary.

296 Directed Reading (4). Directed reading on a specific topic agreed upon by student and instructor. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

297 Writing Practicum (4). Offered winter quarter each year and taught in a workshop format. Assists students with the preparation and revision of the dissertation prospectus so that they may advance to candidacy. Prerequisites: Visual Studies 290A-B-C. Satisfactory/Unsatisfactory only.

298 Reading for the Preliminary Examination (4 to 12). Directed reading in preparation for the preliminary examination. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

299 Dissertation Research (4 to 12). Research and writing of the dissertation. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

DEPARTMENT OF WOMEN'S STUDIES

243 Humanities Instructional Building; (949) 824-6406

E-mail: womensstudies@uci.edu

Jennifer Terry, **Department Chair**

Core Faculty

Laura H. Y. Kang, Ph.D. University of California, Santa Cruz, *Associate Professor of Women's Studies, Comparative Literature, and English* (feminist epistemologies and theories, cultural studies, ethnic studies)

Lilith Mahmud, Ph.D. Harvard University, *Assistant Professor of Women's Studies* (gender, nationalism, elites, race citizenship, secrecy, transparency, knowledge production, secret societies, power, the anthropology of Europe)

Kavita Philip, Ph.D. Cornell University, *Associate Professor of Women's Studies* (science and technology studies, South Asian studies, political ecology, critical studies of race, gender, colonialism, new media, and globalization)

Jeanne Scheper, Ph.D. University of California, Santa Barbara, *Assistant Professor of Women's Studies* (trans-Atlantic modernism, performance studies, feminist visual culture, critical studies of race, gender, and sexuality)

Jennifer Terry, Ph.D. University of California, Santa Cruz, *Department Chair of Women's Studies and Associate Professor of Women's Studies and Comparative Literature* (cultural studies, social theory; science and technology studies, historical formations of gender and sexuality; critical approaches to modernity; American studies in transnational perspective)

Affiliated Faculty

Numerous faculty are affiliated with the Department of Women's Studies. For a current list of Women's Studies affiliates, see <http://www.humanities.uci.edu/womensstudies/people/affiliated.php>. Various faculty are also affiliated with the Queer Studies minor in the Department of Women's Studies. For a current list of Queer Studies affiliates, see http://www.humanities.uci.edu/womensstudies/undergrad/queer_studies.php.

UCI's Department of Women's Studies is dedicated to the study of women, gender, and sexuality in their complex articulation with race, ethnicity, class, religion, and nationality. The Department's goal is to foster critical and creative analysis of the various disciplinary perspectives—historical, political, economic, representational, technological, and scientific—that have constituted women, gender, and sexuality as objects of study. By emphasizing a rigorous interdisciplinary perspective in their teaching and research, the Women's Studies faculty seek to produce new knowledge about the social meanings of gender, race, class, and sexuality, and to equip students with a range of analytical and methodological skills.

The field of women's studies has developed at a phenomenal rate from a handful of student-initiated courses in the early 1970s to more than 600 programs in colleges and universities across the United States offering degrees at the B.A., M.A., and Ph.D. levels. UCI's Department of Women's Studies was founded as a program in 1975 and has grown significantly since that time. The Department offers a B.A. degree in Women's Studies, a minor in Women's Studies, a minor in Queer Studies, and a graduate emphasis in Feminist Studies.

Women's Studies provides a unique intellectual community for undergraduate and graduate students, where faculty and students share a commitment to interactive teaching and learning. Students work closely with faculty and the Department's academic coordinator to plan a coherent program of study and to anticipate work toward advanced degrees and a wide variety of career options.

CAREER OPPORTUNITIES

A degree in Women's Studies prepares students for the expanding opportunities available in graduate programs and in numerous careers in both the public and private sectors. As more women work, business and corporations find the need for increased knowledge about women, and the growth of women's organizations and agencies—at the local, national, and global levels—is creating new opportunities for graduates with specializations in Women's Studies. Graduates bring unique skills and knowledge to the professions of law, medicine, social work, teaching, counseling, and to government service, all of which increasingly require expertise on issues concerning women and gender. Students of Women's Studies develop critical and analytical skills which prove valuable in the full range of life choices.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. In addition, the Women's Studies Office provides more specialized career counseling and information on graduate programs in Women's Studies and related fields.

Undergraduate Program

REQUIREMENTS FOR THE B.A. DEGREE IN WOMEN'S STUDIES

University Requirements: See pages 54–61.

School Requirements: See pages 253–254.

Departmental Requirements for the Major

- A. Three introductory core courses: Women's Studies 50A, plus two selected from 50B, 50C, 60A, 60B, 60C.
- B. Three advanced core courses: one each from the Women's Studies 100, 110, and 120 series.
- C. Four elective advanced core courses selected from Women's Studies 139–168.
- D. Two additional advanced elective courses selected from Women's Studies 170–190. Students may request, by petition, one lower-division course to count in this category. This course should be primarily centered on the study of women, gender, and/or feminism.
- E. Women's Studies 197 (Senior Seminar in Women's Studies).

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI.

Requirements for the Minor

- A. Three lower-division courses selected from Women's Studies 50A, 50B, 50C, 60A, 60B, 60C.
- B. Two upper-division courses selected from Women's Studies 100A, 100B, 100C, 110A, 110B, 110C, 120A, 120B, 120C, 139, 155, 156A, 156B, 157A, 157B, 158A, 158B, 165A, 165B, 165C, 165D, 165E, 165F, 166A, 167A, 167B, 168A, 168B.
- C. Two advanced elective courses selected from Women's Studies 170–190.

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be completed successfully at UCI. By petition, two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

MINOR IN QUEER STUDIES

The Women's Studies Department offers a minor in Queer Studies. Taking as a point of departure that sexuality is a complex historical and cultural phenomenon, Queer Studies examines this complexity, drawing upon methods from anthropology, art, art history, biology, history, literature, philosophy, psychology, and sociology. Interdisciplinary insights from area studies, cultural studies, critical legal studies, ethnic studies, gender studies, religious studies, science and technology studies, visual studies, and women's studies also enrich this area of study.

Requirements for the Minor

- A. Two lower-division introductory courses: Women's Studies 20 plus one course selected from Women's Studies 50A, 50B, 50C, 60A, 60B, 60C, or Sociology 69 (when topics address the sociology of sexuality).
- B. Two upper-division core courses: Women's Studies 157A and 157B.
- C. Three upper-division courses selected from the following: Anthropology 129 (when topics address issues of sexuality and gender), 139 (when topics address issues of sexuality and HIV/AIDS); Drama 103 (when topics cover the representation

of gays and lesbians in drama); English 105 (when topics cover issues of gays and lesbians in literature); Film and Media Studies 112 (when topics address issues of sexuality in representation and theory), 190 (when topics address issues of sexuality in representation and theory); History 146D, 146E, 169 (when topics address gender and sexuality in Latin America); Spanish 185 (when topics cover issues of sexuality in peninsular Spain and/or Portugal), 186 (when topics cover issues on sexuality in Latin American literature and culture); Women's Studies 100A, 100B, 100C, 110A, 110B, 110C, 120A, 120B, 120C, 165A, 165B, 167B, 168B, 190.

Residence Requirement for the Minor: A minimum of four upper-division courses required for the minor must be successfully completed at UCI. Two of the four may be taken through the UC Education Abroad Program, provided course content is approved in advance by the appropriate department chair.

Graduate Emphasis in Feminist Studies

The Department of Women's Studies offers an emphasis in Feminist Studies, which is available to all graduate students at UCI. Satisfactory completion of the emphasis is certified by the Graduate Director of Women's Studies.

Admission to the Program

Admission occurs in spring and fall quarter. Following successful completion of either Women's Studies 200A or 200B, students are to apply by the third week of the subsequent quarter for admission to the emphasis. For complete information about application policies and procedures, refer to <http://www.humanities.uci.edu/WomensStudies/grad/> or contact the Graduate Director.

Emphasis Requirements

Minimum course work for the graduate emphasis in Feminist Studies consists of four courses: two core courses, Women's Studies 200A-B, a coherent sequence normally taken in consecutive quarters; and any two courses selected from the list of courses in Feminist Studies approved by the Graduate Director, as long as one of these is a graduate course in the student's own department or area of interest. In keeping with the interdisciplinary focus of this emphasis, it is highly recommended that the other be a course from a discipline outside that department or area. The course requirements for Ph.D., M.A., and M.F.A. candidates are the same.

For doctoral students, the qualifying examination and dissertation topic should incorporate Feminist Studies in a meaningful way. One member of the candidate's qualifying examination committee and of the candidate's dissertation committee is normally a member of the Women's Studies and affiliate faculty. There are no requirements concerning qualifying examinations or theses for M.A. or M.F.A. students.

Requirements for Completion

The completion of the emphasis will be noted by the Graduate Director upon (1) receipt and verification of completion of four graduate courses related to Feminist Studies and (2) a sample of work related to Feminist Studies, e.g., a substantial paper* (10-page minimum), video, or other creative work.

* The dissertation may be accepted in fulfillment of the second requirement when Feminist Studies is incorporated in a substantive way.

Courses in Women's Studies

(*Schedule of Classes designation: Womn St*)

LOWER-DIVISION

INTRODUCTORY CORE COURSES

Courses of general interest for all students. No prerequisites. Designed to survey and to introduce methods and premises of interdisciplinary studies. Many of these courses fulfill part of the UCI general education requirement.

20 Introduction to Queer Studies (4). Study of sexuality from the perspective of lesbian, gay, queer, transgender scholarship spanning humanities, social sciences, arts. (IV, VII)

50A Gender and Feminism in Everyday Life (4). What is gender? Why does studying it matter? Explores how feminism has understood not only gender as a category of social analysis, but how gender structures personal identities, family, citizenship, work and leisure, social policy, sexuality, and language. (IV, VII)

50B Reproducing and Resisting Inequality (4). From bedroom to boardroom to voting booth to international division of labor, how are societal institutions and politics "gendered"? Examines relationships of gender, race, ethnicity, class, and region in sexual and reproductive experiences, households, education, work, and politics, including community activism. (IV, VII)

50C Gender and Popular Culture (4). An investigation of gender, race, and sexuality in film, TV, video, music, and advertising, with attention to the ways that popular culture shapes understandings of technology, national identities, leisure and work, historical memory, international communication, and multicultural representation. (IV, VII)

60A Gender and Science (4). Examines science from a variety of feminist viewpoints in order to explore how science influences everyday life. Special attention is given to the ways science shapes our understanding of gender, race, and sexuality. (III)

60B Gender and Law (4). Introduction to the relationship between gender, race, sexuality, and the law. Critical thinking about how law defines citizenship, political representation, and democracy, focusing on the history of legal reform undertaken in the name of women as a social group. (III)

60C Gender and Religion (4). Introduces the topic of religion in a feminist context by performing cross-cultural exploration of gender, authority, and faith in various traditions. Study includes (but is not limited to) writings of contemporary Jewish, Christian, and Muslim feminists. (III, VIII)

70 Special Topics in Gender (4). Topics cover issues which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

UPPER-DIVISION

Courses in which students gain experience in analysis, interpretation, and writing.

ADVANCED CORE COURSES

100: THEORY, KNOWLEDGE, CULTURE

100A Producing Feminist Knowledge (4). Explores alternative ways that feminist scholars frame research questions, conduct research or creative activity. Examines challenges that feminist scholarship poses to the academy and the challenges the academy poses to feminist scholars. Prerequisite: one course from Women's Studies 20, 50A, 50B, 50C, 60A, 60B, or 60C.

100B Feminist Theory (4). Introduction to historical traditions in theory and various conceptual frameworks informing Women's Studies' scholarship. Concepts include (but are not limited to) identity, representation, and political economy. Prerequisite: one course from Women's Studies 20, 50A, 50B, 50C, 60A, 60B, or 60C.

100C Key Concepts in Feminist Cultural Studies (4). Investigation of the theories and methods that inform the feminist study of culture. Focuses on the interpretation of the visual arts and literature created by, and predominantly for, women. Prerequisite: one course from Women's Studies 20, 50A, 50B, 50C, 60A, 60B, or 60C.

110: UNDERSTANDING POWER AND GENDER

110A Gender, State, and Nation (4). Examination of gender and sexuality in relation to the production of identities created through participation in state and nation. Examines complexity of relationship between feminism and nationalism, feminism and the state. Previous lower-division course work in Women's Studies is recommended, but not required. (VIII)

110B Money, Sex, and Power (4). Examination of gender and sexuality in relation to the emergence of the modern world, modernity, and capitalism; commodification, circulation, and transnational exchanges relating to race, gender, class, sexuality, religion, and nationality. Previous lower-division course work in Women's Studies is recommended, but not required.

110C Producing Gender Transnationally (4). Examination of how ideas and formations of gender cross national and international boundaries; encounters between feminist and sexual identity movements; how terms such as "sex" and "gender" change meanings according to time and place. Previous lower-division course work in Women's Studies is recommended, but not required. (VIII)

120: INTERPRETING BODIES AND PLEASURES

120A Modern Pleasures: Bodies and Practices (4). Focus on the theory and history of pleasure within academic disciplines as well as in social and cultural processes and networks. Previous lower-division course work in Women's Studies is recommended, but not required.

120B Image Problems: Stereotypes and Representations (4). Examination of scholarly approaches to gender stereotypes and politics of representation as they present possibilities for critical analysis and produce problems and limitations; how powerful ideas of gender intersect with other forms of social differentiation such as race and class. Previous lower-division course work in Women's Studies is recommended, but not required. (VII)

120C Engendering Colonial Bodies (4). Examination of the production of gender and sexuality in the contexts of colonialism and modernization; representations of colonialist and nationalist struggles over gender and race; female bodies as sites of contestation. Previous lower-division course work in Women's Studies is recommended, but not required. (VIII)

ADVANCED ELECTIVE CORE COURSES

139 Topics in Gender Studies (4). Various topics in gender studies. Includes issues of gender, culture, race and class, including issues of sexualities and social justice. Previous lower-division course work in Women's Studies is recommended, but not required. Prerequisite: satisfactory completion of the lower-division writing requirement. May be repeated for credit as topics vary. (VII)

155 Special Topics in Women's Studies (4). Designed to provide students with an opportunity to do advanced work in Women's Studies. Previous lower-division course work in Women's Studies is recommended, but not required. May be repeated for credit as topics vary.

156: GENDER AND RACE STUDIES

156A Race and Gender (4). Examines the roles and intersections of racism, sexism, and heterosexism in U.S. culture and society. Through history and literature, explores the process of immigration, colonization (of identity, language, and the body), and cultural interaction. Previous lower-division course work in Women's Studies is recommended, but not required. (VII)

156B Gender, Race, and the Built Environment (4). Examination of the ways in which houses, buildings, streets, cities, and indeed all social spaces reveal cultural conceptualizations of gender and sexuality in relation to other social relations and processes. Previous lower-division course work in Women's Studies is recommended, but not required. (VII)

157: QUEER STUDIES

157A Topics in Lesbian and Gay Studies (4). Explores issues in lesbian and gay studies from one or more of the following perspectives: theoretical, historical, legal, economic, political, sociological, and representation in the arts. Previous lower-division course work in Women's Studies is recommended, but not required. May be repeated for credit as topics vary. (VII)

157B Queer Lives and Knowledges (4). Explores the emergence and historical elaboration of non-normative sexual identities, practices, and communities; focuses on medical, legal, literary, aesthetic, scientific, and religious notions about homosexuality and appropriations and subversions of these notions by queer people. Previous lower-division course work in Women's Studies is recommended, but not required.

158: GENDER AND THE PRODUCTION OF KNOWLEDGE

158A Gender and the Politics of Information (4). Investigates from feminist perspectives the challenges in the "information age" and its embedded gender and political dimensions. Examines the increasingly complex identification, evaluation, application, and transmission of information. Previous lower-division course work in Women's Studies is recommended, but not required. (VII)

158B Defining Women of Color (4). Examination of women of color as a historical movement emerging as a result to anti-racist struggle in the late twentieth century; who counts as a woman of color, who is included and excluded, the advantages and limitations of this approach to racism. Previous lower-division course work in Women's Studies is recommended, but not required. (VII)

165: GENDER AND SCIENCE

165A Gender, Biology, and Environmental Ethics (4). What is "nature" and how do we know and represent it? Introduces students to the history of "nature" produced within scientific knowledge, as well as historical developments. Previous lower-division course work in Women's Studies is recommended, but not required. Same as Public Health 145.

165B HIV/AIDS (4). Explores HIV/AIDS from a feminist perspective focusing on cultural and political-economic analysis and representations of the disease both within the U.S. and globally. Previous lower-division course work in Women's Studies is recommended, but not required. (VIII)

165C New Reproductive Technologies (4). Examination of representation, implication, and bioethics of new reproductive technologies in different cultures; effects of new reproductive technologies on identities and bodies. Previous lower-division course work in Women's Studies is recommended, but not required.

165D Gender and Science in Colonial India (4). Examination of British colonial policies and politics of science and gender in India; comparison of British India with other colonial contexts; importance of science for colonial rule and history of colonial science and technology. Previous lower-division course work in Women's Studies is recommended, but not required. (VIII)

165E Gender and Cyberspace (4). How has gender and sexuality been produced in the cyberspace frontier during its brief but volatile history? Takes an interdisciplinary approach to this question that engages with debates in urban studies, history of science, anthropology, and political ecology. Previous lower-division course work in Women's Studies is recommended, but not required.

165F Gender and Technology (4). Using a variety of disciplinary methods, examines how various technological processes and products produce culturally complex meanings associated with gender and technology. Previous lower-division course work in Women's Studies is recommended, but not required.

166: GENDER AND RELIGION

166A Contemporary Issues in Gender and Islam (4). Exploration of lives of Muslim women in different cultural contexts; critical examination of various Islamic constructions and interpretations of gender, sexuality, and human nature. Previous lower-division course work in Women's Studies is recommended, but not required. (VIII)

167: THE POLITICAL ECONOMY OF GENDER

167A Militarism and Gender (4). Feminist approach to militarism, war, and political violence drawing on representations of women as both victims of and participants in military violence; effects of militarism on formations of gender; effects of military industrial complex on nationalism and identity. Previous lower-division course work in Women's Studies is recommended, but not required. (VIII)

167B Sexual Traffic (4). Interdisciplinary approaches to understanding the concept of "sexual traffic" as it impacts the formation of sexualized bodies and sexual subjects within and across national boundaries. Previous lower-division course work in Women's Studies is recommended, but not required. (VIII)

168: GENDER AND CULTURAL STUDIES

168A Music and Audio Cultures (4). Examination of the significance of gender, power, and identity in music and audio cultures; changing technologies and connections to gender; political economy of music and audio cultures; representation of women in popular music; performance and reception across different cultures. Previous lower-division course work in Women's Studies is recommended, but not required. (VII)

168B The Politics of Style (4). Examination of the emergence of style and lifestyle in relation to gender and sexuality; analysis of subcultures, politics, and representation of style in relation to formation of social identities. Previous lower-division course work in Women's Studies is recommended, but not required.

ADVANCED ELECTIVE COURSES

170 Gender, Feminism, Literature, and Language (4). Topics cover issues in language and literature which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

171 Gender, Feminism, and History (4). Topics cover issues in history which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

173 Gender, Feminism, and Philosophy (4). Topics cover issues in philosophy which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

174 Gender, Feminism, and the Arts (4). Topics cover issues in the arts which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

175 Gender, Feminism, and the Media (4). Topics cover issues in the media which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

180 Gender, Feminism, and Anthropology (4). Topics cover issues which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

181 Gender, Feminism, and Cognitive Psychology (4). Topics cover issues in cognitive psychology which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

182 Gender, Feminism, and Economics (4). Topics cover issues in economics which relate to women and gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

183 Gender, Feminism, and Sociology (4). Topics cover issues in sociology which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

184 Gender, Feminism, and Political Science (4). Topics cover issues in political science which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

185 Gender, Feminism, and Social Sciences (4). Topics cover issues in social sciences which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

187 Gender, Feminism, and Social Ecology (4). Topics cover issues in social ecology which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

188 Gender, Feminism, and Science (4). Topics cover issues in science which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

189 Gender, Feminism, and Interdisciplinary Studies (4). Topics cover issues in interdisciplinary studies which relate to women or gender, or which are taught from a feminist methodological perspective. May be repeated for credit as topics vary.

190 Topics in Queer Studies (4). Topics cover issues in the humanities, social sciences, sciences, and arts that relate to critical inquiry of sexuality. May be repeated for credit as topics vary.

197 Senior Seminar in Women's Studies (4) S. Students read advanced scholarship in Women's Studies and complete a major seminar paper. Prerequisites: open to majors only; satisfactory completion of the upper-division writing requirement or consent of instructor. (VII)

198 Directed Group Study (4). Special topics through directed reading. Paper required. Prerequisite: consent of instructor.

199 Directed Research (1 to 4) F, W, S. Directed reading and research in consultation with a faculty member. Substantial written work required. Prerequisite: consent of sponsoring faculty member.

GRADUATE

200A Feminist Knowledge and Social Change (4). Provides a broad and introductory overview of Women's Studies and feminist knowledges, including key concepts, theoretical frameworks, disciplinary approaches and methods, and critical debates that have shaped the field. May be taken for credit twice.

200B Problems in Feminist Research (4). Colloquium on analytic approaches to interdisciplinary feminist research in Women's Studies and exploration of how feminist knowledges are produced in different academic disciplines. Prerequisite: Women's Studies 200A or consent of instructor. May be taken twice for credit.

201 Special Topics in Feminist Studies (4). Seminars on various topics in feminist studies. May be repeated for credit as topics vary.

210A Graduate Feminist Theory (4). In-depth introduction to various theoretical frameworks that have and continue to inform scholarship in Women's Studies including (but not limited to) identity, representation, and political economy. May be repeated for credit as topics vary.

260A Advanced Seminar in Feminist Studies (4). Graduate seminar covering various areas of research within Women's Studies as an interdisciplinary field. Recommended for advanced graduate students. May be taken for credit three times as topics vary.

290 Directed Research (2 to 12). Directed graduate study/research in Women's Studies. May be taken for credit for a total of 24 units.

399 University Teaching (4). Limited to Teaching Assistants. Satisfactory/Unsatisfactory only. May be repeated for credit.

DONALD BREN SCHOOL OF INFORMATION AND COMPUTER SCIENCES

Hal S. Stern, **Dean**

Faculty

James Arvo, Ph.D. Yale University, *Associate Professor of Computer Science and of Electrical Engineering and Computer Science*

Pierre Baldi, Ph.D. California Institute of Technology, *Director of the Institute for Genomics and Bioinformatics and UCI Chancellor's Professor of Computer Science, Biomedical Engineering, Developmental and Cell Biology, and Biological Chemistry*

Lubomir Bic, Ph.D. University of California, Irvine, *Professor of Computer Science, Electrical Engineering and Computer Science, and Biomedical Engineering*

Elaheh Bozorgzadeh, Ph.D. University of California, Los Angeles, *Associate Professor of Computer Science*

Michael Carey, Ph.D. University of California, Berkeley, *Donald Bren Professor of Computer Science*

Yunan Chen, Ph.D. Drexel University, *Assistant Professor of Informatics*

Rina Dechter, Ph.D. University of California, Los Angeles, *Professor of Computer Science*

Michael Dillencourt, Ph.D. University of Maryland, *Professor of Computer Science*

J. Paul Dourish, Ph.D. University College, London, *Professor of Informatics and of Computer Science*

Nikil Dutt, Ph.D. University of Illinois, *UCI Chancellor's Professor of Computer Science and of Electrical Engineering and Computer Science*

Magda El Zarki, Ph.D. Columbia University, *Associate Dean of Research Development for the Donald Bren School of Information and Computer Sciences and Professor of Computer Science, Informatics, and Electrical Engineering and Computer Science*

David Eppstein, Ph.D. Columbia University, *Professor of Computer Science*
Julian Feldman, Ph.D. Carnegie Institute of Technology, *Professor Emeritus of Computer Science*

Charless Fowlkes, Ph.D. University of California, Berkeley, *Assistant Professor of Computer Science*

Michael Franz, D.Sc. Techn. Swiss Federal Institute of Technology (ETH), *Professor of Computer Science*

Daniel Frost, Ph.D. University of California, Irvine, *Lecturer in Computer Science and Informatics*

Daniel L. Gillen, Ph.D. University of Washington, *Associate Professor of Statistics*

Tony Givargis, Ph.D. University of California, Riverside, *Associate Professor of Computer Science and of Informatics*

Michael T. Goodrich, Ph.D. Purdue University, *Associate Dean for Faculty Development for the Donald Bren School of Information and Computer Sciences and UCI Chancellor's Professor of Computer Science*

Richard H. Granger, Ph.D. Yale University, *Professor Emeritus of Computer Science*

Ian G. Harris, Ph.D. University of California, San Diego, *Associate Professor of Computer Science*

Gillian Hayes, Ph.D. Georgia Institute of Technology, *Assistant Professor of Informatics*

Wayne Hayes, Ph.D. University of Toronto, *Assistant Professor of Computer Science*

Daniel Hirschberg, Ph.D. Princeton University, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Alexander Ihler, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Computer Science*

Sandy Irani, Ph.D. University of California, Berkeley, *Department Chair and Professor of Computer Science*

Mizuko "Mimi" Ito, Ph.D. Stanford University, *Professor in Residence of Anthropology and Informatics, and John D. and Catherine T. MacArthur Foundation Chair in Digital Media and Learning*

Norman Jacobson, B.S. University of California, Irvine, *Senior Lecturer in Computer Science*

Ramesh C. Jain, Ph.D. Indian Institute of Technology, *Donald Bren Professor of Information and Computer Sciences*

Stanislaw Jarecki, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Computer Science*

Wesley O. Johnson, Ph.D. University of Minnesota, *Professor of Statistics*

James A. Jones, Ph.D. Georgia Institute of Technology, *Assistant Professor of Informatics*

Scott Jordan, Ph.D. University of California, Berkeley, *Professor of Computer Science and of Electrical Engineering and Computer Science*

David G. Kay, J.D. Loyola Law School, Los Angeles; M.S. University of California, Los Angeles, *Senior Lecturer with Security of Employment, Informatics and Computer Science*

Dennis F. Kibler, Ph.D. University of California, Irvine, and Ph.D. University of Rochester, *Professor Emeritus of Computer Science*

Alfred Kobsa, Ph.D. University of Vienna, *Professor of Informatics and of Computer Science*

Richard H. Lathrop, Ph.D. Massachusetts Institute of Technology, *Professor of Computer Science and of Biomedical Engineering*

Chen Li, Ph.D. Stanford University, *Associate Professor of Computer Science*

Cristina Videira Lopes, Ph.D. Northeastern University, *Associate Professor of Informatics and of Computer Science*

George S. Lueker, Ph.D. Princeton University, *Professor Emeritus of Computer Science*

Aditi Majumder, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of Computer Science*

Gloria Mark, Ph.D. Columbia University, *Professor of Informatics*

Melissa Mazmanian, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Informatics*

Gopi Meenakshisundaram, Ph.D. University of North Carolina, *Associate Professor of Computer Science*

Sharad Mehrotra, Ph.D. University of Texas at Austin, *Professor of Computer Science*

Eric D. Mjolsness, Ph.D. California Institute of Technology, *Professor of Computer Science and of Mathematics*

Bonnie Nardi, Ph.D. University of California, Irvine, *Professor of Informatics*

Alexandru Nicolau, Ph.D. Yale University, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Gary Olson, Ph.D. Stanford University, *Donald Bren Professor of Informatics*

Judy Olson, Ph.D. University of Michigan, *Donald Bren Professor of Informatics*

Donald J. Patterson III, Ph.D. University of Washington, *Assistant Professor of Informatics*

Richard Pattis, M.S. Stanford University, *Senior Lecturer with Security of Employment, Computer Science and Informatics*

Deva Ramanan, Ph.D. University of California, Berkeley, *Assistant Professor of Computer Science*

David F. Redmiles, Ph.D. University of Colorado, *Professor of Informatics*

Amelia C. Regan, Ph.D. University of Texas, Austin, *Professor of Computer Science*

Debra J. Richardson, Ph.D. University of Massachusetts, Amherst, *Professor of Informatics*

Isaac Scherson, Ph.D. Weizmann Institute of Science, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Babak Shahbaba, Ph.D. University of Toronto, *Assistant Professor of Statistics*

Susan Elliott Sim, Ph.D. University of Toronto, *Assistant Professor of Informatics*

Padhraic Smyth, Ph.D. California Institute of Technology, *Professor of Computer Science and of Biomedical Engineering*

Thomas A. Standish, Ph.D. Carnegie Institute of Technology, *Professor Emeritus of Informatics*

Hal S. Stern, Ph.D. Stanford University, *Ted and Janice Smith Family Foundation Dean of the Donald Bren School of Information and Computer Sciences and Professor of Statistics*

Tatsuya Suda, Ph.D. Kyoto University, *Professor Emeritus of Computer Science*

Shannon Tauro, M.S. University of California, Irvine, *Lecturer in Computer Science*

Richard Taylor, Ph.D. University of Colorado, *Director of the Institute for Software Research and UCI Chancellor's Professor of Informatics*

Bill Tomlinson, Ph.D. Massachusetts Institute of Technology; M.F.A. California Institute of the Arts, *Associate Professor of Informatics*
 Gene Tsudik, Ph.D. University of Southern California, *Department Vice Chair and Professor of Computer Science*
 Jessica Utts, Ph.D. Pennsylvania State University, *Professor of Statistics*
 André van der Hoek, Ph.D. University of Colorado, Boulder, *Department Chair and Professor of Informatics*
 David van Dyk, Ph.D. University of Chicago, *Department Chair and Professor of Statistics*
 Alexander V. Veidenbaum, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science*
 Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science*
 Max Welling, Ph.D. Utrecht University, *Professor of Computer Science*
 Xiaohui Xie, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Computer Science*
 Yaming Yu, Ph.D. Harvard University, *Assistant Professor of Statistics*
 Zhaoxia Yu, Ph.D. Rice University, *Assistant Professor of Statistics*
 Hadar Ziv, Ph.D. University of California, Irvine, *Lecturer in Informatics*

Overview

The Donald Bren School of Information and Computer Sciences (Bren ICS) embodies excellence, creativity, and collaborative innovation in computer science and information technology. From its inception 40 years ago to its current status as the only independent computing school in the University of California system, Bren ICS is well-positioned to continue its tradition of exploring and advancing the boundaries of a broad, multidisciplinary field on a national and international scale.

A \$20-million endowment from The Irvine Company Chairman Donald Bren in 2004 drives the School's vigorous recruitment and retention of distinguished faculty scholars. The faculty have extensive training in traditional computer science, as well as engineering, mathematics, the arts, and the social sciences. The School's stand-alone structure, as opposed to being part of an engineering school, enables the faculty to take the broadest possible view of computer science and information technology studies. This breadth is reflected in the diverse set of academic degree options for undergraduates and graduates, some which are interdisciplinary and jointly administered with other academic units.

The School's three departments, Computer Science, Informatics, and Statistics, fuel a wide range of instructional and research efforts including: computer architecture and embedded systems; security, privacy, and cryptography; programming languages and compilers; artificial intelligence and machine learning; visual computing; biomedical informatics; scientific computing; theory of computing; statistics; information access and management; software and information systems design, and engineering; interactive and collaborative technology; ubiquitous computing; operations research and arts computation engineering. The vibrant Bren ICS community continues to explore innovative topics ranging from building complete computer systems on chips smaller than a human fingernail to developing user interface systems that allow engineers on opposite sides of the world to collaborate effectively. Bren ICS research continues to focus on how computing and information technology can be used to solve a broad set of real-world problems such as improving how first responders communicate during a crisis, optimizing transportation systems, analyzing data to expedite biological research, and improving network security.

Faculty are active participants and leaders of numerous research institutes spanning computer science, including the Ada Byron Research Center (ABRC); Institute for Genomics and Bioinformatics (IGB); Institute for Software Research (ISR); Center for Games and Virtual Worlds; Center for Embedded Computer Systems (CECS); Center for Ethnography; Center for Interactive Knowledge and Design; California Institute for Telecommunications and Information Technology (Calit2); Center for Machine Learning and

Data Mining; Center for Organizational Research; Center for Research on Information Technology and Organizations (CRITO); Genetic Epidemiology Research Institute; Center for Pervasive Communications and Computing (CPCC); Laboratory for Ubiquitous Computing and Interaction (LUCI), and Secure Computing and Network Center (SCONCE); Institute for Mathematical Behavioral Sciences; Institute for Transportation Studies and Network Systems Center.

Faculty and student-driven research in the Bren School is supported through a variety of grants, gifts, and contracts from public and private institutions such as the State of California, the U.S. Department of Education, various U.S. defense agencies, the National Science Foundation, the National Institutes of Health, NASA, and various companies, including Apple, Boeing, Cisco, Conexant, Google, HP, IBM, Intel, Microsoft, Raytheon, Sun, Toshiba, and Unisys. Since 2001, ICS has received nearly \$100 million in extramural funding, in addition to the recent \$20-million endowment.

Faculty and alumni of the Bren School of ICS have contributed some of computing's most significant advancements, including revolutionizing computer-aided drafting techniques; the creation of the current Hypertext Transfer Protocol (HTTP/1.1); development of the Internet standards for HTTP and Uniform Resource Identifiers (URI); the founding of the Apache HTTP Server Project that produces the software for over 60 percent of public Internet Web sites; and the creation of the Domain Name System (DNS) that translates Web and e-mail addresses into the numeric system used to route information along the Internet.

The Bren School is actively committed to increasing diversity in the computing and information technology fields. The Ada Byron Research Center was created in 2003 to address research and outreach topics aimed at increasing the participation of women and other underrepresented populations in computer science, engineering, digital media, and related information technology areas. Bren ICS is an active partner of the National Center for Women & Information Technology, whose overarching goal is parity in the professional information technology workforce.

FACILITIES AND COMPUTING RESOURCES

Donald Bren Hall, a six-story building completed in 2007, houses classrooms, research labs, meeting rooms and facilities, and faculty, graduate student, and administrative staff offices. The building's innovative use of space and technology is designed to promote faculty/student interactions and facilitate collaborative scholarly work.

The School offers a wide range of research and instructional computing equipment, including many advanced workstations, servers, and other specialized hardware and software. High-speed wireless networking is available in all Bren ICS buildings, classrooms, and labs.

DEGREES

Biomedical Computing	B.S.
Business Information Management ¹	B.S.
Computer Game Science	B.S.
Computer Science	B.S., M.S., Ph.D.
Computer Science and Engineering ²	B.S.
Informatics	B.S.
Information and Computer Science	B.S., M.S., Ph.D.
Networked Systems ²	M.S., Ph.D.
Statistics	M.S., Ph.D.

¹ Offered jointly with The Paul Merage School of Business. See the Interdisciplinary Studies section of the *Catalogue* for information.

² Offered jointly with The Henry Samueli School of Engineering. See the Interdisciplinary Studies section of the *Catalogue* for information.

UNDERGRADUATE PROGRAM

A Bren School of ICS undergraduate education is a blend of scholarship, science, technology, and practical application that forms an excellent foundation for professional life.

The basis of the undergraduate program is a set of fundamental courses in mathematics and computer science, supplemented by general education courses from other academic disciplines. A premium is placed on both communication and quantitative skills. Students start early with hands-on experience with advanced computing systems, and intense use of computer and network technologies continues throughout the undergraduate program. Students study data organization, algorithm design and analysis, design and organization of hardware and network systems, software engineering, artificial intelligence, social aspects of system design and use, and management of technology. In the process, students work with state-of-the-art hardware and software technologies, and learn several contemporary programming languages.

The Donald Bren School of Information and Computer Sciences offers seven majors: Biomedical Computing (BMC); Business Information Management (BIM), offered jointly with The Paul Merage School of Business; Computer Game Science (CGS); Computer Science (CompSci); Computer Science and Engineering (CSE), offered jointly with The Henry Samueli School of Engineering; Informatics (IN4MTX); and Information and Computer Science (ICS). There are also programs of study leading to minors in Biomedical Computing, Digital Information Systems, Informatics, Information and Computer Science, and Statistics.

B.S. in Biomedical Computing. Biomedical Computing (BMC) is the intersection of computer science and information technology with biology and medicine. Students will receive a firm quantitative grounding in mathematics, statistics, and computation; become familiar with the basic foundations of physics, chemistry, and biology; master a rigorous and demanding Biomedical Computing year-long sequence; study theory, algorithms, data mining, and machine learning; and carry out a year-long immersive capstone Senior Project. See page 352 in the Department of Computer Science section.

B.S. in Business Information Management. The undergraduate Business Information Management (BIM) major seeks to educate students to understand and apply the theories and concepts of a broad, integrated curriculum covering computing (computer science, informatics, and software); business fundamentals (accounting, finance, marketing, strategy, and operations); and analytical methods (mathematics, statistics, economics, management science, and decision analysis). The fundamentals of information and computer science provide the foundation for understanding and evaluating the technology through which most of the business information is gathered and presented, while the business fundamentals provide a background and context in which information and its analysis will be applied. The major is administered by the Donald Bren School of Information and Computer Sciences and is a collaborative, interdisciplinary degree program between the Bren School and The Paul Merage School of Business. See page 369 in the *Catalogue's* Interdisciplinary Studies section.

B.S. in Computer Game Science. The Computer Game Science (CGS) major combines a solid foundation in computer science with a focus on designing, building, and understanding computer games and other forms of interactive media. The fundamentals of information and computer science, along with course work in mathematics, statistics, physics, and film and media studies, provide students with the concepts and tools to study a wide scope of computer game technologies. The major emphasizes design, collaboration, and the understanding of computer games and related technologies and media in a social and cultural context. See page 344.

B.S. in Computer Science. The Computer Science (CS) major provides students with an education that focuses on the design and implementation of computer systems and the software that runs them as well as the application of these tools to solve complex problems. Additionally, students may take a variety of courses to broaden their knowledge and/or specialize in particular areas. For instance, the major is well-suited for a more in-depth study of topics such as artificial intelligence and machine learning, advanced data structures, computer graphics, cryptography and security, computational biology, embedded systems, networked systems, database systems, and computer games. See page 354 in the Department of Computer Science section.

B.S. in Computer Science and Engineering. This program is designed to provide students with the fundamentals of computer science, both hardware and software, and the application of engineering concepts, techniques, and methods to both computer systems engineering and software system design. The Computer Science and Engineering (CSE) major gives students access to multidisciplinary problems in engineering with a focus on total systems engineering. Students learn the computer science principles that are critical to development of software, hardware, and networking of computer systems. From that background, engineering concepts and methods are added to give students exposure to circuit design, network design, and digital signal processing. Elements of engineering practice include a systems view, manufacturing and economic issues, and multidisciplinary engineering applications. The program is administered jointly by the Department of Computer Science in the Bren School of ICS and the Department of Electrical Engineering and Computer Science in The Henry Samueli School of Engineering. See page 371 in the *Catalogue's* Interdisciplinary Studies section.

B.S. in Informatics. Within the overall discipline of information and computer science, the Informatics (IN4MTX) major is concerned with the relationship between what is inside the computer and what is outside. The Informatics major addresses the broad set of issues surrounding design, ranging from initial requirements gathering to estimating and measuring the impact of alternative solutions—all from a multidisciplinary perspective that includes computer science, information science, organizational science, social science, and cognitive science. Students pursuing the B.S. in Informatics complete a specialization in one of three areas: software engineering, human-computer interaction, or organizations and information technology. See page 361 in the Department of Informatics section.

B.S. in Information and Computer Science. The overall field of information and computer science spans a vast spectrum of topics. At the one end, it includes computer system design and networking, detailing how modern computer hardware and networks operate on a day-to-day basis. At the other end are human factors, such as how software should be structured to facilitate cooperative work among groups of people. The B.S. in Information and Computer Science (ICS) provides students with a broad introduction to these topics. Through the selection of elective courses, students may choose to specialize in one or more of seven areas: artificial intelligence, computer systems, implementation and analysis of algorithms, information systems, networks and distributed systems, optimization, or software systems. See page 345.

Major and Minor Restrictions

Students majoring in Business Information Management may not double major in Business Administration nor minor in Management, Informatics, or Information and Computer Science.

The major in Biomedical Computing may not be combined with the minor in Information and Computer Science.

The Computer Game Science major may not be combined with the concentration in Game Culture and Technology.

The major in Computer Science (CS) cannot be combined with the major in Computer Science and Engineering (CSE).

The major in Computer Science and Engineering (CSE) cannot be combined with the major in Computer Engineering (offered by The Henry Samueli School of Engineering).

The major or minor in Information and Computer Science (ICS) cannot be combined with the majors in Computer Game Science, Computer Science (CS), Computer Science and Engineering (CSE), or Informatics.

Bren School of ICS majors may not minor in Informatics.

Bren School of ICS majors may not minor in Digital Information Systems. Courses used to complete the minor in Digital Information Systems may not also count toward the requirements for the Information and Computer Science minor or the Informatics minor.

Informatics majors in the Organizations and Information Technology specialization may not also pursue the Management minor.

Students who have completed both ICS 21 and 22 with grades of C or better and who wish to change majors to Informatics may use ICS 21 and 22 in satisfaction of the requirements of Informatics 41 and 42.

Students who have completed both Informatics 41 and 42 with grades of C or better and who wish to change majors to Computer Game Science, Computer Science, or Information and Computer Science may use Informatics 41 and 42 in satisfaction of the requirement of ICS 21 and 22.

Students enrolled in other degree programs who are interested in the field of computer science may pursue the introductory course sequences (ICS 21 and 22 or Informatics 41 and 42) followed by other courses for which they have met the prerequisites as far as their interests require and their programs permit. The introductory courses, along with most of the lower-division ICS courses for nonmajors, may be used to fulfill a General Education requirement. Nonmajors may also take other Bren ICS courses for which they have met the prerequisites.

The ICS Student Affairs Office is staffed by professional academic counselors and peer advisors. These individuals are available to assist students with program planning, questions on University and School policies and procedures, progress toward graduation, and other issues that arise in the course of a student's education. **Faculty also are available for advising, generally for suggestions of additional course work in the student's academic, research, and career interest areas and on preparation for graduate school.**

Honors

Honors at graduation, e.g., *cum laude*, *magna cum laude*, *summa cum laude*, are awarded to approximately the top 12 percent of the graduating seniors. A general criterion is that a student must have completed at least 72 units in residence at the University of California. The student's cumulative record at the end of the final quarter is the basis for consideration of awarding Latin Honors. Other important factors are considered (see page 51).

CAREERS

Graduates of the Donald Bren School of Information and Computer Sciences pursue a variety of careers. Many graduates specify, design, and develop a variety of computer-based systems comprised of software and hardware in virtually every application domain, such as aerospace, automotive, biomedical, consumer products, engineering, entertainment, environmental, finance, investment, law, management, manufacturing, and pharmacology.

Graduates also find jobs as members of research and development teams, developing advanced technologies, designing software and hardware systems, and specifying, designing, and maintaining computing infrastructures for a variety of institutions. Some work for established or start-up companies while others work as independent consultants. After a few years in industry, many move into management or advanced technical positions. Many students also use the undergraduate major as preparation for graduate study in computer science or another field (e.g., medicine, law, engineering, management).

ADMISSIONS

To ensure admission consideration for the fall quarter, students should be sure to file their application by November 30 of the prior year. The selection criteria include grades, test scores, and other considerations.

Transfer Student Policy

Transfer requirements vary by major.

Biomedical Computing: See page 353.

Business Information Management: See page 369.

Computer Game Science: See page 344.

Computer Science: See page 354.

Computer Science and Engineering: See page 371.

Informatics: See page 361.

Information and Computer Science: See page 345.

NOTE TO TRANSFER APPLICANTS: These majors require a series of lower-division courses, and prerequisites constrain the order in which they can be taken. Junior-level transfer students who must complete a significant part of this sequence may find that it will take longer than two years at UCI to complete their degree. Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing a Java-related programming course prior to their first quarter at UCI.

Change of Major

Students interested in changing their major to one offered by the School should contact the ICS Student Affairs Office for more information and assistance. Information is also available at <http://www.changeofmajor.uci.edu>.

Major and minor restrictions: See pages 342–343.

SPECIAL PROGRAMS AND COURSES

The Bren School of ICS Honors Program

The Bren School of ICS Honors Program provides selected upper-division students an opportunity to carry out a research project under the direction of a faculty member in the School. Eligible students participate in the ICS Honors Seminar (ICS H197), which provides an introduction to the range of current faculty research. Each student then affiliates with an ICS faculty advisor who agrees to supervise a minimum of two quarters of research. The participating student prepares a final written research report and submits a copy for review to both the faculty advisor and the Honors Program advisor. Successful completion of the Honors Program earns the student a certificate and medal from the School. Further, a notation of successful completion is added to the student's transcript. For more information about course requirements, application procedures, and deadlines visit <http://www.ics.uci.edu/ugrad/honors/index.php>, or contact the Student Affairs Office at (949) 824-5156.

Other Opportunities

Bren School of ICS undergraduates may complement their educational experience by participating in other programs. Information about the following programs is available elsewhere in the

Catalogue and via the program Web sites: Campuswide Honors Program, Undergraduate Research Opportunities Program, Education road Program, and Student Achievement Guided by Experience (SAGE Scholars).

Concentration: Engineering and Computer Science in the Global Context

The globalization of the marketplace for information technology services and products makes it likely that Bren ICS graduates will work in multicultural settings or be employed by companies with extensive international operations, or customer bases. The goal of the concentration is to help students develop and integrate knowledge of the history, language, and culture of a country or geographic region outside the United States, through course work both at UCI and an international host campus, followed by a technology-related internship in the host country.

All Bren School majors in good standing may propose an academic plan that demonstrates the ability to complete the concentration (a minimum of eight courses) and other requirements for graduation in a reasonable time frame. It is expected that a student's proposal will reflect a high degree of planning that includes the guidance of academic counselors and those at the UCI Study Abroad Center regarding course selection, as well as considerations related to internship opportunities, housing, and financial aid. Each student's proposed program of study must be approved by the Bren School of ICS Associate Dean for Student Affairs. The Associate Dean will be available to assist qualified students with the development of a satisfactory academic plan, as needed.

The concentration consists of the following components:

- A. A minimum of eight courses at UCI or at the international campus with an emphasis on the culture, language (if applicable and necessary), history, literature of the country that corresponds to the international portion of the program, international law, international labor policy, global issues, global institutions, global conflict and negotiation, and global economics;
- B. A one- or two-semester sequence of technical courses related to the major and, possibly, culture, history, and literature courses taken at an international university;
- C. A two-month or longer technical internship experience in the same country as the international educational experience.

More information about the requirements for the concentration is available in the Bren ICS Student Affairs Office.

Undergraduate Major in Business Information Management (BIM)

This program is administered jointly by the Bren School of ICS and The Paul Merage School of Business. For information, see the Interdisciplinary Studies section of the *Catalogue*, page 369.

REQUIREMENTS FOR THE B.S. DEGREE IN BUSINESS INFORMATION MANAGEMENT

University Requirements: See pages 54–61.

Major Requirements: See page 369 in the Interdisciplinary Studies section of the *Catalogue*.

Undergraduate Major in Computer Game Science

The Computer Game Science major gives students a strong foundation in introductory information and computer science, an extensive education in technologies and design practices associated with computer games, and an opportunity to focus in two areas of particular interest to the student. Students who complete the

major will be able to create interactive and human-centered game designs; implement games using skills in modeling, graphics, software engineering, hardware architectures, human interfaces, and aesthetics; and evaluate games and game technology for their use in education, art, and social change.

Career Paths. A wide variety of careers and graduate programs are open to Computer Game Science (CGS) graduates. The video game industry is comparable in size to the film and music industries, and job growth projections are strong for people with strong technical backgrounds. Many other fields, including mobile software development, interactive entertainment, and training and education software have demand for similar skill sets and knowledge. CGS graduates are well-trained in computer science, and can thus pursue graduate programs or any career that involves designing, implementing, evaluating, or interacting with computer-based systems.

ADMISSIONS

Freshman Applicants: See pages 33–36.

Transfer Applicants:

Junior-level applicants who satisfactorily complete course requirements will be given preference for admission. Applicants must satisfy the following requirements:

1. Complete one year of approved college-level math, preferably courses in calculus equivalent to UCI's Mathematics 2A-B; if not available, two semester courses equivalent to other major-related math courses are acceptable.
2. Complete one year of transferable computer science courses* with at least one course involving concepts such as those found in Java, Scheme, C++, or other object-oriented or high-level programming language.

Transfer applicants to the Computer Game Science major should be aware that several lower-division courses must be taken at UCI; therefore, the minimum time to degree completion will exceed two years.

*NOTE: Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing a Java-related programming course prior to their first quarter at UCI.

REQUIREMENTS FOR THE B.S. DEGREE IN COMPUTER GAME SCIENCE

University Requirements: See pages 54–61.

Major Requirements

Lower-division:

- A. ICS 21, ICS 22, ICS 23, ICS 51, ICS 52, ICS 65.
- B. Mathematics 2A, Mathematics 2B, Mathematics 6G, ICS 6B, ICS 6D, Statistics 67.
- C. ICS 60, ICS 61, ICS 62.
- D. Physics 3A.
- E. Film and Media Studies 85A-B-C.

Upper-division:

- A. *Computer Game Science Core requirements:* ICS 160, ICS 161, ICS 162, ICS 163, ICS 167, ICS 168, ICS 169A-B.
- B. Seven elective courses: three courses from one Bren ICS track, two courses from a second Bren ICS track, plus

two courses from any Bren ICS track or non-Bren ICS track listed below.

Bren ICS Tracks:

Algorithms: CS 161; CS 165; one of CS 162, CS 163, CS 164.

Artificial Intelligence: CS 171; CS 175; one of CS 174, CS 177, CS 178, CS 179.

Computational Biology: CS 183; CS 184A; CS 184B; CS 184C.

Computer Graphics and Vision: CS 112; one of CS 111, CS 116; one of CS 114, CS 117.

Computer Networks: CS 132; two of CS 131, CS 133, CS 134.

Databases: CS 122A; CS 122B; one of CS 121/Informatics 141, CS 125.

Hardware: CS 151; CS 154; one of CS 145A, CS 152, CS 153.

Human-Computer Interaction: Informatics 131; Informatics 133; one of Informatics 132, Informatics 134.

Operating Systems: CS 143A; CS 143B; one of CS 144, CS 146.

Programming Languages and Compilers: Informatics 101/CS 141; CS 142A; one of Informatics 102, CS 142B.

Project Management: Informatics 111; Informatics 161; one of Informatics 151, Informatics 162.

Simulation and Optimization: CS 169; CS 168; CS 115.

Social Impacts of Computing: Informatics 161; Informatics 162; Informatics 163.

Software Design: Informatics 121; Informatics 122; Informatics 123.

Software Engineering: Informatics 111; Informatics 113; Informatics 115.

Non-Bren ICS Tracks (some of these courses have prerequisites that are not part of the CGS major):

Business Management: Management 101, 102, 105, 107, 109, 121, 153, 154.

Cognitive Science: Psychology 130A, 131A, 131B, 135M, 135A, B, C, 140C.

Mathematics: Mathematics 112A-B-C, 115, 121A-B.

Film and Media Studies: Film and Media Studies 113, 143, 185.

With the approval of the ICS Associate Dean for Student Affairs, a student may design a new track, or an Independent Study, Honors Research, or Special Topics course may be substituted for a course in a track. Computer Game Science (CGS) elective courses may not be counted as part of the Management minor or the Biomedical Computing minor.

Major and minor restrictions: See pages 342–343.

Undergraduate Major in Information and Computer Science

The Information and Computer Science (ICS) major provides students with a broad introduction to topics ranging from computer system design and networking to software design and computer-supported cooperative work. Through the completion of four elective courses, students may choose to specialize in one or more of six areas (see below under Major Requirements).

ADMISSIONS

Freshman Applicants: See pages 33–36.

Transfer Applicants:

Junior-level applicants who satisfactorily complete the following course requirements will be given preference for admission. Applicants must satisfy the following requirements:

1. Completion of one year of approved college-level math, preferably courses in calculus equivalent to UCI’s Mathematics 2A-B; if not available, two semester courses equivalent to other major-related math courses are acceptable.
2. Completion of one year of transferable computer science courses* with at least one course involving concepts such as those found in Java, Scheme, C++, or other object-oriented or high-level programming language.

*NOTE: Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing a Java-related programming course prior to their first quarter at UCI.

Additional courses beyond those required for admission must be taken to fulfill the lower-division degree requirements, as many are prerequisites for upper-division courses. For some transfer students, this may mean that it will take longer than two years to complete their degree.

REQUIREMENTS FOR THE B.S. DEGREE IN INFORMATION AND COMPUTER SCIENCE

University Requirements: See pages 54–61.

Major Requirements

Lower-division (some or all of these are prerequisites for required upper-division ICS courses):

- A. Mathematics 2A-B, ICS 6B, ICS 6D, Mathematics 6G or 3A, Statistics 67.
- B. ICS 21, 22, 23, 51, 52.

Upper-division:

- A. *ICS Core requirements:* CSE121/Informatics 111, Informatics 161, CS 141/CSE141/Informatics 101, CS 142A/CSE142, CS 143A/CSE104, CS 151, CS 152, CS 161/CSE161, CS 171.

- B. Two intermediate courses, each from a different group: CS 115; CS 116; Informatics 102; Informatics 113 or 115; Informatics 122 or 123; Informatics 124/CS 137; Informatics 131, 133, or 143; Informatics 162 or 171; CS 131, 144, 146, or Engineering EECS113; CS 132, CS 145A, or Engineering EECS115/CSE151; CS 134, 162, 163, 164, 167, or 168; CS 174, 177, 178, 179, Engineering EECS101; CS 111, 112, or Engineering EECS104; CS 122A/Engineering EECS116.
- C. Three project courses selected from Informatics 117, Informatics 119, Informatics 121, Informatics 122, Informatics 132, Informatics 134, Informatics 148, Informatics 163, CS 113/Informatics 125, CS 114, CS 117, CS 122B, CS 133, CS 142B, CS 143B, CS 153, CS 154, CS 165, CS 175.
- D. Two additional courses chosen from this list that have not been used to satisfy another ICS major requirement: Mathematics 105A-B, 114A, 118A-B, 130B-C, 132B-C, 141, 150, 151, 152, 161, 162A-B, 171A-B, 173A-B, 174A; CS 162, 163, 164, 167, 168, 169, 177, 178, 179; Statistics 120B-C/Mathematics 131B-C, Statistics 121; Philosophy 105A-B-C; or Mathematics 120A*-B, 121A*-B, 140A*-B, or 180A*.

NOTE: Courses marked with an asterisk (*) have an additional prerequisite of Mathematics 13.

Specializations: Students may elect to complete one or more specializations within the major in Information and Computer Science. Courses taken for a specialization must be taken for a letter grade and may be used to satisfy upper-division requirements for the major. Courses may also be used to satisfy requirements of more than one specialization, subject to the following limitation: separate specializations may share at most one course.

One individual study course (CS H198 or CS 199) in the area of specialization may be substituted for one designated course (indicated by *) in the specialization requirements, upon prior approval of the Bren School Associate Dean for Student Affairs.

Artificial Intelligence: four courses* selected from CS 116; CS 163 or 165; CS 172–179.

Computer Systems: four courses selected from Informatics 123, Informatics 124/CS 137, CS 112, CS 115, CS 131–134, CS 142B, CS 143B, CS 144, CS 145A, CS 146, CS 153–154.

Implementation and Analysis of Algorithms: two courses selected from CS 163, CS 164, CS 165; two courses* selected from Informatics 117, CS 133, CS 142B, CS 143B, CS 175, CS 177, CS 178.

Information Systems: three courses selected from Informatics 113, Informatics 117, Informatics 132, Informatics 162, Informatics 163, Informatics 171; one course* selected from Informatics 123, Informatics 131, Informatics 153, CS 122A, CS 132, CS 176.

Networks and Distributed Systems: four courses selected from Informatics 123, Informatics 124/CS 137, CS 131, CS 132, CS 133*, CS 134, CS 143B*.

Optimization: four courses selected from CS 144, CS 163, CS 168, CS 169, Statistics 121, Mathematics 105A, 105B, 171A, 171B.

Software Systems: two courses selected from Informatics 113, Informatics 115, Informatics 122, Informatics 123, Informatics 124/CS 137, Informatics 131, Informatics 132, Informatics 133; two software project courses chosen from Informatics 117, Informatics 121, Informatics 125/CS 113, Informatics 134, Informatics 148, CS 122B, CS 142B, CS 143B, CS 175, and ICS 168.

Major and minor restrictions: See pages 342–343.

Sample Program of Study — Information and Computer Science

FALL	WINTER	SPRING
Freshman		
ICS 21	ICS 22	ICS 23
Math 2A	Math 2B	ICS 6B

ICS Intermediate	ICS Intermediate	ICS UD Core
Gen. Ed. (II/IV)	Gen. Ed. (II/IV)	Gen. Ed. (II/IV)
Gen. Ed. (III/VII/VIII)	Gen. Ed.	

NOTE: ICS upper-division core, intermediate, and project requirements may be satisfied by specific Computer Science, Informatics, Engineering, Mathematics, Statistics, and Philosophy courses. See the requirements listed above.

Minor in Information and Computer Science

Students outside the School may also pursue a minor in Information and Computer Science. The minor provides a focused study of Information and Computer Science to supplement a student's major program of study and prepares students for a profession, career, or academic pursuit in which computer science is an integral part but is not the primary focus. The ICS minor contributes to students' competence in computing technology and proficiency in programming as well as exposing them to the fundamentals of computer science. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests.

Requirements for the Minor: ICS 21, 22, 23; ICS 6D; ICS 51 or 52; two upper-division courses from CS 111–144, CS 151–177, Informatics 101–102, Informatics 111–119, Informatics 123, Informatics 125, Informatics 131, Informatics 132–134, Informatics 141, Informatics 148, Informatics 153, Informatics 161–163, and Informatics 171. CS 190–199 and Informatics 190–199 may not be applied to the minor.

GRADUATE PROGRAMS IN INFORMATION AND COMPUTER SCIENCE

The Bren School of ICS offers M.S. and Ph.D. degrees in Computer Science, Information and Computer Science, Networked Systems, and Statistics.

ICS Ph.D. students must complete a concentration in Informatics (INF).

ICS M.S. students must complete one of the following concentrations: Embedded Systems or Informatics (INF).

See page 355 for additional information about the graduate program in Computer Science. See page 366 for additional information about the graduate program in Statistics. The degree program in Networked Systems is supervised by an interdepartmental faculty group from the Department of Computer Science in the Bren

School and the Department of Electrical Engineering and Computer Science in The Henry Samueli School of Engineering. Information is available on page 376 in the Interdisciplinary Studies section of the *Catalogue*.

ADMISSION

Applicants will be evaluated on the basis of their prior academic record. Applicants for the M.S. degree are expected to have a bachelor's degree in computer science or a related field. Those who do not have an undergraduate degree in computer science may take the Computer Science Subject GRE test to demonstrate sufficient background in the field. Scores are reviewed on a case-by-case basis. Ph.D. applicants will additionally be evaluated in their potential for creative research and teaching in Information and Computer Science.

Applicants are expected to have (1) skills in computer programming at least equivalent to those obtained in college-level courses in programming and language development; (2) skills in mathematics equivalent to those obtained in complete college-level courses in logic and set theory, analysis, linear algebra and modern algebra, or probability and statistics; (3) data structures, analysis of algorithms, automata theory, or formal languages; and (4) computer architectures.

All applicants are evaluated on the materials submitted: letters of recommendation, official GRE test scores, official college transcripts, and personal statement. For more information, contact the ICS graduate counselor at (949) 824-5156 or send e-mail to gcounsel@ics.uci.edu.

Financial Assistance

Financial assistance is available to Ph.D. students in the form of fellowships, teaching assistantships, and research assistantships. Although assistance varies, it is the School's goal to support all entering Ph.D. students, subject to availability of funds. International students who are not citizens of countries where English is either the primary or dominant language, as approved by Graduate Council, and who apply for teaching assistantships must take one of the approved English proficiency examinations. More information is available in the Graduate Division section of the *Catalogue*.

Students with a Previously Earned Master's Degree

Credit for one or all required courses may be given at the time of admission to those students who have completed a master's degree in computer science or a closely related field. Course equivalency will be determined by the Bren School Associate Dean for Student Affairs following a written recommendation from a sponsoring research advisor. Research advisors can require that a student take additional courses when this is appropriate.

An additional M.S. degree will not be awarded if the student currently holds an M.S. degree in computer science or a related field from another university.

Course Substitutions

A student who has taken relevant graduate courses at UCI or another university may petition to have a specific course certified as equivalent to one which satisfies Bren School of ICS requirements. The petition should describe the course and should be approved by either the student's advisor or the instructor teaching the class, and by the Associate Dean for Student Affairs. Only two courses can be substituted.

Master of Science Program

The Bren School offers M.S. degrees in Computer Science, Information and Computer Science, Networked Systems, and Statistics. Students pursuing the M.S. in Information and Computer Science must complete a concentration in Embedded Systems or Informatics (INF).

See page 355 for additional information about the graduate program in Computer Science. See page 366 for additional information about the graduate program in Statistics. See page 376 in the Interdisciplinary Studies section for additional information about the Networked Systems program.

M.S. students may select one of two options, the thesis plan or the comprehensive examination plan, as described below. The normative time for completion of the M.S. degree is two years. All study must be completed within four calendar years from the date of admission.

Plan I: Thesis Plan. The thesis option is available for graduate students who may wish to continue on to a Ph.D. program or those who wish to concentrate on a specific problem. To qualify for this option, students must be in good academic standing with their Department. The student must enroll in at least two quarters of Thesis Supervision (CS 298 or Informatics 298) that will substitute for two required courses as specified under the concentration area or specialization of choice. All required courses must be completed with a grade of B or better, and the student must write a research or thesis project. A committee of three faculty members (voting members of the Academic Senate) will guide the student and give final approval of the thesis. The committee will consist of an advisor (faculty member from the student's department) who is willing to supervise the thesis project, and two other faculty members (one of which must be from the student's department) who are willing to serve on the committee as readers of the thesis. An oral presentation of the thesis to the committee will be required. Seminar courses that have an "S" suffix (e.g., 209S) do not count toward degree requirements.

Plan II: Comprehensive Examination Plan. The student completes the required units as specified under the concentration area. Each course must be completed with a grade of B or better. Seminar courses that have an "S" suffix (e.g., 209S) do not count toward degree requirements. The student must take a comprehensive examination given by ICS faculty. The examination covers the core requirements and is given twice a year (fall and spring quarters).

ICS CONCENTRATION IN EMBEDDED SYSTEMS—M.S.

The goal of this program is to prepare students for challenges in developing future embedded systems. These future systems will further integrate communications, multimedia, and advanced processors with complex embedded and real-time software for automotive, medical, telecommunications, and many other application domains. Furthermore, embedded systems are becoming parallel, deploying multiprocessor systems-on-a-chip and parallel application software. An in-depth knowledge of the underlying scientific and engineering principles is required to understand these advances and to contribute productively to development of such systems. This program helps students master embedded system fundamentals, advanced computer architecture and compilers, networking, security, embedded, parallel and distributed software, and computer graphics in a sequence of courses and labs. Students also complete a large embedded systems project and may choose to write a Master's thesis.

Required Courses

The following courses must be completed with a grade of B or better: all students must complete six courses from the following List A: Introduction to Embedded and Ubiquitous Systems (CS 244), Design Automation and Prototyping of Embedded Systems (CS 247), Computer Systems Architecture (CS 250A), Internet (CS 232), Network and Distributed Systems Security (CS 203), Parallel Computing (CS 242), Modern Microprocessors (CS 250B), Distributed Computer Systems (CS 230), High-Performance Architectures and Their Compilers (CS 243).

Six additional courses chosen in one of the following two ways: (1) for students pursuing the M.S. thesis option, two four-unit courses in Thesis Supervision (CS 298) plus four graduate courses taken from List A or the following List B; or (2) for all other students, six graduate courses taken from List A or the following List B: Advanced Compiler Construction (CS 241), Software for Embedded Systems (CS 245), Validation and Testing of Embedded Systems (CS 246), Introduction to Computer Design (CS 252), Advanced System Software (Engineering EECS 211), Visual Computing (CS 211A), Introduction to Ubiquitous Computing (CS 248A/Informatics 241), Software Engineering (Informatics 211), Advanced User Interface Architecture (Informatics 235), Wireless and Mobile Networking (CS 236), Data Compression (CS 267), Graph Algorithms (CS 265), Real-Time Computer Systems (Engineering EECS 223). M.S. students who do not have an undergraduate degree in Computer Science or equivalent must also take CS 260.

Comprehensive Examination or Thesis

Each student must either (1) pass a comprehensive examination administered by the Embedded Systems faculty; or (2) submit a thesis for approval by a three-person committee consisting of an advisor (who is an ICS Embedded Systems full-time faculty member) and two other full-time faculty members (one of which must be from ICS).

ICS CONCENTRATION IN INFORMATICS—M.S.

See course requirements under Doctor of Philosophy program, on this page.

Doctor of Philosophy Program

The Bren School offers Ph.D. degrees in Computer Science, Information and Computer Science, Networked Systems, and Statistics.

Students pursuing the Ph.D. in Information and Computer Science must complete a concentration in Informatics (INF).

See page 355 for additional information about the graduate program in Computer Science. See page 366 for additional information about the graduate program in Statistics. See page 376 in the Interdisciplinary Studies section for additional information about the Networked Systems program.

The Ph.D. program is research oriented and encourages students to work together with faculty to solve advanced problems in information and computer science. The program is designed for full-time study, and the normative time for completion of the Ph.D. is five years (four years for students who entered with a master's degree). The maximum time permitted is seven years. Students enrolled in the Ph.D. program must maintain satisfactory academic progress.

Teaching Requirements for the Ph.D. Program

All ICS doctoral students are required to participate in a minimum of two quarters of teaching activities before graduating. College-level teaching activities in UCI Summer Sessions or UCI Extension, or service at other U.S. universities may be accepted in fulfillment of this requirement.

Timeline for the Ph.D. Program

All course requirements must be satisfied prior to the student's application for advancement to candidacy. The normative time for advancement to candidacy is four years (three years for students who entered with a master's degree). Information on the selection of committees, advancement to candidacy, development of a doctoral dissertation, and final examination on the dissertation is available from the ICS Student Affairs Office.

ICS CONCENTRATION IN INFORMATICS (INF)—M.S. AND PH.D.

Informatics is the interdisciplinary study of the design, application, use, and impact of information technology. It goes beyond technical design to focus on the relationship between information system design and use in real-world settings. These investigations lead to new forms of system architecture, new approaches to system design and development, new means of information system implementation and deployment, and new models of interaction between technology and social, cultural, and organizational settings.

In the Donald Bren School of Information and Computer Sciences, Informatics is concerned with software architecture, software development, design and analysis, programming languages, ubiquitous computing, information retrieval and management, human-computer interaction, computer-supported cooperative work, and other topics that lie at the relationship between information technology design and use in social and organizational settings. Effective design requires an ability to analyze things from many different perspectives, including computer science, information science, organizational science, social science, and cognitive science. Relevant courses in those disciplines are therefore an integral part of the program and give this concentration a unique interdisciplinary flavor—which is imperative as the computing and information technology fields play such a pervasive role in our daily lives.

Students must complete the Survey courses, Informatics Core courses, Informatics Breadth courses, and a focus track in General Informatics, Software, Interactive and Collaborative Technology, or Ubiquitous Computing. All courses must be passed with a grade of B or better.

Survey of Research and Research Methods: Research Methods in Informatics (Informatics 201) and two quarters of Seminar in Informatics (Informatics 209S). Students in the M.S. program may substitute for Informatics 201 either two quarters of Seminar in Informatics Research (Informatics 208S) or one additional Informatics course numbered 200–299.

Informatics Core Courses: three courses chosen from Software Engineering (Informatics 211), Human-Computer Interaction (Informatics 231 or Informatics 232), Introduction to Ubiquitous Computing (Informatics 241), Social Analysis of Computing (Informatics 261).

Informatics Breadth: two four-unit graduate courses in ICS, CS, or Statistics, outside of Informatics.

Students must choose a track and complete the required courses:

General Informatics Track (GEN)

Electives: six four-unit graduate courses approved by the student's advisor and the Department Chair, excluding 290s, 298s, and 299s.

Software Track (SW)

Software electives: three courses from Formal Specification and Modeling (Informatics 213), Software Analysis and Testing (Informatics 215), Software Processes (Informatics 217), Software Environments (Informatics 219), Software Architecture (Informatics 221), Applied Software Design (Informatics 223), Knowledge-Based User Interfaces (Informatics 233), Advanced User Interface Architecture (Informatics 235), Special Topics (Informatics 295 by Software faculty; no more than two 295s are permitted).

Software Breadth: three graduate courses outside of Software, drawn from a list maintained by the Software faculty.

Interactive and Collaborative Technology Track (ICT)

ICT electives (group 1): two courses chosen from Computerization, Work, and Organizations (Informatics 263), Theories of Computerization and Information Systems (Informatics 265), Qualitative Research Methods in Information Systems (Informatics 203),

Quantitative Research Methods in Information Systems (Informatics 205 or Social Science 201A and 201B).

ICT electives (group 2): two courses chosen from Knowledge-Based User Interfaces (Informatics 233), Advanced User Interface Architectures (Informatics 235), Computer-Supported Cooperative Work (Informatics 251).

ICT Breadth: two four-unit graduate courses approved by the student's advisor, excluding 290s, 298s, and 299s. Students are encouraged, but not required, to take them outside of Informatics.

Ubiquitous Computing Track (UBICOMP)

Additional required courses: Ubiquitous Computing and Interaction (Informatics 242) and Introduction to Embedded and Ubiquitous Systems (Informatics 244).

UBICOMP Breadth: four four-unit graduate courses approved by the student's advisor excluding 290s, 298s, and 299s. Students are encouraged, but not required, to take them outside of Informatics.

Research Project for the Ph.D.

Each student must find an Informatics faculty advisor and successfully complete a research project with that faculty member by the end of the second year. The research project should be done over at least two quarters of independent study or thesis supervision (Informatics 299 or 298) with that faculty.

Written Assessment for the Ph.D.

Each student must pass a written assessment. Students in the SW and ICT tracks must pass a written examination (also known as phase II exam) regularly administered by the Department. This examination is based on predetermined reading lists maintained by the SW and ICT faculty, respectively. Students in the UBICOMP and GEN tracks must describe the research project in a publication-quality report, which must be approved by three UBICOMP and Informatics faculty, respectively.

Candidacy Examination for the Ph.D.

Each student must pass the oral advancement to candidacy examination, which assesses the student's ability to conduct, present, and orally defend research work at the doctoral level. The candidacy committee will consist of five faculty members, the majority of whom must be members of the student's program, and the examination is conducted in accordance with UCI Senate regulations. The student must complete the course requirements, complete the research project, and pass the written assessment prior to advancing to candidacy. The oral candidacy examination consists of a research presentation by the student, followed by questions from the candidacy committee.

Students in the UBICOMP and GEN tracks, additionally to questions about the presented research, will also be asked questions about a predetermined list of readings. In the case of UBICOMP, that list is maintained by the UBICOMP faculty; in the case of GEN, that list is to be determined by the student's committee.

Doctoral Dissertation Topic Defense

The student must present a substantial written document representing the student's dissertation plan. This document must include the proposed dissertation abstract, a dissertation outline, a comprehensive survey of related work, and a detailed plan for completing the work. The dissertation plan is presented by the student to the dissertation committee, which must unanimously approve the student's proposal. The dissertation defense committee is formed in accordance with UCI Senate regulations.

Doctoral Dissertation and Final Examination

The student is required to complete a doctoral dissertation in accordance with Academic Senate regulations. In addition, the student must pass an oral thesis defense which consists of a public

presentation of the student's research followed by an oral examination by the student's doctoral committee. The thesis must be approved unanimously by the committee.

Courses in Information and Computer Science

(Schedule of Classes designation: I&C Sci)

COURSES FOR NONMAJORS

3 Internet Technologies and their Social Impact (4). Examines current Internet technologies and social implications at the individual, group, and societal level. Blogs, wikis, sharing of video, photos, and music, e-commerce, social networking, gaming, and virtual environments. Issues include privacy, trust, identity, reputation, governance, copyright, and malicious behavior. **(III)**

4 Human Factors for the Web (4). Principles of human-computer interaction in evaluating, designing, and developing information presented on the World Wide Web. User characteristics, usability analysis, navigation and organization. Color, typography, multimedia, information visualization, prototyping, user studies, evaluation strategies. Web accessibility. May not be taken for credit after Informatics 131. **(II)**

5 Environmental Issues in Information Technology (4). Explores the relationship between recent developments in information technology and current global environmental issues. Potential topics include ecoinformatics, e-waste, technological life cycle assessment, and online community building. Activities involve reading, writing, discussion, and a final project. **(II)**

7 Introducing Modern Computational Tools (4). A unified look at a spectrum of modern tools for building, solving, and analyzing simple computational models (deterministic and random) in diverse subject areas. Tools include those for numeric/symbolic computation, and those for acquiring, organizing, translating, processing, and displaying information. Formerly ICS 6. **(V)**

8 Practical Computer Security (4). Principles of practical computer security to enable students to defend themselves against malicious threats. Firewalls, anti-virus, secure setup of a wireless access point. Cryptography basics and its application. Embedded devices and related security issues. **(II)**

10 How Computers Work (4). Introduction to digital computer and communication systems. Capabilities and limitations of information technology. Representing information in digital form. Overview of computer organization, Internet, operating systems, software. Human-computer interaction and social impact. May not be taken for credit after ICS 51, ICS 52, ICS 105, or Informatics 43. **(II)**

11 The Internet and Public Policy (4). How the Internet works. Current public policy issues concerning the Internet. Introductory economics. Communications law. Interactions between information technology, economics, and law. Case studies about Internet and communications policy. Same as Economics 11. **(II or III)**

Nonmajors may also take lower-division ICS courses for majors (below) to fulfill General Education requirements, if they have met the prerequisites.

LOWER-DIVISION COURSES FOR MAJORS

6B Boolean Algebra and Logic (4). Relations and their properties; Boolean algebras, formal languages; finite automata. Prerequisite: high school mathematics through trigonometry. **(V)**

6D Discrete Mathematics for Computer Science (4). Covers essential tools from discrete mathematics used in computer science with an emphasis on the process of abstracting computational problems and analyzing them mathematically. Topics include: mathematical induction, combinatorics, and recurrence relations. Prerequisite: high school mathematics through trigonometry. **(V)**

20B Introduction to Computer Science with Applications to Biology (4). No background in computer science, programming, or biology required. Fundamental programming concepts are introduced using the language Python with a problem-oriented approach. All problems come from elementary molecular biology. May not be taken for credit after ICS 21/CSE21, ICS H21, or Informatics 41.

21 Introduction to Computer Science I (6). Introduces fundamental concepts related to computer software design and construction. Develops initial design and programming skills using a high-level language. Fundamental concepts of control structures, data structures, and object-oriented programming. Same as CSE21. Only one course from ICS 21/CSE21 and ICS H21 may be taken for credit. May not be taken for credit after Informatics 42. (II or V)

H21 Honors Introduction to Computer Science I (6). Introduces fundamental concepts of computer software design and construction. Develops initial design and programming skills using a high-level language. Fundamental concepts of control structures, data structures, functional and object-oriented programming. Introduces topics in computer organization and social impact of technology. Prerequisite: enrollment open to ICS, CSE, and Computer Science majors in the Campuswide Honors Program or by consent of the Bren School of ICS. Only one course from ICS H21 and ICS 21/CSE21 may be taken for credit. May not be taken for credit after Informatics 42. (II or V)

22 Introduction to Computer Science II (6). Abstract behavior of classic data structures (stacks, queues, sorted and unsorted maps), alternative implementations, analysis of time and space efficiency. Recursion. Object-oriented and functional programming. Prerequisite: ICS 21/CSE21 or ICS H21 with a grade of C or better. Same as CSE22. Only one course from ICS 22/CSE22, ICS H22, or Informatics 42 may be taken for credit. (II or V)

H22 Honors Introduction to Computer Science II (6). Abstract behavior of classic data structures (stacks, queues, sorted and unsorted maps), alternative implementations. Recursion. Mathematical analysis of time and space efficiency, program analysis and correctness, system design techniques, programming paradigms. Prerequisite: ICS H21 with a grade of B- or better or ICS 21/CSE 21 with a grade of A or better. Only one course from ICS H22, ICS 22/CSE22, Informatics 41, or Informatics 42 may be taken for credit. (II or V)

23 Fundamental Data Structures (4). Focuses on implementation and mathematical analysis of fundamental data structures and algorithms. Covers storage allocation and memory management techniques. Prerequisites: ICS 22/CSE22 or ICS H22 with a grade of C or better, *or* Informatics 42 with a grade of C or better, *or* Engineering EECS40. Same as CSE23. Only one course from ICS 23/CSE23 and ICS H23 may be taken for credit. (V)

H23 Honors Introduction to Computer Science III (4). Builds on ICS H22 with respect to mathematical tools and analysis. Focuses on fundamental algorithms in computer science, basic data structures for primary and secondary memory, storage allocation and management techniques, data description, and design techniques. Prerequisites: ICS H22 with a grade of B- or better or ICS 22/CSE 22 with a grade of A or better, *or* Informatics 42 with a grade of A or better. Only one course from ICS H23 and ICS 23/CSE23 may be taken for credit. (V)

51 Introductory Computer Organization (6). Multilevel view of system hardware and software. Operation and interconnection of hardware elements. Instruction sets and addressing modes. Virtual memory and operating systems. Laboratory work using low-level programming languages. Prerequisites: ICS 21 or Informatics 42, with a grade of C or better; ICS 6B. (II)

52 Introduction to Software Engineering (6). Introduction to the concepts, methods, and current practice of software engineering. The study of large-scale software production; software life cycle models as an organizing structure; principles and techniques appropriate for each stage of production. Laboratory work involves a project illustrating these elements. Prerequisite: ICS 23 with a grade of C or better. Only one course from ICS 52, ICS 105, and Informatics 43 may be taken for credit.

60 Computer Games and Society (4). The study and critical analysis of computer games as art objects, cultural artifacts, gateways to virtual worlds, educational aids, and tools for persuasion and social change. Emphasis on understanding games in their historical and cultural context. ICS 60 and University Studies 12A-B-C may not both be taken for credit. (III)

61 Game Systems and Design (4). Principles and usage of game design elements. Introduction to technologies that support modern computer games. Students design, implement, and critique several small games. (II)

62 Game Technologies and Interactive Media (4). Technologies for interactive media and game design. Web-based software systems, virtual world platforms, and game engines. Emphasis on conceptual and architectural aspects of these technologies. Prerequisites: ICS 21/CSE21 or Informatics 41, with a grade of C or better.

65 Advanced Programming with C++ (4). An introduction to the C++ language for experienced Java programmers. Emphasis on object-oriented design and using standard libraries. Prerequisite: ICS 23 or Informatics 45 or one year of Java programming.

77A, B, C, D Topics in Mathematics and Computation in the Digital Age. Lecture, three hours; laboratory, two hours. Corequisite: Mathematics 2J or 6G, or consent of instructor. Prerequisites: Mathematics 2A-B; ICS 21/CSE21 or Informatics 41 or consent of instructor. First- and second-year students only.

77A Introduction to Signal Processing (4). Signals in MATLAB; blurring, mixing, filtering; elements of linear algebra, statistics, optimization; blind matrix inversion; de-correlation method, stochastic gradient descent method, applications to sounds and images. Same as Mathematics 77A. (II or V)

77B Introduction to Collaborative Filtering (4). Basic concepts of collaborative filtering; clustering; matrix factorization and principal components analysis; regression; classification; naive Bayes classifier, decision trees, Perceptron (neural networks). Same as Mathematics 77B. (II or V)

77C Introduction to Image Processing (4). Image de-noising, de-blurring, low pass filtering; image segmentation and classification; sparse representation; visualization. Same as Mathematics 77C. (II or V)

77D Introduction to Game Simulation and Analysis (4). Combinatorial Game Theory—game classification, tree graphs, strategy analysis, Sprague Grundy functions, Bouton's Theorem; Zero-Sum and General-Sum Game Theory—payoff matrices, Minimax Theorem, Nash equilibrium; machine learning—search algorithms. Same as Mathematics 77D. (II or V)

80 Special Topics in Information and Computer Science (2 to 4). May be repeated for credit if title or topic varies.

90 ICS: The First-Year Seminar (1). Introduces students to the Donald Bren School of Information and Computer Sciences. Activities focus on advising students making the transition to UCI, community building, and mostly surveying the technical areas within departments in ICS, via talks by faculty on their research. Pass/Not Pass only.

93 Strategies for Success in ICS (0). Develops students' study skills for ICS and general education requirement courses through instruction, small group activities, and application assignments. Topics include goal setting, note taking, text reading, examination preparation, memory and concentration, and problem solving. Two units of workload credit only. Pass/Not Pass only.

UPPER-DIVISION

105 Digital Information Systems (4). Design and analysis of digital information systems. Covers underlying database and network technology, and software engineering principles used to build these systems. Evaluating digital information systems, and recognizing common flaws and vulnerabilities. Prerequisite: one of the following with a grade of C or better: ICS 10, ICS/CSE21, ICS H21, Informatics 41. Only one course from ICS 52, ICS 105, and Informatics 43 may be taken for credit.

139 Critical Writing on Information Technology (4). Study and practice of critical writing and oral communication as it applies to information technology. Each student writes assignments of varying lengths, totaling at least 4,000 words. Prerequisite: satisfactory completion of the lower-division writing requirement; upper-division standing.

160 Game Engines and Hardware (4). Principles of computer architecture emphasizing hardware used with a general purpose processor to support high-performance computer games and graphics engines. Design of game engines and abstraction layers for this hardware. Prerequisite: ICS 51.

161 Game Engine Lab (4). The use of an industry standard game engine in the design and implementation of a new computer game. Principles of game engine design. Students work on a team to design, implement, and evaluate a new computer game based on an engine. Prerequisites: ICS 65 and ICS 160.

162 Modeling and World Building (4). Use of 3D modeling software and related tools to design and create animated, textured models and expansive virtual worlds incorporating objects, scenes, and venues for activity within game worlds and online environments. Prerequisite: ICS 160.

163 Mobile and Ubiquitous Games (4). Design and technology of mobile games, including mixed reality gaming, urban games, and locative media. Case studies of significant systems. Uses and limitations of location-based technologies. Infrastructures and their relationships to gameplay and design. Prerequisite: ICS 160.

167 Multiplayer Game Systems (4). Foundations and technologies that enable multiuser, networked, and persistent virtual environments. Emphasis on database design and management, network protocols, and concurrency control to accommodate large numbers of simultaneous users. Prerequisite: ICS 160.

168 Multiplayer Game Project (4). Designing and implementing a multi-user, networked, and persistent virtual environment or game. Emphasis on cultural aspects, community building, user interface issues and design, security, privacy, and economics. Prerequisites: ICS 52 with a grade of C or better; ICS 167.

169A-B Capstone Game Project I, II (4-4). Students work in teams to design and implement a new computer game or virtual world. Emphasis on sound, art, and level design, building a community, cut scenes, production values, full utilization of hardware and software platform, and current industry trends. Prerequisites: ICS 167 and 168. In-progress grading for ICS 169A.

192 Industrial or Public Sector Field Study (2). Students participate in an off-campus, supervised internship for a minimum of 60 hours. Students apply classroom knowledge through internship projects in the private sector or non-profit agencies. Prerequisite: approval of the ICS Associate Dean of Student Affairs. Pass/Not Pass only. May be taken for credit two times.

H197 Honors Seminar (2). An overview of computer science and selected recent trends in research. Students attend talks on current faculty research, with opportunities for discussion. Prerequisite: participation in the Bren School of ICS Honors Program or Campuswide Honors Program. Pass/Not Pass only.

GRADUATE

270 CCAST Interdisciplinary Theory Seminar: Special Topics (4). Counterposes technological discourses with fine arts discourses and practices, with a focus on historical contextualization, utilizing critical theory and science and technology studies perspectives. Topics vary and are not repeated in any three-year period. May be repeated for credit as topics vary.

271 CCAST Studio/Laboratory: Interactive Installation and Performance Design Workshop (4). Designing persuasive spatialized interactive experiences: spatially and temporally distributed narratives. User-system relationships. "Freedom" in interaction: authoriality and control. Audience and the spect-actor. Sensors, behavior logics, and multi-modal output. Machine learning and autopedagogic systems. Training in relevant technologies. May be taken twice for credit.

272 CCAST Studio/Laboratory: Games and Algorithmic Systems in Literature and the Arts (4). Explores the cultural tradition of the game and game play with particular reference to the automation of games in computational systems and the close relation between gaming, improvisation, hypertext, and interactive art. Game programming techniques and projects. May be taken twice for credit.

273 CCAST Studio/Laboratory: Spatial Interaction: Sensors and Input/Output (4). Designing and building sensor and effector systems for cultural applications. Sensors, sensor combinations, sensor data collection and interpretation, input/output techniques and devices.

274 CCAST Studio/Laboratory: Real Space Interaction (4). Designing and building machine artworks, motion control, mechatronic, animatronic, and mobile robotic projects. Mechanics, electromechanics, electronics, microcontrollers, motor control. Aesthetic-critical as well as technical aspects subject to assessment.

275 CCAST Studio/Laboratory: Cultural Practice in Immersive Media (4). Examines and moves beyond existing paradigms of virtuality. Sensor and input devices, their logics and limitations. Embodied and symbolic interaction. Panoramic and stereoscopic image technologies. Stereoscopic graphics and spatialized sound. Technical components and their integration. Collaborative projects.

276 CCAST Studio/Laboratory: Telematic Performance and Teleoperative Art (4). Art and performance projects utilizing real time and quasi-real time distance interaction. Synchronous performance and distributed choreography. Network technologies and protocols. Speed, bandwidth, latency. Web-based technologies. Video and sound. Teleoperation/remote machine control. Same as Dance 276.

277 CCAST Studio/Laboratory: Special Topics (4). Focuses on currently emerging technologies, techniques, and cultural and critical issues. May be repeated for credit as topics vary.

278 CCAST Thesis Research (4 to 12). Independent research for thesis and thesis project. May be taken for a total of 36 units.

279 Special Topics in Critical Practices in Art, Science and Technology (4). Prerequisites vary. May be repeated for credit as topics vary.

398A Teaching Assistant Training Seminar (2). Theories, methods, and resources for teaching computer science at the university level, particularly by teaching assistants. Classroom presentations, working with individuals, grading, motivating students. Participants will give and critique presentations and may be videotaped while teaching. Satisfactory/Unsatisfactory only.

398B Advanced Teaching Assistant Seminar (4). Teaching computer science at the university level, emphasizing issues in teaching an entire course. Course organization, designing examinations and projects, grading, motivating students. Participants will begin to assemble teaching portfolios. Satisfactory/Unsatisfactory only. Prerequisite: ICS 398A or consent of instructor.

399 University Teaching (4). Involves on-the-job experience for Teaching Assistants. Limited to and required of Teaching Assistants.

DEPARTMENT OF COMPUTER SCIENCE

3019 Donald Bren Hall; (949) 824-0016

Sandy Irani, **Department Chair**

Gene Tsudik, **Department Vice Chair**

Faculty

James Arvo: Computer graphics, global illumination, human-computer interaction

Pierre Baldi: Bioinformatics, machine learning

Lubomir Bic: Parallel and distributed computing, mobile agents

Elaheh Bozorgzadeh: Design automation and synthesis for embedded systems, VLSI CAD, and reconfigurable computing

Michael Carey: Database systems, information integration, service-oriented computing

Rina Dechter: Complexity of automated reasoning models, constraint-based reasoning, distributed connectionist models, causal models, probabilistic reasoning

Michael Dillencourt: Computational geometry, analysis of algorithms, data structures

Nikil Dutt: Design modeling, languages and synthesis, CAD tools, computer architecture

Magda El Zarki: Telecommunications, networks, wireless communication, video transmission

David Eppstein: Analysis of algorithms, computational geometry, graph theory

Julian Feldman: Management of computing resources; problems involved in managing the computer resources of an organization, including resource allocation and financing organizations; the teaching of programming, and development of techniques which will facilitate the learning of programming

Charles Fowlkes: Artificial Intelligence, automated reasoning, machine learning, data mining, biomedical informatics, computational biology

Michael Franz: Programming languages and their implementation; extensible systems; software architectures, component-ware and portable software that migrates across computer networks

Daniel Frost: Artificial intelligence, software engineering, computer graphics, teaching of programming

Tony Givargis: Embedded systems, platform-based system-on-a-chip design, low-power electronics

Michael Goodrich: Computer security, algorithm design, data structures, Internet algorithmics, geometric computing, graphic drawing

Richard Granger: Computational and cognitive neuroscience
 Ian Harris: Hardware/software covalidation, manufacturing test
 Wayne Hayes: High-performance scientific computing, dynamical systems and chaos, applied mathematics, graph theory, optimization
 Daniel Hirschberg: Analysis of algorithms, concrete complexity, data structures, models of computation
 Alexander Ihler: Artificial intelligence, automated reasoning, machine learning, data mining
 Sandy Irani: Analysis of algorithms; online algorithms; graph theory and combinatorics
 Norman Jacobson: Computer science education, ethics in computing, forensic computing
 Ramesh C. Jain: Computer vision, media information systems, experimental environments
 Stanislaw Jarecki: Cryptography, security, fault-tolerant distributed computing
 Scott Jordan: Pricing and differentiated services in the Internet, resource allocation in wireless multimedia networks, and telecommunications policy
 David G. Kay: Computer law, computer science education
 Dennis Kibler: Machine learning, genomic analysis
 Alfred Kobsa: User modeling, human-computer interaction, artificial intelligence, cognitive science, interdisciplinary computer science
 Richard Lathrop: Modeling structure and function, machine learning, intelligent systems and molecular biology, protein structure/function prediction
 Chen Li: Database systems, data integration, multimedia information systems, Web-based database systems, semi-structured data systems
 George Lueker: Computational complexity; probabilistic analysis of algorithms; data structures
 Aditi Majumder: Computer graphics and visualization, large area displays, human-computer interaction
 Gopi Meenakshisundaram: Geometry and topology for computer graphics, image-based rendering, object representation, surface reconstruction, collision detection, virtual reality, telepresence
 Sharad Mehrotra: Multimedia information systems, multidimensional databases, uncertainty processing in databases, data structures, information retrieval, distributed databases, workflow automation
 Eric Mjolsness: Neural networks, computational biology, bioinformatics, artificial intelligence, machine learning
 Alexandru Nicolau: Architecture, parallel computation, and programming languages and compilers
 Richard Pattis: Microworlds for teaching programming, debugging, computational tools for non-computer scientists
 Deva Ramanan: Artificial intelligence: automated reasoning, machine learning, data mining; large-scale data analysis: information access and management, databases, information infrastructure; computer graphics, visualization, digital arts
 Amelia Regan: Operations research, large-scale network optimization, vehicular ad hoc networks
 Isaac Scherson: Parallel computing architectures, massively parallel systems, parallel algorithms, complexity, orthogonal multiprocessing systems
 Padhraic Smyth: Statistical pattern recognition, automated analysis of large data sets, applications of probability and statistics to problems in artificial intelligence
 Tatsuya Suda: Computer networks; distributed systems; performance evaluation
 Shannon Tauro: Embedded computer systems
 Gene Tsodik: Security and cryptography, networks and operating systems
 Alexander Veidenbaum: Computer architecture, interconnection networks, compilers, embedded systems
 Nalini Venkatasubramanian: Parallel and distributed systems, multimedia servers and applications, internetworking, high-performance architectures, resource management
 Max Welling: Statistical machine learning and probabilistic inference with applications to pattern recognition and computer vision
 Xiaohui Xie: Artificial intelligence, automated reasoning, machine learning, data mining, biomedical informatics, computational biology

Affiliated Faculty

Nader Bagherzadeh: Parallel processing, computer architecture, computer graphics, VLSI design
 Pai Chou: Hardware/software co-design, embedded systems, component-based design, specification methodology, interface synthesis, real-time systems

Paul Dourish: Human-computer interaction, computer-supported cooperative work
 Daniel Gajski: Computer and information systems, software/hardware codesign, algorithms and methodologies for embedded systems, CAD environments, science of design
 Jean-Luc Gaudiot: Parallel processing, computer architecture, processor architecture
 Fadi Kurdahi: VLSI system design, design automation of digital systems
 Cristina Videira Lopes: Programming languages, acoustic communications, operating systems, software engineering
 Alice Silverberg: Theory of abelian varieties, application of arithmetic algebraic geometry to cryptography
 Mark Steyvers: Computational models of memory, reasoning, and perception
 Hong-Kai Zhao: Computational applied mathematics

Undergraduate Major in Biomedical Computing

Biomedical Computing (BMC) is the intersection of computer science and information technology with biology and medicine. The immense growth and impact of biomedical information has led to a critical need for people who can understand the languages, tools, and techniques of both life sciences and computational sciences. The Biomedical Computing program aims to create a new generation of professionals with these complementary cross-disciplinary skills.

The degree program in Biomedical Computing will (1) provide students with a solid foundation in computer science, quantitative methods, and biomedical computing; (2) introduce students to biomedical computing problems and the corresponding computer science perspective; (3) teach students the fundamental principles, methods, and technologies for addressing these problems; and (4) provide students with extensive practice in biomedical computing.

In the lower-division program, students acquire a firm quantitative grounding in mathematics, statistics, and computation; become familiar with the basic foundations of physics and chemistry; and learn the fundamentals of molecular biology from a computational perspective. In the upper-division program, students take a year-long Biomedical Computing sequence; study theory, algorithms, data mining, and machine learning; and take several quantitative and biological electives. The year-long immersive capstone Senior Project unifies theory and practice as applied to an intensive and meaningful real-world biomedical computing problem. By the end of the four-year degree program students will have mastered the theory, context, application, and practice of Biomedical Computing.

Students who complete the major requirements will be able to do the following: synthesize computer science, quantitative methods, and biological science; understand the synergistic set of reciprocal influences between life and computational sciences and technologies; discuss biomedical computing problems and corresponding computer science perspectives; employ principles, methods, and technologies fundamental to biomedical computing; and design and develop software that solves biomedical computing problems.

Career Paths. Graduates have considerable opportunities in the employment sector. The combined health care and biomedical industry is the nation's largest industrial sector, and computational methods increasingly play a driving role. For example, in the fast-paced pharmaceutical or biotechnology industries, the highest projected recruiting demand is for medical, biological, and computer research personnel. Students also would flow easily into many different graduate degree programs.

ADMISSIONS**Freshmen Applicants:**

Completion of four years of mathematics through at least the pre-calculus level. Students should have strong reading, writing, and math skills including critical, logical thinking. Course work in computer science or computer programming is not expected of incoming students.

Transfer Applicants:

Applicants who satisfactorily complete course requirements will be given preference for admission. Applicants must satisfy at least the following minimum requirements:

1. Completion of one year of approved college-level math, preferably courses in calculus equivalent to UCI's Mathematics 2A-B; if not available, two semester courses equivalent to other major-related math courses are acceptable.
2. Completion of one year of transferable computer science courses* involving concepts such as those found in Java, Scheme, C++, or other object-oriented or high-level programming language.
3. Completion of one year of calculus-based physics and corresponding labs covering at least the concepts of units, vectors, motion, force, energy momentum, rotation, gravity, electricity and magnetism.
4. Completion of an introductory biology course covering at least the concepts of genetics, replication and expression of DNA, cell division, gene transmission, mutation, and recombination in diploid organisms.

Knowledge of basic concepts in molecular biology is also highly recommended.

*NOTE: Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Transfer students must enter UCI with knowledge of Java since it is used in many of the lower-division Biomedical Computing requirements and serves as a foundation for upper-division programming-related courses.

Additional courses beyond those required for admission must be taken to fulfill the lower-division degree requirements, as many are prerequisites for upper-division courses. For some transfer students, this may mean that it will take longer than two years to complete their degree. Knowledge of basic concepts in molecular biology is also highly recommended.

REQUIREMENTS FOR THE B.S. DEGREE IN BIOMEDICAL COMPUTING

University Requirements: See pages 54–61.

Major Requirements

Lower-division (some or all of these are prerequisites for required upper-division courses):

- A. ICS 21, ICS 22, ICS 23, ICS 51, and ICS 52.
- B. Mathematics 2A-B, Mathematics 2D, Mathematics 6G or 3A, ICS 6B, ICS 6D, and Statistics 67.
- C. Physics 7C, 7LC and Physics 7D, 7LD.
- D. Chemistry 1A-B and Chemistry 1LE.
- E. Biological Sciences 9C, 93, 94, and 97 (students may substitute one additional biology elective from the list in Upper-Division section A below, not already used to satisfy a degree requirement of the major, for Biological Sciences 9C).

Upper-division:

- A. CS 183/Biological Sciences M123 and one biology elective from the following list: Biological Sciences N110, M133, D137, D155, or E153.
- B. Three quantitative electives from the following list: CS 121/ Informatics 141, CS 122A, CS 122B, CS 163, CS 169, CS 171, CS 177, Informatics 111, Informatics 115, Informatics 131, Informatics 143, Informatics 161, Informatics 171, Statistics 110, Mathematics 3D, Mathematics 13, Biomedical Engineering 110A-B-C, Biomedical Engineering 145, Biomedical Engineering 146.
- C. CS 161, CS 178, CS 184A, CS 184B, CS 184C, CS 189A-B-C.

Major and minor restrictions: See pages 342–343.

Sample Program of Study — Biomedical Computing

Minor in Biomedical Computing

The minor provides a focused study of biomedical computing to supplement a student's major program of study and prepares students for a profession, career, or academic pursuit in which biomedical computing is an integral part but is not the primary focus. The Biomedical Computing minor contributes to students' competence in computing applied to biomedical problems and data, as well as exposing them to the fundamentals of the life sciences from a computer science perspective. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests.

Students who complete the minor requirements will be able to do the following: synthesize computer science, quantitative methods, and biological science; understand the synergistic set of reciprocal influences between life and computational sciences and technologies; discuss biomedical computing problems and corresponding computer science perspectives; and employ principles, methods, and technologies fundamental to biomedical computing.

Requirements for the Minor: ICS 21, ICS 22, ICS 23; Biological Sciences 9C, 93, 94; CS 183/Biological Sciences M123, CS 184A, CS 184B, and CS 184C.

Undergraduate Major in Computer Science

The Computer Science major emphasizes the principles of computing that underlie our modern world, and provides a strong foundational education to prepare students for the broad spectrum of careers in computing. Students receive a balance of knowledge in low-level architecture and systems; middle-level infrastructure such as programming languages, databases, and networks; and high-level topics such as artificial intelligence, computer graphics, and network security. Subsequent courses allow students to concentrate in one or more such directions. This major can serve as preparation for either graduate study or a career in industry.

The Department also offers a joint undergraduate degree in Computer Science and Engineering, in conjunction with The Henry Samueli School of Engineering; information is available in the Interdisciplinary Studies section of the *Catalogue*.

ADMISSIONS

Freshman Applicants: See pages 33–36.

Transfer Applicants:

Junior-level applicants who satisfactorily complete course requirements will be given preference for admission. Applicants must satisfy the following requirements:

1. Complete one year of approved college-level math, preferably courses in calculus equivalent to UCI's Mathematics 2A-B; if not available, two semester courses equivalent to other major-related math courses are acceptable.
2. Completion of one year of transferable computer science courses* with at least one course involving concepts such as those found in Java, Scheme, C++, or other object-oriented or high-level programming language.

*NOTE: Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing a Java-related programming course prior to their first quarter at UCI.

Additional courses beyond those required for admission must be taken to fulfill the lower-division degree requirements, as many are prerequisites for upper-division courses. For some transfer students, this may mean that it will take longer than two years to complete their degree.

REQUIREMENTS FOR THE B.S. DEGREE IN COMPUTER SCIENCE

University Requirements: See pages 54–61.

Major Requirements

Lower-division (some or all of the items listed in A and B are prerequisites for required upper-division ICS courses):

- A. Mathematics 2A-B, ICS 6B, ICS 6D, Mathematics 6G or 3A, Statistics 67, Philosophy 29 or 30 or Mathematics 13.
- B. ICS 21, 22, 23, 51, 52.
- C. A science sequence chosen from Physics 3A-B-C and 3LB-LC; Physics 2, 7C and 7D or 7E with corresponding laboratories; or Chemistry 1A-B-C and 1LC-LD or Chemistry H2A-B-C and H2LA-LB-LC.

Upper-division:

- A. ICS 139.
- B. *CS Core requirements:* CS 132; CS 141; CS 142A; CS 143A; CS 151; CS 152; CS 161*; one of CS 162, 163, 164, 167, 168, or 169; CS 171.

C. Three project courses selected from the following list: CS 113, CS 114, CS117, CS 122B, CS 133, CS 142B, CS 143B, CS 153, CS 154, CS 165, CS 175, and Informatics 117.

D. Eight additional upper-division units selected from the following list: CS 111–189, Informatics 102, 111, 113, 115, 117, 118A, 118B, 119, 123, 125, 131, 132, 141, 153, 161, 162, and 163.

No course may be counted toward more than one of the above categories.

*CS majors must enroll in CS 161 no later than the second quarter after they have earned 90 units.

Major and minor restrictions: See pages 342–343.

NOTE: CS upper-division core, project, and elective requirements may be satisfied by specific Computer Science and Informatics courses. See the requirements listed above.

Undergraduate Major in Computer Science and Engineering (CSE)

This program is administered jointly by the Department of Computer Science in the Bren School of ICS, and the Department of Electrical Engineering and Computer Science (EECS) in The Henry Samueli School of Engineering. For information, see the Interdisciplinary Studies section of the *Catalogue*, page 371.

REQUIREMENTS FOR THE B.S. DEGREE IN COMPUTER SCIENCE AND ENGINEERING

University Requirements: See pages 54–61.

Major Requirements: See page 371 in the Interdisciplinary Studies section of the *Catalogue*.

Graduate Program in Computer Science

The field of Computer Science is concerned with the design, analysis, and implementation of computer systems as well as the use of computation as it is applied to virtually every field of study and use in the everyday world. Computer systems can range in scope from small embedded systems to the Internet as a whole. Research in computer science involves mathematical analysis, empirical experimentation, and the implementation of prototype systems. Core

research areas include artificial intelligence and machine learning, bioinformatics, computer architecture, embedded systems, graphics and visual computing, databases and information management, multimedia, networked and distributed systems, programming languages and compilers, security and cryptography, design and analysis of algorithms, scientific computing, and ubiquitous computing.

The M.S. and Ph.D. degrees in Computer Science (CS) are broad and flexible programs which offer students opportunities for graduate study in the full spectrum of intellectual activity in computer science.

MASTER OF SCIENCE IN COMPUTER SCIENCE

The course requirements for the M.S. are identical to those of the Ph.D., although completion plans differ. See page 347 for additional information about the M.S. completion plan options.

See page 347 for additional information about the Bren School of ICS's graduate programs and general information about admissions.

DOCTOR OF PHILOSOPHY IN COMPUTER SCIENCE

Required Courses

Each student must complete at least 47 units with an average GPA of 3.5 and at least a B in each course. The set of core and elective courses chosen by a student must be approved by the student's research advisor before advancement to candidacy. Faculty associated with each research area will provide suggested curricula for that area to guide students in their selection of courses. These curricula will also help Ph.D. students to prepare for their candidacy examination (see below) which must be taken in a specific research area.

Students must complete three quarters of CS 200S, four core courses, and seven elective courses. The course requirements are as follows:

Students must select four areas from the list of seven areas given below. From each area, they must select at least one of the courses listed for that area.

<i>Area</i>	<i>Core Courses</i>
1. Data Structures and Algorithms:	CS 260, CS 261 or CS 263
2. Architecture/Embedded Systems:	CS 250A or CS 244
3. System Software:	CS 241, CS 243 or CS 230
4. Artificial Intelligence:	CS 271 or CS 273A
5. Networks/Multimedia:	CS 232, CS 203 or CS 212
6. Database Systems:	CS 222 or CS 223
7. Scientific and Visual Computing:	CS 206 or CS 211A

Seven elective courses from any set of CS, Informatics, or Statistics courses, including the above core courses, but excluding CS 290, 298, 299, or any course with a suffix of "S."

Two of these courses can be graduate courses offered by a department outside of ICS, with written consent of the advisor (M.S. students must obtain written consent from the Computer Science Vice Chair for Graduate Studies).

No more than two CS 295s may be taken to satisfy elective course requirements.

Ph.D. students are required to serve as teaching assistants for at least two quarters.

Research Project for the Ph.D. Degree

Doctoral students must find a faculty advisor and successfully complete a research project with that faculty member by the end of their second year. In coordination with this project the student must also take at least one independent studies course (CS 299) with their faculty advisor. The objective of the research project is to demonstrate early in the program the student's ability to carry out basic research in computer science.

Finally, the student must present the outcome of the research in a technical report, which must be approved by the advisor. The project may or may not be a stepping-stone toward a dissertation, and must be completed by the end of the second year, and prior to advancement to candidacy.

Advancement to Candidacy Examination

The objective of the candidacy examination is to demonstrate in-depth knowledge of an area of computer science and readiness to carry out independent research at the doctoral level in that area. The student must complete all pre-candidacy course requirements and the research project prior to advancing to candidacy. All requirements for candidacy including the candidacy examination must be completed by the end of the third year (or, for students entering the program with an M.S. in Computer Science, by the end of the second year). If the student does not pass on the first trial, the student will be allowed until the end of the first quarter of the fourth year to advance to candidacy. Consult the ICS Graduate Office for policies regarding committee membership. The format is an oral examination during which the student is tested on knowledge relevant to the chosen area of specialization. Each area is defined by a set of topics and reading list, which are maintained by the Computer Science Department office. New areas or changes to existing areas must be approved by a majority vote of the CS faculty in accordance with the Department's bylaws. The current areas include the following: Algorithms and Data Structures; Computer Architecture and Embedded Systems; Database Systems and Multimedia; Computer Networks; Distributed Systems; Artificial Intelligence and Machine Learning; Informatics in Biology and Medicine; Computer Graphics and Visual Computing; Cryptography and Computer Security; Computational Neuroscience; Scientific Computing; Systems Software.

The examination is graded pass or fail. In order to pass, the Candidacy Committee must unanimously approve the final outcome. In the case of a fail, the examination may be retaken once. Students who fail on the second try will be recommended for disqualification from the doctoral program.

Doctoral Dissertation Topic Defense

The student must produce a substantial written document representing the dissertation plan. This must include the proposed dissertation abstract, a dissertation outline, and a detailed plan for completing the work. A dissertation defense committee is formed in accordance with UCI Senate regulations. The dissertation committee must unanimously approve the student's proposal. At the discretion of the student's advisor, the student may be required to give an oral presentation of the proposed plan to the committee. This must be completed by the end of the fourth year. It is expected that this will be done at least a year prior to the final examination and before most of the dissertation research and writing are undertaken. The idea is for students to demonstrate that they have a clear plan for carrying out the research for their dissertation. It also gives the student an understanding of what will be expected for final approval of the dissertation.

Doctoral Dissertation and Final Examination

Ph.D. students are required to complete a Ph.D. dissertation in accordance with Academic Senate regulations. In addition, they must pass an oral dissertation defense which consists of a public seminar presenting results followed by a private examination by the doctoral committee and other interested members of the Computer Science Department faculty.

Students entering the Ph.D. program with an M.S. in Computer Science must advance to candidacy within two years. All others must advance within three years. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Graduate Program in Mathematical and Computational Biology

The graduate program in Mathematical and Computational Biology (MCB) is a one-year “gateway” program designed to function in concert with selected graduate programs, including the Ph.D. in Computer Science. The time to degree for students entering the Ph.D. program in Computer Science from MCB begins when the student first transfers to the Computer Science program. Detailed information is available online at <http://mcsb.bio.uci.edu/> and in the School of Biological Sciences section of the *Catalogue*, page 151.

Courses in Computer Science

(*Schedule of Classes* designation: **CompSci**)

UPPER-DIVISION

111 Digital Image Processing (4). Introduction to the fundamental concepts of digital signal and image processing as applicable in areas such as multimedia, graphics, AI, data mining, databases, vision, or video games. Topics include image representation, space- and frequency-domain transformations, filters, segmentation, and compression. Prerequisites: ICS 23/CSE23, ICS 6D, and Mathematics 6G or 3A with grades of C or better.

112 Computer Graphics (4). Introduction to the fundamental principles of 3D computer graphics including polygonal modeling, geometric transformations, visibility algorithms, illumination models, texturing, and rasterization. Use of an independently-learned 3D graphics API to implement these techniques. Prerequisites: ICS 22/CSE22 or ICS H22 and Mathematics 6G or 3A, each with a grade of C or better.

113 Computer Game Development (4). Introduction to the principles of interactive two- and three-dimensional computer game development. Concepts in computer graphics, algorithms, software engineering, art and graphics, music and sound, story analysis, and artificial intelligence are presented and are the basis for student work. Prerequisite: either CS 112, CS 171, Informatics 121, Studio Art 135, or consent of instructor. Same as Informatics 125.

114 Projects in Advanced 3D Computer Graphics (4). Projects in advanced 3D graphics such as illumination, geometric modeling, visualization, and animation. Topics may include physically based and global illumination, solid modeling, curved surfaces, multiresolution modeling, image-based rendering, basic concepts of animation, and scientific visualization. Prerequisites: CS 112 or equivalent; ICS 65 or consent of instructor; recommended: CS 161/CSE161, CS 164, CS 165.

115 Computer Simulation (4). Discrete event-driven simulation; continuous system simulation; basic probability as pertaining to input distributions and output analysis; stochastic and deterministic simulation; static and dynamic system simulation. Prerequisites: ICS 6B, Mathematics 6G, Statistics 67, ICS 51, and either ICS 52 or Informatics 43, all with grade of C or better; upper-division standing.

116 Computational Photography and Vision (4). Introduces the problems of computer vision through the application of computational photography. Specific topics include photo-editing (image warping, compositing, hole filling), panoramic image stitching, and face detection for digital photographs. Prerequisites: ICS 6D, Mathematics 6G or 3A, Mathematics 2A-B, ICS 23.

117 Project in Computer Vision (4). Students undertake construction of a computer vision system. Topics may include automatically building 3D models from photographs, searching photo collections, robot navigation, and human motion tracking. Prerequisite: CS 116 or consent of instructor.

121 Information Retrieval (4). An introduction to information retrieval including indexing, retrieval, classifying, and clustering text and multimedia documents. Prerequisites: ICS 23/CSE23/ICS H23 or Informatics 43; Statistics 7 or 67. Same as Informatics 141.

122A Introduction to Data Management (4). Introduction to the design of databases and the use of database management systems (DBMS) for applications. Topics include entity-relationship modeling for design, relational data model, relational algebra, relational design theory, and Structured Query Language (SQL) programming. Prerequisites: one from ICS 22, ICS H22, or Informatics 42, or EECS114, with a grade of C or better. Recommended: one or both of ICS 23/CSE23 or ICS H23, and Informatics 45. Same as Engineering EECS116.

122B Project in Databases and Web Applications (4). Introduces students to advanced database technologies and Web applications. Topics include but are not limited to database connectivity (ODBC/JDBC), extending databases using stored procedures, database administration, Web servers, Web programming languages (Java servlets and Ruby on Rails), XML, and Ajax. Prerequisite: CS 122A/EECS116.

125 Next Generation Search Systems (4). Discusses concepts and techniques related to all aspects of search systems. After considering basic search technology and the state-of-art systems, rapidly developing techniques for multimedia search, local search, event-search, and video-on-demand are explored. Prerequisites: ICS 21/CSE 21 or Informatics 41 or consent of instructor; upper-division standing. Concurrent with CS 225.

131 Distributed Computing (4). Introduction to systems implemented within network-based computer architectures. Issues in distributed programming, operating systems, and applications. Specific topics covered include programming constructs, timing/coordination problems, data/service replication, transactions/concurrency control, fault-tolerance, recovery, file systems, security. Prerequisite: CS 141/CSE141/Informatics 101. Recommended: CS 132.

132 Computer Networks (4). An introductory course on computer network architectures. Layering approach of communication protocols is introduced, and the function of each layer is explained. Various examples are shown from long-haul networks and local area networks to B-ISDN and high speed networks. Prerequisites: ICS 23/CSE23 or ICS H23 with a grade of C or better; ICS 51 with a grade of C or better, or CSE132/EECS112; ICS 6D; ICS 6B; Statistics 67.

133 Advanced Computer Networks (4). Fundamental principles in computer networks are applied to obtain practical experience and skills necessary for designing and implementing computer networks, protocols, and network applications. Various network design techniques, simulation techniques, and UNIX network programming are covered. Prerequisite: CS 132 or equivalent, or consent of instructor.

134 Computer and Network Security (4). Overview of modern computer and networks security, attacks, and countermeasures. Authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Also covers secure e-commerce and applications of public key methods, digital certificates, and credentials. Prerequisites: ICS 6D; ICS 22/CSE22 or Informatics 42; and one from CS 122A/EECS 116, CS 132, or CS 143A/CSE104.

137 Internet Applications Engineering (4). Concepts in Internet applications engineering with emphasis on the Web. Peer-to-Peer and Interoperability. Topics include HTTP and REST, Remote Procedure/Method Calls, Web Services, data representations, content distribution networks, identity management, relevant W3C/IETF standards, and relevant new large-scale computing styles. Prerequisites: CS 132 or consent of instructor, and upper-division standing. Same as Informatics 124.

141 Concepts in Programming Languages I (4). In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style. Prerequisites: Informatics 42 or ICS 51 or CSE31/EECS31 with a grade of C or better, and Informatics 45 or ICS23/CSE23 with a grade of C or better. Same as CSE141/Informatics 101.

142A Compilers and Interpreters (4). Introduction to the theory of programming language processors covering lexical analysis, syntax analysis, semantic analysis, intermediate representations, code generation, optimization, interpretation, and run-time support. Prerequisite: CS 141/CSE141/Informatics 101. Same as CSE142. Formerly ICS 142.

142B Language Processor Construction (4). Project course which provides working laboratory experience with construction and behavior of compilers and interpreters. Students build actual language processors and perform experiments which reveal their behaviors. Prerequisite: CS 142A/CSE142.

143A Principles of Operating Systems (4). Principles and concepts of process and resource management, especially as seen in operating systems. Processes, memory management, protection, scheduling, file systems, and I/O systems are covered. Concepts illustrated in the context of several well-known systems. Prerequisites: ICS 23/CSE23, and ICS 51 or EECS31/CSE31 with grades of C or better. Same as CSE104. Only one course from CS 143A/CSE104 and EECS111 may be taken for credit.

143B Project in Operating System Organization (4). Detailed specification and design of critical components of an actual operating system including a memory manager, a process server, and a file/IO subsystem. Hardware/software tradeoffs. Emphasis on logical organization of system and communication. Prerequisite: CS 143A/CSE104.

144 High-Performance Computers and Program Optimization (4). Analyzes the relationship between computer architecture and program optimization. High-performance and parallelizing compilers for RISC, Superscalar, and VLIW architectures are discussed. Prerequisite: ICS 51 with a grade of C or better. Recommended: CS 142A.

145A Embedded Computing Systems (4). Principles of embedded computing systems: embedded systems architecture, hardware/software components, system software and interfacing, real-time operating systems, hardware/software co-development, and communication issues. Examples of embedded computing in real-world application domains. Simple programming using an embedded systems development environment. Prerequisites: ICS 23/CSE23, ICS 51 or CSE31 and CSE132.

145B Embedded Computing System Laboratory (2). Laboratory to accompany CS 145A. Corequisite: CS 145A.

146 Programming in Multitasking Operating Systems (4). User- and systems-level programming of modern Internet-connected, multi-user, multitasking operating systems. Shells, scripting, filters, pipelines, programmability, extensibility, concurrency, inter-process communication. Concrete examples of a modern operating system (such as, but not necessarily, Unix programmed in C) are used. Prerequisites: ICS 23/CSE23 and ICS 51 with grades of C or better. Recommended: CS 143A.

151 Digital Logic Design (4). Boolean algebra. Design/analysis of combinational and sequential systems using SSI/MSI/LSI modules. Number systems. Error detecting and correction codes. Arithmetic algorithms. Hardware/firmware implementation of algorithms. Prerequisites: ICS 23/CSE23 and ICS 51 with grades of C or better; ICS 6B; ICS 6D.

152 Computer Systems Architecture (4). Design of computer elements: ALU, control unit, and arithmetic circuits. Memory hierarchy and organization. Caches. Function unit sharing and pipelining. I/O and interrupt processing. RTL and behavioral modeling using hardware description languages. Microprocessor organization and implementation techniques. Prerequisite: CS 151. Only one course from CS 152, CSE132/EECS112, and CSEH132/EECSH112 may be taken for credit.

153 Logic Design Laboratory (4). Introduction to standard integrated circuits: gates, flip-flops, shift registers, counters, latches. Construction and debugging techniques. Design of digital systems using LSI and MSI components. Practical use of circuits in a laboratory environment, including implementation of small digital systems such as arithmetic modules, displays, and timers. Prerequisite or corequisite: CS 151.

154 Computer Design Laboratory (4). Design of basic computer components and small complete digital systems. Emphasis on practical use of Computer-Aided Design (CAD) tools, modeling of computer systems, and design practices in a laboratory environment. Prerequisite or corequisite: CS 151.

161 Design and Analysis of Algorithms (4). Time and space complexity of algorithms. Models of computation, techniques for efficient algorithm design, effect of data structure choice on efficiency of an algorithm. Fast algorithms for problems such as sorting, set manipulation, graph problems, matrix multiplication, Fourier transforms, and pattern matching. NP-complete problems. Prerequisites: ICS 23/CSE23 and ICS 51 or CSE31/EECS31 with grades of C or better; ICS 6B; ICS 6D; Mathematics 6G or 3A; Mathematics 2B. Same as CSE161.

162 Formal Languages and Automata (4). Formal aspects of describing and recognizing languages by grammars and automata. Parsing regular and context-free languages. Ambiguity, nondeterminism. Elements of computability; Turing machines, random access machines, undecidable problems, NP-completeness. Prerequisites: ICS 23/CSE23 with a grade of C or better; Mathematics 2A-B; ICS 6B; ICS 6D. Same as Linguistics 102.

163 Graph Algorithms (4). Algorithms for solving fundamental problems in graph theory. Graph representations, graph traversal, network flow, connectivity, graph layout, matching problems. Prerequisite: CS 161/CSE161.

164 Computational Geometry and Geometric Modeling (4). Algorithms and data structures for computational geometry and geometric modeling, with applications to game and graphics programming. Topics include convex hulls, Voronoi diagrams, arrangements, algorithms for triangulation, visibility, and motion planning, and data structures for geometric searching and modeling of 2D and 3D objects. Prerequisite: ICS 23/CSE23 or ICS H23 or equivalent.

165 Project in Algorithms and Data Structures (4). Design, implementation, execution, and analysis of algorithms for problems such as sorting, searching, data compression, and data encryption. Time-space-structure trade-offs. Prerequisite: CS 161/CSE161; recommended: ICS 65.

167 Introduction to Applied Cryptography (4). An introduction to the essential aspects of applied cryptography, as it is used in practice. Topics include classical cryptography, block ciphers, stream ciphers, public-key cryptography, digital signatures, one-way hash functions, basic cryptographic protocols, and digital certificates and credentials. Prerequisites: ICS 6D; ICS 22/CSE22 or Informatics 42; CS 161/CSE161 and/or upper-division standing.

168 Network Optimization (4). Network modeling techniques and related algorithms for solving large-scale integer programming problems. Exact methods and heuristic techniques. Applications include computer and communications networks and transportation and logistics networks. Prerequisite: upper-division standing or consent of instructor.

169 Introduction to Optimization (4). A broad introduction to optimization. Unconstrained and constrained optimization. Equality and inequality constraints. Linear and integer programming. Stochastic dynamic programming. Prerequisites: Mathematics 2D, Mathematics 3A or 6G, Statistics 67. Concurrent with CS 268.

171 Introduction to Artificial Intelligence (4). Different means of representing knowledge and uses of representations in heuristic problem solving. Representations considered include predicate logic, semantic nets, procedural representations, natural language grammars, and search trees. Prerequisites: ICS 23; Mathematics 2A-B and Statistics 67.

174 Bioinformatics (4). Introduces fundamental problems in biology that lend themselves to computational approaches. The lectures present the necessary biological background to understand the importance of the problem and the data available for algorithmic analysis. Prerequisites: ICS 21/CSE21, ICS 22/CSE22, and ICS 23/CSE23; CS 171 with a grade of C or better.

175 Project in Artificial Intelligence (4). Construction of a working artificial intelligence system. Evaluation of capabilities of the system including impact of knowledge representation. Prerequisite: CS 171.

177 Applications of Probability in Computer Science (4). Application of probability to real-world problems in computer science. Typical topics include analysis of algorithms and graphs, probabilistic language models, network traffic modeling, data compression, and reliability modeling. Prerequisites: Mathematics 2A-B and Statistics 67; ICS 6B; ICS 6D; and either Mathematics 6G or 3A.

178 Machine Learning and Data Mining (4). Introduction to principles of machine learning and data mining applied to real-world datasets. Typical applications include spam filtering, object recognition, and credit scoring. Prerequisites: ICS 6B, ICS 6D, Mathematics 6G or 3A, Mathematics 2A-B, and Statistics 67.

179 Algorithms for Probabilistic and Deterministic Graphical Models (4). Graphical model techniques dealing with probabilistic and deterministic knowledge representations. Focuses on graphical models, such as constraint networks, Bayesian networks, and Markov networks that have become a central paradigm for knowledge representation and reasoning in artificial intelligence and general computer science. Prerequisites: ICS 23/CSE23; Mathematics 2A-B and Statistics 67.

183 Introduction to Computational Biology (4). The use of theories and methods based on computer science, mathematics, and physics in molecular biology and biochemistry. Basics in biomolecular modeling. Analysis of sequence and structural data of biomolecules. Analysis of biomolecular functions. Prerequisite: Mathematics 2D or 2J or Statistics 7 or 8. Same as Biological Sciences M123. Concurrent with Molecular Biology and Biochemistry 223.

184A Representations and Algorithms for Molecular Biology (4). Introduction to computational methods in molecular biology, aimed at those interested in learning about this interdisciplinary area. Covers computational approaches to understanding and predicting the structure, function, interactions, and evolution of DNA, RNA, proteins, and related molecules and processes. Prerequisite: Biological Sciences M123 or CS 183. Concurrent with CS 284A.

184B Probabilistic Modeling of Biological Data (4). A unified Bayesian probabilistic framework for modeling and mining biological data. Applications range from sequence (DNA, RNA, proteins) to gene expression data. Graphical models, Markov models, stochastic grammars, structure prediction, gene finding, evolution, DNA arrays, single- and multiple-gene analysis. Prerequisite: CS 184A. Concurrent with CS 284B.

184C Computational Systems Biology (4). Computational inference and modeling of gene regulation networks, signal transduction pathways, and the effects of regulatory networks in cellular processes, development, and disease. Introduction of required mathematical, computational, and data handling tools. Prerequisites: CS 184B. Concurrent with CS 284C.

189A-B-C Biomedical Computing Project I, II, III (3-3-3).

189A-B: Teaches problem definition and analysis, data representation, algorithm design, component integration, solution validation, and testability with teams of students specifying, designing, building, and testing a biomedical computing problem. Lectures include engineering values, discussions, and ethical ramifications of biomedical computing issues. Prerequisite: CS 184C. **189C:** Completion, documentation, and presentation of projects started in CS 189A-B. Teaches writing and presentation skills. Students write comprehensive project reports individually. Each student participates in a public presentation of the project's results. Prerequisites: CS 189A-B and satisfactory completion of the lower-division writing requirement. CS 189A-B-C must be taken in the same academic year.

190 Special Topics in Information and Computer Science (4). May be repeated for credit if title or topic varies. Prerequisites vary.

H198 Honors Research (4). Directed independent research in computer science for honors students. Prerequisites: upper-division standing and satisfactory completion of the lower-division writing requirement; participation in the Bren School of ICS Honors Program or Campuswide Honors Program; consent of instructor.

199 Individual Study (2 to 5)

GRADUATE

200S Seminar in Computer Science Research (1). Graduate colloquium series. Includes weekly talks by notable computer scientists. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

201 Foundations of Cryptographic Protocols (4). Explores fundamental cryptographic tools, including encryption, signatures, and identification schemes. Students are introduced to the provable security paradigm of modern cryptography, focusing on understanding of security properties provided by cryptographic tools, and on proving security (or insecurity) of cryptographic constructions. Prerequisites: CS 260 or 263, or consent of instructor.

202 Applied Cryptography (4). Design and analysis of algorithms for applied cryptography. Topics include symmetric and asymmetric key encryption, digital signatures, one-way hash functions, digital certificates and credentials, and techniques for authorization, non-repudiation, authentication, identification, data integrity, proofs of knowledge, and access control. Prerequisites: CS 260 and 263, or consent of instructor.

203 Network and Distributed Systems Security (4). Overview of modern computer and networks security: attacks and countermeasures. Authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Group communication and multicast security techniques. Also covers secure e-commerce and applications of public key methods, digital certificates, and credentials. Prerequisite: CS 132 or EECS148. Same as Networked Systems 240.

206 Principles of Scientific Computing (4). Overview of widely used principles and methods of numerical and scientific computing, including basic concepts and computational methods in linear algebra, optimization, and probability. Prerequisites: basic courses in multivariate calculus, linear algebra, and probability. CS 206 and Statistics 230 may not both be taken for credit.

211A Visual Computing (4). Fundamentals of image processing (convolution, linear filters, spectral analysis), vision geometry (projective geometry, camera models and calibration, stereo reconstruction), radiometry (color, shading, illumination, BRDF), and visual content synthesis (graphics pipeline, texture-bump-, mip-mapping, hidden surface removal, anti-aliasing).

211B Advanced Topics in 3D Computer Graphics (4). Advanced topics in 3D graphics on rendering, geometric modeling, and visualization. Subjects range from illumination and shading, and multiresolution representations, to other advanced algorithms and data structures in graphics. Also looks at trends that go beyond traditional computer graphics. Prerequisites: CS 161, 164, or 211A, and 266.

212 Multimedia Systems and Applications (4). Organization and structure of modern multimedia systems; audio and video encoding/compression; quality of service concepts; scheduling algorithms for multimedia; resource management in distributed and multimedia systems; multimedia protocols over high-speed networks; synchronization schemes; multimedia applications and teleservices. Prerequisites: undergraduate degree in computer science or CS 143A and 161; CS 131, 132, and 133 recommended.

213 Introduction to Visual Perception (4). Introduction to the process of human visual perception. Offers the physiological and psychophysical approach to understand vision, introducing concepts of perception of color, depth, movement. Examples of the quantification and application of these models in computer vision, computer graphics, multimedia, HCI. Prerequisite: Mathematics 121A.

216 Image Understanding (4). The goal of image understanding is to extract useful semantic information from image data. Course covers low-level image and video processing techniques, feature descriptors, segmentation, objection recognition, and tracking. Prerequisites: ICS 6D, Mathematics 6G or 3A, Mathematics 2A-B, ICS 23.

217 Light and Geometry in Computer Vision (4). Examines the issues of light transport and multiview geometry in computer vision. Applications include camera calibration, 3D understanding, stereo reconstruction, and illumination estimation. Prerequisites: ICS 6D, Mathematics 6G or 3A, Mathematics 2A-B, ICS 23, CS 211A.

221 Information Retrieval, Filtering, and Classification (4). Algorithms for the storage, retrieval, filtering, and classification of textual and multimedia data. The vector space model, Boolean and probabilistic queries, and relevance feedback. Latent semantic indexing; collaborative filtering; and relationship to machine learning methods. Prerequisites: B.S. degree in computer science, or CS 161, 171; Mathematics 3A or 6G; and a course in basic probability.

222 Principles of Data Management (4). Covers fundamental principles underlying data management systems. Content includes key techniques including storage management, buffer management, record-oriented file system, access methods, query optimization, and query processing. Prerequisites: CS 122A 131, 143A, and 152.

223 Transaction Processing and Distributed Data Management (4). Covers fundamental principles underlying transaction processing including database consistency, concurrency control, database recovery, and fault-tolerance. Includes transaction processing in centralized, distributed, parallel, and client-server environments. Prerequisite: CS 222.

224 Advanced Topics in Data Management (4). Selected advanced topics in data management. Content differs in each offering and with instructor's interests. Intended for students interested in data management with focus on reading and critiquing recent research papers, presentations, and substantial research projects. Prerequisites: CS 143A, 152, 161, 222, 223, or consent of instructor.

225 Next Generation Search Systems (4). Discusses concepts and techniques related to all aspects of search systems. After considering basic search technology and the state-of-art systems, rapidly developing techniques for multimedia search, local search, event-search, and video-on-demand are explored. Prerequisites: ICS 21/CSE 21 or Informatics 41 or consent of instructor. Concurrent with CS 125.

230 Distributed Computer Systems (4). Principles of distributed computing systems. Topics covered include message-passing, remote procedure calls, distributed shared memory synchronization, resource and process/thread management, distributed file systems, naming and security. Prerequisite: consent of instructor.

232 Internet (4). A broad overview of basic Internet concepts. Internet architecture and protocols, including addressing, routing, TCP/IP, quality of service, and streaming. Prerequisite: EECS148, CS 132, or consent of instructor. Same as EECS248A and Networked Systems 201.

233 Networking Laboratory (4). A laboratory-based introduction to basic networking concepts such as addressing, sub-netting, bridging, ARP, and routing. Network simulation and design. Structured around weekly readings and laboratory assignments. Prerequisite: CS 132 or EECS148. Same as Networked Systems 202.

234 Advanced Networks (4). Design principles of networked systems, advanced routing and congestion control algorithms, network algorithms, network measurement, management, security, Internet economics, and emerging networks. Prerequisite: CS 232 or Networked Systems 201 or EECS248A. Same as Networked Systems 210.

235 Internet Technology (4). Application layer Internet protocols, potentially including client/server, WWW, file sharing, group communications, Internet programming. Prerequisite: CS 232. Same as Networked Systems 220.

236 Wireless and Mobile Networking (4). Introduction to wireless networking. The focus is on layers 2 and 3 of the OSI reference model, design, performance analysis, and protocols. Topics covered include: an introduction to wireless networking, digital cellular, next generation cellular, wireless LANs, and mobile IP. Prerequisites: CS 132 or EECS148, and an introductory course in probability or consent of instructor. Same as Networked Systems 230.

237 Middleware for Networked and Distributed Systems (4). Discusses concepts, techniques, and issues in developing distributed systems middleware that provides high performance and Quality of Service for emerging applications. Also covers existing standards (e.g., CORBA, DCOM, Jini, Espeak) and their relative advantages and shortcomings. Prerequisite: undergraduate-level course in operating systems and networks or consent of instructor. Same as Networked Systems 260.

240 Language-Based Security (4). Teaches state-of-the-art language-based techniques for increasing the security and reliability of software systems. Covers static (e.g., bytecode verification, proof-carrying code) and dynamic (e.g., reference monitors, stack inspection) techniques. Also discusses information flow and securing legacy code. Prerequisite: either CS 230, 242, or 262, or consent of instructor.

241 Advanced Compiler Construction (4). Advanced study of programming language implementation techniques: optimizations such as common sub-expression elimination, register allocation, and instruction scheduling. Implementation of language features such as type-directed dispatch, garbage collection, dynamic linking, and just-in-time code generation. Prerequisite: CS 142A or equivalent.

242 Parallel Computing (4). Definition of parallel processing systems. Theory and application of arrays, trees, and hypercubes. Computational models, applications: sorting, integer arithmetic, matrix operations, Fast Fourier Transform, and others. Interconnection networks: a framework for the description, analysis, and construction of hypercube-derived networks.

243 High-Performance Architectures and Their Compilers (4). Emphasis on the development of automatic tools (i.e., compilers/environments) for the efficient exploitation of parallel machines, and the trade-offs between hardware and software in the design of supercomputing and high-performance machines.

244 Introduction to Embedded and Ubiquitous Systems (4). Embedded and ubiquitous system technologies including processors, DSP, memory, and software. System interfacing basics; communication strategies; sensors and actuators, mobile and wireless technology. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains. Prerequisites: B.S. degree in computer science; or ICS 51, CS 152; Mathematics 3A or 6G or ICS 6D; CS 161. Same as Informatics 244.

245 Software for Embedded Systems (4). Embedded computing elements, device interfaces, time-critical IO handling. Embedded software design under size, performance, and reliability constraints. Software timing and functional validation. Programming methods and compilation for embeddable software. Embedded runtime systems. Case studies of real-time software systems. Prerequisites: B.S. degree in computer science; or ICS 51, CS 152; Mathematics 3A or 6G or ICS 6D; CS 161.

246 Validation and Testing of Embedded Systems (4). Embedded system building blocks including IP cores. Co-simulation. Formal verification using model checking. Verification environments. Test challenges in core integration: compliance, feature, random, and collision testing. Core access and test integration. Interface-based verification and standards. Prerequisite: B.S. degree in computer science or basic courses in algorithms and data structures, calculus, discrete mathematics, linear algebra, symbolic logic.

247 Design Automation and Prototyping of Embedded Systems (4). System representation and modeling. Abstract and language models. Simulation as a modeling activity. Computation and hw/sw systems prototypes. System analysis using models. Constraint and interface modeling. Behavioral compilation and synthesis. Prerequisites: B.S. degree in computer science or ICS 6D, ICS 51; CS 152, 161, 244; and Mathematics 3A or 6G.

248A Introduction to Ubiquitous Computing (4). The “disappearing computer” paradigm. Differences to the desktop computing model: applications, interaction in augmented environments, security, alternate media, small operating systems, sensors, and embedded systems design. Evaluation by project work and class participation. Same as Informatics 241.

248B Ubiquitous Computing and Interaction (4). Principles and design techniques for ubiquitous computing applications. Conceptual basis for tangible and embodied interaction. Interaction in virtual and augmented environments. Design methods and techniques. Design case studies. Examination by project work. Prerequisites: Informatics 231 and 241. Same as Informatics 242.

249S Seminar in Compilers and Operating Systems (2). Current research and research trends in system-level software such as compilers and operating systems. Forum for presentation and criticism by students of new published research and work in progress. Prerequisites: undergraduate degree in computer science or CS 142A and 143A. May be taken for credit four times.

250A Computer Systems Architecture (4). Study of architectural issues and their relation to technology and software: design of processor, interconnections, and memory hierarchies. Prerequisite: CS 152 or equivalent.

250B Modern Microprocessors (4). Fundamental concepts and recent advances in computer architecture necessary to understand and use modern microprocessors. Topics span out-of-order execution, multiple instruction issue, control/data speculation, predication, advanced cache and DRAM organizations, embedded systems, DSP and multi-media instructions. Prerequisite: CS 250A or equivalent.

252 Introduction to Computer Design (4). The methodology and use of CAD tools for computer design, accomplished by a lab in which students practice design using commercially available silicon compilers and other tools. Prerequisite: CS 151 and 152 or equivalent.

259S Seminar in Design Science (2). Current research and research trends in design science. Forum for presentation and criticism by students of research work in progress. May be repeated for credit.

260 Fundamentals of the Design and Analysis of Algorithms (4). Covers fundamental concepts in the design and analysis of algorithms and is geared toward non-specialists in theoretical computer science. Topics include: deterministic and randomized graph algorithms, fundamental algorithmic techniques like divide-and-conquer strategies and dynamic programming, and NP-completeness. Prerequisite: CS 161 or equivalent undergraduate algorithms course.

261 Data Structures (4). An in-depth treatment of data structures and their associated management algorithms including resource complexity analysis. Prerequisite: ICS 23 and CS 161.

262 Computational Complexity (4). Advanced course in computational models and complexity classes. Covers the fundamentals of Turing Machines, Decidability, and NP-completeness. Includes discussion of more advanced topics including polynomial hierarchy, randomized complexity classes, #P-completeness and hardness of approximation. Prerequisite: CS 162.

263 Analysis of Algorithms (4). Analysis of correctness and complexity of various efficient algorithms; discussion of problems for which no efficient solutions are known. Prerequisites: CS 161 and 261.

264 Quantum Computation and Information (4). Basic models for quantum computation and their foundations in quantum mechanics. Quantum complexity classes and quantum algorithms including algorithms for factoring and quantum simulation. Introduction to quantum information theory and quantum entanglement. Prerequisites: basic courses in linear algebra and algorithms.

265 Graph Algorithms (4). Graph definitions, representation methods, graph problems, algorithms, approximation methods, and applications. Prerequisites: CS 161 and 261.

266 Computational Geometry (4). An overview of some of the basic problems in computational geometry and of some algorithmic and data-structuring techniques appropriate to their solution. Prerequisites: CS 161 and 261.

267 Data Compression (4). An introduction to the theory and practice of modern data compression techniques. Topics include codes, coding, modeling, text compression, lossless and lossy image compression standards and systems, audio compression. Prerequisite: CS 161, 260, or 261.

268 Introduction to Optimization (4). A broad introduction to optimization. Unconstrained and constrained optimization. Equality and inequality constraints. Linear and integer programming. Stochastic dynamic programming. Prerequisites: Mathematics 2D, Mathematics 3A or 6G, Statistics 67. Concurrent with Computer Science 169.

269S Seminar in the Theory of Algorithms and Data Structures (2). Current research and research trends in the theory of algorithms and data structures. May be repeated for credit.

271 Introduction to Artificial Intelligence (4). The study of theories and computational models for systems which behave and act in an intelligent manner. Fundamental subdisciplines of artificial intelligence including knowledge representation, search, deduction, planning, probabilistic reasoning, natural language parsing and comprehension, knowledge-based systems, and learning.

273A Machine Learning (4). Computational approaches to learning algorithms for classifications, regression, and clustering. Emphasis is on discriminative classification methods such as decision trees, rules, nearest neighbor, linear models, and naive Bayes. Prerequisites: CS 206 and 271.

274A Probabilistic Learning: Theory and Algorithms (4). An introduction to probabilistic and statistical techniques for learning from data, including parameter estimation, density estimation, regression, classification, and mixture modeling. Prerequisite: CS 206 or consent of instructor.

274B Learning in Graphical Models (4). Models for data analysis are presented in the unifying framework of graphical models. The emphasis is on learning from data but inference is also covered. Real world examples are used to illustrate the material. Prerequisite: CS 274A or consent of instructor.

275 Network-Based Reasoning/Constraint Networks (4). Study of the theory and techniques of constraint network model. Covers techniques for solving constraint satisfaction problems: backtracking techniques, consistency algorithms, and structure-based techniques. Tractable subclasses. Extensions into applications such as temporal reasoning, diagnosis, and scheduling. Prerequisite: a basic course in algorithm design and analysis, or consent of instructor.

276 Network-Based Reasoning/Belief Networks (4). Focuses on reasoning with uncertainty using “Bayes Networks” that encode knowledge as probabilistic relations between variables, and the main task is, given some observations, to update the degree of belief in each proposition. Prerequisite: a basic course in probability or consent of instructor.

277 Data Mining (4). Introduction to the general principles of inferring useful knowledge from large data sets (commonly known as data mining or knowledge discovery). Relevant concepts from statistics, databases and data structures, optimization, artificial intelligence, and visualization are discussed in an integrated manner. Prerequisite: CS 273A or 274A or consent of instructor.

278 Probability Models (4). Advanced probability, discrete time Markov chains, Poisson processes, continuous time Markov chains. Queuing or simulation as time permits. Prerequisite: Statistics 120A. Concurrent with Statistics 121.

279S Seminar in Artificial Intelligence (2). Current research and research trends in artificial intelligence. May be repeated for credit.

284A Representations and Algorithms for Molecular Biology (4). Introduction to computational methods in molecular biology, aimed at those interested in learning about this interdisciplinary area. Covers computational approaches to understanding and predicting the structure, function, interactions, and evolution of DNA, RNA, proteins, and related molecules and processes. Prerequisite: a basic course in algorithms, or a basic course in molecular biology, or consent of instructor. Concurrent with CS 184A.

284B Probabilistic Modeling of Biological Data (4). A unified Bayesian probabilistic framework for modeling and mining biological data. Applications range from sequence (DNA, RNA, proteins) to gene expression data. Graphical models, Markov models, stochastic grammars, structure prediction, gene finding, evolution, DNA arrays, single- and multiple-gene analysis. Prerequisite: a basic course in algorithms and molecular biology, or CS 284A or equivalent, or consent of instructor. Concurrent with CS 184B.

284C Computational Systems Biology (4). Computational inference and modeling of gene regulation networks, signal transduction pathways, and the effects of regulatory networks in cellular processes, development, and disease. Introduction of required mathematical, computational, and data handling tools. Prerequisites: CS 284A or 284B or Biological Sciences 99 and Mathematics 2D and 2J, or consent of instructor. Concurrent with CS 184C.

288A Biological Networks (4). Introduces the basics of primarily graph theoretic analysis and modeling of biological networks. Presents the necessary biological background for understanding different types of biological networks as well as mathematical, algorithmic, and computational complexity issues associated with them. Prerequisites: ICS 6D and CS 161/CSE161 or equivalent, and Biological Sciences M123 or equivalent.

289S Seminar for Informatics in Biology and Medicine (2). Current research and research trends in bioinformatics and medical informatics. Forum for presentation and criticism by students of recently published research and work in progress. Prerequisite: CS 284A or 284B, or a basic understanding of bioinformatics or medical informatics. May be repeated for credit.

290 Research Seminar (2). Forum for presentation and criticism by students of research work in progress. Presentation of problem areas and related work. Specific goals and progress of research. Satisfactory/Unsatisfactory only.

295 Special Topics in Information and Computer Science (4).

298 Thesis Supervision (2 to 12). Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

299 Individual Study (2 to 12). Individual research or investigation under the direction of an individual faculty member.

DEPARTMENT OF INFORMATICS

5019 Donald Bren Hall; (949) 824-2901
André van der Hoek, **Department Chair**

Faculty

Yunan Chen: Medical informatics, human-computer interaction
Paul Dourish: Human-computer interaction, computer-supported cooperative work
Daniel Frost: Artificial intelligence, software engineering, computer graphics, teaching of programming
Gillian Hayes: Interactive and collaborative technology, human-computer interaction, computer-supported cooperative work, educational technology, ubiquitous computing
Mizuko “Mimi” Ito: Ethnography, game studies, youth culture, learning sciences, online communities
James A. Jones: Software engineering, software testing and analysis, debugging and fault localization, static and dynamic analysis, software visualization
David G. Kay: Computer law, computer science education
Alfred Kobsa: User modeling, human-computer interaction, artificial intelligence, cognitive science, interdisciplinary computer science
Cristina Videira Lopes: Programming languages, acoustic communications, operating systems, software engineering
Gloria Mark: Computer-supported cooperative work, human-computer interaction
Melissa Mazmanian: Computer-mediated communication, organization studies, information and communication technologies in practice, social response to emerging technologies, work/non-work negotiations in the information age
Bonnie Nardi: Computer-supported collaborative work, human-computer interaction, computer-mediated communication, user studies methods, activity theory, cultural responses to technology development
Gary Olson: Interactive and collaborative technology, human-computer interaction, computer-supported cooperative work
Judy Olson: Interactive and collaborative technology, human-computer interaction, computer-supported cooperative work

Donald J. Patterson: Ubiquitous computing, pervasive computing, human-computer interaction, artificial intelligence, intelligent context for situated computing

Richard Pattis: Microworlds for teaching programming, debugging, computational tools for non-computer scientists

David F. Redmiles: Design environments, human-computer interaction, usability engineering, knowledge-based support

Debra J. Richardson: Software engineering; program testing; life-cycle validation; software environments

Susan E. Sim: Software engineering, research methodology, program comprehension

Thomas A. Standish: Software testing and analysis, software semantics and epistemology, programming and cognition, and software comprehension

Richard Taylor: Software engineering, user interfaces, environments, team support

Bill Tomlinson: Environmental informatics, educational technology, computer graphics/visualization/digital arts

André van der Hoek: Software engineering

Hadar Ziv: Software testing, requirements engineering, Bayesian modeling

The faculty in the Department of Informatics also contribute to the following concentrations in the ICS graduate program: Software track, Interactive and Collaborative Technology track, and Ubiquitous Computing track.

Affiliated Faculty

Christopher Dobrian: Electronic music, composition

Magda El Zarki: Telecommunications, networks, wireless communication, video transmission

Tony Givargis: Embedded systems, platform-based system-on-a-chip design, low-power electronics

Vijay Gurbaxani: Economics of information systems management, impact of information technology on organization and market structure

K. H. (Kane) Kim: Distributed real-time computer systems, fault-tolerant computer systems, real-time learning systems

Kenneth L. Kraemer: Economics and management of computing; organizational and social impacts of computing; information technology and public policy; management information systems/decision support systems

Robert Nideffer: Electronic intermedia, interface theory and design, technology and culture, contemporary social theory

Simon Penny: Robotic sculpture, interactive environments, electronic media, art practice history, and critical theory

Alladi Venkatesh: Social impacts of information technology, Internet and the New Economy, Smart Home technologies, children and multimedia

Mark Warschauer: Language, literacy, technology

Informatics is the interdisciplinary study of the design, application, use, and impact of information technology. It goes beyond technical design, to focus on the relationship between information system design and use in real-world settings. These investigations lead to new forms of system architecture, new approaches to system design and development, new means of information system implementation and deployment, and new models of interaction between technology and social, cultural, and organizational settings.

Undergraduate Major in Informatics

Students in the Informatics major study software architecture; software development, design, and analysis; ubiquitous computing; information retrieval and management; human-computer interaction; computer-supported cooperative work; and other topics that address the relationship between information technology design and use in social and organizational settings. The Informatics major addresses the broad set of issues surrounding design, ranging from initial requirements gathering to software design and measuring the impact of alternative solutions—all from a multidisciplinary perspective that includes computer science, information science, organizational science, social science, and cognitive science.

Courses offer extensive treatment of the conceptual underpinnings of the discipline and provide in-depth practical experiences, often performed on real-world examples and involving outside organizations. Students completing the major will be exceptionally well suited for advanced careers in information technology or for further

study at the graduate level. Specific careers include, but are not limited to, system, software, and information analyst; system, software, and information designer; project manager; and interface and interaction designer. Career settings include new start-ups, multinational corporations, small software houses, consulting, and game companies.

Informatics majors complete one of three specializations: software engineering, human-computer interaction, or organizations and information technology. More information is available online at <http://www.ics.uci.edu/informatics/ugrad>.

ADMISSIONS

Freshmen Applicants: See pages 33–36.

Transfer Applicants:

Students transferring into the major must satisfy the following requirements:

1. Completion of one college-level mathematics course; courses equivalent to ICS 6B (Boolean Algebra and Logic), Statistics 7 (Basic Statistics) or Statistics 67 (Introduction to Probability and Statistics for Computer Science), and Philosophy 29 (Critical Reasoning) are preferred as these courses facilitate scheduling after transfer to UCI.
2. Completion of one year of transferable computer science courses* with at least one course involving concepts such as those found in Java, Scheme, C++, or other object-oriented or high-level programming language.

*NOTE: Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing a Java-related programming course prior to their first quarter at UCI.

Additional courses beyond those required for admission must be taken to fulfill the lower-division degree requirements, as many are prerequisites for upper-division courses. For some transfer students, this may mean that it will take longer than two years to complete their degree.

More information is available at <http://www.ics.uci.edu/informatics/ugrad> or at the ICS Student Affairs Office; telephone (949) 824-5156; e-mail: ucounsel@uci.edu.

REQUIREMENTS FOR THE B.S. DEGREE IN INFORMATICS

University Requirements: See pages 54–61.

Major Requirements

Lower-division:

- A. Introductory courses: Informatics 41, 42, 43, 44.
- B. ICS 23 or Informatics 45.
- C. ICS 6B, Statistics 7 or Statistics 67, and Philosophy 29.

Upper-division:

- A. *Informatics Core Requirements:* Informatics 113, 121, 131, 151, 161, 191A-B-C.
- B. *One of the following specializations:*

Software Engineering: Informatics 101, 102, 111, 115, 117, 122, 123, 133, Computer Science 122A, and one additional course chosen from Informatics 100–199, Computer Science 100–189, EECS118, Management 107, Management 159.

Human-Computer Interaction: Informatics 132; three courses chosen from Informatics 133, 141, 143, 153, 162, 171; two

project courses chosen from Informatics 125, 134, 148, 163; four additional courses chosen from Informatics 100–190 or Public Health 166.

Organizations and Information Technology: (a) Informatics 141, 162, 163, Management 5, Management 102; (b) four additional courses chosen from: Management 107, 159, 162, 170, 173, 175, and 178; Psychology and Social Behavior 9, 104S, 176S, and 180S; Sociology 41, 135, 141, 143, and 145; Informatics 100–199; (c) two additional courses chosen from Informatics 100–199 or Computer Science 100–199. NOTE: Informatics majors in the OIT specialization may not pursue a minor in Management.

Major and minor restrictions: See pages 342–343.

Minor in Digital Information Systems

Students outside the Bren School of ICS may pursue a minor in Digital Information Systems (DIS). The minor is designed for students who want to learn about information systems, computation, and digital communication without preparing to be computer programmers. Students completing the DIS minor will be able to understand the role of digital information systems in society, and will learn about the technological underpinnings of these systems and constraints on their design and use.

Requirements for the Minor: Two of ICS 3, ICS 4, ICS 5, ICS 7, ICS 8, ICS 11, ICS 22, ICS H22, Informatics 42; one of ICS 10, ICS 21, ICS H21, Informatics 41; four of ICS 105, Informatics 131, Informatics 143, Informatics 161, Informatics 162, Informatics 165, Informatics 171, ICS 139.

NOTE: Bren School of ICS majors may not minor in Digital Information Systems. Courses used to complete the minor in Digital Information Systems may not also count toward the requirements for the Information and Computer Science minor or the Informatics minor.

Minor in Informatics

The minor provides a focused study of Informatics to supplement a student's major program of study and prepares students for a profession, career, or academic pursuit in which information and software design is an integral part but is not the primary focus. The minor allows students sufficient flexibility to pursue courses that complement their major field or address specific interests. The minor particularly centers on understanding the relationships among computers and people, and how these relationships must be addressed in information and software design.

Requirements for the Minor: Informatics 41, 42, 43, 44, 131, and 161; and at least two additional upper-division courses in Informatics.

Before enrolling in any course for the Informatics minor, students should ensure that they meet its prerequisites. See the course prerequisites listed in the *Catalogue* or on the Informatics Web site at <http://www.ics.uci.edu/informatics/ugrad>.

NOTE: A maximum of two courses can be taken Pass/Not Pass to satisfy the minor in Informatics. Students majoring in Information

and Computer Science, Computer Science, or Computer Science and Engineering cannot minor in Informatics. Students who are considering a major in Informatics must complete the Informatics courses with a letter grade.

Graduate Concentrations

For graduate concentrations in Informatics, see page 348.

Courses in Informatics

(Schedule of Classes designation: In4matx)

Non-majors may also take lower-division Informatics courses to fulfill General Education requirements if they have met the prerequisites.

LOWER-DIVISION

41 Informatics Core Course I (6). Fundamental concepts of computer software design and construction. Data, algorithms, functions, and abstractions. Overview of computer systems: data representation, architectural components, operating systems, networks. Introduction to information systems: parties involved, architectural alternatives, usability, organizational and social concerns. May not be taken for credit after ICS 22/CSE22. **(II or V)**

42 Informatics Core Course II (6). Alternative data structure implementations; analysis of time and space efficiency. Object-oriented programming concepts and techniques: classes, objects, inheritance, interfaces. Formal languages and automata. Problem modeling and design tradeoffs. Prerequisite: Informatics 41 with a grade of C or better. Only one course from Informatics 42, ICS 22/CSE22, or ICS H22 may be taken for credit. **(II or V)**

43 Informatics Core Course III (4). Concepts, methods, and current practice of software engineering. Large-scale software production, software life cycle models, principles and techniques for each stage of development. Laboratory project applying these concepts. Only one course from Informatics 43, ICS 52, and ICS 105 may be taken for credit.

44 Seminar in Informatics Research Topics (2). Introduction to current research topics in Informatics. Various faculty members present current research and relate it to the course content of the Informatics degree program. Pass/Not Pass only.

45 Patterns of Software Construction (4). Building software applications; reusing and integrating components; designing for reuse. Effective use of libraries and APIs, file and network I/O, creation of user interfaces. Prerequisite: Informatics 42 or ICS 22/CSE22 or ICS H22 with a grade of C or better. **(V)**

UPPER-DIVISION

101 Concepts in Programming Languages I (4). In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style. Prerequisites: Informatics 42 or ICS 51 or CSE31/EECS31 with a grade of C or better, and Informatics 45 or ICS23/CSE23 with a grade of C or better. Same as CS 141/CSE141.

102 Concepts of Programming Languages II (4). In-depth study of major programming paradigms: imperative, functional, declarative, object-oriented, and aspect-oriented. Understanding the role of programming languages in software development and the suitability of languages in context. Domain-specific languages. Designing new languages for better software development support. Prerequisite: Informatics 101/CS 141/CSE141 with a grade of C or better.

111 Software Tools and Methods (4). Concepts and techniques of constructing software in a systematic fashion, including detailed design techniques, specifications, programming methods, quality-inducing procedures, development tools, team techniques, testing, estimation, and performance improvement. Laboratory work involves exercises to illustrate important concepts, methods, and tools. Prerequisite: Informatics 43 or ICS 52 or CSE90 with a grade of C or better. Same as CSE121.

113 Requirements Analysis and Engineering (4). Aims to equip students to develop techniques of software-intensive systems through successful requirements analysis techniques and requirements engineering. Students learn systematic process of developing requirements through cooperative problem analysis, representation, and validation. Prerequisite: Informatics 43 or ICS 52 with a grade of C or better. Recommended: Philosophy 29.

115 Software Testing, Analysis, and Quality Assurance (4). Aims to prepare students to develop high-quality software through successful verification and validation techniques. Fundamental principles of software testing, how to test software, and how to ensure the thoroughness of testing to gain confidence in the correctness of the software. Prerequisites: ICS 6B with a grade of C or better, and either Informatics 43 or ICS 52 with a grade of C or better. Recommended: Philosophy 29.

117 Project in Software System Design (4). Specification, design, construction, testing, and documentation of a complete software system. Special emphasis on the need for and use of teamwork, careful planning, and other techniques for working with large systems. Prerequisites: Informatics 43 or ICS 52, and upper-division standing.

121 Software Design I (4). Introduction to application design: designing the overall functionality of a software application. Topics include general design theory, software design theory, and software architecture. Includes practice in designing and case studies of existing designs. Prerequisite: Informatics 113 with a grade of C or better.

122 Software Design II (4). Introduction to implementation design: designing the internals of a software application. Topics include design aesthetics, design implementation, design recovery, design patterns, and component reuse. Includes practice in designing and case studies of existing designs. Prerequisites: Informatics 121 or Informatics 101/CS 141/CSE141.

123 Software Architectures (4). Prepares students to engineer well-structured software systems. Students learn a wide range of software architectural styles, architectural platforms that provide standard services to applications, and formal architecture description languages. Prerequisites: Informatics 122 or the following: Informatics 101/CS 141/CSE141 and Informatics 113.

124 Internet Applications Engineering (4). Concepts in Internet applications engineering with emphasis on the Web. Peer-to-Peer and Interoperability. Topics include HTTP and REST, Remote Procedure/Method Calls, Web Services, data representations, content distribution networks, identity management, relevant W3C/IETF standards, and relevant new large-scale computing styles. Prerequisites: CS 132 or consent of instructor, and upper-division standing. Same as CS 137.

125 Computer Game Development (4). Introduction to the principles of interactive two- and three-dimensional computer game development. Concepts in computer graphics, algorithms, software engineering, art and graphics, music and sound, story analysis, and artificial intelligence are presented and are the basis for student work. Prerequisite: either CS 112, CS 171, Informatics 121, Studio Art 135, or consent of instructor. Same as CS 113.

131 Human Computer Interaction (4). Presents basic principles of human-computer interaction (HCI). Introduces students to user interface design techniques, design guidelines, and usability testing. Students gain the ability to design and evaluate user interfaces and become familiar with some of the outstanding research problems in HCI. Prerequisite: one course (with a grade of C or better) selected from Informatics 41, ICS 10, ICS 21/CSE21, ICS H21, Engineering ENGR10, EECS10, MAE10, or equivalent.

132 Project in Human-Computer Interaction Requirements and Evaluation (4). Students undertake significant projects in the elicitation and specification of HCI requirements and the thorough evaluation of user interfaces. Prerequisite: Informatics 131.

133 User Interaction Software (4). Introduction to human-computer interaction programming. Emphasis on current tools, standards, methodologies for implementing effective interaction designs. Widget toolkits, Web interface programming, geo-spatial and map interfaces, mobile phone interfaces. Strategies for evaluation of user interfaces. Prerequisite: Informatics 45 or ICS 23/CSE23.

134 Project in User Interaction Software (4). Students complete an end-to-end user interface programming project based on an iterative design paradigm. Topics may include requirements brainstorming, paper prototyping, iterative development, cognitive walk-through, quantitative evaluation, and acceptance testing. Prerequisites: Informatics 131 and 133.

141 Information Retrieval (4). An introduction to information retrieval including indexing, retrieval, classifying, and clustering text and multimedia documents. Prerequisites: ICS 23/CSE23/ICS H23 or Informatics 43; Statistics 7 or 67. Same as CS 121.

143 Information Visualization (4). Introduction to interactive visual interfaces for large datasets, and to principles of human visual perception and human computer interaction that inform their design. Various applications for data analysis and monitoring are discussed. Prerequisite: Informatics 131 or Informatics 43 or ICS 52.

148 Project in Ubiquitous Computing (4). Introduction to ubiquitous computing research methods, tools, and techniques. Prototyping, design, and evaluation of physical computing applications, smart environments, embedded systems, and future computing scenarios. Includes hands-on in-class laboratory exercises. Prerequisite: Informatics 45 or ICS 23/CSE23.

151 Project Management (4). Introduces theoretical and practical aspects of project management. Topics include organizational theory, group behavior, project management skills, case studies, personal and group productivity tools, management of distributed work, stakeholders, consultants, and knowledge management. Students do a project exercise. Prerequisites: Informatics 43 or ICS 52 with a grade of C or better and upper-division standing.

153 Computer-Supported Cooperative Work (4). Introduces concepts and principles of collaborative systems. Topics may include shared workspaces, group interaction, workflow, architectures, interaction between social and technical features of group work, and examples of collaborative systems used in real-world settings. Students develop a simple collaborative application. Prerequisites: Informatics 43 or ICS 52 with a grade of C or better; or Informatics 161.

161 Social Analysis of Computerization (4). Introduction of computerization as a social process. Examines the social opportunities and problems raised by new information technologies, and the consequences of different ways of organizing. Topics include computerization and work life, privacy, virtual communities, productivity paradox, systems risks. Prerequisite: one course (with a grade of C or better) selected from Informatics 41, ICS 10, ICS21/CSE21, ENGR10, EECS10, MAE10, or equivalent; satisfactory completion of the lower-division writing requirement.

162 Organizational Information Systems (4). Introduction to role of information systems in organizations, components and structure of organizational information systems, and techniques used in information systems analysis, design, and implementation. Prerequisites: Informatics 161 and satisfactory completion of the lower-division writing requirement.

163 Project in the Social and Organizational Impacts of Computing (4). Students undertake projects intended to gather and analyze data from situations in which computers are used, organize and conduct experiments intended to test hypotheses about impacts, and explore the application of concepts learned in previous courses. Prerequisite: Informatics 162.

165 Technology and Literacy (4). Examines relationships of new digital media to literacy in home and school environments. Topics include blogs, wikis, fan fiction, social network sites, online research, video games, instant messaging, e-mail, digital imagery, and multimedia production in connection with learning and literacy. Same as Education 139.

171 Introduction to Medical Informatics (4). Broad overview of medical informatics for students with varied backgrounds. Electronic medical records, online resources, mobile technologies, patient safety and computational design. Legal, ethical, and public policy issues. Health systems management. Evaluation and fieldwork for health systems. Prerequisite: one course (with a grade of C or better) selected from Informatics 41, ICS 10, ICS21/CSE21, ENGR10, EECS10, MAE10, or equivalent.

190 Special Topics in Informatics (4). May be repeated for credit if title or topic varies. Prerequisites vary.

191A-B-C Senior Design Project (4-4-4). Group supervised project in which students analyze, specify, design, construct, evaluate, and adapt a significant information processing system. Topics include team management, professional ethics, and systems analysis. Prerequisites for 191A: Informatics 121, 131, 151; either Informatics 161 as a prerequisite or Informatics 123 as a corequisite; and upper-division standing; for 191B: Informatics 191A; for 191C: Informatics 191B. In-progress grading for 191B only.

H198 Honors Research (4). Directed independent research in Informatics for honors students. Prerequisites: satisfactory completion of the lower-division writing requirement; participation in the Bren School of ICS Honors Program or the Campuswide Honors Program.

199 Individual Study (2 to 5)

GRADUATE

200A-B Informatics Graduate Core (4-4). Integrated survey of core topics and techniques in Informatics and exemplary applications thereof. Primary focus on human-computer interaction, software engineering, and research methods for Informatics. Lecture and readings in classical and contemporary research. Prerequisite: graduate standing in the School of ICS.

201 Research Methodology for Informatics (4). Introduction to strategies and idioms of research in Informatics. Includes examination of issues in scientific inquiry, qualitative and quantitative methods, and research design. Both classic texts and contemporary research literature are read and analyzed.

203 Qualitative Research Methods in Information Systems (4). Introduction to qualitative research methods used to study computerization and information systems, such as open-ended interviewing, participant observation, and ethnography. Studies of the methods in practice through examination of research literature. Prerequisite: Informatics 251 or 261.

205 Quantitative Research Methods in Information Systems (4). Quantitative research methods used to study computerization and information systems. Design of instruments, sampling, sample sizes, and data analysis. Validity and reliability. Longitudinal versus cross-sectional designs. Analysis of secondary data. Studies of the methods through examination of research literature. Prerequisites: basic knowledge of elementary statistics; Informatics 251 or 261.

208S Seminar in Informatics Research (2). Current research and research trends in any of the areas of Informatics. Speakers from UCI and elsewhere. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

209S Seminar in Informatics (3). Current research and research trends in Informatics. Forum for presentation and criticism by students of research work in progress. May be repeated for credit as topics vary.

211 Software Engineering (4). Study of the concepts, methods, and tools for the analysis, design, construction, and measurement of complex software-intensive systems. Underlying principles emphasized. State-of-the-art software engineering and promising research areas covered, including project management.

212 Analysis of Programming Languages (4). Concepts in modern programming languages, their interaction, and the relationship between programming languages and methods for large-scale, extensible software development. Empirical analysis of programming language usage.

213 Formal Specification and Modeling (4). Examination of formal specification and modeling techniques, including algebraic, scenario-based, model-based, state-based, temporal and other logics, along with their related uses in software development.

215 Software Analysis and Testing (4). Studies techniques for developing confidence in software from traditional testing schemes to integrated, multi-technique analytic approaches. Considers strengths and weaknesses and explores opportunities for synergistic technique application. Emphasis is on approaches integrated into the software process.

217 Software Processes (4). Explores vehicles for modeling, coding, and analyzing software processes. Considers integration of software process programming approaches with traditional management issues. Explores the use of software process execution as a vehicle for effective integration of tools into environments.

219 Software Environments (4). Study of the requirements, concepts, and architectures of comprehensive, integrated, software development and maintenance environments. Major topics include process support, object management, communication, interoperability, measurement, analysis, and user interfaces in the environment context.

221 Software Architecture (4). Study of the concepts, representation techniques, development methods, and tools for architecture-centric software engineering. Topics include domain-specific software architectures, architectural styles, architecture description languages, software connectors, and dynamism in architectures.

223 Applied Software Design Techniques (4). Study of concepts, representations, techniques, and case studies in structuring software systems, with an emphasis on design considerations. Topics include static and dynamic system structure, data models, abstractions, naming, protocols and application programmer interfaces.

231 User Interface Design and Evaluation (4). Introduction to the design and evaluation of user interfaces, with an emphasis on methodology. Cognitive principles, design life cycle, on-line and off-line prototyping techniques. Toolkits and architectures for interactive systems. Evaluation techniques, including heuristic and laboratory methods.

232 Research in Human-Computer Interaction (4). Introduction to contemporary topics in human-computer interaction, including methods, technologies, design, and evaluation. Emerging application domains and their challenges to traditional research methods. Advanced architectures and technologies. Critical issues. Some familiarity with HCI principles expected.

233 Knowledge-Based User Interfaces (4). Concepts related to the development of interactive software systems with a focus on knowledge-based tools and human-centered design. Topics span the fields of human-computer interaction, software engineering, and knowledge representation. Prerequisite: CS 171 or equivalent.

235 Advanced User Interface Architecture (4). Architectural concerns in advanced interactive systems. The design of current and emerging platforms for novel interactive systems. Paradigms such as constraint-based programming, multimodal interaction, and perceptual user interfaces for individual, distributed, and ubiquitous applications.

241 Introduction to Ubiquitous Computing (4). The “disappearing computer” paradigm. Differences to the desktop computing model: applications, interaction in augmented environments, security, alternate media, small operating systems, sensors, and embedded systems design. Evaluation by project work and class participation. Same as CS 248A.

242 Ubiquitous Computing and Interaction (4). Principles and design techniques for ubiquitous computing applications. Conceptual basis for tangible and embodied interaction. Interaction in virtual and augmented environments. Design methods and techniques. Design case studies. Examination by project work. Prerequisites: Informatics 231 and 241. Same as CS 248B.

244 Introduction to Embedded and Ubiquitous Systems (4). Embedded and ubiquitous system technologies including processors, DSP, memory, and software. System interfacing basics; communication strategies; sensors and actuators, mobile and wireless technology. Using pre-designed hardware and software components. Design case studies in wireless, multimedia, and/or networking domains. Prerequisites: B.S. degree in computer science; or ICS 51, CS 152; Mathematics 3A or 6G or ICS 6D; CS 161. Same as CS 244.

251 Computer-Supported Cooperative Work (4). The role of information systems in supporting work in groups and organizations. Examines various technologies designed to support communication, information sharing, and coordination. Focuses on behavioral and social aspects of designing and using group support technologies.

261 Social Analysis of Computing (4). The social and economic impacts of computing and information technologies on groups, organizations, and society. Topics include computerization and changes in the character of work, social control and privacy, electronic communities, and risks of safety-critical systems to people.

263 Computerization, Work, and Organizations (4). Selected topics in the influence of computerization and information systems in transforming work and organizations. Theories of organization and organizational change. Processes by which diverse information technologies influence changes in work and organizations over short and long time periods. Prerequisite: Informatics 251 or 261.

265 Theories of Computerization and Information Systems (4). Social and economic conceptions of information technology. Macrosocial and economic conditions that foster changes in information technologies. Social construction of information and computer technology in professional worlds. Theories of information technology and large-scale social change. Prerequisite: Informatics 251 or 261.

267 Computing and Cyberspace (4). Selected topics in Internet-level computerization and systems, including electronic communities, distributed information services, electronic commerce, and digital libraries. Surveys systems and architectures. Theories of social interaction, computer-mediated communication, and social-technical system design. Examines social studies of cyberspace use and impacts. Prerequisite: Informatics 251 or 261.

269 Computer Law (4). The American legal system and its provisions affecting computer systems, computer networks, and information processing. Intellectual property, contracts, privacy, liability for malfunction, computer crime, constitutional issues, transborder data flow, computer-based evidence, and litigation. Prerequisite: graduate standing or consent of instructor.

290 Research Seminar (2). Forum for presentation and criticism by students of research work in progress. Presentation of problem areas and related work. Specific goals and progress of research. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

291S Literature Survey in Software Engineering (2). Reading and analysis of relevant literature in Software Engineering under the direction of a faculty member. May be repeated for credit as topics vary.

295 Special Topics in Informatics (4). May be repeated for credit as topics vary.

298 Thesis Supervision (2 to 12). Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

299 Individual Study (2 to 12). Individual research or investigation under the direction of an individual faculty member.

DEPARTMENT OF STATISTICS

2019 Donald Bren Hall; (949) 824-5392; Fax: (949) 824-9863

stat@uci.edu; <http://www.stat.uci.edu/>

David van Dyk, **Department Chair**

Faculty

Daniel L. Gillen: Biostatistics, survival analysis and longitudinal methods, group sequential methods, design and analysis of clinical trials, applications to biological and clinical studies

Wesley O. Johnson: Bayesian semi-parametric inference, survival analysis, prediction, specification of priors, applications in epidemiology, diagnostic testing, longitudinal and mixed modeling, asymptotics

Babak Shahbaba: Biostatistics, Bayesian methodology, statistical machine learning, and applying novel statistical methods to solve research questions in genetics, proteomics, and cancer studies

Hal S. Stern: Bayesian methodology, hierarchical modeling, model checking/model diagnostics, statistical applications in the biological and social sciences, statistics and sports

Jessica Utts: Statistical education and literacy; statistical applications to parapsychology, medicine, epidemiology, and transportation

David van Dyk: Statistical computation, Bayesian methodology, hierarchical modeling, causal inference, and application in astronomy and the physical and social sciences

Yaming Yu: Statistical computation, Bayesian methodology, and missing data problems

Zhaoxia Yu: Statistical genetics, genomics, and bioinformatics

Statistics is the science concerned with developing and studying methods for collecting, analyzing, interpreting, and presenting empirical data. Statistical principles and methods are important for addressing questions in public policy, medicine, industry, and virtually every branch of science. Interest in statistical methods has increased dramatically with the abundance of large databases in fields like computer science (Internet and Web traffic), business and marketing (transaction records), and biology (the human

genome and related data). It is the substantive questions in such areas of application that drive the development of new statistical methods and motivate the mathematical study of the properties of these methods.

Undergraduate Program in Statistics

The Department of Statistics offers lower-division undergraduate courses designed to introduce students to the field of statistics (Statistics 7, 8, 67) and upper-division undergraduate courses on the theoretical foundations of probability and statistics (Statistics 120A-B-C, 121) and statistical methodology (Statistics 110-111-112). The Department is in the process of planning an undergraduate degree program in Statistics. In the interim, students interested in focusing on statistics are encouraged to consider a minor in Statistics along with a major in a field of interest.

MINOR IN STATISTICS

The minor in Statistics is designed to provide students with exposure to both statistical theory and practice. The minor requires a total of seven courses. These include a mathematics course, five core statistics courses, and an elective that may be taken from among several departments. Some of the courses used to complete the minor may include prerequisites that may or may not be part of a student's course requirements for their major. Because of this, the minor is somewhat intensive, but it is a useful complement to a variety of undergraduate fields for mathematically inclined students. The minor, supplemented with a few additional courses (mathematics and computing), would provide sufficient background for graduate study in statistics. Students considering a minor in Statistics should meet with the Director of Undergraduate Studies in Statistics as early as possible to plan their course work.

NOTE: Students may not receive both a minor in Statistics and a specialization in Statistics within the Mathematics major.

Requirements for the Minor

Six required courses: Mathematics 3A, Statistics 120A-B-C, Statistics 110-111.

One elective course: Students select one course from the following list, or can substitute another with approval of the Director of Undergraduate Studies: Statistics 7 or equivalent course (but only if taken prior to Statistics 110); Statistics 112; Statistics 121; Mathematics 105A or 105B; Mathematics 130B or 130C; Mathematics 132B or 132C; ICS 21.

Graduate Program in Statistics

Research in statistics can range from mathematical studies of the theoretical underpinnings of a statistical model or method to the development of novel statistical models and methods and a thorough study of their properties. Frequently, statistics research is motivated and informed by collaborations with experts in a particular substantive field. Their scientific studies and data collection efforts may yield complex data that cannot be adequately handled using standard statistical methodology. Statisticians aim to develop methods that address the scientific or policy questions of the researcher. In doing so, statisticians must consider how efficiently and effectively the proposed methodology can be implemented and what guarantees can be provided as to the performance of the proposed methods. Such questions can often be answered using a combination of mathematical, analytical, and computational techniques.

Background: Individuals from a variety of backgrounds can make significant contributions to the field of statistics as long as they

have sufficient background in statistics, mathematics, and computing. Undergraduate preparation in statistics, mathematics, and computing should include multivariate calculus (the equivalent of UCI courses Mathematics 2A-B, 2D-E), linear algebra (121A), elementary analysis (140A-B), introductory probability and statistics (Statistics 120A-B-C), and basic computing (ICS 21). For students with undergraduate majors outside of mathematics and statistics, it is possible to make up one or two missing courses during the first year in the program.

Students may be admitted to either the master's program or the doctoral program. See page 347 for additional information about the Bren School of ICS's graduate programs and general information about admissions.

MASTER OF SCIENCE IN STATISTICS

Statistics Course Requirements: Intermediate Probability and Statistics (Statistics 200A-B-C); Statistical Methodology (Statistics 210, 211, 212); three quarters of Seminar in Statistics (Statistics 280); six other graduate courses in or related to statistics, at least three of which are offered by the Department of Statistics.

At most one of the six elective courses may be an Individual Study (Statistics 299), and only with prior approval of the Department Graduate Committee.

The entire program of courses must be approved by the Statistics Department Graduate Committee. Students with previous graduate training in statistics may petition the Committee to substitute other courses for a subset of the required courses. Students are required to pass a written comprehensive examination ordinarily at the end of the first year, covering the material from Statistics 200A-B-C, 210, 211, and 212.

DOCTOR OF PHILOSOPHY IN STATISTICS

Statistics Course Requirements: Intermediate Probability and Statistics (Statistics 200A-B-C); Statistical Methodology (Statistics 210, 211, 212); Advanced Probability and Statistics Topics (Statistics 220A-B); Bayesian Statistical Analysis (Statistics 225); Statistical Computing Methods (Statistics 230); five other graduate courses in or related to statistics, at least two of which are offered by the Department of Statistics. These courses must be completed prior to candidacy.

In addition, continual enrollment in Seminar in Statistics (Statistics 280) is required in all quarters.

Additional Ph.D. requirements:

Each Ph.D. student is required to take a written comprehensive examination, ordinarily at the end of the first year, covering the material from Statistics 200A-B-C, 210, 211, and 212. In addition, each student is required to take a written comprehensive examination after completion of the second year course work, covering material from Statistics 220A-B, 225, and 230.

Ph.D. students who have passed the written comprehensive examinations are required to give a post-comprehensive research presentation each year.

Ph.D. students are required to serve as teaching assistants for at least two quarters.

Ph.D. students are required to demonstrate substantive knowledge of an application area outside of statistics (e.g., computer science, economics, cognitive sciences, biology, or medicine). Such knowledge can be demonstrated by course work in the application area (three quarter courses), co-authorship of publishable research in

the application area, or other evidence of supervised collaborative work that is substantiated by an expert in the field. In the case of a theoretically oriented student, the outside application area may be mathematics.

The normative time for advancement to candidacy is three years. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

MASTER OF SCIENCE IN STATISTICS FOR STUDENTS ENROLLED IN A DOCTORAL PROGRAM AT UCI

Students who are currently enrolled in a doctoral program at UCI and wish to pursue a Master of Science degree in Statistics at the same time should consult with the Director of Graduate Studies in Statistics to register their interest with the Department, to develop a program of study, and to establish a relationship with a faculty advisor in Statistics. The degree requirements including the comprehensive examination are the same as those listed under the Master of Science in Statistics. The Statistics Department Graduate Committee must be petitioned for permission to sit for the comprehensive examination. The petition should include the proposed plan of study and a current official UCI transcript. A petition for the degree must be filed with the Statistics Department Graduate Committee for approval two quarters before the degree is awarded.

Courses in Statistics

(*Schedule of Classes* designation: Stats)

LOWER-DIVISION

7 Basic Statistics (4). Lecture, three hours; discussion, one to two hours. Introduces basic inferential statistics including confidence intervals and hypothesis testing on means and proportions, t-distribution, Chi Square, regression and correlation. F-distribution and nonparametric statistics included if time permits. Only one course from Statistics 7, Statistics 8, Management 7, or Biological Sciences 7 may be taken for credit. No credit for Statistics 7 if taken after Statistics 67. (V)

8 Introduction to Biological Statistics (4). Lecture, three hours; discussion, one hour. Teaches introductory statistical techniques used to collect and analyze experimental and observational data from health sciences and molecular, cellular, environmental, and evolutionary biology. Specific topics include exploration of data, probability and sampling distributions, basic statistical inference for means, proportions, linear regression, and analysis of variance. Only one course from Statistics 8, Statistics 7, Management 7, Biological Sciences 7, or Social Ecology 13 may be taken for credit. (V)

67 Introduction to Probability and Statistics for Computer Science (4). Lecture, three hours; discussion, two hours. Introduction to the basic concepts of probability and statistics with discussion of applications to computer science. Prerequisites: Mathematics 2B and ICS 6D. No credit for Statistics 7 or Management 7 if taken after Statistics 67. (V)

UPPER-DIVISION

110 Statistical Methods for Data Analysis I (4). Lecture, three hours; laboratory, one hour. Introduction to statistical methods for analyzing data from experiments and surveys. Methods covered include two-sample procedures, analysis of variance, simple and multiple linear regression. Prerequisite: Statistics 7, or 120A-B-C, or knowledge of basic statistics. Concurrent with Statistics 201.

111 Statistical Methods for Data Analysis II (4). Lecture, three hours; laboratory, one hour. Introduction to statistical methods for analyzing data from surveys or experiments. Emphasizes application and understanding of methods for categorical data including contingency tables, logistic and Poisson regression, loglinear models. Prerequisite: Statistics 110 or equivalent. Concurrent with Statistics 202.

112 Statistical Methods for Data Analysis III (4). Lecture, three hours; laboratory, one hour. Introduction to statistical methods for analyzing longitudinal data from experiments and cohort studies. Topics covered include survival methods for censored time-to-event data, linear mixed models, non-linear mixed effects models, and generalized estimating equations. Prerequisite: Statistics 111 or equivalent. Concurrent with Statistics 203.

120A-B-C Introduction to Probability and Statistics (4-4-4). Lecture, three hours; discussion, one to two hours. Introductory course covering basic principles of probability and statistical inference. **120A:** Axiomatic definition of probability, random variables, probability distributions, expectation. **120B:** Point estimation, interval estimating, and testing hypotheses, Bayesian approaches to inference. **120C:** Linear regression, analysis of variance, model checking. Prerequisites: for 120A-B: Mathematics 2A-B; 2D and 2J or 4; for 120C: Statistics 120A-B; Mathematics 3A or 6G. Same as Mathematics 131A-B-C. Only one course from Statistics 120A, Mathematics 130A, and Mathematics 132A may be taken for credit.

121 Probability Models (4). Advanced probability, discrete time Markov chains, Poisson processes, continuous time Markov chains. Queuing or simulation as time permits. Prerequisite: Statistics 120A. Concurrent with Computer Science 278.

199 Individual Study (2 to 5). Individual research or investigations under the direction of an individual faculty member. Prerequisite: consent of instructor.

GRADUATE

200A-B-C Intermediate Probability and Statistical Theory (4-4-4). **200A:** Basics of probability theory, random variables and basic transformations, univariate distributions—discrete and continuous, multivariate distributions. **200B:** Random samples, transformations, limit laws, normal distribution theory, introduction to stochastic processes, data reduction, point estimation (maximum likelihood). **200C:** Interval estimation, hypothesis testing, decision theory and Bayesian inference, basic linear model theory. Prerequisites: Statistics 120A-B-C or equivalent or consent of instructor.

201 Statistical Methods for Data Analysis I (4). Introduction to statistical methods for analyzing data from experiments and surveys. Methods covered include two-sample procedures, analysis of variance, simple and multiple linear regression. May not be taken for graduate credit by Statistics graduate students. Prerequisite: knowledge of basic statistics (at level of Statistics 7). Concurrent with Statistics 110.

202 Statistical Methods for Data Analysis II (4). Introduction to statistical methods for analyzing data from surveys or experiments. Emphasizes application and understanding of methods for categorical data including contingency tables, logistic and Poisson regression, loglinear models. May not be taken for graduate credit by Statistics graduate students. Prerequisite: Statistics 201 or equivalent. Concurrent with Statistics 111.

203 Statistical Methods for Data Analysis III (4). Introduction to statistical methods for analyzing longitudinal data from experiments and cohort studies. Topics covered include survival methods for censored time-to-event data, linear mixed models, non-linear mixed effects models, and generalized estimating equations. May not be taken for graduate credit by Statistics graduate students. Prerequisite: Statistics 202 or equivalent. Concurrent with Statistics 112.

210 Statistical Methods I: Linear Models (4). Statistical methods for analyzing data from surveys and experiments. Topics include randomization and model-based inference, two-sample methods, analysis of variance, linear regression and model diagnostics. Prerequisite: knowledge of basic statistics (at the level of Statistics 7), calculus, linear algebra.

211 Statistical Methods II: Regression Modeling Strategies (4). Introduction to non-linear regression methods for addressing scientific questions. Emphasizes strategies for appropriately selecting and implementing regression models for addressing questions that arise in multiple scientific areas including economics, public health, sociology, and biology. Prerequisite: Statistics 210 or equivalent.

212 Statistical Methods III: Generalized Linear Models (4). Development of the theory and application of generalized linear models. Topics covered include likelihood estimation and asymptotic distributional theory for exponential families and quasi-likelihood. Focuses on theoretical development and application of methodology for analyzing non-normal outcomes. Prerequisite: Statistics 211 or equivalent.

220A-B Advanced Probability and Statistics Topics (4-4). Advanced topics in probability and statistical inference including measure theoretic probability, large sample theory, decision theory, resampling and Monte Carlo methods, nonparametric methods. Prerequisites: Statistics 200A-B-C.

225 Bayesian Statistical Analysis (4). Introduction to the Bayesian approach to statistical inference. Topics include univariate and multivariate models, choice of prior distributions, hierarchical models, computation including Markov chain Monte Carlo, model checking, and model selection. Prerequisites: two quarters of upper-division or graduate training in probability and statistics, or consent of instructor.

226 Advanced Topics in Modern Bayesian Statistical Inference (4). Fundamental topics in modern Bayesian Statistics including theory of Markov chains, application of this theory to modern methods of Markov chain Monte Carlo sampling; mathematical background for Bayesian non-parametric and semiparametric modeling, including Dirichlet Process Mixtures and Mixtures of Polya Trees prior. Prerequisites: Statistics 200A-B-C.

230 Statistical Computing Methods (4). Numerical computations and algorithms with applications in statistics. Topics include optimization methods including the EM algorithm, random number generation and simulation, Markov chain simulation tools, and numerical integration. Prerequisites: two quarters of upper-division or graduate training in probability and statistics. Statistics 230 and CS 206 may not both be taken for credit.

235 Modern Data Analysis Methods (4). Introduces a variety of modern tools for data analysis. Emphasizes use of computational and resampling techniques for data analyses wherein the data do not conform to standard toolbox of regression models and/or complexity of modeling problem threatens validity of standard methods. Prerequisite: graduate standing in Statistics or Statistics 120C, or equivalent.

240 Multivariate Statistical Methods (4). Theory and application of multivariate statistical methods. Topics include: likelihood and Bayesian inference for the multivariate normal model, visualization of multivariate data, data reduction techniques, cluster analysis, and multivariate statistical models. Prerequisites: Statistics 200A-B-C and Mathematics 121A.

245 Time Series Analysis (4). Statistical models for analysis of time series from time and frequency domain perspectives. Emphasizes theory and application of time series data analysis methods. Topics include ARMA/ARIMA models, model identification and estimation, linear operators, Fourier analysis, spectral estimation, state space models, Kalman filter. Prerequisites: Statistics 200A-B-C.

250 Biostatistics (4). Statistical methods commonly used to analyze data arising from clinical studies. Topics include analysis of observational studies and randomized clinical trials, techniques in the analysis of survival and longitudinal data, approaches to handling missing data, meta-analysis, nonparametric methods. Prerequisite: Statistics 210.

254 Regression Methods for Correlated Data (4). Introduction to statistical methods for analyzing correlated data from experiments and cohort studies. Topics covered include repeated measures ANOVA, linear and non-linear mixed models, and generalized estimating equations. Emphasizes both theoretical development and application of methods. Prerequisite: Statistics 212 or equivalent.

255 Statistical Methods for Survival Data (4). Statistical methods for analyzing survival data from cohort studies. Topics include parametric and non-parametric methods, the Kaplan-Meier estimator, log-rank tests, regression models, the Cox proportional hazards model and accelerated failure time models, efficient sampling designs, discrete survival models. Prerequisite: Statistics 211.

257 Introduction to Statistical Genetics (4). Provides students with knowledge of the basic principles, concepts, and methods used in statistical genetic research. Topics include principles of population genetics, and statistical methods for family- and population-based studies. Prerequisites: two quarters of upper-division or graduate training in statistical methods. Same as Epidemiology 215.

260 Inference with Missing Data (4). Statistical methods and theory useful for analysis of multivariate data with partially observed variables. Bayesian and likelihood-based methods developed. Topics include EM-type algorithms, MCMC samplers, multiple imputation, and general location model. Applications from economics, education, and medicine are discussed. Prerequisites: Statistics 200A-B-C and 210.

262 Theory and Practice of Sample Surveys (4). Covers the basic techniques and statistical methods used in designing surveys and analyzing collected survey data. Topics to be covered include simple random sampling, ratio and regression estimates, stratified sampling, cluster sampling, sampling with unequal probabilities, multistage sampling, and methods to handle non-response. Prerequisites: Statistics 120A-B-C or equivalent.

265 Causal Inference (4). Various approaches to causal inference focusing on the Rubin causal model and propensity-score methods. Topics include randomized experiments, observational studies, non-compliance, ignorable and non-ignorable treatment assignment, instrumental variables, and sensitivity analysis. Applications from economics, politics, education, and medicine. Prerequisites: Statistics 200A-B-C and 210.

270 Stochastic Processes (4). Introduction to the theory and application of stochastic processes. Topics include Markov chains, continuous-time Markov processes, Poisson processes, and Brownian motion. Applications include Markov chain Monte Carlo methods and financial modeling (for example, option pricing). Prerequisites: Statistics 120A-B-C or consent of instructor. Statistics 270 and Mathematics 271A-B-C may not both be taken for credit.

280 Seminar in Statistics (.5) F, W, S. Periodic seminar series covering topics of current research in statistics and its application. Prerequisites: graduate standing and consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

281 Topics in Astrostatistics (1 to 4). Topics in statistical methods for astronomy, astrophysics, particle physics, and solar physics, typically including spectral analysis, image processing and analysis, time series, classification, clustering, massive data, etc. Emphasizes computationally intensive methods, Bayesian and frequentist methods, machine learning, and signal processing. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

295 Special Topics in Statistics (4). May be repeated for credit as topics vary.

298 Thesis Supervision (2 to 12). Individual research or investigation conducted in preparation for the M.S. thesis option or the dissertation requirements for the Ph.D. program.

299 Individual Study (2 to 12). Individual research or investigation under the direction of an individual faculty member.

INTERDISCIPLINARY STUDIES

UCI offers a variety of interdisciplinary programs of study which span the boundaries of traditional academic scholarship and provide students with opportunities to pursue subject areas deriving from the interaction of different disciplines. Faculty participation is determined by research and teaching interests and, as such, faculty may be drawn from various departments and schools across the campus.

This section presents information about the following:

UNDERGRADUATE STUDY

Undergraduate Major in Business Information Management

As the business environment becomes increasingly global and information-centric, the need has increased for graduates who understand and can use technology that gathers and provides information, who are able to distill and recognize patterns in that information, and who can apply those analyses to achieve business objectives.

The undergraduate Business Information Management major administered by the Donald Bren School of Information and Computer Sciences is a collaborative, interdisciplinary degree program between the Bren School and The Paul Merage School of Business. The program seeks to educate students to understand and then apply the theories and concepts of a broad, integrated curriculum covering computing, informatics, business fundamentals, and analytical decision-making. The major prepares students for a wide variety of careers and life experiences. Business Information Management majors can pursue careers in the for-profit and not-for-profit sectors or can proceed to graduate school in several disciplines, including information systems, computing, economics, business, and law.

The curriculum is presented across three general academic areas: Computing (computer science, informatics, and software); Business Foundations (accounting, finance, marketing, strategy, and operations); and Analytical Methods (mathematics, statistics, economics, management science, and decision analysis). The fundamentals of information and computer science, including the rudiments of software design and construction with an emphasis on data management, provide the foundation for understanding, describing, and evaluating the technology through which most business information is gathered and presented. The business fundamentals, covering all the functional areas in the Merage School, provide a background and context in which information and its analysis will be applied.

ADMISSIONS

If the number of Business Information Management applicants exceeds the number of positions available, applicants may be subject to screening beyond minimum University of California admissions requirements.

Freshmen Applicants: See pages 33–36.

Transfer Applicants: Junior-level applicants who satisfactorily complete the following requirements will be given preference for admission:

1. Completion of one year of approved college-level math, preferably courses in calculus equivalent to UCI's Mathematics 2A-B; if not available, two semester courses equivalent to other major-related math courses are acceptable.
2. Completion of one year of transferable computer science courses* with at least one course involving concepts such as those found in Java, Scheme, C++, or other object-oriented or high-level programming language.
3. Completion of one year of introductory accounting theory and practice equivalent to UCI's Management 30A-B.
4. Completion of one year of micro- and macro-economics theory equivalent to UCI's Economics 20A-B.

*NOTE: Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major(s) of interest. Java is used extensively in the curriculum; therefore, transfer students should plan to learn it by studying on their own or by completing a Java-related programming course prior to their first quarter at UCI.

Additional courses beyond those required for admission must be taken to fulfill the lower-division degree requirements, as many are prerequisites for upper-division courses. For some transfer students, this may mean that it will take longer than two years to complete their degree.

More information is available at <http://www.ics.uci.edu/ugrad> or at the Bren School of ICS Student Affairs Office; telephone (949) 824-5156; e-mail: ucounsel@uci.edu.

REQUIREMENTS FOR THE B.S. DEGREE IN BUSINESS INFORMATION MANAGEMENT

University Requirements: See pages 54–61.

Major Requirements

- A. *Lower-Division:* Either Informatics 41, 42, and 43, *or* ICS 21, ICS 22, and Informatics 43, *or* ICS 21, ICS 22, ICS 23, and ICS 52; Mathematics 2A-B, ICS 6D, Mathematics 6G, Statistics 67, Economics 20A-B, Management 30A, 30B.

- B. *Upper-Division Core*: Management 101, 102, 105, 107, 109, 110, 169, 173, 178, 189; CS 121/Informatics 141, CS 122A/EECS116, CS 134, Informatics 113, and Informatics 143.
- C. *Electives*: Four upper-division courses, except independent study and internships, with at least two of the four courses to be taken within the Bren School. Upper-division courses completed via the UC Education Abroad Program may also be utilized toward this requirement upon prior approval by the Bren School of ICS Student Affairs Office.

NOTE: Students majoring in Business Information Management may not double major in Business Administration nor minor in Management, Informatics, or Information and Computer Science.

UD Elective		

Students are advised that this sample program lists the minimum requirements; it is possible that students may have to take additional courses to prepare for required courses.

The lower-division writing requirement must be completed by the end of the seventh quarter at UCI.

It is strongly recommended that students meet with an academic advisor to create an academic plan tailored to meet their specific areas of interest.

Undergraduate Major in Computer Science and Engineering

Participating Faculty

James Arvo, Ph.D. Yale University, *Associate Professor of Computer Science and of Electrical Engineering and Computer Science*

Nader Bagherzadeh, Ph.D. University of Texas at Austin, *Professor of Electrical Engineering and Computer Science*

Lubomir Bic, Ph.D. University of California, Irvine, *Professor of Computer Science, Electrical Engineering and Computer Science, and Biomedical Engineering*

Elaheh Bozorgzadeh, Ph.D. University of California, Los Angeles, *Associate Professor of Computer Science*

Peter J. Burke, Ph.D. Yale University, *Associate Professor of Electrical Engineering and Computer Science and of Biomedical Engineering*

Pai H. Chou, Ph.D. University of Washington, *Associate Professor of Electrical Engineering and Computer Science*

Rina Dechter, Ph.D. University of California, Los Angeles, *Professor of Computer Science*

Brian Demsky, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Electrical Engineering and Computer Science and of Computer Science*

Michael Dillencourt, Ph.D. University of Maryland, *Professor of Computer Science*

Rainer Doemer, Ph.D. University of Dortmund, *Associate Professor of Electrical Engineering and Computer Science*

David Eppstein, Ph.D. Columbia University, *Professor of Computer Science*

Charles Fowlkes, Ph.D. University of California, Berkeley, *Assistant Professor of Computer Science*

Michael Franz, D.Sc. Techn. Swiss Federal Institute of Technology (ETH), *Professor of Computer Science*

Daniel D. Gajski, Ph.D. University of Pennsylvania, *Director of the Center for Embedded Computer Systems, Professor of Electrical Engineering and Computer Science and of Computer Science, and The Henry Samueli "Turing" Chair in Computer Systems Design*

Jean-Luc Gaudiot, Ph.D. University of California, Los Angeles, *Professor of Electrical Engineering and Computer Science*

Tony Givargis, Ph.D. University of California, Riverside, *Associate Professor of Computer Science and of Informatics*

Michael T. Goodrich, Ph.D. Purdue University, *Associate Dean for Faculty Development for the Donald Bren School of Information and Computer Sciences and UCI Chancellor's Professor of Computer Science*

Michael M. Green, Ph.D. University of California, Los Angeles, *Department Chair and Professor of Electrical Engineering and Computer Science*

Ian G. Harris, Ph.D. University of California, San Diego, *Associate Professor of Computer Science*

Glenn E. Healey, Ph.D. Stanford University, *Professor of Electrical Engineering and Computer Science*

Daniel Hirschberg, Ph.D. Princeton University, *Professor of Computer Science and of Electrical Engineering and Computer Science*

Alexander Ihler, Ph.D. Massachusetts Institute of Technology, *Assistant Professor of Computer Science*

Sandy Irani, Ph.D. University of California, Berkeley, *Department Chair and Professor of Computer Science*

Syed A. Jafar, Ph.D. Stanford University, *Associate Professor of Electrical Engineering and Computer Science*

Hamid Jafarkhani, Ph.D. University of Maryland, College Park, *Director of the Graduate Program in Networked Systems and UCI Chancellor's Professor of Electrical Engineering and Computer Science*

Stanislaw Jarecki, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Computer Science*

K. H. (Kane) Kim, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science*

Fadi Kurdahi, Ph.D. University of Southern California, *Professor of Electrical Engineering and Computer Science and of Computer Science*

Richard H. Lathrop, Ph.D. Massachusetts Institute of Technology, *Professor of Computer Science and of Biomedical Engineering*

Henry P. Lee, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science*

Kwei-Jay Lin, Ph.D. University of Maryland, *Professor of Electrical Engineering and Computer Science*

Aditi Majumder, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of Computer Science*

Eric D. Mjolsness, Ph.D. California Institute of Technology, *Professor of Computer Science and of Mathematics*

Richard Pattis, M.S. Stanford University, *Senior Lecturer with Security of Employment, Computer Science and Informatics*

Deva Ramanan, Ph.D. University of California, Berkeley, *Assistant Professor of Computer Science*

Amelia C. Regan, Ph.D. University of Texas, Austin, *Professor of Computer Science*

Phillip C.-Y. Sheu, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science and of Biomedical Engineering*

Susan Elliott Sim, Ph.D. University of Toronto, *Assistant Professor of Informatics*

A. Lee Swindlehurst, Ph.D. Stanford University, *Professor of Electrical Engineering and Computer Science*

Shannon Tauro, M.S. University of California, Irvine, *Lecturer in Computer Science*

Alexander V. Veidenbaum, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science*

Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science*

Max Welling, Ph.D. Utrecht University, *Professor of Computer Science*

The undergraduate program in Computer Science and Engineering is administered by faculty from two academic units: the Department of Computer Science (CS) in the Donald Bren School of Information and Computer Sciences, and the Department of Electrical Engineering and Computer Sciences (EECS) in The Henry Samueli School of Engineering. For faculty listings from respective departments, see pages 351 and 230. Successful completion of the program leads to a B.S. degree in Computer Science and Engineering.

Program Educational Objectives: Graduates of the program will (1) establish a productive Computer Science and Engineering career in industry, government, or academia; (2) engage in professional practice of computer systems engineering and software systems engineering; (3) promote the development of innovative systems and solutions using hardware and software integration; (4) promote design, research, and implementation of products and services in the field of Computer Science and Engineering through strong communication, leadership, and entrepreneurial skills. (Program educational objectives are those aspects of computer science and engineering that help shape the curriculum; achievement of these objectives is a shared responsibility between the student and UCI.)

This program is designed to provide students with the fundamentals of computer science, both hardware and software, and the application of engineering concepts, techniques, and methods to both computer systems engineering and software system design. The program gives students access to multidisciplinary problems in engineering with a focus on total systems engineering. Students learn the computer science principles that are critical to development of software, hardware, and networking of computer systems. From that background, engineering concepts and methods are added to give students exposure to circuit design, network design, and digital signal processing. Elements of engineering practice include systems view, manufacturing and economic issues, and multidisciplinary engineering applications.

Career Paths. Most likely careers will involve building the computer-based infrastructure—computers, networks, embedded devices, as well as operating systems, compilers, and networking software. The focus is on cooperation between hardware and software to yield the highest performance. Examples of such problem areas would be in traffic management, flight control, earthquake monitoring, automotive control, and smart homes.

ADMISSIONS

High School Students: Students must have completed four years of mathematics through pre-calculus or math analysis and are advised to have completed one year each of chemistry and physics. One semester of programming course work is also advised. That preparation, along with honors courses and advanced placement courses, is fundamental to success in the program.

The Henry Samueli School of Engineering recommends that freshmen applicants in Engineering majors take the SAT Subject Test, Math Level 2.

Transfer Students. Students are encouraged to complete as many of the lower-division degree requirements as possible prior to transfer, including one year of approved calculus; one year of calculus-based physics with laboratories (mechanics, electricity and magnetism); one year of transferable computer science courses* involving concepts such as those found in Java, Scheme, C++, or other object-oriented, high-level programming language, and one additional approved transferable course for the major (an approved math, science, or CSE course).

*Additional computer science courses beyond the two required are strongly recommended, particularly those that align with the major of interest. Java is used extensively in the curriculum; therefore,

transfer students should plan to learn it by studying on their own or by completing a Java-related programming course prior to their first quarter at UCI.

Students who enroll at UCI in need of completing lower-division course work may find that it will take longer than two years to complete their degrees. For further information, contact the Donald Bren School of Information and Computer Sciences at (949) 824-5156 or The Henry Samueli School of Engineering at (949) 824-4334.

Change of Major

Students interested in changing their major to Computer Science and Engineering should contact the Student Affairs Office in the Bren School of ICS or The Henry Samueli School of Engineering for information about change-of-major requirements. Information is also available at <http://www.changeofmajor.uci.edu>.

REQUIREMENTS FOR THE B.S. DEGREE IN COMPUTER SCIENCE AND ENGINEERING

University Requirements: See pages 54–61.

Major Requirements

Mathematics and Basic Science Courses:

Mathematics Courses: Students must complete a minimum of 32 units of mathematics including Mathematics 2A-B, 2D, 2J, ICS 6B, ICS 6D, Mathematics 6G or 3A, and Statistics 67.

Basic Science Courses: Students must complete a minimum of 18 units of basic science courses including Physics 7C, 7LC; and Physics 7D and 7LD.

Students select, with the approval of a faculty advisor, two additional basic science courses needed to satisfy school and department requirements.

Engineering and Computer Topics Courses:

Students must complete a minimum of 72 units of *engineering topics*, 24 units of engineering design, and 63 units of *computer topics*. The following courses must be completed:

CSE21, CSE22, CSE23, CSE25, CSE31, CSE31L, CSE70A, CSE90, CSE104, CSE112, CSE120A, CSE121, CSE132, CSE135A, CSE135B, CSE141, CSE142, CSE151, CSE161, CSE181A-B-CW, Computer Science 145A-B or both EECS112L and EECS113, EECS148 or Computer Science 132.

Students select, with the approval of a faculty advisor, any additional engineering and computer topics courses needed to satisfy school and department requirements.

Tracks: Students must complete one of the tracks listed below.

Algorithms: Students complete two of the following courses: Computer Science 162, 163, 164, 165, 167, 168 or 179.

Artificial Intelligence: Students complete two of the following courses: Computer Science 116, 171, 175, 177, 178, or 179.

Graphics/Vision: Students complete one course from each set: Computer Science 112 or EECS104; Computer Science 116 or EECS101.

Parallel and Distributed Computing: Students complete two courses from EECS117, EECS123, and Computer Science 131.

(The nominal Computer Science and Engineering program will require 189 units of courses to satisfy all university and major requirements. Because each student comes to UCI with a different level of preparation, the actual number of units will vary).

NOTE: Students majoring in Computer Science and Engineering may not complete the major in Computer Engineering, the major in Computer Science, the major or minor in Information and Computer Science, or the minor in Informatics.

Courses in Computer Science and Engineering*(Schedule of Classes designation: CSE)***UNDERGRADUATE**

CSE21 Introduction to Computer Science I (6). Introduces fundamental concepts related to computer software design and construction. Develops initial design and programming skills using a high-level language. Fundamental concepts of control structures, data structures, and object-oriented programming. Same as ICS 21. Only one course from CSE21/ICS 21 and ICS H21 may be taken for credit. May not be taken for credit after Informatics 42. **(II or V)**

CSE22 Introduction to Computer Science II (6). Abstract behavior of classic data structures (stacks, queues, sorted and unsorted maps), alternative implementations, analysis of time and space efficiency. Recursion. Object-oriented and functional programming. Prerequisites: CSE21/ICS 21 or ICS H21 with a grade of C or better. Same as ICS 22. Only one course from CSE22/ICS 22, ICS H22, Informatics 41, or Informatics 42 may be taken for credit. **(II or V)**

CSE23 Fundamental Data Structures (4). Focuses on implementation and mathematical analysis of fundamental data structures and algorithms. Covers storage allocation and memory management techniques. Prerequisites: CSE22/ICS 22 or ICS H22 with a grade of C or better, or Informatics 42 with a grade of C or better, or Engineering EECS40. Same as ICS 23. Only one course from CSE23/ICS 23 and ICS H23 may be taken for credit. **(V)**

CSE25 Computing Tools for Computer Science and Engineering (4). Introduces computer-based mathematical and engineering tool usage and the C programming language. Prerequisites: CSE21/ICS 21 and Mathematics 2A. *Computer Science and Engineering majors have first consideration for enrollment.*

CSE31 Introduction to Digital Systems (4) F, Summer. Digital representation of information. Specifications of combinational and sequential systems. Analysis and design of networks of gates and flip flops. Standard modules and their use. Introduction to algorithmic systems: datapath and control. Prerequisite: CSE21/ICS 21, ICS H21, EECS10, EECS12, or MAE10. Same as EECS31. (Design units: 2) *Computer Science and Engineering majors have first consideration for enrollment.*

CSE31L Introduction to Digital Logic Laboratory (3) W. Introduction to common digital building blocks: gates, memory circuits, MSI components. Operating characteristics, specifications, and applications. Design of simple combinational and sequential digital systems (processors state machines). Construction and debugging techniques, using hardware description languages and CAD tools. Prerequisites: CSE31/EECS31; EECS10 or EECS 12 or CSE22/ICS 22. Same as EECS31L. (Design units: 3) *Computer Science and Engineering majors have first consideration for enrollment.*

CSE70A Network Analysis I (4) W, Summer. Modeling and analysis of electronic networks. Basic network theorems. Sinusoidal steady state and transient analysis of RLC networks and the impedance concept. Corequisite: Mathematics 2J or 3D. Prerequisites: Physics 7D; CSE21/ICS 21, ICS H21, EECS10, EECS12, or MAE10. Same as EECS70A. (Design units: 1) *Computer Science and Engineering majors have first consideration for enrollment.*

CSE90 Systems Engineering and Technical Communications (2). Introduces systems engineering concepts, including specifications and requirements, hardware and software design, integration, testing, and documentation. Emphasizes organization and writing of reports and effective presentations. *Computer Science and Engineering majors have first consideration for enrollment.*

CSE104 Principles of Operating Systems (4). Principles and concepts of process and resource management, especially as seen in operating systems. Processes, memory management, protection, scheduling, file systems, and I/O systems are covered. Concepts illustrated in the context of several well-known systems. Prerequisites: CSE23/ICS 23, and ICS 51 or CSE31/EECS31 with grades of C or better. Same as Computer Science 143A. Only one course from CSE104/Computer Science 143A and EECS111 may be taken for credit.

CSE112 Electronic Devices and Circuits (4). Semiconductor properties, carrier transport, P-N junctions, metal-semiconductor junctions, diodes, MOS transistors, transistor equivalent circuits, amplifiers, inverters, digital circuits, CMOS circuits, and logic gates. Prerequisites: Physics 7D, CSE70A/EECS70A. (Design units: 1) *Computer Science and Engineering majors have first consideration for enrollment.*

CSE120A Discrete-Time Signals and Systems (4). Analysis of discrete-time linear-time-invariant (DTLTI) systems in the time domain and using z-transforms. Introduction to techniques based on Discrete-Time, Discrete, and Fast Fourier Transforms. Examples of their application to digital signal processing and digital communications. Prerequisite: CSE70A/EECS70A. Same as EECS150B. (Design units: 0) *Computer Science and Engineering majors have first consideration for enrollment.*

CSE121 Software Tools and Methods (4). Concepts and techniques of constructing software in a systematic fashion, including detailed design techniques, specifications, programming methods, quality-inducing procedures, development tools, team techniques, testing, estimation, and performance improvement. Laboratory work involves exercises to illustrate important concepts, methods, and tools. Prerequisite: Informatics 43, ICS 52, or CSE90 with a grade of C or better. Same as Informatics 111.

CSE132 Organization of Digital Computers (4). Building blocks and organization of digital computers, the arithmetic, control, and memory units, and input/output devices and interfaces. Microprogramming and microprocessors. Prerequisite: CSE31L/EECS31L. Same as EECS112. CSE132/EECS112 and Computer Science 152 may not both be taken for credit. (Design units: 4) *Computer Science and Engineering majors have first consideration for enrollment.*

CSE135A Digital Signal Processing (3) F. Nature of sampled data, sampling theorem, difference equations, data holds, z-transform, w-transform, digital filters. Butterworth and Chebychev filters, quantization effects. Prerequisite: CSE120A/EECS150B. Same as EECS152A. (Design units: 2) *Computer Science and Engineering majors have first consideration for enrollment.*

CSE135B Digital Signal Processing Design and Laboratory (3) W. Design and implementation of algorithms on a DSP processor and using computer simulation. Applications in signal and image processing, communications, radar, and more. Prerequisite: CSE135A/EECS152A. Same as EECS152B. (Design units: 3) *Computer Science and Engineering majors have first consideration for enrollment.*

CSE141 Concepts in Programming Languages I (4). In-depth study of several contemporary programming languages stressing variety in data structures, operations, notation, and control. Examination of different programming paradigms, such as logic programming, functional programming and object-oriented programming; implementation strategies, programming environments, and programming style. Prerequisites: Informatics 42 or ICS 51 or CSE31/EECS31 with a grade of C or better, and Informatics 45 or ICS23/CSE23 with a grade of C or better. Same as Computer Science 141/Informatics 101.

CSE142 Compilers and Interpreters (4). Introduction to the theory of programming language processors covering lexical analysis, syntax analysis, semantic analysis, intermediate representations, code generation, optimization, interpretation, and run-time support. Prerequisite: CSE141/Computer Science 141/Informatics 101. Same as Computer Science 142A.

CSE151 Introduction to VLSI (4) F. A first course in the design of Very Large Scale Integrated (VLSI) systems and chips. Review of CMOS VLSI technology. Analysis and synthesis of basic and complex CMOS gates. Introduction to CAD methodology and usage of CAD tools. Prerequisites: CSE132/EECS112; CSE112 or EECS170B. (Design units: 4) *Computer Science and Engineering majors have first consideration for enrollment.*

CSE161 Design and Analysis of Algorithms (4). Time and space complexity of algorithms. Models of computation, techniques for efficient algorithm design, effect of data structure choice on efficiency of an algorithm. Fast algorithms for problems such as sorting, set manipulation, graph problems, matrix multiplication, Fourier transforms, and pattern matching. NP-complete problems. Prerequisites: CSE23/ICS 23, and CSE31/EECS31 or ICS 51 with grades of C or better; ICS 6B; ICS 6D; Mathematics 6G or 3A; Mathematics 2B. Same as Computer Science 161.

CSE181A-B Senior Design Project (3-3). Teaches problem definition, detailed design, integration and testability with teams of students specifying, designing, building, and testing complex systems. Lectures include engineering values, discussions, and ethical ramifications of engineering decisions. Corequisite: CSE135A/EECS152A. Prerequisite: CSE104/Computer Science 143A. CSE181A-B-C must be taken in the same academic year. (Design units: 3-3) *CSE181A-B: Computer Science and Engineering majors have first consideration for enrollment.*

CSE181C Senior Design Project (3). Completion, documentation, and presentation of projects started in CSE181A-B. Teaches engineering documentation writing and presentation skills. Students write comprehensive project reports individually. Each student participates in a public presentation of the project's results. Prerequisites: CSE181A-B and satisfactory completion of the lower-division writing requirement. CSE181A-B-C must be taken in the same academic year. *Computer Science and Engineering majors have first consideration for enrollment.*

Minor in Civic and Community Engagement

Paula Garb, Director

Core Faculty

Peter J. Bryant, *Research Professor of Developmental and Cell Biology*
William J. Cooper, *Director of the Urban Water Research Center (UWRC) and Professor of Civil and Environmental Engineering and of Chemical Engineering and Materials Science*

Paula Garb, *Director of the Minor in Civic and Community Engagement, Co-Director of the Center for Citizen Peacebuilding, and Lecturer in Anthropology*

Gillian Hayes, *Assistant Professor of Informatics*

Joseph Mahoney, *Associate Professor of Education and of Psychology and Social Behavior*

Virginia Mann, *Professor of Cognitive Sciences and Education*

Carrie J. Noland, *Professor of French*

James S. Nowick, *Professor of Chemistry*

Ellen F. Olshansky, *Director of the Program in Nursing Science and Professor, Program in Nursing Science*

Jone L. Pearce, *Co-Director of the Center for Leadership and Team Development and Dean's Professor of Management*

Affiliated Faculty

Molly Lynch, *Assistant Professor of Dance*

Michael J. Montoya, *Associate Professor of Anthropology, Chicano/Latino Studies, and Public Health*

Bill Tomlinson, *Associate Professor of Informatics*

Tiffany Willoughby-Herard, *Assistant Professor of African American Studies*

Maria Estela Zarate, *Assistant Professor of Education*

The minor in Civic and Community Engagement is an interdisciplinary program that provides students with the knowledge, skills, attitudes, and values to engage as citizens and active community members in the twenty-first century. The minor is distinguished both by *what* students learn, and by *how* they learn it.

Teaching and learning. The minor introduces students from majors across the campus to the traditions and public movements of service and their historical and contemporary philosophical underpinnings. The minor provides a theoretical and empirical framework to increase students' understanding of public problems (environmental, social, and other) from multiple disciplinary perspectives. Students learn about strategies to address public problems, including through public policy; through the involvement of community-based and nonprofit organizations; and through the cultivation of leadership. The minor helps students build on their major programs of study to make connections between public problems and issues of equity and social justice.

Research. The minor increases students' knowledge of the epistemological and methodological underpinnings of community-based research as a strategy for understanding and addressing public problems.

Service. The minor helps students to ground their understanding of public problems by participating in service-learning opportunities and by reflecting critically on those experiences.

The minor is open to all UCI students. Course descriptions are available in the academic department sections of the *Catalogue*.

More information about the minor in Civic and Community Engagement is available from the Division of Undergraduate Education, at (949) 824-3291 or at cceminor@uci.edu, or online at http://www.due.uci.edu/engagement_minor/.

Requirements for the Minor

Completion of eight courses (28 units total). A maximum of two courses for the minor may overlap with courses required for a student's major or for another minor.

A. University Studies 10.

B. University Studies 100.

C. Four upper-division elective courses related to public problems and civic and community engagement, from the following:

Environmental Stewardship: Biological Sciences E150, E181, E189, 191A-B, 191C, Earth System Science 180, 182, 190A-B, 190C, Economics 145E, International Studies 120, Planning, Policy, and Design 131, 132, 136, 138, 139, Political Science 141A, 143D, Public Health 145, 160, 164, Social Ecology 186A-B, 186C, Women's Studies 165A.

Educational Equity: Asian American Studies 139, Chicano/Latino Studies 182, Economics 158, Education 104E, 121, 124, 128, 132, 139, 150, 160, 182, Informatics 165, Political Science 126E, Social Ecology 181, Studio Art 149.

Health and Communities: Anthropology 128B, 134D, 134G, Asian American Studies 134, Chicano/Latino Studies 172, 176, History 136B, Informatics 171, International Studies 122, Nursing Science 170, Philosophy 131C, Planning, Policy, and Design 111, 112, 170, Public Health 122, 143, 147, 167, 168, 173, Social Ecology E127, 131, Women's Studies 165B.

Public History and Public Art: African American Studies 111A, 111B, 133A, 133B, 138, Art History 140A, 140B, 140C, 163,

164A, 164B, 164C, Asian American Studies 137, Chicano/Latino Studies 132A, 132B, 134, 135, Classics 175, Comparative Literature 100A, 105, 107, 140, Dance 110, Drama 103, 122, English 105, History 130B, 142A, 148B, 150, 150A, 150B, 151A, 151B, 151C, 152, Music 148, Religious Studies 106, 120, 130, Spanish 100E, 110C, Studio Art 116, 116A, 118, 121, 122, 123A.

Global Citizenship: Anthropology 125X, 136D, Asian American Studies 101, Chicano/Latino Studies 161, 163, Global Cultures 191, International Studies 121, Planning, Policy, and Design 140, Political Science 126C, 146A, 153E, 154G, 172A, Social Ecology E113, Social Science 177A, 184D.

Social Justice: African American Studies 115, 117, 124, 128, 132A, 132B, Anthropology 121D, Asian American Studies 138, 161, 167, Chicano/Latino Studies 148, Comparative Literature 130, Criminology, Law and Society C120, Film and Media Studies 130, History 146, 152B, Philosophy 131A, Planning, Policy, and Design 102, 113, Psychology 127G, Psychology and Social Behavior P117D, Social Science 175B, Sociology 167A, Women's Studies 110A, 110B, 156A, 157B, 158B.

Leadership and Public Policy: African American Studies 151, 162, Anthropology 136D, Asian American Studies 132, 136, 140, Chicano/Latino Studies 143, 147, 152A, International Studies 152A, Planning, Policy, and Design 166, 167, 169, 176, Political Science 121D, 121E, 124A, 124C, 124D, 126A, 126D, 132B-C, 134A, 154G, Social Science 181, 184A, 184B.

Additional elective courses may be substituted by petition.

- D. Eight units of an approved internship related to civic and community engagement. Internships will typically be completed over one or more quarters. Internships must be approved for credit toward the minor. See the Web site for the minor for a list of hours of community service-learning for internship options at http://www.due.uci.edu/engagement_minor/.

The internship can be completed through the following courses: Anthropology 197, Arts 199, Biological Sciences 14, 101, 102, Chemistry 191, Chicano/Latino Studies 191A-B-C, Education 100, 141A-B-C, 160L, 181B, Engineering 197A, Humanities 195, Informatics 117, 132, 163, 191A-B-C, Mathematics 192, Nursing Science 170L, Physical Sciences 5, 105, 106, Physics 191, Psychology 141J-K-L, 144 A-B-C, 145P-Q-R, Public Health 195, Social Ecology 195, Social Science 186A-B-C, 193B-C, 194A, 194B, 195A-B-C, 196, 197, University Studies 181, 185, 195.

Residence Requirement for the Minor: Students must complete at least four of the required courses for the minor in residence at UCI.

COURSES

(Schedule of Classes designation: Uni Stu)

University Studies 10 Introduction to Civic and Community Engagement (4). Provides a foundation for understanding the role of public scholarship, civic engagement, and social action, and the relationship between service learning and engaged citizenship. Introduces key theoretical and research methodologies on the traditions and innovations of civic and community engagement.

University Studies 100 Doing Research in the Community (4). Critically reimagines the research endeavor and its participants and outcomes. Grapples with methods, values, and relationships involved in research, and explores alternative conceptions of research, focusing on community-based research. Students work in teams on real-world community research projects with faculty mentors and community partners. Prerequisite: University Studies 10.

University Studies 181 Internship in Civic and Community Engagement (2 to 4). Provides an opportunity to extend learning into a community-based setting addressing important social, environmental, and public issues. The internship project has a creative and scholarly component where students initiate their own action or inquiry experience. Prerequisite: University Studies 10. May be taken for credit twice.

Minor in Global Sustainability

321 Steinhaus Hall; (949) 824-6006; Fax (949) 824-2181

Peter A. Bowler, **Director**

Director of the UCI Arboretum and Herbarium, UC Natural Reserve System Academic Coordinator, and Senior Lecturer with Security of Employment, Ecology and Evolutionary Biology

The interdisciplinary minor in Global Sustainability trains students to understand the changes that are needed for the human population to live in a sustainable relationship with the resources available on this planet.

As a result of population growth and the pursuit of higher standards of living, humanity has initiated many global trends that cannot be sustained indefinitely. Some of these trends are physico-chemical in nature, such as the rapid depletion of fossil fuels and the increasing pollution of our environment, including the accumulation of ozone-depleting chemicals with consequent increase of ultraviolet radiation at the Earth's surface, and the buildup of atmospheric carbon dioxide and other molecules that are instrumental in exacerbating global warming. Other trends are biological ones including the degradation of agricultural land, the destruction of many kinds of wildlife habitat with associated high rates of species extinction, and the depletion of wildlife populations by over-exploitation. Global changes are also taking place in human societies including loss of cultural diversity, a growing income gap between rich and poor nations leading to deepening poverty and additional pressure for biological resource exploitation, accelerating urbanization with associated social problems, and regional population and economic imbalances leading to escalating political tensions and potential for conflict. This program examines the causes and interrelationships of these problems and considers new approaches to solving them. Its goal is to provide broad, interdisciplinary training that will allow students to better understand and effectively deal with the serious environmental problems that we will face in the twenty-first century.

The minor is open to all UCI students. Course descriptions are available in the academic department sections of the *Catalogue*. Courses in addition to those already approved for the minor (below) may be petitioned, and the list will be updated on an annual basis.

Requirements for the Minor

Completion of an introductory course anthology that may include any three of the following in any order (one from each group):

Earth System Science 1 (The Physical Environment), Earth System Science 3 (Oceanography), Earth System Science 5 (The Atmosphere), Earth System Science 15 (Introduction to Global Climate Change), University Studies 13A (Environmental Studies I).

Biological Sciences 6 (Tropical Biology: Race to Save the Tropics), Biological Sciences 9K (Global-Change Biology; same as Earth System Science 13), Biological Sciences 55 (Introduction to Ecology), Biological Sciences 65 (Biodiversity and Conservation), Biological Sciences 94 (From Organisms to Ecosystems), Planning, Policy, and Design 131 (Environmental Sustainability I; same as Earth System Science 180), Planning, Policy, and Design 132 (Environmental Sustainability II; same as Earth System Science 182), University Studies 13B (Environmental Studies II).

Anthropology 20A (People, Cultures, and Environmental Sustainability), Anthropology 30A (Global Issues in Anthropological Perspective), Anthropology 41A (Global Cultures and Society), Social Ecology E8 (Introduction to Environmental Analysis and Design), Sociology 44 (Population), Political Science 41A (Introduction to International Relations), Public Health 30 (Human Environments), Public Health 60 (Environmental Quality and Health), University Studies 13C (Environmental Studies III).

Three relevant elective courses (12 units): One elective course must be taken in each of the following three disciplines, and at least two of these must be upper division. While courses from the introductory course list (above) apply, the same course may not be used to complete both the introductory lower-division sequence and the supplemental three courses. As they arise, additional courses may be petitioned to fulfill this requirement as well as the lower-division introductory category. Students may select from the following list:

Biological Sciences: Biological Sciences 6 (Tropical Biology: Race to Save the Tropics), 9K (Global-Change Biology; same as Earth System Science 13), 55 (Introduction to Ecology), 94 (From Organisms to Ecosystems), 65 (Biodiversity and Conservation), E106 (Processes in Ecology and Evolution), E118 (Ecosystem Ecology; same as Earth System Science 164), E150 (Conservation Biology), E175 (Restoration Ecology), E178 (Ocean Ecology), E179 (Limnology and Freshwater Biology), E182 (Mediterranean Ecosystems), E186 (Population and Community Ecology), E189 (Environmental Ethics), University Studies 13B (Environmental Studies II).

Physical Sciences: Earth System Sciences 1 (The Physical Environment), 3 (Oceanography), 5 (The Atmosphere), 13 (Global-Change Biology; same as Biological Sciences 9K), 15 (Introduction to Global Climate Change), 25 (Introduction to Earth and Environmental Sciences), 51 (Land Interactions), 55 (Earth's Atmosphere), 60A (Fundamental Processes in Earth and Environmental Studies), 60B (Local and Regional Environmental Issues), 60C (Global Environmental Issues), 164 (Ecosystems Ecology; same as Biological Sciences E118), 180 (Environmental Sustainability I; same as Planning, Policy, and Design 131), 182 (Environmental Sustainability II; same as Planning, Policy, and Design 132), Public Health 90 (Natural Disasters), University Studies 13A (Environmental Studies I).

Social Sciences/Social Ecology/Public Health: Anthropology 2 (Introduction to Anthropology), 2A (Introduction to Sociocultural Anthropology), 20A (People, Cultures, and Environmental Sustainability), 30A (Global Issues in Anthropological Perspective), 41A (Global Cultures and Society), 125A (Economic Anthropology), 125B (Ecological Anthropology); Social Ecology E8 (Introduction to Environmental Analysis and Design), E113 (Social Ecology of Peace; same as International Studies 121); Planning, Policy, and Design 131 (Environmental Sustainability I, same as Earth System Science 180), Planning, Policy, and Design 132 (Environmental Sustainability II, same as Earth System Science 182), Planning, Policy, and Design 134 (Human Ecology), Planning, Policy, and Design 136 (Global Environmental Issues, same as International Studies 120 and Political Science 143D); Sociology 44 (Population); Political Science 41A (Introduction to International Relations), Public Health 30 (Human Environments), Public Health 60 (Environmental Quality and Health), Public Health 90 (Natural Disasters); University Studies 13C (Environmental Studies III).

Senior Seminar on Global Sustainability I, II, III: To fulfill the requirements for the minor, students must complete Biological Sciences 191A-B-CW (same as Earth System Science 190A-B-CW and Social Ecology 186A-B-CW), which includes a seminar, directed study, and independent research in a relevant area. This work forms the basis for the senior research paper.

Minor in the History and Philosophy of Science

(949) 824-6495

Brian Skyrms, **Director**

Participating Faculty

Francisco J. Ayala, *University Professor and Donald Bren Professor of Biological Sciences*

Jeffrey A. Barrett, *UCI Chancellor's Fellow, Department Chair and Professor of Logic and Philosophy of Science*

William H. Batchelder, *Professor of Cognitive Sciences*

Paul C. Eklof, *Professor Emeritus of Mathematics*

Matthew D. Foreman, *Professor of Mathematics and of Logic and Philosophy of Science*

Douglas M. Haynes, *Director of the ADVANCE Program for Faculty Equity and Diversity and Associate Professor of History*

Donald Hoffman, *Professor of Cognitive Sciences*

Karl G. Hufbauer, *Professor Emeritus of History*

Mary-Louise Kean, *Professor Emerita of Cognitive Sciences*

Stuart M. Krassner, *Professor Emeritus of Developmental and Cell Biology*

J. Karel Lambert, *Professor Emeritus of Philosophy*

R. Duncan Luce, *UCI Distinguished Professor Emeritus of Cognitive Sciences and Economics*

Penelope Maddy, *UCI Distinguished Professor of Logic and Philosophy of Science and of Mathematics*

Louis Narens, *Professor of Cognitive Sciences*

Alan Nelson, *Professor Emeritus of Philosophy*

Riley Newman, *Professor Emeritus of Physics*

Robert Newsom, *Professor Emeritus of English*

Terence D. Parsons, *Professor of Philosophy, UCLA*

A. Kimball Romney, *Professor Emeritus of Anthropology*

Michael R. Rose, *Professor of Ecology and Evolutionary Biology*

Jonas Schultz, *Professor Emeritus of Physics*

Brian Skyrms, *Director of the Minor in the History and Philosophy of Science and UCI Distinguished Professor of Logic and Philosophy of Science and of Economics*

Norman M. Weinberger, *Research Professor of Neurobiology and Behavior*

Peter Woodruff, *Professor Emeritus of Philosophy*

The minor in the History and Philosophy of Science is intended for students who wish to study the history of science, the philosophical foundations of scientific inquiry, and the relationship between science and other fields. The history of science explores how science is actually done and how it has influenced history. This may involve tracking down an idea's source or its influences, evaluating the cultural forces at work in the generation of a scientific theory or the reaction of culture to science, or taking a detailed look at the work of a particular scientist or movement within science. The philosophy of science is concerned with determining what science and mathematics are, accounting for their apparent successes, and resolving problems of philosophical interest that arise in the sciences. Philosophy of science courses cover such topics as the role of logic and language in science and in mathematics, scientific explanation, evidence, and probability. These courses may also cover work that has been done on the philosophical problems in specific sciences—for example, the direction of time in physics, the model of mind in psychology, the structure of evolution theory in biology, and the implications of Gödel's incompleteness theorems for mathematics.

The minor is available to all UCI students. Course descriptions may be found in the academic department sections of the *Catalogue*.

Requirements for the Minor

Completion of seven courses as follows: (1) two courses selected from Logic and Philosophy of Science 31, 40, History 60; (2) two courses selected from History 135B, 135C, 135D, 135E, Philosophy 110–115 (when topic is science), Psychology 120H; and (3) three courses selected from Linguistics 141, 143, Logic and Philosophy of Science 106, 108, 140, 141A, 141B, 141C, 141D, 142, 143, 145, 146, 147.

Minor in Native American Studies

Participating Faculty

Rachel O'Toole, *Assistant Professor of History*
 Justin B. Richland, *Associate Professor of Criminology, Law and Society, Anthropology, and Law*
 Jaime E. Rodríguez, *Professor Emeritus of History*
 Gabriele Schwab, *UCI Chancellor's Professor of Comparative Literature and English*
 Pat Seed, *Professor of History*
 Tanis Thorne, *Lecturer in History*
 Steven C. Topik, *Professor of History*

The minor in Native American Studies is an interdisciplinary, interschool program which focuses on history, culture, religion, and the environment. The three core courses serve as an introduction to the Native American experience from the perspective of different historical periods and frameworks of analysis. Study in the minor is enriched by the research and teaching interests of faculty from different departments.

The minor is open to all UCI students. Advising information is available from the undergraduate counseling offices in the Schools of Humanities and Social Sciences.

Course descriptions are available in the academic department sections and at <http://eee.uci.edu/clients/tcthorne/idp/>.

Requirements for the Minor

Core courses: Religious Studies 90 or History 12 (Native American Religion and the Environmental Ethic); History 15A (Native American History); and Sociology 65 (Cultures in Collision: Indian-White Relations Since Columbus; same as Anthropology 85A).

Four upper-division courses selected from Anthropology 121D (Cross-Cultural Studies of Gender), 135A (Religion and Social Order), 162A (Peoples and Cultures of Latin America); Art History 175 (Studies in Native and Tribal Art); Criminology, Law and Society C158 (U.S. Law and Native Americans); Education 124 (Multicultural Education in K–12 Schools); History 161A (Indian and Colonial Societies in Mexico); Social Science 175B (Ethnic and Racial Communities); Women's Studies 156A (Race and Gender), 158B (Defining Women of Color).

Students may also select from the following courses when the topics presented relate to Native American Studies: Anthropology 149 (Special Topics in Archaeology), 169 (Special Topics in Area Studies); Comparative Literature 105 (Comparative Multiculturalism); English 105 (Multicultural Topics in Literature in English); History 169 (Topics in Latin American History); Sociology 149 (Special Topics: Structures), 169 (Special Topics: Age, Gender, Race, and Ethnicity).

GRADUATE STUDY

Graduate Program in Networked Systems

(949) 824-1755

<http://www.networkedsystems.uci.edu>

Hamid Jafarkhani, **Director**

Faculty

Ender Ayanoglu, Ph.D. Stanford University, *Director of the Center for Pervasive Communications and Computing, Professor of Electrical Engineering and Computer Science, and Conexant-Broadcom Chair* (next generation wireless, broadband, and optical communications)
 Magda El Zarki, Ph.D. Columbia University, *Associate Dean of Research Development for the Bren School of Information and Computer Sciences and Professor of Computer Science, Informatics, and Electrical Engineering and Computer Science* (telecommunications, networks, wireless communication, video transmission)

Hamid Jafarkhani, Ph.D. University of Maryland, *Director of Networked Systems and UCI Chancellor's Professor of Electrical Engineering and Computer Science* (communication theory, coding, wireless networks, multimedia networking)

Scott Jordan, Ph.D. University of California, Berkeley, *Professor of Computer Science and of Electrical Engineering and Computer Science* (pricing and differentiated services in the Internet, resource allocation in wireless multimedia networks, and telecommunications policy)

K. H. (Kane) Kim, Ph.D. University of California, Berkeley, *Professor of Electrical Engineering and Computer Science* (ultra-reliable distributed and parallel computing, real-time object-/component-/service-oriented programming and system engineering)

Athina Markopoulou, Ph.D. Stanford University, *Assistant Professor of Electrical Engineering and Computer Science* (networking—reliability and security, multimedia networking, and measurement and control)

Amelia Regan, Ph.D. University of Texas, Austin, *Professor of Computer Science* (operations research, network optimization, data mining)

Tatsuya Suda, Ph.D. Kyoto University, *Professor Emeritus of Computer Science* (computer networks, distributed systems, performance evaluation)

Gene Tsudik, Ph.D. University of Southern California, *Department Vice Chair and Professor of Computer Science* (security and applied cryptography, mobile/ad-hoc networks and distributed systems)

Nalini Venkatasubramanian, Ph.D. University of Illinois at Urbana-Champaign, *Professor of Computer Science* (parallel and distributed systems, multimedia servers and applications, internetworking, high-performance architectures, resource management)

The graduate program in Networked Systems is administered by faculty from two academic units: the Department of Computer Science (CS) in the Donald Bren School of Information and Computer Sciences, and the Department of Electrical Engineering and Computer Science (EECS) in The Henry Samueli School of Engineering. The program offers M.S. and Ph.D. degrees in Networked Systems.

The Networked Systems program provides education and research opportunities to graduate students in the areas of computer networks and telecommunication networks. Networked Systems include telephone networks, cable TV networks, cellular phone networks, and the Internet, as well as other emerging networks. Networked Systems are inherently interdisciplinary. By their design, they connect devices such as computers and phones using communications methods. Networked Systems therefore must address the combination of software, hardware, and communications. As a result, the Networked Systems area spans traditional departmental boundaries. At a minimum, the area draws heavily from Computer Science, Computer Engineering, and Electrical Engineering. At UCI, these areas are housed in two departments, CS and EECS. The Networked Systems program unites the strengths of these two departments and provides integrated M.S. and Ph.D. degrees in this area.

Program requirements include core, breadth, and concentration courses. The **core courses** are taken by all Networked Systems students and form a foundation for networking topics. The **breadth courses** may be selected from technical courses (including distributed systems, algorithms, data structures, operating systems, databases, random processes, and linear systems) and management and applications of technology (including educational technology, management of information technology, and social impact). The **concentration courses** may be selected from a long list including courses on networks, performance, middleware, communications, and operations research. Core, breadth, and concentration course lists are available on the Networked Systems Web site at <http://www.networkedsystems.uci.edu> or from the Networked Systems Program Office.

As an alternative to the Networked Systems program, students interested in networks may wish to consider the CS degree, offered by the CS Department, which includes courses in networks, compilers, computer architecture, distributed systems, algorithms, and

data structures; the Computer Networks and Distributed Computing concentration, offered by the EECS Department, which includes courses in networks, algorithms, operating systems, databases, and computer architecture; or the Electrical Engineering concentration, offered by the EECS Department, which includes courses in networks, random processes, communications, linear systems, and signal processing.

Admission

Prospective graduate students apply directly to the Networked Systems program, specifying whether they wish to pursue the M.S. degree only, the M.S. and Ph.D. degrees, or the Ph.D. degree only. Applicants who do not hold a bachelor's degree in Computer Science, Computer Engineering, or Electrical Engineering may be required to take supplementary course work to demonstrate sufficient background in the field.

Applicants are evaluated on the basis of their prior academic record and their potential for creative research and teaching, as demonstrated in their application materials including official university transcripts, letters of recommendation, GRE test scores, and statement of purpose.

Master of Science Program

Students pursuing the M.S. degree may choose either Plan I (Thesis Plan) or Plan II (Comprehensive Examination Plan). Students following Plan I must complete the three core courses, two courses chosen from the breadth course list with at most one chosen from the Management and Applications of Technology list, three courses chosen from the concentration course lists with at least one course chosen from at least two different concentrations, two additional courses chosen with the approval of the advisor, and a thesis.

Students following Plan II must complete the three core courses, three courses chosen from the breadth course list with at most two chosen from the Management and Applications of Technology list, four courses chosen from the concentration course lists with at least one course chosen from at least three different concentrations, and two additional courses chosen with the approval of the advisor. Students pursuing this option must also pass a comprehensive examination which will be administered through Networked Systems 295 and will consist of a term paper on a topic relevant to the student's educational program and that term's speakers.

Doctor of Philosophy Program

The Ph.D. degree requires the following 13 courses: three core courses; three courses chosen from the breadth course list, with at most two chosen from the Management and Applications of Technology list; four courses chosen from the concentration course lists, with at least one course chosen from at least three different concentrations; and three additional courses, chosen with the approval of the research advisor. Students must also complete two teaching practicum courses (ICS 399) and a dissertation.

Courses applied to the M.S. degree can also be applied to the Ph.D. degree. Students who have taken similar graduate-level courses at another university may petition to apply these courses to the Ph.D. requirements. Ph.D. students who have served as teaching assistants, readers, or tutors at another university may petition to apply this experience toward the teaching practicum requirement. The normative time for advancement to candidacy is three years (two for students who entered with a master's degree). The normative time for completion of the Ph.D. is six years (five for students who entered with a master's degree), and the maximum time permitted is seven years.

Courses in Networked Systems

(Schedule of Classes designation: Net Sys)

201 Internet (4). A broad overview of basic Internet concepts. Internet architecture and protocols, including addressing, routing, TCP/IP, quality of service, and streaming. Prerequisite: EECS148, Computer Science 132, or consent of instructor. Same as EECS248A and Computer Science 232.

202 Networking Laboratory (4). A laboratory-based introduction to basic networking concepts such as addressing, sub-netting, bridging, ARP, and routing. Network simulation and design. Structured around weekly readings and laboratory assignments. Prerequisite: EECS148 or Computer Science 132. Same as Computer Science 233.

210 Advanced Networks (4). Design principles of networked systems, advanced routing and congestion control algorithms, network algorithms, network measurement, management, security, Internet economics, and emerging networks. Prerequisite: Networked Systems 201 or Computer Science 232 or EECS248A. Same as Computer Science 234.

220 Internet Technology (4). Application layer Internet protocols, potentially including client/server, WWW, file sharing, group communications, Internet programming. Prerequisite: Networked Systems 201. Same as Computer Science 235.

230 Wireless and Mobile Networking (4). Introduction to wireless networking. The focus is on layers 2 and 3 of the OSI reference model, design, performance analysis, and protocols. Topics covered include: an introduction to wireless networking, digital cellular, next generation cellular, wireless LANs, and mobile IP. Prerequisites: EECS148 or Computer Science 132, and an introductory course in probability or consent of instructor. Same as Computer Science 236.

240 Network and Distributed Systems Security (4). Overview of modern computer and networks security: attacks and countermeasures. Authentication, identification, data secrecy, data integrity, authorization, access control, computer viruses, network security. Group communication and multicast security techniques. Also covers secure e-commerce and applications of public key methods, digital certificates, and credentials. Prerequisite: EECS148 or Computer Science 132. Same as Computer Science 203.

250 Performance Analysis of Computer Communication Networks (3). Mathematical modeling and optimization of network performance and design. Data link layer and media access protocols. Queuing models for communication networks. Routing and congestion control. Prerequisite: Networked Systems 201. Same as EECS248B.

256 Network Coding: Theory and Applications (3). Theoretical frameworks for network coding: linear, algebraic, and random network coding; linear programming and combinatorial frameworks. Network code design. Benefits and costs. Practical network coding. Applications to wireless networks, content distribution, security, and other areas. Prerequisites: EECS248A/Networked Systems 201/Computer Science 232 and an introductory course in linear algebra. Same as EECS246.

260 Middleware for Networked and Distributed Systems (4). Discusses concepts, techniques, and issues in developing distributed systems middleware that provides high performance and Quality of Service for emerging applications. Also covers existing standards (e.g., CORBA, DCOM, Jini, Espeak) and their relative advantages and shortcomings. Prerequisite: undergraduate-level course in operating systems and networks or consent of instructor. Same as Computer Science 237.

261 Distributed Computer Systems (3). Design and analysis techniques for decentralized computer architectures, communication protocols, and hardware-software interface. Performance and reliability considerations. Design tools. Prerequisites: EECS211 and EECS213. Same as EECS218.

270 Topics in Networked Systems (4). Study of Networked Systems concepts. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

295 Networked Systems Seminar (1) F, W, S. Current research in networked systems. Includes talks by UCI faculty, visiting researchers, and Networked Systems graduate students. Satisfactory/Unsatisfactory only. May be repeated for credit.

Graduate Program in Transportation Science

(949) 824-5989, -5906; Fax (949) 824-8385

Jean-Daniel Saphores, **Director**

Faculty

- Volodymyr Bilotkach, Ph.D. University of Arizona, *Assistant Professor of Economics*
- Marlon G. Boarnet, Ph.D. Princeton University, *Professor of Planning, Policy, and Design and of Economics*
- David Brownstone, Ph.D. University of California, Berkeley, *Professor of Economics*
- Jan K. Brueckner, Ph.D. Stanford University, *Department Chair and Professor of Economics*
- Joseph F. DiMento, Ph.D., J.D. University of Michigan, *Professor of Planning, Policy, and Design; Law; Social Ecology; and Management*
- Gordon J. Fielding, Ph.D. University of California, Los Angeles, *Professor Emeritus of Social Sciences*
- R. (Jay) Jayakrishnan, Ph.D. University of Texas at Austin, *Associate Professor of Civil and Environmental Engineering*
- Wenlong Jin, Ph.D. University of California, Davis, *Assistant Professor of Civil and Environmental Engineering*
- Michael McNally, Ph.D. University of California, Irvine, *Professor of Civil and Environmental Engineering and of Planning, Policy, and Design*
- Wilfred W. Recker, Ph.D. Carnegie-Mellon University, *Professor of Civil and Environmental Engineering*
- Amelia C. Regan, Ph.D. University of Texas, Austin, *Professor of Computer Science*
- Stephen G. Ritchie, Ph.D. Cornell University, *Director of the Institute of Transportation Studies and Professor of Civil and Environmental Engineering*
- Jean-Daniel M. Saphores, Ph.D. Cornell University, *Director of the Transportation Science Program and Associate Professor of Civil and Environmental Engineering, Economics, and Planning, Policy, and Design*
- Kenneth A. Small, Ph.D. University of California, Berkeley, *Professor Emeritus of Economics*

Affiliated Faculty

- Arthur S. DeVany, Ph.D. University of California, Los Angeles, *Professor Emeritus of Economics*
- Amihai Glazer, Ph.D. Yale University, *Professor of Economics*
- John D. Houston, Ph.D. University of California, Los Angeles, *Assistant Professor of Planning, Policy, and Design*
- Sandra S. Irani, Ph.D. University of California, Berkeley, *Department Chair and Professor of Computer Science*
- Raymond W. Novaco, Ph.D. Indiana University, *Professor of Psychology and Social Behavior*
- Luis Suarez-Villa, Ph.D. Cornell University, *Professor of Planning, Policy, and Design*
- Carole J. Uhlaner, Ph.D. Harvard University, *Associate Professor of Political Science and Economics*
- Christian Werner, Ph.D. The Free University of Berlin, *Professor Emeritus of Economics*

The graduate program in Transportation Science includes faculty from three academic units: the Department of Civil and Environmental Engineering in The Henry Samueli School of Engineering, the Department of Economics in the School of Social Sciences, and the Department of Planning, Policy, and Design in the School of Social Ecology. The program is designed to educate students in a broad set of competencies and perspectives that mirror the actual practice of current transportation research. The M.S. and Ph.D. degrees in Transportation Science are offered.

Admission

Admission is limited to a small number of exceptionally talented, independent, and self-disciplined students. The deadline for application for admission is March 1 for fall quarter. A second window for application for admission for winter or spring quarters is open from April 15 through June 1 but funding options for this second

window may be very limited. All applicants must take the Graduate Record Exam (GRE) prior to the application deadline. Applicants whose first language is not English must also submit Test of English as a Foreign Language (TOEFL) scores.

MASTER OF SCIENCE DEGREE

The M.S. degree program has two options: (1) thesis; and (2) comprehensive examination. Students will choose one of these two options. For both options, no more than 12 credit hours of non-transportation courses can count toward the required number of course-work units. Exceptions must be approved by the student's advisor and the Director of the Transportation Science program. Opportunities are available for part-time study toward the M.S. degree. The normative time for completion of the M.S. is one year, and the maximum time permitted is four years, as part-time status is allowed.

Transportation courses must be chosen from lists in each of the three program areas. Each student must choose (1) at least three graduate courses from *Area 1 (Transportation Systems Engineering)*, and (2) at least one graduate course from each of *Area 2 (Urban and Transportation Economics)* and *Area 3 (Transportation Planning)*, and at least one additional graduate courses from either of these two areas.

Specific courses in each of these areas are shown below (transportation courses are indicated in **bold**):

Area 1 (Transportation Systems Engineering): **CEE220A, CEE221A, CEE222, CEE224A, CEE225A, CEE225B, CEE226A, CEE227A, CEE228A, CEE229A.**

Area 2 (Urban and Transportation Economics): Economics 210A-B, **281A-B, 282A-B, 289A-Z.** NOTE: Economics 281A-B and 282A-B require Economics 210A or consent of the instructor. Students can only count one Economics 289 course toward the required number of units.

Area 3 (Transportation Planning): Planning, Policy, and Design 202, 207, **212, 223, 231, 233,** 235, 237, 238, 242, 244, 252.

Pre-approved upper-division undergraduate courses, independent study units, or seminars:

- Pre-approved upper-division undergraduate courses: CEE121, CEE122, CEE123, CEE124, CEE125, Economics 105A-B, 123A-B, 149.
- Independent study units: CEE296, CEE298, CEE299, Economics 299, Planning, Policy, and Design 298, 299.
- Seminars: Economics 285A-B-C. At most two of these classes may count toward the required units.
- Students who choose the thesis option may also take up to eight units of CEE296 (4 to 12 units) and Planning, Policy, and Design 298 (2 to 4 units).

Substitutions must be approved by the Transportation Science executive committee. Alternatively, students may petition the Director of the Transportation Science program after approval by their advisor.

Plan I: Thesis Option

Students who select the thesis option must complete at least 36 units of study, up to eight of which can be taken in conjunction with the thesis research topic (thesis units should be taken in the home department of the faculty advisor); they must also complete at least 28 units of course work with no more than eight units of pre-approved upper-division undergraduate courses, independent study units, or seminars. The thesis should reflect an original research investigation and it must be approved by a thesis committee of at least three full-time faculty members (a majority of which

must be Transportation Science faculty) with primary appointments in at least two of the following departments: Civil and Environmental Engineering, Economics, and Planning, Policy and Design. Thesis research findings must be presented in a public seminar.

Plan II: Comprehensive Examination Option

Students who select the comprehensive examination option must successfully complete 36 units of course work and pass a comprehensive examination. These units may include no more than six units of pre-approved upper-division undergraduate courses, independent study units, or seminars. The comprehensive examination requirements may be met with a 20-page paper dealing with a transportation topic; this paper must be approved by the student's advisor and the Director of the Transportation Science program.

DOCTOR OF PHILOSOPHY DEGREE

The Ph.D. degree indicates attainment of an original and significant research contribution to the state-of-the-art in the candidate's field, and an ability to communicate advanced concepts to a non-specialized audience. All students must complete a core curriculum consisting of eight courses from Civil Engineering, Economics, and Social Ecology plus the graduate colloquium. Students may apply to the Director of Enrollment and Graduate Academic Affairs for exemption from specific courses based upon the evidence of prior course work. Students also must successfully complete at least six courses from among the four specialization areas: (1) Methods and Analysis; (2) Transportation Systems Economics; (3) Traffic Analysis; and (4) Planning and Policy Analysis. At least four of these six courses must be from one specialization.

Students must complete the following general theory core courses:

Civil Engineering: CEE220A, CEE225A or CEE225B.

Urban Planning: Planning, Policy, and Design 202 or 212; Planning, Policy, and Design 223 or 242.

Economics: Economics H100A-B, 123A-B, and 282A-B.

Transportation Science: Economics 285A-B-C.

It is expected that all students will have sufficient background in one of the core disciplines to be exempted from some of the courses. Substitutions may be approved by the program director.

In addition to the general theory core courses, students must take at least six additional courses chosen from among the four specialization areas below.

Methods and Analysis Specialization: CEE220B, CEE223, CEE224A-B, CEE225A-B, CEE227A, CEE228A, CEE283; Economics 220A-D, 223A, 224A; Planning, Policy, and Design 206, 223, 237, 238, 242; Social Science 201A-B, 201C; Social Ecology 264A-B, 266A-B.

Transportation Systems Economics Specialization: Economics 210A-B, 241A-B, 281A-B.

Traffic Analysis Specialization: CEE221A-B, CEE226A-B, CEE227A, CEE228A-B, CEE229A-B.

Transportation Planning and Policy Analysis Specialization: CEE222, CEE225A-B, Economics 282A, Planning, Policy, and Design 202, 207, 212, 235, 242, 244, 252, 253, 275.

Other requirements include a replication project, in which students replicate the empirical work of a published paper from a major transportation journal; the qualifying examination, which consists of the oral defense of the student's dissertation proposal; and completion of the dissertation.

The normative time for advancement to candidacy is three years. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Replication Project

Prior to preparing a dissertation proposal, each student who has not completed a master's thesis (or otherwise independently published) must replicate the empirical work of a published paper from a major transportation journal, chosen by the student and approved by the advisor. This replication may involve the collection of new data, the use of better statistical techniques, additional simulations, or the identification and correction of theoretical errors. Through the replication project, students gain direct experience in reducing a general problem to a manageable research project, in using data, and in carrying out a research project.

Qualifying Examination

Upon completion of the general theory core courses, the specialization area courses, and the replication requirements, each student must develop a dissertation proposal defining the research problem, related literature, research methods, and data resources. The Ph.D. qualifying examination consists of an oral defense of that proposal before a candidacy committee chosen according to normal campus regulations, upon the recommendation of the Graduate Director. Typically, this is a committee of at least three members of the Transportation Science faculty and at least one faculty member who is not associated with Transportation Science.

Dissertation Requirement

Following advancement to candidacy, the dissertation is supervised by a doctoral committee ordinarily consisting of at least three members of the candidacy committee, a majority of which must be Transportation Science faculty. The dissertation must demonstrate the student's ability to originate interesting and significant research problems, to investigate such problems both broadly and deeply, and to write scholarly material of publishable quality. Certification of the dissertation will be by the student's doctoral committee. Dissertation research units should be earned in the department selected by the chair of the candidacy committee (e.g., CEE297, Economics 290, or Social Ecology 296).

RESEARCH FACILITIES

UCI is a major research university and has an excellent library collection, as well as special interlibrary loan arrangements with other University of California libraries including the Transportation Library at Berkeley. Research is coordinated with the Irvine branch of the Institute of Transportation Studies (ITS). Approximately 30 to 40 graduate students are employed as research assistants each year in ITS. Research covers a broad spectrum of transportation issues. Current funded research projects focus upon intelligent transportation systems (ITS), particularly advanced transportation management systems; planning and analysis of transportation systems; transportation systems operation and control; transportation engineering; transportation safety; road and congestion pricing; environmental and energy issues and demand for alternative fuel vehicles; public transit operations, transportation-land use interactions, demand for autos, and travel demand.

ITS is part of the University of California Transportation Center, one of ten federally designated centers of excellence for transportation research. The transportation research program at UCI is also supported by the Advanced Transportation Management Systems (ATMS) Laboratories. The Institute maintains a regular publications series documenting research conducted within its programs and is the editorial headquarters of the *Journal of Regional Science*.

SCHOOL OF LAW

Erwin Chemerinsky, **Dean**

General Information: law@uci.edu
<http://www.law.uci.edu/>

Faculty

Mario Barnes, J.D. University of California, Berkeley; LL.M. University of Wisconsin at Madison, *Professor of Law*
Dan Burk, J.S.M. Stanford Law School, J.D. Arizona State University, *UCI Chancellor's Professor of Law*
Alejandro Camacho, J.D. Harvard Law School, *Acting Professor of Law*
Jennifer Chacón, J.D. Yale Law School, *Professor of Law*
Erwin Chemerinsky, J.D. Harvard Law School, *Dean of the School of Law and UCI Distinguished Professor of Law and Political Science*
Linda R. Cohen, Ph.D. California Institute of Technology, *Associate Dean for Graduate Studies, School of Social Sciences, and Professor of Economics and Law*
Joseph F. DiMento, Ph.D., J.D. University of Michigan, *Professor of Law; Planning, Policy, and Design; Social Ecology; and Management*
Catherine Fisk, J.D. University of California, Berkeley; LL.M. University of Wisconsin at Madison, *UCI Chancellor's Professor of Law*
Carrie Hempel, J.D. Yale University School of Law, *Associate Dean of Clinical Education and Service Learning Programs, and Clinical Professor of Law*
Sarah B. Lawsky, J.D. Yale Law School; LL.M. New York University, *Acting Professor of Law*
Stephen Lee, J.D. University of California, Berkeley, *Acting Professor of Law*
Christopher Leslie, J.D. University of California, Berkeley, *Professor of Law*
Elizabeth F. Loftus, Ph.D. Stanford University, *UCI Distinguished Professor of Psychology and Social Behavior; Criminology, Law and Society; Cognitive Sciences; and Law*
William M. Maurer, Ph.D. Stanford University, *Department Chair and Professor of Anthropology and Professor of Law*
Carrie Menkel-Meadow, J.D. University of Pennsylvania, *UCI Chancellor's Professor of Law*
R. Anthony Reese, J.D. Stanford Law School, *UCI Chancellor's Professor of Law*
Justin B. Richland, Ph.D. University of California, Los Angeles; J.D. University of California, Berkeley-Boalt Hall School of Law, *Associate Professor of Criminology, Law and Society, Anthropology, and Law*
Michael Robinson-Dorn, J.D. Cornell Law School, *Clinical Professor of Law*
Carroll Seron, Ph.D. New York University, *Professor of Criminology, Law and Society, Sociology, and Law*
Ann Southworth, J.D. Stanford Law School, *Professor of Law*
William C. Thompson, Ph.D. Stanford University; J.D. University of California, Berkeley, *Professor of Criminology, Law and Society, Psychology and Social Behavior, and Law*
Beatrice Tice, J.D. Stanford Law School, M.L.I.S. University of Washington, *Associate Dean of Library and Information Services and Clinical Professor of Law*
Christopher Tomlins, Ph.D. John Hopkins University, *UCI Chancellor's Professor of Law*
Grace Tonner, J.D. Loyola Law School, *Associate Dean of Lawyering Skills and Clinical Professor of Law*
Kerry Vandell, Ph.D. Massachusetts Institute of Technology, *Professor of Management; Law; and Planning, Policy, and Design*
Henry Weinstein, J.D. University of California, Berkeley, *Clinical Professor of Law and Literary Journalism*
Christopher Whytock, Ph.D., M.A. Duke University; J.D. Georgetown University, *Acting Professor of Law*

The Law School anticipates appointing several additional full-time faculty within the School by fall 2011. For up-to-date information on these appointments, please monitor the School's Web site at <http://www.law.uci.edu>.

OVERVIEW

The School of Law welcomed its inaugural class of students in fall 2009. The School offers the J.D. (Juris Doctor). In addition, concurrent degree programs will connect legal education with the wide range of academic and professional opportunities of a major research university. The School emphasizes interdisciplinary studies and encourages dual degrees in many different fields.

Students completing the J.D. degree will be fully prepared for the practice of law based on the ultimate objective of any legal system—the realization of justice. The curriculum, described in further detail below, includes in-depth study of legal doctrine and also provides experiential learning based on clinical practice and the professional training in lawyering skills necessary for the practice of law at the highest level. Every student will have a clinical experience or the equivalent.

The School of Law builds on UCI's existing strengths in emerging technology, social policy, international business, environmental science and policy, health care, and other fields to produce leaders in law, government, and business for the twenty-first century. UCI law graduates are encouraged to pursue careers in public service, including non-governmental organizations and philanthropic agencies. Financial aid and a loan-repayment assistance program will be available to support students interested in these fields. The School will work aggressively to place students in law firms, public interest and legal services offices, and government agencies. A wide array of employers, from both the public and private sectors, have already committed to interview on campus.

The School of Law will seek accreditation from the American Bar Association as soon as possible. That process takes place over a three- to five-year period including an initial application for provisional accreditation for new law schools. (Students and graduates of provisionally approved law schools are entitled to the same recognition given to students and graduates of fully approved law schools. The Law School has applied for provisional accreditation, and if it is received, students will be eligible for any bar exam.) The Dean is fully informed as to the Standards and Rules of Procedure for the Approval of Law Schools by the American Bar Association. The administration and the Dean are determined to devote all necessary resources and in other respects to take all necessary steps to present a program of legal education that will qualify for approval by the American Bar Association. The School of Law makes no representation to any applicant that it will be approved by the American Bar Association prior to the graduation of any matriculating student.

The School of Law seeks to enroll outstanding students who reflect a wide diversity of life experiences. Further information about admission requirements, application deadlines, fee levels, and curriculum developments will be updated regularly on the School's Web site at <http://www.law.uci.edu/>.

Degree

Law J.D.

In addition, concurrent degree study (J.D./Ph.D and J.D./Master's) is available under the auspices of UC Irvine's Program in Law and Graduate Studies, which is described later in the School of Law section.

JURIS DOCTOR (J.D.) REQUIREMENTS

Graduation Requirements

To earn the Juris Doctor, students must complete six semesters of study, earn 86 law semester credits, pass all required classes, complete the required writing project, and have a minimum 2.0 (C) grade point average.

All students must complete at least 68 credits in regularly scheduled Law School classes. “Regularly scheduled Law School classes” include:

Law School courses and seminars, including courses cross-listed at the Law School but originating in another school or department at the University.

Law School clinics and clinical placements approved by the Associate Dean for Clinical Education and Service Learning.

Credits from another ABA-approved law school or from approved study in a foreign exchange program.

Regularly scheduled Law School classes do not include:

Independent study work.

Non-law classes.

Research tutorials.

Externships (other than those deemed to meet the Law School’s clinical requirement).

No more than 8 units of *optional credit/no credit* course work will count toward the 86-unit degree requirement.

First-Year Course Work Requirements

Students must pass all UCI Law School first-year courses, or their substantial equivalents, with grades of 2.0 (C) or higher. The Assistant Dean for Student Services will determine whether classes taken at another law school are sufficient for transfer students to meet the UCI first-year course work requirement. If not, the student will be notified which courses are needed to complete the requirement.

Upper-Level Academic Requirements

1. Writing Requirement

Students must complete at least one course where they are required to produce a major writing project with frequent feedback from a faculty member. This might include seminars, independent studies, or other work, so long as it involves substantial original analysis and research, multiple drafts, and is certified by the faculty members as meeting this requirement.

At the completion of the first-year lawyering skills course, students will have a meeting with their professor and receive advice on the type of writing assistance they need and approaches they should consider in meeting the upper-level writing requirement.

Students are strongly encouraged to develop a portfolio over the course of law school that will include all of their major written work and other forms of presentation.

2. Clinical Requirement

All students are required to complete at least one semester of clinical education, either in a Law School clinic or at a clinical placement that is approved by the Associate Dean of Clinical Education and Service Learning. This shall involve a live client or other real-life practical experience, appropriately supervised and designed to encourage reflection by students on their experiences and on the values and responsibilities of the legal profession, and the development of one’s ability to assess his or her performance and level of competence.

CURRICULUM

FIRST-YEAR CURRICULUM

The UCI School of Law has an innovative curriculum designed to prepare students for the practice of law at the highest levels of the profession. The first-year curriculum teaches students areas of legal doctrine traditionally taught in the first year, but in an innovative way that focuses on teaching methods of legal analysis and skills that all lawyers constantly use.

Students thus receive an education that includes the traditional areas of legal doctrine, but in an innovative context designed to prepare them for practice in the twenty-first century. Many other features of the first year are designed to prepare students for the practice of law. All first-year students are assigned a lawyer mentor and are required to spend a specified number of hours observing that lawyer at work.

There is an active pro bono program where students have the opportunity to do volunteer work in many different contexts beginning in their first year.

All first-year students enroll in the courses below. Additional information is available online at <http://www.law.uci.edu/registrar/curriculum.html>.

FALL SEMESTER

Law 500 Common Law Analysis: Private Ordering (4). This course will focus primarily on the common law of contracts to teach this method of analysis, in which the law is derived from judicial decisions rather than statutes or the Constitution.

Law 503 Statutory Analysis (3). This course will use criminal law as a basis for teaching students the methods employed in all areas of law for analyzing statutes.

Law 504 Procedural Analysis (4). This course will use civil procedure as the foundation for teaching students about areas of law in which there are procedural rules, and how analysis and arguments are made in such contexts.

Law 506A Lawyering Skills I (3). This course, which will be part of both semesters, will focus on teaching skills that all lawyers use, such as fact investigation, interviewing, legal writing and analysis, legal research, negotiation and oral advocacy.

Law 507A Legal Profession I (2). This course, which will be part of both semesters, is designed to prepare students to chart rewarding and responsible careers in law. Drawing from various disciplines, including economics, history, sociology, and psychology, we will teach students about the variety of practice settings in which lawyers work and the professional opportunities and challenges of each. (Full description available at <http://www.law.uci.edu/registrar/curriculum.html>.)

SPRING SEMESTER

Law 501 Common Law Analysis: Public Ordering (4). This course will use torts as a way of further examining the common law, and how lawyers reason and develop arguments in this area.

Law 502 Constitutional Analysis (4). This course will teach students basic areas of constitutional law such as separation of powers, federalism, and individual liberties. It will focus on how constitutional arguments are made, and how courts and lawyers analyze constitutional issues.

Law 505 International Legal Analysis (3). This course will introduce students to international law and the ways that analyses in this area are similar to and different from analysis in other areas of law.

Law 506B Lawyering Skills II (3). In the spring semester of this two-semester course, all students will have gained experience in a legal clinic setting, where they will conduct intake interviews of actual clients for the Legal Aid Society of Orange County.

Law 507B Legal Profession II (2). Continuation of fall semester course.

UPPER-LEVEL COURSES

Below is an overview of the upper-level courses taught at UC Irvine School of Law. Not every course will be offered each year, and additional courses not listed may be offered. Additional information is available at http://www.law.uci.edu/registrar/curriculum_upper_level.html. Course descriptions, content, and requirements are subject to change.

GENERAL COURSES

Law 510 Administrative Law
Law 511 Business Associations
Law 512 Constitutional Law: First Amendment
Law 513 Criminal Procedure
Law 514 Evidence
Federal Courts
Law 5155 Federal Criminal Law
Law 516 Federal Income Taxation
Law 517 Property
Remedies

BUSINESS LAW

Accounting for Lawyers
Law 521 Antitrust
Banking Law
Bankruptcy Law
Business and Economics of Law Firm Practice
Commercial Transactions
Law 526 Corporate Finance
Insurance Law
Securities Regulation

COLLOQUIUM

Law 519 Writing for Publication in the Law Review
Law 519X Advanced Writing for Publication in the Law Review

EMPLOYMENT LAW

Employment Discrimination Law
Employment Law
Law 532 Labor Law

ENTERTAINMENT LAW

Entertainment Law
Sports Law

FAMILY LAW

Children and the Law
Community Property
Law 542 Family Law
Gifts, Wills, and Trusts
Law 543 Advocating for Vulnerable Children: From Foster Care to Juvenile Justice

INTELLECTUAL PROPERTY

Law 545 Copyright Law
Law 546 Intellectual Property Law
Law 547 Patent Law
Trademark and Unfair Competition Law

INTERNATIONAL AND COMPARATIVE LAW

China Law
Comparative Law
Law 552 International Business Transactions
International Environmental Law
Law 554 International Human Rights Law
International Trade Law
Islamic Law
Japanese Law
Jewish Law
Korean Law

LAW AND MEDICINE

Biomedical Ethics
Health Care Law

PERSPECTIVE COURSES

Law 565 American Legal History
Law 5665 Spanish for Lawyers
Critical Race Theory
Feminist Jurisprudence and the Law
Jurisprudence
Law and Economics
Law 5691 Law and Literature
Law 5775 Race and the Law

PROCEDURAL COURSES

Arbitration
Law 5711 Civil Rights Litigation
Complex Litigation
Conflicts of Law
Dispute Resolution
Law 574 Negotiations and Mediation

PUBLIC LAW

Civil Rights Law
Education Law
Election Law
Law 5775 Race and the Law
Law 578 Environmental Law
Law 579 Immigration Law
Legislation
Local Government Law
Law 5815 Organizations, Operations and Tax Aspects of Public Charities and Private Foundations
Law 582 Media Law
National Security Law
Natural Resources Law
Poverty Law
White Collar Crime

REAL ESTATE LAW

Land Use Law
Real Estate Transactions

SKILLS COURSES

Advanced Legal Research
Advanced Legal Writing
Law 592 Appellate Advocacy
Negotiations
Spanish for Lawyers
Law 594 Trial Advocacy

TAX LAW

Law 5950 Corporate Tax
Estate and Gift Taxation
Partnership Tax
Law 5953 Taxation of Business Enterprises

CLINICAL/EXTERNSHIPS

Law 5965S, 5965P, 59651 Externships

Program in Law and Graduate Studies (J.D./Ph.D.; J.D./Master's)

(949) 824-4158

ctomlins@law.uci.edu; <http://www.plgs.uci.edu/>

Christopher Tomlins, **Director**

Highly qualified students interested in combining the study of law with graduate research and/or professional qualifications in cognate disciplines are invited to undertake concurrent degree study under the auspices of UC Irvine's Program in Law and Graduate Studies (PLGS). Students in this program pursue a coordinated curriculum leading to a J.D. degree from the School of Law in conjunction with a Master's or Ph.D. degree from any of the graduate professional or research degree programs at UCI that have been approved for this concurrent degree program. The objective of the program is to promote interdisciplinary study of law while also enabling students to obtain both a J.D. and a graduate degree in less time than would be required to acquire both degrees separately. The normative time for completion of the program is four years for J.D./Master's combinations and seven years for J.D./Ph.D. combinations. Additional information is available from the PLGS Program Director's Office, (949) 824-4158, or by e-mail to plgs@law.uci.edu. A full description of the program, with links to all relevant application information, can be found at <http://www.plgs.uci.edu/>.

UC Irvine's PLGS program is well suited to students interested in professional or academic careers focused on the interdisciplinary or multidisciplinary study of law and legal institutions, policy analysis, and/or applied research in law-related fields (for example, criminal justice and criminology, urban planning and environmental issues, discrimination, human rights, urban planning, environmental protection, and intellectual property). UC Irvine is nationally known for its graduate programs in such fields as Criminology, Law and Society; Psychology and Social Behavior; Anthropology; Management and Business; Literature; History; Performing Arts; and others.

Applicants must submit separate applications for admission to the School of Law and to the graduate program of their choice. Once admitted for study into both components of their program, concurrent degree students will work with the PLGS director and the director of their graduate program to develop a program of study that will permit efficient pursuit of both degrees. Ordinarily, students will commence their studies in their chosen graduate program and begin their first year of law instruction after one or more years of graduate program study. Upon completion of the first year of law instruction, students will pursue a coordinated curriculum of upper-level law study and graduate program study and research. Concurrent degree students' law enrollments will include a required 1-unit "Graduate Legal Studies" colloquium and a 3-unit "Interdisciplinary Perspectives on Law" course. Concurrent degree students will be eligible for financial support through their chosen graduate program while pursuing graduate degree studies, and through the law school while pursuing law studies.

SCHOOL OF PHYSICAL SCIENCES

Kenneth C. Janda, **Dean**

134 Rowland Hall
Academic Counseling: (949) 824-6507
<http://ps.uci.edu/>

The School of Physical Sciences offers both professional training and general education in the Departments of Chemistry, Earth System Science, Mathematics, and Physics and Astronomy. The faculty, active in research and graduate education, are at the same time vitally concerned with undergraduate teaching. Curricula of the School are designed to meet the needs of a wide variety of students ranging from those with little technical background who seek insight into the activities and accomplishments of physical scientists to those seeking a comprehensive understanding that will prepare them for creative research in physical science.

Over the course of the past century and a half, physics, chemistry, and mathematics have evolved into interdependent but separate intellectual disciplines. This development is reflected in the departmental structure of the School of Physical Sciences. In the same period, these fundamental disciplines have moved into domains of abstraction unimagined by early scientists. This trend to abstraction with its concomitant increase in understanding of the physical universe provides the major challenge to the student of the physical sciences. Mathematics, physics, and chemistry, while providing the foundation of the technology that dominates contemporary civilization, underlie to an ever-increasing extent the new developments in the biological and social sciences. Earth system science is grounded in the traditional physical sciences while breaking new paths in the quantitative study of changes in the global environment.

DEGREES

Chemistry	B.S., M.S., Ph.D.
Earth and Environmental Sciences	B.S.
Earth and Environmental Studies	B.A.
Earth System Science	M.S., Ph.D.
Mathematics	B.S., M.S., Ph.D.
Physics	B.S., M.S., Ph.D.

Honors

Criteria used by the School of Physical Sciences in selecting candidates for honors at graduation are as follows: Approximately 1 percent will be awarded *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*. Honors are awarded on the basis of a student's performance in research, cumulative grade point average, and performance in upper-division courses in the major. Students considered for honors at graduation must have completed 72 units in residence at the University of California. The student's cumulative record at the end of the final quarter is the basis for all decisions regarding honors at graduation. Other important factors are considered (see page 51). The School of Physical Sciences also grants special honors to students who have distinguished themselves by their work in their major subject.

Undergraduate Programs

Each department offers courses that are of value to nonmajors and majors in the sciences. The programs for majors are designed to meet the needs of students planning careers in business, education, or industry; of students planning advanced professional study; and of students planning graduate work that continues their major interest. Students who wish to complete a coordinated set of courses

beyond the introductory level in Mathematics and in Earth and Atmospheric Sciences may pursue minors in these areas. Introductory courses in chemistry, mathematics, and physics meet the needs of students majoring in the sciences, mathematics, and engineering and are also appropriate for students in other disciplines who seek a rigorous introduction to the physical sciences. In addition, a number of courses within the School have few or no prerequisites and are directed particularly toward students majoring in areas remote from the sciences.

PLANNING A PROGRAM OF STUDY

Students who choose a major in the School of Physical Sciences have a variety of academic advising and counseling resources available to them. In addition to faculty advisors, there is a Chief Academic Advisor in each department who is responsible for interpreting degree requirements, reviewing student petitions, and assisting with special advising problems. An academic advising and counseling staff, employed in the Associate Dean's Office, is available to serve a broad range of student advising needs. In consultation with their faculty advisor or an academic counselor, students should plan a course of study leading to a major in one of the departments of the School. In carrying out this major, students may often concentrate very heavily in a second department within the School or in some other school. Occasionally students choose to pursue a double major. Permission to do so may be sought by a petition submitted to the Office of the Associate Dean of Physical Sciences.

All initial courses of study for majors include mathematics through calculus, and calculus is a prerequisite for much of the upper-division work in each major. A student interested in any of the physical sciences should continue mathematical training beyond these prerequisite courses. Furthermore, students interested in either physics or chemistry usually will include work in both of these subjects in their undergraduate careers.

Students in the physical sciences are urged to acquire a working knowledge of computer programming at an early stage of their University studies. This can be accomplished by taking Information and Computer Science 21, Chemistry 5, Engineering EECS10, EECS12, MAE10, or Physics 53.

CAREER OPPORTUNITIES

The majority of graduates continue their education beyond the Bachelor's degree level. Many pursue advanced academic degrees in preparation for careers in scientific or medical research, engineering, or postsecondary education. Other students will complete a secondary education credential in order to prepare for careers teaching high school mathematics and science. Some students enter professional school in areas such as medicine, dentistry, law, or business administration. Students who choose not to continue their studies beyond the baccalaureate level most frequently find employment in private business or industry. In addition to technical areas directly related to their major fields of study, students often enter careers in less obviously related fields such as computing, systems analysis, engineering, journalism, marketing, or sales.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. See the Career Center section for additional information.

PREPARATION FOR TEACHING SCIENCE AND MATHEMATICS

Option 1: Earn a Bachelor's Degree, Education Concentration, and Teaching Credential

Physical Sciences students who are interested in pursuing a teaching career should consider the UCI Cal Teach Science and Mathematics Program. This program offers Chemistry, Earth and Environmental Sciences, Earth and Environmental Studies, Mathematics, and Physics majors an option to earn their bachelor's degree concurrently with a California Preliminary Single Subject Teaching Credential. Individuals who hold this credential are authorized to teach science (chemistry, geosciences, or physics) or math in a middle school or high school.

Students complete the degree requirements for their selected major, the requirements for an optional education concentration offered by the same department, and any additional teacher credentialing course requirements that are not included in the major or the concentration. The following courses are required for the Preliminary Single Subject Teaching Credential: Physical Sciences 5, Physical Sciences 105, Physics 193 or Chemistry 193, Mathematics 8 (for mathematics credential candidates only), Logic and Philosophy of Science 60, Education 55, 109, 143A, 143B, 148, and two quarters of Education 158. Beyond course work, some additional requirements for teacher certification are described below.

With careful, early planning, it is possible for students to complete their bachelor's degree and teacher certification in four years. This is a more time-efficient and cost-effective route than the traditional five-year teacher preparation model, which usually involves a full academic year of teacher education courses and clinical teaching experience after completion of a bachelor's degree.

After the School of Physical Sciences verifies the completion of all requirements for the bachelor's degree and education concentration, students are awarded their degree from UC Irvine. The Preliminary Single Subject Teaching Credential is awarded by the California Commission on Teacher Credentialing (CTC) upon completion of a bachelor's degree and the state-approved UCI teacher education program, which combines course work, student teaching, and a teaching performance assessment. The UCI Department of Education must verify completion of all requirements for the teaching credential and then recommend that the credential be awarded to a candidate by the CTC.

Additional Requirements for Teacher Certification. In addition to the required course work for a California Preliminary Single Subject Teaching Credential, the following additional requirements must be satisfied:

- A. The School of Physical Sciences requires a *cumulative* GPA of 2.0 (C) to graduate with the bachelor's degree. However, students must earn a grade of C or better in each of the following courses in order to be recommended for the Preliminary Single Subject Teaching Credential: Physical Sciences 105, Education 55, 143A, 143B, 148, 109, and 158.
- B. The following must be completed and verified prior to the start of student teaching in Education 158:
 1. Pass the California Basic Education Skills Test (CBEST), a basic mathematics and literacy skills test. For more information, see <http://www.cbest.nesinc.com/>.
 2. Pass the California Subject Exam for Teachers (CSET) in the discipline in which a candidate plans to earn a Preliminary Single Subject Teaching Credential (chemistry, geosciences, mathematics, or physics). Although secondary teachers are only required to pass the CSET exam in one discipline, those who pass the CSET exam in more than one disciplinary field (e.g., physics and mathematics) can be authorized to teach

classes in each of those disciplines. For more information about the CSET exam, see <http://www.cset.nesinc.com/>. Mathematics majors have an option to waive the CSET exam by completing prescribed course work, referred to as a subject-matter preparation program (SMPP). More information about the Mathematics SMPP is available at http://www.gse.uci.edu/academic_programs/ap_smpp_math.php.

3. Secondary school science teachers in California are expected to have a broad range of general science knowledge in addition to their discipline of specialization, because their Single Subject Teaching Credential in one of the sciences also authorizes them to teach classes in general or integrated science. The general science subtests of the CSET exam cover foundational topics in astronomy, geodynamics, Earth resources, ecology, genetics and evolution, molecular biology and biochemistry, cell and organismal biology, waves, forces and motion, electricity and magnetism, heat transfer and thermodynamics, and structure and properties of matter. Although students can prepare for the CSET exam's general science subtests through independent study, Physical Sciences students can also prepare themselves by taking lower-division courses that cover this content. Some suggested courses include Biological Sciences 1A or 93 and 94; Biological Sciences 98; Chemistry 1A-B-C; Earth System Science 1 and 7, and Physics 20A.
 4. Obtain a Certificate of Clearance from the State of California.
 5. Obtain a TB test with negative results.
- C. The following must be completed and verified before the Department of Education is able to recommend an individual for the Preliminary Single Subject Teaching Credential:
1. Complete a college-level course or pass an examination on the U.S. Constitution. Political Science 21A satisfies this requirement. Contact the UCI Department of Education Student Affairs Office for information about the exam.
 2. Obtain a CPR certificate in adult, child, or infant training.

Declaring Intention to Complete the Concentration and Teacher Certification. Prospective teachers who want to complete their degree and a teaching credential in four years are encouraged to start planning early by reviewing the sample programs for the major and the education concentration that they have selected, and to consult with an academic counselor. Interested students are encouraged to get started on the suggested first- and second-year credentialing course work, including Physical Sciences 5 and 105, and can do so without officially declaring their intention to complete the concentration or the credential. However, students must declare their intention to complete the optional education concentration and their intention to earn the Preliminary Single Subject Teaching Credential by the end of their second year at the latest, and prior to enrolling in Education 55, which they would typically take in fall of their third year. Forms for declaring a selected education concentration and for declaring an intention to complete the teaching credential are available in the Physical Sciences Student Affairs Office (134 Rowland Hall) or in the Cal Teach Science and Mathematics Resource and Advising Center (137 Biological Sciences Administration).

Option 2: Earn a Bachelor's Degree and Education Concentration or Specialization

A second option for students interested in teaching science and mathematics is to earn a teaching credential in a post-baccalaureate teacher preparation program *after* completing their bachelor's degree. UCI and other universities offer such programs, which typically require one academic year of education course work and

clinical teaching experience. The Departments of Chemistry, Mathematics, and Physics and Astronomy offer the concentration in Chemistry Education, the specialization in Mathematics for Education, and the concentration in Physics Education, respectively, which are well suited for undergraduates who plan to pursue a teaching credential after finishing their degree. These programs offer strong grounding in the fundamentals of one discipline, and at the same time, emphasize the breadth in natural sciences needed by secondary science teachers. Each department's curriculum includes introductory courses on effective methods of science and mathematics teaching and provides opportunities for practical fieldwork experiences in a secondary school classroom. Detailed requirements for each program are provided in the departmental sections.

SPECIAL PROGRAMS

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

Education Abroad Program

Upper-division students have the opportunity to experience a different culture while making progress toward degree objectives through the Education Abroad Program (EAP). EAP is an overseas study program which operates in cooperation with host universities and colleges throughout the world. See the Study Abroad Center section for additional information.

Minor in Biomedical Engineering

The minor in Biomedical Engineering is an interdisciplinary curriculum that includes courses from the Schools of Engineering, Physical Sciences, and Biological Sciences. The minor is designed to provide a student in the physical sciences with the introductory skills needed in the quantitative biomedical arena. See The Henry Samueli School of Engineering section of the *Catalogue* for more information.

Minor in Conflict Resolution

The interdisciplinary minor in Conflict Resolution provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels. See the School of Social Sciences section of the *Catalogue* for more information.

Minor in Global Sustainability

The interdisciplinary minor in Global Sustainability trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet. See the Interdisciplinary Studies section of the *Catalogue* for more information.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 54–61.

School Requirements: None.

Departmental Requirements: Refer to individual departments.

Graduate Programs

The School offers M.S. and Ph.D. degree programs in the Departments of Chemistry, Earth System Science, Mathematics, and Physics and Astronomy.

DEPARTMENT OF CHEMISTRY

1120 Natural Sciences II; (949) 824-6018

Scott D. Rychnovsky, **Department Chair**

Faculty

- Ioan Andricioaei, Ph.D. Boston College, *Associate Professor of Chemistry* (computational, physical, and theoretical chemistry, chemical biology, and chemical physics)
- V. Ara Apkarian, Ph.D. Northwestern University, *Professor of Chemistry* (physical chemistry and chemical physics)
- Ramesh D. Arasasingham, Ph.D. University of California, Davis, *Senior Lecturer with Security of Employment, Chemistry* (chemical education and inorganic chemistry)
- Donald R. Blake, Ph.D. University of California, Irvine, *Professor of Chemistry and Earth System Science* (atmospheric, analytical, environmental chemistry, and radiochemistry)
- Suzanne A. Blum, Ph.D. University of California, Berkeley, *Assistant Professor of Chemistry* (inorganic, organic, and organometallic chemistry)
- Andrew S. Borovik, Ph.D. University of North Carolina, Chapel Hill, *Department Vice Chair and Professor of Chemistry* (inorganic, organometallic, organic, polymer, materials and nanoscience chemistry, and chemical biology)
- David A. Brant, Ph.D. University of Wisconsin, *Professor Emeritus of Chemistry* (physical chemistry of biological macromolecules)
- Kieron Burke, Ph.D. University of California, Santa Barbara, *Professor of Chemistry and Physics* (theoretical and computational chemistry, physical chemistry, and chemical physics)
- A. Richard Chamberlin, Ph.D. University of California, San Diego, *Department Chair and Professor of Pharmaceutical Sciences, and Professor of Chemistry and Pharmacology* (organic synthesis and chemical biology)
- Robert M. Corn, Ph.D. University of California, Berkeley, *Professor of Chemistry and Biomedical Engineering* (analytical, materials, nanoscience, physical and polymer chemistry, chemical biology, and chemical physics)
- Robert J. Doedens, Ph.D. University of Wisconsin, *Interim Associate Dean of the School of Physical Sciences and Professor Emeritus of Chemistry* (structural inorganic and organometallic chemistry)
- Kimberly Edwards, Ph.D. University of California, Irvine, *Lecturer with Security of Employment, Chemistry* (general chemistry)
- William J. Evans, Ph.D. University of California, Los Angeles, *Professor of Chemistry* (synthetic inorganic and organometallic chemistry)
- Barbara J. Finlayson-Pitts, Ph.D. University of California, Riverside, *Director of AirUCI and UCI Distinguished Professor of Chemistry* (atmospheric, analytical, environmental and physical chemistry, and chemical physics)
- Fillmore Freeman, Ph.D. Michigan State University, *Professor of Chemistry* (computational, organic, and theoretical chemistry)
- Filipp Furche, Ph.D. University of Karlsruhe, *Associate Professor of Chemistry* (computational, materials, nanoscience, physical, polymer and theoretical chemistry, and chemical physics)
- Nien-Hui Ge, Ph.D. University of California, Berkeley, *Associate Professor of Chemistry* (analytical and physical chemistry, and chemical physics)
- R. Benny Gerber, Ph.D. Oxford University, *Professor of Chemistry* (atmospheric, computational, environmental, physical and theoretical chemistry, and chemical physics)
- Zhibin Guan, Ph.D. University of North Carolina at Chapel Hill, *Professor of Chemistry and Biomedical Engineering* (materials, nanoscience, organic and polymer chemistry, and chemical biology)
- Stephen Hanessian, Ph.D. Ohio State University, *Director of the Graduate Gateway Program in Medicinal Chemistry and Pharmacology, and Professor of Pharmaceutical Sciences, Pharmacology, and Chemistry* (organic chemistry)
- Warren J. Hehre, Ph.D. Carnegie-Mellon University, *Professor Emeritus of Chemistry* (theoretical chemistry)
- John C. Hemminger, Ph.D. Harvard University, *Vice Chancellor for Research and Professor of Chemistry* (analytical, atmospheric, environmental, materials, nanoscience, physical, polymer, and surface chemistry, and chemical physics)
- Alan F. Heyduk, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Chemistry* (inorganic and organometallic chemistry, and chemical biology)

- Wilson Ho, Ph.D. University of Pennsylvania, *Donald Bren Professor of Physics and Chemistry* (experimental condensed matter physics, materials, nanoscience, physical and polymer chemistry)
- Kenneth C. Janda, Ph.D. Harvard University, *Dean of the School of Physical Sciences and Professor of Chemistry* (analytical, atmospheric, environmental and physical chemistry, spectroscopy, and chemical physics)
- Elizabeth R. Jarvo, Ph.D. Boston College, *Assistant Professor of Chemistry* (inorganic, organic, and organometallic chemistry)
- Susan M. King, Ph.D. Massachusetts Institute of Technology, *Senior Lecturer in Chemistry* (organic chemistry)
- Matthew Law, Ph.D. University of California, Berkeley, *Assistant Professor of Chemistry* (analytical, inorganic, materials, nanoscience, physical and polymer chemistry, and chemical physics)
- Vladimir A. Mandelshtam, Ph.D. Institute of Spectroscopy, Academy of Sciences of the U.S.S.R., *Professor of Chemistry* (computational, physical and theoretical chemistry, and chemical physics)
- Craig C. Martens, Ph.D. Cornell University, *Professor of Chemistry* (computational, materials, nanoscience, physical, polymer and theoretical chemistry, and chemical physics)
- Rachel W. Martin, Ph.D. Yale University, *Assistant Professor of Chemistry and of Molecular Biology and Biochemistry* (analytical and physical chemistry, chemical biology, and chemical physics)
- Robert T. McIver, Jr., Ph.D. Stanford University, *Professor Emeritus of Chemistry* (physical and analytical chemistry)
- George E. Miller, D. Phil. Oxford University, *Senior Lecturer with Security of Employment Emeritus and Reactor Supervisor* (analytical and radioanalytical chemistry, and chemical education)
- Harold W. Moore, Ph.D. University of Illinois, *Department Vice Chair and Professor Emeritus of Chemistry* (organic chemistry and rational drug design)
- Shaul Mukamel, Ph.D. Tel-Aviv University, *UCI Chancellor's Professor of Chemistry* (analytical, computational, materials, nanoscience, physical, polymer, and theoretical chemistry, and chemical physics)
- Serguei A. Nizkorodov, Ph.D. University of Basel, Switzerland, *Associate Professor of Chemistry* (atmospheric, analytical, environmental and physical chemistry, and chemical physics)
- James S. Nowick, Ph.D. Massachusetts Institute of Technology, *Professor of Chemistry* (organic, polymer, materials and nanoscience chemistry, and chemical biology)
- Larry E. Overman, Ph.D. University of Wisconsin, *UCI Distinguished Professor of Chemistry* (inorganic, organic and organometallic chemistry, and chemical biology)
- Reginald M. Penner, Ph.D. Texas A & M University, *Director of the Center for Solar Energy and Professor of Chemistry* (analytical, materials, nanoscience, physical, and polymer chemistry, and chemical physics)
- Eric O. Potma, Ph.D. University of Groningen, *Assistant Professor of Chemistry* (analytical and physical chemistry, chemical biology, and chemical physics)
- Thomas L. Poulos, Ph.D. University of California, San Diego, *UCI Chancellor's Professor of Molecular Biology and Biochemistry, Pharmaceutical Sciences, Physiology and Biophysics, and Chemistry* (inorganic/organic chemistry)
- Jennifer Prescher, Ph.D. Stanford University, *Assistant Professor of Chemistry* (chemical biology)
- Peter M. Rentzepis, Ph.D. Cambridge University, *Professor of Chemistry and of Electrical Engineering and Computer Science, and UC Presidential Chair* (physical chemistry, chemical physics, and picosecond spectroscopy)
- F. Sherwood Rowland, Ph.D. University of Chicago, *Donald Bren Research Professor Emeritus of Chemistry and Earth System Science* (atmospheric, analytical and environmental chemistry, and radiochemistry)
- Scott D. Rychnovsky, Ph.D. Columbia University, *Department Chair and Professor of Chemistry* (organic chemistry)
- A. J. Shaka, Ph.D. Oxford University, *Department Vice Chair and Professor of Chemistry* (analytical and physical chemistry, chemical biology, and chemical physics)
- Kenneth J. Shea, Ph.D. Pennsylvania State University, *Professor of Chemistry and of Chemical Engineering and Materials Science* (analytical, materials, nanoscience, organic, and polymer chemistry)
- Mare Taagepera, Ph.D. University of Pennsylvania, *Senior Lecturer with Security of Employment Emerita* (physical organic chemistry and chemical education)
- Douglas J. Tobias, Ph.D. Carnegie Mellon University, *Department Vice Chair and Professor of Chemistry* (computational biophysical chemistry)
- Shiou-Chuan (Sheryl) Tsai, Ph.D. University of California, Berkeley, *UCI Chancellor's Fellow and Associate Professor of Molecular Biology and Biochemistry, Chemistry, and Pharmaceutical Sciences* (organic chemistry and chemical biology)
- Christopher D. Vanderwal, Ph.D. Scripps Research Institute, *UCI Chancellor's Fellow and Assistant Professor of Chemistry* (organic chemistry)
- David L. Van Vranken, Ph.D. Stanford University, *Professor of Chemistry* (organic chemistry and chemical biology)
- Gregory A. Weiss, Ph.D. Harvard University, *Professor of Chemistry and of Molecular Biology and Biochemistry* (organic chemistry and chemical biology)
- Max Wolfsberg, Ph.D. Washington University, *Professor Emeritus of Chemistry* (computational, physical and theoretical chemistry, and chemical physics)
- Albert Yee, Ph.D. University of California, Berkeley, *Professor of Chemical Engineering and Materials Science, Biomedical Engineering, and Chemistry*

Undergraduate Program

The major in Chemistry is elected by students planning careers in the chemical sciences and frequently also by those whose interests lie in biology, medicine, earth sciences, secondary education, business, and law. The curriculum of the Department is designed to satisfy the diverse needs of these students and others who may have occasion to study chemistry. The year course Chemistry 1A-B-C (or the Honors sequence Chemistry H2A-B-C) is prerequisite to all study in the Department at more advanced levels. The subject matter of this course serves also as a thorough introduction to the varied aspects of modern chemistry for students who do not wish to pursue their studies beyond the introductory level.

One year of high school chemistry is strongly recommended for enrollment in Chemistry 1A. Refer to the Guidelines for General Chemistry course placement located on the Testing Office Web site at <http://www.testingcenter.uci.edu/index.html>. A preparatory course, Chemistry 1P, is offered in summer and fall for those who have not taken a high school chemistry course, or who need additional preparation prior to entering Chemistry 1A. A grade of C- or better in Chemistry 1P automatically qualifies the student for Chemistry 1A.

Completion of a one-year sequence in organic chemistry, either Chemistry 51A-B-C or H52A-B-C, is required for Chemistry majors and for students of the life sciences. Certain advanced courses required of Chemistry majors may also be of interest to others.

The undergraduate program of the Chemistry Department emphasizes close contact with research. Chemistry majors are urged to engage in research or independent study under the direction of a faculty member. Information describing the procedures for arranging an undergraduate research opportunity is available on the Chemistry Department Web site at <http://www.chem.uci.edu/undergrad>.

Much of the important chemical literature is being and has been printed in foreign languages, principally German, Russian, Japanese, Chinese, and French. Reading competence in one or more of these languages is desirable, and Chemistry majors are encouraged to acquire this competence.

Chemistry majors who are interested in teaching chemistry at the secondary level are urged to consider completing the optional concentration in Chemistry Education. A two-year post-baccalaureate program for the M.S. in Chemistry and a California Secondary Teaching Credential is described in the Chemistry Graduate Program section. Chemistry majors who plan subsequent study in medical, dental, or other professional schools should request information concerning admission requirements directly from the

schools which they seek to enter. Counseling about preparation for a career in the health sciences is provided by the health science advisors in the School of Biological Sciences. Those intending to pursue graduate studies in chemistry should discuss their plans with a faculty member no later than the fall quarter of their senior year.

Admission to the Major

Students may be admitted to the Chemistry major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at <http://www.changeofmajor.uci.edu>. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of general chemistry with laboratory and one year of approved calculus.

REQUIREMENTS FOR THE B.S. DEGREE IN CHEMISTRY

University Requirements: See pages 54–61.

School Requirements: None.

Departmental Requirements

Basic Requirements: Mathematics 2A-B-D, Physics 7C-D-E and 7LC-LD, Chemistry 1A-B-C and M2LA-LB-LC (or H2A-B-C and H2LA-LB-LC), Chemistry 5, Chemistry 51A-B-C and 51LA-LB-LC (or H52A-B-C and H52LA-LB-LC), Chemistry 107 and 107L, Chemistry 131A-B-C (or 130A-B-C), Chemistry 151 and 151L.

Elective Requirements: At least five electives from the following lists, including at least two courses selected from the lecture list and two courses selected from the laboratory list. *Lectures:* Chemistry 125, 127, 128, 135, 137, 138, 177; and Chemistry courses numbered 201–205, 213–249, 262, 271, and 272; Biological Sciences 98 (Biochemistry), 99 (Molecular Biology); Earth System Science 122 (Atmospheric Dynamics), ESS 142 (Atmospheric Chemistry), ESS 144 (Marine Geochemistry and Biogeochemistry); Physics 111A-B (Classical Mechanics), 112A-B (Electromagnetic Theory); Engineering CBEMS110 (Reaction Kinetics and Reactor Design), CBEMS112 (Introduction to Biochemical Engineering), CBEMS120A (Momentum Transfer), CBEMS120B (Heat and Mass Transfer), CBEMS130 (Separation Processes), CBEMS135 (Chemical Process Control), CBEMS145 (Chemical Engineering Design), CEE162 (Introduction to Environmental Chemistry).

Laboratories: Biological Sciences M114L (Biochemistry Laboratory), M116L (Molecular Biology Laboratory), Chemistry 128L (Introduction to Chemical Biology Laboratory Techniques), 152 (Advanced Analytical Chemistry), 153 (Physical Chemistry Laboratory), 156 (Advanced Laboratory in Chemistry and Synthesis of Materials), 160 (Organic Synthesis Laboratory), 170 (Radioisotope Techniques), 177L (Medicinal Chemistry Laboratory), 180 (Undergraduate Research), Engineering CBEMS140A-B (Chemical Engineering Laboratory), Physics 120 (Electronics for Scientists), and 121 (Advanced Laboratory). (Chemistry 180 can be counted toward this requirement no more than once.)

At least three of the courses used to satisfy the Elective Requirement must be courses offered by the Chemistry Department, including at least one lecture course and one laboratory course.

Optional American Chemical Society Certification: For ACS Certification, the program must include Chemistry 128 or Biological Sciences 98; and two additional laboratory courses from the following list: Chemistry 128L, 152, 153, 156, 160, 180, or H180. These courses may not overlap with the upper-division laboratory elective requirement. A maximum of one quarter of Chemistry 180 or H180 may be used.

Optional Concentration in Biochemistry: The program must include Biological Sciences 97, 98, 99; Chemistry 128, 128L; and three advanced biology electives chosen from Biological Sciences D103, D104, D111L, D137, D147, D151, D153, D154, M114, M114L, M116, M116L, M121, M121L, M122, M122L, M123, M124A, M124B, M124L, M125, M128, M133, M137, M144, M160, N110, Pharmaceutical Sciences 170A, 170B.

Optional Concentration in Chemistry Education: The program requires Chemistry 193; Physical Sciences 5 and 105; Education 55. Students interested in teaching at the high school level are encouraged to complete the course Physical Sciences 106.

Secondary Teaching Certification Option: With *additional* course work and field experience offered through the UCI Cal Teach program, students who complete the concentration in Chemistry Education can also earn a California Preliminary Single Subject Teaching Credential. Completing the bachelor's degree, concentration, and teacher certification in four years is possible with careful, early planning. Additional courses required for teacher certification are Logic and Philosophy of Science 60; Education 109, 143A, 143B, 148, and two quarters of 158. Successful completion of Education 143A-B and 148 will be accepted in lieu of two electives (from the above Elective Requirements list) for students pursuing the concentration in Chemistry Education. For additional information about teacher certification requirements and enrollment procedures, see page 385. Interested students are strongly encouraged to contact the Physical Sciences Student Affairs Office or the Cal Teach Resource and Advising Center.

HONORS PROGRAM IN CHEMISTRY

The Honors Program in Chemistry is a research-based program offered to selected Chemistry majors during their final year. Applicants to the program must have completed their junior year with a grade point average of at least 3.3 overall and in their Chemistry courses. They must also have demonstrated the potential of carrying out research of honors quality, as judged by the Chemistry faculty member who will supervise their research. Students in this program enroll in Honors Research in Chemistry (Chemistry H180A-B-C) throughout their senior year and submit a formal thesis late in the spring quarter. They also enroll in the Honors Seminar in Chemistry (Chemistry H181), in which they receive instruction in scientific writing and present a formal research seminar. Successful completion of Chemistry H181 satisfies the UCI upper-division writing requirement.

Students who complete these requirements, whose grade point average remains above the 3.3 standard, and whose research is judged to be of honors quality will graduate with Departmental Honors in Chemistry.

The Department also offers an Honors General Chemistry sequence, H2A-B-C. This course in general chemistry is designed for members of the Campuswide Honors Program (CHP) and other highly qualified students. It covers the same material as Chemistry 1A-B-C, but in greater depth.

Additional information is available from the Chemistry Undergraduate Program Office.

PLANNING A PROGRAM OF STUDY

The departmental requirements leave the student a great deal of latitude in choice of courses; the student can choose to pursue interests ranging from biochemistry on the one hand to chemical physics on the other. Many of the basic requirements above coincide with those of the School of Biological Sciences. For this reason a double major in Chemistry and Biological Sciences is popular. The Department is approved by the American Chemical

Society to offer an undergraduate degree certified by the Society as suitable background for a career in chemistry or for graduate study in chemistry. While it is not mandatory, it is desirable for students to pursue a course of study that the Department judges to merit a certified degree. Specifically, the following courses must be included in the program of study: Chemistry 128 or Biological Sciences 98; and two laboratory courses from the list of upper-division laboratory courses that are not already required for the major: Chemistry 128L, 152, 153, 156, 160, 170, 177L, 180, or H180. These courses must be taken for a letter grade.

Students should consult with their academic advisors on courses of study. A Chemistry major normally takes Chemistry 1A-B-C and M2LA-LB-LC (or H2A-B-C and H2LA-LB-LC), Mathematics 2A-B-D, and required writing courses during the freshman year. Students are encouraged to enroll in at least one freshman seminar during the freshman year; freshman seminars probe timely scientific topics and allow students to interact with faculty in an intimate environment. The sophomore year should include Chemistry 5, 51A-B-C, and 51LA-LB-LC (or H52A-B-C and H52LA-LB-LC); the Physics 7 sequence should be completed no later than the fall quarter of the junior year. The balance of the freshman and sophomore program can be chosen at the student's discretion with consideration given to progress toward completion of the UCI general education requirement.

In the junior year all Chemistry majors should enroll in a year sequence of physical chemistry and in Chemistry 151/151L (fall), 107 (winter), and 107L (spring). Chemistry 130A-B-C and 131A-B-C are equivalent courses in physical chemistry. They have the same prerequisites and expect the same level of chemical and mathematical rigor. Both are acceptable to satisfy the physical chemistry requirement for the major. Chemistry 131A-B-C develops the topic beginning from a molecular or microscopic point of view and proceeds to the macroscopic description of matter; applications may address primarily gas phase systems. Chemistry 130A-B-C, on the other hand, commences with the macroscopic description; this approach may be of particular interest for applications of physical chemistry in biology, materials science, and engineering. Students should choose between the two courses on the basis of their interests. Because of significant differences in the sequence of topics, students starting in one series may not switch to the other in subsequent quarters.

During the junior and senior years the Chemistry Department electives requirement should be fulfilled, as should other University and departmental requirements.

Sample programs for Chemistry majors, American Chemical Society-certified Chemistry majors, the Biochemistry concentration, the Chemistry Education concentration, and Chemistry-Biological Sciences double majors are shown in the accompanying charts. Sample programs for Chemistry majors wishing to emphasize chemical physics, computational or theoretical chemistry, chemical synthesis and reactivity, or materials or polymer science in their undergraduate programs are also available. All sample programs can be viewed on the Chemistry Department Web site at <http://www.chem.uci.edu/undergrad>.

The faculty encourages Chemistry majors to enhance their education by studying abroad for one or more quarters, or during the summer. In most cases, the Chemistry EAP advisor can help students plan a program of study that will not extend the time it takes to graduate. Also, study abroad can enhance students' applications for admission to graduate and professional schools. For more information, see the Study Abroad Center section of this *Catalogue* or visit the Physical Sciences Student Affairs Office.

Graduate Program

The Department offers the M.S. and Ph.D. degrees in Chemistry. The Ph.D. degree is granted in recognition of breadth and depth of knowledge of the facts and theories of modern chemistry and an ability to carry out independent chemical research demonstrated through submission of an acceptable doctoral dissertation. The M.S. degree may be earned either through submission of an acceptable

Master's thesis (Plan I) or through an approved program of graduate course work and a comprehensive oral examination (Plan II). A Master's degree is not a prerequisite for admission to the Ph.D. program.

Students in the Ph.D. and M.S. Plan I (Thesis) programs are required to complete a minimum of seven approved courses (or 28 units), including six graduate-level courses (or 24 units), in chemistry. The M.S. Plan II (Non-Thesis) program requires that the student complete 10 graduate-level chemistry courses (or 40 units) and a comprehensive oral examination. Graduate students are expected to attain grades of B or better to remain in good academic standing. The comprehensive oral examination assesses the competence of the candidate in the areas of chemistry covered by the chosen course work, with unanimous agreement among the three examination committee members required for satisfactory completion.

Progress toward the Ph.D. degree during the first year is assessed by a written examination administered after completion of the first year of study. This examination covers either research accomplishments during the first year or comprehensive knowledge acquired in course work. The time and content of the examination depends upon the student's specific area of interest.

Training in teaching is an integral part of each graduate program, and all graduate degree candidates are expected to participate in the teaching program for at least four quarters during their graduate career.

Participants in the Ph.D. program take an oral examination for formal Advancement to Candidacy. This examination consists of an oral defense before a faculty committee of the student's dissertation research project, and an original research proposition conceived, developed, and documented by the student. The committee may examine the student at this time on any subject it deems relevant to the independent pursuit of chemical research. The normative time for advancement to candidacy is three years.

The most important component of the Ph.D. program is the doctoral dissertation, which must describe the results of original research performed by the student under the supervision of a faculty member of the Department. The criterion for acceptability of the dissertation is that its contents be of a quality suitable for publication in a scientific journal of high editorial standards. Each Ph.D. candidate is expected to present the work described in the completed dissertation in a seminar before the Department, following which the candidate will be examined on the contents of the dissertation by a committee of the faculty. A Master's thesis presented in partial fulfillment of the requirements for the M.S. under Plan I must also describe the results of a student's original research performed under the direction of a faculty member. However, no public oral defense of the Master's thesis is required.

Residency requirements specify a minimum of six quarters in residence at UCI for Ph.D. candidates and three quarters for M.S. candidates.

The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

MASTER OF SCIENCE IN CHEMISTRY WITH A TEACHING CREDENTIAL

In cooperation with the UCI Department of Education, the Chemistry Department sponsors a coordinated two-year program for the M.S. degree in Chemistry and the California Single Subject Teaching Credential. The M.S. degree may be obtained under either Plan I or Plan II described below. Prospective graduate students interested in this program should so indicate on their graduate application and should request a detailed description of the program from the Chemistry Department Graduate Affairs Office or the Department of Education.

The following lists specify requirements for each of the graduate programs offered by the Department of Chemistry.

MASTER OF SCIENCE IN CHEMISTRY PLAN I (Thesis Plan)

Completion of a minimum of seven approved courses (or 28 units), including six graduate-level courses (or 24 units) in chemistry (as specified by the Department and excluding Chemistry 280, 290, 291, and 399) with maintenance of an average grade of B or better in all course work undertaken.

Completion of the teaching requirement.

Completion of three quarters in residence at UCI.

Submission of an acceptable Master's thesis.

MASTER OF SCIENCE IN CHEMISTRY PLAN II (Non-Thesis Plan)

Completion of 10 graduate-level courses (or 40 units) in chemistry (excluding Chemistry 290, 291, and 399 and counting Chemistry 280 no more than once) with an average grade of B or better.

Maintenance of an average grade of B or better in all course work undertaken.

Completion of the teaching requirement.

Completion of three quarters in residence at UCI.

Satisfactory completion of a comprehensive oral examination.

DOCTOR OF PHILOSOPHY IN CHEMISTRY

Completion of a minimum of seven approved courses (or 28 units), including six graduate-level courses (or 24 units) in chemistry (as specified by the Department and excluding Chemistry 280, 290, 291, and 399) with maintenance of an average grade of B or better in all course work undertaken.

Completion of the second-year Examination requirement.

Completion of the Oral Examination requirement for Advancement to Candidacy.

Completion of the teaching requirement.

Completion of six quarters in residence at UCI.

Submission of an acceptable doctoral dissertation.

Area Requirements

Ph.D. students generally choose from one of six areas of specialization in the Department which determines course work requirements. Generally, each area requires three or four core courses and a menu of additional courses from which to choose to reach the required total of seven courses.

Analytical Chemistry: Three core courses: Chemistry 243, 246, and 249; plus four additional courses from Chemistry 213, 230, 231A, 232A, 233, 234, 247, 248, 271, and 272.

Atmospheric Chemistry: Three core courses: Chemistry 213, either Chemistry 231A or 232A, and Chemistry 245; plus four additional courses from Chemistry 230, 231A, 231B, 232A, 234, 241, and 243, 246, 249, and Earth System Science 208A and 208B.

Inorganic Chemistry: Three core courses: Chemistry 215, 216, and 217; plus four additional courses from Chemistry 201, 202, 203, 204, 205, 220, 225, and 249, Molecular Biology and Biochemistry 203, 204, and 207, Biological Chemistry 210A and 212.

Organic Chemistry: Three core courses: Chemistry 201, 203, and 204 or 220; plus four additional courses from Chemistry 202, 205, 215, 216, 217, 218, 220, and 225, Molecular Biology and Biochemistry 203, 204, and 207, Biological Chemistry 210A and 212, Physiology and Biophysics 204 and 242.

Physical Chemistry: Three core courses: Chemistry 213, 231A, and 232A; plus four additional courses from Chemistry 207, 227, 230, 231B, 231C, 232B, 232C, 234, 235, 236, 248, 249, and 266.

Theoretical Chemistry: Six core courses: Chemistry 231A, 231B, 232A, 232B, 229A, 237. Three additional courses from Chemistry 213, 228, 229B, 230, 231C, 232C, 235, 254, or Physics 213C, 223, 238A.

Chemical and Structural Biology–Bioinorganic: Seven courses as follows: three core courses, Chemistry 215, 217, 218; Chemistry 219 and 223; plus two additional courses from the electives list.*

Chemical and Structural Biology–Bioorganic: Seven courses as follows: three core courses, Chemistry 201, 220, either Chemistry 204 or Molecular Biology and Biochemistry 203; Chemistry 219 and 223; plus two additional courses from the electives list.*

Chemical and Structural Biology–Biophysical: Seven courses as follows: three core courses, Chemistry 221A and two of the following: Chemistry 213, 231A, or 232A; Chemistry 219 and 223; plus two additional courses from the electives list.*

Chemical and Structural Biology–Structural: Seven courses as follows: three core courses, Molecular Biology and Biochemistry 203, Molecular Biology and Biochemistry 211, and one of the following: Chemistry 218, 220, or 221A; Chemistry 219 and 223; plus two additional courses from the electives list.*

***Electives for the Specialization in Chemical and Structural Biology:** Chemistry 201, 202, 203, 205, 215, 216, 218, 220, 222, 227, 230, 231A, 231B, 231C, 232A, 232B, 232C, 243, 249, 253, 271, and Molecular Biology and Biochemistry 203, 204, 211, 223, and 251. Elective courses are chosen in consultation with an advisor to reflect the student's interest and cannot overlap with courses satisfying the core course requirement.

CONCENTRATION IN CHEMICAL AND MATERIALS PHYSICS

This is an interdisciplinary program between condensed matter physics and physical chemistry, which is designed to eliminate the barrier between these two disciplines. Students with B.S. degrees in Physics, Chemistry, or Materials Science and Engineering, are encouraged to apply to the program. The goal of the concentration in Chemical and Materials Physics (ChaMP) is to provide students with a broad interdisciplinary education in the applied physical sciences that emphasizes modern laboratory and computational skills. The program accepts students for both the M.S. and the Ph.D. degrees. Upon admission to the program, students are assigned two faculty advisors, one from the Department of Physics and Astronomy, and one from the Department of Chemistry, to provide guidance on curriculum and career planning.

The curriculum for the M.S. program includes a summer session to assimilate students with different undergraduate backgrounds; formal shop, laboratory, and computational courses; a sequence on current topics to bridge the gap between fundamental principles and applied technology; and a course to develop communication skills. The required courses include thirteen core courses and three electives (subject to advisor approval) as follows: **Core:** Chemistry 206, 208, 229A, 231C, 232A-B, 266; Physics 273 or Chemistry 273; Chemistry 231A or Physics 215A; Chemistry 231B or Physics 215B; two courses from the following group: Chemistry 228, 230, Physics 211, 222; one course from Physics 133 or 238A or Chemistry 236. **Electives:** Chemistry 213, 225, 226, 229B, 232C, 233, 243, 248, 249, Engineering EECS285B, MSE259A, Physics 134A, 213C, 223, 229B, 233A-B, 238A-B-C. In addition to the required courses, M.S. students complete a master's thesis. Students are required to advance to candidacy for the master's

degree at least one quarter prior to filing the master's thesis. There is no examination associated with this advancement, but the thesis committee needs to be selected and appropriate forms need to be filed. The M.S. program prepares students to compete for high-tech jobs or to begin research toward a Ph.D. degree.

Successful completion of the M.S. degree requirements qualifies students for the Ph.D. program. Progress toward the Ph.D. degree is assessed by a written comprehensive examination administered in the summer after completion of the first year of study. This examination covers comprehensive knowledge acquired in course work, and the content of the examination depends upon the student's specific area of interest.

Participants in the Ph.D. program take an examination for formal advancement to candidacy. It is typically taken within one year of successful completion of the comprehensive examination. To satisfy normative progress toward the degree, it must be taken by the end of the student's third year. The examination is comprised of two parts: (a) a written report on a topic to be determined in consultation with the research advisor and (b) an oral report on research accomplished and plans for completion of the Ph.D. dissertation.

GRADUATE GATEWAY PROGRAM IN MEDICINAL CHEMISTRY AND PHARMACOLOGY (MCP)

The one-year graduate Gateway Program in Medicinal Chemistry and Pharmacology (MCP) is designed to function in concert with selected department programs, including the Ph.D. in Chemistry. Detailed information is available in the Department of Pharmaceutical Sciences section on page 536, and online at <http://www.cohs.uci.edu/pharm.shtml>.

Courses in Chemistry

(*Schedule of Classes* designation: Chem)

LOWER-DIVISION

NOTE: Enrollment in lower-division Chemistry courses is subject to limitations. See the guidelines for Chemistry course placement at <http://www.testingcenter.uci.edu/chemistry.html> and in the *Schedule of Classes* (available at <http://www.reg.uci.edu>).

The Department of Chemistry strictly enforces all course prerequisites. Courses with sequential designations (i.e., 1A-B-C) indicate multiple-quarter courses; each course in a sequence is prerequisite to the next in the series.

1A-B-C General Chemistry (4-4-4) F, W, S, Summer. Lecture, three hours; discussion, one hour. **1A:** Atomic structure; general properties of the elements; covalent, ionic, and metallic bonding; intermolecular forces; mass relationships. Corequisite: concurrent enrollment in the corresponding laboratory courses. Prerequisite: one year of high school chemistry is strongly recommended. **1B:** Properties of gases, liquids, solids; changes of state; properties of solutions; stoichiometry; thermochemistry; and thermodynamics. Corequisite: Chemistry M2LB for Chemistry majors only, no corequisite for other majors. Prerequisite: a grade of C- or better in Chemistry 1A. **1C:** Equilibria, aqueous acid-base equilibria, solubility equilibria, oxidation reduction reactions, electrochemistry; kinetics; special topics. Corequisite: Chemistry M2LC for Chemistry majors only, Chemistry 1LC for other majors. Prerequisite: a grade of C- or better in Chemistry 1A-B. Chemistry 1A-B-C and Chemistry H2A-B-C may not both be taken for credit. *Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Biomedical Computing (for Chemistry 1A-B), Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment. (II)*

NOTE: Students who have had one year of high school chemistry normally start with Chemistry 1A. Students who did not take high school chemistry or who need help with algebraic problem solving should enroll in Chemistry 1P. Refer to the guidelines for Chemistry course placement on the Testing Center's Web site. Students who take Chemistry 1P must earn a grade of C- or better to move on to Chemistry 1A.

1LC-LD General Chemistry Laboratory (2-2) F, S, Summer. Discussion, one hour; laboratory, four hours. Training and experience in basic laboratory techniques. Chemical practice and principles illustrated through experiments related to lecture topics in Chemistry 1A-B-C. Corequisite for 1LC: Chemistry 1C. Prerequisite for 1LC: a grade of C- or better in Chemistry 1B. Prerequisite for 1LD: a grade of C- or better in Chemistry 1C and 1LC. Only one course from Chemistry 1LC-LD, H2LB-LC, or M2LB-LC may be taken for credit. *Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.*

NOTE: Chemistry 1LB will be deleted effective winter quarter 2012. Non-major students will enroll in the following course sequence: fall 2011, Chemistry 1A; winter 2012, Chemistry 1B; spring 2012, Chemistry 1C and 1LC. Students continuing with the organic chemistry series will enroll in the following organic chemistry courses: fall 2012, Chemistry 51A and 1LD; winter 2013, Chemistry 51B and 51LB; spring 2013, Chemistry 51C.

1LE Accelerated General Chemistry Laboratory (3) W, Summer.

Discussion, two hours; laboratory, four hours. Lecture and experiments covering chemical concepts for accelerated students who do not plan to take organic chemistry. Properties of gases, liquids, solutions, and solids; chemical equilibrium, chemical thermodynamics; atomic and molecular structure; chemical kinetics; electrochemistry. Corequisite: Chemistry 1A or 1B. Prerequisite: one year of high school chemistry is strongly recommended. Only one course from Chemistry 1LE, H2LB, or M2LB may be taken for credit. *Majors in the School of Engineering and Biomedical Computing majors have first consideration for enrollment.*

1P Preparation for General Chemistry (4) F, Summer. Lecture, three hours; discussion, one hour. Units of measurement, dimensional analysis, significant figures; elementary concepts of volume, mass, force, pressure, energy, density, temperature, heat, work; fundamentals of atomic and molecular structure; the mole concept; stoichiometry; properties of the states of matter; gas laws; solutions, concentrations. NOTE: Chemistry 1P satisfies no requirements other than contribution to the 180 units required for graduation. Designed for students without a high school chemistry background or who need additional help prior to enrollment in Chemistry 1A. Refer to the guidelines for Chemistry course placement on the Testing Center's Web site. Students who take Chemistry 1P must earn a grade of C- or better to move on to Chemistry 1A. *Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Biomedical Computing, Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Undecided/Undeclared students have first consideration for enrollment.*

H2A-B-C Honors General Chemistry (4-4-4) F, W, S. Lecture, three hours; discussion, one hour. Covers the same material as Chemistry 1A-B-C but in greater depth. Additional topics included as time permits. Corequisite: concurrent enrollment in the corresponding quarter of Chemistry H2LA-LB-LC. Prerequisite for Chemistry H2A: membership in the Campuswide Honors Program, or a score of 4 or 5 on the Chemistry Advanced Placement Examination, or a score of 700 or better on the SAT II in Chemistry, or consent of instructor. Prerequisite for Chemistry H2B-C: a grade of B or better in preceding course in series. Chemistry H2A-B-C satisfies the same requirements and prerequisites as Chemistry 1A-B-C; corresponding segments may not both be taken for credit. (II)

H2LA-LB-LC Honors General Chemistry Laboratory (2-2-2) F, W, S. Discussion, one hour. laboratory, four hours. Training and experience in basic laboratory techniques through experiments related to lecture topics in Chemistry H2A-B-C. Corequisite: concurrent enrollment in the corresponding segment of Chemistry H2A-B-C. Prerequisite: membership in the Campuswide Honors Program, or a score of 4 or 5 on the Chemistry Advanced Placement Examination, or a score of 700 or better on the SAT II in Chemistry, or consent of instructor. Chemistry H2LA-LB-LC and Chemistry 1LC-LD may not both be taken for credit. Only one course from Chemistry 1LE, H2LB, or M2LB may be taken for credit.

M2LA-LB-LC Majors General Chemistry Laboratory (2-2-2) F, W, S. Discussion, one hour; laboratory, four hours. Training and experience in basic laboratory techniques through experiments related to lecture topics in Chemistry 1A-B-C. Corequisite: concurrent enrollment in the corresponding segment of Chemistry 1A-B-C. Prerequisite: one year of high school chemistry is strongly recommended. Chemistry M2LA-LB-LC and Chemistry 1LC-LD may not both be taken for credit. Only one course from Chemistry 1LE, H2LB, or M2LB may be taken for credit. *Open to Chemistry majors only.*

5 Scientific Computing Skills (4) F, S, Summer. Lecture, three hours; discussion, one hour; laboratory, two hours. Introduces students to the personal computing software used by chemists for managing and processing of data sets, plotting of graphs, symbolic and numerical manipulation of mathematical equations, and representing chemical reactions and chemical formulas. Corequisites: Chemistry 1C or H2C, and Mathematics 2D. Prerequisites: Chemistry 1A-B or H2A-B, and Mathematics 2A-B. *Chemistry majors have first consideration for enrollment.*

51A-B-C Organic Chemistry (4-4-4); 51A (F, Summer), 51B (W, Summer), 51C (S, Summer, F). Lecture, three hours; discussion, one hour. Fundamental concepts relating to carbon compounds with emphasis on structural theory and the nature of chemical bonding, stereochemistry, reaction mechanisms, and spectroscopic, physical, and chemical properties of the principal classes of carbon compounds. Corequisite for 51A-B: concurrent enrollment in the corresponding segment of Chemistry 51L. Prerequisites for 51A: Chemistry 1A-B-C and 1LC. Prerequisites for 51B and 51C: a grade of C- or better in previous quarter of sequence. Chemistry 51A-B-C and Chemistry H52A-B-C may not both be taken for credit. *Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Public Health Policy have first consideration for enrollment.*

51LA-LB-LC Organic Chemistry Laboratory (2-2-2); 51LA (F, Summer), 51LB (W, Summer), 51LC (S, Summer, F). Discussion, one hour; laboratory, four hours. Modern techniques of organic chemistry, using selected experiments to illustrate topics introduced in Chemistry 51A-B-C. Corequisite for 51LA-LB-LC: concurrent enrollment in the corresponding segment of Chemistry 51. Prerequisites for 51LB: a grade of C- or better in Chemistry 51A and 51LA. Prerequisites for 51LC: a grade of C- or better in Chemistry 51B and 51LB. Chemistry 51LA-LB-LC and Chemistry H52LA-LB-LC may not both be taken for credit. *Majors in the Schools of Physical Sciences, Biological Sciences, and Engineering, and majors in Nursing Science, Pharmaceutical Sciences, Public Health Sciences, and Public Health Policy have first consideration for enrollment in Chemistry 51LA-LB. Chemistry majors have first consideration for enrollment in Chemistry 51LC.*
NOTE: Chemistry 51LA will be deleted effective fall quarter 2012. Nonmajor students will enroll in the following course sequence: fall 2012, Chemistry 51A and Chemistry 1LD; winter 2013, Chemistry 51B and 51LB; spring 2013, Chemistry 51C.

H52A-B-C Honors Organic Chemistry (4-4-4) F, W, S. Lecture, three hours; discussion, one hour. Fundamental concepts of the chemistry of carbon compounds. Structural, physical, and chemical properties of the principal classes of carbon compounds. Corequisite: concurrent enrollment in the corresponding segment of Chemistry H52L. Prerequisites for H52A: a B average in Chemistry 1A-B-C or H2A-B-C or consent of instructor. Prerequisites for H52B and H52C: a grade of C or better in previous quarter of sequence. Chemistry H52A-B-C and Chemistry 51A-B-C may not both be taken for credit.

H52LA-LB-LC Honors Organic Chemistry Laboratory (2-2-2) F, W, S. Laboratory, five hours. Fundamental techniques of modern experimental organic chemistry. Corequisite: concurrent enrollment in the corresponding segment of Chemistry H52. Prerequisite for H52LB and H52LC: a grade of C or better in previous quarter of sequence. Chemistry H52LA-LB-LC and Chemistry 51LA-LB-LC may not both be taken for credit.

H90 The Idiom and Practice of Science (4). Lecture, three hours; discussion, two hours. A series of fundamental and applied scientific problems are addressed, illustrating the pervasive role of mathematical analysis. Topics may include thermodynamics, chemical equilibria, acid-base chemistry, kinetics, states of matter, electronic structure of atoms and the periodic table, chemical bonding, spectroscopy, and topics from organic, atmospheric, and biochemistry. Open only to members of the Campuswide Honors Program or with consent of instructor. (II)

UPPER-DIVISION

107 Inorganic Chemistry I (4) W. Lecture, three hours; discussion, one hour. Introduction to modern inorganic chemistry. Principles of structure, bonding, and chemical reactivity with application to compounds of the main group and transition elements, including organometallic chemistry. Prerequisites: Chemistry 1A-B-C; 51A-B-C or H52A-B-C. *Chemistry majors have first consideration for enrollment.*

107L Inorganic Chemistry Laboratory (3) S. Laboratory, three hours; discussion, one hour; four-hour mandatory laboratory safety seminar first week of the course. Modern techniques of inorganic and organometallic chemistry including experience with glove box, Schlenk line, and vacuum line methods. Corequisite: Prerequisite: Chemistry 107. *Chemistry majors have first consideration for enrollment.*

125 Advanced Organic Chemistry (4) W. Lecture, three hours; discussion, one hour. Rapid-paced comprehensive treatment of organic chemistry, reinforcing the fundamental concepts introduced in Chemistry 51A-B-C and H52A-B-C. Focuses on molecular structure, reactivity, stability, scope and mechanisms of organic reactions. Topics include: structure and bonding; theoretical organic chemistry; acidity and basicity; reactive intermediates; pericyclic reactions; stereochemistry; organic synthesis; natural products; organic photochemistry. Prerequisites: Chemistry 51A-B-C or H52A-B-C. *Chemistry majors have first consideration for enrollment.*

127 Inorganic Chemistry II (4) S. Lecture, three hours; discussion, one hour. Advanced treatment of selected fundamental topics in inorganic chemistry, building on material presented in Chemistry 107. Molecular symmetry with applications to electronic structure and spectroscopy. Reaction kinetics and mechanisms; inorganic synthesis and catalysis; bioinorganic chemistry. Prerequisite: Chemistry 107. *Chemistry majors have first consideration for enrollment.*

128 Introduction to Chemical Biology (4) W. Lecture, three hours; discussion, one hour. Introduction to the basic principles of chemical biology: structures and reactivity; chemical mechanisms of enzyme catalysis; chemistry of signaling, biosynthesis, and metabolic pathways. Prerequisites: Chemistry 1A-B-C; Chemistry 51A-B-C or H52A-B-C. *Chemistry majors have first consideration for enrollment.*

128L Introduction to Chemical Biology Laboratory Techniques (3) S. Discussion, one hour; laboratory, six hours. Introduction to the basic laboratory techniques of chemical biology: electrophoresis, plasmid preparation, PCR, protein expression, isolation, and kinetics. Prerequisite: Chemistry 128. *Chemistry majors have first consideration for enrollment.*

NOTE: Chemistry 130A-B-C and 131A-B-C are parallel courses in physical chemistry; both are acceptable to satisfy the physical chemistry requirements for the major. Because of significant differences in course content, students starting in one series may not switch to the other in subsequent quarters.

130A-B-C Physical Chemistry: Biological and Materials Applications. Lecture, three hours; discussion, one hour.

130A Chemical Thermodynamics (4) F. Principles of chemical and heterogeneous equilibrium. Multiple chemical equilibrium, electrochemical equilibria, and equilibria at phase boundaries. Corequisite: Physics 7E or Engineering CBEMS40A or CBEMS45A; and Chemistry 5. Prerequisites: Chemistry 1C, Mathematics 2D, and Physics 7D. *Chemistry majors have first consideration for enrollment.*

130B Quantum Chemistry, Spectroscopy, and Bonding (4) W. Fundamentals of molecular quantum mechanics. Development of the principles of rotational, vibrational, electronic, and magnetic resonance spectroscopy. Chemical bonding. Applications to biological and condensed phase systems. Prerequisite: Chemistry 130A or Engineering CBEMS45C; Physics 7D or 7E. *Chemistry majors have first consideration for enrollment.*

130C Structure, Statistical Mechanics, and Chemical Dynamics (4) S. Kinetic theory and statistical mechanics with applications to gases, macromolecules, and condensed phases. Transport phenomena. Chemical kinetics. Prerequisite: Chemistry 130B. *Chemistry majors have first consideration for enrollment.*

131A-B-C Physical Chemistry: A Molecular Approach. Lecture, three hours; discussion, one hour.

131A Quantum Principles (4) F. Principles of quantum chemistry with applications to nuclear motions and the electronic structure of the hydrogen atom. Corequisite: Physics 7E, or Engineering CBEMS40A or CBEMS45C; and Chemistry 5. Prerequisites: Chemistry 1C, Mathematics 2D, and Physics 7D. *Chemistry majors have first consideration for enrollment.*

131B Molecular Structure and Elementary Statistical Mechanics (4) W. Principles of quantum mechanics with application to the elements of atomic structure and energy levels, diatomic molecular spectroscopy and structure determination, and chemical bonding in simple molecules. Prerequisites: Chemistry 131A; Physics 7E or Engineering CBEMS45C. *Chemistry majors have first consideration for enrollment.*

- 131C Thermodynamics and Chemical Dynamics (4) S.** Energy, entropy, and the thermodynamic potentials. Chemical equilibrium. Chemical kinetics. Prerequisite: Chemistry 131B. *Chemistry majors have first consideration for enrollment.*
- 135 Methods of Molecular Structure Determination (4) F, W.** Lecture, three hours; discussion, one hour. Determination of molecular structure using spectroscopic, diffraction, and scattering techniques. Prerequisites: Chemistry 130A-B-C or 131A-B-C. *Chemistry majors have first consideration for enrollment.*
- 137 Computational Chemistry (4) S.** Lecture, three hours; discussion, one hour; laboratory, three hours. Short introduction to programming languages and to representative algorithms employed in chemical research. Students have the opportunity to devise and employ their own codes and also to employ codes which are widely used in various fields of chemistry. Corequisite: Chemistry 130B or 131B. Prerequisites: Chemistry 51A-B-C or H52A-B-C and 130A or 131A. *Chemistry majors have first consideration for enrollment.*
- 138 Introduction to Computational Organic Chemistry (4).** Lecture, three hours; discussion, one hour; laboratory, three hours. An introduction to the use of computational chemistry to investigate reaction mechanisms, to calculate structures, and to predict properties of molecules. Students have the opportunity to perform calculations employing computational methods which are widely used in various fields of chemistry. Prerequisites: Chemistry 51A-B-C or H52A-B-C. *Chemistry majors have first consideration for enrollment.*
- 151 Quantitative Analytical Chemistry (4) F, Summer.** Lecture, three hours; discussion, one hour. Theoretical aspects of methods in analytical chemistry. Topics include statistical treatment of data and the fundamental chemistry which underlies methods of chemical analysis. Corequisite: Chemistry 151L. Prerequisites: Chemistry 1A-B-C, 1LC; 5; 51A-B-C and 51LA-LB-LC or H52A-B-C and H52LA-LB-LC. *Chemistry majors have first consideration for enrollment.*
- 151L Quantitative Analytical Chemistry Laboratory (3) F, Summer.** Discussion, one hour; laboratory, six hours. Practical aspects of important methods in analytical chemistry. Laboratory analysis of standard samples. Laboratory experiments include methods of gravimetry, titrimetry, chromatography and other separation methods, spectrochemical and electrochemical measurements. The use of computer programs for the reduction of data from laboratory experiments is encouraged. Corequisite: Chemistry 151. Prerequisites: Chemistry 1A-B-C, 1LC; 5; 51A-B-C and 51LA-LB-LC or H52A-B-C and H52LA-LB-LC. *Chemistry majors have first consideration for enrollment.*
- 152 Advanced Analytical Chemistry (5) W.** Lecture, three hours; discussion, one hour; laboratory, seven hours. In-depth treatment of most modern instrumental methods for quantitative analysis of real samples and basic principles of instrument design. Laboratory experiments in the use of electronic test equipment, microprocessor programming; interfacing and use of techniques such as absorption, emission, and luminescence spectrophotometry, polarography, gas and liquid chromatography, magnetic resonance, neutron activation analysis, and mass spectrometry. Prerequisite: Chemistry 151 and 151L. *Chemistry majors have first consideration for enrollment.*
- 153 Physical Chemistry Laboratory (4) S.** Prelaboratory lecture, three hours; laboratory, eight hours. Introduction to the modern experimental approaches and software tools used in spectroscopy, kinetics, electrochemistry, and other physical chemistry experiments. Basics of interfacing with instruments using LabView. Corequisite: Chemistry 130C or 131C. Prerequisites: Chemistry 151, 151L, and Chemistry 130A-B or 131A-B. *Chemistry majors have first consideration for enrollment.*
- 156 Advanced Laboratory in Chemistry and Synthesis of Materials (4) S.** Lecture, two hours; laboratory, eight hours. Synthesis and characterization of organic and inorganic materials including polymers and oxides. Techniques include electron and scanning probe microscopy, gel permeation chromatography, x-ray diffraction, porosimetry, and thermal analysis. Prerequisite: Chemistry 130A-B or 131A-B or Engineering ENGR54 or Pharmaceutical Sciences 171. Same as Engineering CBEMS160. *Chemistry majors have first consideration for enrollment.*
- 160 Organic Synthesis Laboratory (4) S.** Lecture, one hour; discussion, one hour; laboratory, eight hours. Modern experimental techniques in organic synthesis including experience with thin-layer chromatography, liquid chromatography, and gas chromatography. Modern methods of structure elucidation including FT NMR are employed in the characterization of products. Prerequisite: Chemistry 125. *Chemistry majors have first consideration for enrollment.*
- 170 Radioisotope Techniques (4) F, W.** Lecture, three hours; laboratory, four to six hours. Basic theory and practice of production, separation, safe handling, counting, applications of radioactive isotopes with emphasis on applications in chemistry, biology, and medicine. Prerequisite: Chemistry 151, 151L. *Chemistry majors have first consideration for enrollment.*
- 177 Medicinal Chemistry (4) W.** Lecture, three hours; discussion, one hour. An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity. Prerequisites: Chemistry 51A-B-C or equivalent, and Biological Science 98 or Chemistry 128. Same as Pharmaceutical Sciences 177. *Chemistry majors have first consideration for enrollment.*
- 177L Medicinal Chemistry Laboratory (2) W.** Laboratory, four hours. Laboratory accompanying Chemistry 177. Corequisite: Chemistry 177. Prerequisites: Chemistry 51A-B-C or equivalent, and Biological Science 98 or Chemistry 128; Biological Science 100. Same as Pharmaceutical Sciences 177L. *Chemistry majors have first consideration for enrollment.*
- 180 Undergraduate Research (4-4-4) F, W, S.** The student wishing to engage in research for credit should arrange with a member of the faculty to sponsor and supervise such work. A student time commitment of 10 to 15 hours per week is expected, and a written research report is required at the end of each quarter of enrollment. Prerequisite: consent of a faculty sponsor.
- H180A-B-C Honors Research in Chemistry (4-4-4) F, W, S.** Undergraduate honors research in Chemistry. A student time commitment of 10–15 hours per week is required. Corequisite for H180C: Chemistry H181. Prerequisites: consent of instructor; open to participants in the Chemistry Honors program and to Chemistry majors participating in the Campuswide Honors Program.
- H181 Honors Seminar in Chemistry (2) S.** Students receive guidance in the preparation of oral and written research presentations. A written thesis is prepared and a formal research seminar is presented. Corequisite: Chemistry H180C. Prerequisites: successful completion of Chemistry H180A-B; satisfactory completion of the lower-division writing requirement. Open only to students in the Chemistry Honors Program and Chemistry majors who are participating in the Campuswide Honors Program.
- 191 Chemistry Outreach Program (2) F, W, S.** Field work, six to eight hours; discussion, one hour. Involves intensive participation in the UCI Chemistry Outreach Program, which performs Chemistry demonstrations at local high schools. Pass/Not Pass only. May be taken for credit six times.
- 192 Tutoring in Chemistry (2) F, W, S.** Enrollment limited to participants in the Chemistry Peer Tutoring Program. Prerequisite: consent of instructor. May be taken for a total of 18 units of which the first eight may be taken for a letter grade. The remaining 10 units must be taken Pass/Not Pass only. NOTE: No more than eight units may be counted toward the 180 units required for graduation. Satisfies no degree requirement other than contribution to the 180-unit total.
- 193 Research Methods (4) W, S.** Lecture, three hours; laboratory, two hours. Explores tools of inquiry for developing and implementing science research projects. Students undertake independent projects requiring data collection, analysis, and modeling, and the organization and presentation of results. Additional topics include ethical issues and role of scientific literature. Prerequisite: Biological Sciences 14 or Physical Sciences 5. Same as Physics 193 and Biological Sciences 108.
- 199 Independent Study in Chemistry (1 to 4 per quarter).** The student wishing to engage in independent study for credit should arrange with a member of the faculty to sponsor and supervise such work. A student time commitment of three to four hours per week per unit is expected, and a written report on the independent study is required at the end of each quarter of enrollment. Prerequisite: consent of instructor.

GRADUATE

- 201 Organic Reaction Mechanisms I (4).** Lecture, three hours; discussion, one hour. Advanced treatment of basic mechanistic principles of modern organic chemistry. Topics include molecular orbital theory, orbital symmetry control of organic reactions, aromaticity, carbonium ion chemistry, free radical chemistry, the chemistry of carbenes and carbanions, photochemistry, electrophilic substitutions, aromatic chemistry. Prerequisite: Chemistry 130A-B-C or 131A-B-C or equivalent.
- 202 Organic Reaction Mechanisms II (4).** Lecture, three hours; discussion, one hour. Topics include more in-depth treatment of mechanistic concepts, kinetics, conformational analysis, computational methods, stereoelectronics, and both solution and enzymatic catalysis. Prerequisite: Chemistry 201.
- 203 Organic Spectroscopy (4).** Lecture, three hours; discussion, one hour. Modern methods used in structure determination of organic molecules. Topics include mass spectrometry; ultraviolet, chiroptical, infrared, and nuclear magnetic resonance spectroscopy. Prerequisite: Chemistry 51A-B-C or H52A-B-C.
- 204 Organic Synthesis I (4).** Lecture, three hours; discussion, one hour. Fundamentals of modern synthetic organic chemistry will be developed. Major emphasis is on carbon-carbon bond forming methodology. Topics include carbonyl annulations, cycloadditions, sigmatropic rearrangements, and organometallic methods. Corequisite: concurrent enrollment in Chemistry 202.
- 205 Organic Synthesis II (4).** Lecture, three hours; discussion, one hour. Fundamentals of modern synthetic organic chemistry will be developed. Major emphasis this quarter is on natural product total synthesis and retrosynthetic (antithetic) analysis. Prerequisite: Chemistry 204.
- 206 Laboratory Skills (4 to 6).** Lecture, three hours; laboratory, six to ten hours. Introduces students to a variety of practical laboratory techniques, including lock-in, boxcar, coincidence counting, noise filtering, PID control, properties of common transducers, computer interfacing to instruments, vacuum technology, laboratory safety, basic mechanical design, and shop skills. Prerequisite: consent of instructor. Same as Physics 206. Concurrent with Physics 106.
- 207 Chemistry for Physicists (4).** Lecture, three hours; discussion, one hour. Introduction to fundamental concepts in molecular structure and reactivity: theory of bonding, valence and molecular orbitals; structure and reactivity in inorganic chemistry; elements in molecular group theory; nomenclature in organic chemistry; and survey of macromolecules. Same as Physics 207.
- 208 Mathematics for Chemists (4).** Lecture, three hours; discussion, one hour. Applications of mathematics to physical and chemical problems. Calculus of special functions, complex variables and vectors; linear vector spaces and eigenvalue problems. Differential equations. Same as Physics 208.
- 209 Physics for Chemists (4).** Lecture, three hours; discussion, one hour. An introduction to concepts of electrodynamics with special emphasis on applications to chemistry: vector analysis, electrostatics, magnetostatics, electrodynamics, electromagnetic waves, classical radiation theory, special relativity.
- 213 Chemical Kinetics (4) S.** Lecture, three hours; discussion, one hour. Surveys gas phase and organic reaction mechanisms and their relationship to kinetic rate laws; treats the basic theory of elementary reaction rates. A brief presentation of modern cross-sectional kinetics is included. Prerequisites: Chemistry 130A-B-C or 131A-B-C or equivalent.
- 215 Inorganic Chemistry I (4).** Lecture, three hours; discussion, one hour. Principles of modern inorganic chemistry with applications to chemical systems of current interest. Inorganic phenomena are organized into general patterns which rationalize observed structures, stabilities, and physical properties. Prerequisites: Chemistry 107 and 130A-B-C or 131A-B-C or equivalent.
- 216 Organometallic Chemistry (4).** Lecture, three hours; discussion, one hour. Synthesis and reactivity of organometallic complexes with an emphasis on mechanisms. Topics include bonding and fluxional properties; metal-carbon single and multiple bonds; metal π -complexes. Applications to homogeneous catalysis and organic synthesis are incorporated throughout the course. Prerequisite: Chemistry 107 or 215.
- 217 Physical Inorganic Chemistry (4).** Lecture, three hours; discussion, one hour. General principles of the spectroscopy and magnetism of inorganic compounds. Characterization of inorganic complexes by infrared, near-infrared, visible, ultraviolet, NMR, EPR, EXAFS, and Mossbauer spectroscopies. Some necessary group theory developed. Prerequisite: Chemistry 215 or consent of instructor.
- 218 Metallobiochemistry (4).** Lecture, three hours; discussion, one hour. A review of the biochemistry of metallic elements emphasizing: methods for studying metals in biological systems; the chemical basis for nature's exploitation of specific elements; structures of active sites; mechanisms; solid-state structures and devices; metals in medicine. Prerequisite: Chemistry 130A-B-C or equivalent.
- 219 Chemical Biology (4).** Lecture, three hours; discussion, one hour. A survey of the organic chemistry underlying biological function. Introduction to chemical genetics, receptor-ligand interactions, small molecule agonists and antagonists, combinatorial synthesis, high throughput assays, molecular evolution, protein and small molecule design. Prerequisite: graduate standing or consent of instructor.
- 220 Bioorganic Chemistry (4).** Lecture, three hours; discussion, one hour. Structure and function of biologically important macromolecules. Introduction to nucleic acids, protein structure, principles of molecular recognition, enzyme function, modeling, and engineering. Prerequisite: Chemistry 51A-B-C or H52A-B-C or equivalent.
- 221A Fundamentals of Molecular Biophysics (4) S.** An overview of the principles and concepts in molecular biophysics. Topics covered include energy and entropy in biology, non-equilibrium reaction kinetics, random walks and molecular diffusion, molecular forces in biology. Prerequisites: undergraduate courses in physical chemistry and biochemistry, or consent of instructor.
- 221B Molecular Biophysics (4) F.** A study of the biophysics of macromolecules and cells from a molecular perspective. Topics covered include protein folding, single molecule reaction kinetics, nucleic acid translation and transcription, molecular motors, cellular signal transduction. Prerequisites: Chemistry 221A and undergraduate courses in physical chemistry and biochemistry, or consent of instructor.
- 223 Biological Macromolecules (4).** Lecture, three hours; discussion, one hour. Introduction to nucleic acid and protein structure, dynamics, and function. Topics include analytical methods, molecular evolution, folding, and catalysis. Same as Pharmaceutical Sciences 223.
- 225 Polymer Chemistry: Synthesis and Characterization of Polymers (4).** Lecture, three hours; discussion, one hour. Structure of synthetic and natural polymers. Survey of modern polymer synthetic methods. Molecular weight and molecular weight distribution. Chain conformation and stereochemistry. Introduction to polymer characterization, chain models, and solution behavior. Prerequisite: undergraduate courses in organic and physical chemistry; or consent of instructor.
- 226 Polymer Materials: Polymer Structure-Property Relationships (4).** Lecture, three hours; discussion, one hour. Chain length and copolymer sequence distributions. Polymer chain models and configurational statistics. Melting and glass transitions in crystalline and amorphous polymers. Network theory. Elasticity and viscoelasticity. Solution theory and phase equilibria. Mechanical and materials properties. Prerequisite: undergraduate courses in organic and physical chemistry; or consent of instructor.
- 228 Electromagnetism (4).** Lecture, three hours; discussion, one hour. Maxwell's equations, electrodynamics, electromagnetic waves and radiation, wave propagation in media, interference and quantum optics, coherent and incoherent radiation, with practical applications in interferometry, lasers, waveguides, and optical instrumentation. Prerequisite: consent of instructor. Same as Physics 228.
- 229A-B Computational Methods (4-4).** Lecture, three hours; laboratory, six hours. Mathematical and numerical analysis using Mathematica and C programming, as applied to problems in physical science. Prerequisite: consent of instructor. Same as Physics 229A-B.
- 230 Classical Mechanics and Electromagnetic Theory (4).** Lecture, three hours; discussion, one hour. The fundamentals of classical mechanics and electromagnetic theory are developed with specific application to molecular systems. Newtonian, Lagrangian, and Hamiltonian mechanics are developed. Boundary value problems in electrostatics are investigated. Multipole expansion and macroscopic media are discussed from a molecular viewpoint. Prerequisite: Chemistry 131A-B-C or equivalent.

231A-B-C Quantum Mechanics and Spectroscopy. Lecture, three hours; discussion, one hour.

231A Fundamentals of Quantum Mechanics (4) F. The postulates of quantum mechanics are discussed and applied to a variety of model problems. Prerequisites: Chemistry 131A-B-C or equivalent.

231B Applications of Quantum Mechanics (4) W. Approximate methods for solving atomic and molecular structure problems are developed, and the application of quantum mechanics to spectroscopy is introduced. Prerequisite: Chemistry 231A or consent of instructor.

231C Molecular Spectroscopy (4) S. Theory and techniques of spectroscopy as used for the study of molecular and condensed phase properties. Coherent time domain spectroscopies are covered. Prerequisite: Chemistry 231B or consent of instructor.

232A Thermodynamics and Introduction to Statistical Mechanics (4) W. Lecture, three hours; discussion, one hour. A detailed discussion from an advanced point of view of the principles of classical thermodynamics. The fundamentals of statistical mechanics. Topics include an introduction to ensemble theory, Boltzmann statistics, classical statistical mechanics, and the statistical mechanics of ideal gas systems. Prerequisite: Chemistry 130A-B-C or 131A-B-C or equivalent.

232B Advanced Topics in Statistical Mechanics (4) S. Continued discussion of the principles of statistical mechanics. Applications to topics of chemical interest including imperfect gases, liquids, solutions, and crystals. Modern techniques such as the use of autocorrelation function methods. Prerequisite: Chemistry 232A or equivalent.

232C Non-Equilibrium Statistical Mechanics (4) F. Lecture, three hours; discussion, one hour. Phenomenology of material processes, including: kinetic theories of transport and continuum, linear response theory, critical phenomena of phase transition, self-assembly, and nucleation. Prerequisite: consent of instructor.

234 Advanced Chemical Kinetics (4). Topics and format vary. Prerequisite: Chemistry 213 or consent of the instructor.

235 Molecular Quantum Mechanics (4) W. Lecture, three hours; discussion, one hour. Application of quantum mechanics to calculation of molecular properties. Electronic structure of molecules. Prerequisite: Chemistry 231A or equivalent.

236 Forces Between Molecules (4) F. Lecture, three hours; discussion, one hour. The nature and effects of non-covalent interactions between molecular systems. The focus is on properties of these interactions in condensed phases: macromolecular systems; particle-surface interactions.

237 Mathematical Methods in Chemistry (4). Lecture, three hours; discussion, one hour. Survey of essential math methods in chemistry. Topics include series and limits, complex analysis. Fourier and Laplace transforms, linear algebra and operators (theory and algorithms), differential equations, and probability concepts for stochastic processes.

241 Current Issues Related to Tropospheric and Stratospheric Processes (4) S. Lecture, three hours. Examination of current issues related to the atmosphere, including energy usage; toxicology; effects on humans, forest, plants, and ecosystems; particulate matter (PM₁₀); combustion; modeling and meteorology; airborne toxic chemicals and risk assessment; application of science to development of public policies. Prerequisite: One course selected from Chemistry 245, Earth System Science 202, Engineering MAE164, Engineering MAE261, or consent of instructor. Same as Engineering MAE 260.

242A Physical and Geometrical Optics (4) W. Lecture, three hours; discussion, one hour. Focuses on the practical aspects of optics and optical engineering, starting at the fundamentals. Topics include geometrical optics, ray tracing, polarization optics, interferometers, and diffractive optics. Prerequisite: consent of instructor. Same as Engineering CBEMS242A. Concurrent with Physics 134A.

242B Applied Optics (4) S. Lecture, three hours; discussion, one hour. Focuses on the treatment of a wide variety of tools and techniques used in optics, in particular in research. Subjects include an introduction to lasers, optical detection, coherent optics, spectroscopic techniques, and selected topics corresponding to the interest of the students. Prerequisite: Chemistry 242A or consent of instructor. Same as Engineering CBEMS242B.

243 Advanced Instrumental Analysis (4) W. Lecture, three hours. Theory and applications of modern advanced instrumental methods of analysis. Includes data acquisition, storage, retrieval and analysis; Fourier transform methods; vacuum technologies, magnetic sector, quadrupole, and ion trap mass spectrometry; surface science spectroscopic methods; lasers and optics. Prerequisites: Chemistry 152 and Chemistry 130A-B-C or 131A-B-C.

245 Atmospheric Chemistry of the Natural and Polluted Troposphere (4) F. Lecture, three hours; discussion, one hour. Kinetics, mechanisms, and photochemistry of tropospheric reactions in the gas, liquid, and solid phases, and methods of analysis. Chemistry of photochemical oxidant formation and acid deposition, and applications to control strategies. Chemistry of toxic chemicals and indoor air pollution. Prerequisites: Chemistry 130A-B-C or 131A-B-C and Chemistry 151 and 151L or equivalent.

246 Separations and Chromatography (4). Lecture, three hours; discussion, one hour. Introduction to modern separation techniques such as gas chromatography, high-performance liquid chromatography, supercritical fluid chromatography, capillary electrophoresis, and field flow fractionation. Applications of these separation strategies are discussed.

247 Current Problems in Analytical Chemistry (4). Lecture, three hours; discussion, one hour. Surveys current research challenges in analytical chemistry. Topics include electrochemistry, chromatography, spectroscopy, and mass spectrometry.

248 Electrochemistry (4). Lecture, three hours; discussion, one hour. Fundamentals of electrochemistry including thermodynamics and the electrochemical potential, charge transfer kinetics, and mass transfer. Methods based on controlled potential and controlled current are described; the effects of slow heterogeneous kinetics and the perturbation caused by homogeneous chemistry are discussed.

249 Analytical Spectroscopy (4). Lecture, three hours; discussion, one hour. Advanced treatment of spectroscopic techniques and instrumentation. Atomic and molecular absorption, emission, and scattering processes and their application to quantitative chemical analysis are outlined. Puts different spectroscopic techniques in perspective and demonstrates most appropriate applications to analytical problems.

251 Special Topics in Organic Chemistry (1 to 4). Advanced topics in organic chemistry. Prerequisite: consent of instructor.

252 Special Topics in Physical Chemistry (1 to 4). Advanced topics in physical chemistry. Prerequisite: consent of instructor.

253 Special Topics in Inorganic Chemistry (1 to 4). Advanced topics in inorganic chemistry. Prerequisite: Chemistry 215 or consent of instructor.

254 Special Topics in Computational and Theoretical Chemistry (4). The subjects covered vary from year to year. May be repeated for credit as topics vary. Prerequisite: consent of instructor.

266 Current Topics in Chemical and Materials Physics (1). Lecture, one hour; discussion, one hour. The subjects covered vary from year to year. Connection between fundamental principles and implementations in practice in science, industry, and technology. Prerequisite: consent of instructor. Same as Physics 266.

271 Structural X-ray Crystallography (4). Lecture, three hours; discussion, one hour. The principles and practice of the determination of structures by single crystal x-ray diffraction techniques. Crystal symmetry, diffraction, structure solution and refinement. Opportunities for hands-on experience in structure determination. Prerequisite: Chemistry 130A-B-C or Chemistry 131A-B-C or equivalent.

272 Industrial Chemistry (4). Lecture, three hours; discussion, one hour. Scientific, economic, and environmental aspects of the top 50 industrially produced chemicals, including how they are obtained and used, present and future sources of energy and raw materials, and the effects of chemical manufacturing on the price structure of our economy. Prerequisite: consent of instructor.

273 Technical Communication Skills (2). Lecture, one hour; discussion, three hours. Development of effective communication skills, oral and written presentations, through examples and practice. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. Same as Physics 273.

280 Research (2 to 12) F, W, S. Supervised original research toward the preparation of a Ph.D. dissertation or M.S. thesis. Prerequisite: consent of the instructor.

290 Seminar (1) F, W, S. Weekly seminars and discussions on general and varied topics of current interest in chemistry. Prerequisite: graduate standing. May be repeated for credit.

291 Research Seminar (4). Detailed discussion of research problems of current interest in the Department. Format, content, and frequency of the course are variable. Prerequisite: consent of instructor.

292 Graduate Symposium (2) F. Students present public seminars on literature-based research topics in contemporary chemistry. Topics to be chosen by student and approved by instructor. May be repeated for credit as topics vary.

299 Independent Study (1 to 4) F, W, S. Prerequisite: consent of instructor.

399 University Teaching (1 to 4) F, W, S. Required of and limited to Teaching Assistants.

DEPARTMENT OF EARTH SYSTEM SCIENCE

3200 Croul Hall; (949) 824-8794

Michael L. Goulden, **Chair**

Faculty

- Ralph J. Cicerone, Ph.D. University of Illinois, *Chancellor Emeritus and Professor Emeritus of Earth System Science* (atmospheric and analytical chemistry)
- Ellen R. M. Druffel, Ph.D. University of California, San Diego, *Professor of Earth System Science* (biogeochemistry and oceanography)
- Todd K. Dupont, Ph.D. Pennsylvania State University, *Assistant Professor of Earth System Science* (glaciology and ice sheet modeling)
- James S. Famiglietti, Ph.D. Princeton University, *Professor of Earth System Science and of Civil and Environmental Engineering* (hydrology and climate)
- Michael L. Goulden, Ph.D. Stanford University, *Department Chair and Professor of Earth System Science, and Professor of Ecology and Evolutionary Biology* (biosphere-atmosphere exchange, physiological ecology)
- Kathleen R. Johnson, Ph.D. University of California, Berkeley, *Assistant Professor of Earth System Science* (geochemistry and paleoclimate)
- Gudrun Magnusdottir, Ph.D. Colorado State University, *Professor of Earth System Science* (atmospheric dynamics and climate dynamics)
- Adam C. Martiny, Ph.D. Technical University of Denmark, *Assistant Professor of Earth System Science and of Ecology and Evolutionary Biology* (environmental microbiology)
- J. Keith Moore, Ph.D. Oregon State University, *Associate Professor of Earth System Science* (ocean ecosystem dynamics and biogeochemistry)
- Diane E. Pataki, Ph.D. Duke University, *Associate Professor of Earth System Science and of Ecology and Evolutionary Biology* (global change biology)
- Michael Prather, Ph.D. Yale University, *Director of the UCI Environment Institute, Professor of Earth System Science, and Fred Kavli Chair in Earth System Science* (mathematical modeling of atmospheric chemistry, and climate)
- Francois W. Primeau, Ph.D. Massachusetts Institute of Technology/Woods Hole Oceanographic Institution, *Associate Professor of Earth System Science* (physical oceanography and climate dynamics)
- James T. Randerson, Ph.D. Stanford University, *Professor of Earth System Science and of Ecology and Evolutionary Biology* (global biogeochemical cycles)
- William S. Reebergh, Ph.D. The Johns Hopkins University, *Professor Emeritus of Earth System Science* (geochemistry and biogeochemistry)
- Eric Rignot, Ph.D. University of Southern California, *Professor of Earth System Science* (glaciology, remote sensing, and cryosphere)
- Eric S. Saltzman, Ph.D. University of Miami, *Professor of Earth System Science* (marine and atmospheric chemistry)
- Susan E. Trumbore, Ph.D. Columbia University, *Professor of Earth System Science* (geochemistry and biogeochemistry)
- Isabella Velicogna, Ph.D. University of Trieste, *Assistant Professor of Earth System Science* (remote sensing, cryosphere, climate change, and geodesy)
- Laurel L. Wilkening, Ph.D. University of California, San Diego, *Chancellor Emerita and Professor Emerita of Earth System Science* (planetary science)
- Jin-Yi Yu, Ph.D. University of Washington, *Associate Professor of Earth System Science* (atmospheric sciences and climate dynamics)
- Charles S. Zender, Ph.D. University of Colorado, *Professor of Earth System Science* (atmospheric physics, aerosols, and climate)

Affiliated Faculty

- Steven D. Allison, Ph.D. Stanford University, *Assistant Professor of Ecology and Evolutionary Biology and of Earth System Science* (microbial enzymes, theoretical ecology, and biogeochemistry)
- Donald R. Blake, Ph.D. University of California, Irvine, *Professor of Chemistry and Earth System Science* (atmospheric and analytical chemistry, and radiochemistry)
- Carl A. Friehe, Ph.D. Stanford University, *Professor Emeritus of Mechanical and Aerospace Engineering* (fluid mechanics, turbulence, micrometeorology, instrumentation)
- F. Sherwood Rowland, Ph.D. University of Chicago, *Donald Bren Research Professor Emeritus of Chemistry and Earth System Science* (atmospheric and analytical chemistry, and radiochemistry)
- Soroosh Sorooshian, Ph.D. University of California, Los Angeles, *Director of the Center for Hydrometeorology and Remote Sensing (CHRS) and UCI Distinguished Professor of Civil and Environmental Engineering and of Earth System Science* (hydrometeorology, remote sensing, water resources)
- Kathleen K. Treseder, Ph.D. Stanford University, *Associate Professor of Ecology and Evolutionary Biology and of Earth System Science* (microbial biogeochemistry)
- Jasper A. Vrugt, Ph.D. University of Amsterdam, *Assistant Professor of Civil and Environmental Engineering and of Earth System Science* (surface hydrology and soil physics)

The goal of the Department of Earth System Science is to increase the scientific understanding of the Earth as a coupled system of atmosphere, ocean, and land. Earth System Science is inherently interdisciplinary in scope, linking the fields of oceanography, atmospheric and terrestrial sciences, climatology, hydrology, biology, physics, and chemistry to understand the climate system and global biogeochemical cycles. These fields have traditionally been taught in different departments, which has hindered students who want to learn about all of the disciplines that interact to control the global environment. At the undergraduate level, courses are designed to educate both science and non-science majors in the basic processes driving the Earth system, including elemental cycling, Earth's climate, and global environmental problems. Undergraduates can pursue a B.S. degree in Earth and Environmental Sciences, a B.A. degree in Earth and Environmental Studies, or a minor in Earth and Atmospheric Sciences. In addition, undergraduates who are interested in teaching science at the secondary level may complete an optional concentration in Geosciences Education with Secondary Teaching Certification. This option is available for students pursuing either the B.S. or the B.A. degree. The Department also offers a group of lower-division general education courses appropriate for non-science majors. At the graduate level, the Department offers the M.S. and Ph.D. degrees in Earth System Science. Graduate study emphasizes laboratory, field, and modeling studies of global change in the environment through study of physical, chemical, and biological processes within and between the atmosphere, oceans, and terrestrial systems.

Undergraduate Programs

BACHELOR OF SCIENCE MAJOR IN EARTH AND ENVIRONMENTAL SCIENCES

The objective of this major is to prepare students to understand the rapidly evolving field of Earth System Science. Students work with faculty and graduate students to obtain a quantitative understanding of the Earth system. The major consists of a set of required core courses and a group of elective courses drawn from offerings in Physical Sciences, Biological Sciences, Engineering, and Social Ecology. The core courses provide a broad scientific foundation of the physical, chemical, and biological principles needed to understand the complex interactions of the atmosphere, ocean, and land that drive the Earth's climate and biogeochemical cycles. Majors develop the analytical and quantitative skills needed to understand sensitive environmental issues.

In their junior and senior years, students are encouraged to focus on a particular area within Earth System Science and to choose electives that build a coherent core of knowledge. Focus areas include but are not limited to climatology, biogeochemical cycles, oceanography, hydrology, terrestrial sciences, atmospheric sciences, environmental policy and planning, and resource management. Alternatively, the focus could be on chemical, physical, or biological processes across these disciplines. This flexible program is designed to accommodate the particular interests of each student. Majors are encouraged to become directly involved in scientific research working with a faculty member by taking Earth System Science 199 for several quarters. The UCI upper-division writing requirement may be fulfilled by taking Earth System Science 199 and 198 in the senior year.

Many students go on to graduate school programs and careers as research scientists in academic, public, or private institutions. Students are prepared to enter the workforce directly as scientists in a diverse array of fields including environmental policy and planning, environmental consulting, air quality monitoring and assessment, laboratory analysis, scientific research, science education, natural resource management, wildlife management, conservation and environmental protection, and water resource management.

Admission to the Earth and Environmental Sciences Major

Students may be admitted to the Earth and Environmental Sciences major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at <http://www.changeofmajor.uci.edu>. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of approved calculus and one year of *either* general chemistry with laboratory (preferred) or one-year of calculus-based physics with laboratory.

REQUIREMENTS FOR THE B.S. DEGREE IN EARTH AND ENVIRONMENTAL SCIENCES

University Requirements: See pages 54–61.

School Requirements: None.

Departmental Requirements

- A. Earth System Science 1, 51, 53, 55, 114, 116, 191; Mathematics 2A-B and 2D or 2J; Chemistry 1A-B-C and 1LC-LD, or H2A-B-C and H2LA-LB-LC; Physics 3A-B-C and 3LB-LC or 7C-7LC-7E.
- B. Seven electives from the following (at least four must be Earth System Science courses): all four-unit upper-division Earth System Science courses except 114, 116, 190C, and 198 or H198 (199 or one quarter of H199A-B-C may count only once toward the elective requirement); Chemistry 51A and 51LA, 51B and 51LB, 51C, H52A and H52LA, H52B and H52LB, H52C, 130A, 130B, 130C, 131A, 131B, 131C; Physics 51A, 51B, 115A, 120, 134A, 137, 144, 145; Mathematics 2D or 2J (may be counted only once), 3A or 6G, 3D, 105A, 112A, 115, 131A, 131B, 131C; Mechanical and Aerospace Engineering (MAE) 91, 130A, 164, 180, 185; Civil and Environmental Engineering (CEE) 156, 162, 171, 172, 176, 178; Biological Sciences 93, 94, 98, D105, E106, E167, E178, E179, E179L, E186, E189, M133; Criminology, Law and Society C148; Planning, Policy, and Design 133, 136, 138, 139; Public Health 161; Computing Skills (one of the following may be counted toward degree): Information and Computer Science 21, Engineering EECS10, Engineering MAE10, Physics 53, or an approved programming course.

Some students (particularly transfer students) take Earth System Science 51, 53, and 55 in the junior year.

Concentration in Geosciences Education with Secondary Teaching Certification

This concentration allows students pursuing the B.S. in Earth and Environmental Sciences to earn a bachelor's degree and complete the required course work and field experience for a California Preliminary Single Subject Teaching Credential at the same time. In addition to the requirements listed above, students must complete the following courses: Physical Sciences 5 and 105, Chemistry or Physics 193, Logic and Philosophy of Science 60, Education 55, 109, 143A, 143B, 148, and two quarters of 158. With careful, early planning, it is possible for students to complete the bachelor's degree and the secondary teaching certification in four years. For additional information about teacher certification requirements and enrollment procedures, see page 385. Interested students are strongly encouraged to contact the Physical Sciences Student Affairs Office or the Cal Teach Resource and Advising Center.

BACHELOR OF ARTS MAJOR IN EARTH AND ENVIRONMENTAL STUDIES

Environmental issues pertaining to resource limitation, pollution, biodiversity loss, and climate change are of increasing societal concern. There is a continuing need for environmental professionals with training in the natural sciences, social sciences, economics, and public policy in the government, nonprofit, and private sectors. The objective of the B.A. degree program is to train and educate students interested in environmental problem solving by linking an understanding of natural science with socioeconomic factors and public policy. The curriculum combines a quantitative understanding of Earth science, chemistry, and biology with studies of social science, policy, and macro- and microeconomics to provide a foundation for careers in environmental policy, resource management, education, environmental law, and related fields.

In their junior and senior years, students are encouraged to focus on a particular area within environmental studies and to choose electives that build a coherent core of knowledge. Focus areas include but are not limited to environmental policy and planning, resource management, conservation biology and ecology, environmental economics, or environmental sociology. Alternatively, the focus could be on biological, chemical, or socioeconomic processes across these disciplines. This flexible program is designed to accommodate the particular interests of each student. Students participate in a senior capstone project or senior thesis that involves original research with faculty, an internship at a local environmental agency/organization, or a detailed review of an environmental issue. The UCI upper-division writing requirement may be fulfilled by taking Earth System Science 199 and 198 or 190A-B-C in the senior year.

Admission to the Earth and Environmental Studies Major

Students may be admitted to the Earth and Environmental Studies major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at <http://www.changeofmajor.uci.edu>. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of either general chemistry with laboratory (preferred) or one year of biology with laboratory. One year of economics or sociology is recommended.

REQUIREMENTS FOR THE B.A. DEGREE IN EARTH AND ENVIRONMENTAL STUDIES

University Requirements: See pages 54–61.

School Requirements: None.

Departmental Requirements

- One course selected from Earth System Science 1, 3, 5, or 7; Earth System Science 60A-B-C, 114, 180 and 182, 190A-B-C or two quarters of 199 or H199 followed by 198 or H198.
- Chemistry 1A-B-C and 1LC-LD or H2A-B-C and H2LA-LB-LC, Biological Sciences 93 and 94.
- Three courses from the following: Mathematics 2A-B, 4, 7; Social Science 9A-B-C; Economics 15A-B; Earth System Science 116, 134.
- Three courses from the following: Sociology 1, 2, or 3; Economics 13, 20A-B; Planning, Policy, and Design 4.
- Two courses from the following: Biological Sciences E189; Planning, Policy, and Design 138, 139, or 140.

F. Three electives each from the following three categories:

- Any upper-division, 4-unit course in Earth System Science (199 may count only once toward elective requirements); courses may not be used as electives if counted toward degree requirements.
- Chemistry 51A and 51LA, 51B and 51LB, 51C, H52A and H52LA, H52B and H52LB, H52C; Biological Sciences 20, 55, 65, 97, 98, 99, E106, E138; E150; E151; E160; E161L; E166; E167; E172; E174; E175; E176; E178; E179; E179L; E182; E184; E186; Physics 3A, 3B, 3C, 7C, 14, 20A, 20B, 20C, 20D.
- Economics 100A-B-C, 141A-B-C, 142A-B-C, 144A-B-C, 144T, 145E, 145L; Sociology 31, 43, 44, 110, 141, 147A, 171.

Other courses may be substituted for approved electives by petition.

Concentration in Geosciences Education with Secondary Teaching Certification

This concentration allows students pursuing the B.A. in Earth and Environmental Studies to earn a bachelor's degree and complete the required course work and field experience for a California Preliminary Single Subject Teaching Credential at the same time. With careful, early planning, it is possible for students to complete the bachelor's degree and the secondary teaching certification in four years. For additional information about teacher certification requirements and enrollment procedures, see page 385. Interested students are strongly encouraged to contact the Physical Sciences Student Affairs Office or the Cal Teach Resource and Advising Center.

Departmental Requirements

- One course selected from Earth System Science 1, 3, 5, or 7; Earth System Science 60A-B-C, 114, 180 and 182.
- Chemistry 1A-B-C and 1LC-LD or H2A-B-C and H2LA-LB-LC, Biological Sciences 93 and 94.
- Three courses from the following: Mathematics 2A-B, 4, 7; Social Science 9A-B-C; Economics 15A-B; Earth System Science 116, 134.
- Two courses from the following: Sociology 1, 2, or 3; Economics 13, 20A-B; Planning, Policy, and Design 4.
- One course from the following: Biological Sciences E189; Planning, Policy, and Design 138, 139, or 140.
- Three electives each from the following three categories:
 - Any upper-division, 4-unit course in Earth System Science (199 may count only once toward elective requirements); courses may not be used as electives if counted toward degree requirements.
 - Chemistry 51A and 51LA, 51B and 51LB, 51C, H52A and H52LA, H52B and H52LB, H52C; Biological Sciences 20, 55, 65, 97, 98, 99, E106, E138; E150; E151; E160; E161L; E166; E167; E172; E174; E175; E176; E178; E179; E179L; E182; E184; E186; Physics 3A, 3B, 3C, 7C, 14, 20A, 20B, 20C, 20D.
 - Economics 100A-B-C, 141A-B-C, 142A-B-C, 144A-B-C, 144T, 145E, 145L; Sociology 31, 43, 44, 110, 141, 147A, 171.
- Physical Sciences 5 and 105, Chemistry or Physics 193, Logic and Philosophy of Science 60, Education 55, 109, 143A, 143B, 148, and two quarters of 158.

NOTE: The major is open to all students except Earth and Environmental Sciences B.S. majors and Earth and Atmospheric Sciences minors.

HONORS PROGRAM IN EARTH SYSTEM SCIENCE

The Honors Program in Earth System Science provides an opportunity for selected students majoring in Earth and Environmental Sciences or Earth and Environmental Studies to pursue research with faculty in the Department during their senior year. Admission to the program is based on an application normally submitted by the sixth week of the spring quarter during the junior year.

To be considered for Departmental Honors in Earth and Environmental Sciences, a student must have satisfied the following requirements: (1) completion of all mathematics, chemistry, and physics requirements for the major; (2) completion of ESS 51, 53, and 55; (3) achievement of an overall GPA at UCI of at least 3.3; and (4) achievement of a GPA in Earth System Science courses of 3.4.

To be considered for Departmental Honors in Earth and Environmental Studies, a student must have satisfied the following requirements: (1) completion of all mathematics and chemistry requirements for the major; (2) completion of ESS 60A-B-C; (3) achievement of an overall GPA at UCI of at least 3.3; and (4) achievement of a GPA in Earth System Science courses of 3.4.

Students must also demonstrate potential for carrying out research of honors quality, as judged by the Earth System Science faculty member who will supervise their research. Students in this program enroll in Honors Research in Earth System Science (H199A-B-C) throughout their senior year and submit a formal thesis late in the spring quarter (H198). If the thesis is deemed honors quality by the ESS faculty, and the student's final GPA is above 3.3, the student then graduates with Departmental Honors in Earth and Environmental Sciences or Earth and Environmental Studies.

MINOR IN EARTH AND ATMOSPHERIC SCIENCES

The minor is open to all students (except B.S. in Earth and Environmental Sciences and B.A. in Earth and Environmental Studies majors), but it is primarily designed for students in the natural sciences and engineering who wish to explore interdisciplinary problems and broaden their studies to include the application of their fields to understanding the Earth system.

NOTE: All of these courses have prerequisites. Students pursuing the minor should plan to fulfill all prerequisites prior to enrolling in these courses.

Requirements for the Minor

Earth System Science 51, 53, 55, or Earth System Science 60A, 60B, 60C, plus four electives chosen from the approved elective list for the B.S. in Earth and Environmental Sciences major, at least two of which must be Earth System Science courses.

Graduate Program

Applicants to the Earth System Science Ph.D. program should have a broad quantitative scientific background, with an undergraduate degree in physical or natural science or related fields such as applied mathematics and engineering. Undergraduate preparation should involve mathematics including differential equations, a year-long sequence of physics and of chemistry, and courses in general biology, ecology, or geology. Entering graduate students plan their courses and research with the help of the Graduate Advisor. Students are admitted to the Ph.D. program only; the master's degree is awarded upon progress to the Ph.D.

To complete the course requirements for the Ph.D. program, a minimum of 10 approved graduate-level courses, including the core curriculum, must be completed with an average grade of B or better. All courses must be approved by the student's advisor. The core curriculum consists of Earth System Science 202, 212, 224, 226, 228, 240, 266, and 298. These courses are described below. Students are also expected to participate in the Earth System Science seminar. Additionally, Ph.D. students are required to complete a teaching assistant training program and to have a minimum of two quarters of experience as a teaching assistant, provided opportunities are available.

Academic Senate regulations specify a minimum period of residence of six quarters for Ph.D. candidates. Enrollment in a minimum of 12 units of graduate/upper-division course work per quarter is required. Registration in every regular academic session is necessary until all requirements for the degree have been completed, unless a formal Leave of Absence is granted by the Graduate Division. All Ph.D. requirements must be completed within 15 quarters in residence (five years), excluding summer quarters. Exceptions must be put to a vote of the Earth System Science faculty. The maximum time permitted is seven years.

A departmental written Comprehensive Examination for all eligible ESS students is administered at the end of spring quarter. This examination determines the student's readiness to begin research for the dissertation. An oral Comprehensive Examination is offered after the written examination and provides an opportunity to clarify questions that arise from the student's performance on the written examination. Both the written and oral examinations are administered by the ESS Comprehensive Examination Committee. The examinations emphasize breadth, general knowledge, and the ability to integrate and use information covered in the core curriculum and other course work.

Following completion of the Comprehensive Examination, those students who receive a recommendation to continue Ph.D. work will pursue research on a potential dissertation topic and then take the Advancement to Candidacy Examination. This oral examination is given by a faculty committee, including extra-departmental faculty. The normative time for advancement for candidacy is two years.

A dissertation based on original research and demonstrating critical judgment, intellectual synthesis, creativity, and clarity in written communication is required for the Ph.D. degree. The dissertation must summarize the results of original research performed by the student under the supervision of a faculty member of the Department. The criterion of acceptability of a dissertation is that its contents be judged by the committee as suitable for publication in a peer-reviewed scientific journal of high editorial standards. The dissertation may be a compilation of published papers or manuscripts

accepted for publication, so long as a major proportion of the material has been produced independently by the candidate. The format and content are approved by the Dissertation Committee, and University requirements for style, format, and appearance are met.

The master's degree is awarded only to students admitted to the Ph.D. program who have completed a total of eight courses, met the three-quarter residency requirement, and completed the Comprehensive Examination.

A summary of the requirements follows.

DOCTOR OF PHILOSOPHY IN EARTH SYSTEM SCIENCE

1. Completion of course work (10 courses, including core courses)
2. Six quarters in residence at UCI
3. Completion of the teaching and seminar requirements
4. Completion of the Comprehensive Examination, with recommendation to continue for the Ph.D.
5. Pass the Advancement to Candidacy Examination
6. Presentation of an open research seminar
7. Submission of an acceptable doctoral dissertation and formal defense

MASTER OF SCIENCE IN EARTH SYSTEM SCIENCE

1. Completion of course work (eight courses, including core courses)
2. Three quarters in residence at UCI
3. Completion of the Comprehensive Examination

Courses in Earth System Science

(Schedule of Classes designation: EarthSS)

Lower-division undergraduate course offerings emphasize an understanding of the basic science involved in global change of the Earth's atmosphere, oceans, and biosphere and soils. Any three courses selected from Earth System Science 1, 3, 5, 7, 11, 13, 15, 17, and H90 will satisfy the science and technology general education requirement. Lower-division Earth System Science courses also are core or elective courses in the interdisciplinary minor in Global Sustainability; see the Interdisciplinary Studies section of this *Catalogue* for information.

Upper-division courses are particularly appropriate as electives for students majoring in the physical or biological sciences, or engineering, with an interest in applying physics, chemistry, and biology to study the Earth's atmosphere, oceans, biosphere, and climate.

LOWER-DIVISION

1 The Physical Environment (4) F. Covers the origin and evolution of the Earth, its atmosphere, and oceans, from the perspective of biogeochemical cycles, energy use, and human impacts on the Earth system. Earth System Science 1 and 25 may not both be taken for credit. **(II)**

3 Oceanography (4) S. Examines circulation of the world oceans and ocean chemistry as it relates to river, hydrothermal vent, and atmospheric inputs. Geological features, the wide variety of biological organisms, and global climate changes, such as greenhouse warming, are also studied. **(II)**

5 The Atmosphere (4) W. The composition and circulation of the atmosphere with a focus on explaining the fundamentals of weather and climate. Topics include solar and terrestrial radiation, clouds, and weather patterns. **(II)**

7 Physical Geology (5) F. Introduction to Earth materials and processes. Topics include rocks and minerals, plate tectonics, volcanoes, earthquakes, Earth surface processes, Earth resources, geologic time, and Earth history. Laboratory work involves hands-on study of geologic materials, maps, and exercises pertaining to geologic processes. **(II)**

11 Climate Change and Policy (4). Develops an understanding of the physical basis behind global climate change; examines how human activities cause it, looks to future rates and impacts of global warming, and reviews the international conventions, protocols, and scientific assessments of climate change. **(II)**

13 Global-Change Biology (4) W. Addresses ways in which humans are altering the global environment, with consequences for the ecology of animals, plants, and microbes. Discussion on how these biologically oriented questions relate to human society, politics, and the economy. Same as Biological Sciences 9K. **(II)**

15 Introduction to Global Climate Change (4). Introduction of scientific, technological, environmental, economic, and social aspects underlying the threat and understanding of global climate change. Human and natural drivers of climate. Impacts of climate on natural, managed, and human systems, including their vulnerability and ability to adapt. **(II, VIII)**

17 Hurricanes, Tsunamis, and other Catastrophes (4) W. Introduction to the basic science and state of predictability of various natural catastrophic events including hurricanes, tsunamis, and volcanoes, as well as possibly future climate catastrophes including severe droughts, abrupt climate change, thermohaline circulation collapse and sea level rise. **(II, VIII)**

51 Land Interactions (4) F. The role of terrestrial processes in the Earth system. Provides an introduction to ecosystem processes that regulate the cycling of energy, water, carbon, and nutrients. Analysis of the impact of human activities. Prerequisite: Chemistry 1C. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

53 Ocean Biogeochemistry (4) W. Overview of oceanography for those interested in Earth system science. Focus is on physical, chemical, and biological processes that drive biogeochemical cycling in the oceans. Coastal systems also reviewed, with emphasis on California waters. Corequisites: Mathematics 2B and Physics 3B or 7C. Prerequisite: Chemistry 1C. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

55 Earth's Atmosphere (4) S. Composition, physics, and circulation of Earth's atmosphere with an emphasis on explaining the role of atmospheric processes in shaping the climate system. Topics include: atmospheric composition, the global energy balance, radiative transfer and climate, atmospheric circulation and climate sensitivity. Corequisites: Mathematics 2B or a score of 4 or 5 on the Advanced Placement Calculus BC examination, Physics 3B or 7C. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

60A Fundamental Processes in Earth and Environmental Studies (4) F. An introduction to the physical environment, biological systems, and human-environment interactions. Explores physical principles such as fluid transport and reaction rates using environmental examples as well as principles of populations, ecosystems, carrying capacity, and sustainable use of resources. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

60B Local and Regional Environmental Issues (4) W. An introduction to common environmental issues using case studies from Orange County and California. Studies natural hazards as well as human-caused problems with air quality, water quality, coastal pollution, ecosystem degradation, and urban climate. Prerequisites: Earth System Science 60A or 25 and Chemistry 1B or H2B. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

60C Global Environmental Issues (4) S. An overview of global environmental changes including climate change, sea level rise, biodiversity loss, land and ocean degradation, and resource depletion. Discusses scientific, cultural, historical, and policy dimensions of these issues as well as possible solutions. Prerequisites: Earth System Science 60A or 25 and Chemistry 1B or H2B.

H90 The Idiom and Practice of Science (4). A series of fundamental and applied scientific problems are addressed, illustrating the pervasive role of mathematical analysis. Topics may include energy utilization, the climate system, the "greenhouse effect," ozone depletion and air pollution, ecological consequences of water pollution, nutrient cycles. Open only to members of the Campuswide Honors Program or consent of instructor. **(II)**

UPPER-DIVISION

101 Paleoclimatology (4) S. Explores past changes in Earth's climate. Topics include tools and techniques used to reconstruct past climate from natural archives; records and mechanisms of past climate changes throughout Earth history; and lessons learned from the paleo-record for predication of future climate. Prerequisites: Earth System Science 60A-B-C, or 51, 53, 55. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

112 Global Climate Change and Impacts (4) F. Observations over the twentieth century show extensive changes in atmospheric composition, climate and weather, and biological systems that have paralleled industrial growth. Evidence of globally driven changes in these biogeochemical systems is studied, including projected impacts over the twenty-first century. Prerequisites: Earth System Science 60A-B-C, or 51, 53, 55. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

114 Earth System Science Laboratory and Field Methods (4) S. Introduction to methods used to measure exchange of gases and energy between the atmosphere and terrestrial ecosystems. Laboratories include data acquisition and isotopic and chromatographic analysis. Field measurements at UCI's Marsh Reserve include microclimate, hydrology, trace-gas exchange, and plant growth. Prerequisite: Earth System Science 51 or 60A. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

116 Data Analysis for Earth Sciences (4) F. Analysis and interpretation of geophysical data, including functional fitting, probability density functions, and multidimensional time-series methods, with applications in atmospheric, oceanic, and biogeochemical sciences. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

118 Advanced Data Analysis and Modeling (4) S. Covers advanced data analysis and modeling techniques for applications within Earth system science. These applications will come from variety of Earth science (write large) problems. Students will gain programming proficiency by implementing computational methods in MATLAB. Prerequisites: Earth System Science 116 and Mathematics 2B. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

122 Atmospheric Dynamics (4) W. Fluid dynamical processes that determine the large-scale flow of the atmosphere and ocean. Most important are interactions between the density stratification and the Coriolis force associated with Earth's rotation. Topics include circulation, vorticity, planetary waves and their role in climate. Prerequisites: Earth System Science 55 and Mathematics 2D and Physics 7B or 7C. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

124 Weather Analysis (4) W. Provides an overview of weather systems in midlatitudes and tropics. The fundamental dynamics possible for these weather systems are described. Elementary weather analysis and forecasting techniques are introduced. Prerequisite: Earth System Science 55 or 60A. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

130 Physical Oceanography (4) W. Physical processes that determine the distribution of water properties such as salt and temperature. Fluid-dynamical underpinnings of physical oceanography. Wave motions. The wind-driven and thermohaline circulation. Similarities and differences between ocean and atmosphere dynamics. Prerequisites: Mathematics 2D and Physics 7B or 7C. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

132 Terrestrial Hydrology (4) S. Comprehensive treatment of modern conceptual and methodological approaches to hydrological science. Combines qualitative understanding of hydrological processes with quantitative representation, approaches to measurement, and treatment of uncertainty. Major components of the hydrological cycle and their linkages within the coupled Earth system. Prerequisite: Earth System Science 60A or 51 or consent of instructor. Concurrent with Earth System Science 232. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

134 Fundamentals of GIS for Environmental Sciences (4). Introduction to Geographic Information Systems (GIS). Topics include fundamentals of cartography, creating/editing GIS data, linking spatial and tabular data, geo-referencing, map projections, geospatial analysis, spatial statistics and the development of GIS models. Examples from hydrology, ecology, and geology. Prerequisite: Earth System Science 51 or 53 or 60A or 60C. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

138 Satellite Remote Sensing for Earth System Science (4) S. Satellite remote sensing data are increasingly used to study the Earth system. Provides an overview of the principles behind remote sensing, and the types of satellite data available for study of the oceans, land, and atmosphere. Prerequisite: Earth System Science 51 or 53 or 60A or 60C. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

142 Atmospheric Chemistry (4) S. Chemistry of the troposphere and stratosphere. Topics include: processes controlling the lifetime and reaction pathways of chemicals in the atmosphere, the role of the atmosphere in biogeochemical cycles, and interactions between atmospheric chemistry and the physical climate system. Prerequisites: Chemistry 1C or H2C, Mathematics 2B. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

144 Marine Geochemistry and Biogeochemistry (4) S. Processes controlling the major and minor element composition of seawater and element distributions in the ocean. Gas exchange, carbon dioxide system, stable isotopes, radionuclides as tracers and chronometers, particle fluxes, organic geochemistry, sediment geochemistry, global cycles of biogeochemically important elements. Prerequisites: Earth System Science 53 or 60A and 60C. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

150 Laboratory Methods in Earth System Science (4) W. Introduction to analytical methods used in Earth science research. Lectures cover theory and applications of each method. Laboratories cover sample preparation, experimental design, standardization and calibration, operation of analytical instruments (mass spectrometers, gas chromatographs, and spectrophotometers), and analysis of data. Prerequisite: consent of instructor. Concurrent with Earth System Science 250. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

164 Ecosystems Ecology (4) F, W, S. A mechanistic perspective on ecosystem processes. Covers ecosystem development, element cycling, and interactions with plants and microbes. The role of ecosystems in environmental change is also addressed. Prerequisite: Chemistry 51C. Same as Biological Sciences E118. Concurrent with Earth System Science 264. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

168 Physiological Plant Ecology (4) F. An examination of the interactions between plants and their environment. Emphasis on the underlying physiological mechanisms of plant function, adaptations and responses to stress, and the basis of the distribution of plants and plant assemblages across the landscape. Prerequisites: Earth System Science 51 or 60A and 60C or Biological Sciences E106. Same as Biological Sciences E127. Concurrent with Earth System Science 268. *Earth and Environmental Sciences and Earth and Environmental Studies majors have first consideration for enrollment.*

170 Environmental Microbiology (4) F. Establishes a fundamental understanding of microbes living in the environment, including their distribution, diversity, and biochemistry, and discusses how they attribute to global biogeochemical cycles. Prerequisites: Earth System Science 53 or 60A and 60C or Biological Sciences E106. Same as Biological Sciences E163. Concurrent with Earth System Science 270.

180 Environmental Sustainability I (4) W. Provides an introduction to sustainability from different points of view; historical, scientific, political, ethical, and economic. Same as Planning, Policy, and Design 131.

182 Environmental Sustainability II (4) S. Investigates how sustainability can be implemented in a variety of contexts including water, energy, non-renewable resources, biodiversity, and urban policy, and also how it could be measured. Same as Planning, Policy, and Design 132.

190A-B Senior Seminar on Global Sustainability I, II (2-2) F, W. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations. **A:** Prepare bibliography. **B:** Prepare research proposal. In-progress grading for 190A-B, grade for sequence given upon completion of 190C. Prerequisites: senior standing, Biological Sciences 65, Environmental Analysis and Design E20, and Earth System Science 10. Same as Biological Sciences 191A-B and Social Ecology 186A-B.

190C Writing/Senior Seminar on Global Sustainability III (4) S. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations and to prepare senior research paper. Prepare/write research paper under the direction of a faculty member. Prerequisites: Earth System Science 190A-B and satisfaction of the lower-division writing requirement. Same as Biological Sciences 191C and Social Ecology 186C.

191 Introduction to Research in Earth System Science (1) F. A series of weekly presentations by Earth System Science faculty describing ongoing research in their laboratories. The goals are to introduce students to the range of research topics and methods in Earth System Science and to the research opportunities available within the Department. Prerequisites: upper-division standing or consent of instructor; limited to majors in Earth and Environmental Sciences or minors in Earth and Atmospheric Sciences.

192 Careers in Earth System Science (1) W. A series of weekly presentations by business and government leaders in environmental fields, describing the goals of their organization and typical career trajectories for entry-level science majors within their organization. Makes students aware of the diversity of career opportunities available. Prerequisites: upper-division standing or consent of instructor; limited to majors in Earth and Environmental Sciences or minors in Earth and Atmospheric Sciences.

198 Senior Thesis in Earth System Science (4) S. Students receive guidance on the effective oral and written communication of research results. Students prepare and present a seminar, a poster, and a written thesis describing their research in Earth System Science. Prerequisites: successful completion of two quarters of Earth System Science 199 or comparable research experience with consent of instructor; successful completion of the lower-division writing requirement. Intended for seniors majoring in Earth and Environmental Sciences. Earth System Science 198 and H198 may not both be taken for credit.

H198 Honors Thesis in Earth System Science (4) S. Students receive guidance on effective written and oral communication of research results. Students prepare and present a seminar, poster, and written thesis describing their honors research in Earth System Science. Corequisite: Earth System Science H199C. Prerequisites: satisfactory completion of the lower-division writing requirement; Earth System Science H199A-B; consent of faculty sponsor; acceptance and enrollment in the Earth System Science Honors Program. This course is also open to Earth System Science majors participating in the Campuswide Honors Program. Earth System Science H198 and 198 may not both be taken for credit.

199 Undergraduate Research (2 to 4) F, W, S. For junior and senior undergraduates, preferably with majors in science or engineering. Interested students should arrange with a member of the Earth System Science faculty to supervise and support a research project. A written summary is required at the end of each quarter. Prerequisite: consent of instructor.

H199A-B-C Honors Research in Earth System Science (4-4-4) F, W, S. Undergraduate honors research in Earth System Science. A student commitment of 10–15 hours a week is expected, and a written report is required at the end of the quarter. Prerequisites: consent of faculty sponsor; acceptance and enrollment in the Earth System Science Honors Program. The sequence is also open to Earth and Environmental Sciences majors participating in the Campuswide Honors Program.

GRADUATE

202 Climate Change (4) S. Explores past, present, and projected changes in Earth's climate. Topics include paleoclimate records and mechanisms of natural climate variability at a range of timescales (orbital to seasonal); General Circulation Models; and IPCC observations and projections of future climate change.

212 Geoscience Modeling and Data Analysis (4) F. Computer-based course. Fundamental statistical techniques needed to analyze Earth system data and models. Basic numerical techniques to solve Earth system models. Focuses on linear and non-linear ordinary differential equations, as well as simple partial differential equations.

224 Ocean Processes (4) F. Introduction to the physics, chemistry, and biology of the oceans. Offers a mechanistic perspective of the structure and functioning of marine ecosystems, nutrient cycles, and role of ecosystem dynamics in local and global biogeochemistry.

226 Land Surface Processes (4) F. A mechanistic perspective of the structure and functioning of terrestrial ecosystems. Includes processes such as nutrient cycling, biogeochemical cycling, mass balance, energetics, terrestrial hydrology, and water cycle.

228 Geophysical Fluid Dynamics (4) W. Introduces fluid dynamical processes that determine the large-scale flow of the atmosphere and ocean, with particular emphasis on the interactions between the stable density stratification and the Coriolis force associated with Earth's rotation.

232 Terrestrial Hydrology (4) S. Comprehensive treatment of modern conceptual and methodological approaches to hydrological science. Combines qualitative understanding of hydrological processes with quantitative representation, approaches to measurement, and treatment of uncertainty. Major components of the hydrological cycle and their linkages within the coupled Earth system. Prerequisite: Earth System Science 60A or 51 or consent of instructor. Concurrent with Earth System Science 132.

236 Radiative Processes and Remote Sensing (4) F. Solar and terrestrial radiation and Earth system interaction. Radiative transfer theory. Principles, applications of remote sensing of environment. Planck's law, radiative transfer equation, radiative properties of trace gases and aerosols, remote sensing techniques, global trends in radiative forcing. Prerequisites: Mathematics 2D and Physics 7A-B-D, or equivalent.

240 Atmospheric Chemistry and Physics (4) W. Examines the physical/chemical processes which determine the structure and composition of Earth's atmosphere and its role in the climate system.

250 Laboratory Methods in Earth System Science (4) W. Introduction to analytical methods used in Earth science research. Lectures cover theory and applications of each method. Laboratories cover sample preparation, experimental design, standardization and calibration, operation of analytical instruments (mass spectrometers, gas chromatographs, and spectrophotometers), and analysis of data. Concurrent with Earth System Science 150.

260 Global Biological Change (4) F. Lecture, two hours; field work, one hour. An investigation of the mechanisms that underlie responses of organisms to human-caused environmental changes. Activities include field trips, literature discussions, and lectures. Focuses on issues of interest in Southern California, including nitrogen deposition, invasions, and habitat fragmentation. Same as Ecology and Evolutionary Biology 225.

264 Ecosystems Ecology (4) F, W, S. A mechanistic perspective on ecosystem processes. Covers ecosystem development, element cycling, and interactions with plants and microbes. The role of ecosystems in environmental change is also addressed. Prerequisite: Chemistry 51C. Concurrent with Earth System Science 164 and Biological Sciences E118.

266 Global Biogeochemical Cycles (4) S. Global biogeochemical cycling of the elements. Topics include global cycling of carbon, nitrogen, oxygen, and sulfur; impact of human activities on biogeochemical processes.

268 Physiological Plant Ecology (4) F. An examination of the interactions between plants and their environment. Emphasis on the underlying physiological mechanisms of plant function, adaptations and responses to stress, and the basis of the distribution of plants and plant assemblages across the landscape. Prerequisites: Earth System Science 51 or 60A and 60C or Biological Sciences E106. Concurrent with Earth System Science 168 and Biological Sciences E127.

270 Environmental Microbiology (4) F. Establishes a fundamental understanding of microbes living in the environment, including their distribution, diversity, and biochemistry, and discusses how they attribute to global biogeochemical cycles. Prerequisites: Earth System Science 53 or 60A and 60C or Biological Sciences E106. Concurrent with Earth System Science 170 and Biological Sciences E163.

280A-B-C Special Topics in Earth System Science (1 to 4). Each quarter is devoted to current topics in the field of Earth System Science. Prerequisite: Earth System Science 200 or equivalent, or consent of instructor. May be repeated for credit as topics vary. Formerly Earth System Science 280.

282A-B Special Topics in Climate (1 to 4). Each quarter is devoted to in-depth analysis of an important and rapidly developing area in the field of climate dynamics. Prerequisite: Earth System Science 200 or equivalent, or consent of instructor. May be repeated for credit as topics vary.

284A-B-C Special Topics in Atmospheric Chemistry (1 to 4) F, W, S. Each quarter is devoted to current topics in the field of Atmospheric Chemistry. Prerequisite: Earth System Science 200 or equivalent, or consent of instructor. May be repeated for credit as topics vary.

286A-B Special Topics in Biogeochemistry (1 to 4). Each quarter is devoted to in-depth analysis of a subarea in biogeochemistry which is undergoing rapid development. Prerequisite: Earth System Science 200 or equivalent, or consent of instructor. May be repeated for credit as topics vary.

288A-B-C Special Topics in Ecosystems (1 to 4) F, W, S. Each quarter is devoted to current topics relating to Ecosystems. May be repeated for credit as topics vary. Prerequisite: Earth System Science 200 or equivalent, or consent of instructor.

290 Seminar (1) F, W, S. Weekly seminars and discussions on topics of general and current interest in Earth System Science. Satisfactory/Unsatisfactory only. Prerequisite: graduate standing. May be repeated for credit as topics vary.

298 Practicum in Earth System Science (4) S. Designed to introduce first-year graduate students to research. Students explore research opportunities and develop a proposal for a summer research project under the direction of a faculty mentor.

299 Research (2 to 12) F, W, S. Supervised original research in areas of Earth System Science. Prerequisite: consent of instructor. May be repeated for credit.

399 University Teaching (1 to 4) F, W, S. Required of and limited to teaching assistants. Satisfactory/Unsatisfactory grading only. May be repeated for credit.

DEPARTMENT OF MATHEMATICS

340 Rowland Hall; (949) 824-5503
Hong-Kai Zhao, **Department Chair**

Faculty

Takeo Akasaki, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (ring theory)

Vladimir Baranovsky, Ph.D. University of Chicago, *Associate Professor of Mathematics* (algebraic geometry, representation theory)

Frank B. Cannonito, Ph.D. Adelphi University, *Professor Emeritus of Mathematics* (group theory)

Long Chen, Ph.D. Pennsylvania State University, *Assistant Professor of Mathematics* (numerical analysis, scientific computing, finite element methods, computational geometry)

Larry Chrystal, M.A. University of California, Santa Barbara, *Lecturer in Mathematics*

Michael C. Cranston, Ph.D. University of Minnesota, *Department Vice Chair for Undergraduate Studies and Professor of Mathematics* (probability)

Donald Darling, Ph.D. California Institute of Technology, *Professor Emeritus of Mathematics*

Sarah Eichhorn, Ph.D. University of Arizona, *Assistant Vice Chair of Undergraduate Studies and Lecturer with Potential Security of Employment, Department of Mathematics* (applied mathematics, mathematics education)

Paul C. Eklof, Ph.D. Cornell University, *Professor Emeritus of Mathematics* (logic and algebra)

Germán A. Enciso Ruiz, Ph.D. Rutgers University, *Assistant Professor of Mathematics* (dynamical systems, mathematical and systems biology)

Catherine Famiglietti, Ph.D. Princeton University, *Lecturer in Mathematics* (calculus, numerical methods)

Aleksandr Figotin, Ph.D. Tashkent University, *Professor of Mathematics* (applied mathematics, photonic crystals, foundations of electromagnetism)

Mark Finkelstein, Ph.D. Stanford University, *Professor Emeritus of Mathematics* (analysis)

Matthew D. Foreman, Ph.D. University of California, Berkeley, *Professor of Mathematics and of Logic and Philosophy of Science* (logic, ergodic theory)

Michael D. Fried, Ph.D. University of Michigan, *Professor Emeritus of Mathematics* (arithmetic geometry, complex variables)

Anton Gorodetski, Ph.D. Moscow State University, *Assistant Professor of Mathematics* (dynamical systems)

Patrick Guidotti, Ph.D. University of Zürich, *Associate Professor of Mathematics* (partial differential equations, applied mathematics)

Svetlana Jitomirskaya, Ph.D. Moscow State University, *Professor of Mathematics* (mathematical physics, dynamical systems)

Abel Klein, Ph.D. Massachusetts Institute of Technology, *Professor of Mathematics* (mathematical physics, random Schrödinger operators)

Natalia L. Komarova, Ph.D. University of Arizona, *Professor of Mathematics and of Ecology and Evolutionary Biology* (applied mathematics, mathematical biology)

Rachel Lehman, Ph.D. University of California, Irvine, *Lecturer in Mathematics*

Peter Li, Ph.D. University of California, Berkeley, *UCI Chancellor's Professor of Mathematics* (differential geometry)

Song-Ying Li, Ph.D. University of Pittsburgh, *Professor of Mathematics* (several complex variables, nonlinear partial differential equations, harmonic analysis)

John S. Lowengrub, Ph.D. New York University, *Department of Mathematics Vice Chair for Graduate Studies and UCI Chancellor's Professor of Mathematics, Biomedical Engineering, and Chemical Engineering and Materials Science* (mathematical materials science, mathematical fluid dynamics, mathematical biology, computational mathematics, cancer modeling, nanomaterials, quantum dots, complex fluids)

Zhiqin Lu, Ph.D. New York University, *Professor of Mathematics* (differential geometry)

Penelope Maddy, Ph.D. Princeton University, *UCI Distinguished Professor of Logic and Philosophy of Science and of Mathematics* (philosophy of mathematics and logic, meta-philosophy)

Caryl Margulies, Ph.D. University of California, Irvine, *Lecturer in Mathematics* (cryptography, graph theory, partial differential equations, linear algebra)

Eric D. Mjolsness, Ph.D. California Institute of Technology, *Professor of Computer Science and Mathematics* (applied mathematics, mathematical biology, modeling languages)

Qing Nie, Ph.D. Ohio State University, *Professor of Mathematics and Biomedical Engineering* (computational mathematics, systems biology, cell signaling and stem cell)

Timur Oikhberg, Ph.D. Texas A&M University, *Associate Professor of Mathematics* (functional analysis)

Alessandra Pantano, Ph.D. Princeton University, *Lecturer with Potential Security of Employment, Department of Mathematics* (representation theory, mathematical education)

David L. Rector, Ph.D. Massachusetts Institute of Technology, *Professor Emeritus of Mathematics* (algebraic topology, computer algebra)

Robert C. Reilly, Ph.D. University of California, Berkeley, *Associate Professor of Mathematics* (differential geometry)

Karl C. Rubin, Ph.D. Harvard University, *Professor of Mathematics and Edward and Vivian Thorp Chair in Mathematics* (number theory)

Bernard Russo, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (functional analysis)

Donald G. Saari, Ph.D. Purdue University, *Director of the Institute for Mathematical Behavioral Sciences and UCI Distinguished Professor of Economics and Mathematics* (dynamical systems with an emphasis on the Newtonian N-body problem and issues coming from the mathematical social and behavioral sciences)

Martin Schechter, Ph.D. New York University, *Professor of Mathematics* (partial differential equations, functional analysis, critical point theory)

Stephen Scheinberg, Ph.D. Princeton University; M.D. University of California, Irvine, *Professor Emeritus of Mathematics* (analysis)

Alice Silverberg, Ph.D. Princeton University, *Professor of Mathematics* (number theory, arithmetic algebraic geometry, cryptography)

William H. Smoke, Ph.D. University of California, Berkeley, *Professor Emeritus of Mathematics* (homological algebra)

Knut Solna, Ph.D. Stanford University, *Professor of Mathematics* (applied mathematics, mathematical finance)

Ronald J. Stern, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (geometry and topology)

- Chuu-Lian Terng, Ph.D. Brandeis University, *Professor of Mathematics* (differential geometry, integrable systems)
- Edriss S. Titi, Ph.D. Indiana University, *Professor of Mathematics and of Mechanical and Aerospace Engineering* (applied and computational mathematics, nonlinear partial differential equations)
- Howard G. Tucker, Ph.D. University of California, Berkeley, *Professor Emeritus of Mathematics* (probability and statistics)
- Gunther Uhlmann, Ph.D. Massachusetts Institute of Technology, *Professor of Mathematics and UCI Excellence in Teaching Endowed Chair in Mathematics* (inverse problems, microlocal analysis, partial differential equations, scattering theory, cloaking)
- Daqing Wan, Ph.D. University of Washington, *Professor of Mathematics* (number theory, its algorithms and applications)
- Frederic Yui-Ming Wan, Ph.D. Massachusetts Institute of Technology, *Professor of Mathematics and of Mechanical and Aerospace Engineering* (applied mathematics, mathematical biology; plate, shell, and elasticity theory; resource economics)
- Robert W. West, Ph.D. University of Michigan, *Professor Emeritus of Mathematics* (algebraic topology)
- Joel J. Westman, Ph.D. University of California, Los Angeles, *Professor Emeritus of Mathematics* (analysis)
- Robert J. Whitley, Ph.D. New Mexico State University, *Professor Emeritus of Mathematics* (analysis)
- Janet L. Williams, Ph.D. Brandeis University, *Professor Emerita of Mathematics* (probability and statistics)
- Dominik Wodarz, Ph.D. University of Oxford, *Professor of Ecology and Evolutionary Biology and of Mathematics* (mathematical biology; infectious disease and cancer)
- Jack Xin, Ph.D. New York University, *Professor of Mathematics* (applied mathematics)
- James J. Yeh, Ph.D. University of Minnesota, *Professor Emeritus of Mathematics* (real and stochastic analysis)
- Yifeng Yu, Ph.D. University of California, Berkeley, *Assistant Professor of Mathematics* (nonlinear partial differential equations)
- Martin Zeman, Ph.D. Humboldt University, *Associate Professor of Mathematics* (logic, set theory)
- Hong-Kai Zhao, Ph.D. University of California, Los Angeles, *Department Chair and Professor of Mathematics* (computational and applied mathematics)
- Weian Zheng, Ph.D. Université de Strasbourg, *Professor of Mathematics* (probability theory and financial engineering)

The Department of Mathematics is engaged in teaching and in fundamental research in a wide variety of basic mathematical disciplines, and offers undergraduate and graduate students the opportunity to fashion a thorough program of study leading to professional competence in mathematical research or in an area of application.

The curriculum in mathematics includes opportunities for supervised individual study and research and is augmented by seminars and colloquia. It is designed to be compatible with curricular structures at other collegiate institutions in California in order to enable students transferring to UCI to continue their programs of mathematics study.

Undergraduate Program

The Department offers a B.S. degree in Mathematics. Within this program there are five tracks; besides the standard track, there are four specializations or concentrations (in Mathematics for Economics, Applied and Computational Mathematics, Mathematics for Education, and Mathematics for Education/Secondary Teaching Certification). In addition, the Department offers a minor in Mathematics.

Undergraduate mathematics courses are of several kinds: courses preparatory to advanced work in mathematics, the exact sciences, and engineering; courses for students of the social and biological sciences; and courses for liberal arts students and those planning to enter the teaching field.

Admission to the Major

Students may be admitted to the Mathematics major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about

change of major policies is available in the Physical Sciences Student Affairs Office and at <http://www.changeofmajor.uci.edu>. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall and who have satisfactorily completed the required course work of one year of approved calculus.

REQUIREMENTS FOR THE B.S. DEGREE IN MATHEMATICS

University Requirements: See pages 54–61.

School Requirements: None.

Departmental Requirements

Lower-Division Requirements (for all Mathematics majors except those in the specialization in Mathematics for Education and the concentration in Mathematics for Education/Secondary Teaching Certification):

- Mathematics 2A-B, 2D (or H2D), 2E (or H2E), 2J, 3A, 3D, 13.
- Computing skills attained through either Information and Computer Science 21, Engineering E10, Engineering EECS10, Engineering EECS12, Engineering MAE10, or Physics 53.
- One three-quarter lecture course sequence selected from Chemistry 1A-B-C, Physics 2 and 7C-D, Physics 2 and 7C-E, or Physics 7C-D-E.

Upper-Division Requirements (for Mathematics majors except those in the Economics concentration, Applied and Computational specialization, Education specialization, or Education concentration): Most of the upper-division Mathematics courses are organized into a series of Core Areas. The Core Areas are Numerical Analysis (courses numbered 100–109); Applied Mathematics (110–119); Algebra (120–129); Probability and Statistics (130–139); Analysis (140–149); Logic (150–159); and Geometry (160–169). There are also non-Core-Area courses (170–189). Students are required to complete 15 upper-division one-quarter lecture courses in Mathematics (with associated laboratories when applicable) as follows. (Mathematics Honors Program students follow modified requirements, as explained in a later section.)

- Mathematics 120A, 121A
- Mathematics 140A-B
- A third lecture course from the Algebra Core Area (120–129)
- A third lecture course from the Analysis Core Area (140–149)
- One additional lecture course from either the Algebra or the Analysis Core Area
- Two lecture courses from a third Core Area
- One lecture course from a fourth Core Area
- Five additional lecture courses in Mathematics chosen from the Core Areas or from courses numbered 170–189.

The Department offers two concentrations and two specializations. Note that all require the completion of an application and an interview with the faculty advisor for that concentration or specialization.

Concentration in Mathematics for Economics

Admission to this concentration requires approval in advance by the Mathematics Department. The admissions process begins with completing a form at the Department office and includes an interview with the Department's advisor for the concentration. This approval should be applied for after the student has completed Economics 20A-B, but no later than the end of the junior year.

Upper-division requirements:

- A. Twelve upper-division Mathematics lecture courses (plus any associated laboratories) including:
1. Nine required courses: Mathematics 120A, 121A-B, 140A-B-C, 131A-B-C (same as Statistics 120A-B-C).
 2. Three elective lecture courses chosen from Mathematics 105A-B (plus 105LA-LB), 107 (plus 107L), 112A-B-C, 118A-B-C, 130B-C, 133A-B, 176.
- B. Eight required Economics courses: Economics 20A-B, 105A-B-C, 123A-B-C.

Specialization in Applied and Computational Mathematics

Admission to this specialization requires approval in advance by the Mathematics Department. The admissions process begins with completing a form at the Department office, and includes an interview with the Department's advisor for the specialization. This approval should be applied for no later than the end of the junior year.

Upper-division requirements:

- A. Thirteen upper-division Mathematics lecture courses (plus any associated laboratories) including:
1. Ten required lecture courses: Mathematics 105A-B, 107 (plus 105LA-LB, 107L), 112A-B-C, 115, 121A, 140A-B.
 2. A two-quarter sequence chosen from Mathematics 114A and 147, 118A-B, 120A-B, 130B-C, 131A-B, 140C-D, 162A-B.
 3. One additional Mathematics course numbered 100–189.
- B. Two approved upper-division courses in an area of application outside of Mathematics. Approval must be obtained in advance from the advisor for this specialization. The student is responsible for satisfying any prerequisites for these courses.

Specialization in Mathematics for Education

Admission to this specialization requires approval in advance by the Mathematics Department. The admission process begins with completing a form at the Department office, and includes an interview with the Department's advisor for the specialization. This approval should be applied for no later than the end of the junior year.

This specialization is designed to help prepare students for teaching mathematics. Students wishing to go on and teach at the intermediate and high school levels should also consult with an academic advisor in the Department of Education. A Commission on Teacher Credentialing (CTC)-approved subject-matter program (SMP) in Mathematics can be easily satisfied in tandem with this specialization, and enables students to waive a subject matter exam for teachers. Specific SMP requirements and enrollment procedures are available from the Department of Education. Students interested in teaching at the high school level are encouraged to complete the course *Physical Sciences 106* in addition to the requirements listed below.

Lower-Division Requirements:

- A. Mathematics 2A-B, 2D (or H2D), 2J, 3A, 3D, 8, and 13.
- B. Computing skills attained through either Information and Computer Science 21, Engineering E10, Engineering EECS10, Engineering EECS12, Engineering MAE10, or Physics 53.
- C. One three-quarter lecture course sequence selected from Chemistry 1A-B-C, Physics 2 and 7C-D, Physics 2 and 7C-E, or Physics 7C-D-E.

Upper-Division Requirements:

- A. Mathematics 105A (plus 105LA), 120A-B, 131A-B (or Statistics 120A-B), 140A-B, 150, 161, 180A, 184; plus one additional Mathematics course numbered 100–189.
- B. Education 172B; Physical Sciences 5 and 105.

Concentration in Mathematics for Education/Secondary Teaching Certification

Admission to this concentration requires approval in advance by the Mathematics Department. The admission process begins with completing a form at the Department office and includes an interview with the Department's advisor for the concentration. This approval should be applied for no later than the end of the sophomore year.

This concentration allows students pursuing the B.S. in Mathematics to earn a bachelor's degree and complete the required course work and field experience for a California Preliminary Single Subject Teaching Credential at the same time. With careful, early planning, it is possible for students to complete both in four years. For additional information about teacher certification requirements and enrollment procedures, see page 385 or contact the Physical Sciences Student Affairs Office or the Cal Teach Resource and Advising Center. A Commission on Teacher Credentialing (CTC)-approved subject-matter program (SMP) in Mathematics can be satisfied in tandem with this concentration, and enables students to waive a subject matter exam for teachers. Specific SMP requirements and enrollment procedures are available from the Cal Teach Resource and Advising Center or the Department of Education. Students interested in teaching at the high school level are encouraged to complete the course *Physical Sciences 106* in addition to the requirements listed below.

Lower-Division Requirements:

- A. Mathematics 2A-B, 2D (or H2D), 2J, 3A, 3D, 8, and 13.
- B. Computing skills attained through either Information and Computer Science 21, Engineering E10, Engineering EECS10, Engineering EECS12, Engineering MAE10, or Physics 53.
- C. One three-quarter lecture course sequence selected from Chemistry 1A-B-C, Physics 2 and 7C-D, Physics 2 and 7C-E, or Physics 7C-D-E.

Upper-Division Requirements:

- A. Mathematics 105A (plus 105LA), 120A-B, 131A-B (or Statistics 120A-B), 140A-B, 150, 161, 180A, 184; plus one additional Mathematics course numbered 100–189.
- B. Physical Sciences 5, 105; Chemistry or Physics 193; Logic and Philosophy of Science 60; Education 55, 109, 143A, 143B, 148, and two quarters of 158.

NOTE: Students may pursue either the concentration in Mathematics for Education/Secondary Teaching Certification or the specialization in Mathematics for Education, but not both.

HONORS PROGRAM IN MATHEMATICS

The Honors Program in Mathematics is open to junior and senior Mathematics majors who meet the minimum academic qualifications of a 3.5 GPA in Mathematics courses and a 3.2 GPA overall. Students should apply for the Honors Program no later than the fall quarter of their senior year.

Participation in this program is highly recommended for students contemplating graduate work in Mathematics.

In addition to completing the requirements for the major in Mathematics (in any one of its tracks), participants must meet the following requirements:

- A. At least 15 units of Analysis: satisfied *either* by Mathematics 140A-B-C and 140D, 141, or 147; *or* by 205A-B-C. (Mathematics 205A-B-C may be taken after undergraduate analysis courses or in place of them: in terms of satisfaction of requirements for the major, 205A-B-C counts as the equivalent of four

upper-division analysis courses. Students who have taken the undergraduate analysis sequence should discuss with the Honors Advisor the possibility of taking Mathematics 210A-B-C instead of 205A-B-C.)

- B. At least 15 units of Algebra: satisfied *either* by Mathematics 120A-B and 121A-B; *or* by 206A-B-C. (Mathematics 206A-B-C may be taken after undergraduate algebra courses or in place of them; in terms of satisfaction of requirements for the major, 206A-B-C counts as the equivalent of four upper-division algebra courses. Students who have taken the undergraduate algebra sequence should discuss with the Honors Advisor the possibility of taking Mathematics 230A-B-C instead of 206A-B-C.)
- C. Completion of the Honors Seminar, H195A-B, or two quarters of Mathematics 199. (Mathematics H195B may be counted toward the major requirements as one of the five additional courses in area H.)
- D. *Either* the completion of an honors thesis *or* completion of one of the graduate sequences, Mathematics 205A-B-C or 206A-B-C. Students pursuing a thesis may work with a faculty advisor of their choice, approved by the Honors Advisor.

Any exception to these requirements must be approved *in advance* by the Honors Advisor.

If all requirements are completed and the student's work and final GPA is deemed of honors quality by the Department's Honors Committee, the student graduates with Honors in Mathematics, and this distinction is noted on their transcript.

Requirements for the Minor

Mathematics 13 and either Mathematics 120A or 140A, plus five additional upper-division lecture courses in Mathematics (plus the associated laboratories, where applicable) numbered 100–189.
 NOTE: Nearly all upper-division courses in Mathematics have Mathematics 2A-B-J as prerequisites, and many courses have additional prerequisites such as Mathematics 2D, 2E, 3A, and/or 3D.

PLANNING A PROGRAM OF STUDY

For all Mathematics majors, or prospective majors, assistance in planning a program of study is available from the Mathematics Department Undergraduate Advisor and the advisors for the various tracks, as well as from the academic counselors for the School of Physical Sciences. The application process for the specializations and concentrations requires students to plan a program of study with the assistance of a faculty advisor. The following sample programs are only examples.

Those in the specialization for Education should note that Mathematics 184 may not be offered more than once every other year and thus should be taken when offered.

Sample Program — Mathematics Major Interested in Pure Mathematics or Preparing for Graduate Study in Mathematics

FALL	WINTER	SPRING
Freshman		
Math. 2B	Math. 2D	Math. 2E

Graduate Program

Graduate courses are designed to meet the needs of students doing graduate work in mathematics and in those disciplines that require graduate-level mathematics for their study. Among the fields covered are analysis, algebra, applied and computational mathematics, mathematical biology, functional analysis, geometry and topology, probability, ordinary and partial differential equations, and mathematical logic.

In addition to formal courses, there are seminars for advanced study toward the Ph.D. in various fields of mathematics. Topics will vary from year to year. Each seminar is conducted by a faculty member specializing in the subject studied. Enrollment will be subject to the approval of the instructor in charge.

MASTER OF SCIENCE IN MATHEMATICS

The Master's program serves a dual purpose. For some students it will be a terminal program of mathematics education; for others it will lead to study and research at the doctoral level. To earn the Master of Science degree, the student must satisfy course and residency requirements, and pass Comprehensive Examinations administered by the Graduate Studies Committee of the Department.

The M.S. degree requires the satisfactory completion of a total of 12 courses. Students are required to complete at least one series of the following courses: Mathematics 210A-B-C, 220A-B-C, or 230A-B-C. At most one undergraduate course may count as an elective course, provided it is sponsored by rank faculty and approved by the Graduate Advisor. At most one elective course (of at least three units) is allowed outside the Department.

Students will take Advisory Examinations in Algebra and Analysis upon entrance to the graduate program. The Advisory Examination in Algebra is based on the courses Mathematics 120A and 121A-B plus some advanced topics in group theory and linear algebra; students who do not pass this examination will be asked to take the Mathematics 206A-B-C sequence. The Advisory Examination in Analysis is based on the courses Mathematics 140A-B-C-D; students who do not pass this examination will be asked to take the Mathematics 205A-B-C sequence.

Students must pass two Comprehensive Examinations, one in Algebra and one in Analysis, before the beginning of their second year in the graduate program and will be given, at most, two chances to pass each examination. Students who have passed the Advisory Examination will be exempted from taking the corresponding Comprehensive Examination.

Students who fail to pass the required examinations satisfactorily within the period specified will be recommended for academic disqualification by the Graduate Dean.

Mathematics 199, 297, 298, 299, and 399 may not be used to fulfill course requirements.

The residency requirement ordinarily is satisfied by full-time enrollment for three quarters immediately preceding the award of the M.S. degree. When appropriate, a leave of absence may be granted between matriculation and the final quarters of study.

MASTER OF SCIENCE IN MATHEMATICS WITH A TEACHING CREDENTIAL

In cooperation with the UCI Department of Education, the Department of Mathematics sponsors a coordinated program for the M.S. degree in Mathematics and the California Single Subject Teaching Credential. This option requires 12 courses, at least eight of which must be graduate courses. Three thesis courses (Mathematics 299) may be used as part of the course work for this option. The Advisory and Comprehensive Examination requirements are the same as for the regular Master's degree. Prospective graduate students interested in this program should so indicate on their applications and can request a detailed description of the program from the Department of Mathematics or the Department of Education.

Advancement to Candidacy

All Master's students, prior to the beginning of their final quarter of enrollment, must be advanced to candidacy for the degree. An application for Advancement to Candidacy must be completed by the student and submitted for approval by the Department. The approved application must be submitted to the Office of Graduate Studies at least 30 days before the beginning of the quarter in which the degree is expected. If the candidate is not advanced before the beginning of the quarter in which all requirements are completed, the degree will not be conferred until the end of the

following quarter. Deadlines for submission of the Application for Advancement to Candidacy are published on the Graduate Divisions Web site, along with filing fee information and deadlines.

DOCTOR OF PHILOSOPHY IN MATHEMATICS

When accepted into the doctoral program, the student embarks on a program of formal courses, seminars, and individual study courses to prepare for the Ph.D. Qualifying Examinations, Advancement to Candidacy Examination, and dissertation.

All students will take Advisory Examinations in Algebra and Analysis upon entrance to the graduate program. The Advisory Examination in Algebra is based on the courses Mathematics 120A and 121A-B, plus some advanced topics in group theory and linear algebra; students who do not pass this examination will be asked to take the Mathematics 206A-B-C sequence. The Advisory Examination in Analysis is based on material covered in Mathematics 140A-B-C-D; students who do not pass this examination will be asked to take the Mathematics 205A-B-C sequence. All students who take Mathematics 205A-B-C (Analysis) and 206A-B-C (Algebra) must pass the corresponding Comprehensive Examination, which covers the material of the Advisory Examination plus Mathematics 205 or 206, respectively. The Comprehensive Examination will be given in spring and fall each year. If the exam is not passed in spring, it will be taken in fall and must be passed by the beginning of the second year in the graduate program.

Each student must choose at least two series of the following three series of courses—Mathematics 210A-B-C (Real Analysis), 220A-B-C (Complex Analysis), or 230A-B-C (Algebra)—and pass two written Qualifying Examinations from these courses before the end of their third year. Each examination may be taken twice. A student who passes the examination prior to taking the corresponding course will be exempted from taking the course. The Department will offer the Qualifying Examinations twice each year, during orientation week before the fall quarter and at the end of spring quarter.

By the end of their second year, students must declare a major specialization from the following areas: Algebra, Analysis, Applied and Computational Mathematics, Geometry and Topology, Logic, or Probability. Students are required to take two series of courses from their chosen area. (Students who later decide to change their area must also take two series of courses from the new area.) Additionally, all students must take two series of course outside their declared major area of specialization. Special topics courses within certain areas of specialization and courses counted toward the M.S. degree, other than Mathematics 205A-B-C and 206A-B-C, will count toward the fulfillment of the major specialization requirement.

By the beginning of their third year, students must have an advisor specializing in their major area. With the advisor's aid, the student forms a committee for the Advancement to Candidacy oral examination. This committee will be approved by the Department on behalf of the Dean of the Graduate Division and the Graduate Council and will have five faculty members. At least one, and at most two, of the members must be faculty from outside the Department. Before the end of the third year, students must have a written proposal, approved by their committee, for the Advancement to Candidacy examination. The proposal should explain the role of at least two series of courses from the student's major area of specialization that will be used to satisfy the Advancement to Candidacy requirements. The proposal should also explain the role of additional research reading material as well as providing a plan for investigating specific topics under the direction of the student's advisor(s). The courses Mathematics 210A-B-C, 220A-B-C, and 230A-B-C cannot count for both Qualifying Examinations and the course requirements for Advancement to Candidacy Examinations.

After the student meets the requirements, the Graduate Studies Committee recommends to the Dean of the Graduate Division the advancement to candidacy for the Ph.D. degree. Students should advance to candidacy by the beginning of their fourth year.

After advancing to candidacy, students are expected to be fully involved in research toward writing their Ph.D. dissertation. Ideally, students should keep in steady contact/interaction with their Doctoral committee.

Teaching experience and training is an integral part of the Ph.D. program. All doctoral students are expected to participate in the Department's teaching program.

The candidate must demonstrate independent, creative research in Mathematics by writing and defending a dissertation that makes a new and valuable contribution to mathematics in the candidate's area of concentration. Upon advancement to candidacy a student must form a Thesis Committee, a subcommittee of the Advancement Examination Committee, consisting of at least three faculty members and chaired by the student's advisor. The committee guides and supervises the candidate's research, study, and writing of the dissertation; conducts an oral defense of the dissertation; and recommends that the Ph.D. be conferred upon approval of the doctoral dissertation. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Qualifying Examinations

Ph.D. qualifying examinations are given in Algebra, Complex Analysis, and Real Analysis. All students seeking the Ph.D. degree must successfully complete two examinations before the end of the third year of entering the graduate program. Additionally, all students entering with an M.S. degree from another institution must pass one exam within one year.

Only two attempts are allowed for a Ph.D. student on each exam.

Area Requirements

Ph.D. students will choose from one of six areas of specialization in the Mathematics Department, which determines course work requirements. Each area of specialization will have a core course, which the Department will do its best to offer each year. The Department will offer other courses every other year, or more frequently depending on student demands and other Department priorities.

Algebra: Mathematics 230A-B-C (core), 232A-B-C, 233A-B-C, 234A-B-C, 235A-B-C, 239A-B-C.

Analysis: Mathematics 210A-B-C (core), 211A-B-C, 220A-B-C (core), 260A-B-C, 295A-B-C, 296.

Applied and Computational Mathematics: Mathematics 290A-B-C (core), 225A-B-C, 226A-B-C, 227A-B, 291A-B-C, 295A-B-C.

Geometry and Topology: Mathematics 218A-B-C (core), 222A-B-C, 240A-B-C, 245A-B-C, 250A-B-C.

Logic: Mathematics 280A-B-C (core), 281A-B-C, 282A-B-C, 285A-B-C.

Probability: Mathematics 210A-B-C, 211A-B-C, 270A-B-C (core), 271A-B-C (core), 272A-B-C (core), 274.

GRADUATE PROGRAM IN MATHEMATICAL AND COMPUTATIONAL BIOLOGY

The graduate program in Mathematical and Computational Biology (MCB) is a one-year "gateway" program designed to function in concert with selected department programs, including the Ph.D. in mathematics. Detailed information is available online at <http://mcsb.bio.uci.edu/> and in the School of Biological Sciences section of the *Catalogue*.

Courses in Mathematics

(Schedule of Classes designation: Math)

LOWER-DIVISION

1A-B Pre-Calculus. Lecture, three hours; discussion, one hour.

1A (0) F, Basic equations and inequalities, linear and quadratic functions, and systems of simultaneous equations. Four units of workload credit only.

1B (4) F, W, Summer. Preparation for calculus and other mathematics courses. Exponentials, logarithms, trigonometry, polynomials, and rational functions. Satisfies no requirements other than contribution to the 180 units required for graduation. Prerequisite: Mathematics 1A.

2A-B Single-Variable Calculus (4-4) F, W, S, Summer. Lecture, three hours; discussion, two hours. **2A:** Introduction to derivatives, calculation of derivatives of algebraic and trigonometric functions; applications including curve sketching, related rates, and optimization. Antiderivatives. Prerequisite: pass the UCI Calculus Placement Test no more than one year before the start of the quarter in which Mathematics 2A will be taken, or receive a grade of C (2.0) or better in Mathematics 1B at UCI, or receive a score of 3 on the AP Calculus AB exam. **2B:** Definite integrals; the Fundamental theorem of calculus. Applications of integration including finding areas and volumes. Techniques of integration. Logarithmic and exponential functions. Prerequisite for Mathematics 2B: 2A. *Majors in the Schools of Physical Sciences, Engineering, and Information and Computer Sciences have first consideration for enrollment.* (V)

2D-E Multivariable Calculus. Lecture, three hours; discussion, two hours.

2D (4) F, W, S, Summer. Differential and integral calculus of real-valued functions of several real variables, including applications. Polar coordinates. Prerequisites: Mathematics 2A-B. Mathematics 2D and H2D may not both be taken for credit. *Majors in the Schools of Physical Sciences, Engineering, and Information and Computer Sciences have first consideration for enrollment.* (V)

2E (4) F, W, S, Summer. The differential and integral calculus of vector-valued functions. Implicit and inverse function theorems. Line and surface integrals, divergence and curl, theorems of Green, Gauss, and Stokes. Prerequisite: 2D. Mathematics 2E and H2E may not both be taken for credit.

H2D-E Honors Multivariable Calculus (4-4) W, S. Lecture, three hours; discussion, two hours. Covers the same material as Mathematics 2D-E, but with a greater emphasis on the theoretical structure of the subject matter. Especially recommended for prospective Mathematics majors and others with a particular interest in mathematics. Satisfies the same requirements and prerequisites as 2D-E. Prerequisites for H2D: a grade of B (3.0) or better in Mathematics 2B or a score of 4 or 5 on the Advanced Placement Calculus BC examination; for H2E: a grade of C (2.0) or better in Mathematics H2D. Mathematics 2D-E and H2D-E may not both be taken for credit. (H2D: V)

2J Infinite Series and Basic Linear Algebra (4) F, W, S, Summer. Lecture, three hours; discussion, two hours. Systems of linear equations: matrix operations; determinants; eigenvalues, and eigenvectors. Infinite sequences and series. Complex numbers. Prerequisites: Mathematics 2A-B. *Majors in the Schools of Physical Sciences and Engineering have first consideration for enrollment.* (V)

3A Introduction to Linear Algebra (4) F, W, S. Lecture, three hours; discussion, two hours. Vectors, matrices, linear transformations, dot products, determinants, systems of linear equations, vector spaces, subspaces, dimension. Corequisite: Mathematics 13. Prerequisite: Mathematics 2J or 4. Mathematics 3A and 6G may not both be taken for credit. *Mathematics majors have first consideration for enrollment.*

3D Elementary Differential Equations (4) F, W, S, Summer. Lecture, three hours; discussion, two hours. Linear differential equations, variation of parameters, constant coefficient cookbook, systems of equations, Laplace transforms, series solutions. Further topics as time permits. Prerequisites: Mathematics 2D and 2J. *School of Physical Sciences and School of Engineering majors have first consideration for enrollment.*

4 Mathematics for Economists (4) F, S. Lecture, three hours; discussion, two hours. Topics in linear algebra and multivariable differential calculus suitable for economic applications. Prerequisites: Mathematics 2A-B. No credit for Mathematics 4 if taken after both Mathematics 2J and 2D. *Economics, Business Economics, and Quantitative Economics majors have first consideration for enrollment.* (V)

5 Mathematics of Compound Interest (4) F, W, S, Summer. Lecture, three hours. Introduction to fundamental concepts of financial mathematics and their application in calculating present and accumulated values for various streams of cash flows. Topics include definition and simple problems in compound interest; basic/advanced annuities; the yield curve; amortization; financial analysis. Prerequisites: Mathematics 2A-B.

6G Linear Algebra (4) F, W, S, Summer. Lecture, three hours; discussion, two hours. Linear equations, vector spaces and subspaces, linear functions and matrices, linear codes, determinants, scalar products. Prerequisite: high school mathematics through trigonometry. Mathematics 6G and 3A may not both be taken for credit. NOTE: Mathematics majors must take 3A. (V)

8 Explorations in Functions and Modeling (4) S. Lecture, three hours; discussion, one hour. Explorations of applications and connections in topics in algebra, geometry, calculus, and statistics for future secondary math educators. Emphasis on nonstandard modeling problems. Corequisite: Mathematics 2A.

13 Introduction to Abstract Mathematics (4) F, W, S. Lecture, three hours; discussion, two hours. Introduction to formal definition and rigorous proof writing in mathematics. Topics include basic logic, set theory, equivalence relations, and various proof techniques such as direct, induction, contradiction, contrapositive, and exhaustion. Prerequisite: Mathematics 2A or Mathematics 6D/ICS 6D. *Mathematics majors have first consideration for enrollment.*

77A, B, C, D Topics in Mathematics and Computation in the Digital Age. Lecture, three hours; laboratory, two hours. Corequisite: Mathematics 2J or 6G, or consent of instructor. Prerequisites: Mathematics 2A-B; ICS 21/CSE21 or Informatics 41 or consent of instructor. First- and second-year students only.

77A Introduction to Signal Processing (4). Signals in MATLAB; blurring, mixing, filtering; elements of linear algebra, statistics, optimization; blind matrix inversion; de-correlation method, stochastic gradient descent method, applications to sounds and images. Same as ICS 77A. (II or V)

77B Introduction to Collaborative Filtering (4). Basic concepts of collaborative filtering; clustering; matrix factorization and principal components analysis; regression; classification; naive Bayes classifier, decision trees, Perceptron (neural networks). Same as ICS 77B. (II or V)

77C Introduction to Image Processing (4). Image de-noising, de-blurring, low pass filtering; image segmentation and classification; sparse representation; visualization. Same as ICS 77C. (II or V)

77D Introduction to Game Simulation and Analysis (4). Combinatorial Game Theory—game classification, tree graphs, strategy analysis, Sprague Grundy functions, Bouton's Theorem; Zero-Sum and General-Sum Game Theory—payoff matrices, Minimax Theorem, Nash equilibrium; machine learning—search algorithms. Same as ICS 77D. (II or V)

UPPER-DIVISION

NOTE: Some of the upper-division courses listed below have one or two hours of discussion weekly in addition to the lectures. Not all courses are offered every year.

105A-B Numerical Analysis (4-4) F, W. Lecture, three hours. Introduction to the theory and practice of numerical computation. **105A:** Floating point arithmetic, roundoff; solving transcendental equations; quadrature; linear systems, eigenvalues, power method. Corequisite: Mathematics 105LA if offered. Prerequisites: Mathematics 2J; some acquaintance with computer programming. Mathematics 105A and Engineering MAE185 may not both be taken for credit. **105B:** Lagrange interpolation, finite differences, splines, Padé approximations; Gaussian quadrature; Fourier series and transforms. Corequisite: Mathematics 105LB if offered. Prerequisite: Mathematics 105A.

105LA-LB Numerical Analysis Laboratory (1-1) F, W. Laboratory, two hours. Provides practical experience to complement the theory developed in Mathematics 105A-B. Corequisite: concurrent enrollment in Mathematics 105A-B.

107 Numerical Differential Equations (4) S. Lecture, three hours. Theory and applications of numerical methods to initial and boundary-value problems for ordinary and partial differential equations. Corequisite: concurrent enrollment in Mathematics 107L if offered. Prerequisites: Mathematics 3D and 105A-B.

107L Numerical Differential Equations Laboratory (1) S. Laboratory, two hours. Provides practical experience to complement the theory developed in Mathematics 107. Corequisite: concurrent enrollment in Mathematics 107.

112A-B-C Introduction to Partial Differential Equations and Applications (4-4-4). Lecture, three hours. Introduction to ordinary and partial differential equations and their applications in engineering and science. Basic methods for classical PDEs (potential, heat, and wave equations). **112A:** Classification of PDEs, separation of variables and series expansions, special functions, eigenvalue problems. **112B:** Green functions and integral representations, method of characteristics. **112C:** Galerkin method and other discretization techniques. Prerequisites for 112A: Mathematics 2D, 3D; for 112B: 2E and 112A.

114A Applied Complex Analysis (4) F. Lecture, three hours. Introduction to complex functions and their applications to engineering and science. Complex numbers, elementary functions; analytic functions; complex integration; power series; residue theory; conformal maps; applications. Prerequisites: Mathematics 2D, 2J. Mathematics 2E and 3D recommended. Mathematics 114A may not be taken for credit after Mathematics 147.

115 Mathematical Modeling (4). Lecture, three hours. Mathematical modeling and analysis of phenomena that arise in engineering physical sciences, biology, economics, or social sciences. Corequisite or prerequisite: Mathematics 112A or Engineering MAE140. Prerequisites: Mathematics 2D; 3A or 6G; 3D.

117 Dynamical Systems (4). Lecture, three hours; discussion, two hours. Introduction to the modern theory of dynamical systems including contraction mapping principle, fractals and chaos, conservative systems, Kepler problem, billiard models, expanding maps, Smale's horseshoe, topological entropy. Prerequisites: Mathematics 3D and 140A. Mathematics 117 and 118B may not both be taken for credit.

118A-B-C The Theory of Differential Equations (4-4-4). Lecture, three hours; discussion, one hour. **118A:** Existence and uniqueness of solutions, continuous dependence of solutions on initial conditions and parameters, Lyapunov and asymptotic stability, Floquet theory, nonlinear systems, and bifurcations. **118B:** Dynamical systems. **118C:** Boundary value problems in ordinary differential equations. Prerequisites for 118A: Mathematics 3D and 140A. Mathematics 118B and 117 may not both be taken for credit. Mathematics 118C and 119 may not both be taken for credit.

119 Boundary Value Problems (4). Lecture, three hours; discussion, two hours. Introduction to boundary value problems including Green's function representations, maximum principle, variational formulations, Sturm-Liouville problems, eigenfunction expansions, existence and uniqueness for non-linear problems, method of shooting, finite difference methods. Prerequisites: Mathematics 3D and 140A; Mathematics 118A recommended. Mathematics 119 and 118C may not both be taken for credit.

120A Introduction to Abstract Algebra: Groups (4) F, W. Lecture, three hours; discussion, two hours. Axioms for group theory; permutation groups, matrix groups. Isomorphisms, homomorphisms, quotient groups. Advanced topics as time permits. Special emphasis on doing proofs. Prerequisites: Mathematics 3A or 6G; 13. *Mathematics majors have first consideration for enrollment.*

120B Introduction to Abstract Algebra: Rings and Fields (4) W, S. Lecture, three hours; discussion, two hours. Basic properties of rings; ideals, quotient rings; polynomial and matrix rings. Elements of field theory. Prerequisite: Mathematics 120A. *Mathematics majors have first consideration for enrollment.*

120C Introduction to Abstract Algebra: Galois Theory (4) S. Lecture, three hours. Galois Theory: proof of the impossibility of certain ruler-and-compass constructions (squaring the circle, trisecting angles); nonexistence of analogues to the "quadratic formula" for polynomial equations of degree 5 or higher. Prerequisite: Mathematics 120B. Formerly Mathematics 124. *Mathematics majors have first consideration for enrollment.*

121A-B Linear Algebra (4-4). Lecture, three hours; discussion, two hours. Introduction to modern abstract linear algebra. Special emphasis on students doing proofs. **121A:** Vector spaces, linear independence, bases, dimension. Linear transformations and their matrix representations. Theory of determinants. **121B:** Canonical forms; inner products; similarity of matrices. Prerequisites for 121A: Mathematics 3A or 6G; 13. *Mathematics majors have first consideration for enrollment.*

130B-C Probability and Stochastic Processes (4-4). Lecture, three hours. Introductory course emphasizing applications. **130B:** Conditional probability and conditional expectations; Markov chains. **130C:** Exponential distribution and Poisson process; Brownian motion; additional topics, such as option pricing, as time permits. Prerequisites: for 130B: Mathematics 2A-B, and either

130A, 131A, 132A, Statistics 120A, or Mathematics 67 and either 6G or 3A; for 130C: Mathematics 130B.

NOTE: Only one course from Mathematics 130A, 131A, and 132A may be taken for credit. Any one of these courses, or Statistics 67 and either Mathematics 6G or 3A, will satisfy the prerequisite for Mathematics 130B, 131B, and 132B.

131A-B-C Introduction to Probability and Statistics (4-4-4). Lecture, three hours; discussion, one to two hours. Introductory course covering basic principles of probability and statistical inference. **131A:** Axiomatic definition of probability, random variables, probability distributions, expectation.

131B: Point estimation, interval estimating, and testing hypotheses, Bayesian approaches to inference. **131C:** Linear regression, analysis of variance, model checking. Prerequisites for 131A-B: Mathematics 2A-B; 2D and 2J or 4; for 131C: Mathematics 131A-B; 3A or 6G. Same as Statistics 120A-B-C.

132B-C Discrete Probability and Mathematical Theory of Sample Surveys (4-4). Lecture, three hours. Sample selection, stratification, cluster sampling, double-sampling procedures, optimal allocation, probability-proportional-to-size sampling. Applications to problems in economics, business, public health, agriculture, and the social sciences. Prerequisites for 132B: Mathematics 2A-B, and either 130A, 131A, 132A, Statistics 120A, or Mathematics 67 and either 6G or 3A; for 132C: Mathematics 132B.

133A-B Statistical Methods with Applications to Finance (4-4) W, S. Lecture three hours; discussion, one hour. Introduction to Monte Carlo (MC) methods. **133A:** Overview of probability, statistics, financial concepts; linear and logistic regressions; time series models; Brownian motion; MC simulations. **133B:** Elliptic and parabolic partial differential equations; MC methods; vanilla and exotic derivatives; Greeks, portfolio management, and value-at-risk. Prerequisites for 133A: Mathematics 67 and either 2D or 4, or Mathematics 131A, or Statistics 120A; for 133B: Mathematics 133A.

140A-B Elementary Analysis (4-4). Lecture, three hours; discussion, two hours. Introduction to real analysis including convergence of sequences, infinite series, differentiation and integration, and sequences of functions. Students are expected to do proofs. Prerequisites: Mathematics 2D, 2J, 13. *Mathematics majors have first consideration for enrollment.*

140C-D Analysis in Several Variables (4-4). Lecture, three hours; discussion, two hours. **140C:** Rigorous treatment of multivariable differential calculus. Jacobians, Inverse and Implicit Function theorems. Prerequisite: Mathematics 140B. **140D:** Rigorous treatment of multivariable integral calculus. Multiple integrals in \mathbf{R}^n ; iterated integrals and Fubini's theorem; change-of-variables theorem; differential forms and Stokes' theorem. Prerequisites: Mathematics 2E and 140C.

141 Introduction to Topology (4) S. Lecture, three hours. The elements of naive set theory and the basic properties of metric spaces. Introduction to topological properties. Prerequisite: Mathematics 140A.

146 Fourier Analysis (4) S. Lecture, three hours. Rigorous introduction to the theory of Fourier series and orthogonal expansions. Fourier transform. Prerequisites: Mathematics 3D and 140A-B. Mathematics 112A recommended.

147 Complex Analysis (4) W. Rigorous treatment of basic complex analysis: complex numbers, analytic functions, Cauchy integral theory and its consequences (Morera's Theorem, Argument Principle, Fundamental Theorem of Algebra, Maximum Modulus Principle, Liouville's Theorem), power series, residue calculus harmonic functions, conformal mapping. Students are expected to do proofs. Corequisite: Mathematics 140B. Prerequisite: Mathematics 140A. Mathematics 114A may not be taken for credit after 147.

150 Introduction to Mathematical Logic (4) F. Lecture, three hours. First-order logic through the Completeness Theorem for predicate logic. Prerequisites: Mathematics 13 or ICS 6B and 6D. Only one course from Mathematics 150, Philosophy 105B, and Logic and Philosophy of Science 105B may be taken for credit.

151 Set Theory (4) W. Lecture, three hours. Axiomatic development; infinite sets; cardinal and ordinal numbers. Prerequisite: Mathematics 150. Only one course from Mathematics 151, Philosophy 105A, and Logic and Philosophy of Science 105A may be taken for credit.

152 Computability (4) S. Lecture, three hours. Computable functions; undecidability; Gödel's Incompleteness Theorem. Prerequisite: Mathematics 150. Only one course from Mathematics 152, Philosophy 105C, and Logic and Philosophy of Science 105C may be taken for credit.

161 Modern Geometry (4). Lecture, three hours. Euclidean geometry; Hilbert's axioms; absolute geometry; hyperbolic geometry; the Poincare models; geometric transformations. Prerequisites: Mathematics 2D and either Mathematics 13 or ICS 6B and 6D. *Mathematics majors have first consideration for enrollment.*

162A-B Introduction to Differential Geometry (4-4) F, W. Lecture, three hours. Applications of advanced calculus and linear algebra to the geometry of curves and surfaces in space. Prerequisites: Mathematics 2E, 3A, and 3D. *Not offered every year.*

171A-B Mathematical Methods in Operations Research. Lecture, three hours. *Offered summer only.*

171A Linear Programming (4). Simplex algorithm, duality, optimization in networks. Prerequisite: Mathematics 3A or 6G.

171B Nonlinear Programming (4). Conditions for optimality, quadratic and convex programming, search methods, geometric programming. Prerequisites: Mathematics 2D and either 3A or 6G.

173A-B Introduction to Cryptology (4-4). Lecture, three hours. Introduction to some of the mathematics used in the making and breaking of codes, with applications to classical ciphers and public key systems. The mathematics which is covered includes topics from number theory, probability, and abstract algebra. Prerequisites for 173A: Mathematics 2B and 3A or 6G; Mathematics 13 or ICS 6B and 6D; for 173B: Mathematics 173A.

174A-B Modern Graph Theory I, II. Lecture, three hours. An introduction to fundamental concepts of graph theory by developing abilities to produce examples, following and devising simple proofs, and current applications of graph theory.

174A Modern Graph Theory I (4). Topics include graph types, matching in graphs; Menger's Theorem; Kuratowski's Theorem. Prerequisites: Mathematics 2B, 3A or 6G, and Mathematics 13 or ICS 6B and 6D.

174B Modern Graph Theory II (4). Topics include coloring maps, plane graphs, vertices, and edges; Hadwiger's Conjecture; Hamilton Cycles; Ramsey Theory. Prerequisite: Mathematics 174A.

176 Mathematics of Finance (4). Lecture, three hours; discussion, one hour. Introduces the mathematics of finance with an emphasis on financial derivatives. After a review of certain tools from probability, statistics, and elementary differential and partial differential equations, concepts such as hedging, arbitrage, Puts, Calls, and the design of portfolios, the derivation and solution of the Black-Scholes and other equations are discussed. Prerequisites: Mathematics 2A-B-J. Same as Economics 135. *Mathematics and Economics majors have first consideration for enrollment.*

180A-B Number Theory (4-4). Lecture, three hours; discussion, one hour. Introduction to number theory and applications. **180A:** Divisibility, prime numbers, factorization. Arithmetic functions. Congruences. Quadratic residue. Diophantine equations. Introduction to cryptography. Formerly Mathematics 180. **180B:** Analytic number theory, character sums, finite fields, discrete logarithm, computational complexity. Introduction to coding theory. Other topics as time permits. Prerequisites for 180A: Mathematics 2J and 13, or consent of instructor; for 180B: Mathematics 180A. *Mathematics majors have first consideration for enrollment.*

184 History of Mathematics (4). Lecture, three hours. Topics vary from year to year. Some possible topics: mathematics in ancient times; the development of modern analysis; the evolution of geometric ideas. Students are assigned individual topics for term papers. Prerequisites: Mathematics 3D, 120A, 140A. *Not offered every year. Mathematics majors have first consideration for enrollment.*

189 Special Topics in Mathematics (4). Lecture, three hours. Offered from time to time, but not on a regular basis. Content and prerequisites vary with the instructor. May be repeated for credit as topics vary.

192 Studies in the Learning and Teaching of Secondary Mathematics (2) W, S. Lecture, two hours; fieldwork, two hours. Enrollment limited to upper-division Mathematics majors participating in the Mathematics for Education specialization, or students in related majors. Admission requires approval of Department Tutor Supervisor. Focus is on historic and current mathematical concepts related to student learning and effective math pedagogy, with fieldwork in grades 6–14. For students *not* in the specialization in Mathematics for Education, this course satisfies no requirements other than contribution to the 180 units required for graduation. Pass/Not Pass only. Prerequisites: Mathematics 2D; 2J; 3D; 13 or 120A or 140A. May be taken twice for credit.

193 SMPP Capstone (2) W, S. Lecture, two hours; fieldwork, two hours. Capstone course for the Mathematics Subject-Matter Preparation (SMP) program. Engages students in reviewing and conducting current research on significant issues related to the teaching and learning of mathematics in the secondary classroom. Corequisite: Mathematics 192 recommended. May be taken twice for credit.

194 Problem-Solving Seminar (2). Develops ability in analytical thinking and problem solving, using problems of the type found in the Mathematics Olympiad and the Putnam Mathematical Competition. Students taking the course in fall will prepare for and take the Putnam examination in December. Pass/Not Pass only. NOTE: satisfies no requirement other than contribution to the 180 units required for graduation. Recommended for prospective teachers. May be taken twice for credit.

H195A-B Honors Seminar (4-4) W, S. Topics vary from year to year. Provides an integrative experience, including problem-solving and oral and written presentations. Required for the Honors Program in Mathematics and open to others with consent of instructor.

199A-B-C Special Studies in Mathematics (4-4-4) F, W, S. Supervised reading. For outstanding undergraduate mathematics majors in supervised but independent reading or research of mathematical topics. Prerequisite: consent of Department. NOTE: Cannot normally be used to satisfy departmental requirements.

GRADUATE

NOTE: Undergraduates who are not in the Honors Program and wish to take 205A or 206A should first get the consent of the instructor.

205A-B-C Introduction to Graduate Analysis (5-5-5) F, W, S. Lecture, four hours. Construction of the real number system, topology of the real line, concepts of continuity, differential and integral calculus, sequences and series of functions, equicontinuity, metric spaces, multivariable differential and integral calculus, implicit functions, curves and surfaces. Prerequisites: Mathematics 2A-B, 2J, 2D, 2E, 3A; or equivalent or consent of instructor.

206A-B-C Introduction to Graduate Algebra (5-5-5). Lecture, four hours. Introduction to abstract linear algebra, including bases, linear transformation, eigenvectors, canonical forms, inner products, symmetric operators. Introduction to groups, rings, and fields including examples of groups, group actions, Sylow theorems, modules over principal ideal domains, polynomials and Galois groups. Prerequisite: Mathematics 3A or equivalent or consent of instructor.

210A-B-C Real Analysis (4-4-4) F, W, S. Lecture, three hours. Measure theory, Lebesgue integral, signed measures, Radon-Nikodym theorem, functions of bounded variation and absolutely continuous functions, classical Banach spaces, L_p spaces, integration on locally compact spaces and the Riesz-Markov theorem, measure and outer measure, product measure spaces. Prerequisites: Mathematics 140A-B-C or consent of instructor.

211A-B-C Topics in Analysis (4-4-4) F, W, S. Lecture, three hours. A continuation of Mathematics 210A-B-C; topics selected by instructor.

218A-B-C Introduction to Manifolds and Geometry (4-4-4) F, W, S. Lecture, three hours. General topology and fundamental groups, covering space; Stokes theorem on manifolds, selected topics on abstract manifold theory. Prerequisites: Mathematics 205A-B-C or consent of instructor.

220A-B-C Analytic Function Theory (4-4-4) F, W, S. Lecture, three hours. Standard theorems about analytic functions. Harmonic functions. Normal families. Conformal mapping. Prerequisites: Mathematics 140A-B-C or equivalent or consent of instructor.

222A-B-C Several Complex Variables and Complex Geometry (4-4-4) F, W, S. Lecture, three hours. Several complex variables, $\bar{\partial}$ -problems, mappings, Kaehler geometry, Le Rham and Dolbeault Theorems, Chern classes, Hodge Theorems, Calabi conjecture, Kahler-Einstein geometry, Monge-Ampere. Prerequisites: Mathematics 218A-B-C and 220A-B-C, or consent of instructor.

225A-B-C Introduction to Numerical Analysis and Scientific Computing (4-4-4). Lecture, three hours. Introduction to fundamentals of numerical analysis from an advanced viewpoint. **225A:** Error analysis, approximation of functions, nonlinear equations. **225B-C:** Numerical linear algebra, numerical solutions of differential equations; stability. Prerequisites: Mathematics 3D; 105A-B or 140A-B; 121A; and Mathematics 112A or Engineering MAE140.

226A-B-C Computational Differential Equations (4-4-4). Lecture, three hours. Finite difference and finite element methods. Quick treatment of functional and nonlinear analysis background: weak solution, L_p spaces, Sobolev spaces. Approximation theory. Fourier and Petrov-Galerkin methods; mesh generation. Elliptic, parabolic, hyperbolic cases in 226A-B-C, respectively. Prerequisites: basic differential equations, such as in Mathematics 3D and either Mathematics 112A or Engineering MAE140; plus either abstract analysis (e.g., Mathematics 140A-B) or numerical analysis (Mathematics 105A-B or equivalent).

227A-B Mathematical and Computational Biology (4-4). Solution techniques and numerical methods for models in biology and life sciences; dynamical systems; ordinary differential equations; reaction-diffusion equations; temporal and spatial dynamics; stability; models for genetic and developmental patterns, cancers, tissue growth, and signaling networks. **227A:** Analytical methods. **227B:** Computer simulations. Prerequisites: Mathematics 2A-B or equivalent.

230A-B-C Algebra (4-4-4) F, W, S. Lecture, three hours. Elements of the theories of groups, rings, fields, modules. Galois theory. Modules over principal ideal domains. Artinian, Noetherian, and semisimple rings and modules. Prerequisites: Mathematics 120A and 121A-B or equivalent, or consent of instructor.

232A-B-C Algebraic Number Theory (4-4-4) F, W, S. Lecture, three hours. Prime number theorem, quadratic reciprocity, Gauss sums, diophantine equations, zeta functions over finite fields. Algebraic integers, prime ideals, class groups, Dirichlet unit theorem, localization, completion, Galois extensions, Chebotarev density theorem. Representations of finite groups. L-functions, Hecke L-functions. Introduction to class field theory. Prerequisites: Mathematics 230A-B-C or consent of instructor.

233A-B-C Algebraic Geometry (4-4-4). Lecture, three hours. Basic commutative algebra and classical algebraic geometry. Algebraic varieties, morphisms, rational maps, blow ups. Theory of schemes, sheaves, divisors, cohomology. Algebraic curves and surfaces, Riemann-Roch theorem, Jacobian classification of curves and surfaces.

234B-C Topics in Algebra (4-4). Lecture, three hours. Group theory, homological algebra, and other selected topics. Prerequisites: Mathematics 230A-B-C or consent of instructor.

235A-B-C Mathematics of Cryptography (4-4-4). Lecture, three hours. **235A:** Mathematics of public key cryptography: encryption and signature schemes; RSA; factoring; primality testing; discrete log-based cryptosystems, elliptic and hyperelliptic curve cryptography. **235B:** Continuation of 235A. **235C:** Topics to be determined by instructor. Prerequisites: Mathematics 230A-B-C or consent of instructor.

239A-B-C Analytic Methods in Arithmetic Geometry (4-4-4) F, W, S. Lecture, three hours. Riemann zeta function. Dirichlet L-functions, prime number theorem, zeta functions over finite fields, sieve methods, zeta functions of algebraic curves, algebraic coding theory. L-functions over number fields, L-functions of modular forms. Eisenstein series. Prerequisites: Mathematics 220A-B-C and 230A-B-C, or consent of instructor.

240A-B-C Differential Geometry (4-4-4). Lecture, three hours. Riemannian manifolds, connections, curvature and torsion. Submanifolds, mean curvature, Gauss curvature equation. Geodesics, minimal submanifolds, first and second fundamental forms, variational formulas. Comparison theorems and their geometric applications. Hodge theory applications to geometry and topology. Prerequisite: consent of instructor.

245A-B-C Topics in Differential Geometry (4-4-4). Lecture, three hours. Continuation of Mathematics 240A-B-C. Topics to be determined by the instructor. Prerequisites: Mathematics 240A-B-C or consent of instructor. May be repeated for credit as topics vary.

250A-B-C Algebraic Topology (4-4-4). Lecture, three hours. Provides fundamental materials in algebraic topology: fundamental group and covering space, homology and cohomology theory, and homotopy group. Prerequisite: Mathematics 230A or consent of instructor.

260A-B-C Functional Analysis (4-4-4). Lecture, three hours. Normed linear spaces, Hilbert spaces, Banach spaces, Stone-Weierstrass Theorem, locally convex spaces, bounded operators on Banach and Hilbert spaces, the Gelfand-Neumark Theorem for commutative C^* -algebras, the spectral theorem for bounded self-adjoint operators, unbounded operators on Hilbert spaces. Prerequisites: Mathematics 210A-B-C and 220A-B-C or consent of instructor.

270A-B-C Probability (4-4-4). Lecture, three hours. Probability spaces, distribution and characteristic functions. Strong limit theorems. Limit distributions for sums of independent random variables. Conditional expectation and martingale theory. Stochastic processes. Prerequisites: Mathematics 130A-B-C and 210A-B-C or consent of instructor.

271A-B-C Stochastic Processes (4-4-4). Lecture, three hours. Processes with independent increments, Wiener and Gaussian processes, function space integrals, stationary processes, Markov processes. Prerequisites: Mathematics 210A-B-C or consent of instructor. Mathematics 271A-B-C and Statistics 270 may not both be taken for credit.

272A-B-C Probability Models (4-4-4) F, W, S. Lecture, three hours. Spin systems, Ising models, contact process, exclusion process, percolation, increasing events, critical probabilities, sub- and super-critical phases, scaling theory, oriented percolation, concentration of measure, Gaussian fields, Borell's inequality, chaining, entropy. Prerequisites: Mathematics 271A-B-C or equivalent.

274 Topics in Probability (4-4-4). Lecture, three hours. Selected topics, such as theory of stochastic processes, martingale theory, stochastic integrals, stochastic differential equations. Prerequisites: Mathematics 270A-B-C or consent of instructor. May be repeated for credit as topics vary.

277A-B-C Topics in Mathematical Physics (4-4-4). Lecture, three hours. Topics to be determined by the instructor. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

280A-B-C Mathematical Logic (4-4-4). Lecture, three hours. Basic set theory; models, compactness, and completeness; basic model theory; incompleteness and Gödel's Theorems; basic recursion theory; constructible sets. Prerequisite: consent of instructor.

281A-B-C Set Theory (4-4-4). Lecture, three hours. Ordinals, cardinals, cardinal arithmetic, combinatorial set theory, models of set theory, Gödel's constructible universe, forcing, large cardinals, iterate forcing, inner model theory, fine structure. Prerequisites: Mathematics 280A-B-C or consent of instructor.

282A-B-C Model Theory (4-4-4). Lecture, three hours. Languages, structures, compactness and completeness. Model-theoretic constructions. Omitting types theorems. Morley's theorem. Ranks, forking. Model completeness. O-minimality. Applications to algebra. Prerequisites: Mathematics 280A-B-C.

285A-B-C Topics in Mathematical Logic (4-4-4). Lecture, three hours. Continuation of Mathematics 280A-B-C. Topics to be conducted by the instructor. Prerequisite: Mathematics 280A-B-C or consent of instructor. May be repeated for credit as topics vary.

290A-B-C Methods in Applied Mathematics (4-4-4). Lecture, three hours. Introduction to ODEs and dynamical systems: existence and uniqueness. Equilibria and periodic solutions. Bifurcation theory. Perturbation methods: approximate solution of differential equations. Multiple scales and WKBJ. Matched asymptotic. Calculus of variations: direct methods, Euler-Lagrange equation. Second variation and Legendre condition.

291C Topics in Applied and Computational Mathematics (4) S. Lecture, three hours. Topics to be determined by instructor. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

295A-B-C Partial Differential Equations (4-4-4). Lecture, three hours. Theory and techniques for linear and nonlinear partial differential equations. Local and global theory of partial differential equations: analytic, geometric, and functional analytic methods. Prerequisites: Mathematics 112A-B-C, 210A-B-C or equivalent, or consent of instructor.

296 Topics in Partial Differential Equations (4). Lecture, three hours. Continuation of Mathematics 295A-B-C. Topics to be determined by the instructor. Prerequisites: Mathematics 295A-B-C or consent of instructor. May be repeated for credit as topics vary.

297 Mathematics Colloquium (1). Weekly colloquia on topics of current interest in mathematics. Satisfactory/Unsatisfactory Only. May be repeated for credit.

298A-B-C Seminar (1 to 3) F, W, S. Seminars organized for detailed discussion of research problems of current interest in the Department. The format, content, frequency, and course value are variable. Prerequisite: consent of the Department. May be repeated for credit.

299A-B-C Supervised Reading and Research (1 to 12) F, W, S, Summer. May be repeated for credit.

399 University Teaching (1 to 4) F, W, S. Limited to Teaching Assistants. Does not satisfy any requirements for the Master's degree. Satisfactory/Unsatisfactory Only. May be repeated for credit.

COURSES IN PHYSICAL SCIENCES

(Schedule of Classes designation: Phy Sci)

5 California Teach 1: Introduction to Science and Mathematics Teaching

(3) F, W, S. Seminar, three hours. First in a series for students interested in becoming middle or high school teachers of mathematics or science. Students gain an understanding of effective, research-based teaching strategies. Includes supervised field experience in a K–12 classroom. Same as Biological Sciences 14. *Majors in the Schools of Physical Sciences, Biological Sciences, Information and Computer Sciences, and Engineering have first consideration for enrollment.*

105 California Teach 2: Middle School Science and Mathematics Teaching

(3) F, W. Seminar, three hours. Second in a series for students interested in becoming middle or high school teachers of mathematics or science. Students gain an understanding of effective, research-based teaching strategies for grades 6–8. Includes supervised field experience in a middle school classroom. Prerequisite: Physical Sciences 5. Same as Biological Sciences 101. *Majors in the Schools of Physical Sciences, Biological Sciences, Information and Computer Sciences, and Engineering have first consideration for enrollment.*

106 California Teach 3: High School Science and Mathematics Teaching

(2) W. Seminar, 1.5 hours; field work, 1.5 hours. Capstone of a series of three seminars for students interested in becoming secondary mathematics or science teachers. Meets six times for students to understand effective, research-based teaching strategies. Includes an opportunity to experience teaching in a high school. Prerequisites: Physical Sciences 5 and 105. Same as Biological Sciences 102. *Majors in the Schools of Physical Sciences, Biological Sciences, Information and Computer Sciences, and Engineering have first consideration for enrollment.*

139 Technical Writing and Communication Skills (4) F, W, S. Lecture, three hours. Workshop in writing technical reports, journal articles, proposals. Oral presentations. Communicating with the public. May not be used in satisfaction of any School or departmental requirement. Prerequisites: upper-division standing; satisfaction of the lower-division writing requirement. *School of Physical Sciences majors have first consideration for enrollment.*

DEPARTMENT OF PHYSICS AND ASTRONOMY

4129 Frederick Reines Hall; (949) 824-6911
William H. Parker, **Department Chair**

Faculty

Jason Alicea, Ph.D. University of California, Santa Barbara, *Assistant Professor of Physics* (theoretical condensed matter physics)
Myron Bander, Ph.D. Columbia University, *Professor Emeritus of Physics* (elementary particle theory)
Aaron Barth, Ph.D. University of California, Berkeley, *Associate Professor of Physics* (observational astrophysics)
Elizabeth Barton, Ph.D. Harvard University, *Associate Professor of Physics* (observational cosmology and astrophysics)
Steven Barwick, Ph.D. University of California, Berkeley, *Professor of Physics* (experimental high-energy particle astrophysics)
Gregory A. Benford, Ph.D. University of California, San Diego, *Professor Emeritus of Physics* (plasma physics and astrophysics)
James Bullock, Ph.D. University of California, Santa Cruz, *Professor of Physics and Gary McCue Administrative Term Chair in Cosmology* (theoretical astrophysics and cosmology)
David A. Buote, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Physics* (observational astrophysics and cosmology)
Kieron Burke, Ph.D. University of California, Santa Barbara, *Professor of Chemistry and Physics* (theoretical condensed matter)
David Casper, Ph.D. University of Michigan, *Associate Professor of Physics* (experimental particle physics)
Gary A. Chanan, Ph.D. University of California, Berkeley, *Professor of Physics* (observational astrophysics)
Liu Chen, Ph.D. University of California, Berkeley, *Professor of Physics* (plasma theory)
Mu-Chun Chen, Ph.D. University of Colorado at Boulder, *Associate Professor of Physics* (elementary particle theory)
Alexander (Sasha) Chernyshev, Ph.D. Russian Academy of Sciences, *Professor of Physics* (condensed matter theory)

Philip G. Collins, Ph.D. University of California, Berkeley, *Associate Professor of Physics* (experimental condensed matter physics and biological physics)
Asantha Cooray, Ph.D. University of Chicago, *Professor of Physics* (theoretical astrophysics and cosmology)
Michael B. Dennin, Ph.D. University of California, Santa Barbara, *Professor of Physics* (experimental condensed matter physics and biological physics)
Igor Dzyaloshinskii, Ph.D. Institute for Physical Problems, *Professor Emeritus of Physics* (condensed matter theory)
Jonathan Lee Feng, Ph.D. Stanford University, *Professor of Physics* (elementary particle theory and cosmology)
Zachary Fisk, Ph.D. University of California, San Diego, *UCI Distinguished Professor of Physics* (experimental condensed matter physics)
Enrico Gratton, Ph.D. University of Rome, *Director of the Laboratory for Fluorescence Dynamics and Professor of Biomedical Engineering, Surgery (Beckman Laser Institute), and Physics* (biological physics)
Steven Gross, Ph.D. University of Texas, Austin, *Professor of Developmental and Cell Biology, Biomedical Engineering, and Physics* (experimental biophysics and radiology)
Gultekin Gulsen, Ph.D. Bogazici University, *Associate Professor in Residence, Departments of Radiological Sciences, Physics and Astronomy, and Biomedical Engineering* (medical physics)
Herbert W. Hamber, Ph.D. University of California, Santa Barbara, *Professor of Physics* (elementary particle theory and gravitational physics)
William W. Heidbrink, Ph.D. Princeton University, *Professor of Physics* (experimental plasma physics)
Wilson Ho, Ph.D. University of Pennsylvania, *Donald Bren Professor of Physics and Chemistry* (experimental condensed matter, physics and chemistry)
Herbert Hopster, Ph.D. University of Aachen, *Professor of Physics* (experimental condensed matter physics)
Manoj Kaplinghat, Ph.D. Ohio State University, *Associate Professor of Physics* (theoretical cosmology and astrophysics)
David P. Kirkby, Ph.D. California Institute of Technology, *Professor of Physics* (experimental particle physics and observational cosmology)
Ilya Krivorotov, Ph.D. University of Minnesota, *Assistant Professor of Physics* (experimental condensed matter physics)
Andrew J. Lankford, Ph.D. Yale University, *Professor of Physics* (experimental particle physics)
Jon M. Lawrence, Ph.D. University of Rochester, *Professor Emeritus of Physics* (experimental condensed matter physics)
Zhihong Lin, Ph.D. Princeton University, *Professor of Physics* (plasma theory)
Mark A. Mandelkern, Ph.D. University of California, Berkeley; M.D. University of Miami, *Professor of Physics* (experimental particle physics and medical physics)
Alexei A. Maradudin, Ph.D. University of Bristol, *Professor Emeritus of Physics* (condensed matter theory)
Meinhard E. Mayer, Ph.D. Parhon University, *Professor Emeritus of Physics* (mathematical physics)
Roger D. McWilliams, Ph.D. Princeton University, *Professor of Physics* (experimental plasma physics)
Douglas L. Mills, Ph.D. University of California, Berkeley, *Professor Emeritus of Physics* (condensed matter theory)
William R. Molzon, Ph.D. University of Chicago, *Professor of Physics* (experimental particle physics)
Orhan Nalcioglu, Ph.D. University of Oregon, *Director, John Tu and Thomas Yuen Center for Functional Onco-Imaging and Professor, Departments of Radiological Sciences, Electrical Engineering and Computer Science, and Physics and Astronomy* (radiological sciences and medical physics)
Riley Newman, Ph.D. University of California, Berkeley, *Professor Emeritus of Physics* (experimental particle physics and gravitational physics)
William H. Parker, Ph.D. University of Pennsylvania, *Department Chair and Professor of Physics* (experimental condensed matter physics and low-temperature physics)
Arvind Rajaraman, Ph.D. Stanford University, *Associate Professor of Physics* (elementary particle theory and gravitational physics)
Thorsten Ritz, Ph.D. University of Ulm, *Associate Professor of Physics* (theoretical biophysics and condensed matter theory)
Norman Rostoker, D.Sc. Carnegie Institute of Technology, *Professor Emeritus of Physics* (plasma physics)
James E. Rutledge, Ph.D. University of Illinois, *Professor of Physics* (experimental condensed matter physics and low-temperature physics)
Nathan Rynn, Ph.D. Stanford University, *Professor Emeritus of Physics* (experimental plasma physics)

- Jonas Schultz, Ph.D. Columbia University, *Professor Emeritus of Physics* (experimental particle physics)
- Yuri Shirman, Ph.D. University of California, Santa Cruz, *Associate Professor of Physics* (elementary particle theory)
- Dennis J. Silverman, Ph.D. Stanford University, *Professor Emeritus of Physics* (elementary particle theory)
- Zuzanna Siwy, Ph.D. Silesian University of Technology, *Associate Professor of Physics* (experimental biophysics and condensed matter physics)
- Tammy Smecker-Hane, Ph.D. The Johns Hopkins University, *Associate Professor of Physics* (observational astrophysics)
- Henry W. Sobel, Ph.D. Case Institute of Technology, *Professor of Physics* (experimental particle physics)
- Min-Ying (Lydia) Su, Ph.D. University of California, Irvine, *Professor and Professor in Residence, Departments of Radiological Sciences and of Physics and Astronomy* (radiological sciences and medical physics)
- Peter Taborek, Ph.D. California Institute of Technology, *Director of the Institute for Surface and Interface Science (ISIS) and Professor of Physics* (experimental condensed matter physics and low-temperature physics)
- Anyes Taffard, Ph.D. University of Liverpool, *Assistant Professor of Physics* (experimental particle physics)
- Timothy Tait, Ph.D. Michigan State University, *Assistant Professor of Physics* (theoretical particle physics)
- Virginia L. Trimble, Ph.D. California Institute of Technology, *Professor of Physics* (theoretical astronomy and scientometrics)
- Gerard Van Hoven, Ph.D. Stanford University, *Professor Emeritus of Physics* (plasma physics)
- Richard F. Wallis, Ph.D. Catholic University of America, *Professor Emeritus of Physics* (condensed matter theory)
- Steven White, Ph.D. Cornell University, *Professor of Physics* (condensed matter theory and cosmology)
- Daniel Whiteson, Ph.D. University of California, Berkeley, *Assistant Professor of Physics* (experimental particle physics)
- Ruqian Wu, Ph.D. Institute of Physics, *Professor of Physics* (condensed matter theory)
- Gaurang B. Yodh, Ph.D. University of Chicago, *Professor Emeritus of Physics* (experimental particle astrophysics)
- Clare Yu, Ph.D. Princeton University, *Professor of Physics* (condensed matter theory and theoretical biophysics)

Physics is that branch of science concerned with the study of natural phenomena at the fundamental level. Physicists study the smallest particles of matter (quarks and leptons), nuclei, and atoms; the fundamental forces; the properties of solids, liquids, gases, and plasmas; the behavior of matter on the grand scale in stars and galaxies; and even the origin and fate of the universe. Other disciplines such as chemistry, biology, medicine, and engineering often build upon the foundations laid by physics.

The Department of Physics and Astronomy offers courses for students of various interests, from those in the humanities and social sciences, to those in biological sciences, and to those in physics, engineering, and other sciences. Faculty members are conducting active research in several forefront areas of physical research, and there is student access to specialized research areas such as astrophysics, cosmology, elementary particle, plasma, condensed matter, biological, and medical physics at both advanced and undergraduate course levels. The Department offers several interdisciplinary concentrations and tracks which include courses taught by faculty in Biological Sciences, Chemistry, Engineering, and Medicine. The faculty is vigorous, innovative, and engaged in a wide variety of research, education, and university and public service activities. The Department encourages student-faculty interaction.

Undergraduate Program

The goal of the undergraduate major in Physics is to develop expert problem solvers with a broad understanding of physical principles. The program is flexible and prepares students for careers in industrial research, applications programming, education, law, or business, as well as for graduate study in astronomy, biomedical physics, engineering, or physics. Annual mandatory meetings with faculty advisors assist students in selecting a program that matches their aptitudes and interests. In addition to the core Physics

courses, students complete either a standard track (such as the track for future Ph.D. physicists), or one of the formal concentrations or specializations (in Applied Physics, Biomedical Physics, Computational Physics, Philosophy of Physics, Physics Education, or Astrophysics). In addition, Physics majors may find the minor in Earth and Atmospheric Sciences, offered by the Department of Earth System Science, to be of interest.

The three lower-division sequences in physics are distinguished by their intended audience, their mathematical prerequisites, and the extent to which they offer preparation for more advanced courses. These aspects of the beginning courses are summarized as follows:

Physics 3: *Intended audience:* Premedical students, Biological Sciences majors. *Prerequisites:* concurrent enrollment in Mathematics 2A. *Preparation for advanced courses:* Physics 7D with permission.

Physics 7: *Intended audience:* Physical Sciences and Engineering majors. *Prerequisite:* concurrent enrollment in Mathematics 2. *Preparation for advanced courses:* Physics 51A.

Physics 12-21: *Intended audience:* Nonscience majors. *Prerequisites:* none. *Preparation for advanced courses:* none.

Admission to the Major

Students may be admitted to the Physics major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities. Information about change of major policies is available in the Physical Sciences Student Affairs Office and at <http://www.changeofmajor.uci.edu>. For transfer student admission, preference will be given to junior-level applicants with the highest grades overall, and who have satisfactorily completed the following required courses: one year of approved calculus and one year of calculus-based physics with laboratory for engineering and physics majors.

REQUIREMENTS FOR THE B.S. DEGREE IN PHYSICS

University Requirements: See pages 54–61.

School Requirements: None.

Departmental Requirements

Physics 7C-D-E with laboratory courses 7LC-LD; Mathematics 2A-B, 2D-E, 2J, 3D; Physics 50; Physics 60; Physics 61A-B*; Physics 52A-B-C; Physics 53 (or another programming course); Physics 111A-B, 112A-B, 113A, 115A, 121, and 125A; Physics 194; and five additional coherently related four-unit courses. (The five coherently related courses are normally satisfied by concentrations, specializations, and tracks.)

* For students transferring into the major after taking Physics 51A-B, Physics 51A-B will be accepted in place of Physics 61A-B.

Upper-Division Writing Requirement: Physics majors are required to satisfy the upper-division writing requirement by completing Physics 194 with a grade of C or better, followed by Physics 121 with a grade of C or better.

Concentration in Applied Physics

Requirements: The six additional coherently related courses required for the major must be in engineering and be approved by the Department of Physics and Astronomy.

Concentration in Biomedical Physics

Requirements: Biological Sciences 97, 98, and 99; Chemistry 1A-B-C, 11C-LD, 51A-B (or H52A-B).

Concentration in Computational Physics

Requirements: Three courses in computer science (Information and Computer Science 21, 22, 23), two courses in numerical analysis

plus the accompanying laboratories (Mathematics 105A-B, 105LA-LB), and one advanced computational course (Mathematics 107, 107L).

Concentration in Philosophy of Physics

Requirements: One course selected from Philosophy or Logic and Philosophy of Science 30, 104, 105A-B-C, or Mathematics 150, 151, 152; Philosophy or LPS 31; Philosophy or LPS 140; one course from History 60, 135B, 135C, or an approved alternative elective; Physics 113B; three courses selected from Philosophy or LPS 102, 121, 141A, 141B, 141C, 141D.

Concentration in Physics Education

Requirements: Physics 193; Education 55; Physical Sciences 5 and 105; four courses selected from Biological Sciences 1A (or 93, 94), Chemistry 1A-B-C, Earth System Science 1 (or 25), 7, Physics 20A-B. Physical Sciences 106 is recommended. (With this concentration, a Secondary Teaching Certification option is available; see page 417.)

Specialization in Astrophysics

Requirements: Physics 139; three astrophysics courses selected from Physics 137, 138, 144, 145; and any two upper-division Physics electives.

Honors Program in Physics

The Honors Program in Physics provides an opportunity for selected students majoring in Physics to pursue advanced work in one of the research areas of the Department. Admission to the program is based on an application normally submitted by the sixth week of the spring quarter of the junior year. Applicants must have an overall grade point average of at least 3.4 and a grade point average in physics courses of 3.5 or better. (Exceptions to these procedures and standards may be granted in unusual circumstances.) In selecting students for the program, the Department considers evidence of ability and interest in research.

Students admitted to the program participate in a year-long course, Physics H196A-B-C, which includes two quarters of research and a final quarter in which a written thesis is submitted. If this work and the student's final GPA are deemed of honors quality by the program advisor, the student then graduates with Departmental Honors in Physics.

PLANNING A PROGRAM OF STUDY

Physics 3 is a one-year course suitable for premedical students, students majoring in Biological Sciences, and nonscience majors. It surveys most of the important branches of physics. Laboratory work accompanies the course. Nonscience majors with some mathematical skill may wish to consider Physics 3 as an alternative to Physics 12 through 21.

A student who decides to major in Physics after completing Physics 3 should meet with the Department Undergraduate Advisor for placement information.

Physics 7 is an intensive four-quarter course for students in Physical Sciences and Engineering who are interested in a careful quantitative approach to macroscopic physics. Laboratory work accompanies the course.

Physics courses numbered between 12 and 21 are general education courses intended for nonscience majors. The content and format of Physics 21 may vary from year to year.

The introduction to mathematical methods (Mathematics 2E, 2J, 3D, and Physics 50), microscopic physics (Physics 61A-B), and experimental physics (Physics 52A-B-C) are normally taken in the sophomore year.

Courses numbered 100 and above are for Physics majors and other qualified students. Courses numbered between 111 and 115 emphasize the mathematical and theoretical structures that have unified our understanding of nature. It should be noted that multi-quarter courses such as 111A-B must be taken and passed in sequential order. Any student who is so inclined may take more than the minimum one quarter of advanced laboratory work. Courses numbered between 132 and 149 introduce active subdisciplines in current research. Independent research (195, 196) is strongly encouraged. In Physics 194, students learn the basics of writing about science, proper use of references and background material, presentation of research proposals, and more.

Transfer students are specifically advised to seek individual consultation with the Department Undergraduate Advisor before deciding on a program of courses.

All Physics majors must complete the core courses listed below. By the end of the junior year, each student must also select a concentration or track.

Note that alternatives to Physics major requirements can be approved upon petition to the Department and the Office of the Associate Dean. Furthermore, exceptionally prepared students are allowed to enroll in graduate-level courses; to do so requires the approval of the Department Undergraduate Advisor.

Sample Program — Physics Core Curriculum

FALL	WINTER	SPRING
Freshman Mathematics 2A Physics 7C, 7LC (Physics 99)	Mathematics 2B Physics 7D, 7LD	Mathematics 2D Physics 7E
Sophomore Mathematics 2E Mathematics 2J Physics 52A Physics 60	Mathematics 3D Physics 61A Physics 52B	Physics 50 Physics 61B Physics 52C

Senior Physics 115A	Physics 121 Physics 125A	

For a student planning graduate study in physics, additional courses in advanced physics are strongly recommended.

Sample Program — Physics Graduate School Track

FALL	WINTER	SPRING
Junior Physics 115A or 116		
Senior Physics 113B Physics 115A or 116 Physics Elective	Physics 113C Physics Elective	Physics 115B Physics 125B Physics Elective

Students preparing for graduate school in atmospheric science or physical oceanography should complete the minor in Earth and Atmospheric Sciences.

The **Applied Physics concentration** is designed to provide appropriate education to students who anticipate a career in industrial or technological research. It combines the fundamental knowledge of physical processes obtained from physics courses with the technical knowledge obtained from engineering courses. A student is required to complete six courses in the School of Engineering approved by the Physics and Astronomy Department. Examples of appropriate courses include Engineering EECS70, EECS170A and 170LA, EECS170B and 170LB, EECS170C and 170LC, EECS174, EECS188, MAE120, MAE135, and MAE147. Upon completion of the Applied Physics concentration, the student will receive a B.S. degree in Physics.

Sample Program — Applied Physics Concentration

FALL	WINTER	SPRING
Junior	Engr. EECS70A	Engr. EECS70B, 70LB
Senior	Engr. EECS170A, LA Engr. EECS188	Physics 206

The **Biomedical Physics concentration** is designed for the student who anticipates a career in physics applied to biology and medicine, such as health physics or radiological physics, or who intends to work in a scholarly field which deals with the physical aspects of biology or medicine, such as molecular biology or physiology. Completion of requirements for the Physics major is required as are nine quarters of basic courses in biology and chemistry. Students who wish to follow the Biomedical Physics concentration are advised to seek guidance early in their college careers. The requirements are such that coordination of a program in the second year is essential.

Sample Program — Biomedical Physics Concentration

FALL	WINTER	SPRING
Freshman		
Chemistry 1A	Chemistry 1B	Chemistry 1C, 1LC
Sophomore		
Chemistry 1LD Chemistry 51A	Chemistry 51B	
Junior		
Bio. Sci. 97	Bio. Sci. 98	Bio. Sci. 99

The **Computational Physics concentration** provides training for positions in software development in a wide variety of high-technology fields. For example, consider medical imaging software for magnetic resonance imaging. To write a first-rate program, one must understand the apparatus and analysis techniques (physics), use appropriate numerical techniques (numerical analysis), and employ a convenient object-oriented interface (computer science). The concentration develops this unique set of skills: physical and mathematical insight through the Physics curriculum, knowledge of modern computer programming techniques, and knowledge of numerical analysis.

Sample Program — Computational Physics Concentration

ICS 21	ICS 22	ICS 23
Senior		
Math. 105A, 105LA	Math. 105B, 105LB	Math. 107, 107L

The **Philosophy of Physics concentration** is concerned with the study of the conceptual history of physics, the method of inquiry that has led to our best physical theories, and the structure and interpretation of the theories themselves. Students take courses in deductive and inductive logic, the philosophy and history of physics, and quantum mechanics. The emphasis on careful argument makes this concentration useful for anyone who wishes to pursue a graduate degree in philosophy or law, or for other careers that employ both verbal and quantitative analysis.

The **Physics Education concentration** is for students who plan a career in secondary education. An Education course, four general science courses, a research methods course, and two quarters of classroom experience complete the requirements for the concentration. Students are encouraged to take Physics 191 (outreach).

Secondary Teaching Certification Option: With additional course work and field experience offered through the UCI Cal Teach program, students who complete the concentration in Physics Education can also earn a California Preliminary Single Subject Teaching Credential. Completing the bachelor's degree, concentration, and teacher certification in four years is possible with careful, early planning. Additional courses required for teacher certification are Logic and Philosophy of Science 60; Education 109, 143A, 143B, 148, and two quarters of 158. Successful completion of Education 143A-B and 148 will be accepted in lieu of Physics 125A and 194 for Cal Teach students. For additional information about teacher certification requirements and enrollment procedures, see page 385. Interested students are strongly encouraged to contact the Physical Sciences Student Affairs Office or the Cal Teach Resource and Advising Center.

The **Astrophysics specialization** is primarily taken by two types of students, those planning on going on to graduate school in astronomy or astrophysics and those planning to work in aeronautics or astrophysics-related industries or government research laboratories after receiving their bachelor's degree. It also is an excellent focus for students who anticipate careers in science journalism, teaching, science administration, or public relations. The course work includes one upper-division astrophysics laboratory (139), three of four courses in astrophysics (137, 138, 144, 145), and two or more upper-division Physics courses. Of the Physics electives, students bound for graduate school are strongly advised

to include Physics 113B, 115B, and 125B. Other recommended electives include Physics 116, 132, 134A, 135, and 136.

Graduate Program

The Department offers the M.S. and Ph.D. degrees in Physics. These degrees are awarded in recognition of demonstrated knowledge of the basic facts and theories of physics and of a demonstrated capacity for independent research. Active programs of research are underway in particle physics, nanophysics, biophysics, medical physics, condensed matter physics, low-temperature physics, plasma physics, gravitational physics, astrophysics, and cosmology.

In general, graduate study in the physics Ph.D. program is expected to be a full-time activity. Other proposed arrangements should be approved by the Graduate Committee. The normative time for completion of the Ph.D. is six years of full-time study, and the maximum time permitted is seven years. Students may pursue the M.S. degree on either a full-time or part-time basis.

Complementing the formal courses, the Department offers regular colloquia and informal seminars. Graduate students are members of an intellectual community and are expected to participate fully in departmental activities. Attendance at colloquia is considered an essential part of graduate study. In addition, there are regular weekly research seminars in condensed matter, particle, and plasma physics, and astrophysics.

Sources of support available to graduate students include teaching assistantships, research assistantships, and fellowships. Students planning to pursue graduate work in Physics should visit the Department Web site at <http://www.physics.uci.edu>.

Students admitted into the graduate program in Physics and Astronomy may elect to pursue the M.S. or Ph.D. degree with a concentration in Chemical and Materials Physics, as described in a later section.

MASTER OF SCIENCE IN PHYSICS

The requirements for the M.S. degree are (1) at least three quarters of residence; (2) mastery of graduate course material, which must be demonstrated by passing, with a grade of B or better, a minimum of eight quarter courses including Physics 211, 213A-B, 214A, 215A, 223, and two other courses approved by the graduate advisor, which can include undergraduate upper-division courses in related areas, and (3) either Option A, a research project and written thesis, or, Option B, a comprehensive written examination. Students pursuing Option A typically complete three quarters of research, enrolling in Physics 295 or 296. Students following Option B should take Physics 215B.

(The requirements for the M.S. degree with a concentration in Chemical and Materials Physics differ from these.)

DOCTOR OF PHILOSOPHY IN PHYSICS

The principal requirements for the Ph.D. degree are a minimum of six quarters of residence, passage of a written and an oral examination, and successful completion and defense of a dissertation reporting results of original research. In addition, the Ph.D. candidate must complete certain graduate course requirements. There is no foreign language requirement.

Course Requirements. Students are required to exhibit mastery of the basic sequences—Classical Mechanics, Electromagnetic Theory, Quantum Mechanics, Mathematical Physics, and Statistical Physics. A minimum of 12 quarter courses including 211, 212A, 213A-B, 214A, 215A-B, 223, at least two other courses numbered between 200 and 259, and two other courses approved by the graduate advisor, must be passed with a grade of B or better. Students are strongly encouraged to take Physics 211, 212A, 213A-B, 214A, 215A-B, and 223 in their first year of study. It is expected that students, having selected a research specialty, will ordinarily take the core courses in that subject in their second year of study. Students pursuing research in elementary particle physics ordinarily complete Physics 215C during their first year and Physics 234A-B-C and 235A-B during their second year. Students pursuing research in plasma physics ordinarily complete Physics 239A during their first year and Physics 239B-C-D their second year; Physics 249 is also recommended. Students pursuing research in condensed-matter physics ordinarily take Physics 238A-B-C during their second year; Physics 133 should be taken in the first year by those students who have not had an equivalent course. Students pursuing research in astrophysics/cosmology ordinarily complete Physics 240A during spring of their first year; 240B, C in their second year; and one or more of Physics 241B, C, D in their second or subsequent years. Students interested in medical imaging should take Physics 233 in the second year. Students pursuing research in biological physics should take Physics 230A-B in the second year. Students who have earned grades of B or better in equivalent graduate-level courses prior to entering UCI may be exempted from required courses by the graduate advisor. Equivalency will be determined by the instructor of each course for which an exemption is sought.

NOTE: The requirements for the Ph.D. degree with a concentration in Chemical and Materials Physics (ChaMP) differ from these and are outlined in a later section.

Comprehensive Examination. Progress toward the degree is assessed by a written comprehensive examination covering a broad range of fundamentals of physics at the graduate and advanced undergraduate levels. It is offered twice a year, and a student is allowed a maximum of three attempts. The first attempt must occur before the end of the fall quarter of the student's second year, and the examination must be passed by the end of spring quarter of the student's second year.

Advancement to Ph.D. Candidacy. For advancement to Ph.D. candidacy, a student must pass an oral advancement examination. It is typically taken within one year of successful completion of the comprehensive examination. To satisfy normative progress toward the degree, it must be taken by the end of the student's third year. The candidacy committee that administers this examination will contain one or two faculty members from outside the Department. This oral examination will cover material principally related to the broad and general features of the student's dissertation area.

Teaching Program. Experience in teaching is an integral part of the graduate program, and all Ph.D. students are required to participate in the teaching program for at least three quarters during their graduate careers. All new teaching assistants are required to enroll in Physics 269 and must pass in order to be allowed to TA in future quarters. Students are required to enroll in Physics 399 while serving as a TA. Lab TAs are required to enroll in Physics 395 as well as 399.

Students who are not citizens from countries where English is either the primary or dominant language as approved by the UCI Graduate Council must pass either the Test of Spoken English (TSE) or the UCI SPEAK (Speaking Proficiency English Assessment Kit) examination. One of these tests must be passed before

such a student can qualify for a teaching assistantship in order to fulfill the Department's teaching requirement. The Department expects one of these tests to be passed by the end of the student's second year at UCI.

Dissertation. A dissertation summarizing the results of original research performed by the student under the supervision of a doctoral committee, appointed by the Department Chair on behalf of the Dean of the Graduate Division and the Graduate Council, will be required for the Ph.D. degree. A criterion for the acceptability of a dissertation by the Department is that it be suitable for publication in a scientific journal. The dissertation must not have been submitted to any other institution prior to its submission to the UCI Physics and Astronomy Department.

Defense of Dissertation. Upon completion of the dissertation, the student will take an oral examination, open to the public, before the doctoral committee.

CONCENTRATION IN CHEMICAL AND MATERIALS PHYSICS

This is an interdisciplinary program between condensed matter physics and physical chemistry, which is designed to eliminate the barrier between these two disciplines. Students with B.S. degrees in Physics, Chemistry, or Materials Science and Engineering, are encouraged to apply to the program. The goal of the concentration in Chemical and Materials Physics (ChaMP) is to provide students with a broad interdisciplinary education in the applied physical sciences that emphasizes modern laboratory and computational skills. The program accepts students for both the M.S. and the Ph.D. degrees. Upon admission to the program, students are assigned two faculty advisors, one from the Department of Physics and Astronomy, and one from the Department of Chemistry, to provide guidance on curriculum and career planning.

The curriculum for the M.S. program includes a summer session to assimilate students with different undergraduate backgrounds; formal shop, laboratory, and computational courses; a sequence on current topics to bridge the gap between fundamental principles and applied technology; and a course to develop communication skills. The required courses include thirteen core courses and three electives (subject to advisor approval) as follows: **Core:** Physics 206, 207, 228, 229A, 266; Physics 273 or Chemistry 273; Chemistry 231A or Physics 215A; Chemistry 231B or Physics 215B; Chemistry 231C, 232A-B; one course from each of the following two groups: Physics 211 or 222; Physics 133 or 238A or Chemistry 236. **Electives:** Physics 134A, 213C, 223, 229B, 233A, 233B, 238A, 238B, 238C, Chemistry 213, 225, 226, 232C, 233, 243, 248, 249, Engineering EECS285B, MSE259A. In addition to the required courses, M.S. students complete a master's thesis. Students are required to advance to candidacy for the master's degree at least one quarter prior to filing the master's thesis. There is no examination associated with this advancement, but the thesis committee needs to be selected and appropriate forms need to be filed. The M.S. program prepares students to compete for high-tech jobs or to begin research toward a Ph.D. degree.

Successful completion of the M.S. degree requirements qualifies students for the Ph.D. program. Progress toward the Ph.D. degree is assessed by a written comprehensive examination administered in the summer after completion of the first year of study. This examination covers comprehensive knowledge acquired in course work, and the content of the examination depends upon the student's specific area of interest.

Participants in the Ph.D. program take an examination for formal advancement to candidacy. It is typically taken within one year of successful completion of the comprehensive examination. To satisfy normative progress toward the degree, it must be taken by the

end of the student's third year. The examination is comprised of two parts: (a) a written report on a topic to be determined in consultation with the research advisor and (b) an oral report on research accomplished and plans for completion of the Ph.D. dissertation.

Courses in Physics

(*Schedule of Classes designation: Physics*)

LOWER-DIVISION

NOTE: The Department of Physics and Astronomy strictly enforces all course prerequisites. Courses with sequential designations (for example, 1A-B-C) indicate multiple-quarter courses; *each course in a sequence is prerequisite to the one following.*

2 Introduction to Mathematical Methods for Physics (4) F, W, S. Lecture, two hours; discussion, two hours; tutorial, two hours. Provides the applied mathematics and problem solving/presentation skills necessary for success in an introductory physics sequence. Focuses on practical exercises in problem solving. Covers kinematics in one and two dimensions in detail. Additional topics include vectors, differentiation, and integration. Corequisite: Mathematics 2A. Prerequisite: Mathematics 1B.

3A-B-C Basic Physics (4-4-4) F, W, S, Summer. Lecture, three hours; discussion, one hour. **3A:** Vectors; motion, force, and energy. **3B:** Fluids; heat; electricity and magnetism. **3C:** Waves and sound; optics; quantum ideas; atomic and nuclear physics; relativity. Prerequisite or corequisite: Mathematics 2A-B. (II)

3LB Basic Physics Laboratory (1.5) W, S, Summer. Laboratory, three hours. Practical applications of electronics and classical physics to biology. Goals include skill to use oscilloscope and other basic instrumentation.

3LC Basic Physics Laboratory (1.5) S, Summer, F. Laboratory, three hours. Practical applications of physics to medical imaging. Topics include optics, radioactivity, and acoustics. Prerequisite: Physics 3LB.

7C Classical Physics (4) F, W, S, Summer. Lecture, three hours; discussion, one hour. Topics include force; energy; momentum; rotation and gravity. Corequisites: Physics 7LC, Mathematics 2B. Prerequisites: Mathematics 2A and one of the following: grade of C or better in Physics 2, or a passing score on the UCI Physics Placement Exam, or a 4 or better on the Physics AP Exam C, Part I or II, or Mathematics 2D/H2D and Chemistry 1C. Physics 7C may not be taken for credit after Physics 7A and 7B. *Physics majors have first consideration for enrollment in one section of this course.* (II)

7D Classical Physics (4) W, S, Summer. Lecture, three hours; discussion, one hour. Electricity and magnetism. Corequisites: Physics 7LD; Mathematics 2D. Prerequisites: Physics 7C or 7B; Mathematics 2B. *Physics majors have first consideration for enrollment in one section of this course.* (II)

7LC Classical Physics Laboratory (1) W. Laboratory, two hours. Experiments related to lecture topics in Physics 7C. Corequisite: Physics 7C. Physics 7LC and 7LA-LB may not both be taken for credit. *Physics majors have first consideration for enrollment in one section of this course.*

7LD Classical Physics Laboratory (1) S. Laboratory, two hours. Electricity and magnetism. Corequisite: Physics 7D. *Physics majors have first consideration for enrollment in one section of this course.*

7E Classical Physics (4) F, S, Summer. Lecture, three hours; discussion one hour. Fluids; oscillations; waves; and optics. Prerequisites: Physics 7B or 7C; Mathematics 2B. *Physics majors have first consideration for enrollment in one section of this course.* (II)

COURSES FOR NONMAJORS

Course numbers between 12 and 21 are assigned to courses especially designed for students majoring in programs other than the physical sciences.

12 Science Fiction and Science Fact (4). Lecture, three hours; discussion one hour. An introduction to fundamental physics principles, the scientific process, and the mathematical language of science, used to analyze topics drawn from superheroes, science fiction works, and current science news to distinguish science fiction and science fact. (II)

14 Physics of Energy and the Environment (4). Lecture, three hours. The physics of society's energy production and consumption, and of their influences on the environment. Topics include fossil and renewable energy resources; nuclear power; prospects for a hydrogen economy; efficient and environmentally benign transportation; efficient home and commercial energy usage. (II)

15 Physics of Music (4). Lecture, three hours. Introduces basic physical principles underlying generation and properties of music, including basic properties of sound waves, musical scales and temperament, musical instruments, and acoustics of music halls. No mathematics background required, but high school algebra is recommended. (II)

16 Physics of Weapons and Their Control (4). Lecture, three hours. Introduction to physics related to issues of peace and conflict. Topics include: nuclear and non-nuclear weapons, delivery systems, missile defense systems, satellite surveillance systems, technology for homeland security, and arms control. Same as International Studies 16. (II)

17 Physics of Athletics (4). Lecture, three hours. Introduces basic physical principles behind motion. Examples are drawn from a range of athletic endeavors (such as ice skating, baseball, diving, and dance). No mathematics background required, but high school algebra is recommended. (II)

18 How Things Work (4) S. Lecture, three hours. Survey of the physical basis of modern technology, with an emphasis on electronics and materials. Topics include power generation and distribution, communication (radio, TV, telephone, computers, tape recorders, CD players), imaging (optics, x-rays, MRI), and modern materials (alloys, semiconductors, superconductors, polymers, ceramics, liquid crystals). (II)

19 Great Ideas of Physics (4). Lecture, three hours. Introduces nonscience majors to physics, examining important breakthroughs and controversies. Potential topics: Einstein's Relativity; Heisenberg's Uncertainty Principle; black holes; extra-dimensions; antimatter. Case studies illustrate the essential nature of scientific review and independent confirmation of results. No mathematics background required. (II)

20 Physical Science of the Earth and Cosmos. Introduction to the physical environment. The formation, structure, and evolution of the Earth, planets, stars, galaxies, and the universe as a whole.

20A Introduction to Astronomy (4) F, S. History of astronomy. Underlying physics. Objects in the solar system and how they are studied. Properties of stars: their formation, structure, and evolution. Pulsars and black holes. Galaxies and quasars. (II)

20B Cosmology: Man's Place in the Universe (4) W. "Cook's Tour" of the universe. Ancient world models. Evidence for universal expansion; the size and age of the universe and how it all began. The long-range future and how to decide the right model. Anthropic principle. (II)

20C Observational Astronomy (4). Lecture, three hours; discussion, one hour. Fundamental observational techniques used in astronomy, including the analysis and interpretation of images and spectra that allow students to determine orbits of planets and moon, time evolution of supernovae, ages of star clusters, Hubble's Law. Naked-eye observations of the night sky. Observations of stars and galaxies with the UCI 24-inch telescope. Current events in observational astronomy. Prerequisites: Physics 20A, 20B. (II)

20D Space Science (4) S. Motions of planets, satellites, and rockets. Propulsion mechanisms and space flight. The solar radiation field and its influence on planets. The interplanetary medium, solar wind, and solar-terrestrial relations. (II)

21 Special Topics in Physics (4). Lecture, three hours. Topics vary. Past topics have included physics and music, Newton, planetary science. Lectures on areas of special interest in physics are used to introduce students to scientific method, fundamental laws of science, qualitative and quantitative analysis of data. May be repeated for credit as topics vary. (II)

ADVANCED LOWER-DIVISION

50 Mathematical Methods for Physical Science (4) S. Lecture, three hours; discussion, one hour. Mathematica and its applications to linear algebra, differential equations, and complex functions. Fourier series and Fourier transforms. Other topics in integral transforms. Corequisite: Mathematics 2E. Prerequisites: Mathematics 2J and 3D.

51A-B Modern Physics (4-4) W, S. Lecture, three hours; discussion, one hour. **51A:** Wave-particle duality; quantum mechanics; special relativity; statistical mechanics. Prerequisites: Physics 7E and Mathematics 2D. **51B:** Atoms; molecules; solids, nuclei; elementary particles. Physics 51A-B is for nonmajors only. Corresponding segments of Physics 51A-B and 61A-B may not both be taken for credit.

52A-B-C Fundamentals of Experimental Physics (2-2-2) F, W, S. Laboratory, four hours. **52A:** Optics: lenses, mirrors, polarization, lasers, optical fibers, interference, spectra. Corequisite: Physics 7E. **52B:** Circuits: oscilloscope, meters, DC and AC circuits. Corequisite: Mathematics 2J. Prerequisite: Physics 7D. **52C:** Data analysis: random and systematic errors, curve fitting; nuclear counting; quantum experiments. Prerequisite: Physics 51A or 61A. *Physics majors have first consideration for enrollment in one section of this course.*

53 Introduction to C and Numerical Analysis (4) S. Introduction to structured programming; in-depth training in C. Elementary numerical methods applied to physics problems. Prerequisites: Mathematics 2J and 3D.

60 Thermal Physics (4) F. Lecture, three hours; discussion, one hour. Introduction to thermodynamics and systems of many particles. Topics include first and second laws of thermodynamics, ideal gas laws, kinetic theory, heat engines and refrigerators, thermodynamic potentials, phase transitions, dilute solutions, chemical equilibrium, and basic statistical distributions. Prerequisites: Physics 7E and Mathematics 2D. *Open only to Physics majors.*

61A-B Modern Physics for Majors (4-4) W, S. Lecture, three hours; discussion, one hour. **61A:** Special relativity; wave-particle duality; Schrödinger equation; angular momentum. Prerequisites: Physics 7E and Mathematics 2D. **61B:** Atomic transitions; molecules; statistical physics; solids; nuclei; elementary particles; cosmological models. Corresponding segments of Physics 61A-B and 51A-B may not both be taken for credit. *Open only to Physics majors.*

H90 The Idiom and Practice of Science (4) W. Lecture, three hours; discussion, two hours. A series of fundamental and applied scientific problems of social relevance. Possible topics include Newton's Laws, calculus, earthquake physics, and radiation. Open only to members of the Campuswide Honors Program. (II)

99 General Physics Seminar (1) F, W, S. Designed to introduce undergraduate students to current topics in physics. Focus is discussion of selected readings on current research issues. May be repeated for credit.

UPPER-DIVISION

100 Computational Methods (4) F. Lecture, three hours; laboratory, six hours. Mathematical and numerical analysis using Mathematica and C programming, as applied to problems in physical science. Prerequisite: consent of instructor. Concurrent with Physics 229A.

106 Laboratory Skills (4 to 6). Lecture, three hours; laboratory, six to ten hours. Introduces students to a variety of practical laboratory techniques, including lock-in, boxcar, coincidence counting, noise filtering, PID control, properties of common transducers, computer interfacing to instruments, vacuum technology, laboratory safety, basic mechanical design, and shop skills. Prerequisite: consent of instructor. Concurrent with Physics 206 and Chemistry 206.

111A-B Classical Mechanics (4-4) F, W. Lecture, three hours; discussion, one hour. One dimensional motion and oscillations; three-dimensional motion, non-inertial coordinates, conservation laws, and Lagrangian and Hamiltonian dynamics; rigid body motion and relativity. Prerequisites: Physics 7E and 50; Mathematics 2J and 3D.

112A-B Electromagnetic Theory (4-4) W, S. Lecture, three hours; discussion, one hour. Electric, magnetic, and gravitational fields and potentials; electrodynamics; mechanical and electromagnetic waves and radiation. Prerequisites: Physics 7D and 50; Mathematics 2E.

113A-B-C Quantum Physics (4-4-4) S, F, W. Lecture, three hours; discussion, one hour. Inadequacy of classical physics; time independent and time dependent Schrodinger equation; systems in one, two, and three dimensions; matrices; Hermitian operators; symmetries; angular momentum; perturbation theory; scattering theory; applications to atomic structure; emphasis on phenomenology. Prerequisites: Physics 61A, 111B, and 112A.

115A Statistical Physics (4) F. Lecture, three hours. Microscopic theory of temperature, heat, and entropy; kinetic theory; multicomponent systems; quantum statistics. Prerequisites: Physics 60 and 61B.

115B Thermodynamics (4) S. Lecture, three hours. Macroscopic theory of temperature, heat, and entropy; mathematical relationships of thermodynamics; heat engines; phase transitions. Prerequisite: Physics 115A.

116 Relativity and Black Holes (4) F. Lecture, three hours; discussion, one hour. Introduces students to both special and general relativity; includes the formalism of four-vectors, equivalence principle, curved space-time, and modern issues with black holes. Prerequisite: Physics 61B.

120 Electronics for Scientists (4) F. Lecture, two hours; laboratory, four hours. Applications of modern semiconductor devices to physical instrumentation. Characteristics of semiconductor devices, integrated circuits, analog and digital circuits. Prerequisite: Physics 52B or consent of instructor. Concurrent with Physics 220.

121 Advanced Laboratory (4) W, S. Lecture, one hour; laboratory, eight hours. Experiments in atomic, condensed matter, nuclear, particle, and plasma physics. Introduction to instrumentation and a first experience in the research laboratory. Prerequisites: Physics 51B or 61B, 52C, 194, and satisfactory completion of the lower-division writing requirement. May be taken for credit three times. *Open only to Physics majors.*

125A-B Mathematical Physics (4-4) W, S. Lecture, three hours; discussion, one hour. Complex variables; Legendre and Bessel functions; complete sets of orthogonal functions; partial differential equations; integral equations; calculus of variations; coordinate transformations; special functions and series. Prerequisite: Physics 113A.

CAPSTONE SEMINARS

NOTE: Some of the upper-division courses listed below have one or two hours of discussion weekly in addition to the lectures. Students should refer to the *Schedule of Classes* (available at <http://www.reg.uci.edu>) for information.

133 Introduction to Condensed Matter Physics (4) S. Lecture, three hours. Phenomena of solids and their interpretation in terms of quantum theory. Prerequisites: Physics 113B and 115A.

134A Physical and Geometrical Optics (4) W. Lecture, three hours; discussion, one hour. Focuses on the practical aspects of optics and optical engineering, starting at the fundamentals. Topics include geometrical optics, ray tracing, polarization optics, interferometers, and diffractive optics. Corequisite: Physics 112B. Prerequisite: Physics 112A. Concurrent with Chemistry 242A.

135 Introduction to Plasma Physics (4) F. Lecture, three hours. Ionization and discharge mechanisms; microscopic motions and kinetic equations; macroscopic fluid theories; electrodynamics of plasma; waves and instabilities; examples of laboratory and cosmic phenomena. Prerequisite: Physics 112B.

136 Introduction to Particle Physics (4) W. Lecture, three hours. Experimental techniques and theoretical concepts of high-energy phenomena: accelerators and detectors; classification of particles and interactions; particle properties; symmetries and mass multiplets; production and decay mechanisms. Prerequisite: Physics 113B.

137 Introduction to Cosmology (4) W. Lecture, three hours; discussion, one hour. Solution of the differential equations governing the expansion of the Universe. Observational determinations of the parameters governing the expansion. Big Bang inflation, primordial nucleosynthesis, and cosmic microwave background. Dark matter, dark energy, and large-scale structure of the Universe. Prerequisites: Physics 111A, Mathematics 3D.

138 Extragalactic Astrophysics (4) W. Lecture, three hours; discussion, one hour. Introduction to the solar neighborhood, Milky Way, and other galaxies. Interstellar medium. Star formation. Stellar populations. Evolution of spiral, elliptical, and irregular galaxies. Supermassive black holes, quasars, and active galaxies. Galaxies as probes of the expansion rate of the Universe. Prerequisites: Physics 111A-B.

139 Observational Astrophysics (4) F. Lecture, one hour; laboratory, eight hours. Telescopes and astronomical observations, imaging with CCD detectors and image processing techniques. Photometry and spectroscopy of stars, galaxies, and quasars. Advanced imaging techniques such as deconvolution, adaptive optics, and interferometry. Prerequisites: Physics 52A-B-C; Physics 53 or equivalent computing experience.

144 Stellar Astrophysics (4) S of odd years. Lecture, three hours. Stars: their structure and evolution; physical state of the interior; the Hertzsprung-Russell diagram, stellar classification, and physical principles responsible for the classification; star formation; nuclear burning; giant and dwarf stars; neutron stars and black holes. Prerequisites: Physics 51B or 61B, 111A, and 112A.

145 High-Energy Astrophysics (4) S of even years. Lecture, three hours. Production of radiation by high-energy particles, white dwarfs, neutron stars, and black holes. Evolution of galactic nuclei, radio galaxies, quasars, and pulsars. Cosmic rays and the cosmic background radiation. Prerequisites: Physics 51B or 61B, 111A, and 112A.

146A-B Biophysics of Molecules and Molecular Machines (4-4) F, W. Lecture, three hours. Physical concepts and experimental and computational techniques used to study the structure and function of biological molecules and molecular machines with examples from enzyme action, protein folding, molecular motors, photobiology, chemotaxis, and vision. Prerequisite: Physics 115A or consent of instructor. Concurrent with Physics 230A-B.

147A-B-C The Physics of Medical Imaging. Lecture, three hours.

147A Principles of Imaging (4) F. Linear systems, probability and random processes, image processing, projection imaging, tomographic imaging. Prerequisite: Physics 51B or 61B or equivalent. Concurrent with Physics 233A and Engineering EECS202A.

147B Techniques in Medical Imaging I: X-ray, Nuclear, and NMR Imaging (4) W. Ionizing radiation, planar and tomographic radiographic and nuclear imaging, magnetism, NMR, MRI imaging. Prerequisite: Physics 147A. Concurrent with Physics 233B and Engineering EECS202B.

147C Techniques in Medical Imaging II: Ultrasound, Electrophysiological, Optical (4) S. Sound and ultrasound, ultrasonic imaging, physiological electromagnetism, EEG, MEG, ECG, MCG, optical properties of tissues, fluorescence and bioluminescence, MR impedance imaging, MR spectroscopy, electron spin resonance and ESR imaging. Prerequisite: Physics 147B. Concurrent with Physics 233C and Engineering EECS202C.

150 Special Topics in Physics and Astronomy (4) F, W, S. Lecture, three hours; discussion, one hour. Current topics in physics. Includes topics from nano-science, biological sciences, astrophysics, and the common use of estimation across subdisciplines within physics. May be repeated for credit as topics vary.

EDUCATION

191 Field Experience in Physics Education (1 to 4) F, W, S. Students develop and perform physics assemblies at neighboring public schools. Prerequisites: Physics 7C-D-E. Pass/Not Pass only. May be taken for a total of eight units.

192 Tutoring in Physics (1 to 2). Enrollment limited to students participating in the Society of Physics Students (SPS) tutoring program. This course satisfies no requirements other than contribution to the 180 units required for graduation. No more than 12 units may be counted toward the 180 units required. Prerequisite: Physics 7E or consent of instructor.

193 Research Methods (4) W, S. Lecture, three hours; laboratory, two hours. Explores tools of inquiry for developing and implementing science research projects. Students undertake independent projects requiring data collection, analysis, and modeling, and the organization and presentation of results. Additional topics include ethical issues and role of scientific literature. Prerequisite: Biological Sciences 14 or Physical Sciences 5. Same as Chemistry 193 and Biological Sciences 108.

RESEARCH

194 Research Communication for Physics Majors (2) F. Lecture, two hours. Students learn the fundamentals of communicating about research. Topics include preparing abstracts, proposals, and literature reviews. Provides preparation for presentation of independent research projects in Physics 121 and 196. Prerequisites: Physics 61B and satisfactory completion of the lower-division writing requirement. *Open only to Physics majors.*

195 Undergraduate Research (4). Open to juniors and occasionally to sophomores with consent of the Department. Pass/Not Pass only. May be repeated for credit as topics vary. *Open only to Physics majors.*

NOTE: Seniors interested in research should take Physics 196A-B-C; see the next page.

196A-B-C Thesis in Physics (2-4-4) F, W, S. Independent research for seniors conducted under the guidance of a faculty member. Students' research results are discussed in oral presentations, and a written proposal, progress report, and thesis are submitted. Corequisite: Physics 194. Prerequisite for 196C: satisfactory completion of the lower-division writing requirement. *Open only to Physics majors.* Physics 196A-B-C and H196A-B-C may not both be taken for credit.

H196A-B-C Honors Thesis in Physics (2-4-4) F, W, S. Independent research for seniors conducted under the guidance of a faculty member. Students' research results are discussed in oral presentations, and a written proposal, progress report, and thesis are submitted. Corequisite: Physics 194. Prerequisite for H196C: satisfactory completion of the lower-division writing requirement. *Open only to participants in the Honors Program in Physics and to Physics majors participating in the Campuswide Honors Program.* Physics H196A-B-C and 196A-B-C may not both be taken for credit.

199 Readings on Special Topics (1 to 4). Prerequisite: consent of the Department. Pass/Not Pass Only. May be repeated for credit.

GRADUATE

206 Laboratory Skills (4 to 6) S, Summer. Lecture, three hours; laboratory, six to ten hours. Introduces students to a variety of practical laboratory techniques, including lock-in, boxcar, coincidence counting, noise filtering, PID control, properties of common transducers, computer interfacing to instruments, vacuum technology, laboratory safety, basic mechanical design, and shop skills. Prerequisite: consent of instructor. Same as Chemistry 206. Concurrent with Physics 106.

207 Chemistry for Physicists (4). Lecture, three hours; discussion, one hour. Introduction to fundamental concepts in molecular structure and reactivity: theory of bonding, valence and molecular orbitals; structure and reactivity in inorganic chemistry; elements in molecular group theory; nomenclature in organic chemistry; and survey of macromolecules. Same as Chemistry 207.

208 Mathematics for Chemists (4). Lecture, three hours; discussion, one hour. Applications of mathematics to physical and chemical problems. Calculus of special functions, complex variables and vectors; linear vector spaces and eigenvalue problems. Differential equations. Same as Chemistry 208.

211 Classical Mechanics (4) F. Lecture, three hours. Variational principles, Lagrange's equations; applications to two body problems, small oscillation theory, and other phenomena. Hamilton's equations. Hamilton-Jacobi theory. Canonical transformations.

212A-B Mathematical Physics (4-4) F, S. Lecture, three hours. **212A:** Complex variables and integration; ordinary and partial differential equations; the eigenvalue problem. **212B:** Integral transforms; integral equations; probability and statistics; tensor analysis.

213A-B Electromagnetic Theory (4-4) W, S. Lecture, three hours. Electrostatics; magnetostatics; relativity; classical electron theory; fields in vacuum and matter; retardation; radiation and absorption; dispersion; propagation of light; diffraction; geometric optics; theories of the electric and magnetic properties of materials; scattering.

213C Modern Optics (4). Lecture, three hours. Modern optics, linear and non-linear. Waves in dispersive media, weak non-linearities, higher order interactions, light scattering, strong non-linearities, laser radiation. Prerequisites: Physics 213A-B.

214A-B Statistical Physics (4-4) F, W. Lecture, three hours. **214A:** Maxwell-Boltzmann, Bose-Einstein, Fermi-Dirac statistics; ideal and imperfect gases; thermodynamic properties of solids; transport theory. **214B:** Phase transitions; critical phenomena; cooperative phenomena; fluctuations.

214C Many Body Theory (4). Application of field theory methods, perturbative and non-perturbative, to many particle systems; second quantization, Feynman diagrams, linear response theory, and functional integral methods applied to the ground state and at finite temperature. Prerequisites: Physics 214A and 215A-B.

215A-B-C Quantum Mechanics (4-4-4) F, W, S. Lecture, three hours. **215A:** Foundations; Dirac notation; basic operators and their eigenstates; perturbation theory; spin. **215B:** Atomic physics; scattering theory, formal collision theory; semi-classical radiation theory; many body systems. **215C:** Quantization of the electromagnetic field; relativistic quantum mechanics; second quantization.

220 Electronics for Scientists (4) F. Lecture, two hours; laboratory, four hours. Applications of modern semiconductor devices to physical instrumentation. Characteristics of semiconductor devices, integrated circuits, analog and digital circuits. Prerequisite: graduate standing. Concurrent with Physics 120.

222 Continuum Mechanics (4) F. Introduction to the continuum limit and stress and strain tensors. Hydrodynamics of perfect fluids; two-dimensional problems, motion of incompressible viscous fluids, Navier-Stokes equations. Basic elasticity theory. Description of viscoelastic materials. Introduction to nonlinear behavior instabilities.

223 Numerical Methods (4) S. Lecture, three hours; laboratory, one hour. Introduction to theory and practice of modern numerical methods. Techniques are drawn from topics such as solution of differential equations, Monte Carlo methods, Fast Fourier transforms, and evaluation of special functions.

228 Electromagnetism (4) W. Lecture, three hours; discussion, one hour. Maxwell's equations, electrodynamics, electromagnetic waves and radiation, wave propagation in media, interference and quantum optics, coherent and incoherent radiation, with practical applications in interferometry, lasers, waveguides, and optical instrumentation. Prerequisite: consent of instructor. Same as Chemistry 228.

229A-B Computational Methods (4-4). Lecture, three hours; laboratory, six hours. Mathematical and numerical analysis using Mathematica and C programming, as applied to problems in physical science. Prerequisite: consent of instructor. Same as Chemistry 229A-B. Physics 229A is concurrent with Physics 100.

230A-B Biophysics of Molecules and Molecular Machines (4-4) F, W. Lecture, three hours. Physical concepts and experimental and computational techniques used to study the structure and function of biological molecules and molecular machines with examples from enzyme action, protein folding, molecular motors, photobiology, chemotaxis, and vision. Concurrent with Physics 146A-B.

231 Special Topics in Computational Physics (4). Lecture, three hours. Modern symbolic and numerical techniques on state-of-the-art computers for solving problems in classical and quantum mechanics, fluids, electromagnetism, and mathematical physics. May be repeated for credit as topic varies.

233A-B-C The Physics of Medical Imaging. Lecture, three hours.

233A Principles of Imaging (4) F. Linear systems, probability and random processes, image processing, projection imaging, tomographic imaging. Prerequisite: Physics 51B or 61B or equivalent. Same as Engineering EECS202A. Concurrent with Physics 147A.

233B Techniques in Medical Imaging I: X-ray, Nuclear, and NMR Imaging (4) W. Ionizing radiation, planar and tomographic radiographic and nuclear imaging, magnetism, NMR, MRI imaging. Prerequisite: Physics 233A. Same as Engineering EECS202B. Concurrent with Physics 147B.

233C Techniques in Medical Imaging II: Ultrasound, Electrophysiological, Optical (4) S. Sound and ultrasound, ultrasonic imaging, physiological electromagnetism, EEG, MEG, ECG, MCG, optical properties of tissues, fluorescence and bioluminescence, MR impedance imaging, MR spectroscopy, electron spin resonance and ESR imaging. Prerequisite: Physics 233B. Same as Engineering EECS202C. Concurrent with Physics 147C.

234A Elementary Particle Physics (4) F. Lecture, three hours. Overview of Standard Model theory and phenomenology. Electromagnetic, strong and weak forces, quark model, interactions with matter, particle detectors and accelerators. Prerequisite: Physics 215C or consent of instructor.

234B-C Advanced Elementary Particle Physics (4-4) W, S. Lecture, three hours. $SU(3) \times SU(2) \times U(1)$ model of strong, weak, and electromagnetic interactions. K-meson system and CP violation, neutrino masses and mixing, grand-unified theories, supersymmetry, introduction to cosmology and its connection to particle physics. Prerequisites: Physics 234A and 235A.

235A Quantum Field Theory (4) F. Lecture, three hours. Canonical quantization, scalar field theory, Feynman diagrams, tree-level quantum electrodynamics. Prerequisites: Physics 215C and completion of first-year graduate courses.

235B Advanced Quantum Field Theory (4) W. Lecture, three hours. Path-integral techniques, loop diagrams, regularization and renormalization, anomalies. Prerequisites: Physics 235A and completion of first-year graduate courses.

238A-B-C Condensed Matter Physics (4-4-4) F, W, S. Lecture, three hours. Bonding in solids; crystal symmetry and group theory, elastic properties of crystals; lattice vibrations, interaction of radiation with matter; cohesion of solids; the electron gas; electron energy bands in solids; ferromagnetism; transport theory; semiconductors and superconductors; many-body perturbation theory. Prerequisites: Physics 133 and Physics 214A or Chemistry 232A; Physics 215B or Chemistry 231B; consent of instructor.

239A-B-C-D Plasma Physics (4-4-4-4) S, F, W, S. Lecture, three hours. **239A:** Basic concepts, orbits, kinetic and fluid equations, Coulomb collisions, fluctuations, scattering, radiation. **239B:** Magnetic confinement, MHD equilibrium and stability, collisional transport. **239C:** Linear waves and instabilities, uniform un-magnetized and magnetized plasmas, non-uniform plasmas. **239D:** Nonlinear plasma physics, quasilinear theory, large-amplitude coherent waves, resonance broadening, strong turbulence.

240A Galactic Astrophysics (4) S. Lecture, three hours. The morphology, kinematics, and evolution of our Milky Way and other galaxies. Topics include stellar formation and stellar evolution, end states of stars (supernovae, neutron stars), the distribution of stars, interstellar gas and mass in galaxies. The Local Group.

240B Cosmology (4) F. Lecture, three hours. An introduction to modern cosmology set within the context of general relativity. Topics include the expansion history of the Universe, inflation, the cosmic microwave background, density fluctuations, structure formation, dark matter, dark energy, and gravitational lensing.

240C Radiative Processes in Astrophysics (4) W. Lecture, three hours. Exploration of radiation mechanisms (electron scattering, synchrotron emission, collisional excitation, and more) and radiative transfer through matter including absorption and emission. Includes such observational astrophysics topics as spectroscopic study of atoms and nuclei, X-rays, and cosmic rays.

241B Stellar Astrophysics (4) W. Lecture, three hours. Physics of stellar interiors and equations of stellar structure. Stellar atmospheres and absorption processes. Introduction to stellar winds. Thermonuclear reactions, nucleosynthesis, and solar neutrinos. Binary stars and mass accretion. White dwarfs, supernovae, neutron stars, and black holes. Prerequisites: Physics 211, 240A.

241C Extragalactic Astrophysics (4) W. Lecture, three hours. The physics and phenomenology of galaxies; star formation, interstellar medium, and intergalactic medium. Galaxy structure and dynamics. Galaxy evolution, stellar populations, and scaling relations; the relationship between galaxy properties and environment. Galaxy clusters and active galactic nuclei. Prerequisites: Physics 211, 240A.

241D Early Universe Physics (4) S. Lecture, three hours. Includes a thorough quantum treatment of the generation of perturbations during inflation and various topics related to kinetic theory in an expanding Universe. Other topics include the astrophysics and cosmology of weakly interacting particles. Prerequisites: Physics 234A, and either 240B or 255.

246 Special Topics in Astrophysics (4) F, W, S. Lecture, three hours. Outlines and emphasizes a subarea of astrophysics that is undergoing rapid development. Prerequisites: Physics 236A-B-C or consent of instructor. May be repeated for credit.

247 Special Topics in Particle Physics (4) F, W, S. Lecture, three hours. Current topics in particle non-accelerator-based research fields. May be repeated for credit.

248 Special Topics in Condensed Matter Physics (4) F, W, S. Lecture, three hours. Outlines and emphasizes a subarea of condensed matter physics that is undergoing rapid development. May be repeated for credit.

249 Special Topics in Plasma Physics (4) F, W, S. Lecture, three hours. Outlines and emphasizes a subarea of plasma physics that is undergoing rapid development. Satisfactory/Unsatisfactory only. Prerequisites: Physics 239A-B. May be repeated for credit.

255 General Relativity (4). Lecture, three hours. An introduction to Einstein's theory of gravitation. Tensor analysis, Einstein's field equations, astronomical tests of Einstein's theory, gravitational waves.

260-299: SEMINARS AND RESEARCH

These courses are designed to acquaint students with the basic concepts and methods underlying current research activity in selected branches of physics.

260A-B-C Seminar in Condensed Matter Physics (1-1-1) F, W, S. Seminar designed to acquaint students with recent advances in solid state physics. Lecturers from the Department of Physics and Astronomy (both faculty and graduate students), other UCI departments, and other institutions. Satisfactory/Unsatisfactory only. Prerequisite: consent of instructor. May be repeated for credit.

261A-B-C Seminar in Plasma Physics (1-1-1) F, W, S. Advanced topics in plasma physics: wave propagation, nonlinear effects, kinetic theory and turbulence, stability problems, transport coefficients, containment, and diagnostics. Applications to controlled fusion and astrophysics. Satisfactory/Unsatisfactory only. Prerequisites: Physics 239A-B-C-D or equivalent.

263A-B-C Seminar in Particle Physics (1-1-1) F, W, S. Discussion of advanced topics and reports of current research results in theoretical and experimental particle physics and cosmic rays. Satisfactory/Unsatisfactory only. Prerequisite: consent of instructor. May be repeated for credit.

265A-B-C Seminar in Astrophysics (1-1-1) F, W, S. Acquaints students with current research in astrophysics. Lecturers from the Department of Physics and Astronomy and from other institutions. Satisfactory/Unsatisfactory only. May be repeated for credit.

266 Current Topics in Chemical and Materials Physics (1). Lecture, one hour; discussion, one hour. The subjects covered vary from year to year. Connection between fundamental principles and implementations in practice in science, industry, and technology. Prerequisite: consent of instructor. Same as Chemistry 266.

267A-B-C Current Problems in Particle Physics (4-4-4) F, W, S. Lecture, three hours. Presentation and discussion of current research and theory in particle physics. Lectures given by staff and students. May be repeated for credit.

269 Seminar in Teaching Physics (2) F. Techniques for effective teaching. Covers active listening and student engagement, problem-solving skills, peer instruction and collaborative learning, and evaluation. Required of all new Teaching Assistants. Satisfactory/Unsatisfactory only.

273 Technical Communication Skills (2). Lecture, one hour; discussion, three hours. Development of effective communication skills, oral and written presentations, through examples and practice. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. Same as Chemistry 273.

291 Research Seminar (1 to 4) F, W, S. Detailed discussion of research problems of current interest in the Department. Format, content, and frequency of the course are variable. Prerequisites: graduate standing and consent of instructor. May be repeated for credit as topics vary.

295 Experimental Research (4 to 12). With the approval of a faculty member, a student may pursue a research program in experimental physics. Typical areas include astrophysics, condensed matter physics, elementary particle physics, and plasma physics.

296 Theoretical Research (4 to 12). With approval of a faculty member, a student may pursue a research program in theoretical physics. Typical areas include astrophysics, condensed matter physics, elementary particle physics, and plasma physics.

298 Physics Colloquium (1). Seminar held each week, in which a current research topic is explored. Frequently, off-campus researchers are invited to present the seminar, and on occasion a faculty member or researcher from the Department will speak. Satisfactory/Unsatisfactory only. May be repeated for credit.

299 Reading of Special Topic (4 to 12). With special consent from a faculty member who will agree to supervise the program, a student may receive course credit for individual study of some area of physics.

395 Laboratory Teaching (1) F, W, S, Summer. Lecture, two hours. Required of and limited to teaching assistants of undergraduate laboratory courses. Designed to teach the necessary skills required of teaching assistants for these courses. Satisfactory/Unsatisfactory only. May be repeated for credit.

399 University Teaching (1 to 4) F, W, S. Required of and limited to Teaching Assistants.

SCHOOL OF SOCIAL ECOLOGY

Valerie Jenness, **Dean**

5300 Social & Behavioral Sciences Gateway
Social Ecology Student Services: (949) 824-6861
Graduate Counseling: (949) 824-5918

Faculty

- M. Victoria Basolo, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of Planning, Policy, and Design*
- Victoria A. Beard, Ph.D. University of British Columbia, *Associate Professor of Planning, Policy, and Design*
- Arnold Binder, Ph.D. Stanford University, *Professor Emeritus of Criminology, Law and Society*
- Marlon G. Boarnet, Ph.D. Princeton University, *Professor of Planning, Policy, and Design and of Economics*
- Scott A. Bollens, Ph.D. University of North Carolina, *Professor of Planning, Policy, and Design and Drew, Chace, and Erin Warmington Chair in the Social Ecology of Peace and International Cooperation*
- Tim-Allen Bruckner, Ph.D. University of California, Berkeley, *Assistant Professor of Public Health and of Planning, Policy, and Design*
- Kitty C. Calavita, Ph.D. University of Delaware, *Professor Emerita of Criminology, Law and Society*
- Elizabeth E. Cauffman, Ph.D. Temple University, *Associate Professor of Psychology and Social Behavior and of Education*
- Susan Charles, Ph.D. University of Southern California, *Associate Professor of Psychology and Social Behavior*
- Chuansheng Chen, Ph.D. University of Michigan, *Professor of Psychology and Social Behavior and of Education*
- Ken Chew, Ph.D. University of California, Berkeley, *Senior Lecturer with Security of Employment, Department of Planning, Policy, and Design*
- K. Alison Clarke-Stewart, Ph.D. Yale University, *Professor Emerita of Psychology and Social Behavior*
- Peter Clecak, Ph.D. Stanford University, *Professor Emeritus of Environmental Health, Science, and Policy*
- Simon A. Cole, Ph.D. Cornell University, *Department Chair and Associate Professor of Criminology, Law and Society*
- Ross F. Conner, Ph.D. Northwestern University, *Professor Emeritus of Planning, Policy, and Design*
- Susan Bibler Coutin, *Associate Dean of the Graduate Division and Professor of Criminology, Law and Society and of Anthropology*
- Thomas J. Crawford, Ph.D. Harvard University, *Senior Lecturer with Security of Employment Emeritus, Psychology and Social Behavior*
- Elliott Currie, Ph.D. University of California, Berkeley, *Professor of Criminology, Law and Society*
- Sally S. Dickerson, Ph.D. University of California, Los Angeles, *Associate Professor of Psychology and Social Behavior*
- Joseph F. DiMento, Ph.D., J.D. University of Michigan, *Professor of Planning, Policy, and Design; Law; Social Ecology; and Management*
- Peter H. Ditto, Ph.D. Princeton University, *Department Chair and Professor of Psychology and Social Behavior*
- John D. Dombink, Ph.D. University of California, Berkeley, *Professor of Criminology, Law and Society and of Sociology*
- C. David Dooley, Ph.D. University of California, Los Angeles, *Professor Emeritus of Psychology and Social Behavior*
- David L. Feldman, Ph.D. University of Missouri, *Department Chair and Professor of Planning, Policy, and Design and Professor of Political Science*
- Martha Feldman, Ph.D. Stanford University, *Professor of Planning, Policy, and Design, Management, Political Science, and Sociology, and Roger W. and Janice M. Johnson Chair in Civic Governance and Public Management*
- Joanne Frattaroli, Ph.D. University of California, Riverside, *Lecturer with Potential Security of Employment, Psychology and Social Behavior*
- Ajay Garde, Ph.D. University of Southern California, *Associate Professor of Planning, Policy, and Design*
- Gilbert L. Geis, Ph.D. University of Wisconsin, *Professor Emeritus of Criminology, Law and Society*
- Wendy A. Goldberg, Ph.D. University of Michigan, *Professor of Psychology and Social Behavior and of Education*
- Michael R. Gottfredson, Ph.D. State University of New York, Albany, *Executive Vice Chancellor and Provost, and Professor of Criminology, Law and Society and of Sociology*
- Ellen Greenberger, Ph.D. Harvard University, *Professor Emerita of Psychology and Social Behavior*
- Sora Han, Ph.D. University of California, Santa Cruz, *Assistant Professor of Criminology, Law and Society*
- Jutta Heckhausen, Ph.D. University of Strathclyde, *Professor of Psychology and Social Behavior*
- John R. Hipp, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of Criminology, Law and Society; Planning, Policy, and Design; and Sociology*
- John D. Houston, Ph.D. University of California, Los Angeles, *Assistant Professor of Planning, Policy, and Design*
- C. Ronald Huff, Ph.D. Ohio State University, *Professor of Criminology, Law and Society and of Sociology*
- Helen Ingram, Ph.D. Columbia University, *Professor Emerita of Planning, Policy, and Design*
- Larry Janner, Ph.D. State University of New York at Stony Brook, *Professor of Psychology and Social Behavior*
- Valerie Jenness, Ph.D. University of California, Santa Barbara, *Dean of the School of Social Ecology and Professor of Criminology, Law and Society and of Sociology*
- Paul D. Jesilow, Ph.D. University of California, Irvine, *Professor of Criminology, Law and Society*
- Eric D. Knowles, Ph.D. University of California, Berkeley, *Assistant Professor of Psychology and Social Behavior*
- Raul Perez Lejano, Ph.D. University of California, Los Angeles, *Associate Professor of Planning, Policy, and Design and of Environmental Health, Science, and Policy*
- Linda J. Levine, Ph.D. University of Chicago, *Professor of Psychology and Social Behavior*
- Elizabeth F. Loftus, Ph.D. Stanford University, *UCI Distinguished Professor of Psychology and Social Behavior; Criminology, Law and Society; Cognitive Sciences; and Law*
- Angela Lukowski, Ph.D. University of Minnesota, *Assistant Professor of Psychology and Social Behavior*
- Mona Lynch, Ph.D. University of California, Santa Cruz, *Professor of Criminology, Law and Society*
- Salvatore R. Maddi, Ph.D. Harvard University, *Professor of Psychology and Social Behavior*
- Richard Matthew, Ph.D. Princeton University, *Director of the Center for Unconventional Security Affairs and Associate Professor of Planning, Policy, and Design and of Political Science*
- Cheryl Maxson, Ph.D. University of Southern California, *Associate Professor of Criminology, Law and Society*
- Sanjoy Mazumdar, Ph.D. Massachusetts Institute of Technology, *Professor of Planning, Policy, and Design and of Environmental Health, Science, and Policy*
- Richard McCleary, Ph.D. Northwestern University, *Professor of Criminology, Law and Society and of Planning, Policy, and Design*
- James W. Meeker, Ph.D., J.D. State University of New York, Buffalo, *Associate Dean of Student Services and Computing, School of Social Ecology, and Professor of Criminology, Law and Society and of Sociology*
- Raymond W. Novaco, Ph.D. Indiana University, *Professor of Psychology and Social Behavior*
- Candice L. Odgers, Ph.D. University of Virginia, *Assistant Professor of Psychology and Social Behavior and of Education*
- Oladele Ogunseitan, Ph.D. University of Tennessee, *Department Chair of Population Health and Disease Prevention, and Professor of Public Health and Social Ecology*
- Joan Petersilia, Ph.D. University of California, Irvine, *Professor Emerita of Criminology, Law and Society*
- Henry N. Pontell, Ph.D. State University of New York, Stony Brook, *Professor of Criminology, Law and Society and of Sociology*

- JoAnn Prause, Ph.D. University of California, Irvine, *Senior Lecturer with Security of Employment, Psychology and Social Behavior*
- Jodi Quas, Ph.D. University of California, Davis, *Associate Professor of Psychology and Social Behavior*
- Justin B. Richland, Ph.D. University of California, Los Angeles; J.D. University of California, Berkeley–Boalt Hall School of Law, *Associate Professor of Criminology, Law and Society, Anthropology, and Law*
- Karen S. Rook, Ph.D. University of California, Los Angeles, *Associate Dean of Research, School of Social Ecology, and Professor of Psychology and Social Behavior*
- Donna C. Schuele, Ph.D. University of California, Berkeley, *Lecturer with Potential Security of Employment, Criminology, Law and Society*
- Carroll Seron, Ph.D. New York University, *Professor of Criminology, Law and Society, Sociology, and Law*
- Roxane Cohen Silver, Ph.D. Northwestern University, *Professor of Psychology and Social Behavior*
- Jennifer Skeem, Ph.D. University of Utah, *Professor of Psychology and Social Behavior*
- Daniel Stokols, Ph.D. University of North Carolina, *UCI Chancellor's Professor of Planning, Policy, and Design; Psychology and Social Behavior; Public Health; and Environmental Health, Science, and Policy*
- Luis Suarez-Villa, Ph.D. Cornell University, *Professor of Planning, Policy, and Design*
- William C. Thompson, Ph.D. Stanford University; J.D. University of California, Berkeley, *Professor of Criminology, Law and Society, Psychology and Social Behavior, and Law*
- George E. Tita, Ph.D. Carnegie-Mellon University, *Associate Professor of Criminology, Law and Society and of Planning, Policy, and Design*
- Rudolpho D. Torres, Ph.D. Claremont Graduate University, *Professor of Planning, Policy, and Design and of Political Science*
- Susan F. Turner, Ph.D. University of North Carolina, Chapel Hill, *Professor of Criminology, Law and Society*
- Elaine Vaughan, Ph.D. Stanford University, *Professor Emerita of Psychology and Social Behavior*
- James Diego Vigil, Ph.D. University of California, Los Angeles, *Professor of Criminology, Law and Society and of Education*
- Sara Wakefield, Ph.D. University of Minnesota, *Assistant Professor of Criminology, Law and Society and of Sociology*
- Geoff K. Ward, Ph.D. University of Michigan, *Assistant Professor of Criminology, Law and Society and of Sociology*
- Carol K. Whalen, Ph.D. University of California, Los Angeles, *Professor of Psychology and Social Behavior*
- John M. Whiteley, Ed.D. Harvard University, *Professor of Environmental Health, Science, and Policy*
- Ilona S. Yim, Ph.D. University of Trier, *Assistant Professor of Psychology and Social Behavior*
- Affiliated Faculty**
- Hoda Anton-Culver, Ph.D. St. Andrews University, *Director of the Center for Cancer Genetics Research and Prevention; Director of the Genetic Epidemiology Research Institute (GERI); Department Chair and Professor of Epidemiology*
- Dean Bradford Baker, M.D. University of California, San Diego; M.P.H. University of California, Berkeley; *Director of the UCI Center for Occupational and Environmental Health, and Professor of Clinical Medicine and Epidemiology*
- Zuzana Bic, Dr.P.H. Loma Linda University, *Lecturer with Security of Employment, Public Health*
- Jan K. Brueckner, Ph.D. Stanford University, *Professor of Economics*
- Lawrence F. Cahill, Ph.D. University of California, Irvine, *Professor of Neurobiology and Behavior*
- Belinda Campos, Ph.D. University of California, Berkeley, *Assistant Professor of Chicano/Latino Studies*
- William J. Cooper, Ph.D. University of Miami, *Professor of Civil and Environmental Engineering and of Chemical Engineering and Materials Science*
- Ralph Delfino, M.D. University of Chicago; Ph.D. McGill University, *Vice Chair of the Department of Epidemiology and Associate Professor in Residence, Departments of Epidemiology and Pediatrics*
- Greg Duncan, Ph.D. University of Michigan, *UCI Distinguished Professor of Education*
- Rufus Edwards, Ph.D. University of Medicine and Dentistry of New Jersey and Rutgers, The State University of New Jersey, *Associate Professor of Public Health*
- Paul J. Feldstein, Ph.D. University of Chicago, *Director of the Center for Health Care Management and Policy, Professor of Management and Economics, and Robert Gumbiner Chair in Health Care Management*
- Catherine Fisk, J.D. University of California, Berkeley; LL.M. University of Wisconsin at Madison, *UCI Chancellor's Professor of Law*
- Chad P. Garner, Ph.D. Oxford University, *Associate Professor in Residence, Department of Epidemiology*
- David Theo Goldberg, Ph.D. City University of New York Graduate School and Center, *Director of the UC Humanities Research Institute and Professor of Comparative Literature*
- Lisa Grant Ludwig, Ph.D. California Institute of Technology, *Associate Professor of Public Health*
- David Igler, Ph.D. University of California, Berkeley, *Associate Professor of History*
- C. Sunny Jiang, Ph.D. University of South Florida, *Professor of Civil and Environmental Engineering and of Ecology and Evolutionary Biology*
- Michael T. Kleinman, Ph.D. New York University, *Adjunct Professor of Medicine*
- Joseph Mahoney, Ph.D. University of North Carolina, Chapel Hill, *Associate Professor of Education*
- Michael G. McNally, Ph.D. University of California, Irvine, *Professor of Civil and Environmental Engineering*
- David S. Meyer, Ph.D. Boston University, *Professor of Sociology*
- Betty H. Olson, Ph.D. University of California, Berkeley, *Professor of Civil and Environmental Engineering*
- Judy Olson, Ph.D. University of Michigan, *Donald Bren Professor of Informatics*
- Mark P. Petracca, Ph.D. University of Chicago, *Department Chair and Associate Professor of Political Science*
- Stephanie Reich, Ph.D. Vanderbilt University, *Assistant Professor of Education*
- Lindsey Richland, Ph.D. University of California, Los Angeles, *Assistant Professor of Education*
- Shawn Rosenberg, M.Litt. Oxford University, Harvard University, *Professor of Political Science*
- Rubén G. Rumbaut, Ph.D. Brandeis University, *Professor of Sociology*
- Jean-Daniel M. Saphores, Ph.D. Cornell University, *Director of the Graduate Program in Transportation Science and Associate Professor of Civil and Environmental Engineering and of Economics*
- Charles Anthony Smith, Ph.D. University of California, San Diego, *Assistant Professor of Political Science*
- David A. Smith, Ph.D. University of North Carolina, Chapel Hill, *Professor of Sociology*
- Sharon Stern, Ph.D. University of Utah, *Senior Lecturer with Security of Employment, Public Health*
- Mark Steyvers, Ph.D. Indiana University, *Professor of Cognitive Sciences*
- Christopher Tomlins, Ph.D. Johns Hopkins University, *UCI Chancellor's Professor of Law*
- Deborah Love Vandell, Ph.D. Boston University, *Department Chair and Professor of Education*
- Kerry Vandell, Ph.D. Massachusetts Institute of Technology, *Professor of Management and Law*
- Linda Trinh Võ, Ph.D. University of California, San Diego, *Associate Professor of Asian American Studies*
- Argyrios Ziogas, Ph.D. University of Southern California, *Associate Adjunct Professor of Epidemiology*

OVERVIEW

The School of Social Ecology is an interdisciplinary academic unit committed to scholarly research and instruction that is informed by and contributes to knowledge in the social, behavioral, legal, and health sciences. It promotes discipline and boundary-crossing research and teaching that is inspired by pressing social problems and directed toward the betterment of society. It is committed to the pursuit of theory development, the creation of empirically derived knowledge, the practical application of scholarly knowledge, and civic engagement.

The School is home to three academic departments: Criminology, Law and Society; Planning, Policy, and Design; and Psychology and Social Behavior; offers four undergraduate and eight graduate degrees; and currently has about 2,135 undergraduate majors, 320 graduate students, 66 faculty, and more than 15,750 alumni.

Social Ecology faculty apply scientific methods to the study of a wide array of recurring social, behavioral, and environmental problems and specialize in conducting research “with considerations of use” in society. Among issues of long-standing interest in the School are crime and justice in society, social influences on human development over the life cycle, and the effects of the physical environment on health and human behavior. While the field of ecology focuses on the relationships between organisms and their environments, social ecology is concerned with the relationships between human populations and their environments.

Social Ecology’s faculty is multidisciplinary, including psychologists with a variety of specialties (e.g., developmental, social, and health psychology); criminologists; sociologists; anthropologists; political scientists; lawyers; urban and regional planners; and program evaluation experts. The School’s research and teaching is distinguished by an emphasis on the integration of the concepts and perspectives of these multiple disciplines. This focus is based on the School’s core belief that the analysis and amelioration of complex societal problems requires interdisciplinary efforts.

Many Social Ecology faculty are involved in developing policies and interventions directed toward improving the functioning of individuals, families and other groups, organizations, institutions, and communities. Social Ecology undergraduate students benefit from the multidisciplinary instructional expertise of the School’s faculty in the classroom and are afforded opportunities to engage in field-based and laboratory-based learning, as well, through the School’s well-established and highly regarded field studies program and its laboratories.

Graduate students work closely with the faculty in the classroom and in laboratories, as well as collaborating on important research projects that enhance their research skills while advancing knowledge and addressing important societal problems.

Research Facilities

Social Ecology I and II and the nearby Social & Behavioral Sciences Gateway building are wireless environments that house the School’s research centers and feature many facilities for experimental research, such as behavioral assessment laboratories for research in human development, social relations, and legal studies. Behavioral assessment laboratories are used for studying social phenomena such as parent-child interaction, cooperation among children, memory functions, hyperactivity, social support processes, and mock jury discussions.

The School also offers students up-to-date computing facilities, including the state-of-the art Janice R. Green Instructional Computing Lab, and assistance to ensure that their skills prepare them for either advanced (graduate) work or for the changing needs of today’s workplace, which increasingly demands skills in computing and information technology.

CENTERS FOR RESEARCH

The **Center in Law, Society and Culture (CLSC)** brings together faculty in the Schools of Social Ecology, Social Sciences, and Humanities who share an interest in the role of social, cultural, and historical factors in the development of law and the importance of social and cultural assumptions in understanding and interpreting law.

UC Irvine has enjoyed a long tradition of innovative, interdisciplinary organizational research that dates back to the founding of the

campus in the mid-1960s. The **Center for Organizational Research** continues that tradition by providing a focal point for organization scholars from Social Ecology, Social Sciences, The Merage School of Business, and The Bren School of Information and Computer Sciences.

The **Community Outreach Partnership Center (COPC)** is an initiative to apply scholarly research to community needs. COPC leverages campus assets to equip nonprofit organizations with research that increases their capacity to effectively assess needs, analyze issues, build community, and impact change. COPC projects are guided by a commitment to “civic engagement.” This model of applied scholarship is widely embraced by research universities across the country and promotes collaborative approaches to problem solving using applied research, training and instruction, and public outreach to help address issues and support actions which build and sustain healthy communities.

The **Center for Psychology and Law (CPL)** draws together faculty in the Department of Criminology, Law and Society and the Department of Psychology and Social Behavior. UC Irvine has emerged as one of the world’s leading centers for research in the field of psychology and law.

New threats such as global terrorist networks, environmental change, and cyber attacks dominate the security agenda. The **Center for Unconventional Security Affairs** addresses these and other security challenges of the twenty-first century and provides opportunities for student involvement in research and outreach.

The **Newkirk Center for Science and Society** finds ways to develop and share research knowledge with the public and policy-makers so they can make informed decisions on vital policy issues of law, education, environment, health care, crime, and public infrastructure. The Center carries out its mission in several ways: through workshops, colloquia, town hall meetings, distinguished visitors, and communication programs. One area in which the interests of several CLS faculty members overlap with the focus of the Newkirk Center relates to expert testimony and, more broadly, the use (and misuse) of science in legal proceedings.

The **Social Ecology Research Center (SERC)** is a School-wide, integrative center that focuses on applied and theoretical inquiry into social problems that call for multidisciplinary, cross-disciplinary, and trans-disciplinary approaches.

IN THE COMMUNITY

The **Criminology Outreach Program (COP)** was established in 1999 to address the needs of under-served students in the community through an education on the legal system. The mission is to create higher-education aspirations for junior high and high school students from neighboring districts that do not send a high proportion of graduates to college. The program acquaints students with college course content and procedures to familiarize them with the issues of student life and intellectual pursuit, and to involve the students in the type of policy debates that occur in the field of criminology. The Criminology Outreach Program emphasizes four elements: critical thinking, writing, library research, and oral presentation skills.

The **Metropolitan Futures Initiative (MFI)** aims to develop an improved understanding of communities and their potential for integrative and collaborative planning and action to ensure a bright future for the region. With initial focus on Orange County and its location within the larger Southern California area, the MFI is a commitment to build communities that are economically vibrant, environmentally sustainable, and socially just by partnering Social Ecology’s world-class, boundary-crossing scholarship with expertise throughout Southern California.

Degrees

Criminology, Law and Society	B.A., M.A.S., Ph.D.
Planning, Policy, and Design	Ph.D.
Psychology and Social Behavior	B.A., Ph.D.
Public Policy	M.P.P.
Social Ecology	B.A., M.A., Ph.D.
Urban and Regional Planning	M.U.R.P.
Urban Studies	B.A.

HONORS

Graduation with Honors. Honors at graduation will be awarded to approximately 12 percent of the graduating seniors who have completed at least 72 units at a University of California campus by the end of the final quarter prior to graduation, including approximately 1 percent *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*. The student's cumulative record at the end of the final quarter is the basis for consideration for awarding Latin Honors. For more information about honors criteria contact the Social Ecology Student Services Office at (949) 824-6861 or visit the Social Ecology Web site at <http://students.soceco.uci.edu/pages/frequently-asked-questions-faqs>. Other important factors are also considered (see page 51).

Dean's Honor List. Quarterly recognition for students who earned a 3.5 grade point average while carrying a minimum of 12 graded units. Recognition is noted on the student's transcript.

Dean's Award for Community Engagement. This award recognizes students who demonstrate both scholarly achievement and community service participation.

School Awards. The School of Social Ecology recognizes the most outstanding undergraduate and graduate students for their academic achievements, contributions to the School, and service to the campus and community.

Social Ecology Honors Program. The Social Ecology Honors Program provides the opportunity for selected School of Social Ecology students to pursue advanced independent study. Admission to the program is based on formal invitation and an application submitted by the prospective student in the spring quarter of the junior year. In order to be considered, a student must have satisfied the following requirements: completion of all lower-division Social Ecology courses required for the major; completion of at least five upper-division Social Ecology courses with a grade point average of at least 3.5 in these courses; and achievement of an overall grade point average at UCI of at least 3.2. Acceptance into the program is based upon evidence of the student's ability, interest in research, and proposed thesis project. Successful completion of the program requires three quarters, including supervised independent work on a thesis research project (Social Ecology H190A-B) and written and oral presentation of an honors thesis (Social Ecology H190W).

Excellence in Undergraduate Research Award in Honor of Gilbert Geis. This award was created to encourage and support undergraduate students interested in research related to Criminology, Law and Society.

Michelle Smith Pontell Memorial Fellowship. This award is given annually to a graduate student in the Department of Criminology, Law and Society for excellence in both research and course work.

Mohan Narasimhan Scholarship in Criminology, Law and Society. Established by the family of a former student to honor his memory and assist a current student, this award is conferred annually to an undergraduate student who is entering his or her senior year.

Outstanding Achievement in Field Study. This award recognizes students who have gone "above and beyond" in their field study placements and/or who have completed an exceptional academic project as part of their field study.

Strauss Scholarship. This scholarship is awarded to a junior who is planning for a career in public service.

Undergraduate Program

The School of Social Ecology offers either a general interdisciplinary degree in Social Ecology or a more focused experience through degree programs in Criminology, Law and Society; Psychology and Social Behavior; and Urban Studies.

Change of Major. Students who wish to change their major to one offered by the School should contact the Social Ecology Student Services Office for information about change-of-major requirements, procedures, and policies. Information is also available at <http://www.changeofmajor.uci.edu>.

CAREER OPPORTUNITIES

Graduates of the School of Social Ecology bring a distinctive cross-disciplinary perspective to the job market. The School provides a solid foundation for those students who seek jobs in planning departments, mental health settings, educational institutions, and a variety of community and governmental agencies, including, for example, criminal justice agencies. Many Social Ecology students find that their interdisciplinary training is also useful for careers in public management, law, and business.

The School also provides useful preparation for students who wish to apply to graduate and professional schools of law, public policy/public administration, public health, social welfare, psychology, sociology, criminology, and urban planning.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. Additional information is available in the Career Center section.

FIELD STUDY

An important aspect of the undergraduate program is its field study requirement for majors. Field study is designed to provide students with an opportunity to examine individual, interpersonal, and social-environmental problems as they occur in community settings; to evaluate the merit of ideas presented in the classroom; and to conduct naturalistic observations and investigations at field sites. Under the supervision of a Social Ecology faculty sponsor, students have the opportunity to test their skills in the community, to evaluate procedures and problem-solving strategies used in the work place, and to observe the links between community practices and academic ideas and issues. The settings provided for field study include a wide range of problem-oriented institutions and agencies in both the private and the public sector (e.g., Orange County Public Defender's Office; California Coastal Commission; American Red Cross; primary and secondary schools; Fairview Development Center; planning, law enforcement, legal, and design corporations). Students must select a placement site from those listed and approved by the School of Social Ecology. Unlisted or inappropriate placements, as well as those that could give the appearance of nepotism or preferential treatment, will not be approved. Departmental approval for field study will be determined by the Field Study Director.

Field study is open *only* to upper-division School of Social Ecology students who are in good academic standing and have completed all prerequisite course work. All field studies are taken on a Pass/Not Pass grading basis. Further information, including field study sign-up procedures and prerequisites, is available online at <http://students.soceco.uci.edu/pages/field-study>.

Planning a Program of Study

Because there are many alternative ways to plan a program, some of which may require careful attention to specific major requirements, students should consult with the Social Ecology Student Services Office, 102 Social Ecology I, to design an appropriate program of study.

Students who elect one of the majors in the School of Social Ecology in their freshman year might begin by taking the introductory courses required by their major. It is a good idea to take these courses early because they include fundamental concepts that are widely applicable in more advanced courses. In addition, the lower-division writing requirement of the general education requirement (category I) should be completed during the first year. In the sophomore year, the student might complete three courses toward the general education requirement, four courses in their major, and four electives. Students who are planning to go on to graduate school can use their freshman and sophomore years to advantage by taking courses in theory, research methods, statistics, and other areas important to graduate study. In the junior and senior years, the student should take courses in the major area and should create an individualized program of study through a combination of courses and course modules which fall in an area of interest. Particular attention should be paid to planning a program of study that will ensure that major requirements are met prior to graduation.

Additional Curricular Options

Students in the School of Social Ecology may combine their course work with the following University programs and should consult an academic counselor for further information.

CAMPUSWIDE HONORS PROGRAM

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

DEPARTMENT OF EDUCATION

Students who plan to obtain a teaching credential or a higher degree in the field of education should consult with counselors in the UCI Department of Education early in their college career. Students completing a degree program in the School of Social Ecology may qualify for a waiver of the Single Subject Credential Examination. For additional information about teaching credentials, refer to the Department of Education section.

EDUCATION ABROAD PROGRAM

Upper-division students have the opportunity to experience a different culture while making progress toward degree objectives through the Education Abroad Program (EAP). EAP is an overseas study program which operates in cooperation with host universities and colleges in countries throughout the world. Additional information is available in the Study Abroad Center section.

INTERDISCIPLINARY MINORS

These minors are available to all UCI students. Information is available in other sections of the *Catalogue*, as noted.

The **minor in Civic and Community Engagement** seeks to provide students with the knowledge, skills, attitudes, and values to engage as citizens and active community members in the twenty-first century. The minor is distinguished both by *what* students learn, and by *how* they learn it. See the Interdisciplinary Studies section for information.

The **minor in Conflict Resolution** provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels. See the School of Social Sciences section for information.

The **minor in Global Sustainability** trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet. See the Interdisciplinary Studies section for information.

The **minor in Native American Studies** is an interdisciplinary, interschool program which focuses on history, culture, religion, and the environment. See the Interdisciplinary Studies section for information.

Requirements for the Bachelor's Degree

University Requirements: See pages 54–61.

School Requirements

The following School requirements apply to all Social Ecology majors except Psychology and Social Behavior: Criminology, Law and Society C7, Psychology and Social Behavior 9 or 11A, B, C, Social Ecology E8, 10, 13, 194, 195 (four units), and one additional upper-division course (four units) chosen from any department in the School of Social Ecology *or* an additional four units of Social Ecology 195. (Social Ecology 198 and 199 may not be used to fulfill this requirement.) NOTE: Beginning 2007–08, students majoring in Psychology and Social Behavior are required to take Psychology and Social Behavior 11A, B, C as a departmental requirement, in lieu of Social Ecology E8, Psychology and Social Behavior 9, and the additional upper-division course.

The following School requirements apply to Psychology and Social Behavior majors: Social Ecology 10, 13, Criminology, Law and Society C7, Social Ecology 194, 195 (four units).

Departmental Requirements: Refer to individual departments.

Grade Requirement

A minimum grade average of at least C (2.0) is required (1) overall, (2) in all courses required for the major program, including the School requirements, and (3) in the upper-division courses required for the major.

Overlap Restrictions

Double Majors. In order to double major within the School of Social Ecology, major requirements must be met for both majors without any overlap of upper-division courses.

Other Double Majors. In fulfilling degree requirements for multiple majors, a maximum of two courses may overlap between any two majors.

Major and Minor Requirements: In fulfilling minor requirements, a maximum of two courses may overlap between a major and a minor. No course overlap is permitted between minors.

Undergraduate Major in Social Ecology

REQUIREMENTS FOR THE B.A. DEGREE IN SOCIAL ECOLOGY

University Requirements: See pages 54–61.

School Requirements: See page 428.

Requirements for the Major

Ten upper-division courses (40 units) as specified below:

- A. Three courses (12 units)—one course (numbered 100–193) selected from each of the three departments—Criminology, Law and Society; Planning, Policy, and Design; and Psychology and Social Behavior.
- B. Seven additional courses (28 units) selected from Social Ecology or the departments of Criminology, Law and Society; Planning, Policy, and Design; and Psychology and Social Behavior. Course prerequisites established by the individual departments must be satisfied.

Students may petition to have two Social Ecology 199 courses (total of 8 units) count toward upper-division major credit, provided that the courses (a) were taken for a letter grade; (b) required a written term paper or research presentation at an academic conference; and (c) were taught by a Social Ecology faculty member whose name appears on a list maintained in the Social Ecology Student Services Office. Students may also petition graduate courses (numbered 200–209) to fulfill upper-division major requirements.

GRADUATE PROGRAMS

Graduate training in the School of Social Ecology is organized around the study of contemporary problems in the social and physical environment. Emphasis is placed primarily upon theory and research that have implications for policy and intervention. Problems are investigated from the complementary perspectives of a multidisciplinary faculty that includes specialists in social, developmental, clinical, environmental, and health psychology; urban and regional planning, public policy, and architecture; urban sociology; law and society; criminology; and public health.

Among issues of long-standing interest in the School are crime and justice in society, social influences on health and human development over the life course, and the effects of the physical environment on health and human behavior. The graduate curriculum emphasizes an interdisciplinary orientation, training students to draw upon the knowledge offered by several of the traditional academic fields in order to examine important social, legal, and environmental problems from a perspective of breadth as well as depth.

The School offers M.A., M.A.S., M.P.P., M.U.R.P., and Ph.D. degree programs. Doctoral students have the opportunity to pursue an individualized course of study in the principles and methods of social ecology for the Ph.D. in Social Ecology, a concentration in Epidemiology and Public Health, or a concentration in Environmental Analysis and Design. Additional degree programs offered are as follows: Ph.D. in Criminology, Law and Society; Ph.D. in Planning, Policy, and Design; and Ph.D. in Psychology and Social Behavior. Master's degrees include the M.A. in Social Ecology; the M.A. in Social Ecology with a concentration in Demographic and Social Analysis; the Master of Advanced Studies (M.A.S.) in Criminology, Law and Society (an online degree program); the Master of Public Policy (M.P.P.); and the Master of Urban and Regional Planning (M.U.R.P.). In addition, many students in the Ph.D. programs in Criminology, Law and Society and in Psychology and Social Behavior obtain an M.A. in Social Ecology on the way to their Ph.D.

Social Ecology faculty members apply diverse methods of scientific inquiry to study social, behavioral, and environmental

problems. Evaluation research, legal research, questionnaire and survey methods, field research, naturalistic observation, and quasi-experimental techniques receive emphasis along with behavioral laboratory experimentation. Collaborative research with faculty members is an important component of graduate education in the School.

A sampling of faculty research and teaching interests includes human stress; health promotion; biobehavioral bases of health and illness; program evaluation; economic change and behavioral disorders; atypical child development; adaptive aging; end-of-life medical decision-making; violence and aggression; legal sanctions and deterrence; the socio-cultural context of law; white-collar and organized crime; gangs; police work; wrongful conviction/miscarriages of justice; transitions to parenthood; personality and psychopathology; effects of chemical and social environments on early child development; urban growth management and policies; transportation policies; poverty and homelessness; community design and development; regional economic development; the use of scientific information in public policy formation and litigation; and the health impacts of work environments.

ADMISSION

Students should submit their complete application file including the application form, transcripts, three letters of recommendation, and Graduate Record Examination (GRE) scores by December 15 if they are applying to the Department of Psychology and Social Behavior, or by January 15 if they are applying to the Department of Criminology, Law and Society, or the Department of Planning, Policy, and Design. The deadline for the M.A.S. in Criminology, Law and Society is in April and specific deadline information is available from the Graduate Coordinator for the Department of Criminology, Law and Society; telephone (949) 824-1442. Call the Graduate Student Services Office for additional information; telephone (949) 824-5918.

CAREER OPPORTUNITIES

Ph.D. graduates enjoy a wide variety of career opportunities and have succeeded in obtaining positions in academic institutions such as Stanford University; Rutgers University; Johns Hopkins University; Temple University; University of California, Los Angeles; University of California, San Diego; University of Colorado; University of Kansas; University of Minnesota; University of Oregon; University of Wisconsin; Indiana University; Carnegie-Mellon University; University of Texas at Austin; Arizona State University; and City University of New York. Other graduates have established research and administrative careers in government agencies and private firms throughout the United States and Canada, including National Institutes of Health; Toronto Department of Public Health; Environmental Protection Agency; Centers for Disease Control; Food and Drug Administration; U.S. Department of Agriculture; Metropolitan Water District; Air Resources Board; Orange County Department of Health Services; United Cerebral Palsy Foundation; Philadelphia Geriatric Center; New Mexico Tumor Registry; Orange County Superior Court; Southern California Metropolitan Water District; and in marketing and research firms such as the Yankelovich Group and McGuire Environmental Consultants. Master of Urban and Regional Planning graduates are employed in top urban planning consulting firms and in cities and counties throughout California and beyond.

Master's Programs

M.A. IN SOCIAL ECOLOGY

The M.A. degree in Social Ecology option is available to those students who have been admitted to one of the Ph.D. degree programs in Criminology, Law and Society; Psychology and Social

Behavior; or Planning, Policy, and Design. In very rare circumstances a student may be admitted directly to the M.A. degree program in Social Ecology. Consult with the Graduate Student Services Office before submitting an application or for additional questions; telephone (949) 824-5918.

Each M.A. degree student is assigned a faculty advisor with whom the student discusses an individual program of education. The M.A. degree program in Social Ecology requires a thesis and satisfactory completion of seven approved courses (28 units), including the Seminar in Social Ecology (Social Ecology 200), Research Methods (C201, P201, U297, or equivalent), and at least one additional approved course in statistics or methodology. Other courses should be selected with regard to the student's academic and career objectives, and must be approved by the faculty advisor. The seven required courses must include at least five graduate courses and must be exclusive of any directed study, independent study, or thesis courses (Social Ecology 298, 299, or 295). A grade of B or better must be achieved in all courses. Students are advanced to candidacy for the M.A. degree, and a thesis committee is appointed, after a review of their graduate work and thesis plans by a faculty committee.

M.A. IN SOCIAL ECOLOGY WITH A CONCENTRATION IN DEMOGRAPHIC AND SOCIAL ANALYSIS

The M.A. in Social Ecology with a concentration in Demographic and Social Analysis offers training in the practical research skills needed to address analytical problems confronting society, business, government, and the nonprofit sector. The concentration emphasizes the Pacific Rim and issues defining Southern California's population, such as immigration, changing household and family structure, racial and economic inequalities, and the impact of local and regional population growth. Informed by the interdisciplinary field of demography, the program draws on faculty and courses in the Schools of Social Ecology and Social Sciences.

The concentration in Demographic and Social Analysis offers the option of additional professional certification for doctoral students already admitted to the School of Social Ecology. Admission, core course, and thesis requirements are identical to those for the general M.A. in Social Ecology. In addition, students must complete 12 units of designated electives in population issues or research methods. Up to two upper-division undergraduate courses may be approved to fulfill the elective requirement. Students interested in this concentration should call the Graduate Counseling Office at (949) 824-5918 for more information.

Ph.D. Programs

The doctoral programs offered by the School of Social Ecology prepare students for academic careers in research and teaching. Graduates also are well qualified for employment in private or government agencies, where they can bring advanced academic training, strong methodological and statistical skills, and special expertise to such issues as environmental design; urban and regional planning; criminal justice; and social policies affecting mental and physical health across the life course. The normative time for completion of the Ph.D. degree is either five or six years, depending upon the specific program.

Each incoming Ph.D. student is assigned a faculty advisor with whom the student should meet at least once every quarter to discuss an individualized program of graduate education.

A student may be formally advanced to candidacy for the Ph.D. degree when all requirements except the dissertation have been completed, and when the student's dissertation plan has been approved by the candidacy committee appointed by the School of Social Ecology, on behalf of the Dean of the Graduate Division

and the Graduate Council. The student will appear before this committee for an oral examination. The dissertation plan will include a thorough examination of the history of the problem being proposed for investigation, its current status, the way in which the proposed research will further knowledge, a detailed specification of the proposed method of investigating the problem, and a description of the planned methods for analyzing the data collected. The normative time for advancement to candidacy is either three or four years, depending upon the program. In no case will students be allowed to advance to candidacy after the end of their fifth year of study.

Formal advancement to candidacy for the Ph.D. degree will be approved by the Dean of the Graduate Division upon recommendation by a unanimous vote of the student's candidacy committee. Alternatively, the committee may recommend a course of action to strengthen the student for advancement to candidacy at a future date. When the student is advanced to candidacy, a doctoral committee will be appointed on behalf of the Graduate Council. The doctoral committee, ordinarily consisting of three members of the faculty, will supervise the preparation and completion of the doctoral dissertation. The dissertation should be completed and accepted within one to two years, and no later than three calendar years after the student's advancement to candidacy.

All Ph.D. students who have not been advanced to candidacy will be formally evaluated by members of the Social Ecology faculty at the end of each year. At that time, the faculty may recommend that the student continue toward the Ph.D. degree, complete the M.A. degree only, or cease graduate studies in the School. A negative evaluation at this point is evidence of failure to maintain satisfactory academic progress. Evaluation of Ph.D. students who have advanced to candidacy is the responsibility of the student's doctoral dissertation committee.

Ph.D. IN SOCIAL ECOLOGY

The Ph.D. program in Social Ecology allows students to develop a tailored course of graduate study that draws upon the knowledge of several traditional academic disciplines. This is a small distinguished program intended for genuinely interdisciplinary doctoral students. The emphases of this training program are in keeping with the academic mission of the School, namely, its emphases on an ecological approach to research and policy, an interdisciplinary approach to research and community intervention, and the application of theory and research to community problem solving. Students are encouraged to integrate the diverse theoretical and methodological insights of several disciplines in order to analyze important social and environmental problems from a perspective of breadth as well as depth. In doing so, students gain familiarity with the classic and contemporary literature in social ecology and with the application of the ecological paradigm, as it has evolved in the natural and behavioral sciences. This program is ideally suited for independent students who wish to develop a unique interdepartmental program of study in consultation with faculty from several departments. Students may elect to concentrate their interdisciplinary studies in the area of Epidemiology and Public Health, which is conducted in collaboration with faculty from the School of Medicine.

Each incoming student takes Seminar in Social Ecology (Social Ecology 200), Research Methods (C201, P201, U297, or equivalent), two approved quarters of graduate-level statistics, one additional approved research methods course, and six elective courses, chosen in consultation with the faculty advisor. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years. Students are encouraged to become involved in research in their first year of study by participating in the research projects of the faculty. Students complete a supervised research project before they begin work on their doctoral dissertation. Research is broadly construed to include experimental

methods, questionnaire and interview studies, systematic field observation, secondary analyses, and legal analyses. This predissertation research project should be completed during the second year in residence and must be evaluated and approved by a committee of three faculty members. Those students pursuing the Epidemiology and Public Health concentration must select six electives in epidemiology and public health, in consultation with their advisor. Additional information is available from the Department of Epidemiology.

Students complete the breadth requirement during their third year of study. This is accomplished through successful completion of either a written comprehensive examination or the submission of a major paper or series of papers that intensively examine specific substantive problems and bodies of research. Preferably, the perspective taken should be multidisciplinary, but a single disciplinary approach is acceptable if it is more congruent with the student's educational goals and is acceptable to the student's committee. Each student's plans for completing the breadth requirement are developed in collaboration with a committee of three Social Ecology faculty members. Students are encouraged to meet with this committee as early as possible during their graduate career and are required to do so no later than the third quarter of their second year. When the student's plans have been approved and implemented, the examining committee will determine whether the breadth requirement was successfully completed, and will recommend additional academic work if it is deemed necessary. The normative time for advancement to candidacy is three years. The fourth, and possibly fifth, years of study are devoted to developing and defending a dissertation proposal and conducting dissertation research.

PH.D. IN SOCIAL ECOLOGY WITH A CONCENTRATION IN ENVIRONMENTAL ANALYSIS AND DESIGN

The doctoral concentration in Environmental Analysis and Design prepares students to conduct research on questions of vital importance to professionals in environmental analysis and evaluation and on related questions on the formulation of environmental and health policy. These questions reflect an overarching concern with the effects of the natural and built environments on the health and social well-being of humans.

This doctoral concentration particularly focuses on insights from a social ecological perspective. One of the concentration's strengths is its research sequence which spans the disciplines within the School. Students are encouraged to take classes across the campus to improve their knowledge of related fields as well.

Students conduct analyses of sociocultural, behavioral, biological, chemical, and physical factors that influence health and well-being of humans, including public and private sector policy as well as the environment as a whole. They are also trained to evaluate the effectiveness of interventions designed to enhance the health of individuals and the community as a whole. The curriculum and diversity of faculty within the concentration afford unique opportunities for multidisciplinary research and training.

Potential employment sources for graduates include academic and research institutions; state and federal agencies; policy-making organizations; national, community, and workplace health-promotion programs; and a diverse range of consulting firms ranging from engineering to design.

Each incoming student takes the five core courses required of most Ph.D. students, noted earlier, and eight elective courses drawn from the focal areas within this concentration. The elective courses cover topics such as environmental health risks, behavioral epidemiology, demography, and technological hazards and change.

The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years. Students are expected to become involved in research activities in their first year of graduate study. Students complete a supervised research project before they begin work on their doctoral dissertation. This predissertation research project should be completed during the second year in residence (preferably by the end of the winter quarter of the second year). The research project must be evaluated and approved by a committee of three faculty members. Students complete the breadth requirement, described earlier, during their third year of study. The normative time for advancement to candidacy is three years. The fourth and fifth years of study are devoted to developing and defending a dissertation proposal and conducting dissertation research.

Courses in Social Ecology

(Schedule of Classes designation: SocEcol)

LOWER-DIVISION

E8 Introduction to Environmental Analysis and Design (4) F, W, S. Lecture, three hours. Overview of general concepts, theoretical principles, and analytical techniques for investigating environmental systems. Integrates tools from both natural and social sciences to analyze contemporary environmental challenges such as pollution, resource acquisition, facility and ecosystem design, impact assessments, the formulation of environmental policy. Formerly Environmental Analysis and Design E8. *Criminology, Law and Society, Social Ecology, Urban Studies, Public Health Sciences, and Public Health Policy majors have first consideration for enrollment. (III)*

10 Research Design (4). Lecture, three hours. An introduction to the logic behind and methods of designing and conducting research studies in Social Ecology. Topics include how to measure variables of interest, identifying causal relationships, sampling, survey research methods, experiments, quasi-experimental designs, and ethics in research.

13 Statistical Analysis in Social Ecology (4). Lecture, three hours. Introduction to the techniques of statistical analysis in Social Ecology. Topics include probability, statistical inference, significance testing, univariate descriptive statistics, and multivariate analysis from an interdisciplinary perspective. Prerequisite: Social Ecology 10; may be taken concurrently. No credit for Social Ecology 13 if taken after Social Science 9A, Social Science 10A, Anthropology 10A, Political Science 10A-B-C, Psychology 10A, or Sociology 10A. *School of Social Ecology majors have first consideration for enrollment. (V)*

H20A-B-C Honors: Critical Issues in the Social Sciences (6-6-6). Lecture, three hours; seminar, two hours. Major themes, methods, and works in the social sciences from an interdisciplinary perspective. Each quarter focuses on a different topic. Weekly small seminars emphasizing the development of the skills of critical thinking and quantitative analysis through regular written work are integral to the course. Prerequisite: restricted to members of the Campuswide Honors Program. Same as Social Sciences H1E-F-G. **(III)**

74A-B-C Moral Development and Just Communities (4-4-4). Lecture, three hours. A three-quarter sequence exploring interpersonal, personal, and social issues based on principles of fairness and justice. Both the living environment of a University residence hall and selected institutions of society are analyzed in terms of moral development theory. Prerequisite: consent of instructor. Pass/Not Pass only.

UPPER-DIVISION

100 Special Topics in Social Ecology (4). Lecture, three hours; discussion, one hour. Special topics courses are offered from time to time. In general they focus on a topic from interdisciplinary perspectives. Course content varies with the interest of the instructor. Prerequisite: varies. May be repeated for credit as topics vary.

111 Advanced Research Methods (4). Lecture, three hours. For students planning to conduct senior research projects or apply to graduate school in social research fields. Topics include reviewing literature, preparing a research proposal, protecting human subjects, citing scholarly work, selecting or building measures, estimating sample size, interview and presentation skills. Prerequisites: Social Ecology 10 and 13 or equivalent.

E113 Social Ecology of Peace (4). Lecture, three hours. Examination of differing definitions of the problem of achieving peace and the special problems of seeking peace in the nuclear age. Same as International Studies 121. Formerly Environmental Analysis and Design E113. (VIII)

E127 Nuclear Environments (4). Lecture, three hours. Understanding the impact of the nuclear age on the environment and human health through the interrelated developments of nuclear power and nuclear weapons. The early years of weapon development, catastrophic environmental pollution, perils of nuclear power in the U.S. and Russia. Same as International Studies 122 and Public Health 168. Formerly Environmental Analysis and Design E127. (VIII)

131 Social Ecology of Health Promotion (4). Lecture, three hours. Core themes of Social Ecology are examined as they apply to major areas of health promotion research and practice. Students attend lectures and work collaboratively on team projects conducted in university and community settings. Prerequisite: consent of instructor. Same as Public Health 143.

150 Social Ecology of Technology (4). Lecture, three hours. Socio-ecological principles applied to technological change and innovation. Technological change as a result of interrelations between people and their socioeconomic environment. Organizational ecology of technology; life cycle concepts and history. Social ecology of technocapitalism and its networks. Prerequisites: Social Ecology 10 and 13 or equivalent.

181 Mentors in Higher Education (4). Seminar, three hours. Discussion of roles and functions of mentors in higher education. Specific mentoring issues include: personal skills, training, the sociocultural role of mentoring in higher education, student affirmative action, history and politics in higher education. Prerequisite: consent of instructor.

183A International Studies Forum (2). Lecture, 1.5 hours; discussion, .5 hours. A faculty-student forum featuring lecturers from a variety of institutions with discussion issues related to international studies. May be taken for credit four times. Same as International Studies 183A, Humanities 183A, and Social Science 183A.

183B Seminar in Mediation (4). Seminar, three hours. Students develop mediation skills and refine knowledge in the practice and theory of conflict resolution. Students who complete this course may serve as mediators in the Campus Mediation Program. Course is a prerequisite to completing Independent Study as an intern practicing mediation with the OC Human Relations Commission in small claims court. Same as Humanities 183B, International Studies 183B, and Social Science 183B.

183C Seminar in Conflict Resolution (4). Designed for students who are pursuing the minor in Conflict Resolution and/or International Studies major. Provides a forum in which students refine skills and theory in the study of cooperation and conflict, from local to global arenas. Students write a research paper. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Humanities 183C and Social Science 183C.

186A-B Senior Seminar on Global Sustainability I, II (2-2) F, W. Seminar, two hours. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations. **A:** Prepare bibliography. **B:** Prepare research proposal. In-progress grading for 186A-B, grade for sequence given upon completion of 186C. Prerequisites: senior standing, Biological Sciences 65, Environmental Analysis and Design E20, and Earth System Science 10. Same as Biological Sciences 191A-B and Earth System Science 190A-B.

186C Writing/Senior Seminar on Global Sustainability III (4) S. Seminar, four hours. Students attend weekly seminar to discuss current issues in global sustainability. Weekly attendance at Global Sustainability Forum also is required. Seminar utilized to analyze forum presentations and to prepare senior research paper. Prepare/write research paper under the direction of a faculty member. Prerequisites: Social Ecology 186A-B and satisfaction of the lower-division writing requirement. Same as Biological Sciences 191C and Earth System Science 190C.

H190A-B Honors Research (4-4). Seminar, three hours. Independent work on an individual research project in addition to participation in a mini pro-seminar in which faculty discuss their ongoing research. Students prepare a written proposal for a research project. **H190A:** Letter grade and Pass/Not Pass. **H190B:** Pass/Not Pass only. Prerequisites: acceptance into the Honors Program; junior or senior standing.

H190W Honors Seminar and Thesis (4). Seminar, three hours. Students write up their honors research project (H190A-B) and prepare an oral report which is presented at the honors seminar. Prerequisites: acceptance into the honors program; junior or senior standing.

194 Naturalistic Field Research (4). Lecture, three hours. Introduction to alternative models of experiential learning and to various methods of observation, assessment, and evaluation. Introduction to the nature of organizations and ethical issues that emerge from research and intervention in natural settings. Must be taken prior to Social Ecology 195. Enrollment in discussion section is required. Prerequisite: Social Ecology 10; satisfactory completion of the lower-division writing requirement; restricted to School of Social Ecology majors.

195 Field Study (2 to 8) F, W, S. Naturalistic observation and analysis of social issues and problems in combination with experiential learning in field placement sites in the areas of psychology and social services, criminology, and environmental studies. Prerequisites: Social Ecology 194; junior standing; restricted to School of Social Ecology majors. Pass/Not Pass only. May be taken for a total of 24 units.

198 Directed Studies (1 to 4) F, W, S. Prerequisite: consent of instructor. Pass/Not Pass only. May be repeated for credit.

199 Special Studies (1 to 4) F, W, S. Prerequisites: consent of instructor and junior or senior status. May be repeated for credit.

GRADUATE

200 Seminar in Social Ecology (4). Students are introduced to the classic and contemporary literature of human and social ecology and are expected to use the ecological paradigm to analyze social phenomena of interest to the differing subprograms.

250 Environmental Policy and Global Sustainability (4). Seminar organized around four transcendent questions: does the world value sustainability, what challenges must be met to move toward it, what are the roots of inequality, and is capitalism compatible with sustainability. Prerequisite: graduate standing or consent of instructor. Same as Public Health 241.

261 Strategies of Theory Development (4). The goals are (1) to examine key issues and controversies facing the development of social ecological theory, and (2) to encourage students to develop their own abilities as theorists. Strategies for enhancing creative hypothesis formation are emphasized.

264A-B Data Analysis (4). Provides an appreciation and understanding of statistics necessary to conduct applied research. Topics include approaches to and presentation of data, robust statistics, standardization techniques, multivariate regression, and analysis of variance. Prerequisite: graduate standing or consent of instructor.

266B Applied Logistic Regression (4). Develops statistical models to be used where the dependent variable is dichotomous. Applications to be considered include cohort and case-control analyses. Prerequisites: Social Ecology 264A-B or consent of instructor.

266D Analysis of Survival Data (4). Provides an introduction to survival analysis methods for the analysis of change in discrete dependent variables. Focuses on data collection strategies for obtaining longitudinal data and continuous-time hazards models. Communicates the variety and power of multivariate hazard models.

266E Applied Longitudinal Data Analysis (4). Longitudinal data feature measurements over a continuum and are often conceptualized as a trajectory describing the evolution of the response "over time." Course emphasizes use of the linear mixed model for the analysis of normally distributed, longitudinal responses. Prerequisites: Social Ecology 264B or Psychology and Social Behavior P264B or equivalent; graduate standing.

272A Structural Equation Modeling I (4). The general structural equation model is developed including path models, recursive and nonrecursive structural models, multiple indicator models, and confirmatory factor models. Use of LISREL and other software for estimating model parameters is covered. Prerequisites: Social Ecology 264A-B or consent of instructor. Formerly Social Ecology 266A.

272B Structural Equation Modeling II: Longitudinal and Advanced Topics (4). Provides hands-on experience with longitudinal and advanced structural equation models and will be of interest to students from a range of disciplines. Topics covered include confirmatory factor, latent growth curve, general growth mixture, and multi-level modeling. Prerequisite: Social Ecology 272A or consent of instructor.

275 Special Topics in Social Ecology (2 to 4). Topics covered vary with interests of the instructor. Prerequisite: consent of instructor. May be repeated for credit.

291 Program Evaluation (4). Students are introduced to the use of research techniques and statistical methods in assessing the effectiveness of social programs. Different evaluative models are discussed using examples of actual program evaluations. Prerequisites: two courses of graduate-level statistics. Intended for students in the Ph.D. program.

295 Master's Thesis Research and Writing (1 to 8). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only.

296 Doctoral Dissertation Research and Writing (1 to 12). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only. May be repeated for credit.

297 Field Studies (2 to 4) F, W, S

298 Directed Studies (2 to 4) F, W, S

299 Independent Study (2 to 8) F, W, S. Prerequisite: consent of instructor. May be repeated for credit.

399 University Supervised Teaching (2 to 4) F, W, S. Required of and limited to Teaching Assistants. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only.

DEPARTMENT OF CRIMINOLOGY, LAW AND SOCIETY

2340 Social Ecology II: (949) 824-5575
Simon A. Cole, **Department Chair**

Faculty

Arnold Binder: Research methodology, juvenile delinquency, police organization and methods

Kitty C. Calavita: Sociology of law, criminology, social deviance, immigration, and inequality

Simon A. Cole: Science, technology, law, and criminal justice

Susan Bibler Coutin: Law, culture, immigration, human rights, citizenship, political activism, Central America

Elliott Currie: Criminal justice policy in the U.S. and other countries, causes of violent crime, social context of delinquency and youth violence, etiology of drug abuse and assessment of drug policy, race and criminal justice

John D. Dombink: Crime and criminal justice, deviance and social control

Gilbert L. Geis: Crime and criminal justice

Michael R. Gottfredson: Criminology, theory, crime and policy

Sora Han: Law and popular culture, critical race theory, philosophies of punishment, feminism and psychoanalysis

John R. Hipp: Community context of crime, household decisions and neighborhood change, research methods

C. Ronald Huff: Criminology and public policy, wrongful convictions, gangs

Valerie Jenness: Links between deviance and social control (especially law), the politics of crime control and criminalization, social movements and social change, corrections and public policy

Paul D. Jesilow: Healthcare regulation, in particular the role of fraud; the police, in particular police-community relations

Elizabeth F. Loftus: Cognitive psychology, human memory, psychology and law

Mona Lynch: Law and society, psychology and law, punishment and society, race and criminal justice

Cheryl Maxson: Crime and delinquency, youth violence, street gangs, juvenile justice system and policing

Richard McCleary: Criminal justice, research methodology, statistics

James W. Meeker: Sociology of law, criminal justice, research methodology, statistics, access to civil justice

Joan Petersilia: Program evaluation, public policy, juvenile justice

Henry N. Pontell: White-collar and corporate crime, criminology, criminal justice, deviance and social control, sociology of law

Justin B. Richland: Legal discourse analysis and semiotics, anthropology of law, contemporary Native American law and politics, the history, structures, and practices of North American (post)colonialism

Donna C. Schuele: Law and society, American legal/constitutional history, constitutional law, civil rights and civil liberties, women and law, crime and gender, judicial process and politics, California legal history

Carroll Seron: Sociology of law, sociology of professions, law and society, sociology of legal profession, methods and police misconduct

William C. Thompson: Psychology and law, criminal justice, human judgment and decision making, use of social science in appellate litigation

George E. Tita: Criminology, community context of violence, urban youth gangs, homicide studies

Susan F. Turner: Sentencing and corrections, applied research methods

James Diego Vigil: Urban research, urban poverty, culture change, socialization and education, psychological anthropology, street gangs in cross-cultural perspective, Mexico and U.S. southwestern ethnohistory, and comparative ethnicity

Sara Wakefield: Criminology, life-course sociology and stratification, incarceration, prison reentry

Geoff Ward: Race relations, courts and sentencing, juvenile justice, social movements, justice workers

Affiliated Faculty

Joseph DiMento: Planning, land use and environmental law, use of social science in policy making, legal control of corporate behavior

Rubén G. Rumbaut: International migration, immigration laws, criminalization, incarceration, inequality

Charles "Tony" Smith: Law and legal institutions, comparative and international law

Christopher Tomlins: Law and humanities, law and society, legal history

David Theo Goldberg: Race and racism, social and political theory, social-legal studies/law and society, South Africa

Catherine Fisk: Labor and employment law, civil rights

Undergraduate Program

The Department of Criminology, Law and Society focuses on the problem of crime and on understanding the social, cultural, political, and economic forces that interact with the law. Basic courses present overviews of American legal systems with particular emphasis on criminal and juvenile justice, forms of criminal behavior, the role of law in understanding social and psychological phenomena, and the applications of sociological theory in understanding law and legal systems. Subsequent course work provides a deeper understanding of the causes and consequences of crime, criminal justice policy, and socio-legal theory. In addition, substantive areas of law, such as criminal, environmental, and family law, are introduced.

Students are provided with opportunities to become acquainted with the varieties of behavior that society chooses to control or regulate, the methods and institutions used to achieve that control or regulation, and the approaches aimed specifically at altering unacceptable behavior. In addition, there is provision for students to use their increasing knowledge of the law, its procedures, and institutions to enhance their understanding of the social sciences.

The course of study provides excellent preparation for law school and for graduate study in sociology, criminology, and criminal justice. Careers for students who terminate their University education at the baccalaureate level may be developed through placements in criminal justice and regulatory agencies, in organizations determining public policy, and in programs that deliver services to people who have difficulties with some aspect of the legal system.

Students are strongly encouraged to select electives in a variety of departments. Courses in areas such as Psychology, Sociology, Economics, and Political Science can provide a further context for the understanding of crime, law, and criminal justice, while courses in areas such as art history, theater, and music can enhance the quality of the student's entire life.

Field study placements are available in police departments, public defenders' offices, probation and parole agencies, the Orange County District Attorney's Office, the State juvenile detention system, the Orange County Victim/Witness Assistance Program, juvenile shelters, legislative offices, and in private legal firms.

REQUIREMENTS FOR THE B.A. DEGREE IN CRIMINOLOGY, LAW AND SOCIETY

University Requirements: See pages 54–61.

School Requirements: See page 428.

Departmental Requirements

Ten courses (40 units) as specified below:

- A. Three upper-division required courses (12 units); students must select one course from each of the following three groups:
 (1) The Legal System, Law and Society, C101, C102, C103, C104, C105; (2) Crime and Criminology, C106, C107, C108, C109, C110; (3) Formal Institutions of Social Control, C111, C112, C113, C114, C115.
- B. Seven upper-division elective courses (28 units) numbered C100–C191. (Courses taken to satisfy requirement A may not also be used to satisfy requirement B.)

Criminology, Law and Society Minor Requirements

Nine courses (36 units): Criminology, Law and Society C7, Social Ecology E8, Psychology and Social Behavior 9, or 11A, B, C, and six upper-division Criminology, Law and Society courses selected from C100–C191.

NOTE: Students pursuing a major in the School of Social Ecology may not use upper-division course work for both school, major, or minor requirements. No overlap is permitted. Social Ecology 198 and 199 may not be applied toward the minor.

Graduate Program

General information about the School of Social Ecology's graduate programs, including admission requirements, career opportunities, and Ph.D. program milestones, appears on pages 429–430. Specific information about the Department of Criminology, Law and Society's graduate program appears below.

M.A.S. IN CRIMINOLOGY, LAW AND SOCIETY

The Master of Advanced Study (M.A.S.) in Criminology, Law and Society, the first online degree program of its kind in the University of California system, prepares professionals for leadership positions in the criminal justice and legal communities. The curriculum emphasizes theoretical and practical applications on topics that are central to crime and its control, social policy, and the law. In keeping with one of the main tenets of the School of Social Ecology, faculty and students approach topics from a multidisciplinary perspective.

This program is ideally suited for professionals interested in or working in the criminal justice or legal fields who are seeking a graduate degree for career advancement. The program consists of 52 units of course work completed over a two-year period (six quarters) plus a one-week in-residence requirement during the first summer. In lieu of a thesis, students are required to take a capstone course in the winter quarter of the second year of study. A degree is awarded upon completion of 10 required courses, plus three elective courses. One traditional face-to-face course taken on the UCI campus, in an accelerated format (five days), is required at the beginning of a student's course of study, with the remaining courses all completed online.

PH.D. IN CRIMINOLOGY, LAW AND SOCIETY

The study of crime, institutional responses to illegal behavior, and the interaction of law and society are the foci of the doctoral program in Criminology, Law and Society. Students examine issues related to the etiology of crime, the process of changing criminal behavior, social regulation, the civil justice system, and the social and cultural context of law.

Students gain familiarity with a number of subjects including sentencing; crime rates; modes of modifying criminal behavior; police behavior; white collar and organized crime; policies against hate crimes; behavior of courts, juries, and regulatory agencies; environmental law; immigration lawmaking; Native American justice issues; and the interaction among law, culture, and identity. In general, students are introduced to the leading classical and contemporary issues in criminology, law and society and to ways of understanding them through interdisciplinary research. The program aims to develop theoretical sophistication and to prepare the graduate student for faculty positions at major universities; and for research and administrative work in institutions in the legal system, the criminal justice system, and related organizations.

In addition to the four core courses required of most Ph.D. students (Social Ecology 200, two additional quarters of graduate-level statistics, and one additional approved research methods course), students take five required courses, Research Methods (C201), Criminology I (C233A) and Criminology II (C233B), Law and Society I (C239A) and Law and Society II (C239B), and three elective courses in Criminology, Law and Society. These elective courses should be chosen in consultation with the student's faculty advisor. Students become involved in research activities from the earliest stages of their training and complete an independent, supervised research project during the second year of graduate study. Methods of research may include questionnaires and surveys, systematic field observation, computer simulation, legal analyses, and archival research. Students complete a written comprehensive examination during year three, which requires them to demonstrate mastery of major issues in criminology, and law and society. The normative time for advancement to candidacy is four years (three years for students who entered with a master's degree). Students are required to advance to candidacy by the end of fall quarter of their fifth year of study, adjusted for any approved leaves of absence. The fourth and, possibly, fifth years of study are devoted to developing and defending a dissertation proposal and completing dissertation research. The normative time for completion of the Ph.D. is six years, and the maximum time permitted is seven years. (For students who have waived two required courses and the second-year project based upon master's-level work completed at another institution, the time to degree is five years, with a maximum of six years.) All Ph.D. students in the Criminology, Law and Society program are required to pass a final oral defense of the dissertation. Opportunities for field placements in legal and criminal justice settings also are available.

Courses in Criminology, Law and Society

(*Schedule of Classes* designation: Crm/Law)

LOWER-DIVISION

C7 Introduction to Criminology, Law and Society (4). Lecture, three hours. Examines the major biological, sociological, and psychological explanations for crime and links them historically with prevailing systems of punishment. From classical criminology to positivism, investigates the evolution of criminological theories, their cultural and historical contexts, and their strengths and weaknesses. *Criminology, Law and Society, Social Ecology, Urban Studies, and Psychology and Social Behavior majors have first consideration for enrollment. (III)*

UPPER-DIVISION

C100 Special Topics in Criminology, Law and Society (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisites: Criminology, Law and Society C7 and, in some cases, consent of instructor. May be repeated for credit as topics vary.

C101 Civil Legal System (4). Lecture, three hours. Provides an overview of the American civil legal system and of certain fundamental legal concepts as well as an introduction to legal research. Reading, briefing and debating judicial opinions, legal research, and writing an appellate legal brief. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C102 Introduction to the Comparative Study of Legal Cultures (4). Lecture, three hours. Traces the anthropological and comparative cultural study of law from the nineteenth century to the present; briefly surveys the diversity of recorded legal cultures and critically examines key concepts which have been used to describe and classify them. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C103 American Socio-Legal Theory (4). Lecture, three hours. Evolution of American legal theory from nineteenth century to present in historical context of other human sciences; emphasizes shifting relation between legitimacy of legal decisions and legal system's relative autonomy; social science research use within legal system. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C104 Sociology of Law (4). Lecture, three hours. Examines law creation and law enforcement in their social and political context. Discusses the major theories of law and the modern state, and presents case studies in order to evaluate the strengths and weaknesses of these theoretical perspectives. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C105 Psychology and the Law (4). Lecture, three hours. Psychological assumptions of American legal system and mental health aspects of provision of criminal justice services. Civil commitment, insanity defense, competence to stand trial, jury selection, eye-witness identification. Use of police, courts, correctional institutions in prevention of behavior disorder. Prerequisite: Criminology, Law and Society C7 or C101. Same as Psychology and Social Behavior 193E. *Criminology, Law and Society, Social Ecology, and Psychology and Social Behavior majors have first consideration for enrollment.*

C106 Crime and Public Policy (4). Lecture, three hours. Explores nature and dimensions of crime in America and uses and limits of various strategies to control it. Topics include growth of imprisonment, the problem of domestic violence, the death penalty, gun control, and the potential of crime prevention programs. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C107 Deviance (4). Lecture, three hours. Perspectives on deviance and criminality in behavior, institution, community, and myth. The suitability of contemporary theories of deviant behavior. Same as Sociology 156 and Psychology 177D. *Criminology, Law and Society, Social Ecology, Sociology, and Psychology majors have first consideration for enrollment.*

C108 Criminological Theory (4). Lecture, three hours. Explores the question of crime causation from a number of theoretical perspectives in the social sciences. Schools of thought examined include utilitarianism, positivism, human ecology, social structural approaches, social process (learning) theories, labeling, and radical-critical (political) perspectives. Prerequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C109 Juvenile Delinquency (4). Lecture, three hours. Patterns of delinquent behavior, theories that explain behavior, current research aimed at enhancing exploratory power. Attempts to prevent and control delinquency are put in historical perspective. Development of the current juvenile justice system and evolution of modern juvenile law. Prerequisite: Criminology, Law and Society C7. Same as Psychology and Social Behavior 193B. *Criminology, Law and Society, Social Ecology, and Psychology and Social Behavior majors have first consideration for enrollment.*

C110 Community Context of Crime (4). Lecture, three hours. Examines the social context of high-crime communities, with special emphasis on the problems of poverty, joblessness, economic inequality, and racial discrimination. Assesses debates on the causes of these problems, and on the most effective policies to combat them. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C111 Theories of Punishment (4). Lecture, three hours. Survey of the various schools of thought regarding formal punishment theory. The purposes of legal sanctions are examined, including those of deterrence, rehabilitation, retribution, and incapacitation. Considers problems in realizing formal goals of punishment in practice. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C112 Legal Sanctions and Social Control (4). Lecture, three hours. Examination of criminal sanctions as mechanisms of social control. Includes the nature, function, and organization of courts as sanction generating institutions, and problems associated with punishing white-collar and corporate illegalities. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C113 Gender and Social Control (4). Lecture, three hours. Investigates how gender and social control interface such that each determines and reflects the other. Examines how the social world is organized around sex, sexuality, masculinities, femininities. Processes that regulate and channel social life, desire, conduct, differential allocation of social status. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C114 Miscarriages of Justice (4). Lecture, three hours. Systematically describes, explains, and analyzes the causes and consequences of the wrongful accusation, prosecution, incarceration, and sometimes even execution, of the innocent in the American criminal justice system. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C115 Prisons, Punishment, and Corrections (4). Lecture, three hours. A review of how the U.S. punishes and rehabilitates convicted law violators. The conflicts among the major purposes of sentencing—rehabilitation, deterrence, incapacitation—are discussed, as well as the effects of different sanctions on public safety, offender rehabilitation, and justice system costs. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C117 Imprisonment and Reentry (4). Lecture, three hours; discussion, one hour. Offers an overview of imprisonment and reentry in the contemporary United States. Examines the development of the prison in the United States and explores changes in its composition, structure, and purpose over time. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C120 Law and Inequality (4). Lecture, three hours. Various aspects of the law as related to three specific areas of inequality: immigration and immigrants, race, and gender. The role of law as a tool of social reform and limitations of the legal system historically in resolving inequality issues. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C121 Science and Law (4). Lecture, three hours. Explores how the law accommodates scientific knowledge and new technologies. Among the topics are ownership of biological materials, intellectual property in the digital age, and toxic torts. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C122 Constitutional Law (4). Lecture, three hours. Addresses the areas of freedom of speech, freedom of religion, the right to privacy, and discrimination. Specific issues include racial and gender bias, abortion, symbolic speech, freedom of the media, defamation, advocacy of violence, and obscenity. Prerequisite: Criminology, Law and Society C7. Criminology, Law and Society C122 and Political Science 171D or 174A may not both be taken for credit. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C123 Family Law (4). Lecture, three hours. Examines legal issues surrounding marriage, cohabitation, divorce, child custody and support, adoption, and the rights of parents and children in the family context. The findings of social science research are used to illuminate the legal issues. Prerequisite: Criminology, Law and Society C7 or C101. Same as Psychology and Social Behavior 193F. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C125 Child Development, the Law, and Social Policy (4). Lecture, three hours. Examines how psychology research and practice can inform areas of law and social policy affecting children and adolescents. Topics include education, mental health, reproductive rights, and delinquency. Goals are to evaluate research as well as identify the costs/benefits of current policies. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Psychology and Social Behavior 111D or 112D recommended. Same as Psychology and Social Behavior 120D. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C126 Drugs, Crime, and Social Control (4). Lecture, three hours. Drug abuse in the U.S.; the psychopharmacology of various drugs; biological, psychological, and sociological explanations for drug abuse. Policy issues are discussed; students will develop and defend a set of strategies for limiting harm done by drugs and drug laws. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C127 Hate Crimes (4). Lecture, three hours. Examines the causes, manifestations, and consequences of hate crimes and the larger social context within which they occur. The politics and dynamics of intergroup violence born of bigotry and manifested as discrimination; social policy designed to control bias-motivated violence. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C128 Environmental Law (4). Lecture, three hours. Environmental law as combination of traditional legal principles and newly created statutes, rules, and decisions applied to environmental protection. Investigates roles of courts, legislature, executive branch and administrative agencies, and private citizens attempting to regulate environmental quality. Federal and state laws utilized. Prerequisite: Social Ecology E8 or Planning, Policy, and Design 4. Same as Planning, Policy, and Design 133. *Criminology, Law and Society, Social Ecology, and Urban Studies majors have first consideration for enrollment.*

C129 International Environmental Management (4). Lecture, three hours. Network of intergovernmental organizations (the United Nations, in particular) and international nongovernmental organizations in the field of environmental management. Analysis of key international projects and sources of information. Lessons for the integration of international research expertise. Prerequisite: Criminology, Law and Society C7. Same as Planning, Policy, and Design 137 and International Studies 123. *Criminology, Law and Society, Social Ecology, Urban Studies, and International Studies majors have first consideration for enrollment.*

C130 Seminar on Gangs (4). Seminar, three hours. An overview of gangs, including the nature and definition of gangs; types of gangs; diversity of membership; theoretical explanations; criminal behavior; drug use and sales; law enforcement responses; gangs in correctional institutions; intervention and prevention strategies; and public policy issues. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C131 Organized Crime and American Society (4). Lecture, three hours. Examination of the phenomenon of American organized crime from a sociological perspective. Explanation of methods by which organized crime is tolerated at various levels of society. Emphasis on ways in which “underworld” interests interact with legitimate economic and political institutions. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C132 Forensic Science, Law, and Society (4). Lecture, three hours. Examines the use of “forensic science” to resolve issues arising in criminal cases including crime scene analysis, DNA testing, fingerprints, trace evidence comparisons, profiling, lie detectors, other forensic techniques; evaluation, statistical characterization, and legal admissibility of evidence; regulation of forensic laboratories. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C133 Homicide and Suicide (4). Lecture, three hours. Examines similarities and differences among homicide and suicide, two major causes of death. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C134 Victimless Crimes (4). Lecture, three hours. Examines major theoretical, empirical, and policy-oriented research related to the design, implementation, and analysis of government intervention, through the criminal sanction, in the spheres of vice and morality. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C136 Forensic Psychology (4). Seminar, three hours. Overviews all forensic psychology, then focuses on psychological analyses of criminal behavior, particularly violent behavior. Examines violence, sexual offending, and mental disorder related to crime with regard to clinical assessment, treatment, and rehabilitation; mental health services within forensic institutions. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Psychology and Social Behavior 102C; Psychology and Social

Behavior 178S or Criminology, Law and Society C149, or consent of instructor. Same as Psychology and Social Behavior 156C and Psychology 177F. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C137 Criminal Procedure (4). Lecture, three hours. Examines the law governing arrests (with and without a warrant); police detention; search and seizure; interrogation; use of informers, eavesdropping, wiretapping; examination and identification of suspects. Pretrial motions such as speedy trial and discovery of evidence may be covered. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C139 Police and Change (4). Lecture, three hours. Organizational efforts to modify police conduct are addressed by focusing on the history of policing in the United States including training, education, and the contributions of women. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C142 White-Collar Crime (4). Lecture, three hours. Examines criminal activity in business and corporate enterprise, organizations, and the professions. Theories regarding the causes and control of white-collar and corporate crime are covered as well as the numerous definitions of these terms. Same as Sociology 142. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C143 Media, Intellectual Property, and Cyberlaw (4). Lecture, three hours. Explores the personal and intellectual property rights and obligations in media and on the Internet. Critically evaluates the challenge of interpreting constitutional rights in the digital world. Topics include Internet regulation, free speech, privacy, crime, biopatents, and artificial intelligence. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C144 Criminal Law (4). Lecture, three hours. Deals specifically with the substantive nature of criminal law and its historical development. Focuses on understanding the development of fundamental doctrinal principles upon which criminal law is based, including *mens rea*, *actus reus*, homicide, causation, group criminality, and exculpation. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C145 Government Crime (4). Lecture, three hours. Examines the legal, organizational, and political issues involved in the generation and control of government lawlessness. Readings present historical and theoretical perspectives in the abuse of government authority and the ability of the legal system to control such behavior. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C147 Law and Social Change (4). Lecture, three hours. Explores the relationship of law to its social setting by considering both law as a product of social change and law as a source or medium of change. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C148 Geographic Information Systems (4). Lecture, one and one half hours; laboratory, one and one half hours. Basic geographic, cartographic, and GIS concepts including computer representation of physical, political, statistical, and social aspects of space using vector and grid-based maps. Experience with extensive geographic base map files and databases through use of GIS software (ArcView 3.x). Same as Public Health 166. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C149 Violence in Society (4). Lecture, three hours. Current theory and research on aggression; anger and violence as problems in individual and social functioning. Process and functions of anger examined with regard to normal behavior and psychopathology. The determinants, prevalence, and implications of violence in society are analyzed. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Psychology and Social Behavior 178S. *Criminology, Law and Society, Social Ecology, and Psychology and Social Behavior majors have first consideration for enrollment.*

C150 The Legal Profession (4). Lecture, three hours. Role of the legal profession in modern society, the diverse professional roles lawyers play, the American legal profession compared with that of other societies. “Litigation explosion,” ethical problems, interactions between lawyers and other professionals, training and socialization of new lawyers. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C151 Cybercrimes, Investigation, Forensics, and Prosecution (4).

Lecture, three hours. Examines crimes committed against persons, property, society, and the government in which a computer is used. How these computer crimes are committed, investigated, and ultimately prosecuted. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C152 Interrogation, Confession, and the Law (4). Lecture, three hours. In-depth examination of the social psychology of police interrogation in America, the evolution of American interrogation practices from the nineteenth century to the present, impact of law on police behavior and ideology, causes and consequences of false confessions, possibilities of reform. Same as Psychology and Social Behavior 193D. *Criminology, Law and Society, Social Ecology, and Psychology and Social Behavior majors have first consideration for enrollment.*

C154 Social Theory and the Law (4). Lecture, three hours. Provides theoretical tools to understand the relationship between law and society. Focuses on the connections between law and discourse, power, space and geography, economic markets, gender, race, class, democratic legitimacy, and the indeterminacy of language. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C156 Cross-Cultural Research on Urban Gangs (4). Lecture, three hours. Taking an urban policy approach, examines the background and contemporary traditions of gangs in several ethnic groups including African-, Asian-, and Mexican-Americans. Cross-cultural exploration of the varied facets of gang life. The major social-control institutions affecting them. Same as Chicano/Latino Studies 153. (VII)

C157 Language in Law and Society (4). Lecture, three hours. Considers the role of language in legal practice and power. Particular attention is paid to linguistic and discourse analytic research that covers topics such as: trial talk, language crimes, law talk in cross-cultural perspectives, and linguistic evidence. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C158 U. S. Law and Native Americans: Colonial Imagery, Native Nationhood (4). Lecture, three hours. Considers U.S. laws governing Native Americans and the way these laws shape and reflect popular conceptions of Native identity. Also surveys the legal practices that Native Nations themselves enact to articulate their sovereign status and identities. (VII)

C159 Employment Law and Society (4). Lecture, three hours. Covers federal and state laws that govern the employer-employee relationship, including "at will" employment; wrongful discharge; sexual harassment; discrimination; "whistle-blowing." Considers political, economic, ideological, and cultural factors that have shaped these laws and caused their evolution over time. Prerequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C161 Race, Ethnicity, and Social Control (4). Lecture, three hours. Provides a nuanced, sociological understanding of racial and ethnic group relations in contexts of criminal social control, and how social inequality, social movements, and social change manifest in these relations. Prerequisite: Criminology, Law and Society C7. Same as Chicano/Latino Studies 152A. (VII)

C162 Crime Hotspots (4). Lecture, three hours. Criminological theories of local public safety hazards or hotspots are introduced. Spatial statistics are developed for different types of hotspots. Hotspot policing theories are introduced and research on the effectiveness of policing strategies is reviewed.

C163 Ethics and Politics of Justice (4). Lecture, three hours. Provides theoretical perspective on how ethics and politics relate to criminal justice through an introduction to moral philosophy; consideration of specific theories of punishment and justice; and consideration of practical and empirical illustrations of the intersection of ethics, politics, and justice. Prerequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C164 Social Control of Delinquency (4). Lecture, three hours. Assumes familiarity with theories of delinquency, the juvenile justice system, and elements of juvenile law. Explores socio-historical origins and evolution of juvenile justice, current research and policy on delinquency prevention and treatment, and future directions of law, policy, and practice. Prerequisite or corequisite: Criminology, Law and Society C7; Criminology, Law and Society C109 recommended. Same as Psychology and Social Behavior 193C. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C165 The Death Penalty (4). Lecture, three hours. Examines why the U.S. continues to have a death penalty when so many other countries have abandoned it. Arguments for and against the death penalty are covered. Prerequisite or corequisite: Criminology, Law and Society C7. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C167 Crime Measurement (4). Lecture, three hours. The strengths and weaknesses of three crime measures (police reports, victim surveys, and offender self-reports) are illustrated through analyses of research articles. Common measurement problems are analyzed with a focus on reliability and validity.

C170 Federal Law Enforcement (4). Lecture, three hours. The peculiar legal, organizational concerns of the federal system of law enforcement and some of the crimes it is uniquely designed to address—white-collar crime, drug trafficking, racketeering, public corruption. Roles, responsibilities of the FBI, DEA, Customs, other policing agencies. Prerequisites: Criminology, Law and Society C7. *Criminology, Law and Society, Social Ecology, and Psychology and Social Behavior majors have first consideration for enrollment.*

C171 Latinos and the Law (4). Lecture, three hours; discussion, one hour. Examines a range of theoretical, empirical, and policy approaches to legal issues affecting the Latino population, with emphasis on California. Discusses topics concerning the purpose of law, the creation of law, and the enforcement of law. Same as Chicano/Latino Studies 142. (VII)

C172 Culture Change and the Mexican People (4). Lecture, three hours. Reviews culture contact and colonization, innovation diffusion, acculturation, assimilation, culture conflict and marginality, modernization, urbanization, legal transformations. Mexico and the Southwestern U.S. are reviewed through several centuries to better appreciate the indigenous base of the Mexican people. Same as Chicano/Latino Studies 155. (VII)

C176 Classics in Crime Cinema (4). Lecture, three hours. A multidimensional understanding of crime films and how they shape public thinking about crime and criminals. Criminology, Law, and Society C176 and C20 may not both be taken for credit.

C177 Eyewitness Testimony (4). Lecture, three hours. Faulty eyewitness testimony is a major cause of wrongful convictions. Covers the fast-growing topic of eyewitness testimony and memory for real-world events, both how psychologists study eyewitness capacity, and how the legal system has dealt with eyewitness issues. Prerequisites: Social Ecology 10 and senior standing. Same as Psychology and Social Behavior 193G. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C181 Contemporary Legal Issues (4). Lecture, three hours. An in-depth analysis of current legal issues viewed from their political and constitutional perspectives. Issues studied are determined by instructor and student interest. Prerequisite: consent of instructor. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

C185 Criminal Justice System Capacity (4). Lecture, three hours. Examination of "system capacity" in criminological and criminal justice related research and how it can be used to explain and describe current problems and practices in the American legal system. Limitations of sanctioning criminals due to political, physical space, and resource constraints. Prerequisite: Criminology, Law and Society C7. *Criminology, Law and Society, Social Ecology, and Chicano/Latino Studies majors have first consideration for enrollment.*

C191 Law and Modernity (4). Lecture, three hours. The rise and spread of Enlightenment legal traditions, social contract theory, individual rights, ideologies of "liberty, equality, fraternity"; contradictions of liberal law, its understandings of "primitive" and "civilized"; pervasive myths of property, difference, race, and rights. Reading- and writing-intensive. Same as Anthropology 127A. (VIII)

C196 Research Seminar in Criminology, Law and Society (4). Seminar, three hours. Special topics research seminar. Content varies with interest of instructor. Capstone research opportunity with Criminology, Law and Society faculty members. Prerequisites: upper-division standing and consent of instructor. May be repeated for credit as topics vary. *Criminology, Law and Society and Social Ecology majors have first consideration for enrollment.*

GRADUATE

C201 Research Methods (4). An introduction to techniques of inductive methodologies, including qualitative interviewing and participant observation, and deductive methodologies, including survey research and experimental and quasi-experimental design. Provides a sound overview of research methodology with tools to pursue specific methods in greater design. Prerequisite: graduate standing or consent of instructor.

C207 Development Control Law and Policy (4). Investigates legal and institutional frameworks for development control. Review of constitutional issues implicated in land-use regulation. Traces development control historically and analyzes contemporary approaches to land-use control which reflect environmental and economic development concerns. Prerequisite: graduate standing. Same as Planning, Policy, and Design 207.

C210 Introduction to Criminology, Law and Society (4). Familiarizes students with the interrelated fields of criminology, law and society studies, and criminal justice studies. Organized around three well-established interdisciplinary literatures: criminology, sociological studies, and criminal justice studies. Prerequisite: graduate standing or consent of instructor.

C211 Legal Institutions and Society (4). Acquaints students with the institutions of U.S. legal system and its operations, as well as with the constitutional framework undergirding this system, and defines the relationship between U.S. citizens and government at a variety of levels. Prerequisite: graduate standing or consent of instructor.

C212 Police, Courts, and Corrections (4). Focuses on basic policy issues in the administration of the criminal justice system. The key elements of the criminal justice system are police, courts, and corrections. Prepares students for continued study of these organizations. Prerequisite: graduate standing or consent of instructor.

C213 Crime and Social Deviance (4). Examines the major social scientific perspectives on criminal and deviant behavior. Specific deviant and criminal activities are described and explained using established theoretical frameworks. Prerequisite: graduate standing or consent of instructor.

C214 Research Methods (4) Structures research methodology, the approach to developing and evaluating knowledge of the sciences for use in criminal justice professional activities. Special emphasis on differentiating scientific approaches from pseudo-science. Prerequisite: graduate standing or consent of instructor.

C215 Applied Statistics (4). Provides a basis for the use of fundamental statistical analysis techniques for solving public policy and management problems through a series of assignments, examinations, and online discussions and demonstrations. Prerequisite: graduate standing or consent of instructor.

C216 Public Policy, Crime, and Criminal Justice (4). Increases understanding of crime, violence, and the criminal justice system. Assesses the state of knowledge on key policy issues of our time. Discusses the contribution of communities, schools, employment, drugs, guns, and alcohol to crime and violence. Prerequisite: graduate standing or consent of instructor.

C217 Leadership (4). Introduces concepts, ideas, and theories about leadership and its operation. Explores leadership concepts through interviews with leaders from the community and fellow classmates. Prerequisite: graduate standing or consent of instructor.

C218 Social Problems, Law, and Policy (4). Capstone course for the M.A.S. program in Criminology, Law and Society. Students choose a social problem related to crime, criminal justice, and law; relate the problem to legal and social issues; and devise a plan of action to research the problem. Open to M.A.S. students only.

C219 Hate Crime (4). Examines the causes, manifestations, and consequences of hate crimes, as well as the larger social context within which they occur, are reacted to, and seem to be proliferating. Prerequisite: graduate standing or consent of instructor.

C221 Sentencing and Corrections (4). Reviews U.S. attempts to punish and rehabilitate convicted law violators. Conflicts among major purposes of sentencing (rehabilitation, deterrence, incapacitation, and retribution) are discussed, as well as effects of different sanctions on public safety, offender rehabilitation, and justice system costs. Prerequisite: graduate standing or consent of instructor.

C222 Street Ethnography (4). Focuses on urban street populations, especially gangs, and outlines some of the major conceptual and theoretical issues related to this topic and the processes of street socialization. Methods of inquiry include mapping, ethnohistory, survey questionnaires, and other quantitative techniques. Prerequisite: graduate standing or consent of instructor. Same as Chicano/Latino Studies 217.

C224 Organizational Perspectives on the Legal System (4). Familiarizes students with organization theory and research as ways to make sense of, navigate, and act on the legal system. Acquaints students with major frameworks in organization theory and their application to the system of legal organizations. Prerequisite: graduate standing or consent of instructor.

C225 Consequences of Imprisonment (4). Reviews imprisonment and its consequences in the United States. Views prison and inmates as part of (rather than separate from) society. Examines the effects of prison on American society, the family, the labor market, and the community. Prerequisite: graduate standing or consent of instructor.

C230 Crime and Public Policy (4). Discusses the measurement of violent crime; violent offenders and their victims; theoretical explanations of violence; the contribution of the media, drugs, guns, and alcohol to violence; and how the justice system treats and punishes violent offenders. Prerequisite: graduate standing or consent of instructor.

C232 Juvenile Delinquency (4). Examines the major theoretical perspectives regarding the onset, persistence, and desistance of juvenile delinquency and examines empirical evidence for each perspective. Prerequisite: graduate standing or consent of instructor.

C233A-B Foundational Criminology I, II (4-4). A two-course sequence which introduces students to the dominant theories in modern criminology, their theoretical antecedents and extensions, major empirical tests and implications for programs, policy, and practice. **C233A:** Focuses on micro-level, individual theories. **C233B:** Focuses on macro-level theories.

C234 Anthropology of Law (4). Law has been a key site of anthropological inquiry since the discipline's nineteenth-century origins. Course introduces and critically assesses the contributions anthropology has made to sociological trends. Prerequisite: graduate standing or consent of instructor.

C235 Theories of Crime (4). Examines classical and contemporary theories of crime and crime control with special emphasis on the implications of theory for public and social action. Prerequisite: graduate standing or consent of instructor.

C236 Gender and Power in Law and Society (4). Focuses on questions of gender and sexuality in law and society studies. Drawing on a variety of theoretical frameworks, especially feminist legal theory, examines social processes and structures related to legal regulation, inequality, and social change. Prerequisite: graduate standing or consent of instructor.

C237 Legal Reasoning (4). Introduction to law and legal process; use of legal source materials; history and assumptions underlying modern legal reasoning. Key jurisprudential perspectives, development and application of constitutional doctrines (focus on equal protection and right of privacy), and procedure and evidence issues. Prerequisite: graduate standing or consent of instructor.

C238 White-Collar Crime (4). Examines the illegal behavior of individuals who commit crimes in the course of their employment. Special attention will be paid to ways in which power and organizational structure affect the behavior of the white-collar offenders. Prerequisite: graduate standing or consent of instructor.

C239A Law and Society I (4). Provides an introduction to the law and society field from its origins in social scientific, legal, and philosophical scholarship during the eighteenth, nineteenth, and early-twentieth centuries. Formerly Criminology, Law, and Society C239.

C239B Law and Society II (4). Building on Law and Society I, addresses contemporary issues in the field from mid-twentieth century to the present with emphasis on the degree to which the field's foundational assumptions are being challenged, refined, or confirmed through current research. Prerequisite: Criminology, Law, and Society C239A.

C241 Race, Ethnicity, and Social Control (4). Origins and organization of racialized social control, with emphasis on criminal justice. Racial politics of criminal/juvenile justice considered in comparative (historical and international) perspective. Exploration of theoretical and methodological issues for research on race, ethnicity, and social control. Prerequisite: graduate standing or consent of instructor. Same as Chicano/Latino Studies 221.

C245 Social Science and the Legal Process (4). Examines the use (and misuse) of social science in the legal process, focusing on role of social science evidence in trial and appellate decision making. Test-case litigation in which social science has been used to challenge laws or support reform. Prerequisite: graduate standing or consent of instructor.

C248 Geographic Information Systems (4). Prepares students to become proficient in the basic GIS functionality including visualization, data management, and spatial analysis. Prerequisite: graduate standing or consent of instructor.

C249 Law and Morality (4). Examines major theoretical, empirical, and policy-oriented research related to the design, implementation, and analysis of government intervention, through the criminal sanction, in the spheres of vice and morality. Prerequisite: graduate standing or consent of instructor.

C251 Qualitative Criminological Analysis (4). Examines issues and strategies involved in the collection and analysis of qualitative data. Application of qualitative research methods with respect to criminology, law and society. Prerequisite: graduate standing or consent of instructor.

C252 Issues in Environmental Law and Policy (4). Treatment of legal and policy strategies for promoting environmental protection and deterring environmental degradation within the context of other societal objectives. Topical approach with a focus on problems of special interest to criminologists and to environmental policy specialists. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 252.

C255 Public Policy (4). Explores different approaches to public policy analysis, the diverse conceptions of the goals and objectives that should be served by policy, and the appropriate role of the policy analyst. Policy consequences are traced to indirect and subtle incentives and disincentives. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 221 and Political Science 221A.

C263 Eyewitness Testimony (4). Examines the evidence that shows that faulty eyewitness memory is the major cause of wrongful convictions. Explores what the legal system thinks of eyewitness testimony and how the legal system has dealt with eyewitness issues. Prerequisite: graduate standing or consent of instructor. Same as Psychology and Social Behavior P263.

C265 Memory and the Law (4). Examines the controversial topic of repressed memory, or perception and memory of real-world events. Prerequisite: graduate standing or consent of instructor. Same as Psychology and Social Behavior P265.

C275 Special Topics in Criminology, Law and Society (4). Topics covered vary with interests of instructor. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

C296 Doctoral Dissertation Research and Writing (2 to 12). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only. May be repeated for credit.

C298 Directed Studies (2 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

C299 Independent Study (2 to 8). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

DEPARTMENT OF PLANNING, POLICY, AND DESIGN

202 Social Ecology I; (949) 824-0563

<http://socialecology.uci.edu/ppd>

David L. Feldman, **Department Chair**

Faculty

M. Victoria Basolo: Housing and community development, urban governance, regionalism, and metropolitan politics

Victoria A. Beard: Planning in developing countries, community-based

planning, poverty reduction, planning theory and population studies

Marlon G. Boarnet: Transportation, urban growth patterns, regional science, urban economics

Scott A. Bollens: Ethnicity and urban planning, urban growth policy,

metropolitan governance, intergovernmental approaches to planning

Tim-Allen Bruckner: Health policy and planning, health promotion, social and economic variation in health services

Ken Chew: Historical and applied demography, urban and environmental studies

Ross F. Conner (*Emeritus*): Evaluation research and social psychology, health promotion

Joseph F. DiMento: Planning, land use and environmental law, use of social science in policy making, legal control of corporate behavior

David L. Feldman: Water resources policy, global climate change, ethics and environmental decisions, adaptive management and sustainable development

Martha Feldman: Organization theory and behavior, stability and change in organizations, decision making and information processing

Ajay Garde: Urban design, urban form, sustainable growth

John D. Houston: Transportation, air pollution, urban inequality, environmental equity, spatial analysis

Helen Ingram (*Emerita*): Public policy, U.S.-Mexico relations, environmental resource management

Raul Perez Lejano: Environmental governance, policy analysis, collective action, social networks and governance, integrative policy analysis

Richard Matthew: Environment, conflict, and peacebuilding; transnational threat networks; international ethics

Sanjoy Mazumdar: Environmental studies and design, organizational analysis, management and planning, and social and behavioral aspects of architecture

Daniel Stokols: Health impacts of environmental stressors, environmental design and social behavior, science of team science

Luis Suarez-Villa: Technology, international development, political economy

Rudolpho D. Torres: Heterodox economics, urban surveillance studies,

political sociology, spatial sociology, urban studies, racism and comparative migration studies in the U.S. and Western Europe

Affiliated Faculty

Hoda Anton-Culver: Genetic epidemiology

Jan K. Brueckner: Urban economics

William Cooper: Environmental chemistry

Paul J. Feldstein: Economics of health care

John Hipp: Neighborhood change and crime, quantitative methods

David Iglar: California and the American west, environmental history, Pacific history

Richard McCleary: Criminal justice, research methodology, statistics

Michael G. McNally: Travel behavior, transportation systems analysis

David S. Meyer: Sociology

Judy Olson: Information sciences, human-computer interaction

Mark P. Petracca: Political science

Jean-Daniel M. Saphores: Environmental and natural resource economics and policy, transportation economics, planning and policy, quantitative methods

David A. Smith: Urbanization, comparative historical sociology, political sociology, world-system analysis

George Tita: Community context of crime, spatial analysis

Kerry D. Vandell: Real estate market dynamics, urban and economic amenities

Linda Trinh Võ: Asian American communities, social inequality, ethnography

The Department of Planning, Policy, and Design utilizes an interdisciplinary approach to the study of urban and regional planning, public policy issues, and the built environment. The Department faculty devote their scholarly and teaching efforts to theory-driven and empirically oriented urban research and their interests include urban and community development, environmental policy, health promotion and policy, and urban design and behavior. The faculty focuses on education in urban, social, public policy, and environmental problems.

The Department offers the B.A. degree in Urban Studies; undergraduate minors in Urban Studies, Urban and Regional Planning, and Environmental Design; the Ph.D. degree in Planning, Policy, and Design; the Master of Public Policy; and the Master of Urban and Regional Planning professional degree (fully accredited by the national Planning Accreditation Board). The Department's graduate degree programs feature innovative teaching often involving students in community projects, and a significant degree of accessibility by students to faculty members.

The faculty members in the Department are productive and influential scholars. The Department's teaching, research, and graduate training utilize UCI's proximity to both urban centers and planned communities, as well as the University's location within the dynamic and multicultural Southern California and Pacific Rim regions. Collaborative academic and research ties are maintained with UCI's Institute of Transportation Studies, Center for Global Peace and Conflict Studies, Newkirk Center for Science and Society, Focused Research Group on International Environmental Policy, Center for Community Health, Community Outreach Partnership Center, Center for Inequality and Social Justice, Center for Unconventional Security Affairs, Center for Organizational Research, and the Urban Water Research Center.

The common mission linking the Department's undergraduate, master's, and doctorate-level instruction and faculty research efforts is to bring applied research to the cause of bettering individuals, neighborhoods, communities, and regions. Southern California has grown dramatically over the past four decades and will soon become the nation's largest urban corridor. The challenges to maintain the quality of life, provide employment opportunities, and reduce the deep socioeconomic disparities of this bi-national and multicultural metropolitan region are enormous. Extremely diverse, multiethnic communities face the necessity of solving their problems in ways that are acceptable to their populations. Older central city areas that are vital to the region face issues of social and economic sustainability. The need to create employment opportunities, through the application of new technologies in industries and services, will be a constant feature of an urban region undergoing such population increases. At the same time, urban growth and transportation will have to meet increasingly stringent environmental regulations that can safeguard the population's health and quality of the diverse natural environments. The urban design and landscape of most communities stand to be reshaped as never before, as the building stock ages and the need to redevelop intensifies.

The Department is grouped into four major clusters, each addressing sets of important issues to contemporary society. Faculty members and students who study urban and community development examine contemporary planning approaches to managing local, community, and regional development and explore the spatial dynamics of urbanization in diverse settings and how public policy can guide urban and regional growth to balance environmental and economic concerns. Faculty members and students engaged in design-behavior research investigate the interrelationships of people and their socio-physical environments at all scales, from micro to macro, with emphasis on urban design and community-scale issues. Faculty members and students who examine environmental policy focus on the environment and natural resources as important policy and planning issues and provide a clear understanding about how politics, economics, ethics, and institutions affect planning and policy choices. Finally, faculty members and students who study health promotion and policy investigate issues at the interface between (1) urban planning and health policy and (2) community and individual health. They examine the public welfare, psychological, and health implications of social and physical planning, and the techniques and goals of public health policy making.

Undergraduate Program

Undergraduate students who major in Urban Studies will become acquainted with the global challenges of urbanization and the analytical skills needed for addressing them. Students will acquire the background for entering graduate study in related fields, including urban planning, community and economic development, and transportation, to name only a few, or for seeking entry-level positions in fields that address urban problems, including urban planning, community development, transportation, and housing.

REQUIREMENTS FOR THE B.A. DEGREE IN URBAN STUDIES

University Requirements: See pages 54–61.

School Requirements: See page 428.

Departmental Requirements

Twelve courses (48 units) as specified below:

- A. Four lower-division courses: Planning, Policy, and Design 4; Economics 20A; Political Science 21A or 51A; and Planning, Policy, and Design 40 or Sociology 43.
- B. Eight upper-division elective courses, including at least one three-course "integrative string," must be completed. An integrative string consists of one designated integrative course plus any two other electives from the same course cluster. The course clusters and their respective integrative courses are as follows:

Urban and Community Development: Planning, Policy, and Design 100, 101 (integrative course), 102, 103, 105, 106, 107 (integrative course), 108, 109, 110, 111, 112, Economics 144A-B.

Urban and Environmental Sustainability: Planning, Policy, and Design 100, 131 (integrative course), 132, 133, 134, (integrative course), 135, 136, 137, 138, 139, 140.

Urban and Environmental Design: Planning, Policy, and Design 100, 151 (integrative course), 152, 153, 154 (integrative course), 155, 156.

Urban Governance: Planning, Policy, and Design 100, 166 (integrative course), 167, 168, 169, 170, 171, 172, 173, 174, 175.

Urban Studies Minor Requirements

Eight courses (32 units): Planning, Policy, and Design 4 and seven additional courses selected from Planning, Policy, and Design 40, 100, 101, 102, 103, 105, 106, 113, 166, 172, 174, 177.

NOTE: A maximum of two courses may be counted toward both the minor in Urban Studies and the minors in Urban and Regional Planning, Environmental Design, *or* the major in Social Ecology.

Urban and Regional Planning Minor Requirements

Nine courses (36 units): Planning, Policy, and Design 4, 107, and seven additional upper-division courses selected from Planning, Policy, and Design 108, 109, 110, 111, 112, 113, 132, 133, 135, 137, 138, 139, 155, 156, 166, 167, 169, 176.

NOTE: A maximum of two courses may be counted toward both the minor in Urban and Regional Planning and the minors in Urban Studies, Environmental Design, *or* the majors in Urban Studies or Social Ecology.

Environmental Design Minor Requirements

Eight courses (32 units): Planning, Policy, and Design 151, 152, 153, and five additional courses selected from Planning, Policy, and Design 40, 133, 136, 154, 155, 156, Art History 145A, 145B, 145C.

NOTE: A maximum of two courses may be counted toward both the minor in Environmental Design and the minor in Urban and Regional Planning, *or* the majors in Urban Studies or Social Ecology.

Graduate Program

General information about the School of Social Ecology's graduate programs, including admission requirements, career opportunities, and Ph.D. program milestones, appears on pages 429–430. Specific information about the Department of Planning, Policy, and Design's graduate program appears below.

MASTER OF PUBLIC POLICY

The Master of Public Policy (M.P.P.) program is a two-year professional degree program administered by both the School of Social Ecology and the School of Social Sciences. Students are required to complete 72 units of graduate courses. In the first year, students will attend an introductory conference, participate in a workshop, and take seven core courses and two elective courses. In the summer after the first year, students will participate in a policy-relevant internship in an appropriate government, business, or nonprofit setting. In the second year, students take three core courses and five elective courses.

The core course requirements in year one of the program are Qualitative Methods and Public Policy, Statistical Methods for Public Policy, Information and the Policy Process, Microeconomics and Public Policy, Policy Processes and Institutions of Governance, Collaborative Governance and Public Management, and Social Mobilization, Power, and Justice. The core course requirements in year two are The Economics of Government, Policy and Ethics, and Capstone Research Project and Briefing.

Additional information is available at <http://mpp.web.uci.edu>.

MASTER OF URBAN AND REGIONAL PLANNING

The Master of Urban and Regional Planning (M.U.R.P.) provides students with a rigorous intellectual foundation and critical analytical skills that prepare them to work as public, private, and non-governmental planners. The program is fully accredited by the national Planning Accreditation Board and has 17 core full-time faculty. Students gain knowledge of planning problems and practices through a series of courses related to the environmental, economic, and social challenges in Southern California, and the United States, as well as other national contexts.

A total of 72 graduate units are necessary to satisfy the master's degree requirements—including 36–40 units of core courses and successful completion of a capstone project, thesis, or comprehensive examination. A normal course load is 12 units per quarter (three courses), which enables students to complete the degree in two years. Required core courses are History of Urban Planning (202), Theoretical Foundations of Planning (203), Microeconomics for Policy Analysis (206), Qualitative Analysis for Planners (214), and Planning and Design Graphics: Fundamentals. Students are required to take three additional courses from the subject areas of methods, law, and urban settlements, selected from a menu of courses approved to satisfy this requirement. The curriculum culminates with a capstone requirement that may be fulfilled through one of the following options: (1) completion of a Professional Report (PR). This entails a two-quarter course sequence, comprising Professional Report (292), followed by four units of Independent Study (299) under continued supervision of the original PR faculty advisor; (2) completion of a two-quarter Practicum sequence; (3) a comprehensive examination; or (4) a master's thesis. Students admitted into the thesis option must previously complete Research Design (297).

Students complete seven elective courses to develop an area of expertise within a substantive area of urban and regional planning practice. Some examples of areas of concentration include affordable housing, international development planning, environmental planning, health and social service planning, and economic development, regional growth management, state and municipal

governance, community mobilization, urban design and transportation planning. Students work with faculty members to define their concentration and identify appropriate electives. Elective courses should be selected from within as well as outside the Department of Planning, Policy, and Design.

The program supports a diverse set of educational opportunities for master's students. Students are eligible to apply to the Housing Fellows Program and Community Scholars Program. Students are also encouraged to incorporate an international educational experience as part of their degree either through the University of California's Education Abroad Program (EAP) or the Network for European and U.S. Regional Urban Studies program (NEURUS). Practical experience in planning in the form of part-time planning internships is also encouraged.

The range of employment opportunities for planners in the public, private, and non-governmental sectors is expanding due to rapid urbanization, rising concerns over environmental issues, and increases in social inequality. Career paths exist in government agencies dealing with urban planning, economic development, transportation, regional growth management, air quality, water treatment, and public utilities. Employment possibilities also exist with private consulting firms specializing in environmental impact assessment as well as residential and commercial development firms. Finally, planners are increasingly pursuing meaningful careers in the growing non-governmental or third sector. These career opportunities include working with environmental and conservation organizations, community-based organizations, advocacy groups, and labor unions.

Concurrent Master's Degree Program with Civil and Environmental Engineering

The Department of Planning, Policy, and Design (PPD) and the Department of Civil and Environmental Engineering (CEE) in The Henry Samueli School of Engineering offer a concurrent degree program that allows students to earn both a master's in Civil Engineering (M.S.) and a master's in Urban and Regional Planning (M.U.R.P.) in two years (instead of more than three years if these degrees were pursued sequentially). The concurrent degree program requires 72 units of study and is organized around two tracks: (1) transportation systems, and (2) environmental hydrology and water resources. The program core comprises 15 graduate courses for the transportation systems track, and 13 graduate and two undergraduate courses for the environmental hydrology and water resources track.

Students choose between a thesis option and a comprehensive examination option. The thesis option requires completion of 72 units of study (eight of which may be taken in conjunction with the thesis research); completion of an original research project and the writing of a thesis to describe it; completion of required core courses; and completion of enough units of approved electives to meet the total requirement of 72 units. The comprehensive examination option also requires completion of 72 units of study as well as a professional report, which represents a substantial piece of planning practice, as the capstone event. These units of study include core courses and enough units of approved electives to meet the total requirement of 72 units, with no redundancy of core courses in either PPD or CEE. Electives may include as many as eight units of independent study or approved undergraduate courses.

Undergraduates seeking admission to the concurrent master's degree program should have a strong record of course work in disciplines related to civil engineering and urban planning, and they must meet the requirements for admission in both departments. For more information about these requirements, see <http://www.eng.uci.edu/grad/programs/cee/admissions>, and <http://ppd.sococo.uci.edu/pages/admissions>.

Ph.D. IN PLANNING, POLICY, AND DESIGN

Today's complex urban, social, and environmental issues can best be understood by researchers who can work across disciplinary boundaries, and who understand the relationship of research to action. For example, efforts to control transportation problems by building neighborhoods that encourage alternatives to the automobile require an understanding of travel behavior and human interactions with the built environment. Understanding how to reduce tobacco use requires an appreciation of how behavior is shaped by programmatic interventions, community settings and norms, and policy tools. Environmental cooperation across national borders often requires understanding of political processes, infrastructure systems, and metropolitan structure and governance in regions, such as the U.S.-Mexico border, where population is concentrated in urban settlements that span the border. And, issues of public safety are increasingly related to the design of public and private spaces, and how those spaces are used and regulated.

In all of these areas, public and private officials are increasingly working on topics that span the boundaries of several traditional academic disciplines. The Planning, Policy, and Design (PPD) doctoral program at the University of California, Irvine trains scholars for national and international prominence in the analysis of social problems related to the built, natural, and institutional environments. Faculty members and students combine perspectives from urban planning, public policy, and design behavior. The Planning, Policy, and Design Ph.D. is based on the Department's internationally prominent research and teaching strengths, including design-behavior research, environmental policy, health promotion and policy, and urban and community development. Students in the Ph.D. program take a common core of classes, and then specialize in study related to their research interests. Students may design their own specialization or may follow the guidelines provided to specialize in Policy and/or Urban and Regional Planning. In either case, the elective courses must be approved by the student's faculty advisory committee.

The Ph.D. program consists of four components: course work, comprehensive exams, advancing to candidacy, and dissertation research, writing, and defense. Each component is described below. A typical pattern for completion of requirements is the following:

Years 1 and 2: Take required departmental courses supplemented by electives.

September after year 2: Take comprehensive exams.

Year 3: Finish required course work, write and defend dissertation prospectus, advance to candidacy.

Years 4–6: Dissertation research and writing (students are expected to complete and defend their dissertations within nine quarters of advancing to candidacy).

Students must also TA for at least one quarter. The normative time for completion of the Ph.D. in Planning, Policy, and Design is six years, and the maximum time permitted in seven years.

The following courses are required of all students and must be completed before advancement to candidacy: Social Ecology 200 (Seminar in Social Ecology), Planning, Policy, and Design 297 (Research Design); two of the following three research methods courses: Social Ecology 264A (Data Analysis) or equivalent, Social Ecology 264B (Data Analysis) or equivalent, Planning, Policy, and Design 209 (Qualitative Research Methods) or equivalent; one advanced research methods course; two courses providing disciplinary/theoretical orientation; two quarters of Planning, Policy, and Design 298 or 299 (Independent or Directed Study); and nine electives.

Graduates with a doctorate degree in Planning, Policy, and Design are employed in a wide array of activities, ranging from university teaching and research, to administrative and research-oriented positions in governmental agencies, international organizations, nonprofit organizations, and private consulting practices.

Courses in Planning, Policy, and Design

(*Schedule of Classes* designation: PP&D)

LOWER-DIVISION

4 Introduction to Urban Studies (4). Lecture, three hours. Introduces the substantive areas, concepts, and tools in the field of urban studies. Acquaints students with physical, environmental, social, economic, and political dimensions of cities. Examines the challenges facing cities, including poverty, sustainability, development, globalization, and others. *School of Social Ecology and Urban Studies majors have first consideration for enrollment. (III)*

40 Urban Sociology (4). Lecture, three hours. Overview of theoretical, substantive, and policy issues in urban sociology. History of urbanization, the school of human ecology, and recent trends regarding urbanism. Time is devoted to understanding the causes and possible solutions to urban problems. Planning, Policy, and Design 40 and Sociology 43 may not both be taken for credit. Formerly Planning, Policy, and Design 104.

UPPER-DIVISION

100 Special Topics in Urban Studies (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisite: in some cases, consent of instructor. May be repeated for credit as topics vary. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

URBAN AND COMMUNITY DEVELOPMENT

101 Urbanization and Social Change (4). Lecture, three hours. Examines interactions between social structure and physical space: (1) the contemporary evolution of cities and their hinterlands in the U.S.; (2) patterns of urbanization in the Third World; and, as background for understanding these developments, (3) the re-emergence of cities in Medieval Europe. Prerequisite: Planning, Policy, and Design 4. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

102 Urban Inequality (4). Lecture, three hours. Examines structural inequality and the influence that urbanization has in affecting race, ethnic, and class relations. Explores how race/ethnicity, class, urban space, housing, economic development, public education and land policy intersect in cities, both historically and today. *Urban Studies, Social Ecology, and Public Health Policy majors have first consideration for enrollment.*

103 Comparative Urbanization in a Developing World (4). Lecture, three hours. Provides an introduction to comparative urbanization in developing countries. First introduces students to the geography, history, and theories of urbanization, and then reviews urban planning, public policy, and governance. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

105 California's Population (4). Lecture, three hours. Surveys California's human population (past, present, and future) and its interactions with trends in society, government, the economy, and the environment. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

106 Technology and Economic Development (4). Lecture, three hours. Covers importance of technology for urban economic and social development. Concepts of technological innovation and diffusion, and their relevance for cities and metropolitan areas. Principles of networks and their importance for diffusion. Relationship of technology with urban infrastructure and metropolitan form. Prerequisites: Social Ecology 10 and 13 or equivalent. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

107 Urban and Regional Planning (4). Lecture, three hours. Important substantive areas, concepts, tools in the field of urban and regional planning. Topics include: forces that have historically guided and are currently guiding U.S. urbanization; land use, economic development, housing and community development, environmental planning; legal, environmental, governmental contexts. Prerequisite: Planning, Policy, and Design 4. *Urban Studies, Social Ecology, Earth and Environmental Sciences, and Earth and Environmental Studies majors have first consideration for enrollment.*

108 Cities and Transportation (4). Lecture, three hours. The relationship between urban areas and transportation systems. Economic analysis of cities, transportation and urban form, highway congestion, environmental impacts of transportation, public transit, land use and transportation, and political influences on transportation planning. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

109 Housing and Urban Development Policy (4). Lecture, three hours. Surveys public policy issues and develops analytic techniques in the areas of housing and urban development. Examines a range of policy topics including housing assistance to low- and moderate-income families, housing finance system, incentives for economic development and neighborhood preservation. Recommended: previous course work in economics. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

110 Urban Economic Development Policy (4). Lecture, three hours. Theoretical and practical perspectives on local economic development policy. Integrates economic, planning, political perspectives. Overview of economic role of cities and metropolitan areas. Specific development issues include link between taxes, regulation, job growth; redevelopment planning; evaluating economic development policy. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

111 Strategies of Health Promotion (4). Lecture, three hours. Examination of strategies for promoting physical and mental health at community, organizational, and individual levels. Interventions designed to promote healthier lifestyles, organizational structures, and environmental conditions. Criteria for monitoring cost-effectiveness of these programs. Prerequisite: Social Ecology E8 or Planning, Policy, and Design 4. *Urban Studies, Social Ecology, and Public Health Policy majors have first consideration for enrollment.*

112 Foundations of Community Health (4). Lecture, three hours. A social ecological framework for understanding community health. Describes economic basis for the formation of communities. Addresses influence of biological, social, economic, and environmental factors on population health. Covers health promotion strategies such as behavioral, planning, and policy interventions. Prerequisite: Social Ecology E8 or Planning, Policy, and Design 4. *Urban Studies, Social Ecology, Public Health Sciences, and Public Health Policy majors have first consideration for enrollment.*

113 Poverty in Developing Countries (4). Lecture, three hours. Focuses on poverty in developing countries. Analyzes the magnitude and changing nature of poverty in the global south. Critically examines poverty conceptualized in terms of economic deprivation, well-being, and social exclusion. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

114 Engaging Globally (4). Lecture, one hour; seminar, one hour; field work, two hours. Introduces students to issues of community engagement and social action in international contexts. Prepares students to understand social and environmental problems in a globalized world. Includes online instruction, on-site service learning in structures projects, critical reflection, and final paper.

URBAN AND ENVIRONMENTAL SUSTAINABILITY

131 Environmental Sustainability I (4) W. Lecture, three hours. Provides an introduction to sustainability from different points of view; historical, scientific, political, ethical, and economic. Same as Earth System Science 180. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

132 Environmental Sustainability II (4) S. Lecture, three hours. Investigates how sustainability can be implemented in a variety of contexts including water, energy, non-renewable resources, biodiversity, and urban policy, and also how it could be measured. Same as Earth System Science 182. *Urban Studies, Social Ecology, Earth and Environmental Sciences, and Earth and Environmental Studies majors have first consideration for enrollment.*

133 Environmental Law (4). Lecture, three hours. Environmental law as combination of traditional legal principles and newly created statutes, rules, and decisions applied to environmental protection. Investigates roles of courts, legislature, executive branch and administrative agencies, and private citizens attempting to regulate environmental quality. Federal and state laws utilized. Prerequisite: Social Ecology E8 or Planning, Policy, and Design 4. Same as Criminology, Law and Society 128. *Urban Studies, Social Ecology, and Public Health Policy majors have first consideration for enrollment.*

134 Human Ecology (4). Lecture, three hours. Explores the interaction of social choice and physical constraint in shaping the earth's human carrying capacity, including ramifications for local, regional, or global environmental issues. Prerequisite: Planning, Policy, and Design 4. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

135 Environmental Impact Analysis (4). Lecture, three hours. Examines the environmental impact assessment process. Topics include impacts associated with biophysical and socioeconomic environmental effects, whether direct, indirect, or cumulative. Analysis of project alternatives, mitigation of impacts, methodologies for measuring impacts. Legislation and case law. Examples from case studies. Prerequisite: Planning, Policy, and Design 4 or consent of instructor. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

136 Global Environmental Issues (4). Lecture, three hours. While many agree that environmental problems threaten humankind, there is much disagreement over the nature of these threats and how to address them. Examines global environmental issues from various perspectives in order to provide answers to these questions. Same as International Studies 120 and Political Science 143D. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

137 International Environmental Management (4). Lecture, three hours. Network of intergovernmental organizations (the United Nations, in particular) and international nongovernmental organizations in the field of environmental management. Prerequisite: Criminology, Law and Society C7. Same as Criminology, Law and Society C129 and International Studies 123. *Urban Studies, Social Ecology, and Public Health Policy majors have first consideration for enrollment.*

138 Environmental Politics and Policy (4). Lecture, three hours. Provides a multifaceted foundation for the development of environmental problem-solving and policy-making skills. Examines "nature" from a range of historical and cultural perspectives. Links socio-ecological stress theories to a range of landscapes and contemporary debates. Current air, water, and land policies. Same as Political Science 141A. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

139 Water Resource Policy (4). Lecture, three hours. Examination of contemporary water problems worldwide, with particular attention to the competing demands for water in the western U.S., and water demand by the poor in developing countries. History and analysis of U.S. water policies at local, state, and federal levels. *Urban Studies, Social Ecology, Earth and Environmental Sciences, and Earth and Environmental Studies majors have first consideration for enrollment.*

140 Ethics and International Relations (4). Lecture, three hours. Introduces students to the dynamic field of ethics and international relations. A variety of traditional and emerging perspectives are examined, skeptical views are discussed in detail, and arguments are illustrated with current cases. Same as Political Science 146A. (VIII)

141 Brownfields: Law and Policy (4). Lecture, three hours. Examines the legal structure and policy issues of redeveloping contaminated properties known as Brownfields. Federal and state Brownfield programs, liability and risk management, cleanup and future land use, institutional controls, community economic revitalization, legislation and policies to encourage Brownfield redevelopment. Prerequisite: Social Ecology E8 or consent of instructor. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

URBAN AND ENVIRONMENTAL DESIGN

150 Experience Design (4). Lecture, three hours; discussion, one hour. Explores functional, experiential, emotional, sensorial, and extra-sensorial aspects of built and modified natural environments. Examines methods for acquiring, evaluating, and presenting information and developing specifications for designers' information needs and for assuring great designed environments. Prerequisites: Planning, Policy, and Design 4 and 152, or consent of instructor. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

151 Environmental Psychology (4). Lecture, three hours. Impact of the physical environment on individual and group behavior. Three basic concerns examined: (a) environmental determinants of behavior at the individual and interpersonal level; (b) social planning and urban design; and (c) methodological approaches to the study of environmental issues. Prerequisites: Social Ecology E8 or 10, or Planning, Policy, and Design 4. Same as Psychology and Social Behavior 171S and Public Health 151. *Urban Studies, Social Ecology, and Psychology and Social Behavior majors have first consideration for enrollment.*

152 Cultural Ecology and Environmental Design (4). Lecture, three hours. Introduction to cultural ecology and environmental and architectural design. With a view to understanding people's relationships with their built environments, the basic elements of architecture, architectural analysis, and cultural analysis are covered. Examines values in design and design for multicultural societies. Prerequisite: Planning, Policy, and Design 4. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

153 Elements of Environmental Design (4). Lecture, three hours. Basic elements of environmental design such as scale, proportion, rhythm, color, sound, lighting, surfaces, texture, architectural definition of spaces, volumes, massing volumetric analysis, solids and voids, and cultural aspects of design. Excitement and creativity in design, imageability. Prerequisites: Planning, Policy, and Design 4 and 152. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

154 Design and Behavior (4). Lecture, three hours. Introduces students to United States urban design and the significance of design for human well-being. Focuses on Southern California urban environment. Prerequisite: Planning, Policy, and Design 4. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

155 Urban Design Principles (4). Lecture, three hours. Introduction to principles of urban design and its applications. Study of contemporary and traditional theories of urban design formulated to improve physical characteristics of built environment to facilitate an enhanced quality of life. A variety of case studies are discussed. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

156 Urban Design and Graphics Studio (4). Lecture, three hours. Introductory course organized around a variety of assignments to encourage learning by design in a studio setting. Students work on design projects and graphic representation assignments to learn practical aspects of urban design. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

URBAN GOVERNANCE

166 Urban Public Policy (4). Lecture, three hours. Examines why and how urban policies are enacted and carried out in contemporary U.S. cities and regions. Topics include: evolution and organization of city governments and policymaking over the past century; who has the power to direct public policy and control how cities develop. Prerequisites: Social Ecology 10 and Planning, Policy, and Design 4. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

167 Public Policy and Management (4). Lecture, three hours. Exposes students to the best management practices that assure effective planning and implementation of policies and programs in government, business, and non-profit sectors. Includes guest lecturers who are proven leaders in the four principal institutions of a community: business, education, government, and nonprofit. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

168 Ethics and Public and Private Life: Advanced Seminar (4). Lecture, three hours. Examines ethical issues in public and private life by considering traditional moral theory in light of specific moral dilemmas, such as environmental policy, genocide, abortion, euthanasia, social welfare, and aid to other countries. Prerequisite: satisfactory completion of the upper-division writing requirement or consent of instructor. Same as Political Science 138B. *Urban Studies, Social Ecology, and Public Health Policy majors have first consideration for enrollment.*

169 Public Policy Analysis (4). Lecture, three hours. Examines different approaches to the analysis of public policy with differing notions of what constitutes good policy, the role of government, and how citizens participate in policy-making. Suggests a policy-design perspective which builds upon other frameworks but concentrates on goals, implementation structures, tools, and rationales. Prerequisites: Planning, Policy, and Design 4 or Social Ecology E8, and Planning, Policy, and Design 166. Same as Political Science 121E. *Urban Studies, Social Ecology, and Public Health Policy majors have first consideration for enrollment.*

170 Health Policy (4). Lecture, three hours. Considers social and economic aspects of health and disease in the United States. What are the proper roles of the individual, community, and government in improving health and health care? International comparisons will be made wherever possible. Same as Public Health 122. *Urban Studies, Social Ecology, Public Health Sciences, and Public Health Policy majors have first consideration for enrollment.*

171 Community Response to Terrorism (4). Lecture, three hours. Examines risk perceptions and behaviors of individuals and societies in response to terrorism. Topics: unconventional and emerging threats, psychology of terror, coping and resilience, risk communication, media effects on psychological responses, public health preparedness for mass-casualty terrorism. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. *Urban Studies, Social Ecology, and Public Health Policy majors have first consideration for enrollment.*

172 Latino Metropolis (4). Lecture, three hours. Explores the processes of Latino urbanization in the United States and the spatialization of Latino identities, particularly in the context of Southern California with selected comparisons drawing from other cities. Same as Chicano/Latino Studies 154. (VII)

173 Technology Analysis (4). Lecture, three hours. Covers concepts of interest for policy-making and technology analysis, dealing with invention, innovation, and the socioeconomic impacts of new technologies. Comparative assessments of new technologies and their national and regional impacts on organizations, sectors, and activities. Prerequisites: Social Ecology 10 and 13. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

174 Decisions, Games, and Other Public Policy Analytics (4). Lecture, three hours. Instruction on theory and use of different models for policy analysis. Emphasis on skills building and preparing students for use of these in their professional lives. Students are trained in real-world applications and institutional analysis. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

175 Institutional Analysis: Studying Programs and Practices (4). Lecture, three hours. Study of the methods of examining institutions from macro, intermediate, and micro scales of analysis. Provides a wide range of skills for program analysis ranging from standard program evaluation to interpretive analytics. Prerequisites: upper-division standing and consent of instructor. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

176 Public Participation in the U.S. (4). Lecture, three hours. Examines decisions that shape the communities in which we live, work, and play. Explores early forms of citizen involvement, planning theories and models, mandated public participation after World War II, and opposition to local development projects. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

177 Chicano Movement (4). Lecture, three hours. Explores the history of Mexicans in the U.S. with particular attention paid to their integration into the U.S. capitalist economy. Examines this economic history and the Chicano movement, "El Movimiento," within the wide context of socio-economic change. Same as Chicano/Latino Studies 166. *Urban Studies and Social Ecology majors have first consideration for enrollment.*

GRADUATE

NOTE: Prior to fall 2010, all Planning, Policy, and Design graduate course numbers had an "U" prefix.

202 History of Urban Planning (4). Introduction to the historical roots and fundamental perspectives of urban and regional planning. Exploration of the significant historical phases and personalities which have shaped the profession. The roles and responsibilities, the limitations and potential, of urban planning. Prerequisite: graduate standing or consent of instructor.

203 Theoretical Foundations of Planning (4). Intellectual excursion into central themes in policy and planning, including philosophy of the market, institutionalization of space, hypostatizations of policy, constructions of communities, logics of spatial analysis. Objective is engagement of the professional in thoughtful reflections on practice and institutions. Prerequisite: graduate standing or consent of instructor.

205 Environmental Economics and Policy (4). Provides a broad introduction to environmental economics and to environmental policy. Environmental problems facing the United States and Europe are analyzed, and whenever possible, the environmental problems facing developing countries. Prerequisite: graduate standing or consent of instructor.

206 Microeconomic Analysis for Urban Planning (4). Provides students with a working knowledge of basic microeconomic concepts. Emphasizes applications related to urban planning and policy analysis. Topics covered include demand analysis, firm behavior, market structure, public goods, externalities, and the role of economics in land markets. Prerequisite: graduate standing or consent of instructor.

207 Development Control Law and Policy (4). Investigates legal and institutional frameworks for development control. Review of constitutional issues implicated in land-use regulation. Traces development control historically and analyzes contemporary approaches to land-use control which reflect environmental and economic development concerns. Prerequisite: graduate standing. Same as Criminology, Law and Society C207.

208 California's Population (4). Provides a non-specialist introduction to social demography through a focus on California population. Surveys historical and current trends in the State's growth, its industries and occupations, and its ethnic and racial makeup. Prerequisite: graduate standing or consent of instructor.

209 Qualitative Research Methods: Overview (4). Introduction to fundamentals of "qualitative" research and non-positivistic inquiry. Formulation of research questions, selection of method, data collection techniques, and analysis (briefly). Overview of selected methods from ethnography, naturalistic field research, phenomenology, ethnoarchaeology, critical approaches, and others. Prerequisite: graduate standing or consent of instructor.

211 Urban Design and Behavior (4). Acquaints students with vocabulary, history, theories, process, and trends in urban design, and the relationship of design to human well-being. The local environment is used as a resource and a laboratory. Prerequisites: graduate standing and consent of instructor.

212 Transportation Planning (4). Introduces current topics in transportation planning. Includes an analysis of the economic role of transportation in urban areas, land-use impacts of transportation projects, traffic congestion, air quality, alternatives to the automobile, and other transportation topics. Prerequisite: graduate standing.

213 Advanced Qualitative Methods: Analyzing Qualitative Data (4). Introduces students to the theory and practice of analyzing qualitative data. Students must have already learned about data collection and research design for qualitative research and they must have qualitative data they can analyze in the course. Prerequisite: graduate standing or consent of instructor. Same as Political Science 273A and Sociology 223.

214 Quantitative Analysis for Planners (4). Introduces students to the basic statistical concepts used to address issues of public concern. Prepares students to perform, interpret, and evaluate quantitative data analyses commonly used in professional studies. Prerequisite: graduate standing or consent of instructor.

215 Analytical Methods for Planning (4). Emphasizes the development of analytical techniques proven useful in the fields of management and administration. Topics include multiple regression, cost-benefit analysis and discounting, decision trees, and other techniques useful for the purposes of community analysis and planning. Prerequisite: graduate standing or consent of instructor.

219 Advanced Planning Theory (4). Focused readings and discussions aimed at developing a foundation for critical research into the theories and epistemologies of planning and policy. Topics include the liberal, communitarian, communicative, and other conceptions of nationality; praxis, hermeneutics, and policy; topologies of justice and social fracture. Prerequisite: graduate standing or consent of instructor.

220 Qualitative Methods: Fieldwork and Data Collection (4). Covers fieldwork, data collections techniques, and related issues for anti-positivistic research. Data collection techniques include observation, physical traces, participation, in-depth interview. Data checks include veracity, detail, completeness, rigor. Prerequisite: graduate standing or consent of instructor.

221 Public Policy (4). Explores different approaches to public policy analysis, the diverse conceptions of the goals and objectives that should be served by policy, and the appropriate role of the policy analyst. Policy consequences are traced to indirect and subtle incentives and disincentives. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C255 and Political Science 221A.

223 Regional Analysis (4). Major concepts and techniques of regional analysis, with applications for urban and regional planning and public policy-making. Definition of regions, processes of economic change, regional structure, location of activities, and analysis of selected policy issues. Emphasis on practical applications. Prerequisite: graduate standing or consent of instructor.

224 Environmental Politics and Policy (4). Reviews and critiques literature on discussion topics including: the nature and effectiveness of the environmental movement and environmental policies; the role of science and technology; the use of economic incentives in policy; decentralization of decision making; and creating arenas for public involvement. Prerequisite: graduate standing or consent of instructor.

225 Local Economic Development (4). Analyzes the economic development process. Attention is given to economic theories of local development and practical implications of those theories. Topics include local economic development and poverty, tax incentives, infrastructure credits, effects of government competition for economic activity. Prerequisite: graduate standing.

226 Public Health Cost-Effectiveness Analysis (4). Examines using cost-effectiveness information to allocate limited resources to maximize health benefits to a population; defining and measuring cost, survival, and health-related quality of life; and how to calculate cost-effectiveness using decision trees and Markov simulation models. Prerequisite: graduate standing or consent of instructor. Same as Psychology and Social Behavior P228 and Public Health 220.

227 Qualitative Methods: Case Study (4). Deals with case study as a qualitative, anti-positivistic research method. Discussion focuses on the essential nature of case study research, quality of case study, rigor, design, implementation, analysis, data collection techniques, analysis, and writing. Prerequisite: graduate standing or consent of instructor.

228 Demographics for Planning and Policy (4). Provides planning and policy practitioners with a condensed, nonspecialist orientation to the sources, applications, and interpretation of population statistics, and conveys the steps used in constructing local-area population forecasts and projections. Prerequisite: graduate standing or consent of instructor.

231 Transportation and Environmental Health (4). Critically evaluates how transportation can promote sustainable, healthy, and equitable cities. Examines the interaction of transportation systems with urban form, land use, community health, and environmental quality. Prerequisite: graduate standing or consent of instructor.

233 Transportation, Transit, and Land-Use Policy and Planning (4). Places students into a specific transportation public policy situation to devise real solutions, with the goal of helping students understand factors in land use, travel behavior, politics, and finance that shape transportation planning policy choices. Prerequisite: graduate standing or consent of instructor.

235 Geographic Information Systems (GIS) Problem Solving in Planning (4). Explores the application of geographic information systems (GIS) in urban planning. Steps through a GIS-based planning procedure that balances housing, jobs, tax base, utilities, transportation, and the natural environment. Prerequisite: graduate standing or consent of instructor.

236 Community Design (4). Provides an overview of the current condition of urban design in the United States. Topics include the academic environment, the retail environment, multi- and single-family residential environments, the office environment, and new urban design tools. Prerequisite: graduate standing or consent of instructor.

237 Introduction to Geographic Information Systems (4). Application of Geographic Information Systems (GIS) to the field of urban and regional planning. Emphasizes current issues that occur in actual implementation settings. Lecture/discussion followed by laboratory demonstrating the area of GIS discussed. Offers "hands-on" student usage of GIS software.

238 Advanced Geographic Information Systems (4). Extends study of geographic information systems to more advanced issues, including data sources, data conversion, relational database integration, software customization, and spatial and three-dimensional analysis. Prerequisite: Planning, Policy, and Design 237.

239 Urban Design Theories and Applications (4). Introduction to contemporary and traditional theories of urban design and their applications. Organized around one question: How might planning and design of built environment contribute to making a good city? National and international case studies are introduced. Prerequisite: graduate standing or consent of instructor.

240 International Environmental Policy (4). Explores causes and effects of environmental problems and the effectiveness of different adaptation or restoration strategies and how they are closely linked to ways in which political, economic, demographic, and cultural systems interact among themselves and ecological systems.

241 Health Promotion and Planning (4). Focuses on health and health care in the United States, but discussion of global health issues and/or international comparisons will be made whenever possible. Considers both the social and economic aspects of health and disease. Prerequisite: graduate standing or consent of instructor. Same as Public Health 221.

242 Regional Development Theory (4). Regional economic development concepts and studies, with applications for urban and regional planning, and public policy-making. Roles and performance of economic sectors, technological innovation, and communications in the process of development. Analysis of regional development policies and programs. Prerequisite: graduate standing or consent of instructor.

243 Health Policy and Management (4). Multidisciplinary inquiry into theory and practice concerned with delivery, quantity, costs of health care for individuals and populations. Explores managerial and policy concerns regarding structure, process, outcomes of health services including the costs, financing, organization, outcomes, and accessibility of care. Prerequisite: graduate standing. Same as Public Health 222.

244 Land-Use Policy (4). Examination of the role of public policy in guiding growth and development in urban and suburban environments. Description of a wide-ranging set of growth policies, the rationales underlying their use, controversies and legal constraints, and evaluation of their effectiveness. Prerequisite: graduate standing.

245 Urban Security (4). Examines changing urban security landscape facing planners, businesses, policymakers, first responders, and academics. Identifies threats and vulnerabilities and how they can be reduced. Focus on transnational networks in which contemporary cities are enmeshed, which function as sources of both threat and opportunity. Prerequisite: graduate standing or consent of instructor.

246 Housing Policy (4). Examines the theories and practices of housing policy and the relationship of housing to larger neighborhood, community, and regional development issues. Considers the roles of private for-profit and not-for-profit developers, lenders, and all levels of government in the provision of housing. Prerequisites: basic statistics and consent of instructor.

247 Neighborhood Planning (4). Focuses on asset-based development and community-building tools. Public policies and neighborhood-based case studies are explored which provide practical skills for the planner of the future. Prerequisite: graduate standing or consent of instructor.

251 Planning and Poverty Alleviation in Developing Countries (4). Critically examines competing conceptualizations, methods of measurement, and poverty alleviation strategies widely used in developing countries. Focuses on poverty conceptualized as economic deprivation, well-being, vulnerability, and social exclusion. Same as Sociology 235.

252 Issues in Environmental Law and Policy (4). Treatment of legal and policy strategies for promoting environmental protection and deterring environmental degradation within the context of other societal objectives. Topical approach with a focus on problems of special interest to criminologists and to environmental policy specialists. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C252.

253 Site Planning (4). Examines site specific, neighborhood, and community site planning from the site designer and local government perspectives. By reviewing actual discretionary case applications and case studies, students learn how regulatory, environmental, and government constraints influence site planning. Prerequisite: graduate standing or consent of instructor.

260 Grant Writing for Community Planning and Development (4). Introduces students to grant writing and processes involved in generating funding for nonprofit programs and community research projects. Prerequisite: graduate standing or consent of instructor.

263 Planning, Policy, and Decentralization (4). Critically examines planning and decentralization with a focus on developing countries. Review of theoretical roots, actors, processes, and mechanisms integral to decentralization in planning. Substantive topics covered include social capital, collective action, popular participation, and elite capture. Prerequisite: graduate standing or consent of instructor.

264 Planning, Policy, and Design Seminar (1). For first- and second-year doctoral students. Topics include professional development; refereed journal publication process; academic conference presentations; and the job market for doctoral students in and out of academia. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

265 Urban and Community Development Seminar (1). For first- and second-year doctoral students. Topics include scholarship related to the urban and community development area. Discussion of assigned articles and book chapters and how they relate to urban and community development. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

270 Environmental Ethics (4). Introduction to major themes and debates in environmental ethics, with application to contemporary environmental issues. Prerequisite: graduate standing or consent of instructor.

273 Global Urbanization (4). Examines the spread of cities worldwide in the twentieth century. What are the political and economic causes of this processes? What are the social-cultural, political, economic effects? How is contemporary urbanization linked to global restructuring of other kinds? Prerequisites: graduate standing, consent of instructor. Same as Social Science 254J and Sociology 252A.

275 Special Topics in Urban Planning (4). Special topics in urban and regional planning are offered from time to time, but not on a regular basis. Course content varies with interest of the instructor. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

278 Culture, Community, and Space (4). Covers how cultures relate to natural and built physical environments. Ways in which culture influences space; ways space influences culture. Concepts for understanding the interrelationship, including values, norms, traditions, religion, and place attachment. Culture and cities, urban form, ethnic communities. Prerequisite: graduate standing or consent of instructor.

279 Theories of Power and Empowerment (4). Studies different ways of thinking about power and its uses. Explores theories of power that inform various notions of empowerment, including resistance, participatory democracy, and workplace empowerment. Prerequisite: graduate standing or consent of instructor. Same as Political Science 223A and Sociology 271.

280A-B Urban Planning Studio (4-4). Offers a practical, problem-solving approach that involves students in varied planning projects. Projects expose students to data gathering, analysis, graphic presentation, politics, law, citizen participation, report writing, and public speaking. Projects emphasize the surrounding metropolitan area. Prerequisite: graduate standing.

282 Urban Design Studio for Planners: An Introduction (4). Introductory urban design for planners. Organized around a variety of assignments to encourage learning by design in a studio setting. Students work on design projects and drawing assignments to learn practical aspects of urban design. Prerequisite: graduate standing or consent of instructor.

283 Collaborative Governance and Public Management (4). Introduction to inclusive management. To make effective use of public resources, public managers are inventing ways of managing that alter relationships within organizations, between organizations, between sectors, and with the public. Requires rethinking fundamentals such as leadership and motivation. Prerequisite: graduate standing or consent of instructor. Same as Political Science 222A.

284 Theories of Public Policy (4). Focuses on two important theorists with the aim being to study not so much their theory, but their mode of theorizing. Taking them two at a time (e.g., Foucault, Bourdieu) allows us to understand each more deeply through the comparison.

288 Environment-Behavior Studies (4). Provides an overview of major theoretical and research perspectives within the field of environment-design research/environment-behavior studies (EBS). Reviews contributions to EBS from architecture, planning, geography, psychology, sociology, and other fields. Prerequisite: graduate standing or consent of instructor.

292 Professional Report (4). Workshop designed to assist M.U.R.P. students in conducting their professional reports. Students select topics, design projects, conduct professional investigations, and write up reports.

292A Professional Report Seminar I (4). Provides an introduction to prepare students for writing a professional planning report. Students learn how to diagnose a planning problem; select appropriate analytical methods to assess the problem; pose, evaluate, and recommend alternative approaches to addressing the problem. Prerequisite: graduate standing or consent of instructor.

292B Professional Report Seminar II (4). Students write and deliver oral presentations in a manner appropriate for professional planning, which includes peer feedback from these presentations. Includes lectures, student assignments, and guest speakers. "Deliverables" and due dates are treated as fixed and contractual professional commitments. Prerequisite: Planning, Policy, and Design 292A.

293 Research Practicum (4). Through reading, discussion, and review of existing research proposals, and implementation of preliminary work for dissertation research, students enhance their knowledge of research design and methods, as well as develop skills to write a proposal for dissertation funding. Prerequisite: Planning, Policy, and Design 297, graduate standing, or consent of instructor.

295 Master's Thesis Research and Writing (1 to 8). May be repeated for credit. Prerequisite: advancement to candidacy.

296 Doctoral Dissertation Research and Writing (2 to 12). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only. May be repeated for credit.

297 Research Design (4). Provides training in research design and methods. Students learn how to evaluate the strength of research findings based on the methods used by a researcher and learn to use lessons from the course to develop a research proposal. Prerequisite: graduate standing or consent of instructor.

298 Directed Studies in Urban Planning (2 to 4). Prerequisites: graduate standing and consent of instructor. May be repeated for credit.

299 Independent Study in Urban Planning (2 to 8). Prerequisites: graduate standing and consent of instructor. May be repeated for credit.

DEPARTMENT OF PSYCHOLOGY AND SOCIAL BEHAVIOR

4201 Social & Behavioral Sciences Gateway; (949) 824-5574
Peter H. Ditto, **Department Chair**

Faculty

Elizabeth E. Cauffman: Adolescent development, mental health, psychopathy, juvenile justice, female delinquency, legal and social policy
Susan Charles: Emotional processes across the adult life span, subjective experience and cognitive processes, health and emotion
Chuansheng Chen: Cross-cultural psychology, socialization of achievement, adolescent development, brain imaging of language and mathematical learning
K. Alison Clarke-Stewart (*Emerita*): Development in early childhood and the effects of variation in the social environment
Thomas J. Crawford (*Emeritus*): Attitude theory and social problems research
Sally S. Dickerson: Stress physiology, psychoneuroimmunology, effects of social evaluation or rejection on emotional and physiological outcomes, self-conscious emotions, health psychology
Peter H. Ditto: Social psychology, judgment and decision making, the role of emotion and motivation in social, political, moral, medical, and legal judgment
C. David Dooley (*Emeritus*): Community psychology, epidemiology, economic change
Joanne Frattaroli: Expressive writing, meta-analysis, positive psychology, health psychology, preventive medicine, educational psychology
Wendy A. Goldberg: Developmental psychology, work and family, mother-father-child relationships, parental involvement in education, transition to parenthood, autism
Ellen Greenberger (*Emerita*): Developmental psychology, cross-cultural research, cultural, family, and peer influences on "normal" and problematic adolescent development, transition to adulthood, origins and consequences of self-entitlement
Jutta Heckhausen: Life-span developmental psychology, motivation and developmental regulation in children, adolescents, and adults, control and health, cultural universals and differences in achievement behavior

Larry Jamner: Health psychology, psychophysiology, biopsychosocial factors related to tobacco use in youth
Eric D. Knowles: Cultural influences on social inference, white racial identity, beliefs and attitudes concerning intergroup inequality, social and political ideology
Linda J. Levine: Relations between cognitive and emotional development, how emotions influence attention and memory, the development of children's strategies for coping with negative emotions
Elizabeth F. Loftus: Human memory, psychology and the law, how facts, ideas, suggestions and other forms of post-event information can modify our memories
Angela F. Lukowski: Memory development in infancy and early childhood, individual differences in long-term memory in infancy, the impact of early nutrition on development
Salvatore R. Maddi: Personality, psychopathology, health psychology, creativity, stress management, resilience through hardiness
Raymond W. Novaco: Anger, stress, violence, cognitive-behavioral interventions
Candice L. Odgers: Developmental psychopathology, longitudinal analysis of growth and change, effects of externalizing disorders on health
JoAnn Prause: Social costs of inadequate employment, adverse effects of unemployment, progression of alcohol disorder, early onset drinking among adolescents
Jodi Quas: Memory development, the effects of stress on memory, emotional reactivity in childhood, children's involvement in the legal system, children's eyewitness testimony
Karen S. Rook: Gerontology, social psychology, health psychology, social support and social networks
Roxane Cohen Silver: Coping with stressful life events (e.g., personal traumas, natural disasters, terrorism)
Jennifer Skeem: Mental illness and criminal justice, personality disorder and antisocial behavior, violence risk assessment and treatment
Daniel Stokols: Health impacts of environmental stressors, environmental design and social behavior, processes and outcomes of transdisciplinary scientific collaboration
Elaine Vaughan (*Emerita*): Environmental assessment, risk perceptions, research methodology, social psychology
Carol K. Whalen: Child and adolescent psychopathology, ADHD across the life span, developmental health psychology, pharmacotherapy
Ilona S. Yim: Psychobiology of stress, stress in pregnancy, women's health, developmental psychobiology, behavioral genetics, assessment of stress

Affiliated Faculty

Lawrence F. Cahill: Neural mechanisms of emotionally influenced memory
Belinda Campos: Culture, relationships, positive emotion, health
Greg Duncan: Development of children and adolescents, poverty, welfare reform, income distribution
Joseph Mahoney: Child/adolescent social development, out-of-school time, social/educational intervention and policy
Stephanie Reich: Child development, parenting, peer interactions, media, program evaluation
Lindsey Richland: Development of higher-order reasoning; learning and memory
Shawn Rosenberg: Political psychology, deliberative democracy, ideology, social theory, social and developmental psychology
Mark Steyvers: Computational models for knowledge extraction and processing, models for human memory and dynamic decision making, causal reasoning, Bayesian Networks
William C. Thompson: Use of expert evidence in the courtroom, including forensic science, particularly forensic DNA tests, statistical testimony, social science evidence of all types
Deborah Lowe Vandell: Developmental process and education, longitudinal methods, early child development, after-school programs

Undergraduate Program

The Department of Psychology and Social Behavior is concerned with human behavior in social contexts. A major objective is to investigate how different social environments (e.g., the family, school, workplace, culture) affect health and human behavior across the life span. The Department's faculty share a strong commitment to interdisciplinary scholarship and research that has the potential for application to important societal problems. Students begin with basic course work in developmental psychology, health

and preclinical (abnormal) psychology, and social and environmental psychology. Subsequent courses cover such topics as social, emotional, and cognitive development in children, adolescents, adults, and the elderly; behavior disorders and developmental psychopathology; cultural, social, and personality influences on behavior; attitude formation and change; health psychology; cognition and emotion; stress and coping; psychology and the law; and counseling and therapy. Opportunities are available to work with faculty members on research in these and other areas. Obtaining research experience as an undergraduate also provides a valuable background for entry into many graduate programs.

Students are given a foundation that will enable them to pursue graduate work in psychology, public health, health services, social work, counseling, or education, or to work after graduation from UCI in both the private and public sectors. Field study opportunities include hospital settings, social service agencies, educational institutions, and community health clinics and counseling centers, among others.

Students should be aware that psychology courses are offered in several different departments and programs at UCI. Students interested in developmental, clinical, social, emotional, health, cross-cultural, or environmental psychology, or in psychology and the law, are advised to consult the course listings here in the Department of Psychology and Social Behavior section. These courses offer students a solid foundation in general psychology. Students interested in language, perception, sensorimotor integration, memory, learning, mathematical psychology, and neuroscience are advised to consult the course listings in the Department of Cognitive Sciences and the School of Biological Sciences sections of the *Catalogue*.

REQUIREMENTS FOR THE B.A. DEGREE IN PSYCHOLOGY AND SOCIAL BEHAVIOR

University Requirements: See pages 54–61.

School Requirements: See page 428.

Departmental Requirements

Thirteen courses (52 units) as specified below:

- A. Psychology and Social Behavior 11A, B, C, Psychology Fundamentals (12 units)
- B. Four upper-division Psychology and Social Behavior core courses (16 units):
 - 101D Life Span Developmental Psychology
 - 102C Abnormal Psychology
 - 103H Health Psychology
 - 104S Social Animal: An Introduction to Social Psychology
- C. Six upper-division Psychology and Social Behavior courses (24 units) chosen from the following:
 - C-1. Three upper-division specialty courses chosen from three of the four groups:
 - Group 1:* Developmental Psychology (110D–134D)
 - Group 2:* Health Psychology (135H–149H)
 - Group 3:* Pre-Clinical/Psychopathology (150C–169C)
 - Group 4:* Social, Personality, and Environmental Psychology (170S–189S)
 - C-2. Three additional upper-division courses chosen from the specialty areas in C-1 above or from courses numbered Psychology and Social Behavior 100, 190–193Z, 196, Social Ecology H190A, and H190W. NOTE: Courses used to satisfy requirement C-1 cannot be used to satisfy C-2; a maximum of two courses from 192A–Z and one 196 course may be counted toward the major; only one Peer Counseling course, either 158C or 159C, may be counted toward the major.

Psychology and Social Behavior Minor Requirements

The minor in Psychology and Social Behavior is met by completing eight courses (32 units). Students have the option of choosing between two versions of the minor as specified below:

Psychology and Social Behavior 11A, B, C; Social Ecology 10; and four upper-division Psychology and Social Behavior courses selected from 100–193Z; *or*

Psychology and Social Behavior 9; Social Ecology 10; and six upper-division Psychology and Social Behavior courses selected from 100–193Z.

Residence Requirement for the Minor: Six courses required for the minor must be completed successfully at UCI.

NOTE: Upper-division courses taken for the Psychology and Social Behavior minor may not be applied toward any other major, minor, or school requirements at UCI. Social Ecology 198 and 199 may not be applied toward the minor.

Excellence in Research in Psychology and Social Behavior

High-achieving students majoring in Psychology and Social Behavior can earn Excellence in Research in Psychology and Social Behavior by participating in a two-component program consisting of faculty-supervised research and courses in methodology and statistics. To be eligible for the program, students must have earned an overall 3.2 UC GPA in their junior year, with grades of B or above in the required methodology and statistics courses (Social Ecology 10, 13, 111, and Psychology and Social Behavior 190). Students will work with a faculty mentor during at least two quarters of the junior year in 196 or Social Ecology 198 or 199. Successful completion of the program also requires faculty-mentored research (Social Ecology H190A-B) and completion of a senior research thesis or a report at a research conference (Social Ecology H190W). Applications for the program are submitted in the spring quarter of the senior year, after completion of all requirements.

Graduate Program

General information about the School of Social Ecology's graduate programs, including admission requirements, career opportunities, and Ph.D. program milestones, appears on pages 429–430. Specific information about the Department of Psychology and Social Behavior's graduate program appears below.

Ph.D. IN PSYCHOLOGY AND SOCIAL BEHAVIOR

The Department of Psychology and Social Behavior offers a Ph.D. program in Psychology and Social Behavior. The main goal of this program is to train behavioral scientists to apply theory and methods in psychology, together with perspectives and knowledge from allied disciplines, to the analysis of human behavior and health across the life span and in diverse sociocultural contexts. This program values both basic and applied research that is relevant to the improvement of individual, community, and societal functioning. Emphasis is placed on the integration of knowledge from several subspecialties in psychology in order to understand the antecedents and developmental course of adaptive or maladaptive behavior and on the conduct of research that has implications for social policies, programs, and interventions.

Training in this program emphasizes four core areas of psychology. The specialization in **Developmental Psychology** focuses on the development of individuals at various periods in the life course and the effects of varying social and cultural contexts on cognitive, social, and health outcomes. **Health Psychology** focuses on identifying, evaluating, and enhancing the psychosocial and behavioral

factors that promote mental and physical health, prevent disease, and optimize medical treatments. The specialization in **Psychopathology** focuses on psychological, biobehavioral, and social environmental mechanisms that influence the development, expression, and amelioration of psychopathology and behavioral disorder. **Social and Personality Psychology** focuses on the interrelations among attitudes, perceptions, motives, emotions, and personality characteristics as they affect individual functioning, interpersonal processes, and intergroup relations. In addition, several faculty offer courses and conduct research in the area of **Psychology and Law**, dealing with such issues as the malleability of memory processes, the ability of jurors to understand scientific evidence, the impact on children and adolescents of contact with the legal system, and the response of the legal system to individuals with severe personality disorders.

Students will learn to understand human behavior from a social ecological, contextual perspective. They will be exposed to the major theories in each specialization and learn various social science research methods. All students are encouraged to become actively involved in research from the earliest stage of their training. Through close association with faculty members and participation in the faculty's research projects, students learn to conduct methodologically sophisticated research that addresses contemporary psychological and social issues. Current research teams are investigating stress, coping, and social support; biobehavioral mechanisms of cardiovascular reactivity; psychobiology of stress; personality factors that increase resilience to health threats; parent-child relations; work and family; transitions across the life course; adaptive aging; end-of-life medical decision making; culture and adolescent psychosocial development; cultural influences on social judgment; relations between cognitive and emotional development; emotion regulation; memory and eyewitness testimony; violence and anger management; the development of health-risking and health-protecting behaviors during childhood and adolescence; economic stress and psychopathology/behavioral disorders; health impacts of environmental stressors; mental health and psychopathy; juvenile and criminal justice; positive psychology; and person-environment fit.

All students take eight required core courses: Seminar in Social Ecology (Social Ecology 200), Research Methods in Psychology (P201), Quantitative Methods in Psychology (P264A), Advanced Quantitative Methods in Psychology (P264B), an additional research methods/data analysis course from an approved list, Applied Psychological Research (P209A), Professional Issues in Psychology (P231), and Research Directions in Psychology and Social Behavior (P294A-B-C). The course on Applied Psychological Research (P209A) introduces students to the scientific, professional, and ethical issues involved in conducting and translating psychological research in a variety of applied settings. Some students may wish to take a complementary (optional) course, Applied Psychological Research in Community Settings (P209B), that provides the opportunity for a supervised research internship in an appropriate community setting. The three-quarter course Research Directions in Psychology and Social Behavior (P294A-B-C) allows students to increase their breadth of knowledge regarding contemporary issues and controversies in psychology and social behavior by participating in the Department's weekly colloquium series and interacting with visiting scholars and other speakers.

Students must select one of four core specialization areas in which to further focus their graduate training. Additional course requirements vary across each specialization. For the Health Psychology specialization, Health Psychology (P258) is required, along with two of the following three courses: Health, Stress and the HPA Axis (P272; formerly titled "Psychoneuroendocrinology"), Biobehavioral Aspects of Health and Illness (P273), and Psychobiology

of Stress (P274). For the Social and Personality specialization, Social Psychology (P214), Personality (P233), and two additional courses from an approved list are required. For the Psychopathology specialization, the following three courses are required: Child Psychopathology (P238), Adult Psychopathology (P239), and Psychological Assessment (P245). In addition, one of the following two courses is required: Mental Health Services and Intervention (P241) or Ecological Context of Behavioral Disorder (P243). The Developmental Psychology specialization requires Developmental Psychology (P220), two life-span courses, plus one additional course from approved developmental electives.

In addition to selecting a core specialization area, students are also required to select a minor specialization and complete one required specialization course and one elective course in this area. The minor specialization and elective courses should be chosen according to the plan that best meets the needs of the individual student, as determined in consultation with the student's faculty advisor and the departmental graduate advisor. In addition to courses offered by the Department of Psychology and Social Behavior and the School of Social Ecology, students may take courses offered by other departments in other schools such as the Departments of Cognitive Science, Anthropology, and Sociology in the School of Social Sciences and the Department of Neurobiology and Behavior in the School of Biological Sciences. Approval from instructors is required to enroll in these courses.

Finally, students who are interested can pursue an optional training track in psychology and law. This track is supplemental to the requirements associated with the required specializations and supplemental to the required minor. That is, all students must complete the above-listed requirements for their specialization and minor. Then, if the student decides to complete the training track in psychology and law, this training is in addition to the requirements listed above. For the training track, a total of four courses must be taken, three required and one elective. The required courses include Social Science and the Legal Process (C245), Psychology and Law (P266), and Legal Reasoning (C237). The elective must be approved by the student's faculty mentor and departmental advisor and can be a course in PSB, or in the School Social Ecology or School of Law, with instructor and school approval.

Students complete a supervised research project during their second year culminating in a paper that may form the basis for a publication. They take a written comprehensive examination during their third year, which requires them to demonstrate mastery of the principles of social ecology and of major theoretical, substantive, and methodological issues in the study of their major and minor specializations and in the psychology of human behavior. The normative time for advancement to candidacy is four years. The fourth year is devoted to developing and defending a dissertation proposal, and the fifth year is spent completing the dissertation research. The normative time for completion of the Ph.D. is six years. Students must complete all requirements for the Ph.D. in Psychology and Social Behavior no later than their seventh year of study, adjusted for any approved leaves of absence that may have been taken. It is expected that most students will complete the degree requirements well in advance of this deadline. All Ph.D. students in the Psychology and Social Behavior program are required to pass a final oral defense of the dissertation.

Potential employment sites for graduates of the program include academic institutions, research organizations, government policy institutes, health care and human services settings (e.g., hospitals, schools, community agencies), and a variety of private sector employers. The Ph.D. Program in Psychology and Social Behavior specializes in the training of researchers, not in the training of clinical practitioners.

Courses in Psychology and Social Behavior

(Schedule of Classes designation: Psy Beh)

LOWER-DIVISION

9 Introduction to Psychology (4) F, W, S, Summer. Lecture, three hours. Introduction to field of psychology, addressing the application of scientific methods to the study of human development, learning, memory, problem solving, perception, biological mechanisms, emotions and motivation, personality, psychopathology, and effects of diverse social and cultural contexts on human behavior. Same as Psychology 7A. No credit for Psychology and Social Behavior 9/Psychology 7A if taken concurrently with, or after, any of the following: Psychology and Social Behavior 11A, B, or C, Psychology 9A, B, or C. Formerly Psychology and Social Behavior P9. *Criminology, Law and Society, Social Ecology, Urban Studies, Public Health Sciences, and Public Health Policy majors have first consideration for enrollment. (III)*

11A, B, C Psychology Fundamentals (4-4-4) F, W, S. Lecture, three hours. Designed to provide freshman Psychology and Social Behavior majors with an in-depth survey of general psychology. Topics include biological bases of behavior, sensation, perception, cognition, development, personality, psychopathology, and social psychology. Same as Psychology 9A, B, C. No credit for Psychology and Social Behavior 9/Psychology 7A if taken concurrently with, or after, any of the following: Psychology and Social Behavior 11A, B, or C, Psychology 9A, B, or C. Formerly Psychology and Social Behavior P11A, B, C. *Psychology and Social Behavior, Psychology, Criminology, Law and Society, Social Ecology, Urban Studies, Public Health Sciences, and Public Health Policy majors have first consideration for enrollment. (III)*

UPPER-DIVISION

100 Special Topics in Social Behavior (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of instructor. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. May be repeated for credit as topics vary. Formerly Psychology and Social Behavior P100.

CORE COURSES

101D Life Span Developmental Psychology (4). Lecture, three hours. Addresses the major issues, concepts, and methods of life span developmental psychology. The fundamental theories, distinctive methods, and the physical, perceptual, cognitive, social, motivational, and emotional development for each developmental phase of the life course are considered. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Formerly Psychology and Social Behavior P106. *Psychology and Social Behavior majors have first consideration for enrollment.*

102C Abnormal Behavior (4). Lecture, three hours. Survey of disorders organized by the diagnostic categories of the American Psychiatric Association. Interdisciplinary orientation combines environmental, psychological, and organic perspectives on etiology and treatment. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Social Ecology 10. Psychology and Social Behavior 102C and Psychology 120A may not both be taken for credit. Formerly Psychology and Social Behavior P105. *Psychology and Social Behavior majors have first consideration for enrollment.*

103H Health Psychology (4). Lecture, three hours. Theory and research are considered as they contribute to an understanding of the role of psychological processes in health and illness. The distinction between prevention and treatment of illness is established, and a variety of psychosocial interventions are elaborated. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P103. *Psychology and Social Behavior majors have first consideration for enrollment.*

104S Social Animal: An Introduction to Social Psychology (4). Lecture, three hours. Theories and research exploring social behavior and social influences on behavior. Topics include methods of social research, attitude formation and change, social perception, the social self, stereotypes and prejudice, conformity, obedience, altruism, aggression, interpersonal relationships and love, and group behavior. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P108. *Psychology and Social Behavior majors have first consideration for enrollment.*

DEVELOPMENTAL PSYCHOLOGY

110D Infant Development (4). Lecture, three hours. Study of human development from conception through the first two years of life, covering processes and events in the domains of physical, social, and cognitive development. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Same as Psychology 127I. Formerly Psychology and Social Behavior P115D. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

111D Child Development (4). Lecture, three hours. Examines social, emotional, and intellectual growth and development between the ages of 2 and 12 years. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Psychology and Social Behavior 111D and Psychology 120D may not both be taken for credit. Formerly Psychology and Social Behavior P113D. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

112D Adolescent Development (4). Lecture, three hours. Examines current research on the biological, social, and cultural contexts of adolescent development. Topics include the impacts of puberty, adolescents' decision-making competencies, changes in family and peer relationships, identity development, and psychosocial problems such as depression and problem behavior. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Psychology and Social Behavior 112D and Psychology 21A may not both be taken for credit. Formerly Psychology and Social Behavior P114D. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

113D Adult Development (4). Lecture, three hours. Examines why and how we change (with attention to gains as well as losses) from ages 25–65 and the nature and sources of continuity over time. Topics include physical and intellectual functioning, personality, coping strategies, and social roles and relationships. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Same as Psychology 127A. Formerly Psychology and Social Behavior P116D. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

114D Gerontology (4). Lecture, three hours. Examines stereotypes and myths associated with aging; physiological and psychological changes that accompany old age; distinguishes behavior changes due to aging *per se* from those due to historical and socioeconomic factors; political, social aspects of old age in contemporary society. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Same as Psychology 127G. Formerly Psychology and Social Behavior P117D. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

115D Cognitive Development (4). Lecture, three hours. Examines theories on nature of cognitive development. Discusses behaviorist theories on role of the environment including those of Vygotsky and Piaget, and recent evidence from cognitive psychologists stressing the importance of knowledge and skills within specific domains. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Psychology and Social Behavior 115D and Psychology 141D may not both be taken for credit. Formerly Psychology and Social Behavior P120D. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

116D Human Development and Cross-Cultural Perspectives (4). Lecture, three hours. Human development in diverse cultures (e.g., Asian, American, and African). Special emphasis on East-West contrasts and when East meets West (i.e., Asian-American experiences). Topics include parenting, family relations, language and cognition, schooling and academic achievement, and morality. Prerequisites: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent; Social Ecology 10. Formerly Psychology and Social Behavior P124D. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

117D Development of Gender Differences (4). Lecture, three hours. Examination of research on how sexes differ in physiology, cognitive functioning, personality, and social behavior. Sex-differentiated development from the prenatal period through adulthood. Explanations for male-female differences are sought, focusing on biological (genetic, hormonal), and social (familial, cultural) mechanisms. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Same as Psychology 127D. Formerly Psychology and Social Behavior P122D. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

118D Human Sexuality (4). Lecture, three hours. A broad survey of human sexuality encompassing genetic factors, physiological and anatomical development, customary and atypical forms of behavior, reproductive processes, and cultural determinants. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Formerly Psychology and Social Behavior P121D. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

119D Development of Motivation Across the Life Span (4). Major concepts in motivation and self-regulation as they develop during the phases of life. Topics include: development of action in infants; childhood conceptions about competence; causal attributions for success and failure; beliefs about control; goal-engagement and disengagement across adulthood. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; and either Psychology and Social Behavior 101D or 176S, and consent of instructor. Formerly Psychology and Social Behavior P191E. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

120D Child Development, the Law, and Social Policy (4). Lecture, three hours. Examines how psychology research and practice can inform areas of law and social policy affecting children and adolescents. Topics include education, mental health, reproductive rights, and delinquency. Goals are to evaluate research as well as identify the costs/benefits of current policies. Prerequisites: Psychology and Social Behavior 9 or 11C, Psychology 7A or 9C, or equivalent; Psychology and Social Behavior 111D or 112D recommended. Same as Criminology, Law and Society C125. Formerly Psychology and Social Behavior P165S. *Psychology and Social Behavior, Social Ecology, and Criminology, Law and Society majors have first consideration for enrollment.*

121D Work and Family (4). Lecture, three hours. Effects of employment and unemployment on mental health and marital quality; effects of work on parenting and child development; corporate and social policies for “families that work”; young adults’ decision-making about work and family. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P170P. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

122D Family, Society, and Education (4). Lecture, three hours. Examines the development of children’s academic and cognitive competence in social context. Effects of parental beliefs, home environment, school environment, peer norms, community norms, cultural values. Effects of selected demographic factors such as ethnicity, parental SES, maternal employment, birth order. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P166S. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

123D Child in the Family, School, and Community (4). Lecture, three hours. The ecological study of contexts in which the child develops and is socialized: the family, school, peer group, media, and community. Examines the impact of societal influences, such as culture, religion, economics, politics, and technology. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P191A. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

124D Impacts of Divorce (4). Lecture, three hours. Examines divorce in historical, economic, and, primarily, psychological contexts, emphasizing recent research pertaining to the impacts of divorce on children, families, and society. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Psychology 1771. Formerly Psychology and Social Behavior P171P. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

125D Perspectives on Child Rearing (4). Lecture, three hours. Examines parenting across contexts using an ecological and family systems perspective. Attention to the interplay between social influences and individual characteristics in relation to contemporary parenting issues such as single parenting, adoption, and children with special needs. Prerequisite: Psychology and Social Behavior 9 or 11B, or 11C, or Psychology 7A or 9B, or 9C, or equivalent. Formerly Psychology and Social Behavior P123D.

HEALTH PSYCHOLOGY

135H Introduction to Biopsychology (4). Introductory overview of the biology of behavior with a focus on the structure and function of the brain. Selected behaviors (e.g., eating, sleeping) and psychological states (e.g., stress, psychiatric disorders) are addressed from a biopsychological perspective. Prerequisite: Psychology and Social Behavior 9 or 11A, or Psychology 7A or 9A, or equivalent. Formerly Psychology and Social Behavior P191H. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

136H Behavioral Medicine (4). Lecture, three hours. Examines biobehavioral aspects of health and illness, focusing on how stress contributes to or exacerbates disease processes. Background information on psychosomatic medicine and stress models and detailed examination of specific organ systems emphasizing the reactivity of these systems to stress. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P134H. *Psychology and Social Behavior, Social Ecology, and Public Health Policy majors have first consideration for enrollment.*

137H Human Stress (4). Lecture, three hours. Stress as a multidisciplinary topic. Biological, psychological, and sociological approaches to adaptation-related disorders. Effects of acute and chronic stress on emotions, physiology, and behavior. Methods of stress assessment, stress reduction, and intervention. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P127H. *Psychology and Social Behavior, Social Ecology, and Public Health Policy majors have first consideration for enrollment.*

138H Child Health Psychology (4). Lecture, three hours. Exploration of psychological antecedents, concomitants, and consequences of medical illnesses in children. Children’s beliefs about health, illness, and medication; the role of stress; coronary-prone behavior; therapeutic adherence and physician-patient interaction; coping with chronic illness; effects of a child’s illness on family. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Social Ecology 10 recommended. Same as Psychology 127H. Formerly Psychology and Social Behavior P131H. *Psychology and Social Behavior, Social Ecology, Psychology, and Public Health Policy majors have first consideration for enrollment.*

139H Sports Psychology (4). Lecture, three hours. Psychological components of athletic performance with regard to scientific and practical issues. Roles of cognitive processes, physiological arousal, and emotion. Various personality factors related to performance, competition, and coaching. Strategies for improving athletic performance for individual and team competition. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P135H. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

140H The Hardiness Approach to Stress Management (4). Lecture, three hours. Hardiness is a new development within psychology involving a combination of motivations and skills that extensive research has shown enhances performance, conduct, morale, stamina, and health. Combines study of hardiness research with strategies for improvement of personal hardiness through a series of exercises. Formerly Psychology and Social Behavior P125H. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

141H Clinical Health Psychology (4). Lecture, three hours. Role of behavior in etiology, treatment, and prevention of certain diseases. Behavioral intervention including biofeedback, stress-, pain-management, health habit counseling, and other skills to assist patients make cognitive, emotional, and behavioral changes needed to cope with disease or achieve better health. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Public Health 141. Formerly Psychology and Social Behavior P141H.

PRE-CLINICAL/PSYCHOPATHOLOGY

150C Clinical Psychology (4). Lecture, three hours. Overview of theories, assessment techniques, research methodologies and intervention approaches in clinical psychology. Psychodynamic, behavioral, humanistic, and cognitive perspectives are examined along with ethical and professional issues. Prerequisites: Psychology and Social Behavior 9 or 11C; or Psychology 7A or 9C, or equivalent; Social Ecology 10; Psychology and Social Behavior 102C. Formerly Psychology and Social Behavior P146C. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

151C Psychological Testing and Assessment (4). Lecture, three hours. Laboratory-seminar exploration of diverse methods of assessing, analyzing, and recording behavior. Includes methods of direct behavioral observation, structured (analog) assessments, rating scales, interviewing, and self-monitoring. Development of assessment skills and their application in intervention and research programs. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Psychology and Social Behavior 102C or 150C. Social Ecology 10 recommended. Formerly Psychology and Social Behavior P147C. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

152C Clinical Child Psychology (4). Lecture, three hours. Examines research and theory concerning childhood psychopathology behavior disorders. Diagnosis and assessment, early identification of high-risk children, fears and phobias, antisocial behavior, childhood psychoses, autism, depression, attention deficit/hyperactivity disorders, and ethical and policy implications of identifying children who are different. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Psychology 127C. Formerly Psychology and Social Behavior P107. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

153C Developmental Psychopathology (4). Lecture, three hours. Research and theory of origins, course, and outcomes of disordered behavior. Continuity and change in patterns of behavior; environmental challenges and buffers; stress and competence in children; vulnerable and invulnerable children; children of mentally ill parents; families at risk; childhood antecedents of adult disorders. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Psychology 120A or consent of instructor; Social Ecology 10 recommended. Same as Psychology 177P. Formerly Psychology and Social Behavior P152C. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

154C Cognitive Behavior Therapy (4). Lecture, three hours. Presentation of principles and procedures of therapeutic interventions based on cognitive-behavior methods. Cognitive factors in learning, emotional arousal, psychological disorder, and psychotherapy reviewed. Introduces the application of cognitive behavioral methods to problems of depression, anxiety, anger, pain, and impulsivity. Prerequisite: Psychology 7A or 9A, 9C; or Psychology and Social Behavior 9 or 11A, 11C; or equivalent. Same as Psychology 147C. Formerly Psychology and Social Behavior P150C. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

155C Child Therapies (4). Lecture, three hours. Examines research methodologies, empirical data, and implications of diverse intervention strategies. Primary topics include psychotherapy process and outcome, family therapies, behavioral intervention, cognitive behavior modification, pediatric psychopharmacology, and ethical and social policy implications of intervening in other people's lives. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Psychology 122C or consent of instructor. Same as Psychology 127T. Formerly Psychology and Social Behavior P151C. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

156C Forensic Psychology (4). Seminar, three hours. Overviews all forensic psychology, then focuses on psychological analyses of criminal behavior, particularly violent behavior. Examines violence, sexual offending, and mental disorder related to crime with regard to clinical assessment, treatment, and rehabilitation; mental health services within forensic institutions. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Psychology and Social Behavior 102C; Psychology and Social Behavior 178S or Criminology, Law and Society C149, or consent of instructor. Same as Criminology, Law and Society C136 and Psychology 177F. Formerly Psychology and Social Behavior P145C. *Psychology and Social Behavior, Social Ecology, Psychology, and Criminology, Law and Society majors have first consideration for enrollment.*

157C Existential Psychology (4). Lecture, three hours. Overall emphasis on life's meaning and direction as an unfolding expression of the pattern of decisions engaged in by each person. Topics include relevant personality and developmental theory, research, and philosophy, as well as applied consideration of diagnostic testing and psychotherapy. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P153C. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

158C Peer Counseling I (4). Lecture, three hours. Focuses on the development of basic counseling skills and knowledge of specific issues related to the student population. Students are required to provide supervised coaching and counseling services to the campus community. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P154C.

159C Peer Counseling II (4). Second quarter of two-quarter course which focuses on the development of basic counseling skills and knowledge in specific issues related to the student population. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Psychology and Social Behavior 158C, and consent of instructor. Formerly Psychology and Social Behavior P155C.

SOCIAL, PERSONALITY, AND ENVIRONMENTAL PSYCHOLOGY

170S Personality (4). Lecture, three hours. Comparison of the major theories of personality. Provides a frame of reference for understanding lifestyles, development, maturity, and psychopathology. Emerging research themes are used to identify promising lines of personality theorizing. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Psychology and Social Behavior 170S and Psychology 120P may not both be taken for credit. Formerly Psychology and Social Behavior P144C. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

171S Environmental Psychology (4). Lecture, three hours. Impact of the physical environment on individual and group behavior. Three basic concerns examined: (a) environmental determinants of behavior at the individual and interpersonal level; (b) social planning and urban design; and (c) methodological approaches to the study of environmental issues. Prerequisites: Social Ecology E8 or 10, or Planning, Policy, and Design 4. Same as Planning, Policy, and Design 151 and Public Health 151. Formerly Psychology and Social Behavior P109. *Psychology and Social Behavior, Social Ecology, Planning, Policy, and Design, Public Health Policy, and Public Health Sciences majors have first consideration for enrollment.*

172S Attitudes and Behavior (4). Lecture, three hours. Intended for students interested in theory and research on how attitudes influence, and are influenced by, behavior. Topics include: voting behavior, Fishbein and Ajzen's theories of reasoned action and planned behavior, attitude accessibility, prejudice and discrimination, and cognitive dissonance theory. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Psychology 127S. Formerly Psychology and Social Behavior P157S. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

173S Social Relationships (4). Lecture, three hours. Examines major issues, concepts, and methods in the scientific study of social relationships. Topics include relationship formation and dissolution, friendships and love relationships, loneliness, bereavement, societal influences on close relationships, significance of close relationships for health and well-being. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Social Ecology 10. Formerly Psychology and Social Behavior P158S. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

174S Error and Bias in Social Judgment (4). Lecture, three hours. Examines how people encode, reason about, and remember social information and explores how biases and shortcomings in social perception, judgment, and memory are central to understanding both effective social functioning and many forms of maladaptive behavior and social conflict. Prerequisite: Psychology and Social Behavior 9 or 11C or Psychology 7A or 9C, or equivalent. Formerly Psychology and Social Behavior P162S. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

175S Cognition and Emotion (4). Lecture, three hours. Examines relations between cognition and emotion. How have the relations between cognition and emotion been construed historically? How closely related are cognitive and emotional development? How do emotions influence reasoning and memory? How similar is emotional experience across cultures? Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Formerly Psychology and Social Behavior P119D. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

176S Motivation (4). Lecture, three hours. History, major theories, methods, and applications of motivational psychology, with emphasis on European approaches. Origins of the field in personality, learning, cognition, and activation research. Recent innovations in motivational and volitional self-recognition. Current approaches, major debates, empirical research programs. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C; 101D; 104S or Environmental Analysis and Design E108U. Psychology and Social Behavior 176S and Psychology 121M may not both be taken for credit. Formerly Psychology and Social Behavior P191D. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

177S Psychology and Emotion (4). Lecture, three hours. General theories of emotion and research regarding cognitive, behavioral, physiological, and subjective experience of emotion. Specific topics include emotion regulation, emotion and health, emotional intelligence, and emotional development. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Psychology 127E. Formerly Psychology and Social Behavior P143H. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

178S Violence in Society (4). Lecture, three hours. Current theory and research on aggression; anger and violence as problems in individual and social functioning. Process and functions of anger examined with regard to normal behavior and psychopathology. The determinants, prevalence, and implications of violence in society are analyzed. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Criminology, Law and Society C149. Formerly Psychology and Social Behavior P175P. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

179S Cultural Psychology (4). Lecture, three hours. An examination of culture's influence on human minds. Topics include culture's impact on perception, cognition, motivation, emotion, moral reasoning, communication, and health. Addresses cultural psychology's methods, history, and place within psychology and related fields. Prerequisite: Psychology and Social Behavior 9 or 11B or 11C, or Psychology 7A or 9B or 9C. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

180S Organizational/Industrial Psychology (4). Lecture, three hours. Introduction to applied psychology in organizations, including personnel testing, selection, training and evaluation, job and classification analysis, job satisfaction and motivation, organizational development, leadership, market research and consumer psychology. Potential ethical problems are discussed. Prerequisite: Psychology and Social Behavior 9 or 11A, or 11B, or 11C, or Psychology 7A or 9A, or 9B, or 9C, or equivalent, or consent of instructor. Same as Psychology 122I. Formerly Psychology and Social Behavior P192B. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

181S Beliefs, Attitudes, and Health Behaviors (4). Lecture, three hours. Examines health-relevant beliefs, attitudes, and behaviors from a social psychological perspective. Topics include: self-control; obesity; sexual behavior; medication errors, stress, perceived control and social support; happiness and well-being; changing health attitudes and behaviors; self-disclosure and health. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Public Health 140. Formerly Psychology and Social Behavior P140H. *Psychology and Social Behavior, Social Ecology, Public Health Policy, and Public Health Sciences majors have first consideration for enrollment.*

182S Violence and Ideas Concerning the Social Order (4). Seminar, three hours. Historical and philosophical perspectives of violence as a way to enhance social science views. Violence as a problem of the social order. The state of nature, the social contract, and human destructiveness explored in conjunction with overviews of violence and warfare. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; and consent of instructor. Formerly Psychology and Social Behavior P176P. *Psychology and Social Behavior and Social Ecology majors have first consideration for enrollment.*

183S Social Epidemiology (4). Lecture, three hours. Overviews evidence linking environmental factors to mental and physical disorders including such variables as socioeconomic status, income inequality, work stress, job loss, social capital, location, and other demographic characteristics. Considers measurement and research design issues of both the individual and aggregate levels. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Social Ecology 10; Social Ecology 13 or equivalent. Same as Public Health 102. Formerly Psychology and Social Behavior P163S. *Psychology and Social Behavior, Social Ecology, and Public Health Sciences majors have first consideration for enrollment.*

ADDITIONAL COURSES

190 Applied Statistics in Psychological Research (4). Lecture, three hours; discussion, one hour; laboratory, one hour. Covers statistical techniques used to describe and make generalizations about phenomena represented by data. Hands-on experience in data analysis and interpretation using statistical software (SPSS, STATA) is emphasized. Topics include data visualization, ANOVA, multiple regression, and categorical data analyses. Prerequisite: Social Ecology 13 or equivalent. Formerly Psychology and Social Behavior P190. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

192A History of Psychology (4). Lecture, three hours. A history of the development of various schools and systems of psychological thought. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent, or consent of instructor. Same as Psychology 120H. Formerly Psychology and Social Behavior P192A. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

192E Perception and Sensory Processes (4). Lecture, three hours. A general introduction to the scientific study of sensory processes and perceptual phenomena, with special emphasis on the visual system. Prerequisite: Psychology and Social Behavior 9 or 11A, or Psychology 7A or 9A, or equivalent, or consent of instructor. Psychology 130A may not be taken for credit if taken after Psychology 131A or 131B. Same as Psychology 130A. Formerly Psychology and Social Behavior P192E. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

192G Cognitive Science (4). Lecture, three hours. Introduction to investigations of the structure and function of the mind, from viewpoints of computation, neuroscience, philosophy, and cognitive psychology. Topics include: perception, attention, knowledge representations, learning and memory, action, reasoning, and language. Prerequisite: Psychology and Social Behavior 9 or 11A, 11B or Psychology 7A or 9A, 9B or equivalent. Same as Psychology 140C. Formerly Psychology and Social Behavior P192G. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

192I Principles of Learning Theory (4). Lecture, three hours. Investigation of the learning and memory processes of humans and animals. Basic experimental approaches to learning and memory, empirical results, and theoretical interpretations of the evidence are discussed. Prerequisite: Psychology and Social Behavior 9 or 11A, or Psychology 7A or 9A, or equivalent. Same as Psychology 140L. Formerly Psychology and Social Behavior P192I. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

192J Human Memory (4). Lecture, three hours. Developments in the area of memory; history of memory research; theories of the nature of memory. Visual memory, recognition memory, high-speed scanning, free recall, short-term memory, mnemonics, retrieval, relationship of memory to thinking. Selected theoretical formulations for memory. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9A, or equivalent. Psychology 46A may not be taken for credit concurrently with Psychology 140M or Psychology and Social Behavior 192J. Same as Psychology 140M. Formerly Psychology and Social Behavior P192J. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

192K Human Problem Solving (4). Lecture, three hours. Modern developments in the psychology of human problem solving. Topics include: concept identification, arithmetic, sets, logic puzzles, story problems, group problem solving, and theorem proving. Prerequisite: Psychology and Social Behavior 9 or 11B, or Psychology 7A or 9B, or equivalent. Same as Psychology 143P. Formerly Psychology and Social Behavior P192K. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

192L Introduction to Cognitive Neuroscience (4). Lecture, three hours; discussion, one hour. Introduction to the neural basis of human perceptual, motor, and cognitive abilities. Topics include sensory perception, motor control, memory, language, attention, emotion, frontal lobe function, functional brain imaging, and neuropsychological disorders. Prerequisite: Psychology and Social Behavior 9 or 11A, B, or Psychology 7A or 9A, B, or Biological Sciences 35, or consent of instructor, or equivalent. Same as Psychology 160A and Biological Sciences N166. Formerly Psychology and Social Behavior P192L.

192P Perceptual Neuroscience (4). Lecture, three hours; discussion, one hour. Examines the physiology of cortical networks underlying human perceptual experience. Prerequisite: Psychology and Social Behavior 192L or Psychology 160A or consent of instructor. Same as Psychology 161P. Formerly Psychology and Social Behavior P192P. *Psychology and Social Behavior, Social Ecology, and Psychology majors have first consideration for enrollment.*

192Q Chicano/Latino Social Psychology (4). Lecture, three hours. Examines theories, research, and major issues of relevance to understanding social psychological processes in Chicano/Latino populations. Topics include social development, cultural orientations, gender and sexuality, close relationships, happiness and well-being, stereotyping, prejudice and discrimination, and mental and physical health. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Chicano/Latino Studies 168. (VII)

192R Culture and Close Relationships (4). Seminar, three hours. Examines cultural influences on close relationship processes including attraction, love, friendship, family, social support, and significance of close relationships for health and well-being. National and ethnic sources of cultural variation examined include Latin America, Asia, Africa, and the Middle East. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Chicano/Latino Studies 177. (VII)

192S Health and the Latino Paradox (4). Seminar, three hours. Examines research and theories concerning the physical and mental health of U.S. Latino populations. Contemporary accounts, health care implications, and new directions for understanding sources of risks and resilience for health in Latino populations are evaluated and discussed. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Chicano/Latino Studies 178. (VII)

192T Cognition and Learning in Educational Settings (4). Lecture, three hours. Foundational concepts in cognition and development as applied to student learning. Primary topics include historical behaviorism, basic cognitive structure and processes, complex cognition, cognitive development, and motivation. Same as Education 173. Formerly Psychology and Social Behavior P192T. *Psychology and Social Behavior, Social Ecology, Education, and Psychology majors have first consideration for enrollment.*

192U Psychology of Learning, Abilities, and Intelligence (4). Lecture, three hours. Overview of classic positions on the mind, human abilities, and intelligence, especially as related to academic achievement. Contrasting views: psychometric versus information processing; experimental versus correlational research. Prerequisite: introductory course in psychology, or consent of instructor. Same as Education 176. Formerly Psychology and Social Behavior P192U. *Psychology and Social Behavior, Social Ecology, and Education majors have first consideration for enrollment.*

192V Language and Literacy (4). Lecture, three hours. Addresses the linguistic principles and processes that underlie oral and written language proficiency. Emphasis is on how to use phonology, morphology, orthography, semantics, syntax, and pragmatics to support literacy and oral language development for K–12 students. Same as Education 151. Formerly Psychology and Social Behavior P192V. *Psychology and Social Behavior, Social Ecology, Education, and Psychology majors have first consideration for enrollment.*

193B Juvenile Delinquency (4). Lecture, three hours. Patterns of delinquent behavior, theories that explain behavior, current research aimed at enhancing exploratory power. Attempts to prevent and control delinquency are put in historical perspective. Development of the current juvenile justice system and evolution of modern juvenile law. Prerequisite: Criminology, Law and Society C7. Same as Criminology, Law and Society C109.

193C Social Control of Delinquency (4). Lecture, three hours. Assumes familiarity with theories of delinquency, the juvenile justice system, and elements of juvenile law. Explores socio-historical origins and evolution of juvenile justice, current research and policy on delinquency prevention and treatment, and future directions of law, policy, and practice. Prerequisite or corequisite: Criminology, Law and Society C7; Criminology, Law and Society C109 recommended. Same as Criminology, Law and Society C164. *Psychology and Social Behavior, Social Ecology, Criminology, Law and Society, and Psychology majors have first consideration for enrollment.*

193D Interrogation, Confession, and the Law (4). Lecture, three hours. In-depth examination of the social psychology of police interrogation in America, the evolution of American interrogation practices from the nineteenth century to the present, impact of law on police behavior and ideology, causes and consequences of false confessions, possibilities of reform. Same as Criminology, Law and Society C152. Formerly Psychology and Social Behavior P156S.

193E Psychology and the Law (4). Lecture, three hours. Psychological assumptions of American legal system and mental health aspects of provision of criminal justice services. Civil commitment, insanity defense, competence to stand trial, jury selection, eye-witness identification. Use of police, courts, correctional institutions in prevention of behavior disorders. Prerequisite: Criminology, Law and Society C7 or C101. Same as Criminology, Law and Society C105. Formerly Psychology and Social Behavior P164S. *Psychology and Social Behavior, Social Ecology, and Criminology, Law and Society majors have first consideration for enrollment.*

193F Family Law (4). Lecture, three hours. Examines legal issues surrounding marriage, cohabitation, divorce, child custody and support, adoption, and the rights of parents and children in the family context. The findings of social science research are used to illuminate the legal issues. Prerequisite: Criminology, Law and Society C7 or C101. Same as Criminology, Law and Society C123. Formerly Psychology and Social Behavior P169P. *Psychology and Social Behavior, Social Ecology, and Criminology, Law and Society majors have first consideration for enrollment.*

193G Eyewitness Testimony (4). Lecture, three hours. Faulty eyewitness testimony is a major cause of wrongful convictions. Covers the fast-growing topic of eyewitness testimony and memory for real-world events, both how psychologists study eyewitness capacity, and how the legal system has dealt with eyewitness issues. Prerequisites: Social Ecology 10 and senior standing. Same as Criminology, Law and Society C177. Formerly Psychology and Social Behavior P177P. *Psychology and Social Behavior, Social Ecology, and Criminology, Law and Society majors have first consideration for enrollment.*

196 Research Seminar in Psychology and Social Behavior (4). Seminar, three hours. Special topics research seminar. Content varies with interest of instructor. Capstone seminar for students who have conducted research with, or have a background in, the research topics of the Psychology and Social Behavior faculty member offering this seminar in a given quarter. Prerequisites: Psychology and Social Behavior 11C, upper-division standing, and consent of instructor. May be repeated for credit as topics vary. Formerly Psychology and Social Behavior P196.

GRADUATE

P201 Research Methods in Psychology (4). In-depth examination of the conceptualization of research problems and linkages between theory and the design of appropriate strategies for empirical research in psychological science. Topics include experimental and quasi-experimental designs, reliability and validity of measurement and non-experimental procedures. Prerequisite: graduate standing or consent of instructor.

P204 Adolescence (4). Considers pubertal and cognitive changes and their social consequences; the family, peer group, school, and cultural contexts in which adolescence is embedded; and selected psychosocial issues including autonomy, identity, health, and well-being. Prerequisite: graduate standing or consent of instructor.

P209A Applied Psychological Research (4). Focuses on scientific and professional issues in the field of psychology. Topics include communication skills; intervention approaches; collaboration, consultation, and referral; and ethical issues associated with at-risk populations research. Prerequisite: graduate standing or consent of instructor.

P212 Social Cognition (4). Explores historical and current developments in cognitive social psychology. Topics include judgment and decision making, automatic versus controlled processing, affective forecasting, motivated reasoning, and the effects of emotion on memory and judgment. Prerequisite: graduate standing or consent of instructor.

P214 Seminar in Social Psychology (4). Presents an overview of selected theoretical and empirical topics in social psychology including social influence and conformity, altruism and aggression, persuasion and attitude change, self and social perception, and social cognition. Prerequisite: graduate standing or consent of instructor.

P218 Infancy (4). Covers development from conception through the second year. Focus is on research and theory concerning infants' physical, social, cognitive, perceptual, emotional, and language development. Also covers transition to parenthood and family context of infant development. Prerequisite: graduate standing or consent of instructor.

P220 Developmental Psychology: Theories and History (4). Examines key concepts, theories, and the historical and philosophical roots of research in human life span development. Focuses on biological and environmental causation, universalism and cultural relativism, continuity and change. Prerequisite: graduate standing or consent of instructor.

P223 Cross-Cultural Developmental Psychology (4). Examines human development in diverse cultures (e.g., Asian, American, and African). Cultural diversity within the U.S. and acculturation of various ethnic groups also discussed. Topics include parenting, family relations, language and cognition, schooling and academic achievement, and morality. Prerequisite: graduate standing or consent of instructor.

P225 Late Adulthood and Aging (4). Examines sociocultural and environmental influences on the social roles, behavior, and personal adjustment of middle-aged and older adults. Changes in age composition and structure of populations, functions of work and leisure, support systems, health care, prospects for social intervention. Prerequisite: graduate standing or consent of instructor.

P228 Public Health Cost-Effectiveness Analysis (4). Examines using cost-effectiveness information to allocate limited resources to maximize health benefits to a population; defining and measuring cost, survival, and health-related quality of life; and how to calculate cost-effectiveness using decision trees and Markov simulation models. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 226 and Public Health 220.

P230 Adulthood (4). Focuses on early and middle adulthood. Examines the extended period of transitioning to adulthood; changes in relationships with family members; impact of major role-related experiences (e.g., spouse, parent, worker) on development and well-being; continuity and change in personality and social identities. Prerequisite: graduate standing or consent of instructor.

P231 Professional Issues in Psychology (4). Examines a variety of issues related to the professional socialization and development of graduate students in psychology. Topics include the publication process, sources of research funding, alternative employment options, competitiveness on the job market, and the academic career route. Prerequisite: graduate standing or consent of instructor.

P232 Hardiness as the Pathway to Resilience (4). Theory, research, and practice supports hardiness as a major pathway to surviving and thriving under stress in our turbulent times. Course (1) imparts relevant theory, research, and practice, and (2) teaches how to use hardiness assessment and training techniques. Prerequisite: graduate standing or consent of instructor.

P233 Personality (4). Provides a frame of reference for understanding personality and its role in life-span development, the relationship of the individual to society, and both mental and physical illness. Prerequisite: graduate standing or consent of instructor.

P237 Violence, Society, and Psychopathology (4). The multifactorial, societal-contextual nature of violence is examined through historical, philosophical, and social science theoretical accounts. Priority topics are violent crime, socio-environmental factors, family violence, media violence, terrorism, personality and mental disorder, psychiatric institutions, and interventions for violent offenders. Prerequisite: graduate standing or consent of instructor.

P238 Child Psychopathology (4). Examination of etiology, classification, and developmental pathways of disorders, as well as risk and resilience factors, during the childhood/adolescent years. Discussion of genetic influences and contextual risk factors as well as internalizing and externalizing disorders. Prerequisite: graduate standing or consent of instructor.

P239 Adult Psychopathology (4). Explores the antecedents, characteristics, course, outcomes, and options for the prevention or management of various forms of psychopathology and behavior disorder. Focuses on psychological and biobehavioral mechanisms that influence the development, expression, and amelioration of maladaptation. Prerequisite: graduate standing or consent of instructor.

P241 Mental Health Services and Interventions (4). Analyzes "state of the art" psychosocial and psychotropic treatments and their role in the "de facto" mental health care system. Introduces mental health services research, with emphasis on skills relevant to developing and evaluating treatment programs. Prerequisite: graduate standing or consent of instructor.

P243 Ecological Context of Psychopathology (4). Surveys the epidemiology of behavioral and other health disorders as they may be affected by socioeconomic status, income disparity, employment stress, adverse employment change, and other social environmental factors. Reviews measurement and design issues in advancing research in this area. Prerequisite: graduate standing or consent of instructor.

P245 Psychological Assessment (4). Familiarizes students with psychological assessments in intelligence, clinical diagnosis, personality, and neuropsychological functioning. Exposure to administering, scoring, and interpreting assessments. Special focus on psychometrics (e.g., reliability and validity), test construction, and ethical responsibilities. Prerequisite: graduate standing or consent of instructor.

P250 Emotion, Reasoning, and Memory (4). Examines research and theory on emotion from the perspective of cognitive psychology. Topics include the effects of emotions on attention, memory, and problem solving; the relations between emotional and cognitive development; flash-bulb memories of intense emotional experiences; eyewitness testimony. Prerequisite: graduate standing or consent of instructor.

P256 Development, Health, and Disease: A Biobehavioral Perspective (4). Interdisciplinary course discusses exposure to disease risk factors and susceptibility to risk exposure as a basis for understanding development, health, and disease. Integrative approach includes relevant concepts from several areas including health and developmental psychology, developmental neuroscience, and behavioral medicine. Prerequisite: graduate standing or consent of instructor.

P257 Genes, Emotions, and Behavior (4). Course in behavioral genetics addresses the nature/nurture question: what is the strength of relative genetic and environmental influences on psychosocial processes ranging from attachment and social behavior to aggression and depression. Prerequisite: graduate standing or consent of instructor.

P258 Health Psychology (4). Interdisciplinary exploration of emerging fields of health psychology and behavioral medicine. Topics: role of stress in the development and treatment of medical problems; sociocognitive determinants of health and illness; interpersonal health transactions; behavioral approaches to medical problems such as diabetes, obesity, hypertension. Prerequisite: graduate standing or consent of instructor.

P262 Interpersonal Processes and Health (4). Examines traditions of research linking interpersonal processes to emotional or physical health. Topics include: role of social support in ameliorating stress, effects of social control on health-compromising behaviors, adverse effects of social relationships on health, causes of deficient social relationships. Prerequisite: graduate standing or consent of instructor.

P263 Eyewitness Testimony (4). Examines the evidence that shows that faulty eyewitness memory is the major cause of wrongful convictions. Explores what the legal system thinks of eyewitness testimony and how the legal system has dealt with eyewitness issues. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C263.

P264A Quantitative Methods in Psychology (4). Statistical techniques for inference in psychological research including point, interval, and effect size estimation to establish test association between variables. Techniques from General Linear Model include single- and multifactor analysis of variance with use of linear contrasts and post hoc comparisons. Prerequisite: graduate standing or consent of instructor.

P264B Advanced Quantitative Methods in Psychology (4). Focuses on proper specification of multivariable regression models with emphasis on inferences using OLS and logistical regression. Emphasizes framework for assessing interaction and other complex relationships between response and predictor variables. Use of statistical software to analyze data. Prerequisite: Psychology and Social Behavior P264A.

P265 Memory and the Law (4). Examines the controversial topic of repressed memory, or perception and memory of real-world events. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C265.

P266 Psychology and the Law (4). Overview of how psychology is applied to the civil and criminal justice systems, how case law shapes this application, and how legal decisions affect the direction of psychological research. Interdisciplinary approach to research in psychology, law, and/or criminology. Prerequisite: graduate standing or consent of instructor.

P268 Coping with Stressful Life Events (4). Explores how individuals cope with serious life crises (e.g., illness, bereavement), life transitions, and daily stressors. Considers how such events impact on people's cognitions, emotions, and health, and the role of others in the coping process. Prerequisite: graduate standing or consent of instructor.

P271 Human Evolution and Behavior (4). Covers theories and empirical research concerning the evolutionary origins of human behaviors and their variations. An interdisciplinary course emphasizing both evolutionary psychology (e.g., mating strategies, kinship, and parenting) and molecular evolution (i.e., evolution of genes for various behaviors). Prerequisite: graduate standing or consent of instructor. Same as Biological Chemistry 217.

P272 Human Stress and the HPA Axis (4). Introduction to a new and multidisciplinary research field investigating the interactions between the brain, hormones, and behavior. After an introduction to relevant neuroendocrine concepts, covers current research topics in the field including stress, memory, development, and psychopathology. Prerequisite: graduate standing or consent of instructor.

P273 Biobehavioral Aspects of Health and Illness (4). Examines the behavior-physiology interactions of some major bodily systems: the nervous, cardiovascular, gastrointestinal, and endocrine systems. Analysis of normal and abnormal states of these systems as they relate to tissue injury, disease, and rehabilitation. Prerequisite: graduate standing or consent of instructor.

P274 The Psychobiology of Stress (4). Introduction to stress physiology and psychoneuroimmunology and critical review of research in this area. Examines bi-directional relationships between psychological factors (e.g., stressors, social processes, emotions), neuroendocrine and immune systems, and disease. Prerequisite: graduate standing or consent of instructor.

P275 Special Topics in Psychology and Social Behavior (4). Topics covered vary with interests of instructor. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary. Prerequisite: graduate standing or consent of instructor.

P276 Meta-Analysis (4). The process of synthesizing results from a number of studies that address a common research question is often referred to as *meta-analysis*. This applied course explores the meta-analysis process from the coding of retrieved studies to the final research synthesis. Prerequisite: graduate standing or consent of instructor.

P289 The Teaching of Psychology (4). Provides students with the theory and skills needed to teach undergraduate psychology courses. Covers research on theories and methods of teaching, curriculum design, and evaluation. Students also gain practical experience preparing and presenting material. Prerequisite: graduate standing in the Department of Psychology and Social Behavior or consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

P290 Research in Developmental Psychology (4). Introduces graduate students to research conducted by individual faculty members in the area of developmental psychology. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P291 Research in Health Psychology (4). Introduces graduate students to research conducted by individual faculty members in the area of health psychology. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P292 Research in Psychopathology and Behavior Disorder (4). Introduces graduate students to research conducted by individual faculty members in the area of psychopathology and behavior disorder. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P293 Research in Social and Personality Psychology (4). Introduces graduate students to research conducted by individual faculty members in the area of social and personality psychology. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P294A-B-C Research Directions in Psychology and Social Behavior (2-2-2) F, W, S. Introduces students to the current research of faculty, graduate students, and visitors to the Department of Psychology and Social Behavior. Includes examination of contemporary research issues and controversies, as well as issues related to students' development as professionals. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only.

P295 Research in Psychology and Law (4). Introduces graduate students to research conducted by individual faculty members in the area of psychology and law. This is accomplished by having students involve themselves in the conceptualization, strategy, and implementation of the faculty member's research. Prerequisite: graduate standing or consent of instructor.

P296 Doctoral Dissertation Research and Writing (4 to 12). Prerequisite: advancement to candidacy. Satisfactory/Unsatisfactory only. May be repeated for credit.

P298 Directed Studies in Psychology and Social Behavior (2 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

P299 Independent Studies in Psychology and Social Behavior (2 to 8). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

SCHOOL OF SOCIAL SCIENCES

Barbara A. Doshier, **Dean**

Social Science Plaza

Faculty

Edwin Amenta, Ph.D. University of Chicago, *Professor of Sociology*
Deborah D. Avant, Ph.D. University of California, San Diego, *Director of International Studies and Professor of Political Science*
Stanley Bailey, Ph.D. University of California, Los Angeles, *Associate Professor of Sociology*
Nina Bandelj, Ph.D. Princeton University, *Associate Professor of Sociology*
Jeffrey A. Barrett, Ph.D. Columbia University, *UCI Chancellor's Fellow, and Department Chair and Professor of Logic and Philosophy of Science*
William H. Batchelder, Ph.D. Stanford University, *Professor of Cognitive Sciences*
Frank D. Bean, Ph.D. Duke University, *UCI Chancellor's Professor of Sociology and Economics*
Matthew N. Beckmann, Ph.D. University of Michigan, *Associate Professor of Political Science*
Duran Bell, Ph.D. University of California, Berkeley, *Professor Emeritus of Economics*
Bruce Berg, Ph.D. Indiana University, *Associate Professor of Cognitive Sciences*
Victoria Bernal, Ph.D. Northwestern University, *Associate Professor of Anthropology*
Volodymyr Bilotkach, Ph.D. University of Arizona, *Assistant Professor of Economics*
Marianne Bitler, Ph.D. Massachusetts Institute of Technology, *Associate Professor of Economics*
Tom Boellstorff, Ph.D. Stanford University, *Professor of Anthropology*
Dan Bogart, Ph.D. University of California, Los Angeles, *Associate Professor of Economics*
Catherine Bolzendahl, Ph.D. Indiana University, *Assistant Professor of Sociology*
John P. Boyd, Ph.D. University of Michigan, *Professor Emeritus of Mathematical Anthropology*
William A. Branch, Ph.D. University of Oregon, *Associate Professor of Economics*
Myron L. Braunstein, Ph.D. University of Michigan, *Professor Emeritus of Cognitive Sciences*
Alyssa A. Brewer, Ph.D. Stanford University, *Assistant Professor of Cognitive Sciences*
Susan K. Brown, Ph.D. University of Washington, *Associate Professor of Sociology*
David Brownstone, Ph.D. University of California, Berkeley, *Professor of Economics*
Jan K. Brueckner, Ph.D. Stanford University, *Department Chair and Professor of Economics*
Daniel R. Brunstetter, Ph.D. University of California, Davis, *Assistant Professor of Political Science*
Michael L. Burton, Ph.D. Stanford University, *Professor Emeritus of Anthropology*
Michael Butler, J.F., Society of Fellows, Harvard University, *Professor Emeritus of Social Sciences*
Carter Butts, Ph.D. Carnegie Mellon University, *Associate Professor of Sociology*
Robert W. Byde, Ph.D. University of California, Irvine, *Lecturer in Cognitive Sciences*
Belinda Campos, Ph.D. University of California, Berkeley, *Assistant Professor of Chicano/Latino Studies*
Francesca M. Cancian, Ph.D. Harvard University, *Professor Emerita of Sociology*
Frank Cancian, Ph.D. Harvard University, *Professor Emeritus of Anthropology*
Christopher S. Carpenter, Ph.D. University of California, Berkeley, *Associate Professor of Management, Economics, and Education*
Leo R. Chávez, Ph.D. Stanford University, *Director of the Center for Research on Latinos in a Global Society and Professor of Anthropology*
Jiawei Chen, Ph.D. The John Hopkins University, *Assistant Professor of Economics*
Yen-Sheng Chiang, Ph.D. University of Washington, *Assistant Professor of Sociology*
Charles F. Chubb, Ph.D. New York University, *Professor of Cognitive Sciences*
Carol M. Cicerone, Ph.D. University of Michigan, *Professor Emerita of Cognitive Sciences*
Linda R. Cohen, Ph.D. California Institute of Technology, *Associate Dean for Graduate Studies, School of Social Sciences, and Professor of Economics and Law*
Benjamin N. Colby, Ph.D. Harvard University, *Professor Emeritus of Anthropology*
Thomas N. Cornsweat, Ph.D. Brown University, *Professor Emeritus of Cognitive Sciences*
Russell J. Dalton, Ph.D. University of Michigan, *Professor of Political Science*
James N. Danziger, Ph.D. Stanford University, *Professor Emeritus of Political Science*
Louis DeSipio, Ph.D. University of Texas at Austin, *Department Chair and Associate Professor of Chicano/Latino Studies and Associate Professor of Political Science*
Arthur S. DeVany, Ph.D. University of California, Los Angeles, *Professor Emeritus of Economics*
John D. Dombink, Ph.D. University of California, Berkeley, *Professor of Criminology, Law and Society and of Sociology*
Barbara A. Doshier, Ph.D. University of Oregon, *Dean of the School of Social Sciences and Professor of Cognitive Sciences*
Greg Duncan, Ph.D. University of Michigan, *UCI Distinguished Professor of Education, Economics, and Psychology and Social Behavior*
Michael D'Zmura, Ph.D. University of Rochester, *Professor of Cognitive Sciences*
David Easton, Ph.D. Harvard University, *UCI Distinguished Research Professor of Political Science*
Julia Elyacher, Ph.D. Harvard University, *Assistant Professor of Anthropology*
Jean-Claude Falmagne, Ph.D. University of Brussels, *Professor Emeritus of Cognitive Sciences*
Katherine Faust, Ph.D. University of California, Irvine, *Professor of Sociology*
Martha Feldman, Ph.D. Stanford University, *Professor of Planning, Policy, and Design, Management, Political Science, and Sociology, and Roger W. and Janice M. Johnson Chair in Civic Governance and Public Management*
Paul J. Feldstein, Ph.D. University of Chicago, *Director of the Center for Health Care Management and Policy and Professor of Management, Planning, Policy, and Design, and Economics, and Robert Gumbiner Chair in Health Care Management*
Cynthia Feliciano, Ph.D. University of California, Los Angeles, *Associate Professor of Chicano/Latino Studies, Sociology, and Education*
Raúl Fernández, Ph.D. Claremont Graduate School, *Director of the UC-Cuba Academic Initiative and Professor of Chicano/Latino Studies and Social Sciences*
Gordon J. Fielding, Ph.D. University of California, Los Angeles, *Professor Emeritus of Social Sciences*
James J. Flink, Ph.D. University of Pennsylvania, *Professor Emeritus of Social Sciences*
David J. Frank, Ph.D. Stanford University, *Department Chair and Professor of Sociology, and Professor of Education*
Linton Freeman, Ph.D. Northwestern University, *Research Professor of Sociology*

- Creel Froman, Ph.D. Northwestern University, *Professor Emeritus of Political Science*
- Paula Garb, Ph.D. U.S.S.R. Academy of Sciences, *Director of the Minor in Civic and Community Engagement, Co-Director of the Center for Citizen Peacebuilding, and Lecturer in Anthropology*
- Angela Garcia, Ph.D. Harvard University, *Assistant Professor of Anthropology*
- Robert Garfias, Ph.D. University of California, Los Angeles, *Professor of Anthropology*
- Michelle Garfinkel, Ph.D. Brown University, *Professor of Economics*
- Amihai Glazer, Ph.D. Yale University, *Professor of Economics*
- Gilbert Gonzalez, Ph.D. University of California, Los Angeles, *Professor Emeritus of Chicano/Latino Studies*
- Sara Goodman, Ph.D. Georgetown University, *Assistant Professor of Political Science*
- Michael R. Gottfredson, Ph.D. State University of New York, Albany, *Executive Vice Chancellor and Provost, and Professor of Criminology, Law and Society and of Sociology*
- Susan Greenhalgh, Ph.D. Columbia University, *Professor of Anthropology*
- Bernard N. Grofman, Ph.D. University of Chicago, *Director of the Center for the Study of Democracy, Professor of Political Science and Economics, and Jack W. Peltason Endowed Chair*
- Emily D. Grossman, Ph.D. Vanderbilt University, *Associate Professor of Cognitive Sciences*
- Jeremy Heis, Ph.D. University of Pittsburgh, *Assistant Professor of Logic and Philosophy of Science*
- Gregory Hickok, Ph.D. Brandeis University, *Professor of Cognitive Sciences*
- Ann Hironaka, Ph.D. Stanford University, *Associate Professor of Sociology*
- Donald Hoffman, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences*
- C. Ronald Huff, Ph.D. Ohio State University, *Professor of Criminology, Law and Society and of Sociology*
- Matthew L. Huffman Ph.D. University of California, Santa Barbara, *Associate Professor of Sociology*
- Simon Huttegger, Ph.D. University of Salzburg, *Associate Professor of Logic and Philosophy of Science*
- Mizuko “Mimi” Ito, Ph.D. Stanford University, *Professor in Residence of Anthropology and Informatics, and John D. and Catherine T. MacArthur Foundation Chair in Digital Media and Learning*
- Geoffrey J. Iverson, Ph.D. New York University, *Professor of Cognitive Sciences*
- Ivan Jeliaskov, Ph.D. Washington University in St. Louis, *Associate Professor of Economics*
- Valerie Jenness, Ph.D. University of California, Santa Barbara, *Dean of the School of Social Ecology and Professor of Criminology, Law and Society and of Sociology*
- Kent E. Johnson, Ph.D. Rutgers University, *Associate Professor of Logic and Philosophy of Science*
- Philippe Jorion, Ph.D. University of Chicago, *UCI Chancellor’s Professor of Management and Economics*
- Marek Kaminski, Ph.D. University of Maryland, *Associate Professor of Political Science*
- Diana Kapiszewski, Ph.D. University of California, Berkeley, *Assistant Professor of Political Science*
- Mary-Louise Kean, Ph.D. Massachusetts Institute of Technology, *Professor Emerita of Cognitive Sciences*
- Claire Jean Kim, Ph.D. Yale University, *Associate Professor of Asian American Studies and Political Science*
- Jerome Kirk, Ph.D. The Johns Hopkins University, *Professor Emeritus of Sociology*
- Igor Kopylov, Ph.D. University of Rochester, *Assistant Professor of Economics*
- Jeffrey Krichmar, Ph.D. George Mason University, *Associate Professor of Cognitive Sciences*
- David LaBerge, Ph.D. Stanford University, *Professor Emeritus of Cognitive Sciences*
- Jennifer Lee, Ph.D. Columbia University, *Associate Professor of Sociology*
- Michael D. Lee, Ph.D. University of Adelaide, *Department Chair and Professor of Cognitive Sciences*
- Karen Leonard, Ph.D. University of Wisconsin, *Director of the Center for Asian Studies and Professor of Anthropology*
- Christine Lofgren, Ph.D. University of California, Irvine, *Lecturer in Cognitive Sciences*
- Elizabeth F. Loftus, Ph.D. Stanford University, *UCI Distinguished Professor of Psychology and Social Behavior; Criminology, Law and Society; Cognitive Sciences; and Law*
- R. Duncan Luce, Ph.D. Massachusetts Institute of Technology, *UCI Distinguished Professor Emeritus of Cognitive Sciences and Economics*
- Cecelia Lynch, Ph.D. Columbia University, *Director of the Center for Global Peace and Conflict Studies and Professor of Political Science*
- Gary S. Lynch, Ph.D. Princeton University, *Professor of Psychiatry and Human Behavior, Cognitive Sciences, and Anatomy and Neurobiology*
- Craig MacAndrew, Ph.D. University of Chicago, *Professor Emeritus of Psychology*
- Penelope Maddy, Ph.D. Princeton University, *UCI Distinguished Professor of Logic and Philosophy of Science and of Mathematics*
- David B. Malament, Ph.D. Rockefeller University, *UCI Distinguished Professor of Logic and Philosophy of Science*
- Virginia Mann, Ph.D. Massachusetts Institute of Technology, *Professor of Cognitive Sciences and Education*
- George E. Marcus, Ph.D. Harvard University, *UCI Chancellor’s Professor of Anthropology*
- Julius Margolis, Ph.D. Harvard University, *Professor Emeritus of Economics*
- William M. Maurer, Ph.D. Stanford University, *Department Chair and Professor of Anthropology, and Professor of Law*
- Michael McBride, Ph.D. Yale University, *Associate Professor of Economics*
- Anthony McGann, Ph.D. Duke University, *Associate Professor of Political Science*
- James L. McGaugh, Ph.D. University of California, Berkeley, *Research Professor of Neurobiology and Behavior and of Cognitive Sciences*
- Martin C. McGuire, Ph.D. Harvard University, *Professor Emeritus of Economics*
- James W. Meeker, Ph.D., J.D. State University of New York, Buffalo, *Associate Dean of Student Services and Computing, School of Social Ecology, and Professor of Criminology, Law and Society and of Sociology*
- David S. Meyer, Ph.D. Boston University, *Professor of Sociology*
- Fabio Milani, Ph.D. Princeton University, *Assistant Professor of Economics*
- Kristen R. Monroe, Ph.D. University of Chicago, *Director of the Interdisciplinary Center for the Scientific Study of Ethics and Morality and Professor of Political Science*
- Michael J. Montoya, Ph.D. Stanford University, *Associate Professor of Anthropology, Chicano/Latino Studies, and Public Health*
- Alejandro Morales, Ph.D. Rutgers University, *Professor of Chicano/Latino Studies and Spanish*
- Patrick Morgan, Ph.D. Yale University, *Professor of Political Science and Thomas T. and Elizabeth C. Tierney Chair in Global Peace and Conflict Studies*
- Keith Murphy, Ph.D. University of California, Los Angeles, *Assistant Professor of Anthropology*
- Louis Narens, Ph.D. University of California, Los Angeles, *Professor of Cognitive Sciences*
- David Neumark, Ph.D. Harvard University, *Professor of Economics and Management*
- Robert Newcomb, Ph.D. University of California, Santa Barbara, *Senior Lecturer with Security of Employment Emeritus, Social Sciences*
- Nicholas R. Noviello, Ph.D. University of California, Irvine, *Lecturer in Social Sciences*
- Andrew Noymer, Ph.D. University of California, Berkeley, *Assistant Professor of Sociology and Public Health*
- Kevin Olson, Ph.D. Northwestern University, *Associate Professor of Political Science*
- Min Ouyang, Ph.D. University of Maryland, *Assistant Professor of Economics*
- Lisa Pearl, Ph.D. University of Maryland, *Assistant Professor of Cognitive Sciences*
- Jack W. Peltason, Ph.D. Princeton University, *President Emeritus of the University of California, UCI Chancellor Emeritus, and Professor Emeritus of Political Science*
- Andrew Penner, Ph.D. University of California, Berkeley, *Assistant Professor of Sociology*
- Kristin Peterson, Ph.D. Rice University, *Assistant Professor of Anthropology*
- Mark P. Petracca, Ph.D. University of Chicago, *Department Chair and Associate Professor of Political Science*

- Joy Pixley, Ph.D. Cornell University, *Assistant Professor of Sociology*
 Dale Poirier, Ph.D. University of Wisconsin, Madison, *Professor of Economics*
 Andrew J. Policano, Ph.D. Brown University, *Dean of The Paul Merage School of Business and Professor of Management and Economics*
 Francesca Athene Polletta, Ph.D. Yale University, *Professor of Sociology*
 Henry N. Pontell, Ph.D. State University of New York, Stony Brook, *Professor of Criminology, Law and Society and of Sociology*
 M. Ross Quillian, Ph.D. Carnegie-Mellon University, *Professor Emeritus of Political Science*
 Priya Ranjan, Ph.D. Columbia University, *Professor of Economics*
 Virginia Richards, Ph.D. University of California, Berkeley, *Professor of Cognitive Sciences*
 Gary Richardson, Ph.D. University of California, Berkeley, *Associate Professor of Economics*
 Belinda Robnett, Ph.D. University of Michigan, *Associate Professor of Sociology*
 Guillaume Rocheteau, Ph.D. University of Pantheon-Assas (Paris 2), *Acting Professor of Economics*
 Jose Antonio Rodriguez-Lopez, Ph.D. University of California, Berkeley, *Assistant Professor of Economics*
 A. Kimball Romney, Ph.D. Harvard University, *Professor Emeritus of Anthropology*
 Ana Rosas, Ph.D. University of Southern California, *Assistant Professor of Chicano/Latino Studies and History*
 Shawn Rosenberg, M.Litt. Oxford University, Harvard University, *Professor of Political Science and Social Psychology*
 Vicki L. Ruiz, Ph.D. Stanford University, *Dean of the School of Humanities and Professor of History and Chicano/Latino Studies*
 Rubén G. Rumbaut, Ph.D. Brandeis University, *Professor of Sociology and Education*
 Donald G. Saari, Ph.D. Purdue University, *Director of the Institute for Mathematical Behavioral Sciences and UCI Distinguished Professor of Economics and Mathematics*
 Kourosh Saberi, Ph.D. University of California, Berkeley, *Professor of Cognitive Sciences*
 Kamal Sadiq, Ph.D. University of Chicago, *Associate Professor of Political Science*
 Wayne Sandholtz, Ph.D. University of California, Berkeley, *Professor of Political Science*
 Barbara W. Sarnecka, Ph.D. University of Michigan, *Assistant Professor of Cognitive Sciences*
 Evan Schofer, Ph.D. Stanford University, *Associate Professor of Sociology*
 William R. Schonfeld, Ph.D. Princeton University, *Professor Emeritus of Political Science*
 Tonya L. Schuster, Ph.D. University of California, Riverside, *Lecturer in Sociology*
 Caesar D. Sereseres, Ph.D. University of California, Riverside, *Associate Dean for Undergraduate Studies, School of Social Sciences, Acting Department Chair of Linguistics, and Associate Professor of Political Science*
 Manisha Shah, Ph.D. University of California, Berkeley, *Assistant Professor of Economics*
 Paul Shirey, Ph.D. University of California, Irvine, *Lecturer in Economics and Social Sciences*
 Stergios Skaperdas, Ph.D. The Johns Hopkins University, *Professor of Economics*
 Brian Skyrms, Ph.D. University of Pittsburgh, *Director of the Minor in the History and Philosophy of Science and UCI Distinguished Professor of Logic and Philosophy of Science and of Economics*
 Kenneth A. Small, Ph.D. University of California, Berkeley, *Professor Emeritus of Economics*
 Charles Anthony Smith, Ph.D. University of California, San Diego, *Assistant Professor of Political Science*
 David A. Smith, Ph.D. University of North Carolina, Chapel Hill, *Professor of Sociology*
 David A. Snow, Ph.D. University of California, Los Angeles, *UCI Chancellor's Professor of Sociology*
 Eitel Solingen, Ph.D. University of California, Los Angeles, *UCI Chancellor's Professor of Political Science*
 Dorothy J. Solinger, Ph.D. Stanford University, *Co-Director of the Minor in Asian Studies and Professor of Political Science*
 George Sperling, Ph.D. Harvard University, *UCI Distinguished Professor of Cognitive Sciences and of Neurobiology and Behavior*
 Jon Sprouse, Ph.D. Stanford University, *Assistant Professor of Cognitive Sciences*
 Ramesh Srinivasan, Ph.D. Tulane University, *Associate Professor of Cognitive Sciences*
 Preston Kyle Stanford, Ph.D. University of California, San Diego, *Professor of Logic and Philosophy of Science*
 Judith Stepan-Norris, Ph.D. University of California, Los Angeles, *Professor of Sociology*
 Mark Steyvers, Ph.D. Indiana University, *Professor of Cognitive Sciences*
 Yang Su, Ph.D. Stanford University, *Associate Professor of Sociology*
 Rein Taagepera, Ph.D. University of Delaware, *Professor Emeritus of Political Science*
 Katherine Tate, Ph.D. University of Michigan, *Professor of Political Science*
 Gary Thom, Ph.D. Yale University, *Professor Emeritus of Political Science*
 Keith L. Topper, Ph.D. University of California, Los Angeles, *Associate Professor of Political Science*
 Bernard Tranel, Ph.D. University of California, San Diego, *Professor of Linguistics*
 Judith Treas, Ph.D. University of California, Los Angeles, *Professor of Sociology*
 Yuliya V. Tverdova, M.P.A. Binghamton University, *Assistant Professor of Political Science*
 Carole J. Uhlaner, Ph.D. Harvard University, *Associate Professor of Political Science and Economics*
 Robert Uriu, Ph.D. Columbia University, *Associate Professor of Political Science*
 Deborah Vargas, Ph.D. University of California, Santa Cruz, *Assistant Professor of Chicano/Latino Studies*
 Roxanne Varzi, Ph.D. Columbia University, *Associate Professor of Anthropology*
 Sheila Vaughn, Ph.D. United States International University, *Lecturer in Cognitive Sciences*
 Wang Feng, Ph.D. University of Michigan, *Professor of Sociology*
 W. C. Watt, Ph.D. University of Pennsylvania, *Professor Emeritus of Cognitive Sciences*
 Martin P. Wattenberg, Ph.D. University of Michigan, *Professor of Political Science*
 Kai F. Wehmeier, Ph.D. Westfälische Wilhelms-Universität Münster, *Professor of Logic and Philosophy of Science*
 Christian Werner, Ph.D. The Free University of Berlin, *Professor Emeritus of Economics*
 Douglas R. White, Ph.D. University of Minnesota, *Professor Emeritus of Anthropology*
 Joseph L. White, Ph.D. Michigan State University, *Professor Emeritus of Social Sciences*
 Charles E. (Ted) Wright, Ph.D. University of Michigan, *Associate Professor of Cognitive Sciences*
 Valerie Wright, Ph.D. Fuller Theological Seminary, *Lecturer in Cognitive Sciences and Social Sciences*
 John I. Yellott, Jr., Ph.D. Stanford University, *Professor Emeritus of Cognitive Sciences*
 Mei Zhan, Ph.D. Stanford University, *Associate Professor of Anthropology*

Visiting Distinguished Professorships

The School sponsors a program of Visiting Distinguished Professorships that exposes students to seminal thinkers in the social sciences. The professorships normally are of a quarter's duration. Participants have included Martin Bronfenbrenner, Professor of Economics (Duke University) and Fellow of the American Academy of Arts and Sciences; Philip Converse, Robert C. Angell Professor of Political Sciences and Sociology (University of Michigan), President of the American Political Science Association, and member of the National Academy of Sciences and the American Academy of Arts and Sciences; Beatrice Whiting, Professor of Anthropology and Education Emeritus, Graduate School of Education (Harvard University), and member of the American Academy of Arts and Sciences; John Whiting, Professor of Social Anthropology (Harvard University) and member of the American Academy of Arts and Sciences; and James Coleman, Professor of Sociology (University of Chicago) and member of the National Academy of Sciences and the American Academy of Arts and Sciences.

OVERVIEW

Undergraduate and graduate education in the School of Social Sciences at UCI represents a commitment to modern social science. The classic subject areas of anthropology, economics, geography, linguistics, political science, psychology, and sociology are included in the School's educational programs, but these programs go well beyond the traditional disciplines and can be characterized by the following emphases.

First, the faculty recognizes the value of systematic empirical observation and quantitative analysis in the study of human behavior. Developments in computer science and in mathematics oriented toward the problems of the social sciences, and the refinement of techniques for the observational, experimental, and statistical study of human behavior, have contributed major new elements to social science. Students in the School of Social Sciences will become familiar with the mathematical, computational, and statistical tools underlying modern social science.

Second, many of the most interesting questions in the study of human behavior cannot be fixed within the traditional disciplinary boundaries. Some of the new and evolving areas which cross orthodox boundaries are political sociology, public policy, cognitive anthropology, and psycholinguistics. Therefore many courses and course modules are built around these interdisciplinary social science phenomena rather than representing social science disciplines.

Third, the School emphasizes the design of hypotheses and of systems of interrelated ideas as an essential part of scientific pursuit. Consequently, the educational programs place substantial emphasis on understanding social science phenomena through the development of theories that can be used to guide empirical studies.

Educational opportunities for students in the School of Social Sciences extend well beyond attendance at courses. Students may develop independent study proposals in cooperation with interested faculty members or may investigate social science applications via off-campus internships. They are invited to participate in the quarterly evaluation of courses and instructors, to propose new courses and other modifications in existing programs, to nominate candidates for visiting faculty appointments, and to serve on School committees. The School provides a variety of opportunities for faculty-student interaction, and students will find the faculty, administration, and academic counseling staff of the School highly accessible and responsive.

Special Facilities

The School of Social Sciences maintains several special facilities for research and education.

The **Social Sciences Research Laboratory**, used for both faculty and student research, occupies the entire fourth floor of the Social Sciences Laboratory Building. The facility contains 40 experiment and control rooms and several specialized facilities including a virtual reality facility and cognition laboratory.

Three **Computer Laboratories** provide access to networked systems, where students can work on assignments using full-featured word-processing, database, graphics, and statistical packages. In addition, these computers provide students with access to e-mail, Internet services, and the World Wide Web. The Social Science Plaza facility contains state-of-the-art, high-tech lecture halls and is fully Internet accessible.

The **Social Sciences Academic Resource Center (SSARC)** was created over a decade ago to help School of Social Sciences students obtain the appropriate information to select a career and/or graduate school program, generate professional contacts, and learn how to

gain a competitive edge during their undergraduate years. Centered around the five educational pillars (Academics, Research, Practical Experience, Leadership, and Community Service), the SSARC offers valuable services, programming, and resources ranging from resume consultation, internship opportunities, and graduate school guidance, to research and leadership training. Through one-on-one consultations and various co-curricular programs, the staff assist students with developing an educational blueprint that will ensure a quality educational experience while developing a strong educational portfolio and transforming each student into successful leaders within their chosen careers. Visit <http://www.socsci.uci.edu/ssarc/> for more information.

Social Sciences Undergraduate Student Affairs (SSUSA) provides general and detailed information about UCI, the School of Social Sciences, and specific requirements exclusive to the majors and minors in the School to students, faculty, administrators, and the general public. SSUSA is fully staffed with academic counselors who speak one-on-one with students regarding their UCI academic career as well as opportunities beyond the classroom. There are also eight peer academic advisors available to undergraduates for walk-in advising regarding requirements and classes. For more information, visit <http://www.socsci.uci.edu/ugs/04.php>.

Centers for Research

The **Center for Asian Studies** at the University of California, Irvine is comprised of more than 40 interdisciplinary faculty members who study China, Japan, Korea, India, and Southeast Asia and enhance the study of the many countries and cultures of Asia. Housed in the School of Social Sciences, the center provides a forum for discussions across geographic and disciplinary boundaries both on campus and within the community.

The **Center for Citizen Peacebuilding** at UCI is a distinctive international clearinghouse for research, education, and action on public peace processes. The program focuses on how citizens participate in these activities to prevent violent conflict and, if violence occurs, to promote reconciliation and sustainable peace. The purpose is to significantly contribute to the theory and practice of conflict resolution.

The multidisciplinary **Center for Cognitive Neuroscience** is aimed at bringing together faculty and students interested in understanding the relation between cognitive abilities and the neural systems that support them. Center participants include 11 faculty and their laboratory members. Active areas of research in participating laboratories include visual and auditory perception, motor control, memory, speech and language, and attention, among others. This research is carried out using a variety of methods such as fMRI, EEG, MEG, TMS, as well as patient-based neuropsychological approaches.

The **Center for Decision Analysis**, located in the **Institute for Mathematical Behavioral Sciences (IMBS)** in the School of Social Sciences, is a specialized research center where the objective is to facilitate interaction and common research goals among scientists whose purpose is to formulate precisely and test theories of human behavior. This is to be interpreted in a wide sense as manifested by the membership which spans the following areas: anthropology, cognitive science, economics, engineering, logic and philosophy of science, mathematics, political science, and sociology. Additional faculty come from management science and psychobiology.

To describe the focus, consider the fruitful symbiotic relationship that has existed for millennia between mathematics and the physical sciences. A goal of IMBS is to generate a similar relationship

between mathematics and the behavioral and social sciences. With high-power social scientists (several are members of the National Academy) providing insights about the field and working with the mathematicians who are involved, new mathematical approaches to analyze these issues are being developed and new kinds of mathematical questions are being raised. For more information, visit <http://www.imbs.uci.edu/>.

The **Center for the Study of Democracy (CSD)** continues the work of the UCI Focused Research Program on Democratization that was founded in 1991 and sponsors research and training on the process of democratic transition and the expansion of the democratic process in already established democracies. CSD includes a multidisciplinary faculty from four UC campuses.

CSD's activities are focused on three areas. First, faculty administer a graduate training program on empirical democratic theory. The National Science Foundation selected UCI in 1995 as a national center for the training of doctoral students in democratization issues; the five-year NSF grant provides funding for graduate fellowships and other training activities.

Second, the Democracy research program aims at improving the democratic process in the United States and other established democracies as we enter the next century. The program focuses on reforms to increase the ability of citizens to express their preferences and have these preferences represented within the democratic process.

Third, CSD supports research on the development of sustainable democracies in Eastern Europe, East Asia, and other new democracies. The New Democracies Initiative contributes to the promotion of democracy in these formerly authoritarian systems. For more information visit the CSD Web site at <http://www.democ.uci.edu/>.

The **Center for Demographic and Social Analysis (C-DASA)** is a formal campus center serving nearly 50 UCI faculty from a dozen departments, as well as their graduate and post-graduate trainees. The center is committed to research on the critical issues shaping the well-being of local, national, and global populations. Faculty are recognized nationally and internationally for award-winning research, ranging from China's one-child policy to U.S. welfare reform, from incorporation of Mexican immigrants to gender inequality in home, school, and workplace. C-DASA promotes innovative scholarship by fostering multidisciplinary exchange, supporting collaboration, and building the advanced infrastructure essential for demographic research and training in the twenty-first century.

The **UCI Interdisciplinary Center for the Scientific Study of Ethics and Morality** was established in 2003 by a group of scholars interested in recent scientific research that yields insight on the origins and causes of morality. In creating the Center, UCI faculty both address a topic that is becoming one of the new frontiers in science and reflect critically on the moral implications of this new frontier.

The Center focuses on the etiology of ethical behavior and differs in several important ways from existing centers dedicated to the discussion of ethics. Traditional academic approaches tend to originate in philosophical, foundational, or religious discussions of ethics. They tend to be humanistic in orientation and emphasize abstract, theoretical considerations of what constitutes ethics and morality. The Center complements this traditional approach and explores the scientific and/or the empirically verifiable factors that influence morality, using a variety of methodologies that examine factors contributing to and driving moral action in a variety of

social, psychological, and biological contexts. The Center encourages ties between scholars interested in ethics in humanities and the sciences—including social science, social ecology, biological sciences, and medicine—building on the interdisciplinary tradition at UCI, complementing, rather than duplicating, existing efforts. Visit <http://www.socsci.uci.edu/ethicscenter/> for more information.

Established in 2006, the **Center for Ethnography** works to develop a series of sustained theoretical and methodological conversations about ethnographic research practices across the disciplines. The center supports innovative collaborative ethnographic research as well as research on the theoretical and methodological refunctioning of ethnography for contemporary cultural, social, and technological transformations.

The **Center for Global Peace and Conflict Studies (CGPACS)** is a multidisciplinary research unit housed in the School of Social Sciences. The mission of CGPACS is to promote research on international problems and processes. The Center's current research emphases include weapons of mass destruction, especially biological weapons; international governance, focusing on the evolution of international norms and institutions; citizen peace building; international environmental cooperation; and religion in international affairs. CGPACS also sponsors research conferences and public colloquia on topics of current significance. The Center's Margolis Lecture brings to UCI high-profile speakers who have played active roles in international affairs. Recent Margolis Lectures have featured Justice Louise Arbour, former chief prosecutor for the International Criminal Tribunals; Chinese democracy activist Wei Jinsheng; Congressman Christopher Cox; former Secretary of State Warren Christopher; and former Secretary of Defense William Perry. Visit <http://www.cgpac.uci.edu/> for more information.

The purpose of the **UCI Center for Research on Immigration, Population, and Public Policy** is to foster and conduct basic and policy-relevant research on international migration and other population processes, with a main focus on U.S. immigration. In order to encourage multi-investigator, multidisciplinary, and interdisciplinary research projects, the Center organizes informal discussions of ideas for future research projects, "brainstorming" sessions about research funding opportunities, "brown-bag" presentations of research findings, and workshops and conferences. Much of the Center's research focuses on the multigenerational incorporation experiences of immigrant groups in the United States, especially those occurring in diverse contexts such as Southern California. Investigations of this type often devote as much attention to what happens to the children and grandchildren of immigrants as to what happens to immigrants themselves. For more information, visit <http://www.cri.uci.edu/>.

The **Center for Research on International and Global Studies (RIGS)** was created to be a hub for research and teaching at UCI on the interactions of politics, economics, societies, cultures, and history in global and international affairs. It provides a calendar of events, hosts the bi-weekly International Studies Public Forum and monthly research seminars, collaborates with over 17 other campus centers, and promotes seed funding for collaborative research activities on international and global issues. Faculty associated with RIGS participate in the undergraduate major and honors program in International Studies and the minor in Conflict Resolution.

The **Institute for Money, Technology and Financial Inclusion (IMTFI)** was formed in 2008. Its mission is to support research on money and technology among the world's poorest people: those who live on less than \$1 per day. IMTFI seeks to create a community of practice and inquiry into the everyday uses and meanings of money, as well as the technological infrastructures being developed as carriers of mainstream and alternative currencies worldwide.

Degrees

Anthropology	B.A., M.A., Ph.D.
Chicano/Latino Studies	B.A.
Economics	B.A., M.A., Ph.D.
International Studies	B.A.
Philosophy ¹	M.A., Ph.D.
Political Science	B.A., M.A., Ph.D.
Psychology	B.A., M.A., Ph.D.
Public Policy ²	M.P.P.
Social Policy and Public Service	B.A.
Social Science	B.A., M.A., Ph.D.
Sociology	B.A., M.A., Ph.D.

Within the Ph.D. in Social Science is an optional concentration in *Mathematical Behavioral Sciences*, supervised by an interdisciplinary group of faculty.

Within the M.A. in Social Science, students may apply directly to the concentration in Demographic and Social Analysis; for those enrolled in a Ph.D. program at another institution, the M.A. concentration in Mathematical Behavioral Sciences is available.

¹ Jointly administered by the Department of Philosophy in the School of Humanities.

² Jointly administered by the School of Social Ecology.

HONORS

Graduation with Honors. No more than 12 percent of the graduating seniors, who have completed at least 72 units in the University of California will receive honors: approximately 1 percent *summa cum laude*, 3 percent *magna cum laude*, and 8 percent *cum laude*. The student's cumulative record at the end of the final quarter is the basis for consideration for awarding Latin Honors. To be eligible for consideration for honors at graduation, the student must, before the end of winter quarter of the senior year, have submitted an Application for Graduation; be officially declared a Social Sciences major; have all corrections to the academic record processed by the Registrar's Office; if completing the Language Other Than English general education requirement with a language exemption test, pass the test by the end of winter quarter; and be able to verify completion of all course work by the end of the spring quarter of the senior year. Other factors are also considered (see page 51).

Dean's Honor List. The quarterly Dean's Honor List is composed of students who have received a 3.5 grade point average while carrying a minimum of 12 graded units.

Departmental Honors Programs. Most departments in the School of Social Sciences offer an Honors Program (refer to the departmental information). Upon successful completion of the Honors Program, students graduate with Honors in their respective majors and their transcripts note that they were in the Honors Program.

Honor Societies. Several departments in the School of Social Sciences belong to a national honor society. Eligibility is based on satisfying the requirements of the specific honor society. In the School of Social Sciences, these national honor societies include Lambda Alpha Kappa (Anthropology), Omicron Delta Epsilon (Economics), Pi Omicron of Pi Sigma Alpha (Political Science), Psi Chi (Psychology), Pi Gamma Mu (Social Sciences), Sigma Iota Rho (International Studies), and Alpha Kappa Delta (Sociology).

Order of Merit. The Dean of the School of Social Sciences' Order of Merit award recognizes the most outstanding graduating undergraduates and graduate students for their academic achievements, contributions to the School, and service to the campus and community.

Kathy Alberti Award for Graduate Student Excellence. This award recognizes a graduate student who holds truly outstanding promise as a future professor or teacher.

Alumni Academic Excellence Scholarship. This scholarship recognizes an undergraduate for outstanding academic performance and service to the School, campus, and community.

Carole Creek Bailey Undergraduate Award for Excellence in Sociology. This award recognizes an undergraduate student in Sociology for outstanding academic performance.

The Ruth Fulton Benedict Prize. This prize recognizes outstanding writing in anthropology by an undergraduate.

James N. Danziger Award for Teaching Excellence. This award recognizes a Political Science graduate student who has advanced to candidacy for teaching excellence.

David Easton Award. This award is given for the outstanding qualifying paper written by a Political Science graduate student during the preceding academic year.

Harry Eckstein Award for the Outstanding Undergraduate Honors Thesis. This award is given annually for the best honors thesis written by a Political Science major.

Harry Eckstein Memorial Fund. The Harry Eckstein Memorial Fund is presented annually to Political Science graduate students conducting research toward the completion of the Ph.D. in Political Science at UCI. Recipients of the award are designated as Eckstein Scholars.

Jean-Claude Falmagne Research Award. This award is given to a Cognitive Sciences graduate student who has advanced to candidacy for the Ph.D. The award is to support the student's summer research activity.

Jeff Garcilazo Scholarship. This award, established in honor and memory of the late Chicano/Latino Studies and History professor Jeff Garcilazo, is awarded annually to the undergraduate student author(s) of the best research paper(s) in Chicano/Latino Studies, to provide opportunities for students to examine the historical and contemporary experiences of Latino communities.

Sheen T. Kassouf Endowed Fellowship. The fellowship is awarded to a student enrolled in the UCI Economics doctoral program. Graduate students in all areas of economics are eligible, with the major criteria for the award being excellence in course work and research.

The Justine Lambert Prize in Foundations of Science. This award is given every other year to the best submitted graduate paper on the foundations of logic, mathematics, and the empirical sciences. The competition is open to all graduate students at UCI, regardless of department or school affiliation.

Charles A. Lave Paper Prize for Creative Modeling in Social Sciences. The prize is awarded to any UCI undergraduate or graduate student and may be in any social or behavioral science discipline, or interdisciplinary. It may be qualitative (with words only) or quantitative (with mathematical expressions). The prize will be awarded to a paper that displays creative modeling; points to or includes data that permits model evaluation; and exhibits the clear writing and brevity that Charles Lave valued.

Brian Lu Undergraduate Award for Excellence in International Studies. This award recognizes an undergraduate student in International Studies for outstanding academic performance.

Alice B. Macy Outstanding Undergraduate Paper Award. This award is given to a Social Sciences undergraduate student in any discipline for a paper that demonstrates original research.

The Malinowski Prize for Undergraduate Research. This award recognizes outstanding original research in the area of anthropology.

Thomas W. McGillin Scholarship. This scholarship is given to an undergraduate who is a first-generation citizen of this country with at least one foreign-born parent.

Outstanding Legal Scholar Scholarship. This scholarship is given to an undergraduate who has achieved outstanding academic achievement as well as contributing to the UCI Law Forum program.

Outstanding Transfer Student Scholarship. This scholarship is given to an outstanding community college transfer student in the School of Social Sciences.

Sanli Pastore & Hill, Inc. Excellence in Economics Writing Award. The Institute for Mathematical Behavioral Sciences (IMBS) awards this paper prize for the top graduate student paper in economics or decision analysis. Students who have written papers in game theory, economic theory, mathematical economics, decision analysis, and related areas are encouraged to submit them for consideration.

Jack and Suzie Peltason Scholarship. This award is given at the discretion of the department chair to support and facilitate the education of undergraduate Political Science majors. All undergraduate Political Science majors are eligible to apply.

Pi Omicron Award for Outstanding Political Science Major. This award is given annually by UCI's Pi Omicron Chapter of Pi Sigma Alpha to a graduating senior Political Science major who best exemplifies a commitment to academic excellence and public service.

A. Kimball Romney Outstanding Graduate Paper Award. This award is given to a Social Sciences graduate student in any discipline for a paper that demonstrates original research.

David and Kristen Rosten International and Community Service Scholarship. This scholarship is awarded to an undergraduate who is planning a career in public service in either the domestic or international community.

Elena B. and William R. Schonfeld Scholarship. This scholarship is awarded annually in the School of Social Sciences to the outstanding undergraduate who combines excellence in scholarship with dedication to the University community and the highest level of achievement in other fields. The award is available to students with one year remaining prior to graduation.

School of Social Sciences Outstanding Graduate Scholarship Award. This award is for high intellectual achievement by a Social Sciences graduate student.

School of Social Sciences Outstanding Graduate Student Service Award. This award is for contributions to the Social Science community, including the intellectual growth of others.

School of Social Sciences Outstanding Undergraduate Honors Thesis Award. This award is for the outstanding undergraduate honors thesis.

School of Social Sciences Student-Athlete Award. This award is given to a Social Sciences student who has demonstrated outstanding academic achievement as well as significant contributions to the UCI Athletics Department.

Gary Singer Scholar Athlete Award. This award is for a student athlete who has outstanding academic achievement as well as contributions to their sport.

Robin M. Williams Award. This award is given to an undergraduate student and a graduate student for the best research paper in the field of sociology.

John I. Yellott Scholar Award. This award is given to a Cognitive Sciences graduate student who has not yet advanced to candidacy for the Ph.D. The award is to support the student's summer research activity.

Reza Zarriff and Rufina Paniego Undergraduate Award for Excellence in Anthropology. This award recognizes an undergraduate student in Anthropology for outstanding academic performance.

Undergraduate Program

PLANNING A PROGRAM OF STUDY

Since there are many alternative ways to plan a program, some of which may require careful attention to specific major requirements, students should consult with the School of Social Sciences Undergraduate Student Affairs to design an appropriate program of study.

Students who select one of the School majors in their freshman year might begin by taking the one-digit courses required by their major and one of the mathematics sequences listed under Part A of the School requirements. It is a good idea to take these courses early since they include fundamental concepts that will be widely applicable in more advanced courses. In addition, the lower-division writing requirement of the general education requirement (category I) should be completed during the first year. In the sophomore year, the student might complete the course on computing, three courses toward the general education requirement, four courses in the social sciences, and four electives. Students who are planning to go on to graduate school can use their freshman and sophomore years to advantage by taking courses in theory, research methods, mathematics, and other areas important to graduate study. In the junior and senior years, the student should take courses in the major area and should create an individualized program of study through a combination of courses and course modules which fall in an area of interest. Particular attention should be paid to planning a program of study that will ensure that major requirements are met prior to graduation.

Change of Major. Students who wish to change their major to one offered by the school should contact the Social Sciences Undergraduate Student Affairs for information about change-of-major requirements, procedures, and policies. Information is also available at <http://www.changeofmajor.uci.edu>.

Double Majors within Social Sciences

In fulfilling degree requirements for multiple majors, a maximum of two lower-division courses may overlap between any two majors.

Other Double Majors

In fulfilling degree requirements for multiple majors, a maximum of two courses may overlap between any two majors.

Mathematics and Social Sciences

The mathematics requirement stems from the nature of modern social science. The concepts and terms of mathematics, statistics, and computers are an important part of the social scientist's vocabulary. Basic knowledge of these tools is necessary to an understanding of current literature in the social sciences, to the analysis of data, and to an intelligent use of social science models. Each candidate for a degree in the School of Social Sciences is expected to have a basic knowledge of probability, statistics, and computing. In addition, for students who are preparing for graduate school in an area of social science, it will be important to supplement the minimal mathematics requirements with additional courses related to mathematics and social science methodology. The particular courses which would be recommended are not specified here, however, since they are highly dependent on the major emphasis of the student. Students who are preparing for graduate study should consult their advisors to determine a program of study which will give them the research skills necessary for successful graduate work.

REQUIREMENTS FOR THE BACHELOR'S DEGREE

University Requirements: See pages 54–61.

School Requirements

- A. Familiarity with basic mathematical, computational, and statistical tools underlying modern social sciences. This requirement is met by passing a three-course sequence in mathematics (Anthropology 10A-B-C; Mathematics 2A-B, and either Statistics 7 or Management 7; Psychology 10A-B-C; Social Science 10A-B-C; or Sociology 10A-B-C). (NOTE: School of Social Sciences majors may not take Social Science 9A-B-C to fulfill the mathematics requirement.) Computer education is essential for a complete social science education. This requirement can be satisfied by passing Information and Computer Science 21, Informatics 41, or Social Science 3A. Departments may have preferences for specific courses. Students should see their major department for acceptable courses. This course requirement should be taken during the student's first year.
- B. An understanding of the fundamental concepts, analytical tools, and methods of social science. This requirement is met by taking two four-unit introductory courses in the School of Social Sciences bearing a one-digit course number. (Such courses include Anthropology 2A, 2B, 2C, 2D; Economics 1; Linguistics 3; Political Science 6A, 6B, 6C; Psychology 7; Social Science 1A, 5A, 5B, 5C, 5D; Sociology 1.) These courses normally should be taken during the student's first year. (NOTE: This requirement may be fulfilled by option B of the departmental requirements for students majoring in Political Science.)
- C. An understanding of important advanced areas in social science. This requirement is met by passing satisfactorily nine four-unit upper-division courses in the School of Social Sciences, where at least three of these courses comprise core courses or a module. (NOTE: The major in Social Science requires 11 four-unit upper-division courses.) For modules which are listed with more than three courses, the student may normally elect to take any subset of three courses in the module. Appropriate substitutions may be made upon petition.
- D. Four additional four-unit social science courses from any level. Students are reminded that the Pass/Not Pass option is not applicable to course requirements A through D above or to any additional requirements listed for specific major programs. However, Information and Computer Science 21 and Informatics 41 are exceptions to this rule and may be taken Pass/Not Pass.

Courses used to meet requirements B through D above are included in the computation of the grade point average in courses required in the major program.

Maximum Overlap Between Major and Minor Requirements: Students completing both a major and a minor within the School of Social Sciences may count courses taken to fulfill the School's mathematics and computer science requirement toward satisfaction of both the major and the minor. No other course overlap is allowed. For students completing a major within the School of Social Sciences and a minor outside of the School of Social Sciences, a maximum of two courses may overlap between a major and a minor. No course overlap is permitted between minors.

TRANSFER STUDY RECOMMENDATIONS

The School recommends that students wishing to transfer to UCI do the following:

1. Complete the Intersegmental General Education Transfer Curriculum (IGETC) prior to transfer to UCI.
2. Refer to <http://www.assist.org/> for information about community college courses that will fulfill UCI lower-division major requirements.

Specific course recommendations:

Prospective **Economics majors:** complete the equivalent of UCI's Mathematics 4 at a community college (in addition to the courses required for transfer-student admission; see the Department of Economics section).

Prospective **International Studies majors:** complete two semesters of foreign language at the intermediate level.

Prospective **Psychology majors:** complete a three-course sequence in introductory, physiological, and either social or abnormal psychology.

TRANSFER STUDENTS

Freshmen and Sophomores: Students transferring to UCI as freshmen or sophomores will fulfill the regular requirements of the four-year program either through work at UCI or through transfer credit for comparable work elsewhere.

Juniors: Following review by the School of Social Sciences, it may be determined that junior transfer students electing to major in one of the School's degree programs, who have good records at other accredited colleges and universities, have satisfied School requirement B and the University requirements. However, all transfer students must fulfill the upper-division writing general education requirement (category I) while at UCI. Students anticipating transfer to UCI in their junior year should plan their curriculum so as to anticipate the special mathematics requirement (School requirement A). Every effort will be made to accommodate individual variation in background, provided students are prepared to commit themselves to intensive work in areas of deficiency. Ordinarily, the typical two-year program for junior transfers is simply the last two years of the regular four-year program, except that students who have not satisfied the mathematics requirements of the School should plan to do so in the junior year and must do so before graduation.

Seniors: Students wishing to graduate with a degree in the School by transferring to UCI in their senior year should plan their work carefully to ensure that the requirements can be met in one year of residence. In general, differences between the program at UCI and programs elsewhere make senior transfers difficult.

SERVICE LEARNING, COMMUNITY SERVICE, AND INTERNSHIPS

Service learning is a meaningful educational activity that integrates community service within the curriculum. It is an opportunity for students to make positive contributions to underserved and marginalized communities through academic courses, field studies, and internships.

Service learning provides out-of-class experiences to reinforce understanding of academic theory while addressing serious community concerns. When combined with a structured curriculum that includes research components, students can explore the role of the social scientist while seeking solutions to problems affecting society. The School of Social Sciences' philosophy is to practice research, service, and good citizenship.

The School actively supports service learning through its philosophy of enhancing the learning process by motivating, inspiring, and teaching students how to recognize and accept their civic responsibilities. The goal is to educate students about social issues and provide them with the necessary tools to solve the difficult problems society faces. Under the guidance and supervision of faculty and staff, students are offered the opportunity to experience personal, professional, social, and intellectual growth through the following School of Social Sciences programs: public- and

private-sector internships, community service, field studies, and the specialization in Public and Community Service within the major in Social Science.

UNDERGRADUATE PROGRAMS IN K–12 EDUCATION

Undergraduate students who wish to pursue a career in the field of K–12 education are well-served in the School of Social Sciences and the Department of Education. The following interrelated programs provide opportunities for students to gain knowledge and experience in this important area.

Minor in Educational Studies

The minor in Educational Studies allows students to explore a broad range of issues in the field of education and provides a strong foundation for K-12 teaching. Both introductory and advanced courses are included, giving students a solid preparation for later teacher credential programs and many related occupations. NOTE: A Statement of Intent is required of all students wishing to enroll in this minor. See the Department of Education section of the *Catalogue* for more information.

Department of Education Programs

The Department of Education provides many other opportunities for prospective educators, including a mentoring program which provides students with valuable experience while they work with credentialed teachers; UC Links, a program in which undergraduates tutor K–8 students in after-school settings; and advising services provided by counselors who assist students in planning future careers in education. Further information about these programs is available from the Department of Education counselors at 2001 Berkeley Place.

Students interested in obtaining a teaching credential should see the Department of Education section of the *Catalogue* for information.

SPECIAL PROGRAMS

Campuswide Honors Program

The Campuswide Honors Program is available to selected high-achieving students from all academic majors from their freshman through senior years. For more information contact the Campuswide Honors Program, 1200 Student Services II; (949) 824-5461; honors@uci.edu; <http://www.honors.uci.edu/>.

Education Abroad Program

Upper-division students have the opportunity to experience a different culture while making progress toward degree objectives through the Education Abroad Program (EAP). EAP is an overseas study program which operates in cooperation with host universities and colleges throughout the world. Additional information is available in the Study Abroad Center section.

Interdisciplinary Minors

A variety of interdisciplinary minors are available to all UCI students. The **minor in Chicano/Latino Studies**, offered by the School of Social Sciences, is designed to provide an awareness, knowledge, and appreciation of the language, history, culture, literature, sociology, anthropology, politics, social ecology, health, medicine, and creative (art, dance, film, drama, music) accomplishments of Chicano/Latino communities.

The **minor in Conflict Resolution**, sponsored by the International Studies program in the School of Social Sciences, provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels. The curriculum includes training that students may apply toward State of California certification as a mediator.

Information about the following minors is available in the Interdisciplinary Studies section of the *Catalogue*.

The **minor in Civic and Community Engagement** seeks to provide students with the knowledge, skills, attitudes, and values to engage as citizens and active community members in the twenty-first century. The minor is distinguished both by *what* students learn, and by *how* they learn it.

The **minor in Global Sustainability** trains students to understand the changes that need to be made in order for the human population to live in a sustainable relationship with the resources available on this planet.

The **minor in the History and Philosophy of Science** explores how science is actually done and how it has influenced history, and is concerned with determining what science and mathematics are, accounting for their apparent successes, and resolving problems of philosophical interest that arise in the sciences.

The **minor in Native American Studies** focuses on history, culture, religion, and the environment. The three core courses serve as an introduction to the Native American experience from the perspective of different historical periods and frameworks of analysis.

Information about the following interdisciplinary minors is available in the School of Humanities section.

The **minor in African American Studies** offers undergraduate students an opportunity to study those societies and cultures established by the people of the African diaspora and to investigate the African American experience from a variety of disciplinary perspectives and theoretical approaches.

The **minor in Archaeology** introduces students to modern archaeological theory and practice, to different approaches and theoretical frameworks used in the reconstruction of cultures based on their material remains, and the use of such approaches and frameworks in a comparative context that emphasizes one geographic area.

The **minor in Asian American Studies** examines the historical and contemporary experiences of Asians after their arrival in the United States and seeks to provide an awareness of the history, culture (e.g., literary and creative art accomplishments), psychology, and social organization of Asian American communities.

The **minor in Asian Studies** creates opportunities for students to explore Asian topics in a variety of fields, to develop advanced language skills, and to acquire broader perspectives.

The **minor in Latin American and Caribbean Studies** is designed to develop in students an awareness, knowledge, and appreciation of Latin American issues in the areas of language, history, culture, literary studies, sociology, anthropology, political science, health, folk medicine, and creative (art, dance, film, drama, music) accomplishments.

The **minor in Religious Studies** focuses on the comparative study of religions in various cultural settings around the world and seeks to provide a wide-ranging academic understanding and knowledge of the religious experience in society.

The **minor in Women's Studies** fosters critical and creative analysis of the various disciplinary perspectives—historical, political, economic, representational, technological, and scientific—that have (or have not) constituted women, gender, and sexuality as objects of study. Women's Studies also offers a minor in Queer Studies.

CAREERS IN SOCIAL SCIENCES

Business and industry often look to social science graduates to fill positions in management, finance, marketing and advertising, personnel, production supervision, and general administration. In the public sector, a wide variety of opportunities are available in city, county, state, and federal government. Teaching is a frequently chosen career at all levels from elementary school teacher

to professor. In addition, many graduates enter professional practice, becoming lawyers, psychologists, researchers, or consultants in various fields.

Because all Social Sciences degrees involve an educational program that is interdisciplinary and that prepares students to understand quantitative methods of data analysis, graduates of the School are well-positioned for research and analysis careers at all levels of government and in private firms. Their solid grounding in contemporary social science methods and their familiarity with a broad spectrum of social scientific thinking gives them an excellent foundation for the pursuit of further training in graduate and professional programs.

The UCI Career Center provides services to students and alumni including career counseling, information about job opportunities, a career library, and workshops on resume preparation, job search, and interview techniques. Additional information is available in the Career Center section.

Graduate Program

The School of Social Sciences offers graduate training in the following areas: Anthropology (Ph.D. in Anthropology), Cognitive Sciences (Ph.D. in Psychology), Economics (Ph.D. in Economics), Logic and Philosophy of Science (Ph.D. in Philosophy), Mathematical Behavioral Sciences (Ph.D. in Social Science), Politics and Society (Ph.D. in Political Science), and Sociology (Ph.D. in Sociology). In addition, an interdisciplinary concentration in Public Choice is offered within the programs in Economics and Political Science, a concentration in Cognitive Neuroscience is offered within the program in Cognitive Sciences, a specialized concentration in Transportation Economics is offered within the program in Economics, an emphasis in Social Networks is offered within the Mathematical Behavioral Sciences concentration, and a concentration in Political Psychology is offered within the program in Political Science. When an applicant's interests lie outside of or across these areas, the Associate Dean of Graduate Studies, School of Social Sciences, may, on rare occasions, appoint a three-member faculty committee to guide an independent course of study for the Ph.D. degree in Social Science.

The M.A. degree in Anthropology, Economics, Philosophy, Political Science, Psychology, Social Science, or Sociology may be conferred upon students in Ph.D. programs after completion of the necessary requirements.

Additionally, the M.A. degree program in Social Science with a concentration in Demographic and Social Analysis is supervised by faculty from the Schools of Social Sciences and Social Ecology. Students may apply directly to this M.A. program. A Master of Public Policy (M.P.P.) program is also available.

In cooperation with the UCI Department of Education, students enrolled in a School of Social Sciences graduate program may choose to pursue a teaching credential while working toward their degree. After completion of requirements for an M.A. degree, students may apply for admission into the credential program administered by the Department of Education. As required by law, the applicant must pass the California Basic Educational Skills Test (CBEST), obtain a Certification of Clearance, and successfully complete the appropriate subject area examination or an approved subject-matter program. A detailed description of the program may be obtained from the Social Sciences Graduate Office or the Department of Education.

ADMISSION

Potential graduate students should apply by January 15 to receive fullest consideration for financial aid. Applicants should indicate the title of the degree sought (Anthropology, Economics, Political

Science, Psychology, or Social Science), and the academic area of concentration (see above). All applicants are required to submit Graduate Record Examination General Test scores. Letters of recommendation and the applicant's statement of interest are important factors in the admission decision.

In addition to the University admission requirements described in the Graduate Division section, individual graduate programs may prescribe special requirements or expectations of applicants, subject to the approval of the Graduate Council. Such requirements are minimum standards only; successful applicants typically must exceed them by a substantial margin.

FINANCIAL SUPPORT

Many students receive financial support in the form of fellowships, teaching assistantships, or research assistantships available under grants to individual faculty. Before accepting an offer of admission with financial support for the first year, applicants should inquire about the likelihood of such support in future years. Occasionally, a newly admitted student may receive a multiyear commitment of some specified financial support, but this is not the rule. Students are also advised to seek aid from sources external to the University. NOTE: Teaching assistantships do not include remission of fees, tuition, or nonresident supplemental tuition.

LENGTH OF STUDY AND RESIDENCE

The normative time for completion of the Ph.D. degree is either five, six, or seven years, depending upon the specific program. See the department sections for information.

Students admitted to the M.A. concentration in Demographic and Social Analysis should be able to earn the M.A. within one to two years.

Because the intellectual training offered by the School requires full-time study and constant contact with the faculty, the School does not accept part-time students.

MASTER OF PUBLIC POLICY

The Master of Public Policy (M.P.P.) program is a two-year professional degree program administered by both the School of Social Ecology and the School of Social Sciences. Students are required to complete 72 units of graduate courses. In the first year, students will attend an introductory conference, participate in a workshop, and take seven core courses and two elective courses. In the summer after the first year, students will participate in a policy-relevant internship in an appropriate government, business, or nonprofit setting. In the second year, students take three core courses and five elective courses.

The core course requirements in year one of the program are Qualitative Methods and Public Policy, Statistical Methods for Public Policy, Information and the Policy Process, Microeconomics and Public Policy, Policy Processes and Institutions of Governance, Collaborative Governance and Public Management, and Social Mobilization, Power, and Justice. The core course requirements in year two are The Economics of Government, Policy and Ethics, and Capstone Research Project and Briefing.

Additional information is available at <http://mpp.web.uci.edu>.

Community Outreach

The **Ambassador's Council** has been created to promote and enrich the School by supporting new and existing schoolwide/department projects. It collectively acts as an official student in discussing program development with administrators and department chairs and other faculty.

Through the **Global Connect** program, the School of Social Sciences is hoping to connect its academic and human capital with

selected underrepresented schools within Orange County. Through in-class lectures and interactive lessons, students are introduced to the concepts and realities of global markets, post-cold war political identities, borderless social issues (literacy, hunger, AIDS), international organizations (the World Bank, the United Nations) and the multidimensional themes of globalization.

HABLA is a broad-spectrum Latino-focused educational outreach program based in the School of Social Sciences and created by Professor Virginia Mann in 2000 with the support of the Orange County Children and Families Commission. Its purpose is to increase the school readiness of disadvantaged children ages two–four years, by uniting faculty and students at UCI with the Santa Ana Unified School System, local Families Resource Center, Americorp/VISTA, FACT, and the national Parent Child Home Program (PCHP).

Jumpstart was established on the UCI campus by Professor Virginia Mann in 2003. Students involved as Jumpstart members are paired with children participating in pre-school programs in the local Orange County area. The purpose is to help young students develop language, literacy, and social skills. Social Sciences undergraduates usually serve with Jumpstart for a full school year. The UCI Jumpstart program recruits, trains, and supervises UCI students to work with Head Start and other early-childhood programs in low-income communities of Orange County.

The School of Social Sciences' **Summer Academic Enrichment Program (SAEP)** is an intensive, five-week on-campus residential program. It is designed to enhance the academic experience of first-generation, low-income university students. SAEP is a landmark program on the University of California, Irvine campus and represents a successful model to offer a rigorous research experience. Three courses in research methods, statistical analysis, and writing and communications are taught by UC Irvine faculty. SAEP's goal is to strengthen specific analytical and research skills and to prepare participants for graduate school.

DEPARTMENT OF ANTHROPOLOGY

3203 Social & Behavioral Sciences Gateway; (949) 824-7602
Bill Maurer, **Department Chair**

Anthropology is the comparative study of past and present human societies and cultures. The Department of Anthropology at UCI is at the forefront of addressing issues in contemporary theory and ethnographic methods within the discipline. The Department has a strong interdisciplinary bent, with research and teaching interests in economic anthropology, political and legal anthropology, the anthropology of finance, social history and social change, the anthropology of science, technology and medicine, identity and ethnicity, gender and feminist studies, urban anthropology, modernity and development, religion, visual anthropology, and the arts and expressive culture. The Department also has a strong emphasis on the study of contemporary issues, especially those concerned with emergent, fluid, and complex global phenomena such as international flows of goods, peoples, images, and ideas; the relationship between global processes and local practices; immigration, citizenship, and refugees; population politics; violence and political conflict; ethnicity and nationalism; gender and family; food, health, and technological innovation; law; development and economic transformation; urban studies; and environmental issues. Geographic regions of expertise include China, Southeast Asia, South Asia, Oceania, Europe, Latin America, the Caribbean, East Africa, Latino communities of the United States, and diasporic and transnational communities in the United States and abroad.

Undergraduate Program

The major in Anthropology prepares students to embark on a wide range of careers, to pursue graduate studies, and to continue to

learn and achieve in our culturally diverse world. The curriculum develops students' knowledge and skills, including (1) an understanding of cultural diversity and global relationships; (2) the fundamentals of conducting research and analyzing sources of information through ethnographic and other anthropological techniques; and (3) communication skills in organizing and presenting information in written reports and oral presentations.

REQUIREMENTS FOR THE B.A. DEGREE IN ANTHROPOLOGY

University Requirements: See pages 54–61.

School Requirements: See page 464.

Departmental Requirements for the Major

School requirements must be met and must include 12 courses (48 units) as specified below:

- A. Anthropology 2A.
- B. Anthropology 2B, 2C, or 2D.
- C. Anthropology 30A or 30B.
- D. Three topical courses (12 units) from Anthropology 120–159, 170–179.
- E. Two courses (eight units) on a geographical area, from Anthropology 160–169.
- F. Four additional elective courses (16 units) from Anthropology 30A, 30B, 40–179, 180A.

Students are strongly encouraged to take Anthropology 180A after they have had at least three courses beyond Anthropology 2A and 2B, 2C, or 2D. Students are also strongly encouraged to take both Anthropology 30A and 30B.

The faculty encourages Anthropology majors or minors to study abroad and experience a different culture while making progress toward degree objectives. The Study Abroad Center, which includes the Education Abroad Program (EAP) and the International Opportunities Program (IOP), assists students in taking advantage of many worldwide opportunities. For example, EAP offers excellent opportunities to study anthropology at many universities abroad; courses taken abroad can be used to fulfill departmental requirement C, D, and E. Study abroad also can provide opportunities for cross-cultural experience, field research, and foreign language training. The Undergraduate Research Opportunities Program (UROP) provides funding for independent field research. See the Study Abroad Center and the Undergraduate Research Opportunities Program sections of the *Catalogue* for additional information.

Honors Program in Anthropology

The Honors Program in Anthropology is designed to allow undergraduates to pursue field research and write an honors thesis on topics of their choice under the guidance of Department of Anthropology faculty members. Research projects typically involve a combination of library research, exploratory ethnographic interviews, participant observation, and systematic data collection and analysis. The program is open to all senior Anthropology majors with a grade point average of 3.3 or better overall, with 3.5 in Anthropology courses (at least five courses). Successful completion of the Honors Program and the honors thesis satisfies the upper-division writing requirement. Students must apply to be admitted into the Honors Program. The application form is available on the Departmental Web site (<http://www.anthro.uci.edu>); in the Department office (B203 SBSG); and in the School of Social Sciences Undergraduate Student Affairs Office (1201 SBSG).

Although course work for the Honors Program does not start until the senior year, it is highly recommended that during the spring quarter of the junior year, students find a professor willing to serve

as their research project advisor on the basis of a mutually acceptable abstract that indicates the goal and significance of their project. If extensive research is to be undertaken at this time, students enroll in Anthropology 199.

During the fall quarter of the senior year, students enroll in Anthropology H190A and write a proposal describing their research question, the relevant background literature, and the method of data collection and analysis. Field work for the project may begin during this quarter.

In the winter quarter of the senior year, students begin or continue ethnographic field research by enrolling in Anthropology H190B. Field research typically combines exploratory field research with fixed format data collection methods.

In the spring of the senior year, students enroll in Anthropology H191 and complete a senior honor thesis that is typically 40 to 80 pages long. Honor theses are read and evaluated by the advisor and the Undergraduate Program Director.

Anthropology Minor Requirements

Requirements for the minor in Anthropology are met by taking seven Anthropology courses (28 units) as specified below:

- A. Anthropology 2A.
- B. Anthropology 2B, 2C, or 2D.
- C. Anthropology 30A or 30B.
- D. Two topical courses (eight units) from Anthropology 120–159, 170–179.
- E. Two courses (eight units) on a geographical area, from Anthropology 160–169.

Medical Anthropology Minor Requirements

Requirements for the minor in Medical Anthropology are met by taking seven Anthropology courses (28 units) as specified below:

- A. Anthropology 2A.
- B. Anthropology 2B, 2C, or 2D.
- C. Anthropology 30A or 30B.
- D. Anthropology 134A.
- E. Three topical courses (12 units) from among the following: Anthropology 50B, 121D, 128B, 132A, 132C, 134B, 134D, 134E, 134G, 136K, 139 (special topics, by petition to the Undergraduate Director), Sociology 154.

Residence Requirement for the Minors: The four required upper-division courses must be completed successfully at UCI. Two of the four may be taken through the UC Education Abroad Program provided course content is approved in advance by the Undergraduate Director of the Department of Anthropology.

NOTE: Students may complete only one of the following programs: the major in Anthropology, the minor in Anthropology, or the minor in Medical Anthropology.

Interdisciplinary Minor in Archaeology

An interdisciplinary minor in Archaeology is offered by the Department of Classics. See the School of Humanities section of the *Catalogue* for information.

Graduate Program

Participating Faculty

- Victoria Bernal: Feminist theory, capitalism and social transformation, Islamic revival, civil society, globalization, and cyberspace, diaspora, Africa
- Tom Boellstorff: Sexuality, postcoloniality, HIV/AIDS, mass media and popular culture, language and culture, Indonesia, Southeast Asia

- Michael Burton: Economic anthropology, ecological anthropology, psychological anthropology, gender; Africa, Micronesia
- Frank Cancian: Economic anthropology, inequality, peasants; Mexico
- Leo R. Chávez: International migration, Latin American immigration, the politics of reproduction, culture theory, narrative and history, citizenship and subjectivity, nationalism, medical anthropology
- Benjamin Colby: Culture theory and cultural pathology, content analysis, psychological anthropology, cognition, narrative structures, psychoneuro-immunology; Japan, Mesoamerica, women's health and well-being in Orange County
- Susan Bibler Coutin: Law, culture, immigration, human rights, citizenship, political activism, Central America
- Julia Elyachar: Economic anthropology, social theory, management, evil/witchcraft, NGOs, state, Egypt, Israel/Palestine, former Yugoslavia
- Angela Garcia: Medical anthropology, psychological anthropology, subjectivity, drugs, gender, criminality, Latin America and U.S.
- Robert Garfias: Ethnomusicology, ethnicity
- Susan Greenhalgh: Social studies of science, technology, and medicine; politics of population reproduction, modernity/globalization, feminism/gender, China, Taiwan, Pacific Rim
- Mimi Ito: New media use, particularly among young people in Japan and the U.S.; digital media use in the U.S. and portable technologies in Japan
- Karen Leonard: Social history of India, caste, ethnicity and gender, Asian-Americans and Muslim Americans, religion, ethnicity, class, and gender
- Lilith Mahmud: Gender, nationalism, elites, race, citizenship, secrecy, transparency, knowledge production, secret societies, power, the anthropology of Europe
- George E. Marcus: Distributed knowledge systems, aesthetic influences on diverse practices of rationality; the changing metaculture of the anthropological research process, challenges to secularism, the study of intellectuals and power, the decline of elites, transcultural networks; Europe and Oceania
- Bill Maurer: Anthropology of law, globalization, transnationalism, citizenship and nationalism, finance capital, identity, Caribbean
- Michael J. Montoya: Social inequality and health; race and ethnicity; social and cultural studies of science, technology, and medicine; the participation of ethnic populations in biomedical research; the U.S./Mexican border, critical bioethics
- Keith M. Murphy: Linguistic anthropology, design, aesthetics, semiotics, non-verbal behavior, Scandinavia
- Kristin Peterson: Political economy, policy-making, intellectual property law, and science, health, and medicine; Nigeria and West Africa
- A. Kimball Romney: Experimental and psychological anthropology, quantitative and cognitive anthropology
- Justin B. Richland: Anthropology of law, legal discourse analysis and semiotics, indigenous law and politics, North American postcolonialism
- Roxanne Varzi: Visual anthropology, media, youth culture, religion Islam, war and urban anthropology and public culture; Iran
- Douglas White: Cross-cultural research, mathematical anthropology, social networks, longitudinal analysis, development and social change
- Mei Zhan: Medical anthropology, cultural and social studies of science, globalization, transnationalism, gender, China, the United States

Affiliated Faculty

- Etienne Balibar: French and comparative literature, literary and social theory, Marxism and postmodernism
- Duran Bell: Economics, economic anthropology
- John P. Boyd: Kinship, social networks, mathematical anthropology
- Carol Burke: Folklore, cultural studies
- J. Paul Dourish: Human-computer interaction, computer-supported cooperative work
- Paula Garb: Anthropology of conflict and conflict resolution, ethnic and environmental conflict in the former U.S.S.R.
- David Theo Goldberg: Race and racism, social and political theory, sociolegal studies/law and society and South Africa
- Cecelia Lynch: International relations (theory, organization, law), religion and ethics, social movements and civil society actors (on peace, security, globalization, humanitarianism, and religion)
- Bonnie Nardi: Human-computer interaction, activity theory, cultural responses to technology development
- Carrie Noland: Twentieth-century French literature and theory
- Kavita Philip: Transnational studies of science and technology; feminist technocultures; gender, race, globalization, and postcolonialism; environmental history; and new media theory

- Gabriele Schwab: Nineteenth-century English and comparative literature; modernish; American literature; contemporary theory; literature and psychoanalysis; feminist and gender studies; cultural studies and criticism; Native American literatures
- Jennifer Terry: Cultural studies, science and technology studies, formations of sexuality, American studies in transnational perspective
- Alladi Venkatesh: New media, information technologies, marketing, postmodern theory and marketing, cross-cultural consumer behavior
- James Diego Vigil: Urban, psychology, socialization and educational anthropology, sociocultural change, urban poverty, Mexico and U.S. Southwest ethnohistory, comparative ethnicity

The Department of Anthropology offers a Ph.D. degree program in Anthropology. The program focuses on social and cultural anthropology, with a strong focus on understanding emergent processes and systems at a number of scales, including the national and transnational level. Areas of teaching emphasis include the anthropology of modernity and development; political, legal, and economic anthropology; ethnographic method; and the anthropology of science, technology, and medicine. In addition, Ph.D. students have the option of enrolling in a Feminist Studies or a Critical Theory emphasis, both of which involve interdisciplinary work with departments and centers in the School of Humanities. The Department's faculty members have interests in ethnicity, gender, international migration, science, technology and medicine, law and finance, urban anthropology, youth culture, and social networks. The program also provides rigorous training in ethnographic method. The Department is committed to fostering new and innovative approaches to anthropological inquiry in a pluralistic and intellectually open academic environment. Program faculty take diverse theoretical and methodological approaches to a variety of substantive issues. They are united, however, in a willingness to question taken-for-granted theoretical premises and analytic frames, and to engage in good-faith intellectual dialogue about alternative models and approaches.

ADMISSION

Students are admitted to the program based on their application materials and evidence of scholarly potential, including grade point average, GRE scores, and letters of recommendation.

REQUIREMENTS

Students must complete a one-year Proseminar in Anthropology (202A-B-C) during their first year and one course in anthropological fieldwork methods during their second year. In addition, students are required to complete two-course sequence in statistics, research design, and data analysis (211A, 212A), and six elective courses in Anthropology, which are selected in consultation with their advisor and which normally cover a coherent area of specialization within the field. All course work must be completed before a student is advanced to candidacy. Students must demonstrate competence to read one foreign language, in accordance with the requirements of the Ph.D. degree in Anthropology.

At the end of the first year, students must pass a formal evaluation which is made by the Department on the basis of (1) the first-year course work and (2) examinations to be taken as part of the Proseminar. Students should advance to candidacy by the end of the third year; the advancement to candidacy examination is based on a research proposal, a review of relevant literature, and an annotated bibliography. The fourth (and, in many cases, some or all of the fifth) year is normally devoted to extended anthropological fieldwork. The sixth year (in some cases, also part of the fifth) is devoted to writing the dissertation, in close consultation with the advisor. The normative time for completion of the Ph.D. is seven years, and the maximum time permitted is eight years.

Feminist Studies Emphasis

A graduate emphasis in Feminist Studies is available. Refer to Women's Studies in the School of Humanities section of the *Catalogue* for information.

Critical Theory Emphasis

A graduate emphasis in Critical Theory is available. Refer to the Critical Theory Emphasis in the School of Humanities section of the *Catalogue* for information.

Courses in Anthropology

(*Schedule of Classes* designation: Anthro)

LOWER-DIVISION

2 Introduction to Anthropology. Basic introduction to anthropology. These courses can be taken in any order.

2A Introduction to Sociocultural Anthropology (4). Introduction to cultural diversity and the methods used by anthropologists to account for it. Family relations, economic activities, politics, gender, and religion in a wide range of societies. Stresses the application of anthropological methods to research problems. (III, VIII)

2B Introduction to Biological Anthropology (4). Evolutionary theory and processes, comparative primate fossil record, human variation, and the adequacy of theory, and empirical data. (III)

2C Introduction to Archaeology (4). Archaeological theory and cultural processes with emphasis on the American Southwest, Mesoamerica, and Mesopotamia. (III)

2D Introduction to Language and Culture (4). Explores what the study of language can reveal about ourselves as bearers of culture. After introducing some basic concepts, examines how cultural knowledge is linguistically organized and how language might shape our perception of the world. Same as Linguistics 68. (III)

10A-B-C Probability and Statistics (4-4-4). An introduction to probability and statistics. Emphasis on a thorough understanding of the probabilistic basis of statistical inference. Emphasizes examples from anthropology, sociology, and related social science disciplines. Same as Sociology 10A-B-C. Students who receive credit for Anthropology 10A-B-C may not receive credit for Political Science 10A-B-C, Psychology 10A-B-C, Social Ecology 13, Social Science 9A-B-C or 10A-B-C, or Sociology 10A-B-C. *Anthropology majors have first consideration for enrollment.* (V)

20A People, Cultures, and Environmental Sustainability (4). An anthropological consideration of global environmental sustainability from the perspective of human cultures and communities. Causes and consequences of population growth, natural resource management, environmental law, environmental ethics. Case studies emphasize tropical rain forests, arid lands of Africa and North America. (VIII)

30A Global Issues in Anthropological Perspective (4). Explores anthropological perspectives on issues of importance in an increasingly global society. Topics vary from year to year; may include emphases on ethnic conflict; identity; immigration and citizenship; religion and religious diversity; medical anthropology; legal anthropology; development and economic change; gender. *Anthropology majors have first consideration for enrollment.* (VIII)

30B Ethnography and Anthropological Methods (4). Explores ethnography, anthropology's classic method. Students obtain hands-on training in participant observation, interviewing, and other methods, in local communities, and the preparation of research reports. Also provides theoretical and reflexive readings on ethnography. *Anthropology majors have first consideration for enrollment.*

41A Global Cultures and Society (4). Offers a general overview of the rise of global interdependence in political, economic, demographic, and cultural terms. Considers what drove people from relative isolation into intensified intercourse with one another, and investigates the consequences of this shift. Same as International Studies 11. *Anthropology majors have first consideration for enrollment.* (III, VIII)

50B Gender and Global Health (4). Examines the social forces, life circumstances, and political and economic processes that influence gendered health outcomes. Focuses especially on women located at the economic and political margins of societies throughout the world. *Anthropology majors have first consideration for enrollment.*

85A Cultures in Collision: Indian–White Relations Since Columbus (4). An introductory survey of topics such as: indigenous religious belief and socio-political organization, stereotypical “images,” intermarriage, the fur trade, Native leaders, warfare, and contemporary issues. Slides, films, and trips to local museums enhance student learning. Same as Sociology 65. (VII)

89 Special Topics in Anthropology (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies. *Anthropology majors have first consideration for enrollment.*

UPPER-DIVISION

121A Kinship and Social Organization (4). Organization of social life primarily in preindustrial societies. Theories of kinship, marriage regulations, sexual behavior, and social roles. Comparisons of biological, psychological, sociological, and economic explanations of social organization. (VIII)

121D Cross-Cultural Studies of Gender (4). Familiarizes students with the diversity of women’s experiences around the world. Gender roles and relations are examined within cultural and historical contexts. A central concern is how class, race, and global inequalities interact with women’s status. Prerequisite: Anthropology 2A or 2B. (VIII)

121G Political Anthropology (4). Utilizes anthropological accounts of Western and non-Western societies to question conventional ways of thinking about power and politics. Classical traditions in political anthropology are critiqued; an alternative view is presented through recent anthropological political analyses of topics such as class, gender, aesthetics, and popular culture. (VIII)

121J Urban Anthropology (4). Cultural roles of urban centers and processes or urbanization in comparative perspective, focusing on nonwestern, nonindustrial societies of past and present; relationship between modern urban centers and Third World peoples. Migration, urban poverty, adaption, social and political integration of rural folk in urban settings in Africa, Asia, Latin America. (VIII)

125A Economic Anthropology (4). Economic systems in comparative perspective: production, distribution, and consumption in market and non-market societies; agricultural development in the third world. Prerequisite: one course in general science, anthropology, economics, geography, or sociology. Same as Economics 152A. (VIII)

125B Ecological Anthropology (4). Studies relationships between human communities and their natural environments. The role of environment in shaping culture; effects of extreme environments on human biology and social organization; anthropologist’s role in studying global environmental problems, e.g., African famine, destruction of tropical rain forests. Prerequisite: Anthropology 2A, 2B, or 2C. (VIII)

125S The Anthropology of Money (4). Anthropological approaches to money; impact of money on subsistence economies; cultural history of money; and modern transformations of money. Students conduct ethnographic research on alternative money practices in Southern California, and create an online exhibition and research paper. *Anthropology majors have first consideration for enrollment.*

125X Transnational Migration (4). Examines the movement of people across national borders, governmentality and the role of state practices to control populations, and issues of citizenship, belonging, and identity. Examples are drawn from the United States, Europe, Latin America, Asia, and Africa. Same as Chicano/Latino Studies 161. (VIII)

125Z Muslim Identities in North America (4). Explores multiple identities of Muslims in North America, including indigenous Muslims (e.g., African American Muslims and Sufis) and immigrants of many national origins. Explores religious, political, cultural, ethnic, class differences among American Muslims, turning to Islamic institutions near UCI to conduct small research projects. Same as Asian American Studies 142. (VII)

126A Elite Cultures (4). The distinctive contribution that ethnographic studies have made to the understanding of elites past and present, in particular societies and globally. *Anthropology majors have first consideration for enrollment.*

127A Law and Modernity (4). The rise and spread of Enlightenment legal traditions, social contract theory, individual rights, ideologies of “liberty, equality, fraternity”; contradictions of liberal law, its understandings of “primitive” and “civilized”; pervasive myths of property, difference, race, and rights. Reading- and writing-intensive. Same as Criminology, Law and Society C191. (VIII)

128A Introduction to Science Studies (4). Explores the ways in which science and technology have been conceived of in the Social Sciences through the twentieth century. Emphasis on recent literature in Science and Technology Studies (STS), especially writings that concern the relationship of science to power and politics. *Anthropology majors have first consideration for enrollment.*

128B Race, Gender, and Science (4). Perfect for pre-health, science, and social science majors wanting to appreciate how science and society interact. Race and gender as biological and socio-cultural constructs are examined. Questions explored: What is disease? What is science? What are social and biological differences? Same as Chicano/Latino Studies 176. (VII)

128C Culture, Power, and Cyberspace (4). Explores cultural and political implications of the infotech revolution and the ways new media are used around the world, new cultural practices and spaces (e.g., cybercafes), debates surrounding the meanings of these new technologies, and their implications for transforming society. *Anthropology majors have first consideration for enrollment.*

129 Special Topics: Social and Economic Anthropology (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies. *Anthropology majors have first consideration for enrollment.*

132A Psychological Anthropology (4). Cultural differences and similarities in personality and behavior. Child-rearing practices and consequent adult personality characteristics, biocultural aspects of child development and attachment, evolutionary models of culture and behavior, politically linked personality, cognitive anthropology, psychology of narrative forms, comparative national character studies. Prerequisite: Psychology 7A or 9A, B, C, or Psychology and Social Behavior 9 or 11A, B, C, or Anthropology 2A. Same as Psychology 173A. *Anthropology majors have first consideration for enrollment.*

132C Anthropology of Madness (4). “Madness” poses fundamental questions related to science, experience, and modernity. Course examines cultural representations of madness, psychiatric discourse, ethnographic explorations of mental illness, and social theory on subjectivity, science, and technology. Prerequisite: satisfactory completion of the lower-division writing requirement.

134A Medical Anthropology (4). Introduces students to cross-cultural perspectives and critical theories in anthropological studies of medicine. Special attention is given to diverse ways of understanding bodies, illnesses, and therapeutic practices in our changing world. (VIII)

134B Anthropology of Drugs (4). Examines the increasing role “drugs” play in shaping the expression, understanding, and representation of the self and social life. The shifting construction of licit/illicit; cultural and ethnographic representations of drug use; the pharmaceutical industry; production and management of addiction and disease. Prerequisite: junior- or senior-standing or consent of instructor.

134D Culture and Health (4). Explores America’s cultural diversity by examining differing systems of belief and behavior in relation to illness, curing, disease, practitioner behavior, and use of conventional medical services. Groups focused on include Native Americans, African Americans, Latinos, and Asians. Same as Chicano/Latino Studies 172. (VII)

134E Caring vs. Curing (4). Examines place of health, suffering and medicine in society, with a particular focus on differing conceptions of “caring” versus “curing.” *Anthropology majors have first consideration for enrollment.*

134G HIV/AIDS in a Global Context (4). Examines issues concerning cultural conceptions of HIV infection and disease worldwide. Topics include treatment and prevention, identity and behavior, risk, ethnicity, gender, youth, sexuality, activism, drug use, illness, religion, the clinical encounter, national belonging, and the pharmaceutical industry. Prerequisite: satisfactory completion of the lower-division writing requirement. (VIII)

134M Borders and Bodies: Boundaries and Bioscapes (4). Examining borders and boundaries as material and semiotic constructs, explores troubleings of places, spaces, disciplines, borders, and bodies of all sorts. Geographical, corporeal, and identity transgressions examined alongside blurrings of nature/culture, biology/society, modernity/postmodernity, and other such concepts/situations. (VII)

135A Religion and Social Order (4). An anthropological exploration of religious belief and practices in diverse social and historical contexts. Emphasis placed on selected non-western traditions of the sacred, and on issues of power, ritual, moral order, and social transformation. (VIII)

135I Modern South Asian Religions (4). Nineteenth- and twentieth-century developments in Hinduism, Islam, and Sikhism are covered, with emphasis on changing forms as well as contents of religious movements. (VIII)

136A Nationalism and Ethnicity in the Contemporary World (4). An exploration of the concepts of identity, culture, ethnicity, race, and nation through ethnographic cases, with a view to asking larger questions: How do people create nativeness and foreignness? How does “culture” get worked into contemporary racisms and nationalisms? (VIII)

136B History of Anthropological Theory (4). Provides foundational knowledge in the discipline of anthropology by reviewing competing approaches in anthropological theory, from the nineteenth century to the present. Covers historically fundamental approaches—social evolutionism, functionalism—and recent movements such as feminism, cultural studies, poststructuralism, and postmodernism. *Anthropology majors have first consideration for enrollment.*

136D Conflict Management in Cross-Cultural Perspective (4). Examines theories of conflict management. Analyzes how conflict is mitigated in diverse cultures: at the interpersonal level, between groups, and on the international scale. Students discuss readings, hear from conflict management practitioners, and simulate negotiations. Same as Political Science 154G, Social Science 183E, and International Studies 183E. (VIII)

136G Colonialism and Gender (4). An anthropological enquiry into the ways colonial relations of power have been structured and gendered throughout the world and to what effect. Examines the social locations of men and women in the everyday exercise of colonial and imperial power. *Anthropology majors have first consideration for enrollment.*

136K The Woman and the Body (4). Probes culture and politics of the female body in contemporary American life. Focusing on “feminine beauty,” examines diverse notions of beauty, bodily practices, and body politics embraced by American women of different classes, ethnicities, and sexualities. (VII)

137A Reading Images Culturally (4). Students are provided with the analytical tools necessary to undertake research on visual representations. Images, as cultural productions, are steeped in the values, ideologies, and taken-for-granted beliefs of the culture which produced them. Of concern are representations of race, identity, gender, and the “Other.” Same as Chicano/Latino Studies 116. (VII)

138J Music of Japan and Okinawa (4). A survey of the musics that developed in the islands of Japan and Okinawa from the perspective of the social, political, and economic forces that played upon the culture and that formed the context of these musical languages. Prerequisite: upper-division standing or consent of instructor. *Anthropology majors have first consideration for enrollment.*

138M Music as Expressive Culture (4). Fundamental requirements for development of a musical tradition. Guiding structural principles which must be agreed upon for new forms of expression to be understood and accepted. How members of society develop their own individual musical cultures and how these permit them to interact with the personal cultures of others. *Anthropology majors have first consideration for enrollment.*

138O Music and Society in the Ottoman Sphere (4). The unique character of Ottoman society created a musical culture which spread throughout much of Eastern Europe and into much of the Arabic speaking world. This influence is still clearly manifest in these regions as well as in Turkey. (VIII)

138P Music of Asia (4). A survey of the major music traditions of Asia and a consideration of the broad cultural and historical patterns which brought them about. Discusses the interaction and development of regional forms and communicates something of the value systems underlying these forms. (VIII)

138Q Latino Music: A View of Its Diversity and Strength (4). A survey of the musics of the many Latin cultures of the Americas including Mexico, Central and South America, as well as the Caribbean, and of those many Latin cultures which thrive and survive in the United States. Same as Chicano/Latino Studies 115A. (VIII)

138R Cross-Cultural Parameters of Popular Music (4). A consideration of popular music in the U.S. and abroad. How is pop defined and what does its evolution in other cultures tell us about our own pop music? The course will consider how the various cultures within the U.S. fit into the pop music scene, how they modify it today, and how they have in the past. (VII)

138S Music of Greater Mexico (4). A wide range of musics exist in Mexico, and in the Mexican traditions within the United States. From the indigenous traditions of Mexico and the ancient Aztec and Mayan civilizations through the Colonial and Revolutionary periods, the variety of Mexican music is explored. Same as Chicano/Latino Studies 115B. (VIII)

138T Africa and Afro-American Music (4). Africa’s range of musical languages had a profound influence on the musics of the Americas. Covers sub-Saharan Africa and Afro-American musics of Latin America and the United States. Explores the survival of cultural characteristics and diffusion of musical ideas. (VII)

139 Special Topics in Cultural and Psychological Anthropology (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies. *Anthropology majors have first consideration for enrollment.*

141A Ancient Civilizations of Mexico and the Southwest (4). The prehistory and cultural evolution of the civilizations which originated in Mexico, including the Olmecs, Aztecs, Toltecs, Maya, and Zapotec, as well as the Pueblos of the Southwestern U.S. Topics include the origins of food production and of the state, political and social history, ancient cities, and the Spanish conquest. *Anthropology majors have first consideration for enrollment.*

149 Special Topics in Archaeology (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies. *Anthropology majors have first consideration for enrollment.*

150A Language and Social Cognition (4). Explores the relationship between language and cognition in social and cultural contexts. The overall goal is to think through how language structure and use impact how individuals perceive, think about, and understand the world around them. *Anthropology majors have first consideration for enrollment.*

161T Field Research: Asian Immigrants and Refugees in Orange County (4). Instruction in field work methodology via research projects involving the local communities of immigrants and refugees from Asia. Open only to School of Social Sciences majors. (VII)

162A Peoples and Cultures of Latin America (4). Surveys the prehistory of Latin America and its indigenous cultures, emphasizing the impact of colonial rule, capitalism, and twentieth-century transformations. Emphasis on communities from several countries. In some years, emphasis on comparisons between the Latin American and Caribbean experiences. (VIII)

162B Indian North America (4). A survey of indigenous peoples in North America: American Indians, Alaska Natives, First Nations, Native Americans. Tribal populations and geographic distributions, political and social organization, sovereignty, self-determination, intergovernmental relations; cultural continuity and change; management, preservation, development of environments/resources. Prerequisite: satisfaction of the lower-division writing requirement. (VII)

163A Peoples of the Pacific (4). The cultural history and recent developments among the Pacific peoples of Polynesia, Micronesia, Melanesia, New Guinea, and Australia. (VIII)

163I Transforming China (4). Focuses on transformations in the everyday life in post-socialist China. Explores topics including privatization, consumerism, urbanization, rural development, national and ethnic identities, religion, family, gender, sexuality, medicine, food, pop culture, transnationalism, and globalization. (VIII)

163K Korean Society and Culture (4). Introductory background to the social and cultural forces that affect the lives of the Koreans, including those in the United States. Considers traditional values and contemporary issues within a historical framework. Same as East Asian Languages and Literatures 130 and Sociology 175A. (VIII)

164A African Societies (4). Comparative studies of the cultures and societies of Sub-Saharan Africa, with emphasis on critical study of colonialism and postcoloniality, social transformation, and the politics of identity. Prerequisite: Anthropology 2A. *Anthropology majors have first consideration for enrollment.*

164P Peoples and Cultures of Post-Soviet Eurasia (4). Examines the cultures and political conflict of the more than 130 indigenous ethnic groups in the European and Asian territories of the former U.S.S.R. Emphasis is on the theoretical issues of ethnicity, nationalism, and conflict management. Same as Political Science 154F. (VIII)

169 Special Topics in Area Studies (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies. *Anthropology majors have first consideration for enrollment.*

174A Human Complexity: World Cultures (4). Introduction to ethnology/ethnography, comparative research and theory, culminating in processes of discovery and hypotheses testing using world cultural databases to which students can contribute. Prerequisite: satisfactory completion of the lower-division writing requirement. (VIII)

175A Cantometrics (4). Cantometrics is a method for the analysis of music based on sound rather than music notation. Devised by Allen Lomax, cantometrics yields measurable data on the world's many forms of music and permits mapping of global patterns following Murdock.

176A Exploring Society Through Photography (4). Students explore society through presentation, interpretation, and discussion of their own photographs. A few common exercises at the beginning of the quarter are followed by individual projects. Photography as social observation and the relation of photographs in an essay are stressed. Prerequisite: basic darkroom techniques or the digital equivalent. Same as Social Science 182A and Sociology 114A. *Anthropology majors have first consideration for enrollment.*

179 Special Topics: Methods and Formal Representations (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies. *Anthropology majors have first consideration for enrollment.*

SPECIAL COURSES

180A Anthropology Majors Seminar (4-4-4). A course in anthropological theory designed especially for majors in Anthropology. Different issues are considered in different years. Prerequisite: Anthropology major only or consent of instructor.

190 Senior Thesis (4). May be taken a total of three times. Prerequisite: consent of instructor.

H190A Honors Research Workshop (4) F. Students articulate the goals and significance of their research projects. Written work consists of an eight- to fifteen-page research proposal, due by quarter's end, describing the research question, the relevant literature, and methods of data collection and analysis. Prerequisites: open only to students in the Honors Program in Anthropology; consent of instructor.

H190B Honors Field Research (4) W. Students begin or continue ethnographic field research that combines exploratory field research (e.g., participant-observation, interviews, study of archival and documentary materials) with fixed format data collection methods (e.g., standardized interviews, behavioral observations). Prerequisite: Anthropology H190A; consent of instructor.

H191 Honors Senior Thesis (4) S. Student drafts a senior honor thesis (typically) with the following sections: problem statement, literature review, ethnographic background, description of the methods, results, and conclusions. Prerequisites: Anthropology H190A, H190B; satisfaction of the lower-division writing requirement; consent of instructor.

197 Field Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198 Group Directed Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

GRADUATE

202A-B-C Proseminar in Anthropology (4-4-4). Year-long intensive introduction to the history of anthropological thought and reading in classical and contemporary ethnography for first-year graduate students. Prerequisite: graduate standing or consent of instructor.

204A Proseminar in Medicine, Science, and Technology (4). Explores how the phenomena studied by "medical anthropology" and "science and technology studies" are inextricably linked, and how understanding these formations requires moving between disparate fields of inquiry.

208A Anthropological Fieldwork Methodology (4). A survey of anthropological fieldwork methodology techniques, including attention to contemporary analysis of fieldwork. Prerequisite: graduate standing or consent of instructor.

211A Statistics and Research Design (4). Introduces basic concepts of research design for anthropology in conjunction with relevant concepts from the field of statistics, which will be learned in conjunction with the research designs that require use of those methods. Prerequisite: graduate standing.

212A Research Design and Data Analysis (4). Introduces advanced concepts of research design for anthropology, presents statistical models for multivariate analysis and for analysis of systems of relationships, and includes practice in sampling and data analysis. Prerequisite: graduate standing.

221A Family and Life History (4). Interdisciplinary and comparative work in family and life history. Prerequisite: graduate standing or consent of instructor. Same as Social Science 253A.

223A Research Design (4). Data collection, organization, and analysis in ethnographic or quasi-experimental settings, including interviewing, participant observations, behavior observations, and questionnaires. Research design issues include sampling, longitudinal research, and comparative research. Emphasis on the integration of qualitative and quantitative data. Prerequisite: graduate standing or consent of instructor. Anthropology 223A and Sociology 265 may not both be taken for credit.

225A Grant and Proposal Writing (4). Focuses on production, critique, and revision of student research proposals. A practical seminar designed to improve student proposals, help students through the application processes, and increase students' chances of obtaining support for their research. Prerequisite: graduate standing or consent of instructor. Same as Social Science 255C.

228A Anthropology of Encounters (4). Cultural encounters have long provided the ground for ethnographic research. This seminar refocuses on "encounter" not only as the material condition but also as a productive heuristic device in anthropological inquiry. Examines the reorientation of anthropology as a "global discipline."

229A Anthropology of Knowledge (4). Examines the politics of knowledge. Considers the long history of anthropological studies of a wide variety of knowledge forms and practices, as well as more recent feminist and postcolonial studies. Aims to investigate and enlarge normative definitions of knowledge and science.

230A Anthropology and History (4). An examination of the complex, long-standing relationship between anthropology and history. Themes include: history, culture, and colonialism; history and the power to represent; nostalgia and the uses of the past in struggles over "national history." Prerequisite: graduate standing or consent of instructor.

230D Ethnographies (4). Surveys changes in the character of ethnographic writing in the face of changing fields and topics of research. The emergence of new research terrains and the comparative contexts of ethnography are emphasized.

232B Medical Anthropology (4). Explores historical and contemporary theoretical positions and debates in medical anthropology. Topics may include subjectivity, theories of the body, biopolitics, biomedical technologies, sexuality, pharmaceuticals, political economy and health, infectious disease and epidemics, health disparities, and humanitarianism.

235A Transnational Migration (4). The immigrant experience will be examined in order to explore how specific theoretical issues are examined empirically. These issues include ethnic enclave formation, gendered differences in migration and settlement, class differences, the migration of indigenous groups, identity formation, and issues of representation. Same as Social Science 254A.

236A Borders and Bodies: Places, Processes, and Transgressions (4). Examines borders and boundaries as material and semiotic constructs. Drawing upon an array of literatures, but loosely situated in U.S. geo/biopolitics, explores transformative troubleings of places, spaces, borders, and bodies of all sorts. Same as Chicano/Latino Studies 214.

240A Economic Anthropology (4). Classic and contemporary theory in economic anthropology. Case studies from Latin America (primarily Mexico and the Andes), Africa, and the Pacific. Substantive topics include non-market exchange, markets and marketplaces, households, gender, management of common property (fisheries, pastoral lands, forests), labor, development, and change. Prerequisite: graduate standing or consent of instructor.

245A Seminar in Political Anthropology (4). Explores anthropological approaches to politics. Covers a range of issues and topics, including: theories of culture, power, and hegemony; approaches to colonial and post-colonial relations of global inequality; and ethnographic approaches to the modern state. Prerequisite: graduate standing or consent of instructor. Same as Social Science 254H.

246B Law, Colonialism, and Nationalism (4). Origins and spread of law in colonial and nationalist contexts: law's role in constituting and policing difference. Recent theoretical approaches; property in things and people; human and indigenous rights; "customary" law; legal foundations of nationalism; resistance to/through law; globalization. Prerequisite: graduate standing.

247A Structuralism and Post-Structuralism (4). Traces recent theoretical discussions and arguments over the philosophical and historical "subject" from structuralist decenterings toward the characteristically "post-structuralist" contemporary concern with the historical and political constitution of subjectivities and subject positions. Prerequisite: graduate standing or consent of instructor.

248A Approaches to Globalization (4). Historical and contemporary approaches to the world economy, emphasizing anthropological questions of culture, power, identity, inequality. Examines "neo-imperialism," "late capitalism," accumulation, global markets, urban space, the state, business and policy globalization discourse, "local" responses to and instantiations of the "global." Prerequisite: graduate standing or consent of instructor. Same as Social Science 254L.

250A The Cultural Politics of Visual Representation (4). Develops a theoretical framework for analyzing and reading visual images. Images, as cultural productions, are steeped in the values, ideologies, and taken-for-granted beliefs of the culture which produced them and a political economy that is class, race, and gender inflected.

250B Cybersociality (4). Explores questions of sociality in cyberspace, including what social theories and ethnographic methods are effective in studying online cultures. Topics include general issues like indexicality, reference, temporality, spatiality, and embodiment, and topics such as language, gender, ethnicity, property, and inequality. Prerequisite: graduate standing.

252A Queer Anthropology (4). Explores historical and contemporary scholarship that employs ethnographic approaches to address the discursive construction of sexuality. Also examines how the discipline of anthropology has been shaped by the study of sexuality. Prerequisite: graduate standing or consent of instructor.

253A Design, Aesthetics, and Social Life (4). Anthropology has only recently recognized that design demands consideration as a cultural form linked to, yet nonetheless distinct from, other aesthetic endeavors. Course is largely oriented toward collaboratively working out a conceptual basis for a distinctly anthropological approach to design.

259A Dissertation Writing Seminar (4). Intended for advanced, post-fieldwork Anthropology graduate students. Emphasis on the presentation of research design and results, problems of ethnographic writing, and qualitative and quantitative data and analysis. Prerequisites: post-fieldwork; graduate standing in Anthropology or consent of instructor.

289 Special Topics in Anthropology (1 to 4). Special topics vary from quarter to quarter. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

290 Dissertation Research (4 to 12). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

299 Independent Study (1 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

DEPARTMENT OF CHICANO/LATINO STUDIES

383 Social Science Tower; (949) 824-7180
<http://www.socsci.uci.edu/clstudies>
 Louis DeSipio, Department Chair

Undergraduate Program

Chicano/Latino Studies is an interdisciplinary department organized to provide undergraduate and graduate students with the opportunity to examine the historical and contemporary experiences of Americans of Latino origin or ancestry. This diverse population includes people who trace their heritage to Mexico, Puerto Rico, Cuba, El Salvador, Guatemala, Nicaragua, and other Latin American and Caribbean nations. The curriculum is designed to provide an awareness, knowledge, and appreciation of the language, history, culture, literature, sociology, anthropology, politics,

social ecology, health, medicine, and creative (art, dance, drama, film, music) accomplishments of Chicano/Latino communities. The Department offers a B.A. degree in Chicano/Latino Studies, an undergraduate minor, and a graduate emphasis.

Change of Major. Students who wish to change their major to Chicano/Latino Studies should contact the Department office for information about change of major requirements, procedures, and policies. Information is also available at <http://www.changeofmajor.uci.edu>.

Center for Research on Latinos in a Global Society

The Department is affiliated with the Center for Research on Latinos in a Global Society (CRLGS). Its multifold goals are (1) to examine the emerging role of Latinos as actors in global economic, political, and cultural events; (2) to promote Latino scholarship; (3) to enhance the quality of research in Latino studies; (4) to provide a forum for intellectual exchange and the dissemination of research finding; and (5) to promote the participation of undergraduate and graduate students in research on Latino issues. The use of the term "global society" underscores the faculty's perception that, as a society, the United States is becoming "globalized," meaning that it is increasingly affected by worldwide economic, political, demographic, and cultural forces and that Latinos are at the center of this. Latinos in the United States, individually and as a sociopolitical group, play important roles in the multiple processes—immigration, trade, international capital flow, and international political movements—which are changing the traditional demarcation between domestic and foreign, and national and international politics, economics, and society.

Scholarship Opportunities

The **Jeff Garcilazo Fellowship/Scholarship Fund**, established in honor and memory of the late Chicano/Latino Studies and History professor, provides opportunities for students to examine the historical and contemporary experiences of Latino communities. The Jeff Garcilazo Prize is awarded annually to the undergraduate student author(s) of the best research paper(s) in Chicano/Latino Studies.

The **Hispanic Scholarship Fund (HSF)**, formerly the National Hispanic Scholarship Fund, awards scholarships annually to students enrolled in and attending an accredited college full-time from the fall through the spring (or summer) terms. More information is available at <http://www.hsf.net/>.

CAREER OPPORTUNITIES

Chicano/Latino Studies graduates have used their degrees as the foundation for careers in public service, social service, education, the corporate world, and the law. Many also go on to earn M.A. and Ph.D. degrees in Social Science and Humanities disciplines at major universities throughout the nation. What links all of these careers is that the Chicano/Latino Studies major prepares its students for careers that will speak of the needs of Chicano and Latino communities nationwide and globally. The highest number of the Department's majors have pursued advanced degrees and professional degrees, such as law degrees or advanced teaching credentials. Their training at UCI has served them well in that the list of institutions that they are attending include the nation's best, such as Harvard University, Stanford University, Columbia University, and several University of California campuses.

Others have moved directly into the workforce. Interestingly, many have selected careers that offer the opportunity to ensure that younger Latinos are able to seize the same opportunities the Department's students did and attend four-year colleges and universities. Chicano/Latino Studies majors work as primary and secondary school teachers, work for advocacy organizations focusing on Latino health and children's services, and have taken positions in legislative offices both in California and in Washington, D.C.

REQUIREMENTS FOR THE B.A. DEGREE IN CHICANO/LATINO STUDIES

University Requirements: See pages 54–61.

School Requirements: See page 464.

Departmental Requirements for the Major

- A. Five core courses: Chicano/Latino Studies 61, 62, 63, 101, 102.
- B. Spanish 2A or its equivalent; students are encouraged to continue their Spanish language education through Spanish 2C.
- C. One comparative ethnic studies course selected from either African American Studies, Asian American Studies, or Education 124. Course must focus on the study of African American or Asian American communities in the United States.
- D. Three upper-division electives, one from each of the following categories: Literature, Arts, and Media (Chicano/Latino Studies 110–129); History (Chicano/Latino Studies 130–139); Inequalities and Social Context (Chicano/Latino Studies 140–189).
- E. Four additional elective courses, three of which must be upper-division, selected from Chicano/Latino Studies courses. Electives may include Independent Study courses (Chicano/Latino Studies 199). Students may obtain credit for one of these three courses through participation in a study abroad program in Mexico. Students must consult with the Department office for additional information regarding this option.

Residence Requirement for the Major: A minimum of five upper-division courses required for the major must be completed successfully at UCI. Courses taken through the UC Education Abroad Program will be counted toward satisfaction of the residence requirement.

Optional Independent Research Project

Students are encouraged to pursue field research and write a substantial research paper on topics of their choice under the guidance of Chicano/Latino faculty members. Often, this project will grow out of issues examined in Chicano/Latino Studies 102 (Research Seminar). Research projects typically involve a combination of library research and fieldwork in the Chicano/Latino community. Methods and analytical frameworks vary depending on the student and faculty advisors. Interested students should enroll in Chicano/Latino Studies 199 (Independent Study).

Honors Program in Chicano/Latino Studies

The Honors Program in Chicano/Latino Studies is designed to allow undergraduates to pursue independent research and write an honors thesis on topics of their choice under the guidance of Chicano/Latino Studies faculty members. Research projects typically involve a combination of library research, data analysis, and field research. The program is open to all senior Chicano/Latino Studies majors with a grade point average of 3.3 or better overall, with 3.5 in Chicano/Latino Studies courses (at least five courses). Prior completion of or concurrent enrollment in Chicano/Latino Studies 101 (Research in the Latino Community) is strongly recommended. Successful completion of the Honors Program and the honors thesis satisfies the upper-division writing requirement.

Although course work for the Honors Program does not start until the senior year, it is highly recommended that during the spring quarter of the junior year, students find a professor willing to serve as their research project advisor on the basis of a mutually acceptable abstract that indicates the goal and significance of their project. If extensive research is to be undertaken at this time, students should enroll in Chicano/Latino Studies 199.

During the fall quarter of the senior year, students enroll in Chicano/Latino Studies H190A and write a proposal describing their research question, the relevant background literature, and the

method of data collection and analysis. Field work for the project may begin during this quarter.

In the winter quarter of the senior year, students begin or continue their research by enrolling in Chicano/Latino Studies H190B. In the spring quarter of the senior year, students enroll in Chicano/Latino Studies H190C and complete a senior honors thesis.

Requirements for the Minor

Completion of three core courses: Chicano/Latino Studies 61, 62, 63; three upper-division courses selected from Chicano/Latino Studies 100–189; and Spanish 2A or its equivalent.

Residence Requirements for the Minor: Other than the language requirement, no more than two courses taken at other academic institutions may be used toward satisfaction of minor.

In addition to satisfying the requirements for the major or minor, students are encouraged to take advantage of the variety of unique educational opportunities available at UCI. Through the Education Abroad Program (EAP), students receive academic credit while studying at universities in Mexico, Chile, Costa Rica, Brazil, or Spain. Internship opportunities with private and public institutions concerned with the Chicano/Latino communities are available in Orange County, Sacramento, and Washington, D.C. Independent research with faculty on Chicano/Latino issues is also encouraged. Student research is conducted and given academic credit through independent study or group research courses. The Undergraduate Research Opportunities Program (UROP) and the Summer Academic Enrichment Program (SAEP) are examples of programs at UCI which allow students to work as research assistants with professors.

Graduate Program

Participating Faculty

- Catherine L Benamou: Good Neighbor cinema, cinemas of Brazil, Cuba, and Mexico, transnational television and its Latina/Latino diasporic audiences
Latina/Latino public sphere, mediated representations of immigration an exile
- Belinda Campos: Relationships, emotion, physical and mental health in Latino populations
- Leo R. Chávez: International migration, Latin American immigrants, medical anthropology, transnational communities, cultural analysis of popular images
- Gilberto Q. Conchas: Inequality with emphasis on urban schooling systems
- Susan B. Coutin: Law, culture, immigration, human rights, citizenship, political activism, Central America
- Louis DeSipio: American politics, ethnic politics, Latino politics and public policy
- Cynthia Feliciano: Race, ethnicity, minority relations, migration and immigration, education
- Raúl Fernández: Economic and cultural transactions between the U.S. and Latin America
- Gilbert González: Ethnic/Chicano historical studies, the political economy of education and Latin American studies
- Rodrigo Lazo: U.S. literature and the Americas; Latino studies; U.S. immigrant literature; the nineteenth century; Cuba and Cuban American studies
- Michael J. Montoya: Social inequality and health; race and ethnicity; social and cultural studies of science, technology, and medicine; the participation of ethnic populations in biomedical research; the U.S./Mexican border, critical bioethics
- Alejandro Morales: Latin American and Chicano literature, film studies, creative writing
- Ana Rosas: Labor history, immigration, family studies
- Vicki L. Ruiz: Twentieth-century U.S. history specializing in Chicana/Chicano studies, Latina history, oral narratives, gender studies, labor, and California and the West
- Rubén G. Rumbaut: International migration, the “1.5” generation, comparative race and ethnic relations, structural inequality, identity, health and mental health
- Caesar D. Sereseres: U.S. foreign policy, U.S.-Latin American relations, Mexican-American politics

Rodolfo D. Torres: Urban politics, the State and class structures, studies in racism and inequality, poverty and social policy
 Deborah Vargas: Chicana/Latina cultural production; racialized sexualities; transnational feminisms; cultural studies; popular culture
 James Diego Vigil: Urban, psychology, socialization and educational anthropology, sociocultural change, urban poverty, Mexico and U.S. Southwest ethnography, and comparative ethnicity
 Maria Estela Zarate: College-access issues, Latino educational issues, and education policy

GRADUATE EMPHASIS IN CHICANO/LATINO STUDIES

The Department of Chicano/Latino Studies offers a graduate emphasis in Chicano/Latino Studies, which is available in conjunction with the Ph.D. programs in the Departments of Anthropology; Criminology, Law and Society; Education; English; History; Political Science; Planning, Policy, and Design; Sociology; Spanish and Portuguese; Women's Studies; the program in Visual Studies; and the program in Social Science. Satisfactory completion of the emphasis is certified by the Chair of Chicano/Latino Studies and is noted in the student's dossier.

ADMISSION TO THE GRADUATE EMPHASIS

Applicants must first be admitted to, or currently enrolled in, one of the participating programs listed above. Applicants must submit to the Chicano/Latino Graduate Program Committee (1) an application form listing prior undergraduate and graduate course work related to Chicano/Latino Studies (if any), institutions attended, and major(s); and (2) a one- to two-page statement of purpose, including career objectives, areas of interest and research, and record of research, teaching, community, and/or creative work.

The Committee determines admissions, in consultation with the Chicano/Latino Studies core faculty, based upon the extent to which the applicant's research interests relate to Chicano/Latino Studies, the applicant's previous course work, and research or other experience related to Chicano/Latino Studies. Lack of prior course work does not preclude admission, so long as the statement of research interests is congruent with the graduate emphasis and makes a compelling case.

GRADUATE EMPHASIS REQUIREMENTS

Minimum course work for the graduate emphasis in Chicano/Latino Studies consists of four courses: two core courses, Chicano/Latino Studies 200A and 200B, a coherent sequence normally taken in consecutive quarters; and any two courses selected from the list of graduate courses in Chicano/Latino Studies.

For doctoral students, the qualifying examination and dissertation topic should incorporate U.S. Latinos and/or issues relevant to Chicano/Latino Studies as a central focus of analysis. One member of the candidate's dissertation committee should be a core or affiliate faculty of the Chicano/Latino Studies Department.

Courses in Chicano/Latino Studies

(*Schedule of Classes* designation: Chc/Lat)

LOWER-DIVISION

61 Introduction to Chicano/Latino Studies I (4). An introduction to the study of the historical foundations of the Chicano/Latino experience. Addresses such topics as empire, migration, immigrant settlement, economic integration, race, gender, and the formation of group identities. (III, VII)

62 Introduction to Chicano/Latino Studies II (4). Provides an introduction to the arts, literature, and culture of Chicano/Latino communities. Analyzes representations of and cultural production in Chicano/Latino communities through such media as folklore, literature, art, film, architecture, dance theatre, performance, music, poetry, mass media, and language. (III, VII)

63 Introduction to Chicano/Latino Studies III (4). Examines contemporary public policy issues in Chicano/Latino communities. Each offering addresses at least three of the following themes: migration, immigrant incorporation, identity construction, language policy, health policy, politics, sexuality, gender, labor, class, and education. (III, VII)

64 Introduction to Race and Ethnicity in Political Science (4). Examines major theories that attempt to explain the roles of race and ethnicity in U.S. politics, while also looking at the political attitudes and behaviors of ethnic and racial populations in order to measure their contemporary political influence. Same as Political Science 61A. (III, VII)

65 Ethnic and Immigrant America (4). Focusing on Asian, Latino, and Black immigrant groups, examines the second generation's experience of straddling two cultures and growing up American. Covers topics such as assimilation, bilingualism, race relations, education, bicultural conflicts, interracial marriage, and multiracial identities. Same as Sociology 68A. (VII)

UPPER-DIVISION

101 Research in the Latino Community (4). Students engage in firsthand research in the local Orange County environment. Students identify a research problem, conduct a literature review, develop questions and/or hypotheses, appropriate methods, and write a proposal. Prerequisites: two courses from Chicano/Latino Studies 61, 62, 63, and two courses from Chicano/Latino Studies 110–189, or consent of instructor. *Chicano/Latino Studies majors have first consideration for enrollment.*

102 Chicano/Latino Research Seminar (4). Taught as a writing and research seminar in Chicano/Latino Studies. Student develops own project; engages in peer editing; drafts, writes, and presents paper at spring research conference. Prior course work in Chicano/Latino Studies helpful, i.e., Chicano/Latino Studies 61, 62, 63. Prerequisites: Chicano/Latino Studies 101, satisfactory completion of the lower-division writing requirement, and upper-division standing. (VII)

110–129: LITERATURE, ARTS, MEDIA, CULTURE

110A, B Chicano Literature (4, 4). Focus on contemporary Chicano literature, in relation to Chicana literature, women's literature, American literature, and Latino literature. Same as Spanish 140A, B. (VII)

111A Critical Issues in Chicano Studies (4). A critical survey of social science literature on the Chicano experience and a general discussion of the various models and theories applied by social scientists to the study of oppressed national minorities. Discussion of race and class within the context of the Chicano experience. (VII)

111B Chicano Culture (4). Current research and perspectives on different aspects of Chicano culture: political, economic, sociological, artistic, and folkloric. Prerequisites: Spanish 3A and 3B, or consent of instructor. May be taken for credit twice as topics vary. Same as Spanish 142. (VII)

114 Film Media and the Latino Community (4). Uses film as a resource for understanding contemporary issues and problems facing the Chicano/Latino community. (Does not study cinema as a genre.) Same as Social Science 173G. (VII)

115A Latino Music: A View of Its Diversity and Strength (4). A survey of the music of the many Latin cultures of the Americas including Mexico, Central and South America, as well as the Caribbean, and of those many Latin cultures which thrive and survive in the United States. Same as Anthropology 138Q. (VIII)

115B Music of Greater Mexico (4). A wide range of musics exists in Mexico, and in the Mexican traditions within the United States. From the indigenous traditions of Mexico and the ancient Aztec and Mayan civilizations through the Colonial and Revolutionary periods, the variety of Mexican music is explored. Same as Anthropology 138S. (VIII)

115C Afro-Latin American Music (4). Musical culture of Afro-Latin American peoples, emphasizing Spanish-speaking Caribbean. Topics include: background in West Africa, the persistence of traditions in the Caribbean, the commercial music of the twentieth century, the connections between musical culture, religion, and the economy. Same as Social Science 176A. (VIII)

116 Reading Images Culturally (4). Students are provided with the analytical tools necessary to undertake research on visual representations. Images, as cultural productions, are steeped in the values, ideologies, and taken-for-granted beliefs of the culture which produced them. Of concern are representations of race, identity, gender, and the "Other." Same as Anthropology 137A. (VII)

119 Chicana, Chicano/Latina, Latino Cultural Studies (4). Explores sites of cultural production within the scholarship area of Chicano/Latino Cultural Studies. Considers questions pertaining to social structural processes as they relate to cultural productions and considers potential political strategies for challenging inequality within cultural sites. (VII)

121 Latina/Latino Pop: Latina/Latino Popular Culture (4). With a focus on the politics of language and space/place, prepares students to critically analyze sites of Latina/Latino popular culture including: music, film, performance, sports, media, and varied subcultures. *Chicano/Latino Studies majors have first consideration for enrollment.*

122 Engaging Latino Issues in Media (4). This writing course is designed to address contemporary issues related to *Latinidad* and Latinos according to a variety of media forms including commercial and independent news sources, talk shows, and Internet sites. Issues range from immigration to electoral politics. Prerequisites: satisfactory completion of the lower-division writing requirement; upper-division standing or consent of instructor. Formerly Chicano/Latino Studies 136. (VII)

129 Special Topics in Literature, Arts, Media, Culture (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies. *Chicano/Latino Studies majors have first consideration for enrollment.*

130–139: HISTORY

130 Introduction to Cuba: History, Culture, and Society (4). Introduction to Cuban history, culture, and society using social science texts, visual and musical materials. Examines major historical moments including the historical relationship between the United States and explores evolution of Cuban music from the earliest times to present. Same as International Studies 177F and Social Science 173Q. (VIII)

132A Chicana/Chicano History: Pre-Colonial to 1900 (4). Examines social history of the Southwest region from antiquity to 1900. Discusses major questions, theory and research methods pertinent to Chicanas/Chicanos. Themes include: indigenous empires, conquest, colonialism, social stratification, ideology, marriage, sexuality, industrial capitalism, accommodation and resistance. Same as History 151A. (VII)

132B Chicana/Chicano History: Twentieth Century (4). Examines social history of the Southwest with emphasis on Mexican-origin people. Discusses major questions, theory, and research methods pertinent to Chicana/Chicano history. Themes explored include: immigration, xenophobia, class struggle, leadership, generational cohorts, unionization, education, barrioization, ethnicity, patriarchy, sexuality. Same as History 151B. (VII)

133B Twentieth-Century Mexico (4). Examines the history of contemporary Mexico beginning with the Mexican Revolution and concluding with the present administration. Social, economic, and political effects of the Revolution; formation of a “one-party democracy”; economic transformation of the nation; the present crisis. Same as History 161C. (VIII)

134 U.S. Latino Literature and Cultures (4). Focuses on some aspect—literature, art, cultural production, history—of the multifaceted Latino cultures that have developed within the United States. Can focus on one group, such as Caribbean Americans, Chicanos, Central Americans, or take a comparative perspective of several groups. Prerequisites: Spanish 3A and 3B, or consent of the instructor. Same as Spanish 110C. (VII)

135 Latinas in the Twentieth-Century U.S. (4). Latinas in the U.S. from 1900 to present, offering a diversity of their cultures, regional histories, sexualities, generations, and classes. Same as History 151C. (VII)

137 Comparative Latino Populations (4). Provides foundation for understanding of Chicano/Latino Studies as an interdisciplinary field of inquiry. Focus on the history, arts, cultures of distinct (Mexican, Cuban, Puerto Rican, Central American) Latino communities. Topics include: precolonial history and culture, conquest, mestizaje, colonialism/neocolonialism, resistance. Same as Social Science 173K. Formerly Chicano/Latino Studies 103. (VII)

138 Chicano/Chicana Labor History (4). Examines origins of Latino/Latina labor from colonial period to present. Emphasis on the issues of race, culture, class, and gender. Focus on processes and institutions including: *encomienda*, migration, unions, informal economies, Bracero program, domestic work. Same as Social Science 167. Formerly Chicano/Latino Studies 141. (VII)

139 Special Topics in Chicano/Latino History (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies. *Chicano/Latino Studies majors have first consideration for enrollment.*

140–189: INEQUALITIES AND SOCIAL CONTEXT

140A Latina/Latino Queer Sexualities (4). Introduces students to the notion of “queer” in relation to Chicanas/Chicanos and Latinas/Latinos and provides students with theoretical frameworks to explore the shifting categories of sexuality, gender, Chicano, Latino within the scholarship areas of Chicana/Chicano and Latina/Latino Studies. *Chicano/Latino Studies majors have first consideration for enrollment.*

142 Latinos and the Law (4). Examines a range of theoretical, empirical, and policy approaches to legal issues affecting the Latino population, with emphasis on California. Discusses topics concerning the purpose of law, the creation of law, and the enforcement of law. Same as Criminology, Law and Society C171. (VII)

143 Mexican-Americans and Politics (4). Examines political development of Mexican-Americans. Topics include their “territorial” roots in the Southwest, demographics, political leadership and organization; policy issues of immigration, bilingualism, education, and economics; relations with other minority groups; the role of Mexican-Americans in U.S.-Mexico relations. Same as Political Science 126A. (VII)

147 Comparative Minority Politics (4). Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements. Same as African American Studies 151, Asian American Studies 132, and Political Science 124C. (VII)

148 Racial and Ethnic Relations in the United States (4). Examines central questions and issues in the field of race and ethnicity; the emergence, maintenance, and consequences of the ethnic and racial stratification system in the United States; the future of racial and ethnic relations; and relevant public policy issues. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Sociology 167A. *Chicano/Latino Studies majors have first consideration for enrollment.*

151 Latinos in U.S. Politics (4). Comparing the political issues facing Latino groups by examining their migration histories, voting behavior, nonelectoral participation, and policy issues. Latino issues are examined on the national, state, and local levels, including formal representation, immigration, affirmative action, and language policy. Same as Political Science 124B. (VII)

152 Race and Citizenship in America (4). The role U.S. citizenship policy has played in the social construction of race. Looks comparatively at citizenship experiences of different racial/ethnic groups to understand how the meaning of being a U.S. “citizen” has varied over time and across groups. Same as Political Science 124D. (VII)

152A Race, Ethnicity, and Social Control (4). Provides a nuanced, sociological understanding of racial and ethnic group relations in contexts of criminal social control, and how social inequality, social movements, and social change manifest in these relations. Prerequisite: Criminology, Law and Society C7. Same as Criminology, Law and Society C161. (VII)

153 Cross-Cultural Research on Urban Gangs (4). Taking an urban policy approach, examines the background and contemporary traditions of gangs in several ethnic groups including African-, Asian-, and Mexican-Americans. Cross-cultural exploration of the varied facets of gang life. The major social-control institutions affecting them. Same as Criminology, Law and Society C156. (VII)

154 Latino Metropolis (4). Explores the processes of Latino urbanization in the United States and the spatialization of Latino identities, particularly in the context of Southern California with selected comparisons drawing from other cities. Same as Planning, Policy, and Design 172. (VII)

155 Culture Change and the Mexican People (4). Reviews culture contact and colonization, innovation diffusion, acculturation, assimilation, culture conflict and marginality, modernization, urbanization, legal transformations. Mexico and the Southwestern U.S. are reviewed through several centuries to better appreciate the indigenous base of the Mexican people. Same as Criminology, Law and Society C172. (VII)

157 The Chicana/Latina: A Psychosocial Perspective (4). Provides an in-depth psychosocial perspective of the Chicana/Latina experience in the U.S. Topics include the historical contributions of Latina women in Latino communities; Chicana feminist theories, gender roles and sexuality, ethnic identity, education, health, and models of multicultural counseling. Prerequisite: satisfactory completion of the lower-division writing requirement. Formerly Chicano/Latino Studies 173. (VII)

158 Chicana Feminisms (4). Surveys the development of Chicana feminist thought and practice. Focuses on historical contemporary writings by and about Chicana feminists. Draws from interdisciplinary scholarship in order to survey the diversity of Chicana feminisms. Prerequisite: satisfactory completion of the lower-division writing requirement. (VII)

159 Special Topics in Society, Labor, Politics, Law, Gender, Race, Ethnicity (1 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topic varies. *Chicano/Latino Studies majors have first consideration for enrollment.*

160 Perspectives on the U.S.–Mexican Border (4). Economic aspects of the historical development of the U.S.-Mexican border. The current economic situation in the Southwest and border areas as it affects both Mexico and the Latino/Chicano population is also examined. Same as International Studies 177B and Social Science 173I. (VII)

161 Transnational Migration (4). Examines the movement of people across national borders, governmentality and the role of state practices to control populations, and issues of citizenship, belonging, and identity. Examples are drawn from the United States, Europe, Latin America, Asia, and Africa. Same as Anthropology 125X. (VIII)

163 U.S. Immigration Policy (4). Examines selected immigration policy debates since the nineteenth century, rationale and consequences of immigration law since 1965, problems of administration, implementation and enforcement, impact of immigration policy on foreign relations, and contemporary debate regarding the future of U.S. policy. Same as Political Science 126C. (VII)

165 Latin American and Latino Cultures I (4). Surveys the history, social and economic conditions, gender issues, problems of economic and social development in Latin America and their relation to U.S. Latinos. Topics include the colonial experience, economic relations with the U.S., Latin American migration to the U.S. Same as Social Science 172F. (VIII)

166 Chicano Movement (4). Explores the history of Mexicans in the U.S. with particular attention paid to their integration into the U.S. capitalist economy. Examines this economic history and the Chicano movement, “El Movimiento,” within the wide context of socio-economic change. Same as Planning, Policy, and Design 177. *Chicano/Latino Studies majors have first consideration for enrollment.*

167 Latinos in a Global Society (4). Examines interconnections between diverse Latino groups in the U.S. and the effects of globalization on their social, cultural, political realities. Topics include: immigration, demographics, socioeconomic differentiation, familial relations, political protest/resistance, law and policy, and links to “homeland” issues. Prerequisite: Chicano/Latino Studies 137. Same as Social Science 173L. Formerly Chicano/Latino Studies 104. (VII)

168 Chicano/Latino Social Psychology (4). Examines theories, research, and major issues of relevance to understanding social psychological processes in Chicano/Latino populations. Topics include social development, cultural orientations, gender and sexuality, close relationships, happiness and well-being, stereotyping, prejudice and discrimination, and mental and physical health. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Psychology and Social Behavior 192Q. (VII)

170 Chicano/Latino Families (4). Introduction to research, literature, and issues surrounding the topic of Chicano/Latino families including cultural history, contemporary issues, organization of family, traditions, lifestyle, values, beliefs, generational differences, gender issues, ethnic identity, evolution of demographic patterns, current economic and political standings. Same as Social Science 165. (VII)

171 Chicano/Latino Psychology (4). Examines research and literature investigating Chicano/Latino ethnicity as a variable influencing behavior. Explores mental health needs and issues of Chicano/Latinos and discusses competent, sensitive methods of mental health service delivery. Same as Psychology 174F. (VII)

172 Culture and Health (4). Explores America’s cultural diversity by examining differing systems of belief and behavior in relation to illness, curing, disease, practitioner behavior, and use of conventional medical services. Groups focused on include Native Americans, African Americans, Latinos, and Asians. Same as Anthropology 134D. (VII)

174 Multicultural Counseling (4). Covers both theories and application of multicultural counseling that are of greatest relevance to psychology. Topics include the historical foundations of multicultural counseling; theories and models of multicultural counseling; multicultural assessment and prediction; counseling and effective interventions for minorities. Prerequisite: satisfactory completion of the lower-division writing requirement. (VII)

176 Race, Gender, and Science (4). Perfect for pre-health, science, and social science majors wanting to appreciate how science and society interact. Race and gender as biological and socio-cultural constructs are examined. Questions explored: What is disease? What is science? What are social and biological differences? Same as Anthropology 128B. (VII)

177 Culture and Close Relationships (4). Examines cultural influences on close relationship processes including attraction, love, friendship, family, social support, and significance of close relationships for health and well-being. National and ethnic sources of cultural variation examined include Latin America, Asia, Africa, and the Middle East. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Psychology and Social Behavior 192R. (VII)

178 Health and the Latino Paradox (4). Examines research and theories concerning the physical and mental health of U.S. Latino populations. Contemporary accounts, health care implications, and new directions for understanding sources of risks and resilience for health in Latino populations are evaluated and discussed. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Psychology and Social Behavior 192S. (VII)

179 Special Topics in Health, Medicine, and Psychosocial Dynamics (1 to 4). Prerequisites: vary. May be repeated for credit as topics vary. *Chicano/Latino Studies majors have first consideration for enrollment.*

180 History of Chicano Education (4). Examines the relationship between the development of the public education system and the Chicano community in the U.S. Same as Social Science 173H. (VII)

182 Latina/Latino Access and Persistence in Higher Education (4). Introduction to how social, political, and economic forces impact on Latina/Latino racial/ethnic minorities with regard to their access and persistence in the U.S. higher education system. Investigates historical perspectives and theoretical underpinnings of college access and retention research. Same as Education 182. (VII)

189 Special Topics in Educational Policy and Issues (1 to 4). May be repeated for credit as topics vary.

190–199: SPECIAL COURSES

H190A Honors Research Preparation (4). Students write a proposal describing their research question, the relevant background literature, and the method of data collection and analysis. Field work for the project may begin during this quarter. Prerequisites: open only to students in the Honors Program in Chicano/Latino Studies; consent of instructor.

H190B Honors Field Research (4). Students begin or continue their research for their senior honors thesis. Prerequisites: Chicano/Latino Studies H190A; consent of instructor.

H190C Honors Thesis (4). Students draft a senior honor thesis (typically) with the following sections: problem statement, literature review, description of the methods, results, and conclusions. Prerequisites: Chicano/Latino Studies H190A-B; satisfactory completion of the lower-division writing requirement; consent of instructor.

191A-B-C HABLA: Language Intervention for Disadvantaged Children (4-4-4). Trains students (fall quarter) to deliver home visits (winter and spring) that promote school readiness among two–four year-olds from low SES and educational backgrounds. Covers fundamentals of child language, literacy, cognitive development; procedures, ethics of home visitation. Work with parents and children to create better home literacy and language environment. Prerequisites: must pass an interview by instructor, be fluent in English and one other language (Spanish most typically), must have experience with preschool children and be culturally sensitive. Same as Psychology 144A-B-C and Social Science 186A-B-C.

198 Group Directed Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topics vary.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topics vary.

GRADUATE

200A Theoretical Issues in Chicano/Latino Research (4). Introduction to theoretical issues in the scholarship in Chicano/Latino Studies. Theories from social sciences, humanities, critical theory. Topics: immigration, identity, gender and sexuality, globalization, transnationalism, social, political, and economic integration, race theory, labor market participation, social history, cultural productions.

200B Problems and Methods in Chicano/Latino Research (4). Examines issues related to conducting research in Latino communities. Topics include problem definition, sampling, quantitative and qualitative methods, participant-observation, language and interviewing, immigration status, gender, participatory research, and communication with the larger community.

210A-B Cultural and Historical Precedents for Latinos and Medical Care (2-2). Introduction to the history of Latinos, focusing on relevant pre-Columbian, colonial, and modern social and cultural developments, including issues of race, gender, sexuality, religious beliefs, and health beliefs and practices. In-progress grading for 210A. Chicano/Latino Studies 210A-B and 212 may not both be taken for credit.

211A-B Latinos/Latinas and Medical Care: Contemporary Issues (2-2). Introduction to medical anthropological and social science perspectives on Latinos/Latinas in relation to a number of health and medically related issues, i.e., immigration, gender, reproduction, culture, social structure, political economy, sexuality, utilization of medical services, and health beliefs. Chicano/Latino Studies 211A-B and 213 may not both be taken for credit.

214 Borders and Bodies: Places, Processes, and Transgressions (4). Examines borders and boundaries as material and semiotic constructs. Drawing upon an array of literatures, but loosely situated in U.S. geo/biopolitics, explores transformative troubleings of places, spaces, borders, and bodies of all sorts. Same as Anthropology 236A.

217 Street Ethnography (4). Focuses on urban populations, especially gangs, and outlines some of the major conceptual and theoretical issues related to this topic and the processes of street socialization. Methods of inquiry include mapping, ethnohistory, survey questionnaires, and other quantitative techniques. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C222.

218 Latina/Latino Sexualities (4). Seeks to critically engage key shifts in the field of Latina/Latino sexualities. Engages key words through scholarship that has come to represent the field of study now referred to as Latina/Latino sexualities. Prerequisite: graduate students only or consent of instructor.

221 Race, Ethnicity, and Social Control (4). Origins and organization of racialized social control, with emphasis on criminal justice. Racial politics of criminal/juvenile justice considered in comparative (historical and international) perspective. Exploration of theoretical and methodological issues for research on race, ethnicity, and social control. Prerequisite: graduate standing or consent of instructor. Same as Criminology, Law and Society C241.

235 U.S. Ethnic Politics (4). Assesses theories of ethnic political attitudes and behaviors in U.S. politics and examines methodological approaches to testing theories of ethnic politics. The primary focus is contemporary ethnic politics with attention to ethnic politics in American political development. Prerequisite: graduate standing or consent of instructor. Same as Political Science 245A.

289 Special Topics in Chicano/Latino Studies (1 to 4). Current research in Chicano/Latino Studies. May be repeated for credit.

299 Independent Study (4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

DEPARTMENT OF COGNITIVE SCIENCES

2201 Social & Behavioral Sciences Gateway; (949) 824-3771
Michael D. Lee, **Department Chair**

The Department of Cognitive Sciences is committed to the investigation of the abstract, complex structures that underlie human cognition: language, thought, memory, learning, sensorimotor integration and perception. The main areas of research strength within the Department are visual and auditory perception, experimental psychology, cognitive psychology, mathematical psychology, and cognitive neuroscience.

Undergraduate Program

Students should be aware that psychology courses are offered in several different departments and programs. Students interested in general psychology including the areas of development, clinical, perception, learning, memory, cognitive processes, and neuroscience are advised to consult the course listings here in the Department of Cognitive Sciences section. These courses are designed to provide students with a strong foundation in general psychology. Students interested in other areas of psychology are advised to consult the course listings in the School of Social Ecology and the School of Biological Sciences sections.

In anticipation that the number of students who are qualified to elect Psychology as a major will exceed the number of positions available, students applying for admission for fall 2012 should be sure to file their application before November 30, 2011.

Change of Major: Information about change-of-major requirements, procedures, and policies is available in the School of Social Sciences Undergraduate Counseling Office and at <http://www.changeofmajor.uci.edu>.

Excellence in Psychological Research: Psychology majors doing independent research under Psychology 199 may be eligible for participation in the Undergraduate Research Opportunities Program (UROP). Participants can obtain research funding and have the opportunity to have their research papers published in a peer-reviewed student journal or to present them at a special conference of UCI student research. Guidelines for the program are available from the Department of Cognitive Sciences office.

REQUIREMENTS FOR THE B.A. DEGREE IN PSYCHOLOGY

University Requirements: See pages 54–61.

School Requirements: See page 464.

Departmental Requirements for the Major

School requirements must be met and must include 18 courses (70 units) as specified below:

- A. Psychology 9A, B, C.
- B. Two introductory courses (eight units) in the social sciences chosen from Anthropology 2A, 2B, 2D, Economics 1, Linguistics 3, Political Science 6C, Social Science 5A, Sociology 1, or one or two quarters of Social Science H1E, H1F, or H1G, when topic is not psychology.
- C. A one-quarter course and laboratory in experimental psychology or research methods selected from Psychology 112A and 112LA, 112M and 112LM, 112P and 112LP, or 112R and 112LR.

NOTE: These courses have as prerequisites Psychology 9A, B, C and one year of mathematics/statistics (see course listings). These prerequisites are strictly enforced. Psychology 112A, 112LA are the first quarter of a multi-quarter sequence that satisfies the upper-division writing requirement and allows students to plan and conduct research projects. Students taking these courses should plan to continue in them through at least the second quarter. Students who intend to fulfill the upper-division writing requirement in some other way should consider taking Psychology 112M and 112LM, 112P and 112LP, or 112R and 112LR to fulfill the laboratory requirement.
- D. Four upper-division Psychology core courses are required (16 units). These courses are designated with the ending number "0" and include the following: Psychology 120A, 120D, 120H, 120P, 130A, 140C, 140L, 140M, 160A, 160D.

E. Seven additional courses (four or more units each) with emphasis in psychology, distributed as follows:

1. No more than one of the seven may be lower-division. Psychology 7A and 46A may not be used to fulfill this requirement.
2. Three of the upper-division courses used to satisfy requirements D and E must be taken from one of the following modules: Psychology 110–119 (Research Methodologies), 120–129 (General Psychology), 130–139 (Perception and Sensory Processes), 140–149 and 150–159 (Learning and Cognition and Language Sciences combined), 160–169 (Cognitive Neuroscience), and 170–179 (Interdisciplinary Studies).
3. Certain courses offered in the School of Biological Sciences and the School of Social Ecology may be used in partial satisfaction of this requirement. A total of three of these courses (12 units) may be used in this way with a maximum of two from either of these Schools.

The courses that may be used in this way are those in the Department of Cognitive Sciences' course listings numbered Psychology 127, 147, and 177, as well as Psychology and Social Behavior P164S (same as Criminology, Law and Society C105) and Biological Sciences D137, E174, N110, and N159.

4. No more than three of the courses (each of four or more units) may be numbered 190–199.

NOTE: Psychology majors are strongly encouraged to take Biological Sciences 1A and 35 toward satisfaction of the science and technology portion of the general education requirement (category II). Furthermore, it is strongly recommended that students who intend to pursue postbaccalaureate work in psychology take the Psychology 112A-B-C sequence. Most psychology graduate programs require statistics (which, at UCI, may be satisfied by taking Psychology 10A-B-C or Social Science 10A-B-C), but some require calculus (which, at UCI, may be satisfied by taking Mathematics 2A-B).

Honors Program in Psychology

The two-year honors program in Psychology is open to selected juniors who are majoring in Psychology. It provides thorough grounding in research methods and culminates with the opportunity for basic research in some area of psychology under faculty supervision. The program has a limited number of openings and seeks to attract outstanding students who plan to undertake postgraduate education in some field of the psychological sciences. Admission to the program is based on a formal application that is normally submitted in the spring quarter of the sophomore year. Applicants should have an overall grade point average of at least 3.2 and a grade point average of at least 3.5 in psychology courses, although this requirement may be waived in unusual cases.

During the junior year, students who participate in the program are expected to enroll in Honors Experimental Psychology (H111A-B-C), and in the fall quarter of the Honors Seminar in Psychology (H101A). As seniors, following successful completion of these junior-year requirements, Psychology honors students are enrolled in the Honors Seminar in Psychology (H101B-C) in the fall and spring quarters. Participants in the honors program are expected to complete course work beyond the general education requirement in one or more of the following areas: biological sciences, mathematics, computer science, physical science, linguistics, philosophy. The honors seminar may be used to satisfy two of the courses required by Part E of the Psychology major requirements. To graduate with Honors in Psychology, a student must successfully complete the requirements for the B.A. degree in Psychology with an overall grade point average of 3.2 and a grade point average of at

least 3.5 in Psychology courses. In addition, Honors students must successfully complete a senior honors thesis as part of the senior-year course work.

Sample Programs — Psychology Majors

GENERAL	GRADUATE SCHOOL TRACK	HONORS
Freshman		
Psych. 9A, B, C 2 Intro. Soc. Sci. 1 Computer 6 Gen. Ed.	Psych. 9A, B, C Humanities Core Math. 2A-B, Stats. 7	Psych. 9A, B, C Humanities Core Math. 2A-B, Stats. 7

Sample Program — Transfer Psychology Majors

Junior	Senior
Psych. 9A, B, C 3 quarters Statistics ¹ 1 Computer 2 Intro. Soc. Sci. 3 Core ²	1 Core ² 3 Module/UDP ³ 1 Elective <i>and select one:</i> Psych. 112A-B-C and 3 UDP ³ Psych. 112M and 5 UDP ³

¹ Either Psychology 10A-B-C or Social Science 10A-B-C, with Psychology 10 recommended for those planning to attend graduate school in Psychology.

² Psychology core course, an upper-division course with the ending number "0."

³ UDP in an upper-division Psychology course.

* Taken in satisfaction of the upper-division writing requirement.

Psychology Minor Requirements

Requirements for the minor in Psychology are met by taking seven or eight psychology courses (28 or 32 units) as specified below:

- A. Psychology 7A (for the 28-unit minor) or 9A, B, C (for the 32-unit minor).
- B. Three upper-division Psychology courses chosen from the following core courses in Psychology: 120A, 120D, 120H, 120P, 130A, 140C, 140L, 140M, 160A, 160D.
- C. For students who take Psychology 7A, three additional psychology courses (four or more units each) no more than one of which is a lower-division course. For students who take Psychology 9A, B, C, two additional upper-division Psychology courses (four or more units each). Psychology 190–199 cannot be used to fulfill this requirement.
- D. In addition, the School mathematics and computer science requirement (School requirement A) must be satisfied.

Graduate Program

Participating Faculty

- William Batchelder: Mathematical models of learning and memory, mathematical psychology, and measurement
- Bruce Berg: Audition, auditory attention, psychophysics of complex sounds, computational models of hearing
- Myron Braunstein: Visual perception
- Alyssa A. Brewer: Neuroimaging of visual perception, visual deficits, and neurological disorders
- Charles F. Chubb: Visual perception, mathematical modeling, histogram contrast analysis
- Barbara Doshier: Human information processing, memory retrieval, attention, visual perception
- Michael D'Zmura: Vision, hearing, language, brain-computer interfaces
- Jean-Claude Falmagne: Mathematical behavioral sciences
- Emily D. Grossman: Visual perception, neuroimaging
- Gregory Hickok: Neuroanatomy of language, neural plasticity, neuroimaging, cognitive neuroscience
- Donald Hoffman: Machine and human vision, visual recognition, artificial intelligence, virtual reality, consciousness and cognition, shape from motion
- Geoffrey J. Iverson: Mathematical psychology, psychophysics, statistics
- Mary-Louise Kean: Cognitive neuropsychology, biological foundation of higher mental processes
- Jeffrey Krichmar: Computational neuroscience, robotics
- Michael D. Lee: Mathematical and computational models of stimulus representation, categorization, memory decision-making, problem solving
- R. Duncan Luce: Axiomatic measurement, decision theory, psychophysics, response times
- Virginia Mann: Reading ability: phoneme awareness, developmental dyslexia, phonological skills, early intervention, precocious readers; speech perception: context effects, cross-linguistic comparisons
- Louis Narens: Measurement, logic, and metacognition
- Lisa Pearl: Linguistics, computational linguistics, language development, language change, Bayesian models
- Virginia M. Richards: Auditory perception and cognition, human psychophysics
- Kouros Saberi: Signal detection, psychophysics, cortical neuroscience, sensory genetics
- Barbara Sarnecka: Cognitive development, language development, number concepts, conceptual change, individual cognitive development, historical development of science and mathematics
- George Sperling: Vision, perception, information processing
- Jon Sprouse: Linguistics, syntax, psycholinguistics
- Ramesh Srinivasan: Cognitive neuroscience, brain development, consciousness, perception, EEG, brain dynamics
- Mark Steyvers: Semantic influences in recognition and recall, computational models for knowledge extraction, dynamic decision-making models, causal reasoning, bayesian networks
- W.C. Watt: Cognitive semiotics
- Charles E. (Ted) Wright: Cognitive psychology, human motor control, Fitts task, aimed movements, handwriting, immersive virtual reality, 1/f noise, quantitative models
- John I. Yellott, Jr.: Mathematical psychology, visual perception

GRADUATE STUDY IN THE COGNITIVE SCIENCES

The Department of Cognitive Sciences offers a Ph.D. degree program in Psychology, with a specialization in cognitive science, to prepare students for research and teaching careers in academia, industry, and government. The emphasis is on modern techniques of experimentation and theory construction. Special attention is given to providing hands-on research experience and equipping students with sophisticated mathematical and computing skills. The Department has 29 faculty; two are members of the National Academy of Sciences, and many serve as editors or editorial board members of leading professional journals, and as members of NSF and NIH study panels. Many Cognitive Sciences faculty are also members of UCI's Institute of Mathematical Behavioral Sciences, and the Department is generally regarded as one of the world's leading centers for mathematically oriented research in cognitive psychology. The Department is also allied closely to the School's Center for Cognitive Neuroscience.

ADMISSION

In addition to meeting the general requirements for admission, applicants should have acquired a background in mathematics equivalent to at least one year of calculus. Advanced course work in some of the following fields is highly desirable: psychology, computer science, mathematics, physical sciences, biology, logic, and linguistics. Standard requirements for admission include Graduate Record Examination (GRE) scores for tests taken within the past five years, official transcripts of all college course work, and at least three letters of recommendation. Applicants whose first language is not English must also take the Test of English as a Foreign Language (TOEFL) and achieve a score of 213 or higher on the computer-based exam or 550 or higher on the paper-based exam. As an alternative to the TOEFL, candidates for admission may submit scores from the Academic Modules of the International English Language Testing System (IELTS), in which case an overall minimum score of 7 is required, with a score of no less than 6 on any individual module. Applicants who are not citizens of countries where English is either the primary or dominant language as approved by the UCI Graduate Council and who apply for a teaching assistantship, must pass the Test of Spoken English (TSE), or the Speaking Proficiency English Assessment Kit (SPEAK) examination, with a score of 50 or more. The IELTS can serve as an alternative to the Test of Spoken English (TSE) when the applicant also scores 8 or higher on the "Speaking" module of the Test.

To receive full consideration for fellowship and assistantship awards, applications must be received by December 15. Late applications may be considered until July 1 on a space-available basis. Since the program starts in the fall quarter, students are not normally admitted in the winter or spring, though exceptions may be made. Application materials are available online at the Graduate Division Web site, <http://www.grad.uci.edu/prospective>.

REQUIREMENTS FOR THE DOCTORAL DEGREE IN PSYCHOLOGY

Each student is expected to take two course sequences in the first year. These include a quantitative research methods sequence that covers the areas of probability, statistics, and experimental design (Psychology 203A-B-C). The second is a computational research methods sequence that covers programming for experiments and data analysis (Psychology 205A and 205B or 205C). Students must also enroll in a quarter-long proseminar course during the fall quarter of their first year (Psychology 202A). Suitable substitutes may be made with written approval of the Department's Director of Graduate Studies. Completion of the quantitative research methods sequence may be extended over two years if warranted by the background or needs of the student. Additional advanced course work in other fields relevant to the student's interests will supplement the required courses. Students are expected to enroll in the Cognitive Sciences Research Seminar (Psychology 201A-B-C) during all quarters in residence prior to passage of the advancement-to-candidacy examination.

In addition, each student must take at least four core elective courses prior to advancement to candidacy. These courses are drawn from the Core Elective module (Psychology 210–219). Students must also take at least three more courses prior to advancement to candidacy that are normally selected from at least two of the following six modules: Human Cognition (Psychology 220–229); Methodologies and Models (Psychology 230–239); Language Sciences (Psychology 240–249); Human Performance (Psychology 250–259); Cognitive Neuroscience (Psychology 260–269); and Sensation and Perception (Psychology 270–289).

Each student is expected to carry out theoretical/empirical research during the first two years. By the end of the second year, each student should have completed a research project of a scope and nature that is potentially publishable in a professional journal. Every student is assigned a faculty advisor, and the advisor is responsible for assisting in the planning and other facets of the project. Students are required to present a talk to the Cognitive Sciences Research Seminar, based on their research project, by the end of the spring quarter of their second full year in the graduate program. (Another forum for the second-year talk may be substituted with the written approval of the Graduate Director.)

By the following fall quarter, students are required to write a paper based on their research project. The paper must be approved by the student's advisor and the Director of Graduate Studies.

At the end of each academic year the faculty of the Department meet to discuss and provide feedback on the progress of each student in the program.

Requirements for the M.A. Degree

NOTE: Although the Department does not have an M.A. program, students may earn an M.A. degree as part of the Ph.D. program.

The student must (1) complete the required course work as outlined above; (2) present a talk and submit an approved paper, both based on empirical/theoretical research, as described above; and (3) fulfill a computer-programming language requirement by completing satisfactorily the computational research methods sequence Psychology 205A-B or by demonstrating proficiency in use of a programming language for cognitive sciences research as assessed by two faculty members and approved by the Graduate Director.

Requirements for Advancement to Candidacy

The requirements for advancement to candidacy are (1) the student must meet the requirements listed above for the M.A. degree; (2) the student must, in addition, form a five-member faculty committee selected according to Graduate Division policy. The committee will examine the student on a topic which is determined in consultation with the committee. A written document describing the student's work on this topic must be submitted to the committee prior to advancement. The student must demonstrate an understanding of the background and issues for the research topic and show sufficient preparation and creativity to undertake planning for a dissertation project (e.g., by describing a possible experimental design or outlining a possible theoretical development); and (3) students are required to advance to candidacy by the end of the fall quarter of their third year in the program.

Requirements for the Ph.D. Degree

The requirements for the Ph.D. degree are (1) the student must formally present and defend a written dissertation proposal to a committee of at least three members selected according to Graduate Division requirements. The dissertation proposal presentation may take place as part of the examination for Advancement to Candidacy, in which case, that five-member committee will approve the dissertation proposal; (2) the proposal must be approved prior to the final dissertation defense (usually at least three months before to allow time for the candidate to incorporate suggestions and changes required by the committee); (3) prior to the approval of the final version of the dissertation the student is expected to defend the dissertation in a public colloquium announced with at least one week's notice; and (4) all requirements for the Ph.D. degree must be fulfilled within three years after advancement to candidacy.

The normative time for advancement to candidacy is three years. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is six years.

CONCENTRATION IN COGNITIVE NEUROSCIENCE

Students can also pursue a Ph.D. in Psychology with a concentration in Cognitive Neuroscience. This is an interdisciplinary field which studies the relation between mind and brain. With the development of non-invasive functional brain imaging techniques during the last two decades, the integration of cognitive and neural models of information processing has become a major focus in the field, and a major growth area within the Department's academic plan.

The program concentration is administered by the Department of Cognitive Sciences and coordinated by the graduate director in concert with the Cognitive Neuroscience program advisor. Commensurate with the multidisciplinary nature of cognitive neuroscience, the Department expects to admit students with a variety of undergraduate educational backgrounds. These include, but are not necessarily limited to, undergraduate degrees in psychology/cognitive science, neuroscience, biology, computer science, mathematics, and engineering. Students will have the opportunity to work closely with faculty from the Center for Cognitive Neuroscience (see <http://www.ccns.uci.edu>).

Requirements

Course work. Students must complete 12 courses distributed as follows: the cognitive neuroscience core course, Psychology 216; two quantitative courses drawn from Psychology 203A and either 203B or 203C; one computational course, drawn from the Psychology 205A-B-C sequence; two neuroscience methods courses drawn from Psychology 236, 265A-B, 268A; two cognitive sciences courses drawn from Psychology 210-219; two neuroscience courses drawn from the Psychology 261-269 module; and two electives.

Students must fulfill the Ph.D. program's computer-programming language requirement.

Students are expected to enroll in the Cognitive Sciences Research Seminar (Psychology 201A-B-C) and the Cognitive Neuroscience Research Seminar (Psychology 260) during all quarters in residence prior to passage of the advancement-to-candidacy examination.

Concentration examination. At the beginning of the fall quarter of their second year, students will be required to take a written concentration examination. It will involve (1) a critical review of work in the student's area of research interest, and (2) written responses to specific questions provided by the student's committee members.

Advancement examination. The advancement examination consists of a written research proposal in NIH NRSA Predoctoral Fellowship format, and an oral defense of the proposed research. The advancement committee will comprise the student's advisor plus four additional faculty members, one of whom will be from outside the program. Students are encouraged to advance by the end of their second year, and must advance by the end of the first quarter of their third year.

Dissertation. Students must submit a dissertation describing original publishable research and present a public defense of the dissertation as the final requirement of the Ph.D. program.

Courses in Psychology

(*Schedule of Classes designation: Psych*)

LOWER-DIVISION

7A Introduction to Psychology (4) F, W, S, Summer. Introduction to field of psychology, addressing the application of scientific methods to the study of human development, learning, memory, problem solving, perception, biological mechanisms, emotions and motivation, personality, psychopathology, and effects of diverse social and cultural contexts on human behavior. Same as Psychology and Social Behavior 9. No credit for Psychology 7A/Psychology and Social Behavior 9 if taken concurrently with, or after, any of the following: Psychology 9A, B, or C. Psychology and Social Behavior 11A, B, or C. (III)

9A, B, C Psychology Fundamentals (4-4-4) F, W, S. Designed to provide freshman Psychology majors with an in-depth survey of general psychology. Topics include biological bases of behavior, sensation, perception, cognition, development, personality, psychopathology, and social psychology. Same as Psychology and Social Behavior 11A, B, C. No credit for Psychology 7A/ Psychology and Social Behavior 9 if taken concurrently with, or after, any of the following: Psychology 9A, B, or C. Psychology and Social Behavior 11A, B, or C. *Psychology majors have first consideration for enrollment.* (III)

10A-B-C Probability and Statistics in Psychology I, II, III (4-4-4). An introduction to probability and statistics. Emphasis on thorough understanding of the probabilistic basis of statistical inference. Examples drawn primarily from psychology. Students who receive credit for Psychology 10A-B-C may not receive credit for Anthropology 10A-B-C, Political Science 10A-B-C, Social Ecology 13, Social Sciences 9A-B-C or 10A-B-C, or Sociology 10A-B-C. *Psychology majors have first consideration for enrollment.* (V)

21A Adolescent Psychology (4). Focuses on psychosocial dynamics of today's adolescents in America emphasizing the quest for identity, independence, values, and sexual orientation. The influence of society, family, school, and peers is analyzed. Strategies for helping troubled adolescents are discussed. Prerequisite: Psychology 7A or 9A, B, C, or Psychology and Social Behavior 9 or 11A, B, C. Psychology 21A and Psychology and Social Behavior 112D may not both be taken for credit. (III)

46A Introduction to Human Memory (4). Covers the core concepts of modern research and theorizing about human memory, including structural subdivisions (e.g., perceptual memory, short-term memory, long-term memory), different measures of memory (e.g., recall, reorganization), and some practical applications of memory research (e.g., mnemonics). Prerequisite: Psychology 7A or 9A, B, C or Psychology and Social Behavior 9 or 11A, B, C. Psychology 46A may not be taken for credit concurrently with or after Psychology 140M or Psychology and Social Behavior 192J. (III)

56L Acquisition of Language (4). What children say, what they mean, and what they understand. Theories about the learning of language by one-, two-, and three-year olds. Comparison of kinds of data on which these theories are based. Same as Linguistics 51. (III)

78A Introduction to Social Psychology (4). Studies sociological contributions to theory and research in social psychology, with focus on the social influences on personality, attitudes, beliefs, and behavior; socialization, human groups, and social interaction. Same as Sociology 31. (III)

89 Special Topics in Lower-Division Psychology (4). Prerequisites vary. May be repeated for credit as topic varies.

UPPER-DIVISION

H101A-B-C Honors Seminar in Psychology I, II, III (4-4-4). Focuses on the research activities and honors thesis research projects of each student and on the research of various Cognitive Sciences faculty. Students discuss their research interests in the early and later stages of their projects. Research projects and write-ups are required. Restricted to students in the Honors Program in Psychology. H101B: Pass/Not Pass only.

RESEARCH METHODS

H111A Honors Experimental Psychology (4) F. Emphasis on design of experiments and analysis of results. Experiments are conducted in laboratory sections. Corequisite: Psychology H111LA. Prerequisites: Psychology 9A, B, C, or Psychology and Social Behavior 11A, B, C; Psychology 10A-B-C or any other 10A-B-C series in the School of Social Sciences, or Mathematics 2A-B and 7/Statistics 7. Open only to students in the Honors Program in Psychology. Psychology H111A and 112A may not both be taken for credit.

H111LA Honors Experimental Psychology Laboratory (2) F. Corequisite: Psychology H111A.

H111B Honors Advanced Experimental Psychology (4) W. Design and analysis of multivalent, factorial, and correlational studies. Students prepare proposals for independent research. Corequisite: Psychology H111LB. Prerequisite: Psychology H111A or Psychology 112A. Open only to students in the Honors Program in Psychology or by consent of instructor.

H111LB Honors Advanced Experimental Psychology Laboratory (2) W. Corequisite: Psychology H111B.

H111C Honors Research in Experimental Psychology (4) S. Each student conducts a research project in experimental psychology. The projects are discussed in a seminar format. Written reports on each project are submitted at the end of the quarter. Prerequisite: Psychology H111B or 112B. Open only to students in the Honors Program in Psychology or by consent of instructor.

NOTE: Students who wish simply to fulfill the laboratory/research-methods requirement in one quarter should take Psychology 112M or 112P.

112A Experimental Psychology (4) F. Emphasis on design of experiments and analysis of results. Experiments are conducted in laboratory sections. Corequisite: Psychology 112LA. Prerequisites: Psychology 9A, B, C, or Psychology and Social Behavior 11A, B, C; Psychology 10A-B-C or any other 10A-B-C series in the School of Social Sciences, or Mathematics 2A-B and 7/Statistics 7. Only one course from Psychology H111A, 112A, and 112F-G may be taken for credit. *Psychology majors have first consideration for enrollment.*

112LA Experimental Psychology Laboratory (2) F. Corequisite: Psychology 112A. *Psychology majors have first consideration for enrollment.*

112B Advanced Experimental Psychology (4) W. Design and analysis of multivalent, factorial, and correlational studies. Students prepare proposals for independent research. Corequisite: Psychology 112LB. Prerequisite: Psychology 112A, 112LA. Only one course from Psychology 112B and 112F-G may be taken for credit. *Psychology majors have first consideration for enrollment.*

112LB Advanced Experimental Psychology Laboratory (2) W. Corequisite: Psychology 112B. *Psychology majors have first consideration for enrollment.*

112C Research in Experimental Psychology (4) S. Each student conducts a research project in experimental psychology. The projects are discussed in a seminar format. Written reports on each project are submitted at the end of the quarter. Prerequisite: Psychology 112B, 112LB. Only one course from Psychology 112C and 112F-G may be taken for credit. *Psychology majors have first consideration for enrollment.*

112M Research Methods in Psychology (4) F. Research methods in psychology for majors who wish to fulfill this requirement separately from upper-division writing. Covers both experimental and descriptive research methods, analysis of results, and reading the psychological literature. Research experience is provided in laboratory sections. Corequisite: Psychology 112LM. Prerequisites: Psychology 9A, B, C, or Psychology and Social Behavior 11A, B, C; Psychology 10A-B-C or any other 10A-B-C series in the School of Social Sciences, or Mathematics 2A-B and 7/Statistics 7. Psychology 112M and 112F may not both be taken for credit. May not be taken for credit after completion of any other Psychology 112 course. *Psychology majors have first consideration for enrollment.*

112LM Research Methods in Psychology Laboratory (2) F. Corequisite: Psychology 112M. *Psychology majors have first consideration for enrollment.*

112P Research in Perception and Psychophysics (4). Introduction to design and practice of experiments: students perform auditory, visual, tactile, or other experiments. Emphasis on methodology, finding and reading previous research, generating research ideas, statistical analysis. Students propose and conduct their own final research project with approval. Corequisite: Psychology 112LP. Prerequisites: Psychology 9A, B, C, or Psychology and Social Behavior 11A, B, C; Psychology 10A-B-C or any other 10A-B-C series in the School of Social Sciences, or Mathematics 2A-B and 7/Statistics 7; Psychology 130A. *Psychology majors have first consideration for enrollment.*

112LP Research in Perception and Psychophysics Laboratory (2). Corequisite: Psychology 112P. *Psychology majors have first consideration for enrollment.*

112R Cognitive Robotics (4). Introduces concepts on experimental design, embodiment, robot construction, and computer programming. Concepts of embodied intelligence and case studies of cognitive robotics are covered in lecture. Simple robots are constructed and programmed to carry out different behavioral experiments in lab. Corequisite: Psychology 112LR. Prerequisites: Psychology 9A, B, C, or Psychology and Social Behavior 11A, B, C; Psychology 10A-B-C or any other 10A-B-C series in the School of Social Sciences, or Mathematics 2A-B and 7/Statistics 7. *Psychology majors have first consideration for enrollment.*

112LR Cognitive Robotics Laboratory (2). Corequisite: Psychology 112R. *Psychology majors have first consideration for enrollment.*

113T Introduction to Psychological Tests and Measurements (4). Principles of psychological measurement, including elementary psychophysics, psychometrics, test theory, and the measurement of abilities, attitudes, traits, and interests. Reliability and validity of psychological measurements. Prerequisites: Psychology 7A or 9A, B, C, or Psychology and Social Behavior 9 or 11A, B, C; Psychology 10A or any other 10A course in the School of Social Sciences, or equivalent. *Psychology majors have first consideration for enrollment.*

114M MATLAB Programming (4). MATLAB is a mathematical software package for solving quantitative problems often encountered in experimental psychology. Topics include rudiments of programming, statistical analysis of data, matrix algebra, signal processing, graphic visualization, and simulated models of cognitive and perceptual processes. *Psychology majors have first consideration for enrollment.*

119 Special Topics in Research Methodologies (1 to 4). Prerequisites vary. May be repeated for credit as topic varies. *Psychology majors have first consideration for enrollment.*

GENERAL PSYCHOLOGY

120A Abnormal Psychology (4). Introduction to psychopathology and behavioral deviations, and the concepts of theories regarding these conditions. Prerequisite: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C. Psychology 120A and Psychology and Social Behavior 102C may not both be taken for credit. *Psychology majors have first consideration for enrollment.*

120D Developmental Psychology (4). A general introduction to the study of the physical, intellectual, social, and emotional development of the child from birth to adulthood. Prerequisites: Psychology 7A or 9A, or Psychology and Social Behavior 9 or 11A. Psychology 120D and Psychology and Social Behavior 111D may not both be taken for credit. *Psychology majors have first consideration for enrollment.*

120H History of Psychology (4). A history of the development of various schools and systems of psychological thought. Prerequisite: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C, or equivalent, or consent of instructor. Same as Psychology and Social Behavior 192A. *Psychology majors have first consideration for enrollment.*

120P Personality Theories (4). A survey of the evolution of personality theory during this century. An overview of major perspectives in the field, with special attention to Freud, Jung, and Adler. Prerequisite: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C. Psychology 120P and Psychology and Social Behavior 170S may not both be taken for credit. *Psychology majors have first consideration for enrollment.*

121M Theories of Motivation (4). Factors affecting the behavioral performance of organisms. A survey of theoretical and empirical approaches to the physiological, psychological, and social factors which generate behavior. Prerequisites: Psychology 7A or 9A, B, C, or Psychology and Social Behavior 9 or 11A, B, C. Psychology 121M and Psychology and Social Behavior 176S may not both be taken for credit. *Psychology majors have first consideration for enrollment.*

121S Psychology of Sleep and Consciousness (4). Covers the physiology, neurochemistry, and neuroanatomy associated with sleep, contemporary sleep theory, REM and NREM, phenomenology, sleep disorders, examination of differences between conscious and unconscious cognitive function, the history of sleep and dream theories from ancient time to present day. *Psychology majors have first consideration for enrollment.*

122C Clinical Psychology (4). Provides overview of the clinical psychology field including theories and techniques used in counseling and testing. *Psychology majors have first consideration for enrollment.*

122I Organizational/Industrial Psychology (4). Introduction to applied psychology in organizations, including personnel testing, selection, training and evaluation, job and classification analysis, job satisfaction and motivation, organizational development, leadership, market research and consumer psychology. Potential ethical problems are discussed. Prerequisite: Psychology 7A, or 9A, or 9B, or 9C, or Psychology and Social Behavior 9 or 11A, or 11B, or 11C, or equivalent, or consent of instructor. Same as Psychology and Social Behavior 180S. *Psychology majors have first consideration for enrollment.*

123P Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 143 and Philosophy 143. *Psychology majors have first consideration for enrollment.*

127A Adult Development (4). Examines why and how we change (with attention to gains as well as losses) from ages 25–65 and the nature and sources of continuity over time. Topics include physical and intellectual functioning, personality, coping strategies, and social roles and relationships. Prerequisite: Psychology 7A or 9B, or Psychology and Social Behavior 9 or 11B, or equivalent. Same as Psychology and Social Behavior 113D. *Psychology majors have first consideration for enrollment.*

127C Clinical Child Psychology (4). Examines research and theory concerning childhood psychopathology behavior disorders. Diagnosis and assessment, early identification of high-risk children, fears and phobias, antisocial behavior, childhood psychoses, autism, depression, attention deficit/hyperactivity disorders, and ethical and policy implications of identifying children who are different. Prerequisites: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C, or equivalent. Same as Psychology and Social Behavior 152C. *Psychology majors have first consideration for enrollment.*

127D Development of Gender Differences (4). Examination of research on how sexes differ in physiology, cognitive functioning, personality, and social behavior. Sex-differentiated development from the prenatal period through adulthood. Explanations for male-female differences are sought, focusing on biological (genetic, hormonal), and social (familial, cultural) mechanisms. Prerequisite: Psychology 7A or 9B, or Psychology and Social Behavior 9 or 11B, or equivalent. Same as Psychology and Social Behavior 117D. *Psychology majors have first consideration for enrollment.*

127E Psychology and Emotion (4). General theories of emotion and research regarding cognitive, behavioral, physiological, and subjective experience of emotion. Specific topics include emotion regulation, emotion and health, emotional intelligence, and emotional development. Prerequisite: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C, or equivalent. Same as Psychology and Social Behavior 177S. *Psychology majors have first consideration for enrollment.*

127G Gerontology (4). Examines stereotypes and myths associated with aging; physiological and psychological changes that accompany old age; distinguishes behavior changes due to aging *per se* from those due to historical and socioeconomic factors; political, social aspects of old age in contemporary society. Prerequisite: Psychology 7A or 9B, or Psychology and Social Behavior 9 or 11B, or equivalent. Same as Psychology and Social Behavior 114D. *Psychology majors have first consideration for enrollment.*

127H Child Health Psychology (4). Exploration of psychological antecedents, concomitants, and consequences of medical illnesses in children. Children's beliefs about health, illness, and medication; the role of stress; coronary-prone behavior; therapeutic adherence and physician-patient interaction; coping with chronic illness; effects of a child's illness on family. Prerequisites: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C, or equivalent; Social Ecology 10 recommended. Same as Psychology and Social Behavior 138H. *Psychology majors have first consideration for enrollment.*

127I Infant Development (4). Study of human development from conception through the first two years of life, covering processes and events in the domains of physical, social, and cognitive development. Prerequisite: Psychology 7A or 9B, or Psychology and Social Behavior 9 or 11B, or equivalent. Same as Psychology and Social Behavior 110D. *Psychology majors have first consideration for enrollment.*

127S Attitudes and Behavior (4). Intended for students interested in theory and research on how attitudes influence, and are influenced by, behavior. Topics include: voting behavior, Fishbein and Ajzen's theories of reasoned action and planned behavior, attitude accessibility, prejudice and discrimination, and cognitive dissonance theory. Prerequisite: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C, or equivalent. Same as Psychology and Social Behavior 172S. *Psychology majors have first consideration for enrollment.*

127T Child Therapies (4). Examines research methodologies, empirical data, and implications of diverse intervention strategies. Primary topics include psychotherapy process and outcome, family therapies, behavioral intervention, cognitive behavior modification, pediatric psychopharmacology, and ethical and social policy implications of intervening in other people's lives. Prerequisites: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C, or equivalent; Psychology 122C or consent of instructor. Same as Psychology and Social Behavior 155C. *Psychology majors have first consideration for enrollment.*

129 Special Topics in General Psychology (1 to 4). Prerequisites vary. May be repeated for credit as topic varies. *Psychology majors have first consideration for enrollment.*

PERCEPTION AND SENSORY PROCESSES

130A Perception and Sensory Processes (4). A general introduction to the scientific study of sensory processes and perceptual phenomena, with special emphasis on the visual system. Prerequisite: Psychology 7A or 9A, or Psychology and Social Behavior 9 or 11A, or equivalent, or consent of instructor. Psychology 130A may not be taken for credit after 131A or 131B. Same as Psychology and Social Behavior 192E. *Psychology majors have first consideration for enrollment.*

131A Vision (4). Visual perception and the anatomy and physiology of the visual system. Topics include: the retina and the visual pathway; visual sensitivity; color vision; spatial vision; motion perception; and the development of the visual system. Psychology 130A may not be taken for credit after Psychology 131A. Same as Biological Sciences N182. *Psychology majors have first consideration for enrollment.*

131B Hearing (4). Auditory perception, the anatomy and physiology of the auditory system, and the physics of sound. Topics include: neural transduction of sound, sensitivity, sound localization, complex sound perception, and hearing loss. Prerequisites: Psychology 9A, B, or Psychology and Social Behavior 11A, B; upper-division standing or consent of instructor. Psychology 130A may not be taken for credit after 131B. *Psychology majors have first consideration for enrollment.*

135A, B, C Memory and Decision-Making Research (4-4-4). Covers a range of theoretical, empirical, and model-based memory and decision-making research topics, including reconstructive memory, decision-making in reinforcement learning problems, sequential sampling processes, hierarchical Bayesian methods, and the application of machine learning methods to corpora of human behavior. Concurrent with Psychology 235A, B, C. *Psychology majors have first consideration for enrollment.*

135M The Mind/Body Problem (4). What is consciousness and what is matter and how are the two related? How can brains have minds? This multidisciplinary course draws on information from the fields of computer vision, artificial intelligence, cognition, neurophysiology, philosophy, and psychophysics. *Psychology majors have first consideration for enrollment.*

139 Special Topics in Perception and Sensory Processes (4). Prerequisites vary. May be repeated for credit as topic varies. *Psychology majors have first consideration for enrollment.*

LEARNING AND COGNITION

140C Cognitive Science (4). Introduction to investigations of the structure and function of the mind, from viewpoints of computation, neuroscience, philosophy, and cognitive psychology. Topics include: perception, attention, knowledge representations, learning and memory, action, reasoning, and language. Prerequisite: Psychology 7A or 9A, 9B or Psychology and Social Behavior 9 or 11A, 11B or equivalent. Same as Psychology and Social Behavior 192G. *Psychology majors have first consideration for enrollment.*

140L Principles of Learning Theory (4). Investigation of the learning and memory processes of humans and animals. Basic experimental approaches to learning and memory, empirical results, and theoretical interpretations of the evidence are discussed. Prerequisite: Psychology 7A or 9A, or Psychology and Social Behavior 9 or 11A, or equivalent. Same as Psychology and Social Behavior 192I. *Psychology majors have first consideration for enrollment.*

140M Human Memory (4). Developments in the area of memory; history of memory research; theories of the nature of memory. Visual memory, recognition memory, high-speed scanning, free recall, short-term memory, mnemonics, retrieval, relationship of memory to thinking. Selected theoretical formulations for memory. Prerequisite: Psychology 7A or 9B or Psychology and Social Behavior 9 or 11B, or equivalent. Psychology 46A may not be taken for credit concurrently with or after Psychology 140M or Psychology and Social Behavior 192J. Same as Psychology and Social Behavior 192J. *Psychology majors have first consideration for enrollment.*

141D Cognitive Development: The Origins of Knowledge (4). Explores the origins of individual human knowledge in relation to two larger time scales: biological evolution and historical/cultural change. Evidence from many fields is presented, but the main focus is on experimental data from cognitive and developmental psychology. Prerequisites: upper-division standing and satisfactory completion of the lower-division writing requirement. Psychology 141D and Psychology and Social Behavior 115D may not both be taken for credit. *Psychology majors have first consideration for enrollment.*

141J-K-L Jumpstart: Early Language, Literacy, and Social Development (4-4-4) F, W, S. An experiential course integrated with lecture material in the field of child development and education. Students are expected to attend lectures, complete assignments, and commit a total of eight hours per week as mentors of disadvantaged preschool children. Prerequisite: consent of instructor. Same as Education 141A-B-C. *Psychology majors have first consideration for enrollment.*

143P Human Problem Solving (4). Modern developments in the psychology of human problem solving. Topics include: concept identification, arithmetic, sets, logic puzzles, story problems, group problem solving, and theorem proving. Prerequisite: Psychology 7A or 9B, or Psychology and Social Behavior 9 or 11B, or equivalent. Same as Psychology and Social Behavior 192K. *Psychology majors have first consideration for enrollment.*

144A-B-C HABLA: Language Intervention for Disadvantaged Children (4-4-4). Trains students (fall quarter) to deliver home visits (winter and spring) that promote school readiness among two–four year-olds from low SES and educational backgrounds. Covers fundamentals of child language, literacy, cognitive development; procedures, ethics of home visitation. Work with parents and children to create better home literacy and language environment. Prerequisites: must pass an interview by instructor, be fluent in English and one other language (Spanish most typically), must have experience with preschool children and be culturally sensitive. Same as Chicano/Latino Studies 191A-B-C and Social Science 186A-B-C. *Psychology majors have first consideration for enrollment.*

145P-Q-R Attention and Learning Deficits in Children I, II, III (4-4-4). Learning in normal and attention-deficit disordered children. Covers the normal developmental course of learning and a variety of deficits. Includes field work with attention-deficit disordered children. Prerequisite: consent of instructor. *Psychology majors have first consideration for enrollment.*

146M Writing About Memory (4). Covers a broad range of texts, literary, philosophical, and scientific, each probing the nature of memory and its meaning in human life. Readings are drawn from across many disciplines and many perspectives. Prerequisites: Psychology 7A or 9B or Psychology and Social Behavior 9 or 11B, or equivalent; satisfactory completion of the lower-division writing requirement. *Psychology majors have first consideration for enrollment.*

147C Cognitive Behavior Therapy (4). Presentation of principles and procedures of therapeutic interventions based on cognitive-behavior methods. Cognitive factors in learning, emotional arousal, psychological disorder, and psychotherapy reviewed. Introduces the application of cognitive behavioral methods to problems of depression, anxiety, anger, pain, and impulsivity. Prerequisite: Psychology 7A or 9A, 9C, or Psychology and Social Behavior 9 or 11A, 11C, or equivalent. Same as Psychology and Social Behavior 154C. *Psychology majors have first consideration for enrollment.*

148A, B, C Cognitive Development Research (4-4-4). Provides experience in cognitive development research, centered around the child's acquisition of number words and concepts. Students conduct research and review and discuss each other's projects in weekly lab meetings with instructor and graduate students. Prerequisite: consent of instructor. May be repeated for credit as topics vary. Concurrent with Psychology 228A, B, C. *Psychology majors have first consideration for enrollment.*

149 Special Topics in Cognition and Learning (4). Prerequisites vary. May be repeated for credit as topics vary. *Psychology majors have first consideration for enrollment.*

LANGUAGE SCIENCES

153 Experimental Syntax (4). Examines the experimental methods that have been proposed for accessing speakers' knowledge of language in the psycholinguistic literature. Students investigate the merits of each technique through hands-on experience, culminating in a fully fledged experimental syntax study. Prerequisite: Linguistics 20. Same as Linguistics 123. *Psychology majors have first consideration for enrollment.*

155 Psychology of Language (4). Examines language using the tools of experimental psychology. From sounds to words to spoken and written sentences, explores how language is used in real time, and how its use reveals how it is represented in the mind. Same as Linguistics 155. *Psychology majors have first consideration for enrollment.*

156A Acquisition of Language II (4). Focuses on native language learning, exploring the way in which infants and very young children unconsciously uncover the rich systematic knowledge of their native language. Examines both experimental and computational studies that quantitatively investigate the "how" of language acquisition. Prerequisite: Psychology 56L or Linguistics 51 recommended. Same as Linguistics 150. *Psychology majors have first consideration for enrollment.*

157M Computational Methods for Language Research (4). Focuses on computational methods useful for language research. Students become familiar with software and programming languages used for extracting information from electronic datasets and for creating basic simulations of linguistic cognition. No prior programming experience assumed. Prerequisite: Psychology 155/Linguistics 155 or Psychology 156A/Linguistics 150, or consent of instructor. Same as Linguistics 107M. Concurrent with Psychology 247M. *Psychology majors have first consideration for enrollment.*

158A, B, C Language Sciences Research (4-4-4). Provides in-depth experience in all facets of research in language. Research topics include language acquisition and adult processing. Methodologies include behavioral research methods, brain imaging techniques, and computational methods. Students engage in research and participate in a weekly seminar. Prerequisite: consent of instructor. May be repeated for credit as topics vary. Concurrent with Psychology 248A, B, C. *Psychology majors have first consideration for enrollment.*

159 Special Topics in Semiotics and Language (1 to 4). Prerequisites vary. May be repeated for credit as topics vary. *Psychology majors have first consideration for enrollment.*

COGNITIVE NEUROSCIENCE

160A Introduction to Cognitive Neuroscience (4). Introduction to the neural basis of human perceptual, motor, and cognitive abilities. Topics include sensory perception, motor control, memory, language, attention, emotion, frontal lobe function, functional brain imaging, and neuropsychological disorders. Prerequisite: Psychology 7A or 9A, B, or Psychology and Social Behavior 9 or 11A, B, or Biological Sciences 35, or equivalent, or consent of instructor. Same as Biological Sciences N166 and Psychology and Social Behavior 192L. *Psychology majors have first consideration for enrollment.*

160D Brain Disorders and Behavior (4). Examines the localization of human brain functions and the effects of neurological disorders on psychological functions such as perception, motor control, language, memory, and decision-making. Prerequisites: Psychology 7A or 9A, B, or Psychology and Social Behavior 9 or 11A, B, or Biological Sciences 35, or equivalent, or consent of instructor. Same as Biological Sciences N165. Formerly Psychology 165. *Psychology majors have first consideration for enrollment.*

161 Language and the Brain (4). Analysis of current research on the biological bases of human linguistic capacity. Development, focusing on hemispheric specialization and plasticity; localization of specific linguistic functions in adults, with emphasis on study of aphasias; relation of linguistic capacity to general cognitive capacity, considering research on retardation. Prerequisite: Biological Sciences 35 or N110, or consent of instructor. Same as Linguistics 158 and Biological Sciences N160. *Psychology majors have first consideration for enrollment.*

161H Hearing and the Brain (4). An overview of brain mechanisms of hearing, including perception of simple sounds, speech, and music. Begins with sound itself, and looks at processing by the ear, auditory pathways, auditory cortex, and beyond. Also auditory development, learning, and clinical issues. Prerequisite: Psychology 160A or Biological Sciences N110. Same as Biological Sciences N147. *Psychology majors have first consideration for enrollment.*

161P Perceptual Neuroscience (4). Examines the physiology of cortical networks underlying human perceptual experience. Prerequisite: Psychology 160A or Psychology and Social Behavior 192L or consent of instructor. Same as Psychology and Social Behavior 192P. *Psychology majors have first consideration for enrollment.*

161V Cognitive Neuroscience of Vision (4). Explores the neural basis of our visual experience, including visual perception, face and object recognition, attention, and visual awareness. Emphasis placed on evidence acquired from neuroimaging, neuronal recordings, patient literature, and brain stimulation. Prerequisite: Psychology 160A or Psychology and Social Behavior 192L. *Psychology majors have first consideration for enrollment.*

162A Neurobiology of Learning and Memory (4). How the brain and behavior change as a result of experience, with an emphasis on identifying the neurochemical processes through which memory is stored and the parts of the brain that are involved. Prerequisite: Biological Sciences 35 or N110. Same as Biological Sciences N158. *Psychology majors have first consideration for enrollment.*

162B Human Memory Disorders (4). Focuses on models and methods of assessing human memory and its disorders. Exposure to conventional and new assessment devices provided. *Psychology majors have first consideration for enrollment.*

164A, B, C Neuroscience of Language Research (4, 4, 4). Covers a range of neuroscience of language research topics: psycholinguistic and neuroscience foundations, methods, experimental design, and content areas such as speech perception/recognition, production, sensory-motor integration, lexical access, comprehension, working memory, sign language, and aphasia. Concurrent with Psychology 264A, B, C. *Psychology majors have first consideration for enrollment.*

168E Embodied Cognition (4). Addresses concepts of embodiment in cognitive sciences. Introduces the notion of how the brain is closely coupled to the body and its interaction with the environment. Case studies of both natural and artificial systems are explored. Prerequisite: Psychology 7A or 9A, B, C, or Psychology and Social Behavior 9 or 11A, B, C. *Psychology majors have first consideration for enrollment.*

169 Special Topics in Cognitive Neuroscience (4). Prerequisites vary. May be repeated for credit as topics vary. *Psychology majors have first consideration for enrollment.*

INTERDISCIPLINARY STUDIES

171 Psychology of a Diverse Society (4). Examines the social and cultural bases of human behavior, including ethnicity, gender, gender orientation, class, and religion. Analysis of historical, political, and economic factors influencing a diverse society. *Psychology majors have first consideration for enrollment.*

173A Psychological Anthropology (4). Cultural differences and similarities in personality and behavior. Child-rearing practices and consequent adult personality characteristics; biocultural aspects of child development and attachment; evolutionary models of culture and behavior; politically linked personality; cognitive anthropology; psychology of narrative forms; comparative national character studies. Prerequisite: Psychology 7A or 9A, B, C, or Psychology and Social Behavior 9 or 11A, B, C, or Anthropology 2A. Same as Anthropology 132A. *Psychology majors have first consideration for enrollment.*

174A Asian American Psychology (4). Examines the social and psychological concerns of Asian Americans, e.g., coping with racial prejudice, maintaining bicultural identities, dealing with cross-cultural conflicts in interracial relationships, and trying to reconcile generational differences between immigrant parents and their American-born children. Same as Asian American Studies 141. (VII)

174C Adolescent Psychology in Urban American Society (4). Psychosocial dynamics of adolescents in American society; their ongoing quest for identity, independence, values, moral and cognitive development, peer group relationships, sexuality and sex role preference. Analysis of power struggle between adolescent subcultures and institutions of dominant society. *Psychology majors have first consideration for enrollment.*

174E African American Psychology (4). Historical overview of the development of black psychology and the African American frame of reference. Topics include personality development, psychological assessment, issues in education, black mental health, and the role of the African American psychologist in the community. Same as African American Studies 153. (VII)

174F Chicano/Latino Psychology (4). Examines research and literature investigating Chicano/Latino ethnicity as a variable influencing behavior. Explores mental health needs and issues of Chicano/Latinos and discusses competent, sensitive methods of mental health service delivery. Same as Chicano/Latino Studies 171. (VII)

176A Political Psychology (4). Examination of how psychological theory and research may be used to better understand political thought and behavior. Drawing on theories of learning, cognition, and personality, discusses the formation of political attitudes, the process of political decision-making, the nature of political leadership. Same as Political Science 137C. *Psychology majors have first consideration for enrollment.*

177D Deviance (4). Perspectives on deviance and criminality in behavior, institution, community, and myth. The suitability of contemporary theories of deviant behavior. Same as Sociology 156 and Criminology, Law and Society C107. Previously Psychology 178D. *Psychology majors have first consideration for enrollment.*

177F Forensic Psychology (4). Overviews all forensic psychology, then focuses on psychological analyses of criminal behavior, particularly violent behavior. Examines violence, sexual offending, and mental disorder related to crime with regard to clinical assessment, treatment, and rehabilitation; mental health services within forensic institutions. Prerequisites: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C, or equivalent; Psychology and Social Behavior 102C; Psychology and Social Behavior 178C or Criminology, Law and Society C149, or consent of instructor. Same as Criminology, Law and Society C136 and Psychology and Social Behavior 156C. *Psychology majors have first consideration for enrollment.*

177I Impacts of Divorce (4). Examines divorce in historical, economic, and, primarily, psychological contexts, emphasizing recent research pertaining to the impacts of divorce on children, families, and society. Prerequisite: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C, or equivalent. Same as Psychology and Social Behavior 124D. *Psychology majors have first consideration for enrollment.*

177P Developmental Psychopathology (4). Research and theory of origins, course, and outcomes of disordered behavior. Continuity and change in patterns of behavior; environmental challenges and buffers; stress and competence in children; vulnerable and invincible children; children of mentally ill parents; families at risk; childhood antecedents of adult disorders. Prerequisites: Psychology 7A or 9C, or Psychology and Social Behavior 9 or 11C, or equivalent; Psychology 120A or consent of instructor; Social Ecology 10 recommended. Same as Psychology and Social Behavior 153C. *Psychology majors have first consideration for enrollment.*

178N Social Psychology of Networks (4). Review of network methods used in small group and organizational research. Discussion of social psychological literature relevant to the network study of cognitive social structure, exchange and communication, identity negotiation, and social control. Case study of network datasets exemplifies research issues. Same as Sociology 135. *Psychology majors have first consideration for enrollment.*

179 Special Topics in Interdisciplinary Studies (1 to 4). Prerequisites vary. May be repeated for credit as topic varies. *Psychology majors have first consideration for enrollment.*

190 Senior Thesis (4-4-4). In progress grading. Prerequisite: consent of instructor.

197A-Z Field Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198A-Z Directed Group Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. Students may enroll in only one 199 per quarter. May be repeated for credit as topic varies.

GRADUATE

201A-B-C Cognitive Sciences Research Seminar (1.3-1.3-1.4) F, W, S. Weekly reports and colloquia by faculty, students, and visitors. Prerequisite: admission to graduate program in Cognitive Sciences or consent of instructor.

202A Proseminar in the Cognitive Sciences (1). Introduction to the conceptual foundations and basic research results in the cognitive sciences for first-year graduate students. Satisfactory/Unsatisfactory only.

203A Discrete Mathematics and Probability (4). Logic and set theory are covered during the first three weeks, using an interactive computer system. The remaining seven weeks are devoted to probability theory and cover elementary concepts from sample spaces to Chebychev's Inequality and the moment generating function. Prerequisite: graduate standing.

203B Introduction to Mathematical Statistics (4). An introduction to statistical estimation and statistical inference. Topics include sufficiency and the Rao-Blackwell Theorem, completeness and the Lehmann-Scheffe Theorem. The method of maximum likelihood is explored in some detail. Inference in linear models covers regression and analysis of variance.

203C Design and Analysis of Experiments (4). Discussion of the logic of experimental design and inferential statistics. Presentation of mathematical ideas from behind analyses of variance and covariance, analysis of counted data; main emphasis on research applications rather than mathematical formulations. Prerequisite: graduate standing or consent of instructor.

204A Professional and Laboratory Skills (2.7). Using a variety of formats, this course allows students to develop and practice their professional skills and introduces students to equipment and technical procedures used for a variety of research. Satisfactory/Unsatisfactory only. Prerequisite: graduate standing in Psychology or consent of instructor. May be repeated for credit.

205A Computational and Research Methods with MATLAB (4). Introduces rudiments of programming, statistical analysis and probability theory, graphic visualization, GUI design, spectral analysis, and simulation models using MATLAB, a software package for solving quantitative problems often encountered in experimental psychology.

205B Running Experiments Using MATLAB (4). Provides an in-depth introduction to writing MATLAB programs to run auditory and visual experiments. Topics covered include program structure, stimulus generation, presentation, and data collection. Prerequisite: Psychology 205A or consent of instructor.

205C Computational Statistics (4). Introduction to a number of computational statistics approaches including exploratory data analysis and modeling using a probabilistic framework with Bayesian graphical models. Emphasis will be on in-class programming using MATLAB. Prerequisite: graduate standing or consent of instructor.

211 Attention and Perception (4). Focuses on selective attention, the process of selecting a subset of available information for analysis and representation, and on how stimulus salience, behavioral goals, and expectations influence attentional deployments and perception. Also explores related cognitive processes and applications. Prerequisite: graduate standing or consent of instructor.

212 Learning, Memory, and Knowledge Organization (4). Addresses fundamental issues in human memory, inductive learning, and knowledge organization. Knowledge representation, storage, retrieval, acquisition, and relation to the environment are explored. Prominent computational approaches are reviewed. Prerequisite: graduate standing or consent of instructor.

213 The Mind/Body Problem (4). Course is multidisciplinary, drawing on information from the fields of quantum physics, computer vision, artificial intelligence, cognition, neurophysiology, philosophy, and psychophysics. Prerequisite: graduate standing or consent of instructor.

- 214 Bayesian Cognitive Modeling (4).** Considers a range of statistical methods of data analysis and simple cognitive models using the Bayesian graphical modeling framework. Prerequisite: graduate standing or consent of instructor.
- 215 Language Sciences (4).** Introduces the field of theoretical linguistics, studies of adult processing of verbal materials in real time, language acquisition by children, and research on the structure and function of the neural substrate of human linguistic capacity. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.
- 215L Language Acquisition (4).** Focuses on native language learning, exploring the way in which infants and very young children unconsciously uncover the rich systematic knowledge of their native language. Examines both experimental and computational studies that quantitatively investigate the "how" of language acquisition. Prerequisite: graduate standing or consent of instructor. Formerly Psychology 245.
- 215N Neuroscience of Language (4).** Covers fundamental issues in the neuroscience of language processing. Topics include word and sentence-level psycholinguistics, and the neural basis of these language functions as revealed by neuropsychological and functional imaging studies.
- 215S Structure of Language (4).** Explores the structure of human languages, and the theoretical architectures that have been proposed to capture that structure. Special focus on the nature of linguistic facts, the structure of linguistic argumentation, and the psychological claims of linguistic theories. Prerequisite: graduate standing or consent of instructor. Formerly Psychology 241A.
- 216 Introduction to Cognitive Neuroscience (4).** Explores the neural basis of higher cognitive functions such as perception, attention, language, memory, and executive function as understood from functional brain imaging, neuropsychological disorders, and other neuroscience techniques. Prerequisite: graduate standing or consent of instructor.
- 217 Vision (4).** Examines visual sensation and perception using psychophysical and neuroscientific perspectives. Covers visual stimulus description and generation; the eye and retinal processing; LGN and cortical visual area function; specialized processing for form, depth, motion, and color perception; and neurological disorders. Prerequisite: graduate standing or consent of instructor.
- 218 Hearing (4).** Examines auditory sensation and perception using psychophysical and neuroscientific perspectives. Covers physical aspects of sound; subcortical auditory processing; aspects of sensation and perception such as sensitivity, sound localization, and complex-sound recognition; neuroscientific studies of cortical function; and abnormal auditory processing. Prerequisite: graduate standing or consent of instructor.
- 219 Cognitive Development I: Core Knowledge (4).** Explores the study of cognitive development in infancy and childhood. Emphasizes the role of this research in answering questions concerning the origins of human knowledge. Addresses topics of space, objects, agency, navigation, number, and conceptual change. Prerequisite: graduate standing or consent of instructor.
- 220 Cognitive Development II: Conceptual Change (4).** The cognition of human infants is similar to that of other primates. But adult human knowledge is vastly different from that of any other animal. Examines the childhood conceptual changes that underlie adult human cognitive achievements. Prerequisite: graduate standing or consent of instructor.
- 228A, B, C Cognitive Development Research (4-4-4).** Provides experience in cognitive development research, centered around the child's acquisition of number words and concepts. Students conduct research and review and discuss each other's projects in weekly lab meetings with instructor and graduate students. Prerequisite: consent of instructor. May be repeated for credit as topics vary. Concurrent with Psychology 148A, B, C.
- 229 Special Topics in Human Cognition (1.3 to 4).** Current research in brain/behavior relationships, human memory, and learning theory is presented. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.
- 231P Topics of Philosophy of Psychology (4).** Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Logic and Philosophy of Science 243 and Philosophy 243.
- 233A Observer Theory I (4).** Provides framework for mathematical analysis of perception/cognition and its relation to the physical world. Permits a unified treatment of perceptual and physical interactions and lays the foundation for a nondualistic, nonreductionistic science. Mathematical aspects include a study of Markovian dynamic systems. Prerequisite: graduate standing or consent of instructor.
- 234A Mathematical Models of Cognitive Processes I (4).** Mathematical models of various cognitive processes developed since 1960, including learning, memory, perception, psycholinguistics, and problem solving. Models are formulated in different mathematical languages: calculus, algebra, logic, probability, and computer. Difficulties in testing and validating models discussed. Prerequisite: graduate standing or consent of instructor.
- 235A, B, C Memory and Decision-Making Research (4-4-4).** Covers a range of theoretical, empirical, and model-based memory and decision-making research topics, including reconstructive memory, decision-making in reinforcement learning problems, sequential sampling processes, hierarchical Bayesian methods, and the application of machine learning methods to corpora of human behavior. Concurrent with Psychology 135A, B, C.
- 236 Multivariate Time Series Analysis (4).** Introduces multivariate time series analysis theory and methods emphasizing computational methods in spectral analysis, autoregressive modeling, information theory, principal and independent components analysis, and nonlinear dynamics. Applications to human neuroimaging data are extensively discussed. Prerequisite: Psychology 205A or consent of instructor.
- 236F Advanced Statistical Methods in fMRI Analysis (4).** Introduces advanced statistical methods used in inferencing and exploratory fMRI analysis. Topics include hierarchical general linear modeling, parameter estimation variance components, design optimization, parametric designs, factor methods such as principle components, independent components, and path analysis. Prerequisite: Psychology 205A or 265C.
- 237 Advanced Bayesian Cognitive Modeling (4).** Considers a range of advanced cognitive process models including models of signal detection, memory retention, category learning, stimulus representation, and reasoning using the Bayesian graphical modeling framework. Prerequisite: Psychology 214.
- 238 Auditory Signal Processing and Experimental Design (4).** Topics include physics and measurement of sounds, digital signal processing (DSP), recording/processing of speech and music, generating complex sounds (e.g., FM and AM), use of sound level meter and artificial ear (coupler), digital filtering, signal mixing, autocorrelation and cross-correlation. Prerequisite: Psychology 205A or consent of instructor.
- 239 Special Topics in Methodology and Models (1.3 to 4).** Current research in cognitive sciences methodologies, concepts, and models is presented. May be repeated for credit as topics vary.
- 245A Computational Models of Language Learning (4).** Focuses on computational models of native language learning, exploring how probabilistic learning and inference fare on difficult case studies within language acquisition. In all cases, grounds the learning models in available empirical data and considers their psychological plausibility. Prerequisite: Psychology 215L or consent of instructor.
- 247M Computational Methods for Language Research (4).** Focuses on computational methods useful for language research. Students become familiar with software and programming languages used for extracting information from electronic datasets and for creating basic simulations of linguistic cognition. No prior programming experience assumed. Prerequisite: one course from Psychology 215L, 215S, 215N, 245A, or consent of instructor. Concurrent with Psychology 157M and Linguistics 107M.
- 248A, B, C Language Sciences Research (4-4-4).** Provides in-depth experience in all facets of research in language. Research topics include language acquisition and adult processing. Methodologies include behavioral research methods, brain imaging techniques, and computational methods. Students engage in research and participate in a weekly seminar. Prerequisite: consent of instructor. May be repeated for credit as topics vary. Concurrent with Psychology 158A, B, C.
- 249 Special Topics in Language Science (1.3 to 4).** Foundations and current research in theoretical, experimental, and computational linguistics. May be repeated for credit as topics vary.

254 Human Information Processing (4). Detailed introduction to speed-accuracy tradeoff experimental procedures; speed-accuracy tradeoff issues; quantitative modeling of temporal aspects of human information processing. Prerequisite: graduate standing or Honors Program in Psychology undergraduate with consent of instructor.

259 Special Topics in Human Performance (1.3 to 4). Current research in the human issues involved with sensation, perception, and cognition. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

260 Seminar in Cognitive Neuroscience (1). Explores current topics and trends in cognitive neuroscience including experimental, theoretical/computational, and methodological developments. May be repeated for credit as topics vary.

261N Cortical Neuroscience (4). Physiology of the cerebral cortex, theoretical neuroscience, and the neural basis of perception. Prerequisite: Psychology 216 or consent of instructor.

262 Functional Neuroanatomy (4). It is impossible to truly understand human behavior without some understanding of the physical structure that enables behavior. Examines recent findings in functional neuroanatomy through lectures and papers discussing links between particular behaviors and specific brain structures. Prerequisite: graduate standing or consent of instructor.

263A, B, C Visual Neuroscience Research (4, 4, 4). Covers a range of cognitive neuroscience research topics with emphasis on cortical organization of visual circuits, object recognition, motion perception, visual attention, and decision making. Prerequisite: graduate standing or consent of instructor.

264A, B, C Neuroscience of Language Research (4, 4, 4). Covers a range of neuroscience of language research topics: psycholinguistic and neuroscience foundations, methods, experimental design, and content areas such as speech perception/recognition, production, sensory-motor integration, lexical access, comprehension, working memory, sign language, and aphasia. Concurrent with Psychology 164A, B, C.

265A-B Introduction to Functional MRI (4-4). Describes the fundamentals of imaging the human brain function using Magnetic Resonance Imaging (MRI). **265A:** Basic MRI physics and image acquisition for fMRI; experimental design for fMRI. **265B:** Fundamentals of fMRI data processing and analysis; fMRI data acquisition and analysis lab.

267 Cognitive Neuroscience of Music (4). Introduction to cortical mechanisms involved in music perception and production. Prerequisite: graduate standing or consent of instructor.

268A Computational Neuroscience (4). Introduction to computational neuroscience. Mathematical models of single neurons, neural circuits, thalamo-cortical systems, and cortical mass action can stimulate single-unit, local field potential, and EEG dynamics. These models are used to investigate mechanisms of sensation, motor control, attention, and consciousness. Prerequisites: Psychology 205A and 216 or 261N or consent of instructor.

268R Cognitive Robotics (4). Introduces concepts for studying cognitive function by embedding brain models on robotic platforms. Topics include robot construction, computer programming, and the notion of embodiment. Students construct simple robots and program these robots to perform different behaviors.

269 Special Topics in Cognitive Neuroscience (1.3 to 4). Current research in cognitive neuroscience. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

271A, B, C Perception Seminar (1.3, 1.3, 1.4). Participants, who include faculty interested in auditory and visual perception/psychophysics, along with interested graduate students, make research presentations and discuss current publications. The seminar also serves as a forum for presentations by visiting researchers. Satisfactory/Unsatisfactory only.

289 Special Topics in Sensation and Perception (1.3 to 4). Current research in the reception and processing of visual and auditory stimuli presented. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

290 Dissertation Research (1 to 12). Prerequisites: consent of instructor, graduate standing. May be repeated for credit.

299 Individual Study (4 to 12). Prerequisites: consent of instructor, graduate standing. May be repeated for credit.

DEPARTMENT OF ECONOMICS

3223 Social Science Plaza B; (949) 824-5788

Jan K. Brueckner, **Department Chair**

Economics is concerned with the way individuals or societies allocate scarce resources and distribute goods and services. Any situation requiring choice among competing alternatives can be viewed as an economic problem. Economic courses enable students to study the way individuals make these choices (microeconomics), the way governments make these choices (public choice), and the aggregate consequences of these choices (macroeconomics). In addition, the Economics curriculum addresses international trade, money and banking, and economic development of the less developed nations.

Faculty members in the Department of Economics have research and teaching interests that span a broad range of fields. In addition to strengths in micro theory, macroeconomics, and econometrics (Bayesian and classical), the Department has expertise in many applied fields, including economic history, industrial organization, international economics, labor economics, public choice and public finance, transportation economics, and urban economics. Members of the Department maintain close ties with members of the Department of Political Science, the Department of Statistics, and The Paul Merage School of Business. Members of the Department maintain affiliations with the Institute for Mathematical Behavioral Sciences, the Institute of Transportation Studies, the Institute on Global Conflict and Cooperation, the Center for the Study of Democracy, and the program in International Studies.

Undergraduate Program

The Department offers majors in Economics, Business Economics, and Quantitative Economics, and an optional specialization in International Issues and Economics is available to students in all three majors. In addition, the Honors Program in Economics is open to high-achieving students in all three majors. The Department also offers a minor in Economics.

NOTE: Students may complete only one of the three Economics majors.

ADMISSION TO THE MAJORS

Freshmen: Preference will be given to those who rank among the highest using the selection criteria as stated in the Undergraduate Admissions section of this *Catalogue*.

Transfer-Student Applicants: Transfer applicants with the highest grades overall who satisfactorily complete course prerequisites will be given preference for admission. All applicants must complete one course in microeconomics, one course in macroeconomics, and two semesters/two quarters of approved first-year calculus.

Change of Major: Information about change-of-major requirements, procedures, and policies is available in the School of Social Sciences Undergraduate Counseling Office and at <http://www.changeofmajor.uci.edu>.

REQUIREMENTS FOR THE B.A. DEGREE

University Requirements: See pages 54–61.

School Requirements: See page 464.

Departmental Requirements for the Major in Economics

This major is designed for students seeking a broad education applicable to occupations in business, law, and government or as preparation for graduate school in the social sciences. School requirements must be met and must include 17 courses as specified below.

A. Economics 20A-B.

B. Economics 15A-B.

- C. Mathematics 2A-B and 4.
 D. Economics 100A-B-C.
 E. Economics 122A.
 F. Six additional Economics courses, one of which may be lower-division.

Sample Program — Economics Majors

Freshman	Sophomore
Economics 20A-B	Economics 100A-B-C
2 Lower-division writing courses	Economics 15A-B
Math. 2A-B, 4	Soc. Sci. computer requirement
Lower-division Econ. electives	5 General Education
2 Soc. Sci. intro. courses	
2 General Education	

Junior	Senior
Economics 122A	3 Upper-division Econ. courses
4 Upper-division Econ. courses	Electives
2 General Education	
Electives	

Departmental Requirements for the Major in Quantitative Economics

The Department strongly urges students to consider the major in Quantitative Economics, which best prepares them for careers in business and finance, for law school, for M.B.A. programs, and for graduate studies in the social sciences. School requirements must be met and must include 19 courses as specified below.

- A. Economics 20A-B.
 B. Mathematics 2A-B, 3A or 6G, and 4.
 C. Economics 105A-B-C.
 D. Statistics 120A-B-C.
 E. Economics 123A-B.
 F. Five additional Economics courses, including at least four four-unit upper-division courses and one that satisfies the upper-division writing requirement. The upper-division electives must include two Quantitative Electives selected from Economics 107, 116, 131A, and 135. Additional courses may be added to this list; up-to-date information is available at <http://www.economics.uci.edu/>.

NOTE: Students who are double majoring in Quantitative Economics and Mathematics may (i) substitute Mathematics 2D-E-J for Mathematics 4, (ii) substitute an upper-division probability and statistics sequence taught in the Mathematics Department for Statistics 120A-B-C, and (iii) substitute three upper-division Mathematics electives for upper-division Economics electives.

Sample Program — Quantitative Economics Majors

Freshman	Sophomore
Economics 20A-B	Economics 105A-B-C
2 Lower-division writing courses	Statistics 120A-B-C
Math. 2A-B, 3A or 6G, 4	Soc. Sci. computer requirement
2 Soc. Sci. intro. courses	4 General Education
2 General Education	

Junior	Senior
Economics 123A-B	3 Upper-division Econ. courses
4 Upper-division Econ. courses	Electives
2 General Education	
Electives	

Departmental Requirements for the Major in Business Economics

The Business Economics major is for students seeking a business orientation in their study of economics. It does not replicate the traditional undergraduate business school curriculum. Instead, it offers a more tightly focused curriculum that is guided by the rigorous logic and integrative perspective of economics. School requirements must be met and must include 20 courses as specified below.

- A. Economics 20A-B.
 B. Economics 15A-B.
 C. Economics 25.
 D. Mathematics 2A-B and 4.
 E. Economics 100A-B-C.
 F. Economics 122A-B.
 G. Seven additional Economics courses, including at least four four-unit upper-division courses. Two of the electives must be selected from the following Business Electives list: Economics 125, 131A, 132A, 134A, 135, 142A-B, 145L, and 161A-B-C; and two of the electives must be selected from the following Management Electives list: Economics 140, 147A-B, 149 (when the topic is Business Decisions), 115, 151A-B, and 169 (when the topic is Economics of International Business). It is strongly recommended that students satisfy the upper-division writing requirement with one of the Economics electives.

Sample Program — Business Economics Majors

Freshman	Sophomore
Economics 20A-B	Economics 100A-B-C
2 Lower-division writing courses	Economics 15A-B
Math. 2A-B, 4	Soc. Sci. computer requirement
Economics 25	5 General Education
2 Soc. Sci. intro. courses	
2 General Education	

Junior	Senior
Economics 122A-B	3 Upper-division Econ. courses
4 Upper-division Econ. courses	Electives
2 General Education	
Electives	

Specialization in International Issues and Economics

Students in any of the three Economics majors may complete the specialization in International Issues and Economics. Admission to the specialization requires approval in advance by the Economics Department. The admissions process begins with completing a form at the Department office. This approval should be applied for after the student has completed Economics 20A-B, but no later than the end of the junior year.

The specialization requires the completion of the following:

- A. International Studies 11 and 12 and Economics 13.
 B. Three upper-division international Economics elective courses selected from Economics 156, 157, 161B-C, 163, 164A, and 169.
 C. Three additional international general education elective courses selected from International Studies 111A, 112A, 120, 121, 122, 123, 179; Political Science 141A, 141B, 141C, 141D, 143D, 143E; History 21A, 21B, 21C, 101. At most, only one lower-division elective may be taken.

Honors Program in Economics

Undergraduates in any of the three Economics majors may complete the Honors Program in Economics. Entry into the program requires a 3.4 GPA or better in upper-division Economics courses and an overall GPA of 3.2 or better. Undergraduates hoping to

enter the program must apply no later than the spring quarter of their junior year. Students in the Honors Program must complete an honors thesis and the two-quarter Economics Honors Colloquium (Economics H190A-B; satisfies the upper-division writing requirement).

Economics Minor Requirements

Requirements for the minor in Economics are met by taking nine courses (36 units) as specified below:

- A. Core courses (28 units): Economics 15A-B¹, 20A-B², and either 100A-B-C or 105A-B-C.
- B. Electives (8 units): two upper-division Economics electives (excluding 199)³.

NOTE: Prerequisites for the Economics core courses include Mathematics 2A-B, 4 (or 2D and 2J).

- ¹ Management 7 may not be used to substitute for Economics 15A-B. Furthermore, students will not receive credit for Management 7 if taken after Economics 15A-B.
- ² Note that Economics 20A-B is a requirement of both the undergraduate major in Business Administration and the Economics minor.
- ³ As noted in the Economics courses list that appears later in this *Catalogue*, some courses overlap with upper-division courses offered by The Paul Merage School of Business. Where there is overlap, students may use the course to count toward satisfying the upper-division requirements of the Business Administration major or the Economics minor, but not both.

Graduate Program

Participating Faculty

Duran Bell: Models of social processes
 Volodymyr Bilotkach: Industrial organization, transportation economics, and microeconomics
 Marianne Bitler: Labor economics, econometrics, and microeconomics
 Dan Bogart: Economic history, institutions, infrastructure and economic development
 William A. Branch: Macroeconomics
 David Brownstone: Econometrics and transportation economics
 Jan K. Brueckner: Urban economics, public economics, industrial organization, and housing finance
 Jiawei Chen: Industrial organization, econometrics, finance
 Linda R. Cohen: Political economy, social choice, government regulation, and government policy toward research and development
 Art DeVany: Economic theory, industrial organization
 Gordon J. Fielding: Urban and transportation economics
 Michelle R. Garfinkel: Macroeconomics, political economy and conflict
 Amihai Glazer: Political economy
 Ivan Jeliazkov: Theoretical and applied econometrics, Bayesian inference, Markov chain Monte Carlo, computation in social sciences
 Igor Kopylov: Microeconomics, decision theory, game theory
 R. Duncan Luce: Theory of measurement, individual decision theory, response times
 Julius Margolis: Political economy of national defense and government behavior
 Michael McBride: Microeconomics, game theory, political economy
 Martin C. McGuire: Public finance, international trade, economics of peace and security
 Fabio Milani: Macroeconomics, monetary economic, time-series econometrics, international money and finance
 David Neumark: Labor economics
 Min Ouyang: Macroeconomics, industrial organization, computational economics
 Dale Poirier: Econometrics, both theoretical and empirical, specializing in Bayesian econometrics
 Priya Ranjan: International trade
 Gary Richardson: Economic history, immigration, institutions, and economic development
 Guillaume Rocheteau: Monetary theory, macroeconomics, labor economics, search theory
 Jose Antonio Rodriguez-Lopez: International macroeconomics

Donald G. Saari: Social choice, voting theory, economic theory and mathematical economics
 Manisha Shah: Development economics, health
 Stergios Skaperdas: Economic theory, political economy
 Kenneth A. Small: Urban economics, transportation economics, discrete-choice econometrics, environmental economics
 Christian Werner: Mathematical geography

Affiliated Faculty

Dennis J. Aigner: Statistical and econometric methodology, efficiency estimation
 Frank Bean: Immigration, population, public policy
 Marlon G. Boarnet: Urban planning, urban economic development
 Michael L. Burton: Economic anthropology, cognitive anthropology; kinship, gender, and households
 Frank Cancian: Economic anthropology, comparative social inequality
 Christopher Carpenter: Health economics, labor economics, and policy evaluation
 Greg Duncan: Economics of education, program evaluation, child development
 Paul J. Feldstein: Economics of health care
 Bernard Grofman: Mathematical models of decision making, electoral rules and reapportionment
 Phillipe Jorion: Empirical research in investment, global portfolio investments, predicting the risk and return of foreign currencies, managing financial risk, and derivatives markets
 Marek Kaminski: Voting models, democratization, political consequences of electoral laws
 Richard McKenzie: Public choice
 Andrew Policano: Macroeconomics, monetary theory and policy
 Jean-Daniel Saphores: Environmental and natural resource economics and policy
 Brian Skyrms: Game theory and decision making
 Carole J. Uhlaner: Comparative political participation, formal models of political behavior

The Department of Economics offers a Ph.D. degree program in Economics. Drawing upon the School's strong quantitative tradition, it specializes in public choice, transportation economics, urban economics, econometrics, and applied microeconomics. Admission is highly selective and is limited to students whose interests mesh closely with those of the faculty. By requiring a high degree of overlap between faculty and student research interests, the program offers extensive faculty contact within a tutorial framework. Motivated and well-qualified students find the graduate program highly attractive because of its small size and its great flexibility. Self-discipline and an inquiring mind are prerequisites.

ADMISSION

The deadline for application for admission is January 15 for fall quarter. Students are admitted for winter or spring quarters only under exceptional circumstances. Late applications are considered on a space-available basis. All applicants must take the Graduate Record Exam (GRE) prior to the application deadline. Applicants whose primary language is not English must also submit Test of English as a Foreign Language (TOEFL) scores. To be considered for any financial aid (including a teaching assistantship), students who are not citizens of countries where English is either the primary or dominant language as approved by the UCI Graduate Council must submit a passing score from the Test of Spoken English (TSE).

REQUIREMENTS

All students must show competence in the core areas of microeconomics, macroeconomics, and econometrics. This is done by taking the three-quarter required course sequences in microeconomics, macroeconomics, and econometrics, with no grade lower than a B and with a grade point average across these courses of at least 3.25. The Department may also require students to pass a written qualifying exam in one or more of the core course sequences after taking the courses.

Students take the oral candidacy examination based on their research. A well-prepared student should take this oral examination at the end of the second year.

Students also must master two fields of applied economics by taking a two-course sequence (possibly including independent reading courses) and writing a research paper in each field. Students also must enroll for at least four quarters in the graduate colloquium, in which attendance at regular Economics faculty research colloquia is supplemented by discussion of the papers presented and additional reading. Students are encouraged to become conversant with areas of current economic research early in their graduate careers, in order to facilitate a timely transition from meeting course and field requirements to thinking through a dissertation research plan.

Two or three quarters before the expected completion of the dissertation, the dissertation committee will organize an oral examination of the candidate's dissertation prospectus. Ordinarily, the prospectus will describe in detail the dissertation, and will typically be accompanied by at least one completed chapter of the dissertation.

Students are expected to complete their dissertation by the end of their fifth year. The maximum time permitted for completion of the Ph.D. is six years.

Concentration in Transportation Economics

Students can also pursue a Ph.D. in Economics with a concentration in Transportation Economics. This option draws upon the transportation researchers on the campus within the School of Social Sciences, The Henry Samueli School of Engineering, The Paul Merage School of Business, and the School of Social Ecology. Students benefit from association with the Institute of Transportation Studies, which facilitates student research by providing research assistantships and interdisciplinary seminars on all modes of transportation.

Requirements for the concentration are the same as those described above with the following three exceptions: (1) instead of the third quarter of microeconomics and macroeconomics, students may substitute specified courses such as Discrete Choice Econometrics (Economics 223A), Advanced Travel Demand Analysis (Engineering CEE220A), or Operations Research for Management (Management 201B); (2) one of the student's two required fields of competence must be transportation economics; the other must be a related field such as urban economics, labor economics, industrial organization, or a transportation-related field from outside economics (such as travel demand and flow theory, urban and transportation policy analysis, environmental impacts of transportation, or urban and transportation planning) subject to the approval of the Director of Graduate Studies for Economics; and (3) students must take at least one additional course from a list of designated courses in transportation and related subject areas.

Concentration in Public Choice

Students can also pursue a Ph.D. degree in Economics with a concentration in Public Choice. This is an interdisciplinary field, at the intersection of Economics and Political Science, which draws on quantitative tools to model the functioning of political institutions. Faculty from the Departments of Economics, Political Science, and Logic and Philosophy of Science and from The Paul Merage School of Business are involved in research that supports the concentration.

Students who elect this concentration are admitted under the normal procedures for the program in Economics and must fulfill all the requirements for the Economics degree with the following modifications: (1) one of the student's two required fields of competence must be public choice; included is a three-quarter core course in public choice, Economics 270A-B-C, which is jointly

organized by faculty in the Departments of Economics and Political Science. (A background in economic theory is a prerequisite to this sequence.) The requirement for competence in a second field may be met with a one-quarter course, instead of two, if it provides sufficient fluency in the field; and (2) students must obtain a background knowledge in political science equivalent to that provided by a one-year undergraduate survey course, if they do not already have it.

RESEARCH FACILITIES

UCI is a major research university with an excellent library, as well as special interlibrary loan arrangements with other University of California libraries. The School of Social Sciences provides a computer laboratory. The Economics Department has a small library with current journals and unpublished working papers from other universities. Students also have access to advanced computing resources as well as PC and UNIX laboratories. Three Organized Research Units, the Institute of Transportation Studies, the Center for Research on Information Technology and Organizations, and the Institute for Mathematical Behavioral Sciences, provide research opportunities for graduate students.

Courses in Economics

(Schedule of Classes designation: Econ)

NOTE: Students are reminded that each quarter of a sequential course (i.e., Economics 100A-B-C) must be taken in order. Priority for admission to upper-division Economics courses is given to Economics majors and International Studies majors.

LOWER-DIVISION

1 Introduction to Economics (4) F, W, S. An analysis of the problems society faces in organizing itself to provide goods and services. How decisions of government, business, and the individual relate to current economic problems such as unemployment, inflation, poverty, and environmental pollution. Open only to non-Economics majors. Credit will not be given for Economics 1 if taken concurrently or after Economics 20A-B. **(III)**

11 The Internet and Public Policy (4). How the Internet works. Current public policy issues concerning the Internet. Introductory economics. Communications law. Interactions between information technology, economics, and law. Case studies about Internet and communications policy. Same as ICS 11. **(II or III)**

13 Global Economy (4) S. Acquaints students with the fundamental patterns of the global economy. Emphasizes the historical roots and political implications of economic choices. Same as International Studies 13. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.* **(III, VIII)**

15A-B Probability and Statistics in Economics I, II (4-4) F, W. An introduction to probability, statistics, and econometrics. Emphasis on a thorough understanding of the probabilistic basis of statistical inference. Examples from economics. Prerequisites: Mathematics 2A-B and 4. No credit for Management 7 if taken after Economics 15A-B. Management 7 may not be used to substitute for Economics 15A-B. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

17 An Economic Approach to Religion (4) F. Introduction to how basic economic concepts such as demand, supply, consumption, production, competition, free-riding, innovation, regulation, and rent-seeking can be applied to understand observed religious behavior. Same as Religious Studies 17. **(III)**

20A-B Basic Economics I, II (4-4) F, W. 20A: The fundamentals of microeconomics. The behavior of firms and of consumers: markets, supply/demand, utility maximization, resource allocation, and efficiency. Economics 20A and 23 may not both be taken for credit. **20B:** The fundamentals of macroeconomics. Government behavior: monetary and fiscal policy, inflation, and unemployment. Prerequisite: Economics 20A. *Effective fall 2006, the content of Economics 20B is macroeconomics. This course cannot be taken to repeat Economics 20B taken prior to fall 2006.* **(III)**

23 Basic Economics for Engineers (4). The fundamentals of microeconomics. The behavior of firms and of consumers: markets, supply/demand, utility maximization, resource allocation, and efficiency. Economics 23 and 20A may not both be taken for credit. **(III)**

25 The Economics of Accounting Decisions (4). Introduction to accounting concepts and principles, including the accounting model and accounting style, transaction analysis, and preparation of financial statements. An analysis of the similarities and differences between accounting and economic concepts (e.g., value, profits). Prerequisite: Economics 20A. Economics 25 and Management 30A may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

26A Managerial Accounting (4). An introduction to the fundamentals of management accounting, including the study of terms and concepts, comparisons of different costing systems, analysis of cost-volume profit relationships, preparation of information for planning, control, and evaluation of performance, and decision analysis. Prerequisites: Mathematics 2A-B and 4. Economics 26A and Management 30B may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

UPPER-DIVISION

100–119: GENERAL ECONOMICS

100A-B-C Intermediate Economics I, II, III (4-4-4) F, W, S. Determinants of supply and demand; operation of competitive and monopolistic markets; imperfections of the market system, explanations of unemployment, inflation, recessions; public policy for macroeconomic problems. Prerequisites: Economics 20A-B and Mathematics 2A-B or equivalent. For 100B: Economics 100A. For 100C: Economics 100B. Economics 100A-B-C and 105A-B-C may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

105A-B-C Intermediate Quantitative Microeconomics and Macroeconomics I, II, III (4-4-4) F, W, S. An advanced and mathematical version of Economics 100A-B-C for students in the Quantitative Economics major. Prerequisites: Economics 20A-B and Mathematics 2A-B, 3A, and 4. Economics 105A-B-C and 100A-B-C may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

107 Economics of Asymmetric Information (4). Focuses on the effects of asymmetric information in the markets for traditional economic goods and resources, such as labor, insurance, used cars, credit, and in auctions and bargaining problems. Prerequisite: Economics 100A or 105A. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

109 Special Topics in Economic Theory (4). Prerequisites vary. May be repeated for credit as topic varies. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

115 Behavioral Economics (4). Studies the behavioral and psychological biases in economics settings. Both individual decisions and games are discussed. Prerequisites: Economics 20A-B. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

116A-B Game Theory I, II (4-4). A two-quarter sequence on game theory. **116A:** Extensive form games with perfect information, and coalitional games. The key solution concepts are Nash Equilibrium, Backward Induction, and the Core. Substantive examples include public good production, oligopoly, electoral competition, auctions, holdup, market entry, and voting. Formerly Economics 116. **116B:** Bayesian games, extensive form games with imperfect information, zero-sum games, rationalizability, evolutionary equilibrium, repeated games, and bargaining. The key solution concepts are Bayesian Nash Equilibrium, Subgame Perfect Equilibrium, Maxminimization, and Evolutionary Stable Strategies. Prerequisites: Economics 15A-B and 100A or 105A. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

120–124: QUANTITATIVE METHODS

122A-B Applied Econometrics I, II (4-4). Introduction to econometrics emphasizing practical applications in microeconomics and macroeconomics. Prerequisites: Economics 15A-B, 20A-B. Economics 122A-B and 123A-B may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

122C Data Analysis Writing (4). A research writing course in econometrics focusing on individual research projects that are designed and written during the quarter. Students employ econometric analysis to address an economic question in a 20-page paper and present their findings to the class in a short presentation. Prerequisites: Economics 15A-B and 122A-B; satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

123A-B-C Econometrics I, II, III (4-4-4) F, W, S. 123A-B: Specification, estimation, and testing of econometric models. Applications in various areas of microeconomics and macroeconomics. **123C:** Seminar course in which students do an original econometric research project. Prerequisites: Mathematics 2A-B and 4 or equivalent; Statistics 120A-B-C and Economics 100A-B-C. For 123C: satisfactory completion of the lower-division writing requirement. Economics 123A-B and 122A-B may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

124 Advances in Econometrics I (4) S. Aims to supplement the training in econometrics for students who have completed either Economics 122A-B or 123A-B-C by covering chapters in the two texts used in these sequences which were not covered. Prerequisites: Economics 122A-B or 123A-B.

125 Business Forecasting (4). Students learn how to produce forecasts of the behavior of economic (and other) variables. The techniques examined are linear regression, nonlinear regression, and nonparametric kernel regression, AR, MA, ARMA, ARIMA, and Box-Jenkins. Prerequisites: Economics 15A-B and 20A-B. Economics 125 and Management 180 may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

129 Special Topics in Quantitative Methods (4). Prerequisites vary. May be repeated for credit as topic varies. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

130–139: FINANCIAL ECONOMICS

131A The Economics of Risk and Uncertainty (4). The theory of insurance and joint-ownership of risky enterprises; optimal procedures for the allocation of uncertain payoffs. Prerequisites: prior or concurrent enrollment in Economics 15A-B or equivalent; Economics 100A-B or 105A. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

132A Introduction to Financial Investments (4). Modern theories of investment and their application to the study of financial markets. The relation between risk and return, diversification, asset pricing, efficient markets hypothesis, and the market valuation of stocks, bonds, options, and futures. Prerequisites: Economics 15A-B and 122A or equivalent; Economics 100A-B-C or 105A-B-C. Concurrent enrollment in Economics 100C or 105C sufficient. Economics 132A and Management 141 may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

134A Corporate Finance (4). Provides an overview of the modern theory and practice of corporate finance and focuses on two fundamental financial decisions; investment as well as financing. Prerequisites: Economics 100A-B-C or 105A. Economics 134A and Management 109 may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

135 Mathematics of Finance (4). Introduces the mathematics of finance with an emphasis on financial derivatives. After a review of certain tools from probability, statistics, and elementary differential and partial differential equations, concepts such as hedging, arbitrage, Puts, Calls, and the design of portfolios, the derivation and solution of the Black-Scholes and other equations are discussed. Prerequisites: Mathematics 2A-B-J. Same as Mathematics 176. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

139 Special Topics in Financial Economics (4). Prerequisites vary. May be repeated for credit as topic varies. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

140–149: ECONOMICS OF PUBLIC AND PRIVATE ORGANIZATIONS

140 Managerial Economics (4). Managerial economics is a collection of concepts and methods for effective decision making. Explores how the tools of microeconomics, including game theory and industrial organization theory, can be used to make better managerial decisions, particularly those involving allocation of resources within firms. Prerequisite: Economics 100A-B. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

141A-B-C Public Economics I, II, III (4-4-4). **141A:** Examines the role of government expenditure in the economy from both a theoretical and an empirical perspective, with a focus on two broad categories of government expenditures policies: social insurance and redistribution programs. Analysis of taxation. **141B:** Theory of public goods, externalities, voting models, analysis of bureaucracy, the Tiebout model, income redistribution, intergovernmental grants. **141C:** Allows students to apply knowledge of public economics in the conduct of individual research. Prerequisites: Economics 100A-B or 105A or consent of instructor. For 141C: satisfactory completion of the lower-division writing requirement. Same as Political Science 127A-B-C. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

142A-B-C Industrial Organization I, II, III (4-4-4) F, W, S. **142A:** The theory of market structure. Imperfect markets, government policies, and industry performance. **142B:** Regulation and antitrust theory and performance in industries. **142C:** Research in industrial organization. Prerequisites: Economics 15A-B and 100A-B or 105A. For 142C: satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

143 Energy Economics (4). The economics of markets for oil, natural gas, electricity, renewable energy and their interactions with each other and the rest of the economy. Effects of government intervention, traditional policy measures, economic policy issues arising from relationship of energy use and the environment. Prerequisites: Economics 100A-B-C or 105A. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

144A-B-C Urban Economics I, II, III (4-4-4). **144A:** Why cities exist, economics of urban land use, housing demand and tenure choice, urban amenities. **144B:** Economics of traffic congestion, housing policy analysis, Third World urbanization, urban public goods and services, crime, neighborhood effects. **144C:** Allows students to apply knowledge of urban economics in the conduct of individual research. Prerequisites: Economics 20A-B; Economics 100A recommended. For 144C: satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

145E Economics of the Environment (4). Surveys economic aspects of natural resources, pollution, population, and the environment. Examines the causes of pollution, e.g., air, water, noise, toxic waste, and nonoptimal utilization of certain resources, e.g., fisheries; analysis of public policies regarding these problems. Emphasis on microeconomic aspects of environmental problems. Prerequisites: Economics 15A-B and 122A or equivalent; Economics 100A-B or 105A. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

145F Economics of the Environment II (4). Applications of the tools covered in Economics 145E to such topics as global warming, destruction of the ozone layer, and emissions trading. Emphasis on independent research papers. Syllabus and classes include writing technique. Prerequisites: Economics 15A-B, 145E, and satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

145L Economics of Law (4). Examination of several economic concepts which are useful in understanding legal rules: externalities, the assignment of property rights, and Coase's theorem. Examples are drawn from the fields of pollution control, no-fault insurance, medical malpractice, and product liability. Prerequisites: Economics 100A-B or 105A, or concurrent enrollment in Economics 100B. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

146 Public Policy Issues (4). An examination and interpretation of the public policy areas such as schooling, housing and homelessness, occupational licensing, F.D.A. drug approval, credit bureaus, the U.S. Postal Service, and auto emissions. Prerequisites: Economics 15A-B or equivalent; 100A-B-C or 105A; satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

147A Corporate Governance (4). Studies topics in the internal organization of firms, including rent seeking, incentive contracts, principal-agent problems, internal labor markets, contests, and herd behavior. Prerequisite: Economics 100A. Formerly Economics 147. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

147B Economics of Strategy (4). Uses of tools of economics, game theory in particular, to develop an understanding of business decision making. Deals with questions such as how the firm decides what kind of business to be in, how large should it be, and others. Prerequisites: Economics 100A-B-C or Economics 105A. Economics 147B and Management 110 may not both be taken for credit. Economics 147B and Management 168 may not both be taken for credit. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

149 Special Topics in Economics of Public and Private Organizations (4). Prerequisites vary. May be repeated for credit as topic varies. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

150–159: HUMAN RESOURCES

151A-B-C Labor Economics and Human Resources I, II, III (4-4-4). **151A:** Labor demand, labor supply, human capital, personnel economics, and other topics. **151B:** Labor market discrimination, compensating wage differentials, immigration, and other topics. **151C:** Original research by students. Prerequisites: Mathematics 2A-B; Economics 15A and either 100A-B or 105A-B. For 151C: satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

152A Economic Anthropology (4). Economic systems in comparative perspective: production, distribution, and consumption in market and non-market societies; agricultural development in the third world. Prerequisite: one course in general science, anthropology, economics, geography, or sociology. Same as Anthropology 125A. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment. (VIII)*

154A Economics of Complex Systems (4). Students are required to write a paper about social systems as complex adaptive systems. Lectures are presented by interactive video from UCLA. Prerequisites: Economics 20A-B and satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

155A Economics of the Family (4). Students write and rewrite papers on topics that are suggested by the models and literature in the "economics of the family." Prerequisites: Economics 15A-B or equivalent; 100A-B-C or 105A; satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

156 The Economics of Population Issues (4). Applies economic analysis to population issues, including determinants of key aspects of demographic change—fertility, mortality, internal and international migration—and their implications. Shows how economics can be used to study couples' decisions about how many children to have. Prerequisites: Economics 15A-B, 20A-B, and satisfactory completion of the lower-division writing requirement. Economics 100A-B-C or 105A and 122A-B are recommended. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

157 Economic Development (4). Considers the process of economic development across the globe and why some countries are rich and others poor. Discusses the major problems facing developing countries, such as population growth, education, capital formation, environmental protection, and international trade. Prerequisites: Economics 20A-B. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

158 Economics of Education (4). Arms students with tools, concepts, and evidence that can be used to analyze complex policy questions in education, enabling students to arrive at their own reasoned judgments about how to improve education. Prerequisites: Economics 15A, 100A, and satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

159 Special Topics in Economics in Human Resources (4). Prerequisites vary. May be repeated for credit as topic varies. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

160–169: MACROECONOMICS

161A Money and Banking (4). Basic elements of money and banking: institutional features and economics of financial markets and, in particular, of the U.S. banking system; determinants of interest rates; the Federal Reserve and its role in the money supply process; effects of money on output and inflation. Prerequisites: Economics 100A-B-C or 105A-B-C. Concurrent enrollment in 100C or 105C sufficient. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

161B International Money (4). Open economy macroeconomics and determination of exchange rates. Asset-market approach to the balance of payments. Internal and external balance in the economy. Macroeconomic policies under fixed and floating exchange rates. The international monetary system and institutions. Prerequisites: Economics 100A-B-C or 100A-B and concurrent enrollment in 100C. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

161C International Trade and Commercial Policy (4). Determination of trade flows and the relative prices. Gains from trade, the terms of trade, and income distribution. Imperfect competition and international trade. The effect of tariffs, export subsidies, and import quotas. The effects of free and restricted trade on economic welfare. Prerequisites: Economics 15A-B or equivalent; 100A-B or 100A and concurrent enrollment in 100B. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

161D Advanced Money and Banking (4). Studies business cycles in the United States during the last century. The first portion of the course reviews the theoretical models employed to study economic fluctuations and empirical methods used to measure fluctuations. Prerequisites: Economics 15A-B; 100A-B-C or 105A-B-C. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

163 Communism in Russia and China (4). Examines the politics, economics, and history of revolutionary Marxism during the twentieth century. Begins by discussing the theoretical foundation of communism and then contrasting those theories with the actual institutions established in communist nations and with socialist, capitalist, and democratic systems. Prerequisites: Economics 20A-B. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

164A The Industrial Revolution in Western Europe (4). How do economists explain the process of economic development during the past three centuries? How has the process of industrialization affected living standards? In focusing on these questions, students learn how to apply economic theory and quantitative methods to the study of historical issues. Prerequisites: Economics 100A-B-C or 105A; satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

164B The Industrial Revolution in the United States (4). How do economists explain the process of economic development during the past three centuries? How has the process of industrialization affected living standards? In focusing on these questions, students learn how to apply economic theory and quantitative methods to the study of historical issues. Prerequisites: Economics 100A-B-C or 105A; satisfactory completion of the lower-division writing requirement. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

169 Special Topics in Development Economics (4). Prerequisites vary. May be repeated for credit as topic varies. *Economics, Quantitative Economics, and Business Economics majors have first consideration for enrollment.*

H190A-B Economics Honors Colloquium I, II (4-4). Colloquium required for honors students in Economics, Quantitative Economics, and Business Economics. Introduces students to independent research. Helps students plan a research program. **H190A:** Prepares students for thesis writing. **H190B:** Students complete their thesis. Prerequisites: must be enrolled in the Honors Program in Economics; satisfactory completion of the lower-division writing requirement.

199 Independent Study (1 to 5). May be repeated for credit as topics vary.

GRADUATE

200A-B-C Graduate Colloquium for Economics I, II, III (2-2-2) F, W, S. Weekly reports and colloquia by faculty, students, and visitors. Supplemented by class discussion of these presentations and other material on current research methodology. Prerequisite: admission to graduate program in Economics or consent of instructor. May be repeated for credit.

203A Mathematics for Economists (4). Gives students the mathematical background required for graduate work in economics. Topics covered include multivariate calculus, differential equations, and linear algebra. Prerequisite: graduate standing or consent of instructor.

205A Research Writing in Economics (4). For Economics graduate students who are writing their required research paper in an applied field. How to write an original paper in economics. Guidance for specific papers. Prerequisite: admission to the graduate program in Economics.

210–219: GRADUATE ECONOMIC THEORY

210A-B-C Microeconomic Theory I, II, III (4-4-4) W, S. Theoretical microeconomics. Emphasis on the meaning and empirical interpretation of theoretical models. Topics include theory of the firm, theory of the market, theory of the consumer, duality theory, application to econometrics, general equilibrium and welfare economics, uncertainty, game theory. Prerequisite: graduate standing or consent of instructor.

210D-E-F Macroeconomic Theory I, II, III (4-4-4) F, W, S. Advanced macroeconomic theory including alternative macroeconomic models, microeconomic foundations of macroeconomics, investment and growth theory, inflation and unemployment, rational expectations and macroeconomic policy, wealth effects, crowding out and fiscal policy, money and interest, open economy models. **210E:** Corequisite: Economics 211L. Prerequisite: graduate standing.

211L Macroeconomics Theory II Laboratory (2) W. Overview of stochastic processes; introduction to dynamic programming; two equilibrium concepts; Ricardian equivalence; real business cycle model; complete versus incomplete markets; asset pricing and the equity premium puzzle. Corequisite: Economics 210E. Prerequisite: graduate standing. Satisfactory/Unsatisfactory only.

219 Special Topics in Economic Theory (2 to 4) F, W, S. Prerequisites vary. May be repeated for credit as topics vary.

220–229: QUANTITATIVE METHODS

220A-B-C-D Statistics and Econometrics I, II, III, IV (4-4-4-4). 220A: Covers probability mathematical statistics necessary to prepare students for econometric study and empirical work. Topics include probability theory, distributions, sampling, and classical point estimation. A likelihood perspective is emphasized. **220B:** Begins with Bayesian point estimation. Then covers interval estimation and hypothesis testing from both classical and Bayesian perspectives, followed by a general discussion of prediction. Finally, all these techniques are applied to the standard linear regression model under ideal conditions. **220C:** Begins by relaxing the ideal conditions of the standard regression model. Topics include kernel density estimation, Generalized Least Squares (GLS), instrumental variables (IV), two stage least squares (2SLS), panel data models, and simulation-based Bayesian methods, including Gibbs sampling. **220D:** Begins by reviewing estimation theory and the bootstrap. Topics include econometric time series, discrete choice and count models, sample selection, and duration time models. Covers both Bayesian and classical asymptotic methods.

221A-B-C-D Statistics and Econometrics Laboratory I, II, III, IV

(2-2-2-4). 221A-B-C: Discussion of problems in statistics and econometrics and their relationship to statistical and econometric theory. Instruction in the use of computers for applied econometric work. **221D:** Before the course begins, students choose a published empirical economics article and obtain the necessary data to replicate it. Then, students replicate and extend the economic analysis and write a paper describing their work. Satisfies econometrics requirement for the Ph.D. in Economics. Corequisites: Economics 220A-B-C-D.

223A Discrete Choice Econometrics (4). Specification, estimation, and testing of discrete choice models, with emphasis on cross-sectional and panel data models and applications. Topics include models for binary, ordinal, censored, and count data; sample selection; treatment effects; latent variables; Bayesian and classical simulation-based inference; Markov chain Monte Carlo techniques; simulated likelihood estimation. Students use computer packages to apply models and techniques to real data. Prerequisites: Economics 220A-B-C-D.

224A Time Series Econometrics (4). Econometric analysis of time series data. Moving average and autoregressive series, regression analysis, Box-Jenkins techniques, computational methods, and causality conditions. Prerequisites: Economics 220A-B-C-D.

229 Special Topics in Social Dynamics Seminar (4). Prerequisites vary. May be repeated for credit as topics vary.

230–239: ECONOMIC AND FINANCIAL HISTORY

231A-B Institutions in Historical Perspective I, II (4-4). Investigates economic and political institutions across the world and throughout history. Focuses on institutions such as property rights, political regimes, regulations, legal systems, corporate organization, and social norms. Prerequisites: Economics 210 A-B-C-D-E-F or consent of instructor.

232 Business Cycles in Historical Perspective (4). Investigates business cycles in the United States and worldwide during the last two centuries. Topics include causes and consequences of business fluctuations, monetary and fiscal policy, models of fluctuations, and empirical macroeconomics. Prerequisites: Economics 210A-B-C-D-E-F or consent of instructor. Formerly Economics 262A.

233 European Economic History (4). Focuses on European economic history between 1500 and 1910. Examines the causes of the Industrial Revolution and globalization. Particular topics: productivity growth, transport improvements, technological change, capital markets, property rights, international trade. Prerequisites: Economics 210A-B-C-D-E-F or consent of instructor. Formerly Economics 242A.

234 American Economic History (4). Focuses on American economic history from colonization onwards. Topics include the development of legal systems, transport systems, financial markets, industrialization, migration, immigration, technological change, and the consequences of slavery. Prerequisites: Economics 210A-B-C-D-E-F or consent of instructor. Formerly Economics 244A.

239 Special Topics in Financial Economics (2 to 4). Prerequisites vary. May be repeated for credit as topics vary.

240–249: MICROECONOMICS

241A-B Industrial Organization I, II (4-4). Analysis of the structure and economic performance of markets, and the impact of public policy and their efficiency and equity. Effects of information structure. **241A:** Oligopoly, cartels, mergers, vertical integration, patents, innovation, antitrust, and regulation; **241B:** price flexibility and dispersion, auctions, search and industrial structure, intrafirm organization. Prerequisites: Economics 100B and 203A.

241C Industrial Organization III (4). Open to graduate students who have completed the first two quarters of the graduate Industrial Organization (IO) sequence and to other students with consent of instructor. Students are expected to have started a field paper in IO during the earlier quarters, and will finish a completed draft of it during this quarter. Prerequisites: Economics 100B, 203A, and 241A-B; graduate standing or consent of instructor.

243A Game Theory (4). A formal introduction to noncooperative game theory. Topics include properties of Nash Equilibrium and equilibrium refinements, dynamic games, repeated games, games with imperfect information, and games with incomplete information. Prerequisites: Economics 201A-B-C; graduate standing or consent of instructor.

243B Advanced Game Theory (4). Provides advanced instruction and research opportunities in game theory for students interested in using game theory in their research. Prerequisites: Economics 243A and consent of instructor.

245 Empirical Methods in Applied Microeconomics (4). Focuses on the empirical methods used in modern applied microeconomics. Teaches students methods that can be applied to produce original research in applied fields using cross-sectional and panel data. Applications will be drawn heavily from labor, public, health and development economics.

249 Special Topics in Microeconomics (2 to 4). Prerequisites vary. May be repeated for credit as topics vary.

250–259: HUMAN RESOURCES

251A-B Labor Economics I, II (4-4). Analytic and empirical study of labor markets. Topics may include labor supply and demand, human capital, educational sorting, life-time earnings profiles, discrimination, unemployment, and unions; several econometric techniques are taught as needed. Prerequisites: Economics 203A and graduate standing or consent of instructor.

259 Special Topics in Human Resources (2 to 4). Prerequisites vary. May be repeated for credit as topics vary.

260–269: MACROECONOMICS

260A-B Monetary Economics I, II (4-4). 260A: Focuses on the derivation and estimation of state-of-the-art Dynamic Stochastic General Equilibrium (DSGE) models, with particular emphasis on models useful for monetary policy. **260B:** Surveys recent issues on monetary policy in uncertain environments. Examines settings where both the policy makers and the private sector are uncertain of future outcomes or the underlying economic structure. Formerly Economics 225A-B.

261B International Trade II (4). Covers theoretical models, empirical methods, and policy issues in international trade. Following the conventional treatment of the Ricardian model, the Heckscher-Ohlin model, and the specific factors model; new trade models which incorporate scale economies and imperfect competition are discussed. Prerequisite: Economics 210A-B.

263A-B Advanced Macroeconomics I, II (4-4). 263A: Students build Dynamic Stochastic General Equilibrium (DSGE) macroeconomic models from microeconomic foundations. This approach emphasizes intertemporal optimization by firms and households and typically incorporates nominal rigidities such as sluggish price and/or wage adjustment. **263B:** Extensively studies policy in dynamic models. Topics: rule versus discretionary-based policy and its implications for macroeconomic stability and multiple equilibria; the design of optimal monetary policy; economic policy with model uncertainty and when the economic model is unknown.

269 Special Topics in Macroeconomics (2 to 4). Prerequisites vary. May be repeated for credit as topics vary.

270–279: PUBLIC CHOICE

270A-C Seminar in Public Choice I, III (4-4). Public choice lies at the intersection of economics and political science. This course involves the use of tools derived from economics to understand the behavior of governments and of citizens when they deal with politics. Prerequisite: graduate standing and Social Science 111H. Same as Political Science 270A-C.

271A Institutions in Historical Perspective (4). Investigates economic and political institutions across the world and throughout history. Focuses on institutions such as property rights, political regimes, regulations, legal systems, corporate organization, and social norms. Prerequisites: Economics 210A-B-C-D-E-F or consent of instructor.

272A-B-C Public Economics I, II, III (4-4-4). 272A: Covers welfare economics and the theory of optimal taxation. **272B:** Covers the theory of public goods and models of decentralized provision of such goods, including voluntary provision, voting, bureaucratic provision, and preference revelation mechanisms. **272C:** Covers two broad categories of government expenditure policies, redistribution programs and social insurance, from a theoretical and empirical perspective. Prerequisites: Economics 210A-B-C.

279 Special Topics in Public Choice (2 to 4). Prerequisites vary. May be repeated for credit as topics vary.

280–289: URBAN AND TRANSPORTATION ECONOMICS

281A-B Urban Economics I, II (4-4). **281A:** Economic reasons for the existence of cities, analysis of urban spatial structure, urban sprawl, Third World urbanization, hedonic price analysis, housing tenure choice. **281B:** Housing in the portfolio, land-use controls, rent control, homelessness, neighborhood effects, urban quality-of-life measurement, and subcenters. Prerequisite: Economics 210A or equivalent.

282A-B Transportation Economics I, II (4-4). **282A:** Applies microeconomic concepts of demand, costs, pricing, investment, and project evaluation to analyze transportation activities. Empirical studies include travel demand using discrete models, and cost functions. **282B:** Policy analysis in the presence of road transport externalities (such as environmental spill-overs), imperfect instruments, and other economic distortions such as imperfectly priced networks and imperfect competition. Connections of transportation economics with environmental economics, public finance, spatial economics and industrial organization.

285A-B-C Colloquium for Transportation Science I, II, III (2-2-2). Selected perspectives on transportation based on the study of human behavior. Organized by Interdisciplinary Program in Transportation Science. Research presentations by faculty, students, and visitors supplemented by class discussion. Satisfactory/Unsatisfactory only. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

289 Special Topics in Urban and Transportation Economics (2 to 4). Prerequisites vary. May be repeated for credit as topics vary.

290–299: SPECIAL COURSES

290 Dissertation Research (2 to 12). Prerequisite: consent of instructor. May be repeated for credit.

299 Independent Study (2 to 4). Prerequisite: consent of instructor. May be repeated for credit.

THE CURRICULUM IN GEOGRAPHY

The curriculum in geography covers such topics as the evolution of the landscape, arrangement of urban centers, the internal structure of cities, the arrangement of industrial and agricultural activities, the pattern of movement of people, goods and ideas, and relationships between humans and the environment.

Courses in Geography

(*Schedule of Classes* designation: Soc Sci)

LOWER-DIVISION

Social Science 5 Introduction to Geography. Basic introduction to geography.

5A Introduction to Human Geography (4). Human behavior in a geographical context. Spatial patterns and organization of the cultural, social, and economic activities of man as imposed on and influenced by the earth's physical setting. (III)

5B Introduction to Physical Geography (4). An introduction to the physical world we live in. Distribution and dynamics of the earth's air, water, and solid crust. Concepts and principles from climatology and geology. Selected examples from North America and beyond.

5C Environment and Resources (4). Analysis of landscapes, with special attention to California and the West. Emphasis on humans as agents of environmental change. (III)

5D U.S. and World Geography (4). Provides a broad survey of general geographical principles and facts on a world scale as well as introduces students to the broad regional and resource geography of the U.S., emphasizing in particular the interactions of physical and cultural factors. (III, VIII)

Social Science 18A Evolution of Landforms (4). Introduction to geomorphology; major forces which shape the relief of the earth's surface and the forms which result from their activity. General principles demonstrated using examples from the western United States with special emphasis on California.

UPPER-DIVISION

Course modules emphasizing geography are assigned numbers 118 and 119.

Social Science 118 Geographical Analysis

118C Transportation Theory (4). Advanced topics in transportation systems analysis and planning; land-use and traffic generation; traffic flow and network theory; transportation impact; transportation policy. Emphasis on theoretical approaches and mathematical models. Prerequisites: Economics 20A-B-C.

118F Urban Analysis (4). Students participate in design of an urban research project; involves analysis of transit systems and their relationship to urban structure of metropolitan areas. Focus is on the methodology of evaluation research as it relates to public programs and public policy analysis. Prerequisite: consent of instructor.

118G Regional Geography of California (4). Geographical analysis of selected regions of California, in particular their geomorphological, hydrological, and climatic conditions, as well as their economic and social strengths and weaknesses. Includes discussion of Orange County on environmental, social, and residential problems.

118L Spatial Structure of Metropolitan Areas (4). The spatial arrangement of activities in U.S. metropolitan areas. Identification of the economic, social, and technological processes which affect urban spatial structure. The processes of urbanization and suburbanization are discussed, and the policy implications of contemporary urban spatial structure are examined. Prerequisites: upper-division status and either Economics 1 or 20A-B; Social Science 5A recommended.

Social Science 119A-Z Special Topics in Geography (4) F, W, S. May be repeated for credit. Prerequisites vary.

THE UNDERGRADUATE MAJOR IN INTERNATIONAL STUDIES

569 Social Science Tower; (949) 824-8687

 Deborah D. Avant, **Director**

Affiliated Faculty

Deborah D. Avant, *Director of International Studies and Professor of Political Science*

Marc Baer, *Associate Professor of History*

Nina Bandelj, *Associate Professor of Sociology*

Frank Bean, *UCI Chancellor's Professor of Sociology and Economics*

Victoria Beard, *Associate Professor of Planning, Policy, and Design*

Victoria Bernal, *Associate Professor of Anthropology*

Tom Boellstorff, *Professor of Anthropology*

Scott A. Bollens, *Professor of Planning, Policy, and Design and Drew, Chace, and Erin Warmington Chair in the Social Ecology of Peace and International Cooperation*

Carolyn P. Boyd, *Professor Emerita of History*

Susan K. Brown, *Associate Professor of Sociology*

Daniel Brunstetter, *Assistant Professor of Political Science*

Carol M. Burke, *Director of Religious Studies and Professor of English*

Michael L. Burton, *Professor Emeritus of Anthropology*

Vinayak Chaturvedi, *Associate Professor of History*

Leo R. Chávez, *Director of the Center for the Study of Latinos in a Global Society and Professor of Anthropology*

Yong Chen, *Associate Professor of History and Asian American Studies*

Susan Bibler Coutin, *Associate Dean of the Graduate Division and Professor of Criminology, Law and Society and of Anthropology*

Russell J. Dalton, *Professor of Political Science*

Arthur DeVany, *Professor Emeritus of Economics*

Joseph F. DiMento, *Professor of Planning, Policy, and Design; Law; Social Ecology; and Management*

Julia Elyachar, *Assistant Professor of Anthropology*

Sarah Farmer, *Associate Professor of History*

Raúl Fernández, *Director of the UC-Cuba Academic Initiative and Professor of Chicano/Latino Studies and Social Sciences*

David John Frank, *Department Chair and Professor of Sociology, and Professor of Education*
 Michelle Garfinkel, *Professor of Economics*
 James B. Given, *Professor of History*
 Amihai Glazer, *Professor of Economics*
 David Theo Goldberg, *Director of the UC Humanities Research Institute and Professor of Comparative Literature and of Criminology, Law and Society*
 Sara Goodman, *Assistant Professor of Political Science*
 John Graham, *Professor Emeritus of Management*
 Susan Greenhalgh, *Professor of Anthropology*
 Bernard N. Grofman, *Director of the Center for the Study of Democracy, Professor of Political Science and Economics, and Jack W. Peltason Endowed Chair*
 Sora Han, *Assistant Professor of Criminology, Law and Society*
 Douglas M. Haynes, *Director of the ADVANCE Program for Faculty Equity and Diversity and Associate Professor of History*
 Jeremy Heis, *Assistant Professor of Logic and Philosophy of Science*
 Lamar M. Hill, *Professor Emeritus of History*
 Ann Hironaka, *Associate Professor of Sociology*
 Helen Ingram, *Professor Emerita of Planning, Policy, and Design*
 Jon Jacobson, *Professor Emeritus of History*
 Winston James, *Professor of History*
 Marek Kaminski, *Associate Professor of Political Science*
 Diana Kapiszewski, *Assistant Professor of Political Science*
 Jennifer Lee, *Associate Professor of Sociology*
 Karen Leonard, *Director of the Center for Asian Studies and Professor of Anthropology*
 Mark A. LeVine, *Professor of History*
 Cecelia Lynch, *Director of the Center for Global Peace and Conflict Studies and Professor of Political Science*
 Lynn Mally, *Professor of History*
 Richard Matthew, *Director of the Center for Unconventional Security Affairs and Associate Professor of Planning, Policy, and Design and of Political Science*
 George Marcus, *UCI Chancellor's Professor of Anthropology*
 Michael McBride, *Associate Professor of Economics*
 Martin C. McGuire, *Professor Emeritus of Economics*
 David S. Meyer, *Professor of Sociology*
 Fabio Milani, *Assistant Professor of Economics*
 Jack R. Miles, *UCI Distinguished Professor of English*
 Laura Mitchell, Ph.D. University of California, Los Angeles, *Director of History Graduate Studies and Associate Professor of History*
 Robert G. Moeller, *Professor of History*
 Kristen R. Monroe, *Director of the Interdisciplinary Center for the Scientific Study of Ethics and Morality and Professor of Political Science*
 Patrick Morgan, *Professor of Political Science and Thomas T. and Elizabeth C. Tierney Chair in Global Peace and Conflict Studies*
 Keith L. Nelson, *Professor Emeritus of History*
 Riley Newman, *Professor Emeritus of Physics*
 Ngugi wa Thiong'o, *UCI Distinguished Professor of English and Comparative Literature*
 Raymond W. Novaco, *Professor of Psychology and Social Behavior*
 Kevin Olson, *Associate Professor of Political Science*
 Rachel Sarah O'Toole, *Assistant Professor of History*
 Kristin Peterson, *Assistant Professor of Anthropology*
 Kenneth L. Pomeranz, *UCI Chancellor's Professor of History*
 Mark S. Poster, *Professor Emeritus of Film and Media Studies and of History*
 Rajagopalan Radhakrishnan, *UCI Chancellor's Professor of English and Comparative Literature*
 Priya Ranjan, *Associate Professor of Economics*
 Gary Richardson, *Associate Professor of Economics*
 Jaime E. Rodríguez, *Professor of History*
 Jose Antonio Rodríguez-Lopez, *Assistant Professor of Economics*
 Ana Rosas, *Assistant Professor of Chicano/Latino Studies and History*
 Emily Rosenberg, *Professor of History*
 Rubén G. Rumbaut, *Professor of Sociology and Education*
 Kamal Sadiq, *Associate Professor of Political Science*
 Wayne Sandholtz, *Professor of Political Science*
 Evan Schofer, *Associate Professor of Sociology*
 William Schonfeld, *Professor Emeritus of Political Science*

Armin Schwegler, *Director of Global Cultures and Professor of Spanish*
 Patricia Seed, *Professor of History*
 Caesar D. Sereseres, *Associate Dean for Undergraduate Studies, School of Social Sciences, and Associate Professor of Political Science*
 Stergios Skaperdas, *Professor of Economics*
 Kenneth Small, *Professor Emeritus of Economics*
 David A. Smith, *Professor of Sociology and of Planning, Policy, and Design*
 David A. Snow, *UCI Chancellor's Professor of Sociology*
 Etel Solingen, *UCI Chancellor's Professor of Political Science*
 Dorothy J. Solinger, *Co-Director of the Minor in Asian Studies and Professor of Political Science*
 Yang Su, *Associate Professor of Sociology*
 Timothy Tackett, *Professor of History*
 Jennifer Terry, *Department Chair and Associate Professor of Women's Studies and Associate Professor of Comparative Literature*
 Steven C. Topik, *Professor of History*
 Judith Treas, *Professor of Sociology*
 Robert Uriu, *Associate Professor of Political Science*
 Roxanne Varzi, *Associate Professor of Anthropology*
 Anne Walthall, *Co-Director of the Minor in Asian Studies and Professor of History*
 Wang Feng, *Professor of Sociology*
 Jeffrey Wasserstrom, *Department Chair and Professor of History*
 Douglas White, *Professor Emeritus of Social Sciences*
 John Whiteley, *Professor of Environmental Health, Science, and Policy*
 Mei Zhan, *Associate Professor of Anthropology*

The major in International Studies provides an interdisciplinary perspective on global politics, culture, and economics. International Studies majors acquire twenty-first-century analytical skills and knowledge that will enable them to understand and contribute to shaping the rapidly evolving global community. The degree in International Studies prepares students for graduate study and professional careers in a variety of fields in the national and international job markets such as international affairs and public policy, international business and finance, international organizations, and academic research and teaching.

Requirements for the major include a core set of courses: an introductory sequence (Global Cultures and Society, Global Politics, World History and Global Economics), basic economics (micro and macro), one additional lower-division social science course (either World Geography or International Sociology), and two quarters of the International Studies Public Forum. Students then choose both a regional focus (four upper-division courses on Europe and Eurasia, Africa and the Middle East, the Americas, or Asia) and a functional focus (four upper-division courses on Global Security; Global Conflict and Conflict Resolution; International/Comparative Law; International/Transnational Organizations and Movements; Global Ethics and Human Rights; Global Identities: Religion, Nationalism, Gender; Global Trade, Investment, and Finance; Global Development, Public Health, and Environment; or Global Population, Migration, and Diaspora). The final requirements are competence in a language other than English and an international experience.

REQUIREMENTS FOR THE B.A. DEGREE IN INTERNATIONAL STUDIES

University Requirements: See pages 54–61.

School Requirements: See page 464.

Requirements for the Major

- A. International Studies 11, 13, 14, and either History 21B or 21C.
- B. Economics 20A-B.
- C. Social Science (Geography) 5D or Sociology 2.
- D. Competency in a language other than English. Competency is established by college-level course work equivalent to UCI's sixth quarter of study (usually 2C).

E. Regional Focus:* Four courses focused on one of the following geographic areas from at least two different disciplines (e.g., political science, sociology, history, economics, etc.) and including material on at least two different countries:

Europe and Eurasia
Africa and the Middle East
The Americas (including the U.S.)
Asia

F. Functional Focus:* Four courses in one of the following areas from at least two different disciplines (e.g., political science, sociology, history, economics, etc.):

Global Security
Global Conflict and Conflict Resolution
International/Comparative Law
International/Transnational Organizations and Movements
Global Ethics and Human Rights
Global Identities: Religion, Nationalism, Gender
Global Trade, Investment, and Finance
Global Development, Public Health, and Environment
Global Population, Migration, and Diaspora

* See http://undergraduatestudies.ss.uci.edu/ugs_ap_is_courses for a list of approved courses. Although some courses are listed in more than one focus, students may not double count a course for both their regional and functional areas. Study abroad counts as one course in the regional focus.

G. Two quarters of Social Science 183A (International Studies Forum), one quarter of which must be taken during the senior year as a capstone experience. (Social Science 183A is a two-unit course so these together count as a four-unit course.)

H. At least one quarter of international experience. Majors are encouraged to study abroad through the Education Abroad Program (EAP) or the International Opportunities Program (IOP), which are available for periods of a quarter, year, or summer. When this is not possible, work overseas (through IOP) or a domestic internship with the UCDC Internship Program, the UCI Washington D.C. Academic Internship Program, or the Social Science Internship Program (Social Science 197) with an international focus may be substituted. Study abroad counts as one course in the regional focus.

International Studies Minor Requirements

A. Choice of one from the core sequence: International Studies 11, 13, or 14.

B. Regional Focus:* Three courses focused on one of the following geographic areas from at least two disciplines and including material on at least two different countries:

Europe and Eurasia
Africa and the Middle East
The Americas (including the U.S.)
Asia

C. Functional Focus:* Three courses in one of the following areas from at least two different disciplines:

Global Security and Criminology
Conflict and Conflict Resolution
International/Comparative Law
International/Transnational Organizations and Movements
Global Ethics and Human Rights
Global Identities: Religion, Nationalism, Gender
Global Trade, Investment and Finance
Global Development, Public Health, and Environment
Global Population, Migration, and Diaspora

* See http://undergraduatestudies.ss.uci.edu/ugs_ap_is_courses for a list of approved courses. Although some courses are listed in more than one focus, students may not double count a course for both their regional and functional areas. Study abroad counts as one course in the regional focus.

D. Two quarters of Social Science 183A (International Studies Forum), one quarter of which must be taken during the senior year as a capstone experience. (Social Science 183A is a two-unit course so these together count as a four-unit course.)

HONORS PROGRAM IN INTERNATIONAL STUDIES

The Honors Program allows International Studies majors to engage in research leading to the completion of an honors thesis. The topic for the honors thesis is selected by the student, in consultation with a faculty advisor, and should reflect a theme consistent with the student's module in the International Studies major. The Honors Program is open to all junior and senior International Studies majors with an overall GPA of 3.0 and a 3.5 GPA in the major who have taken all three core courses (International Studies 11, 13, and 14) and at least two upper-division courses that count toward the International Studies major. Successful completion of a written senior thesis in the International Studies 190 course satisfies the upper-division writing general education requirement.

During the spring quarter of the junior year or during the summer before the senior year, students formally apply to the Honors Program. Students will be notified of their selection to the Honors Program by September 1. In the fall quarter of the senior year, students enroll in International Studies H180, Honors Research Seminar. In this course, each student formulates a written research plan (i.e., prospectus) for the honors thesis. Students also select a faculty member who agrees to supervise the research, evaluate the written work, and approve the honors thesis. In the winter quarter of the senior year, students enroll in International Studies H190, Senior Thesis, with their faculty advisor. The faculty advisor supervises and evaluates data collection and analysis and reads and edits chapter drafts. In the spring quarter of the senior year, students enroll in a second quarter of Senior Thesis, with their faculty advisor. The thesis is to be completed by the student and approved by the advisor prior to the end of the quarter.

Honors students must also demonstrate a high level of language proficiency by completing two courses beyond the 2A level in language, literature, or culture taught in their chosen international language.

International Studies majors are also required to pursue some form of international experience, as explained in detail in major requirement H.

SIGMA IOTA RHO: NATIONAL HONORS SOCIETY

The National Honor Society in International Studies was established in 1985, and welcomed the University of California, Irvine, designated Gamma Gamma, as a new chapter on November 30, 2006. The Gamma Gamma Chapter was established primarily as a means by which to honor those students who have excelled academically and to foster integrity and creative performance in the understanding of world affairs.

For more information call the International Studies program office at (949) 824-8687.

Courses in International Studies

(*Schedule of Classes* designation: Intl St)

LOWER-DIVISION

11 Global Cultures and Society (4). Offers a general overview of the rise of global interdependence in political, economic, demographic, and cultural terms. Considers what drove people from relative isolation into intensified intercourse with one another, and investigates the consequences of this shift. Same as Anthropology 41A. *International Studies majors have first consideration for enrollment.* (III, VIII)

13 Global Economy (4). Acquaints students with the fundamental patterns and problems of the global economy. Emphasizes the historical roots and political implications of economic choices. Same as Economics 13. *International Studies majors have first consideration for enrollment.* (III, VIII)

14 Introduction to International Relations (4). Analysis of political relations between and among nations with emphasis on explanations of conflict and cooperation. The role of ideologies and their relation to international problems are also examined. Same as Political Science 41A. *International Studies majors have first consideration for enrollment.* (III, VIII)

16 Physics of Weapons and Their Control (4). Lecture, three hours. Introduction to physics related to issues of peace and conflict. Topics include: nuclear and non-nuclear weapons, delivery systems, missile defense systems, satellite surveillance systems, technology for homeland security, and arms control. Same as Physics 16. (II)

UPPER-DIVISION

105A Game Theory and Politics I (4). Introduction to game theory and a survey of its political applications. Examples of topics covered include voting in small committees, legislatures, and mass elections; interest group activities and environmental issues; institutional design, and the evolution of cooperative behavior. Same as Political Science 130A and Social Science 103A. *International Studies majors have first consideration for enrollment.*

105B Game Theory and Politics II (4). More advanced game theory and its political applications, beginning where Game Theory and Politics I ends. Examples of topics covered include revolutions; arms race; spatial models of party competition; political manipulation; political coalitions and their power. Prerequisite: Economics 116 or Political Science 130A. Same as Political Science 130B and Social Science 103B. *International Studies majors have first consideration for enrollment.*

111A Economic Development (4). Reviews the process of economic development across the globe. Topics include main theories of economic development, influence of domestic and international policies on economic development, and the effect of economic development on institutions and the environment. (VIII)

112A International Business (4). Introduction to conducting business in the international arena, decision making in the organization, and globalization of markets and production. Topics covered range from tax and finance to ethics, marketing, and more. Continuing corporate regulatory scandals discussed. Same as Social Science 115D. (VIII)

113A International Trade (4). Global trade as an essential element of global growth. Covers trade, balance of payments, tariffs, quotas, commercial policy, exchange rates, international financial crises, international economic institutions since WWII. Regions studied include U.S., Japan, European Union, China, India, East Asia. Same as Social Science 115H. (VIII)

120 Global Environmental Issues (4). While many agree that environmental problems threaten humankind, there is much disagreement over the nature of these threats and how to address them. Examines global environmental issues from various perspectives in order to provide answers to these questions. Same as Planning, Policy, and Design 136 and Political Science 143D. *International Studies majors have first consideration for enrollment.*

121 Social Ecology of Peace (4). Examination of differing definitions of the problem of achieving peace and the special problems of seeking peace in the nuclear age. Same as Social Ecology E113. (VIII)

122 Nuclear Environments (4). Understanding the impact of the nuclear age on the environment and human health through the interrelated developments of nuclear power and nuclear weapons. The early years of weapon development, catastrophic environmental pollution, perils of nuclear power in the U.S. and Russia. Same as Social Ecology E127 and Public Health 168. (VIII)

123 International Environment Management (4). Network of intergovernmental organizations (the United Nations, in particular) and international nongovernmental organizations in the field of environmental management. Analysis of key international projects and sources of information. Lessons for the integration of international research expertise. Prerequisite: Criminology, Law and Society C7. Same as Planning, Policy, and Design 137 and Criminology, Law and Society C129. *International Studies majors have first consideration for enrollment.*

130 Transnational Gangs (4). Examines the internationalization of U.S. domestic street gangs. The relationship between California gangs Mara Salvatrucha and 18th Street and Mexico/Central American gangs is assessed. Specified topics include: mobilization, migration, territorialism, culture, organization, and use of technology. Prerequisite: Social Science 66. Same as Social Science 120. (VIII)

135 California and Global Economy (4). Presents the nature of the State's economy and the current and projected role of California in the world economy. Same as Social Science 115E. (VIII)

151A Philosophies and World Religions (4). Examines major religious traditions that shape human cultures. A new global order is forming led by globalization of technology, trade, finance, popular culture, education, science, and medicine. What role will religion play in the future? Same as Social Science 170P. (VIII)

151B Religion and World Politics (4). Examines the relationship between religion and world politics historically and today, focusing on connections with peace/war, democracy, human rights, secularism(s), and globalization. Covers major debates, scholarship, concepts, and theories through class exercises, exams, and essays. Prerequisite: Political Science 41A, or International Studies 11 or 12, or Religious Studies 5A, 5B, or 5C. Same as Religious Studies 115 and Political Science 146B.

152A Non-Governmental Organization (NGO) Fundamentals (4). Introduction to non-governmental organizations, including their role in U.S. society and the international community. Explores varying definitions of NGOs and the characteristics held in common by all NGOs. Same as Social Science 152A. (VIII)

154 Ethics and Justice in International Affairs (4). Analyzes choices regarding the use of force, resolving conflict, and promoting human rights and social justice. Special attention is given to the American experience as a principal case study of ethics and statecraft. Prerequisites: International Studies majors only; satisfactory completion of the lower-division writing requirement. *International Studies majors have first consideration for enrollment.*

155A International Journalism (4). Studies and critically analyzes how the media covers international issues that have reshaped American foreign coverage and the implications for Americans and U.S. foreign policy. Focuses on international reporting as a way of developing fundamental skills of journalism. Same as Social Science 184F. (VIII)

155B Media Writing (4). Designed to teach reporting and news writing basics. Students learn how to gather and organize information, ask effective questions, develop story ideas, research facts, and write stories on deadline. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Social Science 184G. *International Studies majors have first consideration for enrollment.*

156A Voting and Political Manipulation (4). Introduction to social choice and cooperative games. Topics include majority rule, types of voting methods, apportionment and proportional representation, agenda manipulation, coalition formation, voting power, political consequences of electoral laws. Same as Political Science 151H and Social Science 121T. *International Studies majors have first consideration for enrollment.*

160 Lebanese Politics (4). Explores the domestic, regional, and international dynamics that make Lebanon a challenge to its Middle Eastern neighbors. A comparison between Lebanon and other Middle Eastern countries. Same as Social Science 188J. (VIII)

161 Islam and the West (4). Analyzes how modernity transformed the relationship between Islam and the West, Jew and Arab, male and female in the Middle East. Analyzes the significance of globalization. Aims at presenting the debate in a way that fosters civilizational/cultural dialogue. Same as Social Science 188C. (VIII)

161A Political Islam (4). Political Islam is a diverse phenomenon. While noticeable barriers exist to "Islamist democracy," it is the Islamists who will define the political future of much of the Muslim world. Reviews experience of Saudi Arabia, Iran, Egypt, Pakistan, Turkey, and Indonesia. Same as Social Science 188K. (VIII)

162 Afghanistan (4). Examination of Afghanistan's traditional social organization, economy, political organization, and relationship among ethnic groups as a basis for discussing the consequences of domestic political turmoil and foreign interventions over the last twenty years. The country's current situation and future prospects. Same as Social Science 188I. (VIII)

164 The Politics of Reconstruction: Iraq (4). Examines the political history of Iraq; prospects of Iraq's economic development; effects of external interventions on Iraqi society; theoretical and practical tools to understand the politics behind reconstructing and nation-building; diverse perspectives on the reconstruction of Iraq. Same as Social Science 188L. (VIII)

165 Introduction to Contemporary Middle East Politics (4). An overview of basic issues that shape the politics of the Middle East and North Africa. Themes include implication of the colonization era, nation-state formation, inter-Arab relations, nationalism, Arab-Israel conflict, Islamic resurgence, and more. Same as Social Science 188A. (VIII)

166 Psychology of the Middle East Conflict (4). Explores how emotions guide actions; political movements and social identity factors in ethnic, religious, or other group conflicts; psycho-biographies of political leaders and effects on foreign policy making; decisions to go to war; psychological dimensions of conflict and conflict resolution. Same as Social Science 188M. (VIII)

167 Democratization in the Middle East (4). Examines underlying causes why Arab states continue to resist the spread of democracy and modernity. In this context the course examines relations between the Arab World and the West including democratization efforts, impact of colonization, oil, resources, authoritarianism and religion. Same as Social Science 188B. (VIII)

168 Iran: Past and Present (4). Pre-revolutionary Iran; and Iran since the revolution. History, oil and politics: domestic and international. Same as Social Science 188D. (VIII)

170 Israel and the World: An Introduction (4). Examines the founding of Israel, its relationship with the Arab world, the role of the international community, and the challenges it faces today. Same as Social Science 188E. (VIII)

171 Middle East Security (4). Examines various dilemmas and concerns such as terrorism and weapons of mass destruction. Students explore security dynamics of key actors including Iran, Iraq, Egypt, Syria, Gulf states, Israel, Palestine, and the U.S. and look at civil-military relations and internal security. Same as Social Science 188F. (VIII)

172 Oil Politics and Democracy in the Middle East (4). Explores the impact of oil politics on Middle East, focusing on modern history of major oil producers. Examines oil and democracy in the Middle East, oil security and American foreign policy and policy-makers' options to decrease dependence on foreign oil. Same as Social Science 188G. (VIII)

173 War and Peace in the Middle East (4). Discusses causes of war severity in the Middle East, implications of regional conflicts for international security. Studies and applies theories in international relations, compares policies for promoting peace through examination of sources of war and peace in the Middle East. Same as Social Science 188H. (VIII)

177A Latin American Populism (4). Explores and assesses Latin America's political shift to new populism and what is means for the United States. Through readings and extensive discussion, studies how this fits in Latin American history and traditions, tracing populism's roots to current political panorama. Same as Social Science 172K. (VIII)

177B Perspectives on the U.S.–Mexican Border (4). Economic aspects of the historical development of the U.S.–Mexican border. The current economic situation in the Southwest and border areas as it affects both Mexico and the Latino/Chicano population is also examined. Same as Chicano/Latino Studies 160 and Social Science 173I. (VII)

177C Revolution in Latin America (4). Presents a comparative analysis of the causes, development, and consequences of selected revolutionary movements, focusing on outbreaks in Mexico, Bolivia, Cuba, Chile, Nicaragua, and Grenada. Explores topics of state formation, economic nationalism, social justice, ethnicity, and role of international affairs. Same as Social Science 173N. (VIII)

177D U.S. Intervention in Latin America (4). Explores the political, economic, social, and cultural ties that bind Latin America to the United States. Focuses on U.S. intervention and Latin American response from early nineteenth century to present day. Case studies include Mexico, Guatemala, Cuba, Chile, and Central America. Same as Social Science 123A. (VIII)

177E Cuban Society and Revolution (4). Explores the causes, development, and legacy of the 1959 Revolution. Themes include economic dependency, democracy, race, gender, culture, and the always volatile relations between Cuba and the United States. Same as Social Science 173P. (VIII)

177F Introduction to Cuba: History, Culture, and Society (4). Introduction to Cuban history, culture, and society using social science texts, visual and musical materials. Examines major historical moments including the historical relationship between the United States and explores evolution of Cuban music from the earliest times to present. Same as Chicano/Latino Studies 130 and Social Science 173Q. (VIII)

179 Regional Topics in International Studies (4). May be repeated for credit as topics vary. (VIII)

H180 International Studies Honors Research Seminar (4). Designed to assist students prepare a thesis prospectus for the Honors Program in International Studies. The student identifies a thesis topic, reads on the subjects of writing and research methods, orally presents and defends the prospectus, and prepares a written prospectus/literature review. Prerequisite: acceptance into the International Studies Honors Program. *International Studies majors have first consideration for enrollment.*

183A International Studies Forum (2). A faculty-student forum featuring lecturers from a variety of institutions with discussion issues related to international studies. May be taken for credit four times. Same as Humanities 183A, Social Ecology 183A, and Social Science 183A. *International Studies majors have first consideration for enrollment.*

183B Seminar in Mediation (4). Students develop mediation skills and refine knowledge in the practice and theory of conflict resolution. Students who complete this course may serve as mediators in the Campus Mediation Program. Course is a prerequisite to completing Independent Study as an intern practicing mediation with the OC Human Relations Commission in small claims court. Same as Social Ecology 183B, Humanities 183B, and Social Science 183B.

183E Conflict Management in Cross-Cultural Perspective (4). Examines theories of conflict management. Analyzes how conflict is mitigated in diverse cultures: at the interpersonal level, between groups, and on the international scale. Students discuss readings, hear from conflict management practitioners, and simulate negotiations. Same as Anthropology 136D, Political Science 154G, and Social Science 183E. (VIII)

189 Special Topics in International Studies (2 to 4). May be repeated for credit as topics vary. (VIII)

190 Senior Thesis (4). Prerequisite: Consent of instructor. May be taken for credit twice.

199 Individual Study (2 to 4). Students participate in planned research and study under written contract with a supervising UCI instructor. Students may enroll for only one individual study course each quarter. Prerequisite: consent of instructor. May be repeated for credit as topics vary.

Minor in Conflict Resolution

The minor in Conflict Resolution is sponsored by the International Studies program. It offers an interdisciplinary curriculum that can help students both discover and prepare themselves for any career. The course of study provides skills in conflict analysis and resolution and a useful understanding of integrative institutions at the local, regional, and international levels. Conflict plays a key role in all areas of our lives. It can have destructive or constructive potential. This program explores how conflict arises, how it is represented and discussed, how it is prevented, mitigated, managed, and used for change in interpersonal relations, within and between organizations and other kinds of groups inside nations, and in conflict between nations.

The curriculum includes training that students may apply toward State of California certification as a mediator.

As enrolled minors, students are invited to special engagements where they can interact with leading community and government officials from the U.S. and other countries, prominent scholars, and other experts in local and international conflict resolution.

Requirements for the Minor

- A. Either International Studies 14 or Sociology 63.
- B. Conflict Resolution Core (four courses):
1. Political Science 149 (when topic is Global Security and Cooperation II).
 2. Political Science 154G/Anthropology 136D.
 3. Social Science 183B/Humanities 183B/Social Ecology 183B/International Studies 183B.
 4. Social Science 183CW/Humanities 183CW/Social Ecology 183CW.
- C. Conflict Resolution Electives (choose two): Anthropology 136A, 164P (same as Political Science 154F), Chicano/Latino Studies 153 (same as Criminology, Law and Society C156), Criminology, Law, and Society C127, C129 (same as Planning, Policy and Design 137 and International Studies 123), History 103, 126A, 126B, 126C, 132A, 175F, International Studies 121, 166, Political Science 124A, 124C (same as African American Studies 151, Asian American Studies 132, and Chicano/Latino Studies 152), Political Science 142G, 143B, 155E, Psychology and Social Behavior 178S (same as Criminology, Law and Society C149), Social Science 120, Sociology 167A (same as Chicano/Latino Studies 148), Sociology 170A, 170B, 174 (same as Political Science 156).
- D. Two quarters of Social Science 183A (International Studies Forum), one quarter of which must be taken during the senior year as a capstone experience. (Social Science 183A is a two-unit course so these together count as a four-unit course.)

NOTE: With faculty approval, a student may substitute a maximum of one course. With faculty approval, a student participating in the UC Education Abroad Program may substitute a maximum of two courses.

DEPARTMENT OF LINGUISTICS

5404 Social & Behavioral Sciences Gateway; (949) 824-7161
Caesar D. Sereseres, **Acting Department Chair**

Affiliated Faculty

Michael Fuller, *Associate Professor of East Asian Languages and Literatures*
Gregory Hickok, *Director of the Center for Cognitive Neuroscience and Professor of Cognitive Sciences*

Kent E. Johnson, *Associate Professor of Logic and Philosophy of Science*
Mary-Louise Kean, *Professor Emerita of Cognitive Sciences*

Glenn S. Levine, *Faculty Director of the Center for International Education, German Language Program Director, and Associate Professor of German*
Virginia A. Mann, *Professor of Cognitive Sciences*

Lisa Pearl, *Assistant Professor of Cognitive Sciences*

Robin Scarcella, *Director and Professor of the Academic English/English as a Second Language Program and Professor of Education*

Armin Schwegler, *Director of Global Cultures and Professor of Spanish*

Jon Sprouse, *Assistant Professor of Cognitive Sciences*

Bernard Tranel, *Professor of Linguistics*

Mark Warschauer, *Professor of Education*

W.C. Watt, *Professor Emeritus of Cognitive Sciences*

Language is one of the most fundamental human instincts. It is an extraordinarily intricate system which all of us master as young children without special teaching, and which gives us the ability to communicate, tell stories, and express our deepest feelings. Linguistics is the scientific study of human language. It is concerned with understanding the nature of language and our knowledge of it, how we acquire it, and how that knowledge is put to use. It is connected to many other fields of study, including psychology, anthropology, sociology, biology, physics, mathematics, computer science, philosophy, and literature.

The Department offers an undergraduate minor and undergraduate courses.

Linguistics Minor Requirements

Requirements for the minor in Linguistics are met by taking seven linguistics courses (28 units) as specified below:

A. Linguistics 3, 10, and 20.

B. Four additional linguistics courses, three of which must be upper-division.

Residence Requirement: At least three upper-division courses required for the minor must be completed successfully at UCI.

Courses in Linguistics

(*Schedule of Classes* designation: **Linguis**)

LOWER-DIVISION

1 Languages of the World (4). The world has over 5,000 languages, with an exuberant variety of sounds, words, and grammars. Introduction to a representative selection (about eight), drawn from every continent. Students are not expected to learn these languages, but rather to explore them and study their structure and complexity. (**VIII**)

2 Discovering Language (4). Explores language's pervasiveness and diversity; demonstrates ways linguistics illuminates language's crucial—albeit hidden—societal role. Issues: self- and group-identification, language death, language in legal and educational settings. Illustrations: spoken and signed languages, English dialects (including Black English), American Indian languages. (**VII**)

3 Introduction to Linguistics (4). Emphasis on the notion that language is a remarkable achievement of the human mind. Current insights into the nature of language. Survey of various subfields of linguistics. Introduction to linguistic analysis. (**III** or **V**)

10 Introduction to Phonology (4). Basic concepts in phonetic description and phonological analysis. Prerequisite: Linguistics 3. (**III** or **V**)

20 Introduction to Syntax (4). Basic concepts in syntactic description and grammatical analysis. Prerequisite: Linguistics 3. (**III** or **V**)

51 Acquisition of Language (4). What children say, what they mean, and what they understand. Theories about the learning of language by one-, two-, and three-year olds. Comparison of kinds of data on which these theories are based. Same as Psychology 56L. (**III**)

68 Introduction to Language and Culture (4). Explores what the study of language can reveal about ourselves as bearers of culture. After introducing some basic concepts, examines how cultural knowledge is linguistically organized and how language might shape our perception of the world. Same as Anthropology 2D. (**III**)

99 Special Topics in Linguistics (4). Special topics at lower-division level. May be repeated for credit when topic varies.

UPPER-DIVISION

100 Grammatical Theory (4). Has both a phonology and a syntax component, and forms a bridge between lower-division course offerings and more advanced courses in phonology, syntax, and morphology. Emphasis on development of analytical skills, and evaluation of alternative proposals. Prerequisites: Linguistics 10 and 20.

101–109: COMPUTATIONAL LINGUISTICS

102 Formal Languages and Automata (4). Formal aspects of describing and recognizing languages by grammars and automata. Parsing regular and context-free languages. Ambiguity, nondeterminism. Elements of computability; Turing machines, random access machines, undecidable problems, NP-completeness. Prerequisites: ICS 23/CSE23 with a grade of C or better; Mathematics 2A-B; ICS 6B; ICS 6D. Same as Computer Science 162.

107M Computational Methods for Language Research (4). Focuses on computational methods useful for language research. Students become familiar with software and programming languages used for extracting information from electronic datasets and for creating basic simulations of linguistic cognition. No prior programming experience assumed. Prerequisite: Psychology 155/Linguistics 155 or Psychology 156A/Linguistics 150, or consent of instructor. Same as Psychology 157M. Concurrent with Psychology 247M.

109 Special Topics in Computational Linguistics (4). Prerequisites vary. May be repeated for credit as topics vary.

110–119: PHONETICS / PHONOLOGY

111 Intermediate Phonology (4). Fundamentals of phonological theory. Intensive practice in phonological analysis. Prerequisite: Linguistics 100 or equivalent.

112 Advanced Phonology (4). Overview of recent developments in phonological theory. Prerequisite: Linguistics 111.

114 Current Topics in Phonological Theory (4). Phonology seminar. Intensive study of a small number of current topics in phonological theory. Prerequisite: Linguistics 112. May be repeated for credit as topic varies.

119 Special Topics in Phonetics/Phonology (4). Prerequisites vary. May be repeated for credit as topic varies.

120–129: SYNTAX

121 Intermediate Syntax (4). Examines various phenomena within a generative theory of syntax, focusing on the nature of syntactic rules, representations, and constraints. Introduces methods of experimental syntax, providing students hands-on opportunity to recognize the connection(s) between theory and experimental results. Prerequisite: Linguistics 20 or consent of instructor.

122 Advanced Syntax (4). Intensive investigation of selected current topics in syntactic theory. Readings drawn from primary literature. Prerequisite: Linguistics 121.

123 Experimental Syntax (4). Examines the experimental methods that have been proposed for accessing speakers' knowledge of language in the psycholinguistic literature. Students investigate the merits of each technique through hands-on experience, culminating in a fully fledged experimental syntax study. Prerequisite: Linguistics 20. Same as Psychology 153.

124 Current Topics in Syntactic Theory (4). Research seminar in syntax. Intensive study of a small number of well-defined topics which have had significant impact on the development of syntactic theory. Prerequisite: Linguistics 122. May be repeated for credit as topic varies.

129 Special Topics in Syntax (4). Prerequisites vary. May be repeated for credit as topic varies.

130–139: MORPHOLOGY

139 Special Topics in Morphology (4). Prerequisites vary. May be repeated for credit as topic varies.

140–149: SEMANTICS

141 Topics in Philosophy of Language (4). Selected topics in the philosophy of language, e.g., the nature of meaning, mechanisms of reference, speech acts. May be repeated for credit as topics vary. Same as Philosophy 145 and Logic and Philosophy of Science 145. May be repeated for credit as topics vary.

143 Semantics (4). The role of semantics in an integrated linguistic theory. Examination of a truth theory for natural language and the role of logical form as the interface of syntax and semantics. Discussion of reference, predication, quantification, and intentionality. Readings drawn from linguistic and philosophical sources. Prerequisite: at least one of the following: Linguistics 100 or 140, Philosophy 105B, Mathematics 150, ICS 162, or consent of instructor.

149 Special Topics in Semantics (4). Prerequisites vary. May be repeated for credit as topic varies.

150–159: PSYCHOLINGUISTICS

150 Acquisition of Language II (4). Focuses on native language learning, exploring the way in which infants and very young children unconsciously uncover the rich systematic knowledge of their native language. Examines both experimental and computational studies that quantitatively investigate the "how" of language acquisition. Prerequisite: Psychology 56L or Linguistics 51 recommended. Same as Psychology 156A.

154 Theories of Second Language Acquisition (4). Research in the acquisition and learning of second and foreign languages. The influence of language acquisition theory on past and current teaching methodology. A comparison of first and second language acquisition. Prerequisite: Linguistics 3. Recommended: Linguistics 51.

155 Psychology of Language (4). Examines language using the tools of experimental psychology. From sounds to words to spoken and written sentences, explores how language is used in real time, and how its use reveals how it is represented in the mind. Same as Psychology 155.

158 Language and the Brain (4). Analysis of current research on the biological bases of human linguistic capacity. Development, focusing on hemispheric specialization and plasticity; localization of specific linguistic functions in adults, with emphasis on study of aphasias; relation of linguistic capacity to general cognitive capacity, considering research on retardation. Prerequisite: Biological Sciences 35 or N110, or consent of instructor. Same as Biological Sciences N160 and Psychology 161.

159 Special Topics in Psycholinguistics (4). Prerequisites vary. May be repeated for credit as topic varies.

160–169: LANGUAGE STUDIES

163B The Structure of English (4). An examination of American English phonology, morphology, and syntax. Useful for prospective teachers of English in elementary and secondary schools and for teachers of English as a second language. Prerequisite: Linguistics 3.

164A Topics in Romance Languages (4). Prerequisites vary. May be repeated for credit as topic varies.

164B French Phonetics (4). Study of the sound structure of French. Introduction to elements of general phonetics, contrastive (French/English) phonetics, and French phonetics and phonology. Designed to help students improve their pronunciation. Also serves as a preparatory course for language teaching. Prerequisite: French 1C or equivalent or consent of instructor.

166B Indian Languages of the Americas (4). Survey of the native languages of North and/or South America, focusing on the range of sound systems, morphological processes, and syntactic structures exhibited by this diverse group of languages. Also considers the linguistic affiliations of the surveyed languages. Prerequisite: Linguistics 3.

168A Sociolinguistics (4). Examines descriptions and explanations of systematic patterns of language use in society, in particular how geographical and social factors give rise to a range of variations in a given language (dialects). Includes aspects of language change, language planning, language death. Prerequisites: Linguistics 3 and satisfactory completion of the lower-division writing requirement.

169 Special Topics in Language Studies (4). Prerequisites vary. May be repeated for credit as topic varies.

170–179: HISTORICAL LINGUISTICS

170 Historical Linguistics (4). Study of language change. Methods of historical analysis of language. Classification of languages and aspects of language change by internal reconstruction and the comparative method. Prerequisite: Linguistics 3. Recommended: Linguistics 10.

172 History of English (4). External (historical and social) and internal (linguistic) changes which have affected the English language from its Germanic roots to the present day. Prerequisite: Linguistics 3 or consent of instructor.

179 Special Topics in Historical Linguistics (4). Prerequisites vary. May be repeated for credit as topic varies.

180–189: COGNITIVE SEMIOTICS

189 Special Topics in Cognitive Semiotics (4). Prerequisites vary. May be repeated for credit as topic varies.

190–199: SPECIAL COURSES

197 Field Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198 Directed Group Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies. Students may enroll for only one 199 each quarter.

DEPARTMENT OF LOGIC AND PHILOSOPHY OF SCIENCE

779 Social Science Tower; (949) 824-1520

Jeffrey Barrett, **Department Chair**

The Department of Logic and Philosophy of Science (LPS) brings together faculty and students interested in a wide range of topics loosely grouped in the following areas: general philosophy of science; philosophy of the particular sciences; logic, foundations and philosophy of mathematics; and philosophy of mathematics in application. LPS enjoys strong cooperative relations with UCI's Department of Philosophy; in particular, the two units jointly administer a single graduate program which offers the Ph.D. in Philosophy. LPS also has strong interconnections with several science departments, including Mathematics and Physics, as well as the School of Biological Sciences, the Donald Bren School of Information and Computer Sciences, the Departments of Cognitive Sciences and Economics, and the graduate concentration in Mathematical Behavioral Sciences.

Graduate Program

Faculty

Jeffrey A. Barrett: Philosophy of science, philosophy of physics, philosophy of quantum mechanics, epistemology
 Jeremy Heis: History and philosophy of mathematics and logic, early analytic philosophy
 Simon Huttegger: Game and decision theory, philosophy of biology, philosophy of science
 Kent Johnson: Philosophy of language, philosophy of mind
 Penelope Maddy: Philosophy of mathematics, philosophy of logic, naturalism, history of analytic philosophy
 David Malament: Foundations of relativity theory, philosophy of physics
 Brian Skyrms: Philosophy of science, decision theory, game theory, philosophy of biology, epistemology, metaphysics
 Kyle Stanford: Philosophy of science, philosophy of biology, history of modern philosophy, metaphysics
 Kai F. Wehmeier: Logic, philosophy of mathematics, history of analytic philosophy

Affiliated Faculty

Wayne Aitken (*CSUSM*): Logic, philosophy of mathematics
 Francisco Ayala: Evolutionary biology, philosophy of science, philosophy of biology
 Patricia Churchland (*UCSD*): Philosophy of neuroscience and psychology
 Paul Churchland (*UCSD*): Philosophy of science, philosophy of mind, artificial intelligence and cognitive neurobiology, epistemology, and perception
 Paul Eklof: Mathematical logic
 Matthew Foreman: Mathematical logic
 Steven Frank: Evolutionary biology
 Donald Hoffman: Human and machine vision
 Duncan Luce: Mathematical behavioral science
 D.A. Martin (*UCLA*): Logic, set theory, philosophy of mathematics
 James McGaugh: Neurobiology of learning and memory
 Yiannis Moschovakis (*UCLA*): Set theory, recursion theory
 Louis Narens: Measurement, logic, and metacognition
 Riley Newman: Experimental particle physics and gravitational physics
 Terence Parsons (*UCLA*): Philosophy of language, metaphysics
 Donald Saari: Mathematical economics, mathematical behavioral science, celestial mechanics
 Jonas Schultz: Experimental particle physics
 Norman Weinberger: Neural bases of attention and learning
 Martin Zeman: Logic and combinatorics

The Department of Logic and Philosophy of Science and the Department of Philosophy jointly administer a Ph.D. program in Philosophy with two independent tracks: the Philosophy track and the LPS track. Both tracks begin from a common core of requirements in standard philosophical fields (e.g., history of philosophy, logic, ethics, metaphysics/epistemology) and branch off thereafter; both tracks offer the Ph.D. degree in Philosophy. Applicants are

advised to apply to the unit whose faculty, areas of specialization, and curriculum correspond best with their interests. Students are expected to reside in the same unit as their primary advisor, but faculty in both units are available for all other academic purposes (course work, independent studies, committee membership, and more). See the Department of Philosophy in the School of Humanities for a description of the Philosophy track.

The M.A. degree in Philosophy may also be awarded to Ph.D. students who complete the necessary requirements.

ADMISSIONS

Applicants for the LPS track must have a bachelor's degree, but there is no formal requirement as to the field of that degree. The most natural undergraduate majors for LPS graduate students would be philosophy, mathematics, or the sciences, but those with other degrees who are interested in the LPS fields should feel free to apply.

Complete applications must include GRE scores, transcripts, letters of recommendation, and a writing sample. The deadline for application is January 15.

Several forms of incoming fellowships are available on a competitive basis; these include a stipend, student fees, tuition, and nonresident supplemental tuition (for out-of-state students). In subsequent years, some additional fellowship funding is available, but students in good standing are most often supported with teaching assistantships.

REQUIREMENTS OF THE LPS TRACK

All required courses must be completed with a grade of B or better.

The **History of Philosophy Requirement** provides a broad perspective. Graduate courses in three out of the following four areas—Modern Rationalism, Modern Empiricism, Kant, and Twentieth Century—must be completed by the end of the seventh quarter in residence.

The **Logic Requirement** acquaints students with the fundamentals of modern logic: elementary set theory, metalogic, effective procedures and Gödel's incompleteness theorems. LPS 205A, 205B, and 205C must be completed by the end of the seventh quarter in residence.

The **Field Requirement** provides exposure to a range of philosophical disciplines. One graduate course in moral philosophy and one graduate course in metaphysics/epistemology must be completed by the end of the seventh quarter in residence. (These courses may not also be used to satisfy the History Requirement.)

The **Philosophy of Science Requirement** provides exposure to a range of philosophy of science, from general philosophy of science to the philosophies of particular sciences (e.g., physics, biology), to the philosophies of mathematics and logic. Three selected courses from LPS 240–247 must be completed by the end of the seventh quarter in residence. (These courses may be repeated as topics vary.) Courses used to satisfy the Philosophy of Science Requirement may also be used to satisfy the History or Field Requirements.

The **Tools of Research Requirement** provides some flexibility for students with various levels of interest in pursuing the philosophy of a particular science. So, for example, a student most interested in historical issues in the philosophy of mathematics might benefit most from the study of German, while a student most interested in the philosophy of quantum mechanics should take a series of graduate courses in physics. (Students wishing to specialize further in the philosophy of a particular science might wish to pursue more demanding options; see the Mathematics and Physics emphases, below.) To satisfy this requirement, a student must pass an examination on an appropriate foreign language or receive a grade of B

or better in three appropriate graduate courses in a discipline or disciplines outside philosophy by the end of the ninth quarter in residence. Though the discipline(s) here must be outside philosophy, they might be taught by Philosophy or LPS faculty. The two-hour language examination will be administered by an LPS faculty member and will require the student to translate (with the aid of a dictionary) a passage or passages from philosophical or scientific authors.

The **Portfolio Requirement** ensures that students have acquired dissertation-level skills in the writing of philosophy: e.g., the ability to isolate, understand and evaluate arguments in the philosophical literature; the ability to assimilate secondary literature; the ability to formulate and defend an original philosophical thesis. The portfolio is designed to display these skills. To satisfy this requirement, a student must submit an extended writing sample, most often consisting of several individual papers, that demonstrates the skills necessary to write a Ph.D. dissertation. (A successful portfolio typically consists of several papers totaling around 80 pages. These may be revisions of term papers. Each paper should present and defend a definite thesis and should be accessible to faculty members unfamiliar with the literature in question. The papers in the portfolio need not be of publishable quality, but they must, collectively, demonstrate the specified skills.) Portfolios will be evaluated by the entire LPS faculty. (LPS track students may request that relevant Philosophy Department faculty also be present at the evaluation meeting.) Portfolios must be submitted by the end of the fourth week of the seventh quarter.

The **Candidacy Examination** demonstrates that the student has a viable dissertation topic and an adequate grasp of related literature. To satisfy this requirement, a student must prepare and be examined on a reading list of canonical literature in the area of the dissertation and a brief (15–20 page) dissertation proposal. The reading list should in effect define the context of the proposed dissertation. The examination must be completed by the end of the tenth quarter in residence. The normative time for advancement to candidacy is 3.3 years.

Dissertation Defense. Students must pass a final oral examination focusing on the content of the dissertation administered by the Dissertation Committee. The normative time for completion of the Ph.D. is six years, and the maximum time permitted is seven years.

LPS TRACK EMPHASIS IN MATHEMATICS

In addition to the LPS track described above, students may elect to pursue the more demanding option of the Mathematics emphasis. Faculty in the UCI and UCLA Departments of Mathematics participate in the Mathematics emphasis. Students in the emphasis take courses and receive advising from these participating Mathematics professors, as well as from the faculty of LPS and the Philosophy Department. Mathematics emphasis students must satisfy the following requirement in addition to the usual LPS track requirements:

Mathematics Requirement. A student must receive a grade of B or better in six graduate courses in mathematics. (Some of these courses may also be used to satisfy the Tools of Research Requirement.)

LPS TRACK EMPHASIS IN PHYSICS

In addition to the LPS track described above, students may elect to pursue the more demanding option of the Physics emphasis. Physics emphasis students must satisfy the following requirement in addition to the usual LPS track requirements:

Physics Requirement. A student must receive a grade of B or better in three sections of LPS 241 whose topics are Philosophy of Quantum Mechanics, Geometry and Spacetime, and Probability and Determinism, as well as in three additional graduate courses in

Physics or Mathematics. (Students in the Physics Emphasis may also use these courses to satisfy the Tools of Research Requirement, but not the Philosophy of Science Requirement.)

SALZBURG EXCHANGE PROGRAM

LPS and the Department of Philosophy jointly administer an Exchange Program with the University of Salzburg. The program has two parts. The Scholarly Exchange provides opportunities for faculty and graduate students in LPS and Philosophy to visit Salzburg and for faculty and graduate students from Salzburg to visit one or the other of the UCI units. The Program also sponsors joint conferences, held alternately in Irvine and in Salzburg; these are co-sponsored by Salzburg and the UCI Interdisciplinary Program in the History and Philosophy of Science.

To be eligible for the Salzburg Exchange, a graduate student must have advanced to candidacy. The selected student spends one semester in Salzburg, usually teaching one course in the general area of the thesis topic. An upper-division course may be taught in English, but lower-division courses must be taught in German. (Some previous visitors have learned serviceable German by attending a Goethe institute during the preceding summer.) Typically, a Salzburg visitor will receive a Salzburg Fellowship intended to cover travel expenses, and a stipend; those who teach while in Salzburg will also receive a salary intended to cover living expenses (including health and dental insurance).

Applications from LPS graduate students (including a curriculum vita and syllabi for courses that might be taught) should be sent to the LPS Salzburg Exchange Director by November 1.

Courses in Logic and Philosophy of Science

(Schedule of Classes designation: LPS)

LOWER-DIVISION

29 Critical Reasoning (4). Introduction to analysis and reasoning. The concepts of argument, premise, and conclusion, validity and invalidity, consistency and inconsistency. Identifying and assessing premises and inferences. Deductive versus inductive reasoning, and introduction to the probability calculus. Evaluating definitions. Informal fallacies. Same as Philosophy 29. (V)

30 Introduction to Symbolic Logic (4). An introduction to the symbolism and methods of the logic of statements, including evaluation of arguments by truth tables, the techniques of natural deduction and semantic tableaux. Same as Philosophy 30. (V)

31 Introduction to Inductive Logic (4). Philosophical questions concerning the foundations of scientific inference, e.g., the traditional problem of induction, the Goodman paradox, the concept of cause, Mill's method of inductive reasoning, probability calculus, different interpretations of probability, and their interaction in inductive reasoning. Prerequisite: Logic and Philosophy of Science 30 or 104. Same as Philosophy 31. (V)

40 The Nature of Scientific Inquiry (4). Investigates the nature, scope, and status of scientific knowledge and the methods used to acquire it. Uses concrete historical examples from a variety of scientific fields to identify distinctive features of the scientific enterprise and explore their significance. (II)

60 The Making of Modern Science (4). Surveys the history of science and mathematics since the Scientific Revolution, examining central developments both chronologically and thematically, as well as investigating their significance for contemporary philosophical debates about the role and status of current scientific theories. Same as History 60. (IV)

UPPER-DIVISION

100 Writing Philosophy (4). Discussion of those aspects of writing of special importance in philosophy, e.g., philosophical terminology, techniques for evaluating arguments, philosophical definitions and theories. At least 4,000 words of assigned composition based on philosophical readings. Prerequisites: satisfactory completion of the lower-division writing requirement; junior standing or consent of instructor. Same as Philosophy 100.

102 Introduction to the Theory of Knowledge (4). A study of one or more of the basic issues in epistemology, e.g., the role of perception in the acquisition of knowledge, the nature of evidence, the distinction between belief and knowledge, and the nature of truth and certainty. Same as Philosophy 102.

104 Introduction to Logic (4). Introduction to sentence logic, including truth tables and natural deduction; and to predicate logic, including semantics and natural deduction. Same as Philosophy 104.

105A Elementary Set Theory (4). An introduction to the basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n -tuples, relations, functions, ordinal and cardinal numbers. Prerequisite: Logic and Philosophy of Science 104 or Mathematics 6B or an upper-division course in Mathematics or consent of instructor. Logic and Philosophy of Science 105A and Mathematics 151 may not both be taken for credit. Same as Philosophy 105A.

105B Metalogic (4). Introduction to formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Löwenheim-Skolem theorems. Prerequisite: Logic and Philosophy of Science 105A or consent of instructor. Logic and Philosophy of Science 105B and Mathematics 150 may not both be taken for credit. Same as Philosophy 105B.

105C Undecidability and Incompleteness (4). Introduction to the formal theory of effective processes, including recursive functions, Turing machines, Church's thesis, and proofs of Gödel's incompleteness theorem for arithmetic, and Church's undecidability theorem for first-order logic. Prerequisite: Logic and Philosophy of Science 105B or consent of instructor. Logic and Philosophy of Science 105C and Mathematics 152 cannot both be taken for credit. Same as Philosophy 105C.

106 Topics in Logic (4). Selected topics in mathematical or philosophical logic. Prerequisite: Logic and Philosophy of Science 105B or consent of instructor. May be repeated for credit as topics vary. Same as Philosophy 106.

108 Topics in Induction, Probability, and Decision Theory (4). Selected topics in induction, probability, and decision theory. May be repeated for credit as topics vary. Same as Philosophy 108.

113 Topics in Modern Philosophy (4). Focuses on the works of one or more of the central philosophical figures of the modern period (e.g., Descartes, Leibniz, Hobbes, Locke, Hume, Kant) or the treatment of one or more central philosophical problems by a number of these figures. May be repeated for credit as topics vary. Same as Philosophy 113.

115 Topics in History of Analytic Philosophy (4). Review of one or more central theories or figures in the history of analytic philosophy. Emphasis is on the study of original sources, especially writings of Frege, Russell, Schlick, Carnap, and Quine. Topics include the nature of meaning and truth, the synthetic/analytic distinction, and scientific knowledge. May be repeated for credit as topics vary. Same as Philosophy 115.

120 Topics in Metaphysics (4). Examines central philosophical questions concerning our own fundamental nature and that of the world around us (e.g., causation and necessity, determination, free will, personal identity, the mind-body problem). May be repeated for credit as topics vary. Same as Philosophy 120.

121 Topics in the Theory of Knowledge (4). One or more topics in the theory of knowledge, e.g., the nature of rational justification, of perceptual knowledge, of *a priori* knowledge. May be repeated for credit as topics vary. Same as Philosophy 121.

140 Topics in Philosophy of Science (4). Selected topics in contemporary philosophy of science, e.g., the status of theoretical entities, the confirmation of theories, the nature of scientific explanation. May be repeated for credit as topics vary. Same as Philosophy 140.

140A-B Science and Religion I, II (4-4). The development of genomics, stem-cell research, robotics, nanotechnology, and neuropharmacology raises difficult religious and philosophical questions. Examines interdisciplinary approaches that cut across institutional boundaries, cultural borders, and religious traditions. **140A:** Focuses on the relationship between religion and biological sciences. **140B:** Focuses on the relationship between religion and cognitive/affective/social neuroscience. Same as Social Science 130A-B.

141A Topics in Philosophy of Physics (4). Selected topics in the philosophy of physics, e.g., the interpretation of quantum mechanics, the nature of spacetime, the problem of quantum field theories. May be repeated for credit as topics vary. Same as Philosophy 141A.

141B Geometry and Spacetime (4). An examination of the foundations of the special theory of relativity, with emphasis on the geometry of Minkowski spacetime, and its relation to both Euclidean and non-Euclidean (hyperbolic) plane geometries. Prerequisites: multivariable calculus and linear algebra at the undergraduate level. Same as Philosophy 141B.

141C Philosophy of Quantum Mechanics (4). An examination of the standard von Neumann-Dirac formulation of quantum mechanics. The quantum measurement problem is discussed along with several proposed solutions, including GRW, many-worlds, man-minds, and Bohm's theory. Same as Philosophy 141C.

141D Probability and Determinism (4). An examination of a cluster of interrelated issues concerning probability, determinism, logic, and the foundations of quantum mechanics. Prerequisites: multivariable calculus and linear algebra at the undergraduate level. Same as Philosophy 141D.

142 Writing/Philosophy of Biology (4). Philosophy of biology, e.g., scientific method in biology, the structure of evolutionary theory, teleology, ethics, and evolution. Course work includes one 4,000-word and four 1,000-word papers. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Biological Sciences E142 and Philosophy 142.

143 Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Philosophy 143 and Psychology 123P.

144 Topics in Philosophy of Social Science (4). Selected topics in the philosophy of the social sciences, e.g., is their goal to understand behavior or to predict and control it?; are they normative and the natural sciences not?; do they incorporate philosophical doctrines about language and mind? May be repeated for credit as topics vary. Same as Philosophy 144.

145 Topics in Philosophy of Language (4). Selected topics in the philosophy of language, e.g., the nature of meaning, mechanisms of reference, speech acts. May be repeated for credit as topics vary. Same as Linguistics 141 and Philosophy 145. May be repeated for credit as topics vary.

146 Topics in Philosophy of Logic (4). Selected topics in the philosophy of logic, e.g., the nature of logical truth and our knowledge of it, the status of propositions, definite descriptions, and existential presuppositions. May be repeated for credit as topics vary. Same as Philosophy 146.

147 Topics in Philosophy of Mathematics (4). Selected historical and contemporary topics in the philosophy of mathematics, e.g., mathematical truth and ontology, mathematical knowledge, the nature and role of proof, the workings of mathematics in application. May be repeated for credit as topics vary. Same as Philosophy 147.

199 Independent Study (1 to 4). Investigation of special topics. May be taken for credit for a total of 12 units.

GRADUATE

200 Topics in Logic and Philosophy of Science (4). May be repeated for credit as topics vary.

205A Set Theory (4). The basic working vocabulary of mathematical reasoning. Topics include: sets, Boolean operations, ordered n -tuples, relations, functions, ordinal and cardinal numbers. Same as Philosophy 205A.

205B Metalogic (4). Formal syntax (proof theory) and semantics (model theory) for first-order logic, including the deduction, completeness, compactness, and Loewenheim-Skolem theorems. Prerequisite: Logic and Philosophy of Science 205A. Same as Philosophy 205B.

205C Undecidability and Incompleteness (4). Formal theory of effective processes, including recursive function, Turing machines, Church's thesis, and proofs of Goedel's incompleteness theorem for arithmetic, and Church's undecidability for first-order logic. Prerequisite: Logic and Philosophy of Science 205B. Same as Philosophy 205C.

206 Topics in Logic (4). May be repeated for credit as topics vary. Same as Philosophy 206.

213 Topics in Modern Philosophy (4). May be repeated for credit as topics vary. Same as Philosophy 213.

215 Topics in Analytic Philosophy (4). May be repeated for credit as topics vary. Same as Philosophy 215.

220 Topics in Metaphysics (4). May be repeated for credit as topics vary. Same as Philosophy 220.

221 Topics in Epistemology (4). May be repeated for credit as topics vary. Same as Philosophy 221.

232 Topics in Political and Social Philosophy (4). Same as Philosophy 232.

240 Topics in Philosophy of Science (4). May be repeated for credit as topics vary. Same as Philosophy 240.

241 Topics in Philosophy of Physics (4). May be repeated for credit as topics vary. Same as Philosophy 241.

242 Topics in Philosophy of Biology (4). May be repeated for credit as topics vary. Same as Philosophy 242.

243 Topics in Philosophy of Psychology (4). Selected topics in the philosophy of psychology, e.g., the nature of psychological explanation, reductionism, issues in cognitive, behavioral, and neuroscience. May be repeated for credit as topics vary. Same as Philosophy 243 and Psychology 231P.

244 Topics in Philosophy of Social Science (4). May be repeated for credit as topics vary. Same as Philosophy 244.

245 Topics in Philosophy of Language (4). May be repeated for credit as topics vary. Same as Linguistics 241 and Philosophy 245.

246 Topics in Philosophy of Logic (4). May be repeated for credit as topics vary. Same as Philosophy 246.

247 Topics in Philosophy of Mathematics (4). May be repeated for credit as topics vary. Same as Philosophy 247.

289 Logic and Philosophy of Science Workshop (1 to 4). A two- or three-quarter-long workshop on selected topics in logic and philosophy of science. In-progress grading, Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary. Same as Philosophy 249.

298 Independent Study (4 to 12). May be repeated for credit for a total of 12 units.

299 Directed Research (1 to 12). May be repeated for credit as topics vary.

399 University Teaching (4 to 12). May be repeated for credit for a total of 12 units.

DEPARTMENT OF POLITICAL SCIENCE

5229 Social Science Plaza B; (949) 824-5361
Mark P. Petracca, **Department Chair**

Undergraduate Program

The Department of Political Science offers a wide variety of courses at the introductory, lower-division, and more specialized upper-division levels. Courses in both micropolitics (individual and group politics) and macropolitics (politics at the state and international levels) are offered. The curriculum is organized into five areas: American politics and society, political theory, international relations, comparative politics, and public law. The Department also offers an Honors Program in Political Science for juniors and seniors, culminating in a senior honors thesis.

The Department is composed of a strong and diverse faculty especially interested in analyzing central questions of political science related to such topics as policy-making, political structures, participation, conflict, change and development, power and authority, and interstate relations. The faculty has particular strength in interdisciplinary approaches, in comparative analysis, and in the application of quantitative data to political science issues.

REQUIREMENTS FOR THE B.A. DEGREE IN POLITICAL SCIENCE

University Requirements: See pages 54–61.

School Requirements: See page 464.

Departmental Requirements for the Major

School requirements must be met and must include 11 courses (44 units) as specified below:

I. Five lower-division (one or two digit) Political Science courses selected as indicated either in option A or option B. Students are encouraged to take most of these courses during their first two years as a Political Science major at UCI.

Option A: Political Science 6A, 6B, and 6C (12 units), plus the lower-division introductory course (4 units) for the module selected under II below, plus any one additional lower-division course in Political Science (4 units).

Option B: Three lower-division courses (12 units) selected from Political Science 21A, 31A, 41A, 51A, and 61A, plus any two additional lower-division Political Science courses (8 units). One of these five courses must be the lower-division introductory course for the module selected under II below.

II. Six upper-division courses in Political Science (24 units) chosen from among the Political Science modules numbered 120–179. Three of these courses must be from one module.

Honors Program in Political Science

The Honors Program in Political Science is open to all junior and senior Political Science majors who meet the minimum academic qualifications (3.5 GPA in Political Science courses and 3.2 GPA overall). In addition to satisfying the requirements for the major in Political Science, Honors Program participants must complete additional course work as specified below.

During the year prior to the year in which the thesis will be written, a prospective Honors Program student should identify a Department of Political Science faculty member who is willing to supervise the student's thesis. Students are ordinarily expected to take an upper-division Political Science course or a Political Science 199 Independent Study course with the advisor prior to their senior year. Students must also prepare a written proposal for their senior thesis. Proposals are approved by the faculty advisor and filed with the Department and Undergraduate Counseling offices.

During their senior year, students must enroll in the Honors Thesis Workshop (Political Science H182A, offered during the fall quarter), and three quarters of the Senior Thesis course (Political Science 190). Students write their senior thesis, which is designed and completed under their faculty advisor's supervision. Upon successful completion of their senior thesis, students graduate with Honors in Political Science and their transcripts note that they were in the Honors Program in Political Science.

Public Affairs Internship Program

The Public Affairs Internship Program, sponsored by the Department of Political Science, is designed to provide Political Science and other students with professional experience in the fields of government, nongovernmental organizations, the media, law, business, consulting, and others. The program is open to all sophomores, juniors, and seniors.

This program provides a selection of internship opportunities open to students by intern-sponsors, as available. Students also may create their own internship opportunities, consistent with Departmental guidelines. Students are required to enroll in Political Science 183 during the quarter of their internship. This course, supervised by the internship coordinator and participating members of the

faculty, is offered Pass/Not Pass and cannot be used to satisfy upper-division Political Science requirements.

Information and applications are available in the Department office.

Political Science Minor Requirements

Requirements for the minor in Political Science are met by taking seven political science courses (28 units) as specified below:

- A. One course selected from Political Science 6A, 6B, or 6C.
- B. Three upper-division political science courses, chosen from one Political Science module.
- C. Three additional courses in political science, chosen from those numbered Political Science 6A, 6B, 6C, 20–79, or 120–179.

Graduate Program

Participating Faculty

Edwin Amenta: Political sociology, historical and comparative sociology, social movements, social policy
 Deborah D. Avant: International relations, comparative politics, international law and organizations, history and politics, international security
 Matthew N. Beckmann: American political institutions, the Presidency, Congress, interest groups, and survey research methodology
 Daniel R. Brunstetter: Political theory, international relations, French political thought
 Alejandro E. Camacho: Environmental law, regulatory reform, natural resource law and land use regulation
 Erwin Chemerinsky: Constitutional law, federal practice, civil rights and civil liberties, appellate litigation
 Russell J. Dalton: West European politics, mass political behavior
 James Danziger: Urban political systems, public policy analysis, and technology and politics
 Louis DeSipio: American politics, ethnic politics, Latino politics and public policy
 David Easton: Political systems, political structures
 David L. Feldman: Law and policy, environmental and energy policy, ethics, philosophy, and public policy, comparative public policy, water resources management
 Martha Feldman: Organization theory, organizational change, decision making, public management, qualitative research methods
 Mark J. Fisher: Law and medicine
 Sara B. Goodman: Comparative politics, immigration, integration, and citizenship policies in European Union and North America
 Bernard Grofman: Mathematical models of collective decision making, formal democratic theory, sequential decision making, and politics of small groups
 Helen Ingram: Public policy, U.S.–Mexico relations, American politics
 Marek Kaminski: Institutions of democracy, game theory, methodology, and statistics
 Diana Kapiszewski: Public law, comparative politics, area studies (Latin America), methodology
 Claire Jean Kim: Racial and ethnic politics, protest and social movements, contemporary political theory
 Cecelia Lynch: International relations, peace politics, and international law
 Richard Matthew: International politics, environmental policy
 Anthony McGann: Formal modeling of political systems, comparative political economy, West European politics
 David S. Meyer: Social movements, public policy, peace and war, social justice
 Kristen R. Monroe: Political economy, rationality, American politics, methodology
 Patrick Morgan: National security policy, American foreign policy, international politics, U.S.–European relations, Soviet politics
 Kevin Olson: Political theory, history of political thought, legal theory, philosophy of the social sciences
 Jack W. Peltason: Constitutional law and civil liberties
 Mark P. Petracca: American political institutions (presidency and congress), interest organizations, public policy, power and political discourse
 Shawn Rosenberg: Political psychology, cognitive psychology, public opinion
 Kamal Sadiq: Comparative politics, immigration in developing countries, India and South East Asia, Asian security

Wayne Sandholtz: International political economy, European community
 William Schonfeld: Authority, democratic theory, and comparative politics
 Caesar D. Sereseres: U.S. foreign policy, U.S.–Latin American relations, Mexican-American politics
 Charles (Tony) Smith: Public law and courts, international law and organizations, constitutional law and theory, federalism and intergovernmental relations
 Etel Solingen: International relations theory, international political economy, and world politics
 Dorothy J. Solinger: Chinese domestic politics and political economy, comparative politics, East Asian politics, and democratization
 Rein Taagepera: Mathematical models and quantitative analysis of elections, inequality, arms races, growth–decline phenomena and Baltic area studies
 Katherine Tate: African American and minority politics, voting behavior, public opinion and American elections, state and urban politics
 Keith L. Topper: Political theory
 Rodolfo D. Torres: Urban politics, the State and class structures, studies in racism and inequality, poverty and social policy
 Yuliya V. Tverdova: Comparative politics, methodology
 Carole J. Uhlander: Comparative political participation, formal models of political behavior
 Robert Uriu: International relations, international political economy, Japanese political economy
 Martin Wattenberg: American political behavior and institutions
 Christopher A. Whytock: Transnational litigation, international law, conflict of laws, business law, empirical legal studies

The Department of Political Science offers a Ph.D. degree program in Political Science. The Department has attained a reputation for producing the very best innovative and interdisciplinary scholarship. Faculty are engaged in the study of such key questions as the politics of advanced and democratizing societies, international cooperation and peace, the politics of racial and ethnic minority groups, and the origins of altruism and morality and their impact on world politics.

Graduate students can pursue concentrations in public choice and political psychology and specializations in democracy studies, international relations, and race and minority politics. The Ph.D. program offers big payoffs to graduate students, in fact, because of the extended range of inquiry an interdisciplinary program affords.

Political Science faculty members are regular participants in and help direct several research units on campus. The Center for the Study of Democracy, an Organized Research Unit at UCI, sponsors research and education aimed at improving the democratic process in the United States and expanding democracy around the world. The UCI Interdisciplinary Center for the Scientific Study of Ethics and Morality explores questions concerning the origins and causes of morality. The Center for Global Peace and Conflict Studies (CGPACS), housed in the School of Social Sciences, is a multidisciplinary program dedicated to promoting scholarly, student, and public understanding of international conflict and cooperation. The Institute for Mathematical Behavioral Sciences, also located in the School of Social Sciences, offers opportunities for participation in ongoing faculty research, notably with faculty members engaged in fields of public choice and political economy.

ADMISSIONS

The deadline for application for fall quarter admission is January 15. Students are admitted for winter or spring quarters only under exceptional circumstances. Additional information is available in the general section on admission to Social Science graduate programs. Please note especially the required examinations.

REQUIREMENTS

First-year students must take a core program of graduate seminars, focusing on major substantive areas as well as research methods. Students are required to complete one year of statistics, preferably before enrollment but no later than their first year. Competence in a foreign language is required. Students may substitute mastery of

an advanced research skill in place of a foreign language. To acquire such a skill (which could involve course work in such disciplines as economics, mathematics and computer science, or statistics), students could take courses in econometrics, advanced multivariate regression, or computer science. Attendance in a colloquium series also is required for all graduate students during their first two years in residence.

Reviews and Examinations

Students ordinarily are expected to maintain a grade point average of 3.5 or better. At the completion of the first year, a review of performance in the graduate program will be conducted for each student by the Political Science faculty.

A set of three papers, normally completed by the third year of study, tests the student's competence in a set of major domains for intellectual inquiry. These domains are determined by the student and the Political Science Graduate Director. Upon successful completion of these papers and demonstration of competence in mathematics and a foreign language or an advanced research skill, a candidacy committee is appointed to oversee the qualifying examination and the formal advancement to candidacy. Students are expected to advance to candidacy by the ninth quarter of graduate study.

After the student advances to candidacy, the doctoral committee, usually composed of three members of the candidacy committee, reviews a dissertation prospectus and supervises work toward completion of the dissertation. Within six months of the oral qualifying examination (the formal advancement to candidacy), students are expected to meet with their doctoral committee, in order to discuss with the members a dissertation prospectus.

The normative time for completion of the Ph.D. is six years, and the maximum time permitted is seven years.

Concentration in Public Choice

Public Choice is an interdisciplinary field, at the intersection of political science and economics, which draws on sophisticated quantitative tools to model the functioning of political institutions. Public Choice examines such areas as theories of voter and party choice; the theory of constitutions; the theory of committees and elections; models of regulation; problems of public goods and externalities; rent-seeking models; and issues in social choice, social welfare, and demand revelation.

This concentration is administered by an interdisciplinary committee of faculty from the Departments of Political Science and Economics. Students who elect this concentration are admitted under the normal procedures for the program in Political Science and must fulfill all the requirements for the Political Science degree, with the following modifications:

- (1) Students must complete the three-quarter core sequence in Public Choice, which is taught jointly by Political Science and Economics faculty. This sequence is usually taken in the student's second or third year.
- (2) Students must complete three additional graduate-level, four-unit courses in related fields with the consent of their graduate advisor, chosen from a set of courses designated by the interdisciplinary committee. The courses chosen are to be tailored to the individual interests and academic background of the student and usually will include at least two Economics courses (such as Econometrics, Game Theory, and Law and Economics) and one Political Science course (such as those on electoral systems, party systems, constitutions, courts).
- (3) Students are expected to write their dissertation on a topic related to Public Choice. Usually the dissertation advisor will be a Political Science member of the interdisciplinary committee.

Concentration in Political Psychology

The last two decades have seen an explosion of interest in the field of political psychology. UCI's graduate concentration is part of this development, but enjoys a rather distinctive place. The concentration offers students a broader education than is typically available at other institutions. In this vein, the program aims to provide (1) a strong background in both political science and psychology; (2) an emphasis on theoretical and conceptual issues as well as empirical and methodological ones; and (3) a familiarity with research being done outside of the United States as well as within it. In this context, a number of research concerns central to the participating faculty are considered, including social change and democratization, ideology, altruism, social and political identity, public policy, community building, mass media effects, voting behavior, and international integration. Believing in academic community, the concentration's sponsoring faculty offer a host of activities including colloquia, reading groups, and joint research opportunities to facilitate contact between students and faculty and among the students themselves.

Requirements. The purpose of the concentration is to provide a course of study which supplements the Ph.D. degree in Political Science. Therefore, students are required to complete all degree requirements for the Ph.D. stipulated by the Department of Political Science. As part of or in addition to these requirements, students must take five courses: Introduction to Political Psychology I and II (Political Science 285A and 285B), and three graduate psychology courses which provide a strong background in psychology (selected from an approved group which includes courses such as Personality in Development, Society and Pathology, Personality Assessment, Proseminar in Cognitive Science, and Human Information Processing). These courses are taught in the Department of Cognitive Science in the School of Social Sciences and the Department of Psychology and Social Behavior in the School of Social Ecology.

Courses in Political Science

(*Schedule of Classes* designation: Pol Sci)

LOWER-DIVISION

6 Introduction to Political Science. Basic introduction to politics and society. These courses can be taken in any order.

6A Introduction to Political Science: Political Analysis (4). Presents various modes of understanding politics. Emphasis on basic approaches to political analysis, their uses in constructing theories, and their application to particular national political systems. (III, VIII)

6B Introduction to Political Science: Macropolitics (4). Introduction to political inquiry at the level of the nation-state. Addresses the questions: how do we account for the emergence of a world system of nation-states; how does the course of political development affect the distribution of political power within nation-states; what is the evolutionary linkage between liberal democracies and the transformation of capitalism; what are the major challenges to political governance facing western democracies. (III)

6C Introduction to Political Science: Micropolitics (4). Introduction to political behavior of individuals and groups within national systems. Three major questions are addressed: How do individuals come to understand the political world? How do individuals behave within this world? How do groups and individuals engage in the political process? (III)

10A Probability and Statistics in Political Science I (4). Introduction to the variety of statistical applications in the social sciences. Descriptive statistics. Measures of central tendency and dispersion. Percentile ranks. Standardization and normal approximation. Basic probability theory focuses on application to statistical inference and binomial distribution. Laboratory required. Prerequisites: Social Science 3A; lower-division standing or consent of instructor. Students who receive credit for Political Science 10A may not receive credit for Anthropology 10A, Psychology 10A, Social Ecology 13, Social Science 9A, Social Science 10A, or Sociology 10A. (V)

10B Probability and Statistics in Political Science II (4). Introduction to statistical inference, sampling distribution, standard error. Hypothesis tests for proportions and means. Inferential techniques for nominal variables including chi-square, study measures of strengths, significance of relationships between variables, assumptions, data requirements, and types of error in significance tests. Prerequisite: Political Science 10A or equivalent. Students who receive credit for Political Science 10B may not receive credit for Anthropology 10B, Psychology 10B, Social Ecology 13, Social Science 9B, Social Science 10B, or Sociology 10B. (V)

10C Probability and Statistics in Political Science III (4). Focus on correlation, regression, and control for effects of variables. One-way and two-way factorial analysis of variance. *A priori* and *a posteriori* comparisons. Introduction to repeated measures design and on-parametric statistics. Discusses use of statistics in newspapers and popular magazines. Prerequisite: Political Science 10B or equivalent. Students who receive credit for Political Science 10C may not receive credit for Anthropology 10C, Psychology 10C, Social Ecology 13, Social Science 9C, Social Science 10C, or Sociology 10C. (V)

21A Introduction to American Government (4). Introduction to American political processes and institutions. Topics include elections, political participation, parties, interest groups, the Presidency, Congress, the bureaucracy, and the judiciary. (III)

29 Special Topics in American Politics (4). May be repeated for credit as topics vary.

31A Introduction to Political Theory (4). Types of questions: What is politics? What are the theoretical and philosophical bases for different types of political arrangements? How do these perspectives get translated into reality? Among others, the works of Rousseau, Locke, Mill, and Marx are read. (III)

39 Lower-Division Special Topics in Political Theory (4). May be repeated for credit as topics vary.

41A Introduction to International Relations (4). Analysis of political relations between and among nations with emphasis on explanations of conflict and cooperation. The role of ideologies and their relation to international problems are also examined. Same as International Studies 14. *Political Science majors have first consideration for enrollment.* (III, VIII)

42A Nuclear Arms and Global Conflicts (4). Introduction to the history, technical basis, military capacity, and political conceptions and perceptions that bear on the global nuclear arms race. Topics include how weapons work and are delivered, theories of deterrence, arms race models, prospects for arms control and disarmament. (VIII)

43D Global Security and Cooperation (4). Examination of global conflict and cooperation since World War II, and future prospects. The Cold War, nuclear arms race, regional conflicts, arms proliferation and control, deterrence theory, psychology of conflict, governmental and nongovernmental efforts to promote global peace and cooperation. (VIII)

44A Global Issues and Institutions (4). Surveys recent developments in the nature of global interdependence. Examines the major political, economic, and military conflicts of this century and recent problems of population growth, environmental decay, ethnic/national antagonism and violence, and post-Cold War politics. (III, VIII)

49 Lower-Division Special Topics in International Relations (4). May be repeated for credit as topics vary.

51A Introduction to Comparative Politics (4). Presents various analytical methods used to compare political systems. Emphasis on examination of theories and research with national political systems as units of analysis. Understanding how it is possible to compare political units and make meaningful statements about them. (III)

59 Lower-Division Special Topics in Comparative Politics (4). May be repeated for credit as topics vary.

61A Introduction to Race and Ethnicity in Political Science (4). Examines major theories that attempt to explain the roles of race and ethnicity in U.S. politics, while also looking at the political attitudes and behaviors of ethnic and racial populations in order to measure their contemporary political influence. Same as Chicano/Latino Studies 64. (III, VII)

69 Lower-Division Special Topics in Minority Politics (4). May be repeated for credit as topics vary.

71A Introduction to Law (4). An introduction to the study of judicial politics. Questions include: what is law?; what is a court?; who are the judges? Analysis of a wide range of judicial decisions illustrates the political importance of courts in the U.S. and elsewhere. (III)

79 Lower-Division Special Topics in Law (4). May be repeated for credit as topics vary.

UPPER-DIVISION

120–129: AMERICAN POLITICS AND GOVERNMENT

120 Public Opinion (4). This writing course introduces students to theories concerning sources of public opinion, processes by which it is altered, organization of citizens' belief systems, and role of public opinion in government policy. Students analyze survey data as a research project. Prerequisite: satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

121A The American Presidency (4). Presents a comprehensive survey of the American presidency and considers the question of political power. *Political Science majors have first consideration for enrollment.*

121B Mass Media and the Nomination Process (4). Examines changes in the presidential nomination process over the last four decades as well as the role of the media in this process. Students do a research paper comparing the media's coverage of two nomination races in different historical eras. *Political Science majors have first consideration for enrollment.*

121C U.S. Elections and Voting Behavior (4). Examines how voters evaluate political parties, candidates, and issues in electoral campaigns to reach their decisions. Numerous controversies concerning the degree of issue voting, sophistication of candidate evaluations, and the decline of political parties are discussed. *Political Science majors have first consideration for enrollment.*

121E Public Policy Analysis (4). Examines different approaches to the analysis of public policy with differing notions of what constitutes good policy, the role of government, and how citizens participate in policy-making. Suggests a policy-design perspective which builds upon other frameworks but concentrates on goals, implementation structures, tools, and rationales. Prerequisites: Social Ecology E8 or Planning, Policy, and Design 4, and Planning, Policy, and Design 166. Same as Planning, Policy, and Design 169. *Political Science majors have first consideration for enrollment.*

121F Presidents Since World War II (4). Reviews the actions and character of presidents from Harry Truman through Bill Clinton. Each week a different president is examined from a variety of perspectives. Students are expected to write a substantial original research paper. Prerequisite: Political Science 21A. *Political Science majors have first consideration for enrollment.*

122A American Metropolitan Politics (4). An analysis of the politics of urban and suburban cities. Main themes include alternative explanations of how political power is exercised and how policy decisions are made for urban governments; the structure of local political systems, including the problems of metropolitanism and federalism; the major policy problems facing the urban area, particularly from the perspective of the "underclass." *Political Science majors have first consideration for enrollment.*

122B California Politics (4). Examines the structure and function of California government, traces historical development of political power, with constantly changing casts of power-brokers and seekers. Explores California exceptionalism and the roles played by the electorate, legislature, executive, and organized interests in policy making. Prerequisite: satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

122C The American Electorate (4). Provides an overview of how polls are conducted, and how they can be manipulated by question wording, sampling techniques, interviewing procedures, and context. Public attitudes toward Congress are examined, and students analyze survey data on their own as a research project. *Political Science majors have first consideration for enrollment.*

123A Parties and Political Organizations (4). A consideration of the role that parties and other political organizations play in the American political process. Also looks at the development and significance of PACs, interest groups, and social movements as vehicles for democratic participation. *Political Science majors have first consideration for enrollment.*

123B Representation and Redistricting (4). Deals with classical theories of representation: issues of racial and political representation in U.S. legislatures and city councils; proportional representation models and comparative election systems. Prerequisite: Political Science 21A. *Political Science majors have first consideration for enrollment.*

123C Reforming American Politics (4). Assesses the demands and prospects for political reform in America. Where is political reform most needed? Why? What form shall it take? Focuses specifically on ethics of public decision-making, professionalization of American politics, institutional designs for democratic governance. *Political Science majors have first consideration for enrollment.*

124A The Politics of Protest in the U.S. (4). Examines the Civil Rights movement, the Black Power movement, and the women's movement in light of existing social movement theories. The theories are used to illuminate the three cases, and the cases are used to critique and revise the theories. (VII)

124B Latinos in U.S. Politics (4). Comparing the political issues facing Latino groups by examining their migration histories, voting behavior, non-electoral participation, and policy issues. Latino issues are examined on the national, state, and local levels, including formal representation, immigration, affirmative action, and language policy. Same Chicano/Latino Studies 151. (VII)

124C Comparative Minority Politics (4). Examines the political experiences of Blacks, Latinos, and Asian Americans in the United States from roughly 1950 to the present. Focuses on how each group has pursued political empowerment via both conventional political channels and social movements. Same as African American Studies 151, Asian American Studies 132, and Chicano/Latino Studies 147. (VII)

124D Race and Citizenship in America (4). The role U.S. citizenship policy has played in the social construction of race. Looks comparatively at citizenship experiences of different racial/ethnic groups to understand how the meaning of being a U.S. "citizen" has varied over time and across groups. Same as Chicano/Latino Studies 152. (VII)

124E African American Politics (4). Examines the politics of African Americans in order to gain a broader perspective of the American political process. Major developments in African American politics (including the civil rights movement, Black presidential bids), continuing problem of racism, responsiveness of key governing institutions. Same as African American Studies 152. *Political Science majors have first consideration for enrollment.*

125A The United States Congress (4). Does the Congress do a good job of representing the American citizenry? Is it the most appropriate mechanism for the creation, resolution, and implementation of public policy? Prerequisite: satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

125B Congress: The New Institutionalist Approach (4). Study of the U.S. Congress emphasizing how rules and institutions (filibuster, veto, the committee system, party caucuses) structure how the Congressional game is played. Combines theoretical study of procedures with the practical study of actual bills. *Political Science majors have first consideration for enrollment.*

126A Mexican-Americans and Politics (4). Examines political development of Mexican-Americans. Topics include their "territorial" roots in the Southwest, demographics, political leadership and organization; policy issues of immigration, bilingualism, education, and economics; relations with other minority groups; the role of Mexican-Americans in U.S.–Mexico relations. Same as Chicano/Latino Studies 143. (VII)

126B Urban Policy Analysis (4). Problem-solving seminar examining key issues for urban political systems and the metropolitan area. Evaluation of the nature, quality, and feasibility of alternative analyses of a series of policy problems, such as housing, poverty/welfare policy, transportation, crime, education. Prerequisite: consent of instructor. *Political Science majors have first consideration for enrollment.*

126C U.S. Immigration Policy (4). Examines selected immigration policy debates since the nineteenth century, rationale and consequences of immigration law since 1965, problems of administration, implementation and enforcement, impact of immigration policy on foreign relations, and contemporary debate regarding the future of U.S. policy. Same as Chicano/Latino Studies 163. (VII)

126D Urban Politics and Policy (4). Examines the economic limits of cities and welfare policy. Addresses such issues as why are the poor concentrated in the central cities? Which anti-poverty programs will work best in the cities? Which level of government is best able to combat poverty in the U.S.? *Political Science majors have first consideration for enrollment.*

126F Politics of Animal Rights (4). Examines animal rights/welfare movement's efforts to transform moral, practical, and legal standing of nonhuman animals in contemporary U.S. Topics include philosophical debates about the moral status of animals; current knowledge about animal minds and emotions; factory farming; ethics of vegetarianism/veganism. *Political Science majors have first consideration for enrollment.*

127A-B-C Public Economics I, II, III (4-4-4). **127A:** Examines the role of government expenditure in the economy from both a theoretical and an empirical perspective, with a focus on two broad categories of government expenditures policies: social insurance and redistribution programs. Analysis of taxation. **127B:** Theory of public goods, externalities, voting models, analysis of bureaucracy, the Tiebout model, income redistribution, intergovernmental grants. **127C:** Allows students to apply knowledge of public economics in the conduct of individual research. Prerequisites: Economics 100A-B or 105A or consent of instructor. For 127C: satisfactory completion of the lower-division writing requirement. Same as Economics 141A-B-C. *Political Science majors have first consideration for enrollment.*

129 Special Topics in American Politics and Society (4). May be repeated for credit as topic varies. *Political Science majors have first consideration for enrollment.*

130–139: POLITICAL THEORY AND METHODS

130A Game Theory and Politics I (4). Introduction to game theory and a survey of its political applications. Examples of topics covered include voting in small committees, legislatures, and mass elections; interest group activities and environmental issues; institutional design, and the evolution of cooperative behavior. Same as International Studies 105A and Social Science 103A. *Political Science majors have first consideration for enrollment.*

130B Game Theory and Politics II (4). More advanced game theory and its political applications, beginning where Game Theory and Politics I ends. Examples of topics covered include revolutions; arms race; spatial models of party competition; political manipulation; political coalitions and their power. Prerequisite: Political Science 130A or Economics 116. Same as International Studies 105B and Social Science 103B. *Political Science majors have first consideration for enrollment.*

131A Political Thought Since Hobbes (4). Classic statements of political values from Hobbes to the present: classical liberalism, conservatism, radical democracy, liberal democracy, socialism, pluralism, Marxism, fascism, neo-conservatism. Emphasis on underlying views of human nature and history. Prerequisite: upper-division standing or consent of instructor. *Political Science majors have first consideration for enrollment.*

131D Nietzsche (4). The social, economic, and political philosophy of Nietzsche. Nietzsche's seminal ideas about knowledge and language and how these ideas have influenced contemporary thinking concerning these subjects. Prerequisite: satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

132A Critical Political Theory (4). Acquaints students with current political theories, critical of conventional thinking, which attempt to join political, economic, social, historical, linguistic, and philosophical concerns to questions involving the relationships between and among individuals, groups, and institutions in the society, economy, and polity. Prerequisites: upper-division standing and satisfactory completion of the lower-division writing requirement. Same as Sociology 126. *Political Science majors have first consideration for enrollment.*

133D Analytic Political Research (4). Encourages students to think creatively and analytically about politics by applying mathematical techniques as a means to increase understanding. Introduces the use of both static and dynamic mathematical models on such political topics as elections, revolution, and arms races. *Political Science majors have first consideration for enrollment.*

134A Democratic Theory and Liberalism (4). A modern approach to democratic theory including social choice and empirical democratic theory. Addresses issues such as how institutions can be democratic, how minorities can be protected, how rights can be balanced against obligations, and how democracy can promote deliberation. *Political Science majors have first consideration for enrollment.*

134B Modern Political Theory (4). Focuses on a different aspect of modern political theory each quarter. *Political Science majors have first consideration for enrollment.*

134F Social and Political Theory (4). Focus is on recent major work in social and political theory. An in-depth analysis of a relatively small body of writing. Authors discussed include Jurgen Habermas, Anthony Giddens, and Richard Rorty. *Political Science majors have first consideration for enrollment.*

134H Language and Power (4). Seminar to study a theory of how reality/meaning/knowledge is created in language as a consequence of structures of power. Prerequisites: upper-division standing and satisfactory completion of the lower-division writing requirement; strongly recommended: 3.5 GPA and/or background in modern language analysis. *Political Science majors have first consideration for enrollment.*

134J Sexism and Power (4). Sexism may be seen as a particular form of socially constructed power which creates and maintains gender differences as relations and practices of structured inequalities. Males and females are objects constructed in a powered language dominated and controlled by males to their positional and distributional advantage. Prerequisites: upper-division standing and satisfactory completion of the lower-division writing requirement. Same as Sociology 168. *Political Science majors have first consideration for enrollment.*

135A Origins of Liberalism (4). Examines the ideals, social forces, and historical events that gave rise to liberal political theory. Topics include patriarchal authority, the divine right of kings, religious toleration, slavery, colonialism, political economy, the evolution of law, and tensions between liberty and equality. Prerequisite: Political Science 6B or 6C or 31A, or consent of instructor. *Political Science majors have first consideration for enrollment.*

137A Politics and Human Nature (4). Addresses the central debate between positive social science and normative political theory: is there an intrinsic human nature? If so, what is it? What is its origin? And how much cultural variation does it display? Prerequisite: satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

137B Types of Political Representation (4). Political representation plays an important role in democratic systems, but is elusive once examined closely. Students delve into the concept and relate different views to political life. Half of the course is spent on writing instruction. Prerequisite: satisfactory completion of the lower-division writing requirement. Recommended for upper-division students. *Political Science majors have first consideration for enrollment.*

137C Political Psychology (4). Examination of how psychological theory and research may be used to better understand political thought and behavior. Drawing on theories of learning, cognition, and personality, discusses the formation of political attitudes, the process of political decision-making, the nature of political leadership. Formerly Political Science 128A. Same as Psychology 176A. *Political Science majors have first consideration for enrollment.*

138B Ethics and Public and Private Life: Advanced Seminar (4). Examines ethical issues in public and private life by considering traditional moral theory in light of specific moral dilemmas, such as environmental policy, genocide, abortion, euthanasia, social welfare, and aid to other countries. Prerequisite: satisfactory completion of the upper-division writing requirement or consent of instructor. Same as Planning, Policy, and Design 168. *Political Science majors have first consideration for enrollment.*

138C Ethics of Difference (4). Examines differences traditionally judged politically salient—race, ethnicity, religion, gender. Personal interviews with an elderly person encourage students to understand the social construction of difference and to reexamine their own attitudes by putting themselves in the place of another. Prerequisite: satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

139 Special Topics in Political Theory and Methods (4). May be repeated for credit as topic varies. *Political Science majors have first consideration for enrollment.*

140–149: INTERNATIONAL RELATIONS

141A Environmental Politics and Policy (4). Lecture, three hours. Provides a multifaceted foundation for the development of environmental problem-solving and policy-making skills. Examines “nature” from a range of historical and cultural perspectives. Links socio-ecological stress theories to a range of landscapes and contemporary debates. Current air, water, and land policies. Same as Planning, Policy, and Design 138. *Political Science majors have first consideration for enrollment.*

141B International Political Economy (4). Examination of problems in global political-economic relations through competing conceptual lenses or grand theories: mercantilism, liberalism, and marxism. Surveys North-North and North-South issues relating power and wealth. (VIII)

141C International Political Economy of East Asia (4). Integration of theoretical perspectives in international political economy with the study of economic development in East Asia, with special emphasis on regional integration. (VIII)

141E U.S. Foreign Policy Toward Asia (4). U.S. policy toward the countries of East Asia: bilateral and regional security relationships, U.S. economic relations with the major Asian countries, the development of regional institutions, and human rights. (VIII)

142B The International Relations of East Asia (4). Surveys various aspects of relations between the nations of East Asia. Topics include historical development of the region; current political and security relations, including the impact of the American military presence; other issues such as economic relations and human rights. *Political Science majors have first consideration for enrollment.*

142D U.S. Foreign Policy I: Globalism and Cold War (4). Looks at the changing international perspectives, policy responses, and military strategies of presidential administrations from Truman to Reagan. In assessing the motives and objectives of U.S. foreign policy leaders during the “Cold War” era, the concept of “national interest” is examined. *Political Science majors have first consideration for enrollment.*

142E U.S. Foreign Policy II: Cold War Decline and After (4). Deals with U.S. foreign policy from the post-Vietnam War era through the collapse of the Cold War and into the emergence of the post-Cold War era, roughly from 1972 to the present. *Political Science majors have first consideration for enrollment.*

142F U.S. Foreign Policy III: National Security Decision-Making (4). Concept of “national security” from 1947–1990s is reviewed. Organizational and psychological factors that influence decision-making, the dangers of “group-think,” and the issues of accountability are analyzed. National security agenda (military, economic, environmental, and social) for the 1990s is discussed. *Political Science majors have first consideration for enrollment.*

142G U.S. Coercive Diplomacy (4). Examines the theory of compellence and the U.S. practice of coercive diplomacy—the power to change the behavior of other governments. Specific case examples include the Cuban missile crisis, bombing of North Vietnam, the Nicaraguan Contras, Desert Shield/Desert Storm, and Libya. Prerequisite: junior or senior standing. *Political Science majors have first consideration for enrollment.*

142H Human Rights and Foreign Policy (4). Analyzes theories, patterns, and cases of human rights foreign policy. How do countries pursue the values and standards of human rights in their foreign relations? How does the U.S. fit into worldwide trends? Examines U.S. behavior and international human rights. (VIII)

143B Alternative Security (4). Seminar designed to critically evaluate the major means of preventing the outbreak of a great war—deterrence—and some major alternatives to this policy. Prerequisite: Political Science 42A. *Political Science majors have first consideration for enrollment.*

143D Global Environmental Issues (4). While many agree that environmental problems threaten humankind, there is much disagreement over the nature of these threats and how to address them. Examines global environmental issues from various perspectives in order to provide answers to these questions. Same as Planning, Policy, and Design 136 and International Studies 120. *Political Science majors have first consideration for enrollment.*

143E Globalization and Its Discontents (4). Reviews current literature on globalization and its impact on global, regional, and domestic politics. Explores how different states, nations, and cultures respond to common global predicaments and opportunities emanating from the international economy and the global institutions associated with it. (VIII)

143F Intelligence in International Politics (4). Intelligence agencies, activities, and functions—their impact on international politics; how governments and societies seek to control intelligence agencies and activities; and how intelligence agencies work—their techniques, resources, technology, problems, successes, and failures. *Political Science majors have first consideration for enrollment.*

144A Approaches to International Relations (4). Reviews theoretical and methodological approaches to the study of international relations using contending perspectives to analyze power and influence, capabilities, interdependence, reciprocity, international regimes, anarchy, cooperation, imperialism, and hegemony. *Political Science majors have first consideration for enrollment.*

146A Ethics and International Relations (4). Introduces students to the dynamic field of ethics and international relations. A variety of traditional and emerging perspectives are examined, skeptical views are discussed in detail, and arguments are illustrated with current cases. Same as Planning, Policy, and Design 140. (VIII)

146B Religion and World Politics (4). Examines the relationship between religion and world politics historically and today, focusing on connections with peace/war, democracy, human rights, secularism(s), and globalization. Covers major debates, scholarship, concepts, and theories through class exercises, exams, and essays. Prerequisite: Political Science 41A, or International Studies 11 or 12, or Religious Studies 5A, 5B, or 5C. Same as Religious Studies 115 and International Studies 151B.

149 Special Topics in International Relations (4). May be repeated for credit as topic varies. *Political Science majors have first consideration for enrollment.*

150–159: COMPARATIVE POLITICS

150A Seminar on Regime Change in East Asia (4). Examines nine factors relevant to regime change, studying one factor each week in class. Students write four short (two-page) analytic papers, and one eight–ten-page research paper on one country. Prerequisites: Political Science 6A, 6B, 6C and satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

151A East Asian Politics (4). Explores the recent history and political systems of China, Japan, and Korea, comparing the three countries with each other and with occasional reference to the United States, British, and French systems. (VIII)

151B Introduction to Chinese Politics (4). Background to the Chinese revolution, rise of the Communist party; and institutions, ideology, and structure of Communist party rule from 1949–present. (VIII)

151C Chinese Politics: Policy, Leadership, and Change (4). Examines major policies from 1949 to the present, and considers the changing role of the Communist Party and its shifting treatment of various social groups; the era of Mao Zedong, reforms under Deng, and post-Deng politics. (VIII)

151D Japanese Politics: State and Economy in Modern Japan (4). Introduction to the political foundations and economic achievements of modern Japan. Focus on the development and evolving roles and functions of the principal institutional actors in Japan's political economy. (VIII)

151E Are Chinese Politics Changing? (4). There's been speculation about whether the Chinese political system is fundamentally changing. This upper-division writing seminar reviews new books on this topic and considers the question from a range of angles. Four two-page papers and one 8–10-page paper required. Prerequisite: satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

151F Korean Politics and Society (4). Examination of contemporary political/social structures and process of Korea (South and North). Historical and cultural influences on current political systems and policies. Also included are economic development, national security, unification issues, and foreign relations. (VIII)

151G Electoral Systems (4). A worldwide overview of electoral laws by which votes are converted into assembly seats. Systematic analysis of these laws and their effect on political process and stability. Single-, two-, and multi-party systems. Proportional representation versus plurality rule. Majoritarian and consensus patterns of government. Political Science 52B and 151G may not both be taken for credit. *Political Science majors have first consideration for enrollment.*

151H Voting and Political Manipulation (4). Introduction to social choice and cooperative games. Topics include majority rule, types of voting methods, apportionment and proportional representation, agenda manipulation, coalition formation, voting power, political consequences of electoral laws. Same as International Studies 156A and Social Science 121T. *Political Science majors have first consideration for enrollment.*

152C German Politics and Society (4). Concentrates on twentieth-century German politics and society, focusing on the contemporary political system of democratic West Germany. Study of the historical legacies of Weimar and the Nazi period, the postwar division between the two German states, and their reunification. (VIII)

152D Post-Soviet Politics I (4). An overview of the present sociopolitical structure and of the major national cultures within the former Soviet Union. (VIII)

152F West European Politics (4). Explores four main themes: (1) thinking scientifically about politics; (2) understanding the linkages between different political structures and spheres of activity; (3) evaluating some theories about politics; (4) learning about three countries: Britain, France, and Germany. (VIII)

152G European Politics (4). An introduction to the politics of Europe including the smaller countries and the former Warsaw Pact. Includes case study of three or four countries, as well as contemporary issues such as globalization, immigration, population decline, and European integration. *Political Science majors have first consideration for enrollment.*

153A Latin American Politics (4). Explores the common political dynamics of Latin America, as well as the political histories and prospects of selected countries of the region. Places Latin American politics in an analytical framework derived from comparative politics. (VIII)

153B Canadian Politics (4). An overview of contemporary Canadian government and politics. In addition to consideration of the basic structures and processes of Canadian government, topics may include regionalism, federalism, western alienation and oil, Canadian solutions to social welfare policy questions, developments in Quebec. (VIII)

153C Research in Canadian Politics (4). Intensive consideration of several topics in Canadian politics and society, leading to the writing of a research paper by each student. Topics are oriented toward contemporary issues of public policy. Prerequisite: Political Science 153B or consent of instructor. *Political Science majors have first consideration for enrollment.*

153E Human Rights (4). Examines the causes and consequences of human rights violations with a focus on Latin America. What are human rights? When and where are they violated? What political mechanisms are available to deal with human rights problems? How effective are they? (VIII)

154C Comparative Politics: Four Nations, Three Continents (4). Studies four countries in a comparative fashion: their respective political histories and cultural traditions, actual differences among their superficially similar party, parliamentary, and executive institutions; contemporary economic policy. The countries represent three continents and stand at varying levels of economic development. (VIII)

154E Comparative Political Economy (4). Examines the interaction between politics and markets, both in theory and in practice, explicitly linking classic works on political economy with current policy debates. Studies how political systems and markets are organized in different national settings. *Political Science majors have first consideration for enrollment.*

154F Peoples and Cultures of Post-Soviet Eurasia (4). Examines the cultures and political conflicts of the more than 130 indigenous ethnic groups in the European and Asian territories of the former U.S.S.R. Emphasis is on the theoretical issues of ethnicity, nationalism, and conflict management. Same as Anthropology 164P. (VIII)

154G Conflict Management in Cross-Cultural Perspective (4). Examines theories of conflict management. Analyzes how conflict is mitigated in diverse cultures: at the interpersonal level, between groups, and on the international scale. Students discuss readings, hear from conflict management practitioners, and simulate negotiations. Same as Anthropology 136D, International Studies 183E, and Social Science 183E. (VIII)

155B Political/Social Impacts of Computing (4). Aims to increase our understanding of the major impacts of computer and telecommunications technologies on contemporary society. Emphasis on the uses and effects of these technologies on the political world, as well as other effects on society that are policy-relevant. Analytic research paper required. Prerequisite: consent of instructor. *Political Science majors have first consideration for enrollment.*

155C Organizations (4). How bureaucracies, formal organizations, and voluntary associations work, how and why they grow, and where they are going. History and structure of organizational rationality; dynamics of organized groups; behavior in organizations. The limits of bureaucratization and attempts to overcome these limits through decentralization. Same as Sociology 141. *Political Science majors have first consideration for enrollment.*

155E Revolution and Collective Political Violence (4). Examines the theory of collective political violence, internal war, and insurgency. Considers causes and “process” of revolutions; comparative characteristics of organized armed movements; personality of revolutionary leaders. U.S. foreign policy and military doctrine on insurgency and low-intensity conflict reviewed. Prerequisite: satisfaction of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

155F Political Economy of Japan (4). Surveys postwar developments in the politics and political economy of Japan. Topics include the political and institutional context of policy making; pressures for change which Japan’s political economy has faced in the last decade; and Japan’s foreign policies, past and present. (VIII)

156A Political Participation (4). The ways in which people in various political systems take part in politics, especially in activities directed toward affecting outcomes. Who is active, what they do, why they do it, and what difference it makes. (VIII)

156B Participation and Representation (4). Examines the concepts “political participation” and “political representation” and the interconnection between these concepts. Addresses both the theoretical issues and debates raised by these concepts and considers how they are studied empirically. Prerequisite: upper-division standing or consent of instructor. *Political Science majors have first consideration for enrollment.*

156C Citizen Politics (4). Study of the role of public opinion in the political process. Reviews some of the key research approaches and findings on which our current understanding of public opinion is based, and provides an opportunity to conduct research and to analyze public opinion surveys. Prerequisite: satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

156D Social Movements and Collective Behavior (4). A survey of models of collective action drawn from sociology, economics, psychology, and political science, and focusing on areas such as social movements, strikes, crowd psychology, cults, fads, fashions, public opinion, and symbolic and mythical elements in collective culture. Prerequisite: Political Science 6A, Sociology 1, or Economics 1. Same as Sociology 174. *Political Science majors have first consideration for enrollment.*

157A Nationalism (4). Nationalism, one of the most potent social and political forces of the twentieth century, is explored. Seeks to understand the sources and nature of various forms of nationalism. Prerequisite: satisfactory completion of the lower-division writing requirement. (VIII)

159 Special Topics in Comparative Politics (4). May be repeated for credit as topic varies. *Political Science majors have first consideration for enrollment.*

170–179: PUBLIC LAW

171A Law and Society (4). Examination of the law and its various roles in society. The nature and meaning of law; legality and power in the American system; law as a mechanism for social change; the role of law in dispute processing, social control, compliance with judicial decisions. Prerequisites: Political Science 71A and satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

171B Jurisprudence (4). A survey of legal philosophies. Explores jurisprudence from the ancient Greeks to the present, including natural law philosophy; legal positivism and realism; sociological jurisprudence; and liberal, radical, and conservative thought. Prerequisite: Political Science 71A. *Political Science majors have first consideration for enrollment.*

171C Comparative Constitutional Politics (4). Examines the impact of constitutional courts on politics and policy-making in Canada, France, Germany, and the United States. Cases may focus on the constitutional politics of free speech, abortion, rights to property, and the conduct of foreign relations. Prerequisite: Political Science 71A and satisfaction of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

171D American Constitutional Law (4). American constitutional interpretation through extensive analysis of cases involving the separation of powers, federal-state relations, rights of property, free expression, privacy, criminal due process, political participation, and equality. Corollary topics include legal research methods, development of judicial review, legal reasoning, and the political impact of Supreme Court decisions. Prerequisite: Political Science 71A. Political Science 171D and Criminology, Law and Society C122 may not both be taken for credit. *Political Science majors have first consideration for enrollment.*

171F Law in the Twenty-First Century (4). Examines the complex relationship between law, the social sciences, and modern society. Lectures explore such issues as the interplay between technology and constitutional rights, the impact of science on law, and the evolving roles of attorneys and judges. Same as Social Science 172D. *Political Science majors have first consideration for enrollment.*

172A International Law (4). Examination of the origin, changing structure, and application of international law, and the role of legal norms in regulating the behavior of states and maintaining international order. The use of force, pacific settlement of disputes among nations, human rights, international terrorism. Prerequisite: Political Science 71A. (VIII)

172B International Law and the U.S. Legal System (4). Explores how international law and U.S. law interact, focusing on recent cases and controversies. Topics include: treaty and customary law as U.S. law; international human rights litigation in U.S. courts; war powers; detentions in the war on terror; and torture. Prerequisite: Political Science 71A or 172A. (VIII)

174A Civil Liberties (4). Political analysis of selected Supreme Court cases involving claims under the Bill of Rights and the Fourteenth Amendment. Topics include: race, sex, and other forms of discrimination; criminal justice; privacy; freedom of speech and related claims. Prerequisite: Political Science 71A. Political Science 174A and Criminology, Law and Society C122 may not both be taken for credit. *Political Science majors have first consideration for enrollment.*

174B Contemporary Constitutional Rights (4). Addresses a central aspect of politics: the interpretation and application of the United States’ fundamental rules. These rules tell us something about the goals of society, and the means chosen to achieve them by allocating rights and duties, costs, and benefits among its members. Prerequisite: Political Science 71A or consent of instructor. *Political Science majors have first consideration for enrollment.*

174C U.S. Supreme Court (4) Detailed overview and analysis of the role played by the U.S. Supreme Court in the American political system. Judicial review, appointment of justices, judicial activism and judicial restraint, process of case selection, court deliberation, and decision-making, impact of Supreme Court decisions. Prerequisite: satisfactory completion of the lower-division writing requirement. *Political Science majors have first consideration for enrollment.*

179 Special Topics in Public Law (4). Prerequisite: Political Science 71A. May be repeated for credit as topics vary. *Political Science majors have first consideration for enrollment.*

SPECIAL COURSES—UPPER-DIVISION

H180 Honors Seminar in Political Science (4). Restricted to students enrolled in the Honors Program in Political Science. May be taken for credit three times as topics vary.

H182A Honors Thesis Workshop (4). A weekly seminar/workshop to facilitate the exchange of ideas and research strategies among students and to review their progress in writing the thesis. Prerequisite: consent of instructor. Open only to students in the Political Science Senior Thesis program.

183 Public Affairs Internship (4). Supervised internship and study in political, governmental, nonprofit, or related organizations for students participating in the Department's Public Affairs Internship Program. Enrollment dependent upon availability of intern positions. Pass/Not Pass only. Prerequisite: consent of instructor. May be taken for credit three times.

184 Government Internship (4). Internship and study in political, governmental, nonprofit, or related organizations for students participating in the UCDC Program. Pass/Not Pass only. Prerequisite: consent of instructor. May be taken for credit twice.

190 Senior Thesis (1 to 4). Prerequisite: consent of instructor and satisfactory completion of the lower-division writing requirement. May be taken for credit three times.

197 Field Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198 Directed Group Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies. Students may enroll for only one 199 each quarter.

GRADUATE

210A Research Seminar in Politics and Society (1.3). Weekly reports and colloquia by faculty, students, and visitors. Students required to report on one research project over the course of three quarters. Required of first- and second-year graduate students in Political Science. Satisfactory/ Unsatisfactory only. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

211A Foundations of Modern Political Science (4). Provides an introduction to major works by highly influential scholars in the nineteenth and twentieth centuries, such as Marx and Engels, Mosca, Michels, Weber, Wallas, and Lasswell, that constitute the foundation of contemporary political science. Required of first-year graduate students in Political Science. Prerequisite: graduate standing or consent of instructor.

211B Micropolitics (4). Provides students with comprehensive introduction to the substance and methods of the study of political behavior. Focuses on the level of individual behavior, but the relation to macrosocial analysis is considered. Required of first-year graduate students in Political Science. Prerequisite: graduate standing or consent of instructor.

211C Macropolitics (4). Examines some of the major research issues in political science involving macro-level questions: systemic processes, political institutions, or system outputs. Required of first-year graduate students in Political Science. Prerequisite: graduate standing or consent of instructor.

219A-Z Special Topics in Politics and Society (4). Current research in politics and society. May be repeated for credit as topics vary.

221A Public Policy (4). Explores different approaches to public policy analysis, the diverse conceptions of the goals and objectives that should be served by policy, and the appropriate role of the policy analyst. Policy consequences are traced to indirect and subtle incentives and disincentives. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 221 and Criminology, Law and Society C255.

222A Collaborative Governance and Public Management (4). Introduction to inclusive management. To make effective use of public resources, public managers are inventing ways of managing that alter relationships within organizations, between organizations, between sectors, and with the public. Requires rethinking fundamentals such as leadership and motivation. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 283.

223A Theories of Power and Empowerment (4). Studies different ways of thinking about power and its uses. Explores theories of power that inform various notions of empowerment, including resistance, participatory democracy, and workplace empowerment. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 279 and Sociology 271.

229 Advanced Research Methods: Varied Topics (4). Topics in advanced research methods. Topics will vary. Prerequisite: graduate standing. May be repeated for credit as topics vary.

232A Introduction to Voting Theory (4). Introduction to voting modules. Substantive topics include majority rule, voting methods and their properties, apportionment and proportional representation, agenda manipulation, coalition formation, voting power, political consequences of electoral laws. Prerequisite: graduate standing or consent of instructor.

232B Electoral Systems Seminar (4). Studies electoral systems worldwide, analyzes their effect on the number of parties and duration of government cabinets, and applies the results to the present democratizing countries. Prerequisite: graduate standing or consent of instructor.

234A Research Methods in Political Science (4). An introduction to standard research techniques in political science. Issues of epistemology, research design, and approaches to empirical analysis. Prerequisites: graduate standing or consent of instructor, and upper-division or graduate-level statistics.

240A American Foreign Policy Decision Making (4). Assesses the changing international perspectives, policy instruments, and decision making processes of United States presidential administrations since World War II. Prerequisite: graduate standing or consent of instructor.

241B Seminar in International Relations Theory (4). Overview of the major theories guiding research and scholarship in international relations. Focus on major conceptual approaches (realism, neoliberalism, marxism) and levels of analysis (systemic, state, and subnational), as well as on methodological/epistemological debates engulfing the field. Prerequisite: graduate standing or consent of instructor.

245A U.S. Ethnic Politics (4). Assesses theories of ethnic political attitudes and behaviors in U.S. politics and examines methodological approaches to testing theories of ethnic politics. The primary focus is contemporary ethnic politics with attention to ethnic politics in American political development. Prerequisite: graduate standing or consent of instructor. Same as Chicano/Latino Studies 235.

252A The State in Comparative Perspective (4). Seminar examining the state from theoretical, empirical, comparative perspectives. How the state came into being, the state's role in the economy, toward society and internationally, and in policy-making in Western Europe, East Asian newly industrialized countries, the Third World. Prerequisite: graduate standing or consent of instructor.

252F Political Culture and Democracy (4). Examines the political culture literature and its relationship to democratic development. What are the cultural prerequisites of democracy, what aspects of political culture facilitate democratic politics and governmental performance, and what forms and reforms a political culture? Prerequisite: graduate standing or consent of instructor.

253B Regime Change in East Asia (4). Regime change from authoritarianism to democracies (Japan, South Korea, Taiwan); gradual political change (China). Uses theories from comparative literature on regime transition; combines theory with historical institutions, political culture, prior regimes, elements in the transition process in the four countries. Prerequisites: graduate standing or consent of instructor.

254A Introduction to Game Theory (4). Introduction to non-cooperative games. The prisoner's dilemma, Nash equilibrium, sequential games, subgame perfection. Applications include collective action, agenda-setter models, spatial competition of political parties, models of revolution and arms race. Prerequisite: graduate standing or consent of instructor.

260B Political Participation (4). Examines theoretical approaches to the explanation of the pattern of participation and consideration of the results of empirical studies of such activity by mass publics (mainly in Europe and North America). Addresses issues in both comparative politics and political behavior. Prerequisite: graduate standing or consent of instructor.

270A-B-C Seminar in Public Choice I, II, III (4-4-4). Public Choice lies at the intersection of economics and political science. This course involves the use of tools derived from economics to understand the behavior of governments and of citizens when they deal with politics. Prerequisite: graduate standing and Social Science 111H. Same as Economics 270A-C.

273A Advanced Qualitative Methods: Analyzing Qualitative Data (4). Introduces students to the theory and practice of analyzing qualitative data. Students must have already learned about data collection and research design for qualitative research and they must have qualitative data they can analyze in the course. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 213 and Sociology 223.

285A Introduction to Political Psychology I (4). Reviews theoretical questions regarding the relationship between the analytical and normative and the polity. Considers the relationship between the analytical and normative concerns of psychology and political science, addressing empirical literatures including works on political socialization, ideology and public opinion, identity and nationality.

285B Introduction to Political Psychology II (4). Discusses the complex set of relationships among the three disciplines of politics, psychology, and economics, focusing on human decision-making processes and political choice. Prerequisite: graduate standing or consent of instructor.

290 Dissertation Research (1 to 12). Prerequisite: consent of instructor. May be repeated for credit.

299 Independent Study (4). May be repeated for credit.

THE UNDERGRADUATE MAJOR IN SOCIAL POLICY AND PUBLIC SERVICE

The major in Social Policy and Public Service provides an interdisciplinary perspective on the study of society, both at the individual and group level. Using the knowledge and methods of all social science disciplines, a student majoring in Social Policy and Public Service develops the skills to think clearly about social concepts and issues. Majors have an opportunity to use their classroom knowledge in applied and individual learning experiences, such as internships, field studies, or research with a faculty advisor.

The curriculum for the major exposes students to various social science methods and topics, teaching applied computer-based research and statistical analyses; internship experiences in community, public, and educational organizations; and a more in-depth understanding of social science research and methodology. Students can then narrow their focus of study by choosing one of three areas to further their upper-division work: Education, Governance, or Health.

REQUIREMENTS FOR THE B.A. DEGREE IN SOCIAL POLICY AND PUBLIC SERVICE

University Requirements: See pages 54–61.

School Requirements: See page 464.

Requirements for the Major

School requirements must be met and must include 15 courses (60 units) as specified below. *Students are reminded that the Pass/Not Pass option is not applicable to course requirements A through H or any additional requirements listed for specific majors.* Courses used to meet requirements A through H are included in the computation of the grade point average in courses required in the major program.

- A. An understanding of the fundamental concepts, analytical tools, and methods of social science: Social Science 1A, 2A, 3A.
- B. One course in Introduction to Social Policy and Public Service: Social Science 40.

- C. One course in Cultural Competency: either Social Science 70C or Sociology 63.
- D. One course in Leadership: either Social Science 181A or 181B.
- E. Two courses in Research Methods: Social Science 102A and 170A.
- F. Three quarters of Field Studies: Social Science 193A-B-C (must be taken consecutively).
- G. One quarter of off-campus internship experience: Social Science 194A.
- H. Functional Focus: Three courses in one of the following areas:

Education:

Education 121, 124, 126, 132, 150, 157, 170A, 175, 180, 182
Chicano/Latino Studies 180, 189
Economics 158
Psychology 141J-K-L
Social Science 196

Governance:

Anthropology 121G, 121J, 174A
Economics 146
International Studies 160, 161A, 162, 164, 165, 177C, 177E
Management 162
Political Science 122A, 122B, 123A, 123B, 123C, 124A, 124B, 124C, 124D, 124E, 125A, 125B, 126A, 126B, 126C, 126D, 130A, 130B, 133D, 137B, 137C, 142D, 142E, 142F, 151H, 171A, 171B, 171C, 171D, 171F, 172A, 172B, 174A, 174B, 174C, 179
Social Science 152A, 152B, 173I, 188A, 194B
Sociology 138, 141, 144, 176, 177

Health:

Anthropology 128B, 132A, 134A, 134D, 134E, 134G
Chicano/Latino Studies 157, 168, 178, 179
Psychology 120A, 120D, 121S, 127C, 127E, 127G, 127H, 127I, 127T, 171, 174A, 174E, 174F
Sociology 135, 154, 164, 176

NOTE: Certain special topics courses may be applicable to this major; students should see their undergraduate advisor prior to enrolling in a special topics course to ensure that it meets the requirements. Social Science 184A-B (Sage Leadership Research) and 192 (Washington Seminar) may not be used to satisfy School requirements.

HONORS PROGRAM

The Honors Program allows majors to engage in research leading to the completion of an Honors thesis. The topic for the Honors thesis, reflecting a social science theme, is determined by the student in consultation with a faculty advisor. In addition to satisfying the requirements for the major, Honors Program participants must complete additional course work as specified below.

The Honors Program is composed of three four-unit courses: Social Science H190A (Honors Research Workshop), H190B (Honors Thesis Research), and H190C (Honors Thesis). Satisfactory completion of the Honors Thesis course also satisfies the upper-division writing requirement. The Honors Program is open to all junior and senior Social Policy and Public Service majors with an overall GPA of 3.00 and a 3.30 GPA in at least five Social Science courses.

The schedule of courses for the Honors Program is as follows:

1. During the spring quarter of the junior year or the summer prior to the senior year, students formally apply to the Honors Program through the School of Social Sciences Student Affairs Office.

2. In the fall quarter of the senior year, students enroll in H190A. This course ends with each student having formulated a written research plan for the honors thesis. Students also select a faculty mentor who has agreed to supervise the research and evaluate the final version of their Honors thesis.
3. In the winter quarter of the senior year, students enroll in H190B and work with their faculty mentor, who supervises and evaluates data collection and analysis.
4. In the spring quarter of the senior year, students enroll in H190C and work with their faculty mentor to complete the final version of their Honors thesis.

PI GAMMA MU: INTERNATIONAL HONOR SOCIETY

The International Honor Society in Social Sciences is the oldest and preeminent honor society in the social sciences with over 150 active chapters in the United States and overseas. Its mission is to encourage and recognize superior scholarship in social science disciplines and to foster cooperation and social service among its members. For more information call the Social Science Undergraduate Office at (949) 824-9229.

Courses in Social Science

(*Schedule of Classes* designation: Soc Sci)

LOWER-DIVISION

The Social Science curriculum includes major methodological and statistical courses suitable for social science students generally; courses which do not fall within disciplinary boundaries; and senior thesis, field study, and independent study courses.

1A Principles in the Social Sciences (4) W. Introduction to various disciplines within the social sciences. Provides an interdisciplinary perspective on understanding human behavior and social institutions, including interpersonal, economic, political, and cultural activities. For those students desiring a broad introduction to the social sciences. (III)

H1E-F-G Honors: Critical Issues in the Social Sciences (6-6-6) F, W, S. Major themes, methods, and works in the social sciences from an interdisciplinary perspective. Each quarter focuses on a different topic. Weekly small seminars emphasizing the development of the skills of critical thinking and quantitative analysis through regular written work are integral to the course. Prerequisite: restricted to members of the Campuswide Honors Program. Same as Social Ecology H20A-B-C. (III)

2A Introduction to Social Science Analysis (4). Introduction to social science research and analytical models. Theory construction and use of research methods in an interdisciplinary context. Discussion of the application of social science research to public policy. Computer laboratories develop creative thinking, graphing, and data presentation skills. Formerly Social Science 12A. (III)
Social Science majors have first consideration for enrollment.

3A Computer-Based Research in the Social Sciences (4) W. Focuses on the data manipulation, data visualization, and information searching techniques. Hands-on experience in hypothesis testing, mapping, graphics, and data arrays. *School of Social Sciences majors have first consideration for enrollment.*

9A General Statistics and Probability I (4) F. Introduction to the variety of statistical applications in many fields, including the humanities, physical and social sciences, business, forensic and health sciences. Descriptive statistics, including percentile ranks, standardization, and normal approximation. Estimation and the measurement of error. For non-Social Sciences majors only. Students who receive credit for Social Science 9A may not receive credit for Anthropology 10A, Political Science 10A, Psychology 10A, Social Ecology 13, Social Science 10A, or Sociology 10A. (V)

9B General Statistics and Probability II (4) W. Introduction to statistical inference, sampling distributions, standard error. Hypothesis tests for proportions and means. Inferential techniques for nominal variables including chi-square. Selected applications in fields such as ecology, forensic science, and quantitative stylistics are based on student interests. For non-Social Sciences majors only. Prerequisite: Social Science 9A. Students who receive credit for Social Science 9B may not receive credit for Anthropology 10B, Political Science 10B, Psychology 10B, Social Ecology 13, Social Science 10B, or Sociology 10B. (V)

9C General Statistics and Probability III (4) S. Focus on correlation and regression. One-way and two-way factorial analysis of variance. Introduction to repeated measures designs and non-parametric statistics. Critiquing the use of statistics in newspapers and popular magazines. Locating, accessing, and evaluating statistical data. For non-Social Sciences majors only. Prerequisite: Social Science 9B. Students who receive credit for Social Science 9C may not receive credit for Anthropology 10C, Political Science 10C, Psychology 10C, Social Ecology 13, Social Science 10C, or Sociology 10C. (V)

10A Probability and Statistics in the Social Sciences I (4) F. Introduction to the variety of statistical applications in the social sciences. Descriptive statistics. Measures of central tendency and dispersion. Percentile ranks. Standardization and normal approximation. Basic probability theory focuses on application to statistical inference and binomial distribution. Laboratory required. Corequisite or prerequisite: Social Science 3A. Prerequisite: lower-division standing or consent of instructor. Students who receive credit for Social Science 10A may not receive credit for Anthropology 10A, Political Science 10A, Psychology 10A, Social Ecology 13, Social Science 9A, or Sociology 10A. *Social Science majors have first consideration for enrollment.* (V)

10B Probability and Statistics in the Social Sciences II (4) W. Introduction to statistical inference, sampling distribution, standard error. Hypothesis tests for proportions and means. Inferential techniques for nominal variables including chi-square, study measures of strengths, significance of relationships between variables, assumptions, data requirements, and types of error in significance tests. Prerequisite: Social Science 10A. Students who receive credit for Social Science 10B may not receive credit for Anthropology 10B, Political Science 10B, Psychology 10B, Social Ecology 13, Social Science 9B, or Sociology 10B. *Social Science majors have first consideration for enrollment.* (V)

10C Probability and Statistics in the Social Sciences III (4) S. Focus on correlation, regression, and control for effects of variables. One-way and two-way factorial analysis of variance. *A priori* and *a posteriori* comparisons. Introduction to repeated measures design and non-parametric statistics. Discuss use of statistics in newspapers and popular magazines. Prerequisite: Social Science 10B. Students who receive credit for Social Science 10C may not receive credit for Anthropology 10C, Political Science 10C, Psychology 10C, Social Ecology 13, Social Science 9C, or Sociology 10C. *Social Science majors have first consideration for enrollment.* (V)

16A Current Topics in Global Peace and Conflict Studies (2). Topics focus on the perspectives of academic disciplines that examine global issues, bilateral and multilateral relations, and issues related to regions or countries. Students choose seminar subjects, prepare opening remarks, and lead discussions with a faculty member or guest lecturer.

20 Model United Nations (2). Focuses on simulations of the foreign policy pursuits of selected countries in the international community. Emphasis placed on understanding the rules of debate, as well as the policy positions of the student's selected country in the United Nations. Should be taken as a one-year sequence. May be taken for credit six times.

40 Social Policy and Public Service (4). An introduction to the basic theories and principles of public policy. Students examine various influences on the development of public policy and the principle actors in the process, and learn to identify tools and techniques employed in policy making. (III)

66 Introduction to Gangs (4). Introduces students to street gang subculture and explores risk factors associated with gang membership. Students develop a working definition for street gang and understand the difference between a social and legal definition. Also explores the connection between prison and street gangs.

70B Introduction to Expressive Forms in American Society (4). A survey of the expressive forms of minority culture groups in the United States. Literature, music, visual art, ritual, and folklore are studied, with an emphasis upon understanding their relationship to their social and cultural contexts. (III, VII)

70C Comparing Cultures (4). Introduces students to the scope of cross-cultural comparisons by analyzing the theories, methodologies, and facts utilized by anthropologists, sociologists, social psychologists, political scientists, and historians in comparing cultures. (III, VII)

78A Introduction to Asian American Studies I (4). Examines and compares the diverse experiences of major Asian American groups since the mid-nineteenth century. Topics include: origins of emigration; the formation and transformation of community; gender and family life; changing roles of Asian Americans in American society. Same as Asian American Studies 60A and History 15C. (III, VII)

78B Introduction to Asian American Studies II (4). Examines the renewal of Asian immigration following World War II. Focuses on domestic and international conditions influencing the liberalization of U.S. immigration laws, and the impact of contemporary Asian immigration on the U.S. political economy and social order. Same as Asian American Studies 60B. (III, VII)

78C Introduction to Asian American Studies III (4). Analyzes the Asian American experience in comparative perspective, which includes comparisons of different ethnic and racial groups, and across gender and class. Possible topics include labor, economy, politics, migration, nation, popular culture, gender, family, sexuality, and multiraciality. Same as Asian American Studies 60C. (III, VII)

89A-Z Special Topics in Social Sciences (2 to 4). May be repeated for credit as topic varies.

90 Introduction to Survey Research in the Social Sciences (4). Introduces major issues in conducting survey research in the social sciences. Topics explored are the history of survey research, sources of error, ethical issues, problems with cross-cultural research, the psychology of non-response, and criticisms of survey research.

UPPER-DIVISION

102A Introduction to Geographic Information Systems (4). Hands-on laboratory course introduces students to the fundamentals of Geographic Information Systems (GIS) technology using social science applications. Students learn to organize, manipulate, and display spatial data leading to the design of their own GIS research project. *Social Science majors have first consideration for enrollment.*

102B Intermediate Geographic Information Systems (4). Expands Geographic Information Systems (GIS) skills to more advanced theories and concepts in the spatial analysis of social science issues and particularly to analyzing and interpreting spatial data. Students develop and complete a GIS research project of their own choosing. Prerequisite: Social Science 102A. *Social Science majors have first consideration for enrollment.*

103A Game Theory and Politics I (4). Introduction to game theory and a survey of its political applications. Examples of topics covered include voting in small committees, legislatures, and mass elections; interest group activities and environmental issues; institutional design, and the evolution of cooperative behavior. Same as International Studies 105A and Political Science 130A. *Social Science majors have first consideration for enrollment.*

103B Game Theory and Politics II (4). More advanced game theory and its political applications, beginning where Game Theory and Politics I ends. Examples of topics covered include revolutions; arms race; spatial models of party competition; political manipulation; political coalitions and their power. Prerequisite: Economics 116 or Political Science 130A. Same as International Studies 105B and Political Science 130B. *Social Science majors have first consideration for enrollment.*

115D International Business (4). Introduction to conducting business in the international arena, decision making in the organization, and globalization of markets and production. Topics covered range from tax and finance to ethics, marketing, and more. Continuing corporate regulatory scandals discussed. Same as International Studies 112A. (VIII)

115E California and Global Economy (4). Presents the nature of the State's economy and the current and projected role of California in the world economy. Same as International Studies 135. (VIII)

115H International Trade (4). Global trade as an essential element of global growth. Covers trade, balance of payments, tariffs, quotas, commercial policy, exchange rates, international financial crises, international economic institutions since WWII. Regions studied include U.S., Japan, European Union, China, India, East Asia. Same as International Studies 113A. (VIII)

120 Transnational Gangs (4). Examines the internationalization of U.S. domestic street gangs. The relationship between California gangs Mara Salvatrucha and 18th Street and Mexico/Central American gangs is assessed. Specified topics include: mobilization, migration, territorialism, culture, organization, and use of technology. Prerequisite: Social Science 66. Same as International Studies 130. (VIII)

121T Voting and Political Manipulation (4). Introduction to social choice and cooperative games. Topics include majority rule, types of voting methods, apportionment and proportional representation, agenda manipulation, coalition formation, voting power, political consequences of electoral laws. Same as Political Science 151H and International Studies 156A. *Social Science majors have first consideration for enrollment.*

123A U.S. Intervention in Latin America (4). Explores the political, economic, social, and cultural ties that bind Latin America to the United States. Focuses on U.S. intervention and Latin American response from early nineteenth century to present day. Case studies include Mexico, Guatemala, Cuba, Chile, and Central America. Same as International Studies 177D. (VIII)

130A-B Science and Religion I, II (4-4). The development of genomics, stem-cell research, robotics, nanotechnology, and neuropharmacology raises difficult religious and philosophical questions. Examines interdisciplinary approaches that cut across institutional boundaries, cultural borders, and religious traditions. **130A:** Focuses on the relationship between religion and biological sciences. **130B:** Focuses on the relationship between religion and cognitive/affective/social neuroscience. Same as Logic and Philosophy of Science 140A-B. *Social Science majors have first consideration for enrollment.*

152A Non-Governmental Organization (NGO) Fundamentals (4). Introduction to non-governmental organizations, including their role in U.S. society and the international community. Explores varying definitions of NGOs and the characteristics held in common by all NGOs. Same as International Studies 152A. (VIII)

152B Domestic Nonprofit Organizations (4). Introduction to nonprofit organizations. Explores why nonprofit organizations develop, how they operate, and the role they play in the United States. Examines current trends in the nonprofit sector and discusses challenges and criticisms of nonprofit organizations. *Social Science majors have first consideration for enrollment.*

164B Domestic Gangs (4). Examines the history and development of California street gangs and the role of historical events in that development. Students will be able to contrast and compare gang cohort behaviors between some of the major gangs in California. Prerequisite: Social Science 66. *Social Science majors have first consideration for enrollment.*

164C Prison Gangs (4). Examines the growth and spread of prison gangs throughout the country. Relationships between prison and street gangs, and possible relationships with foreign drug trafficking organizations studied. Violence examined as the standard to establish dominance in and out of prison. Prerequisite: Social Science 66. *Social Science majors have first consideration for enrollment.*

164D Juvenile Gangs (4). Examines some identified risk factors that can be used to predict gang membership. Compares generational with non-generational gangs and develops a working sociological definition that can be used to identify street gangs. Examines common myths about juveniles and street gangs. Prerequisite: Social Science 66. *Social Science majors have first consideration for enrollment.*

165 Chicano/Latino Families (4). Introduction to research, literature, and issues surrounding the topic of Chicano/Latino families including cultural history, contemporary issues, organization of family, traditions, lifestyle, values, beliefs, generational differences, gender issues, ethnic identity, evolution of demographic patterns, current economic and political standings. Same as Chicano/Latino Studies 170. (VII)

167 Chicano/Chicana Labor History (4). Examines origins of Latino/Latina labor from colonial period to present. Emphasis on the issues of race, culture, class, and gender. Focus on processes and institutions including: *encomienda*, migration, unions, informal economies, Bracero program, domestic work. Same as Chicano/Latino Studies 138. (VII)

170A Research Methods in the Social Sciences (4). Examines how interdisciplinary social science research questions are formulated and studies several research methods including: experimental method, quasi-experimental methods, survey research, field research, evaluation research, and meta-analysis. Parametric and non-parametric statistical methods are illustrated using the SPSS program. Prerequisites: Social Sciences 1A, 3A; 10A-B-C or equivalent; 12A and upper-division standing. *Social Science majors have first consideration for enrollment.*

170E Society and Culture (4). An introduction to the processes underlying stratification in American society with emphasis on race/ethnic/class divisions. These processes also are examined in relationship to the works of major theorists such as Marx, Weber, and Durkheim. (VII)

170P Philosophies and World Religions (4). Examines major religious traditions that shape human cultures. A new global order is forming led by globalization of technology, trade, finance, popular culture, education, science, and medicine. What role will religion play in the future? Same as International Studies 151A. (VIII)

172A American Culture (4). A survey of the historical development of dominant American culture and society; emphasis on a close reading of key cultural texts, with weekly text as a model of writing examining its use of language and rhetoric. Prerequisite: satisfactory completion of the lower-division writing requirement. *Social Science majors have first consideration for enrollment.*

172D Law in the Twenty-First Century (4). Examines the complex relationship between law, the social sciences, and modern society. Lectures explore such issues as the interplay between technology and constitutional rights, the impact of science on law, and the evolving roles of attorneys and judges. Same as Political Science 171F. *Social Science majors have first consideration for enrollment.*

172F Latin American and Latino Cultures I (4). Surveys the history, social and economic conditions, gender issues, problems of economic and social development in Latin America and their relation to U.S. Latinos. Topics include the colonial experience, economic relations with the U.S., Latin American migration to the U.S. Same as Chicano/Latino Studies 165. (VIII)

172K Latin American Populism (4). Explores and assesses Latin America's political shift to new populism and what it means for the United States. Through readings and extensive discussion, studies how this fits in Latin American history and traditions, tracing populism's roots to current political panorama. Same as International Studies 177A. (VIII)

173G Film Media and the Latino Community (4). Uses film as a resource for understanding contemporary issues and problems facing the Chicano/Latino community. (Does not study cinema as a genre.) Same as Chicano/Latino Studies 114. (VII)

173H History of Chicano Education (4). Examines the relationship between the development of the public education system and the Chicano community in the U.S. Same as Chicano/Latino Studies 180. (VII)

173I Perspectives on the U.S.–Mexican Border (4). Economic aspects of the historical development of the U.S.–Mexican border. The current economic situation in the Southwest and border areas as it affects both Mexico and the Latino/Chicano population is also examined. Same as International Studies 177B and Chicano/Latino Studies 160. (VII)

173K Comparative Latino Populations (4). Provides foundation for understanding of Chicano/Latino Studies as an interdisciplinary field of inquiry. Focus on the history, arts, cultures of distinct (Mexican, Cuban, Puerto Rican, Central American) Latino communities. Topics include: precolonial history and culture, conquest, *mestizaje*, colonialism/neocolonialism, resistance. Same as Chicano/Latino Studies 137. (VII)

173L Latinos in a Global Society (4). Examines interconnections between diverse Latino groups in the U.S. and the effects of globalization on their social, cultural, political realities. Topics include: immigration, demographics, socioeconomic differentiation, familial relations, political protest/resistance, law and policy, and links to "homeland" issues. Prerequisite: Social Science 173K. Same as Chicano/Latino Studies 167. (VII)

173N Revolution in Latin America (4). Presents a comparative analysis of the causes, development, and consequences of selected revolutionary movements, focusing on outbreaks in Mexico, Bolivia, Cuba, Chile, Nicaragua, and Grenada. Explores topics of state formation, economic nationalism, social justice, ethnicity, and role of international affairs. Same as International Studies 177C. (VIII)

173P Cuban Society and Revolution (4). Explores the causes, development, and legacy of the 1959 Revolution. Themes include economic dependency, democracy, race, gender, culture, and the always volatile relations between Cuba and the United States. Same as International Studies 177E. (VIII)

173Q Introduction to Cuba: History, Culture, and Society (4). Introduction to Cuban history, culture, and society using social science texts, visual and musical materials. Examines major historical moments including the historical relationship between the United States and explores evolution of Cuban music from the earliest times to present. Same as Chicano/Latino Studies 130 and International Studies 177F. (VIII)

175B Ethnic and Racial Communities (4). Examines various theoretical analyses of race and ethnicity, particularly as they apply to Asian Americans. Also explores the relationship of Asian Americans to other racialized minorities in the U.S. Same as Asian American Studies 161. (VII)

176A Afro-Latin American Music (4). Musical culture of Afro-Latin American peoples, emphasizing Spanish-speaking Caribbean. Topics include: background in West Africa, the persistence of traditions in the Caribbean, the commercial music of the twentieth century, the connections between musical culture, religion, and the economy. Same as Chicano/Latino Studies 115C. (VIII)

NOTE: Courses numbered 177–179 explore Asian American Studies.

177A Globalization, Diaspora, and Racialization (4). Studies the relationship between globalization and racialization and comparatively examines the racialization of Asians in the U.S. with the experiences of other Asians in the diaspora. Attention paid to the cultural expressions of racialization as creation, representation, adaptation, and resistance. Same as Asian American Studies 101. *Social Science majors have first consideration for enrollment.*

177B Asian American Women (4). Examines the representations and experiences of Asian American women from diverse perspectives. Explores the commonalities and differences among various groups of Asian American women, with particular focus on history, culture, values, and family roles. Same as Asian American Studies 162. (VII)

177D Asian American Family (4). Examines the representations and experiences of Asian American families from diverse standpoints. Analyzes the similarities and differences among family structures with particular attention to cultural values, gender roles, and domestic violence. Same as Asian American Studies 133. (VII)

178C The Korean American Experience (4). Explores the factors that have distinctly shaped the Korean American experience, including patterns of racial domination, the profile of immigrant flow, immigrant roles in the urban political economy, politics in Korea, and the role of the church. Same as Asian American Studies 151C. (VII)

178D The Vietnamese American Experience (4). Studies the resettlement of Vietnamese in the United States following their exodus from Southeast Asia. Topics discussed include the Vietnam War, the 1975 evacuation, boat and land refugees, the shaping of Vietnamese communities, and Vietnamese American literature. Same as Asian American Studies 151D. (VII)

178E The Japanese American Experience (4). Studies the settlement of Japanese in Hawaii and the continental United States since the late nineteenth century. Topics covered include sugar plantations, development of rural Japanese America, World War II internment, post-War community development, and persistence of Japanese American identity. Same as Asian American Studies 151E. (VII)

178F South Asian American Experience (4). Examines and compares the experiences of South Asian immigrants in the U.S. over time. Looks at the economic, political, and social positions of the immigrants, with special emphasis on religious changes and the changes in the second and later generations. Same as Asian American Studies 151F. *Social Science majors have first consideration for enrollment.*

178H Southeastern Asian American Experience (4). Analyzes experiences of refugees and immigrants from Cambodia, Laos, and Vietnam. Examines political and economic factors for their exodus and how they reconstruct their identities, families, and communities. Issues include educational experiences, public policies, social services, occupational options, homeland relations. Same as Asian American Studies 151H. (VII)

178J Chinese American Experiences (4). Analyzes the experiences of Chinese in the United States. Immigration, Chinese exclusion, racial and gender identity. Historical overview and contemporary issues covered. Same as Asian American Studies 151J. (VII)

178K Filipina/Filipino American Experience (4). Explores the experience of Filipina/Filipino Americans from the era of Spanish colonization of the Philippines to present-day community formations in the United States, with special emphasis on the twentieth century. Topics include colonialism, nation, migration, gender, and culture. Same as Asian American Studies 151K. (VII)

179 Special Topics in Asian American Studies (4). May be repeated for credit as topics vary. (VII)

180A-B-C Social Networks/Human Sciences and Complexity (1.3-1.3-1.3). Requires participation in the Human Sciences and Complexity Video Colloquium series with a focus on written analysis of the work of a speaker.

180D Formal Models and Simulation in Social Sciences (4). How do people make choices? Exchange goods, services, and ideas? Or learn about and adapt to their environments? Explores ways to model these and related phenomena, with an emphasis on the value of scientific speculation, computer simulation, and experiential observation. *Social Science majors have first consideration for enrollment.*

180G Culture: What Makes It All Work? (4). Basic questions that are addressed: what we mean by culture with new theories and the methods that allow us to begin to do quasi-experimental research into the nature of culture. Extensive use of multi-agent simulation. *Social Science majors have first consideration for enrollment.*

180H Artificial Culture: Experiments in Synthetic Anthropology (4). Exploring artificially evolved multi-agent worlds through computer simulations provides new insight into describing, understanding, explaining the complex causal web of biological and cultural processes that make us human. Embraces an evolutionary and computational epistemology, focuses on emergence of distributed cultural cognition. *Social Science majors have first consideration for enrollment.*

180I Social Communication and the New Technologies (4). Uses cultural, cognitive, and evolutionary theories of communication to examine the history, social and personal impact, and possible futures of digital forms of communication. *Social Science majors have first consideration for enrollment.*

180K Social Life of Information (4). Three great problems in political science: coordination, cooperation, and (social) cognition. How do people coordinate their efforts toward a common goal, how do they cooperate on the production of public goods? *Social Science majors have first consideration for enrollment.*

180M Networks of Social Action (4). Analysis of how social networks create social structure, how social actors utilize them, and their unexpected effects. Topics include job search, firm efficiency, and social movements. Visualization programs, computer simulations, and research project. *Social Science majors have first consideration for enrollment.*

181 Leadership in the Twenty-First Century (4). Students learn about theoretical and practical issues related to leadership and leadership development. Readings and assignments provide opportunity to learn of contemporary leadership theory, values, ethics and power, organizational development, gender and leadership, and cultural competence. *Social Science majors have first consideration for enrollment.*

181A Ethical Leadership (4). Explores historical and contemporary theories of ethical and unethical leadership. Examines models of "good leadership" such as cardinal and monastic virtues; and models of "bad leadership," such as Machiavelli's *Prince*. Explores the philosophies, styles, and accomplishments of leaders. *Social Science majors have first consideration for enrollment.*

181B Fundamentals of Leadership Theory (4). An examination of theories and skills necessary for the development of effective leadership including historical and more recently developed models. Connecting theory to practice, students learn to facilitate appropriate learned elements to develop an individual leadership approach, process, and style. Prerequisite: School of Social Sciences major only.

182A Exploring Society Through Photography (4). Students explore society through presentation, interpretation, and discussion of their own photographs. A few common exercises at the beginning of the quarter are followed by individual projects. Photography as social observation and the relation of photographs in an essay are stressed. Prerequisite: basic darkroom techniques or the digital equivalent. Same as Anthropology 176A and Sociology 114A. *Social Science majors have first consideration for enrollment.*

183A International Studies Forum (2). A faculty-student forum featuring lecturers from a variety of institutions with discussion issues related to international studies. Pass/Not Pass only. May be taken for credit four times. Same as Humanities 183A, Social Ecology 183A, and International Studies 183A. *Social Science majors have first consideration for enrollment.*

183B Seminar in Mediation (4). Students develop mediation skills and refine knowledge in the practice and theory of conflict resolution. Students who complete this course may serve as mediators in the Campus Mediation Program. Course is a prerequisite to completing Independent Study as an intern practicing mediation with the OC Human Relations Commission in small claims court. Same as Humanities 183B, Social Ecology 183B, and International Studies 183B. *Social Science majors have first consideration for enrollment.*

183C Seminar in Conflict Resolution (4). Designed for students who are pursuing the minor in Conflict Resolution and/or International Studies major. Provides a forum in which students refine skills and theory in the study of cooperation and conflict, from local to global arenas. Students write a research paper. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Humanities 183C and Social Ecology 183C. *Social Science majors have first consideration for enrollment.*

183E Conflict Management in Cross-Cultural Perspective (4). Examines theories of conflict management. Analyzes how conflict is mitigated in diverse cultures: at the interpersonal level, between groups, and on the international scale. Students discuss readings, hear from conflict management practitioners, and simulate negotiations. Same as Anthropology 136D, International Studies 183E, and Political Science 154G. (VIII)

184A Sage Leader Research I (2). Participants in the SAGE Scholars Program learn to define leadership concepts, discover various leadership styles, and develop strong leadership and communication skills resulting in strengthened ability to contribute to and interact with UCI and the Orange County community. Prerequisite: must be selected for the SAGE Scholars Program by the director.

184B Sage Leader Research II (4). Provides a survey of contemporary topics and challenges in the fields of management and leadership. Case studies and text by leading authors are used to analyze key leadership issues in twenty-first century, with particular emphasis on current events. Prerequisites: Social Science 184A and selection for the SAGE Scholars Program.

184D International Studies: Current Topics (2). Topics focus on the perspectives of academic disciplines that examine international issues, bilateral and multilateral relations, and issues related to regions or countries. Students choose seminar subjects, prepare opening remarks, and lead discussions with a faculty member or guest lecturer. Pass/Not Pass only. May be taken for credit four times as topics vary.

184F International Journalism (4). Studies and critically analyzes how the media covers international issues that have reshaped. American foreign coverage and the implications for Americans and U.S. foreign policy. Focuses on international reporting as a way of developing fundamental skills of journalism. Same as International Studies 155A. (VIII)

184G Media Writing (4). Designed to teach reporting and news writing basics. Students learn how to gather and organize information, ask effective questions, develop story ideas, research facts, and write stories on deadline. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as International Studies 155B. *Social Science majors have first consideration for enrollment.*

185 People in Society (4). Through readings about people in distinctly different societies throughout history, students learn concepts that cross the boundaries of the social science disciplines. Such themes as democracy, elitism, power, social class, and gender as the basis for discussion and writing. Prerequisite: satisfactory completion of the lower-division writing requirement.

186A-B-C HABLA: Language Intervention for Disadvantaged Children (4-4-4). Trains students (fall quarter) to deliver home visits (winter and spring) that promote school readiness among two–four year-olds from low SES and educational backgrounds. Covers fundamentals of child language, literacy, cognitive development; procedures, ethics of home visitation. Work with parents and children to create better home literacy and language environment. Prerequisites: must pass an interview by instructor, be fluent in English and one other language (Spanish most typically), must have experience with preschool children and be culturally sensitive. Same as Chicano/Latino Studies 191A-B-C and Psychology 144A-B-C. *Social Science majors have first consideration for enrollment.*

187 Twenty-First-Century Graduate Education (2). Discussion of graduate and professional education in twenty-first century United States. Examines specific strategies for admission to postbaccalaureate programs and success in graduate study culture. Introduction to processes including planning and preparation, school selection, entrance examination preparation, submission of applications, writing personal statements. Prerequisite: upper-division standing or consent of instructor. Pass/Not Pass only.

188A Introduction to Contemporary Middle East Politics (4). An overview of basic issues that shape the politics of the Middle East and North Africa. Themes include implication of the colonization era, nation-state formation, inter-Arab relations, nationalism, Arab-Israel conflict, Islamic resurgence, and more. Same as International Studies 165. (VIII)

188B Democratization in the Middle East (4). Examines underlying causes why Arab states continue to resist the spread of democracy and modernity. In this context the course examines relations between the Arab World and the West including democratization efforts, impact of colonization, oil, resources, authoritarianism and religion. Same as International Studies 167. (VIII)

188C Islam and the West (4). Analyzes how modernity transformed the relationship between Islam and the West, Jew and Arab, male and female in the Middle East. Analyzes the significance of globalization. Aims at presenting the debate in a way that fosters civilizational/cultural dialogue. Same as International Studies 161. (VIII)

188D Iran: Past and Present (4). Pre-revolutionary Iran; and Iran since the revolution. History, oil and politics: domestic and international. Same as International Studies 168. (VIII)

188E Israel and the World: An Introduction (4). Examines the founding of Israel, its relationship with the Arab world, the role of the international community, and the challenges it faces today. Same as International Studies 170. (VIII)

188F Middle East Security (4). Examines various dilemmas and concerns such as terrorism and weapons of mass destruction. Students explore security dynamics of key actors including Iran, Iraq, Egypt, Syria, Gulf states, Israel, Palestine, and the U.S. and look at civil-military relations and internal security. Same as International Studies 171. (VIII)

188G Oil Politics and Democracy in the Middle East (4). Explores the impact of oil politics on Middle East, focusing on modern history of major oil producers. Examines oil and democracy in the Middle East, oil security and American foreign policy and policy-makers' options to decrease dependence on foreign oil. Same as International Studies 172. (VIII)

188H War and Peace in the Middle East (4). Discusses causes of war severity in the Middle East, implications of regional conflicts for international security. Studies and applies theories in international relations, compares policies for promoting peace through examination of sources of war and peace in the Middle East. Same as International Studies 173. (VIII)

188I Afghanistan (4). Examination of Afghanistan's traditional social organization, economy, political organization, and relationship among ethnic groups as a basis for discussing the consequences of domestic political turmoil and foreign interventions over the last twenty years. The country's current situation and future prospects. Same as International Studies 162. (VIII)

188J Lebanese Politics (4). Explores the domestic, regional, and international dynamics that make Lebanon a challenge to its Middle Eastern neighbors. A comparison between Lebanon and other Middle Eastern countries. Same as International Studies 160. (VIII)

188K Political Islam (4). Political Islam is a diverse phenomenon. While noticeable barriers exist to "Islamist democracy," it is the Islamists who will define the political future of much of the Muslim world. Reviews experience of Saudi Arabia, Iran, Egypt, Pakistan, Turkey, and Indonesia. Same as International Studies 161A. (VIII)

188L The Politics of Reconstruction: Iraq (4). Examines the political history of Iraq; prospects of Iraq's economic development; effects of external interventions on Iraqi society; theoretical and practical tools to understand the politics behind reconstructing and nation-building; diverse perspectives on the reconstruction of Iraq. Same as International Studies 164. Formerly Social Science 151. (VIII)

188M Psychology of the Middle East Conflict (4). Explores how emotions guide actions; political movements and social identity factors in ethnic, religious, or other group conflicts; psycho-biographies of political leaders and effects on foreign policy making; decisions to go to war; psychological dimensions of conflict and conflict resolution. Same as International Studies 166. Formerly Social Science 153. (VIII)

189A-Z Special Topics in Social Sciences (2 to 4). May be repeated for credit as topic varies. *Social Science majors have first consideration for enrollment.*

H190A Honors Research Workshop (4). Student develops a 10–15-page prospectus of research for the honors thesis which includes: the research question, literature review, methods of investigation, and bibliography. Student selects a faculty mentor who will supervise thesis research and writing in winter and spring. Prerequisite: acceptance into the Honors Program for Social Science majors.

H190B Honors Thesis Research (4). The student initiates and completes data collection for the honors thesis. A faculty mentor provides supervision and feedback on thesis chapters. Prerequisite: Social Science H190A.

H190C Honors Thesis (4). The student completes, with the approval of the faculty mentor, an honors thesis containing: statement of the problem, literature review, research hypotheses, methods of investigation, results, discussion, and bibliography. Prerequisites: Social Science H190B and satisfactory completion of the lower-division writing requirement.

191 Graduate-Mentored Study in the Social Sciences (4). Offers a hands-on research experience while increasing awareness of the various disciplines in the social sciences and of the requirements of graduate school. Features graduate-mentored study under the supervision of the Associate Dean. Pass/Not Pass only. Prerequisite: identification of a graduate student (who is in good standing) as a mentor.

192 The Washington Seminar (4). Interdisciplinary seminar examines and explores unique aspects (e.g., governmental, cultural, political, the arts, historical, media related) of Washington, D.C. Core course mandatory for all participants in Washington D.C. Center Program. Prerequisite: selected for Washington D.C. Center Program. Same as University Studies 194.

193A-B-C Field Studies in Public and Community Service (4-4-4). Advanced training in qualitative and ethnographic research centered on community service. Students pursue field studies at nonprofit agencies (200 hours) to understand current social problems in underrepresented and underserved communities. Through field placement, students apply theory to practice. Prerequisites: Social Science 70C or Sociology 63; satisfactory completion of the lower-division writing requirement and consent of instructor. Open only to Social Science majors.

194A Public Service Internship (2 to 4) F, W, S, Summer. Introduces the role of etiquette and leadership in the professional environment. With a two-unit (50 hours) or four-unit (100 hours) credit option, students intern at a nonprofit agency exploring their roles as community leaders and improving their professional skills. Prerequisite: Social Science majors only. Pass/Not Pass Only. May be taken for credit twice, for a maximum of 8 units.

194B Community Internship (2 to 4) F, W, S, Summer. Required to complete 50 (two units) or 100 (four units) hours at a nonprofit organization, students engage in lectures related to the formation and maintenance of nonprofit organizations. Grant writing, funding issues, and effective service delivery are addressed. Prerequisites: Social Science 194A; Social Science majors only. Pass/Not Pass Only. May be taken for credit three times.

195A-B-C Educational Policy Field Studies (4-4-4) F, W, S. Students learn to integrate academic course work with experiential learning; to examine the effects of educational policy on urban and suburban schools; to discover the relationship between community service and personal academic interests; and to develop awareness about the challenges of public education.

196 Global Connect (2 or 4) F, W, S. Identifies factors of change that influence the twenty-first century. Students serve as mentors at high schools to introduce globalization issues through workshops and lectures. Prerequisites: must submit application and have a 3.0 or higher overall GPA. May be taken for credit three times.

197 Professional Internship (2 to 4) F, W, S. Students apply classroom knowledge through research projects in nonprofit agencies (local, state, and government) and the private sector. They pose solutions to agency-posed questions. Students gain field experience through 50 hours (for 2 units) or 100 (for 4 units). Pass/Not Pass only. Prerequisites: satisfactory completion of the lower-division writing requirement and approval of internship coordinator or faculty sponsor. Open only to School of Social Sciences majors. May be taken for credit for a total of 8 units.

198 Directed Group Study (2 to 4) F, W, S. Directed group study on special topics. Prerequisites: consent of instructor and department chair. May be taken for credit for a total of 12 units.

199 Individual Study (2 to 4) F, W, S. Opportunities to do research and learn new skills outside the normal classroom environment. Students participate in planned research and study activities under a written contract with a supervising UCI instructor. Prerequisites: upper-division standing; consent of instructor and department chair. May be taken for credit for a total of 16 units. Students may enroll for only one 199 each quarter.

DEPARTMENT OF SOCIOLOGY

4215 Social Science Plaza B; (949) 824-7637
David J. Frank, **Department Chair**

Undergraduate Program

Sociology studies societies and human groups. It examines social conflict and cooperation, and the organization of families, communities, workplaces, and nations. The program at UCI covers the breadth of the discipline while giving students opportunities to conduct independent research, to do an internship in the community, to participate in an Honors Program, and to take advantage of departmental opportunities in such areas as human services, diversity, international sociology, and business, economy, and society. All students take basic courses on social institutions, theory, and methods. Students then take more specialized courses such as Race and Ethnicity, Social Psychology, Sociology of Gender, or Chinese Society. Courses are enriched by ongoing faculty research on such topics as the work and family of immigrants to the U.S., economic change in Asia, the relation between women and men in different social classes and ethnic groups, and attitudes to sexual behavior.

In addition to developing students' ability to critically analyze and understand social patterns, the major is relevant to professional careers in high school teaching, social work, urban planning, law, business, public health, and government service. It also provides training for advanced graduate work in sociology.

REQUIREMENTS FOR THE B.A. DEGREE IN SOCIOLOGY

University Requirements: See pages 54–61.

School Requirements: See page 464.

Departmental Requirements for the Major

School requirements must be met and must include 12 courses (48 units) as specified below:

- A. Sociology 1 and either 2 or 3.
- B. One course in methods (Sociology 110) and one course in theory (Sociology 120).
- C. One course in research design and implementation (Sociology 180A; required for all majors). The second course in the sequence (Sociology 180B) is for students who pass the first course and wish to write a thesis.
- D. Five courses selected from the following list of core courses, no more than two of which may be lower-division: Sociology 31, 41, 43, 44, 56, 62, 63, 135, 141, 144, 145, 156, 161, 164, 173, 174, 175B.

- E. One additional upper-division Sociology course and one additional introductory course from another social science discipline.

Honors Program in Sociology

The Honors Program in Sociology is open to outstanding Sociology majors during their junior or senior year. To gain admission to the program, potential Honors students normally take Sociology courses in theory (Sociology 120), methods (Sociology 110), statistics (Sociology 10A-B-C or equivalent) and at least two Sociology core courses. Students who receive an average grade of 3.5 or better in these courses are eligible for the Honors program. In addition, Honors students should have a grade point average of 3.2 or better in all courses taken at UCI. Majors who are transfers may petition for entry into the program based on their grades from their former schools.

During their junior or senior year, Honors Program students write a thesis, designed and carried out under faculty supervision. Projects normally entail some empirical analysis of sociological data. Students meet regularly in a two-quarter Honors seminar to design and carry out these projects, to exchange ideas, and to help analyze each other's work (Sociology H188A and H188B; satisfies Sociology major requirement C: Honors students do *not* have to take Sociology 180A). In addition, Honors students are required to attend at least six Sociology colloquia and subsequent meetings to discuss relevant sociological issues. Upon successful completion of the program, including approval of an honors thesis by the faculty mentor and honors instructor and receiving a grade of B+ or higher in Sociology H188B, students graduate with Honors in Sociology.

Sociology Minor Requirements

Requirements for the minor in Sociology are met by taking seven sociology courses (28 units) as specified below:

- A. Sociology 1 and either 2 or 3.
- B. One course in methods (Sociology 110) and one course in theory (Sociology 120).
- C. In addition, students must either satisfy the School mathematics and computer science requirement (School requirement A), or take three courses (12 units) or equivalent in a single acceptable foreign language.
- D. Three courses selected from the following list of core courses, no more than two of which may be lower-division: Sociology 31, 41, 43, 44, 56, 62, 63, 135, 141, 144, 145, 156, 161, 164, 173, 174, 175B.

Graduate Program

Participating Faculty

Edwin Amenta: Political sociology, historical and comparative sociology, social movements, social policy
Stanley R. Bailey: Race and ethnicity, religion, Latin America
Nina Bandelj: Economic sociology, organizations, culture, social networks, comparative sociology, central and eastern Europe
Frank D. Bean: International migration, demography, racial and ethnic relations, economic sociology, family
Catherine I. Bolzendahl: Gender, the welfare state, political sociology, comparative sociology, family, quantitative methodology
Susan K. Brown: Immigration, inequality, urban sociology
Carter Butts: Mathematical sociology, social networks, quantitative methodology, human judgment and decision making, economic sociology
Francesca Cancian: Gender sociology of the family, carework, sexual assault
Yen-Sheng Chiang: Social networks, social psychology, group behaviors and dynamics, mathematical and simulation modeling
Katherine Faust: Social networks, research methods
Cynthia Feliciano: Race/ethnicity/minority relations, migration and immigration, education

David John Frank: Globalization, sexuality, the natural environment, higher education
 Linton Freeman: Social networks, social structure and cognition, methodology
 Ann Hironaka: Political sociology, war and peace, environmental sociology, ethnic and racial conflict
 Matt Huffman: Race/gender inequality, labor markets, organizations
 Jennifer Lee: Immigration, race/ethnicity, social inequality, Asian American studies
 David S. Meyer: Social movements, public policy, peace and war, social justice
 Andrew Noymer: Population, social networks, mathematical models, demography of health and mortality, historical demography
 Andrew Penner: Gender, inequality, education, family, and race
 Joy Pixley: Career hierarchy, dual-career and dual-earner couples, work and family, life course, sex stratification, gender roles, research design
 Francesca Polletta: Social movements, democracy, culture, sociology of law, race and ethnicity, social theory
 Belinda Robnett: Social movements, race and ethnicity, gender, social change, African Americans
 Rubén G. Rumbaut: International migration, the “1.5” generation, comparative race and ethnic relations, structural inequality, identity, health and mental health
 Evan Schofer: Comparative political sociology, sociology of education, quantitative methods and statistics, globalization, sociology of the environment, and organization
 David A. Smith: World-system analysis, urbanization, development, comparative historical sociology, dependent development in East Asia
 David Snow: Collective behavior and social movements, social psychology, urban, social problems, culture and qualitative methods
 Judith Stepan-Norris: Labor unions, sociology of work, political sociology, American society, research methods, historical-comparative methods, class formation
 Yang Su: Social movements and collective action, political sociology, China’s political transition
 Judith Treas: Family, social demography, aging, social stratification
 Wang Feng: Contemporary demographic, economic, and social processes, social inequality in state socialism, contemporary Chinese society

Affiliated Faculty

Christine Beckman: Organizational theory; gender and inequality; organizational learning and interorganizational relationships; new organizational forms
 Kitty C. Calavita: Sociology of law, criminology, social deviance, immigration, and inequality
 Gilbert Q. Conchas: Race and social inequality and sociocultural processes
 Thurston Domina: Educational policy, inequality, higher education
 John D. Dombink: Crime and criminal justice, deviance, and social control
 George Farkas: Educational inequality, early childhood, gender
 Martha Feldman: Organization theory and behavior, stability and change in organizations, decision making, and information processing
 Michael R. Gottfredson: Criminology, theory, and crime and policy
 John R. Hipp: Criminology, community context of crime, household decisions and neighborhood change, quantitative research methods, and social network analysis
 C. Ronald Huff: Criminology and public policy
 Valerie Jenness: Links between deviance and social control, gender, and social change
 James Meeker: Law and society, criminology/delinquency, quantitative methodology
 Henry Pontell: Criminal justice, sociology of law, medical sociology
 Carroll Seron: Sociology of law, sociology or professions, law and society
 Denis Trapido: Social relations, social networks, organizations
 Linda Trinh Võ: Asian American studies; race and ethnic relations; immigration theory; gender relations; social stratification and inequity ethnographic research methods; and community and urban sociology
 Sara Wakefield: Crime/law/deviance, life course studies, and stratification
 Geoff Ward: Race relations, social movements, juvenile justice

The Department of Sociology offers a Ph.D. degree program in Sociology. Particular emphases include gender, race/ethnicity, labor, social movements, family, migration, population, political economy, and states and global transformation. The program provides structured training in sociological theory, statistics, and qualitative and quantitative research methods. While the core of the

program is sociological, it also includes an interdisciplinary component, incorporating links to anthropology, political science, history, criminology, and urban planning. Small entering cohorts ensure personalized attention for each student and provides them with greater access to professors, allowing for close mentorship relationships. Program faculty take diverse theoretical and methodological approaches to a variety of substantive issues, are committed to empirical research addressing central sociological issues, and are open to intellectual cross-pollination from cognate disciplines.

Graduate students have the opportunity to participate in a variety of interdisciplinary research units, including the Center for the Study of Democracy, the Center for Global Peace and Conflict Studies, and informal research groups in demography and labor studies. The Sociology Department is linked to Women’s Studies and various ethnic studies programs, such as Asian American Studies, Chicano/Latino Studies, and African American Studies. Research and funding opportunities are also available through UC-wide programs like Pacific Rim Studies and the Humanities Research Institute located on the UCI campus.

ADMISSION

Students in the program come from diverse educational, ethnic, and social backgrounds, including a number from different countries and various regions of the United States. The deadline for applications to receive full funding consideration for fall admission is January 15. Students are admitted for winter and spring quarter only under exceptional circumstances. Admission is based on application materials and evidence of scholarly potential, including grade point average, GRE scores, statements of purpose, and letters of recommendation.

REQUIREMENTS

Students must complete a two-quarter proseminar, a course in research design, a three-quarter statistics sequence, one seminar each in classical and contemporary theory, an advanced sociological methodology course, and nine Sociology seminars selected in consultation with the student’s advisor, in order to build competency in two areas of specialization in the discipline. Course work prepares students to complete an independent research project, which is presented in oral and written form during the winter quarter of their second year. Students must pass a formal evaluation at the end of their second year involving assessment of course work and the second-year research project and evaluation of teaching or research experience. Knowledge of one foreign language is required.

All required course work must be completed prior to advancement to candidacy. The normative time to advance to candidacy is four years. The advancement-to-candidacy examination is based on field examinations in two broad areas of sociology and an oral defense of a dissertation research prospectus, contextualized in the appropriate literature and including a discussion of data collection and methods of analysis. In preparation, students usually take at least the required one quarter of the Dissertation Seminar course during the third year. After advancing to candidacy, students are expected to work in close consultation with their advisor and dissertation committee. Committee approval of a satisfactory dissertation follows a final oral defense of the document. The normative time for completion of the Ph.D. is six years, and the maximum time permitted is eight years.

Feminist Studies Emphasis. A graduate emphasis in Feminist Studies is also available. Refer to the Women’s Studies section of the *Catalogue* for information.

Courses in Sociology

(Schedule of Classes designation: Sociol)

LOWER-DIVISION

INTRODUCTORY COURSES

1 Introduction to Sociology (4). Major concepts and approaches to the study of society: social interaction, social differentiation, social control, social change, social institutions. (III)

2 International Sociology (4). Introduces international sociology by examining international social structures and processes. Attention to international migration to and from various countries around the world, and to theories and research about the determinants of international migration for both sending and receiving countries. (III, VIII)

3 Introduction to Social Problems (4). Focuses on how institutional and organizational features of societies generate problems for people. Particular attention is directed at a set of problems related to political and economic inequality: poverty, racism, sexism, urban and population problems, the environment, the criminal justice system. (III)

METHODS

10A-B-C Probability and Statistics (4-4-4). An introduction to probability and statistics. Emphasis on a thorough understanding of the probabilistic basis of statistical inference. Emphasizes examples from sociology, anthropology, and related social science disciplines. Same as Anthropology 10A-B-C. Students who receive credit for Sociology 10A-B-C may not receive credit for Anthropology 10A-B-C, Political Science 10A-B-C, Psychology 10A-B-C, Social Ecology 13, or Social Science 9A-B-C or 10A-B-C. *Sociology majors have first consideration for enrollment.* (V)

19 Special Topics: Methods (4). Prerequisites vary. May be repeated for credit as topic varies.

THEORY

23 Understanding Social Facts (4). Focus on perspectives toward the question of what constitutes sociological knowledge and processes through which competent investigators have built sociological arguments from data. Examination of several types of research techniques. (III)

29 Special Topics: Theory (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL PSYCHOLOGY

31 Introduction to Social Psychology (4). Studies sociological contributions to theory and research in social psychology, with focus on the social influences on personality, attitudes, beliefs, and behavior; socialization, human groups, and social interaction. Same as Psychology 78A. (III)

39 Special Topics: Social Psychology (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL STRUCTURE

41 Small Group Behavior (4). Deals with models for understanding behavior in small groups, including coalition formation, socialization, group norms and decision rules, leadership, conformity, group structure, and communication processes. *Sociology majors have first consideration for enrollment.*

43 Urban Sociology (4). The nature, causes, and consequences of urbanization are examined along with its changing scale and complexity, demographic and ecological city growth patterns, the quality of life in urban areas, processes of decision-making in cities, and the bearing of sociological investigation on public policy concerns in contemporary urban society. Sociology 43 and Planning, Policy, and Design 40 may not both be taken for credit. *Sociology majors have first consideration for enrollment.*

44 Population (4). Introduction to the analysis of human population including fertility, mortality dispersion, sex distribution. Attention is focused on the effects of these variables on, e.g., over-population, social disorganization, and the stability of social institutions. (VIII)

49 Special Topics: Structures (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIAL INSTITUTIONS AND CULTURE

51 Asian American Family and Community (4). Briefly examines the history of different Asian American groups and provides an in-depth analysis of issues related to family composition, mate selection, changing gender roles, and intergenerational conflict. (VII)

55 Mass Media and American Society (4). Examines the social implications of the fundamental changes in the organization and structure of American mass media since World War II, including the demise of big-city newspapers, the rise of broadcast television, and the fragmentation of radio and magazine markets. Explores the potential implications of emerging technologies—cable, telecast, and direct broadcast satellite (DBS)—on American culture and institutions. *Sociology majors have first consideration for enrollment.*

56 Society and Religion (4). A critical and personal examination of the varieties of religious and spiritual experiences human beings are undergoing in contemporary society. The role of conscious understanding and unconscious conditioning regarding religion and spirituality. *Sociology majors have first consideration for enrollment.*

59 Special Topics: Social Institutions and Culture (4). Prerequisites vary. May be repeated for credit as topic varies.

AGE, GENDER, RACE, AND ETHNICITY

62 Marriage and Families (4). Sociological theories and research on marriage, kinship, intimacy, and divorce. Emphasis on comparing family patterns in different social classes, ethnic groups, and societies, and on relating family life to the economy and other social institutions. Topics include gender roles, child-rearing, historical change. (III)

63 Race and Ethnicity (4). Focuses on racial and ethnic relations in the United States and compares them with those found in other societies. Analyzes the conditions that favor either cooperation and integration or rivalry, tension, and conflict. Appraises strategies for reducing and resolving conflicts. (VII)

65 Cultures in Collision: Indian-White Relations Since Columbus (4). An introductory survey of topics such as: indigenous religious belief and socio-political organization, stereotypical "images," intermarriage, the fur trade, Native leaders, warfare, and contemporary issues. Slides, films, and trips to local museums enhance student learning. Same as Anthropology 85A. (VII)

66 The Life Course (4). How social institutions channel the course of our lives from birth to death. Childhood, adolescence, transition to adulthood. Family, occupations, and other careers. Conversions and turning points. Generations and the influence of population age structures. Cross-cultural and historical comparisons. (III)

68A Ethnic and Immigrant America (4). Focusing on Asian, Latino, and Black immigrant groups, examines the second generation's experience of straddling two cultures and growing up American. Covers topics such as assimilation, bilingualism, race relations, education, bicultural conflicts, interracial marriage, and multiracial identities. Same as Chicano/Latino Studies 65. (VII)

69 Special Topics: Age, Gender, Race, and Ethnicity (4). Prerequisites vary. May be repeated for credit as topic varies.

SOCIETIES AND SOCIAL INEQUALITY

77 Social Change in East Asia (4). Introduction to comparative sociology focusing on social change in East Asia. Particular attention to macrostructural shifts in these societies such as economic development/underdevelopment, social inequality, political stability/instability, and rapid urbanization and population growth. (VIII)

78 Social Work (4). Provides conceptual tools to understand the social welfare response to need as it has evolved from the seventeenth century to the present. Provides an understanding of the structure of service programs and the history of the organized social work profession. (III)

79 Special Topics: Societies and Social Inequality (4). Prerequisites vary. May be repeated for credit as topic varies.

UPPER-DIVISION**METHODS**

110 Research Methods (4). Methods of data collection and analysis used by sociologists. Experimental methods, surveys, and interviews, field research and participant observation, demographic methods, historical and comparative approaches. Prerequisite when offered for upper-division writing: satisfactory completion of the lower-division writing requirement. *Sociology majors have first consideration for enrollment.*

114A Exploring Society Through Photography (4). Students explore society through presentation, interpretation, and discussion of their own photographs. A few common exercises at the beginning of the quarter are followed by individual projects. Photography as social observation and the relation of photographs in an essay are stressed. Prerequisite: basic darkroom techniques or the digital equivalent. Same as Anthropology 176A and Social Science 182A. *Sociology majors have first consideration for enrollment.*

119 Special Topics: Methods (4). Prerequisites vary. May be repeated for credit as topic varies. *Sociology majors have first consideration for enrollment.*

THEORY

120 Sociological Theory (4). What a theory of society is and is not. Historical and contemporary models, perspectives, and schools. Prerequisite: satisfactory completion of the lower-division writing requirement. *Sociology majors have first consideration for enrollment.*

126 Critical Political Theory (4). Acquaints students with current political theories, critical of conventional thinking, which attempt to join political, economic, social, historical, linguistic, and philosophical concerns to questions involving the relationships between and among individuals, groups, and institutions in the society, economy, and polity. Prerequisites: upper-division standing and satisfactory completion of the lower-division writing requirement. Same as Political Science 132A. *Sociology majors have first consideration for enrollment.*

129 Special Topics: Theory (4). Prerequisites vary. May be repeated for credit as topic varies. *Sociology majors have first consideration for enrollment.*

SOCIAL PSYCHOLOGY

135 Social Psychology of Networks (4). Review of network methods used in small group and organizational research. Discussion of social psychological literature relevant to the network of study of cognitive social structure, exchange and communication, identity negotiation, and social control. Case study of network datasets exemplifies research issues. Same as Psychology 178N. *Sociology majors have first consideration for enrollment.*

136 Religious Traditions of Asian Americans (4). Studies the religious traditions of Asian Americans, focusing on the transplantation of religious institutions, establishment of sacred spaces, celebration of religious holidays, socialization of children, as well as birth, marriage, gender relations, death, family. Same as Asian American Studies 143. **(VII)**

138 Business Decisions (4). Surveys normative and descriptive models of decision-making behavior, with an emphasis on organizational and policy contexts. Topics include rational choice theory, biases and heuristics, framing effects, and overconfidence. Management fads, panics, and herd behavior are also discussed. Prerequisites: either Anthropology 10A-B-C, Sociology 10A-B-C, Social Sciences 10A-B-C, or Mathematics 2A-B, 7. *Sociology majors have first consideration for enrollment.*

139 Special Topics: Social Psychology (4). Prerequisites vary. May be repeated for credit as topic varies. *Sociology majors have first consideration for enrollment.*

SOCIAL STRUCTURE

141 Organizations (4). How bureaucracies, formal organizations, and voluntary associations work, how and why they grow, and where they are going. History and structure of organizational rationality; dynamics of organized groups; behavior in organizations. The limits of bureaucratization and attempts to overcome these limits through decentralization. Same as Political Science 155C. *Sociology majors have first consideration for enrollment.*

142 White-Collar Crime (4) W. Examines criminal activity in business and corporate enterprise, organizations, and the professions. Theories regarding the causes and control of white-collar and corporate crime are covered as well as the numerous definitions of these terms. Same as Criminology, Law and Society 142. *Sociology majors have first consideration for enrollment.*

143 Social Networks and Social Support (4). Examines the manner in which behaviors and attitudes of individuals are affected by their network ties to others. How are peoples' opportunities and well-being increased or decreased by their social networks? What are the processes involved? Topics vary and may include studies in mental and physical health, job seeking, separation and loss, and aging. *Sociology majors have first consideration for enrollment.*

144 Political Sociology (4). Includes an examination of the major theoretical approaches to political sociology, and the application of these ideas to the politics of advanced capitalist societies. Also considers stability and change in power structures. *Sociology majors have first consideration for enrollment.*

145 Occupations and Professions (4). What makes some jobs satisfying and others boring? How does technology influence the workplace? What changes are coming in the U.S. job market? Sociology and psychology of occupations. Students interview workers and study aspects of their occupations. Prerequisite: upper-division standing. *Sociology majors have first consideration for enrollment.*

147A Cities and Social Change (4). Focuses on comparative urban political economy and the way cities and urban process are linked to changes in the global system. Attempts to draw on a diverse interdisciplinary literature that includes sociology, geography, and urban planning. Prerequisite: upper-division standing and completion of lower-division writing requirement. *Sociology majors have first consideration for enrollment.*

149 Special Topics: Structures (4). Prerequisites vary. May be repeated for credit as topic varies. *Sociology majors have first consideration for enrollment.*

SOCIAL INSTITUTIONS AND CULTURE

150 Sociological Lens on Religion (4). Examines the effects of religious beliefs, belonging, and institutions on social dynamics, including class, gender, and racial stratification, politics, and social movements. Additional topics: the sociological significance of conversion, commitment, and secularization/sacralization. *Sociology majors have first consideration for enrollment.*

152 Sociology and Psychology of the Arts (4). Explores the relationship between artists and the "art world" through which artistic activity is defined, supported, and consumed. Empirical studies in the plastic arts, performing arts, and literature are used to examine varieties of aesthetic expressions. Prerequisite: upper-division standing; authorization required. *Sociology majors have first consideration for enrollment.*

153 Sociology of Science (4). Empirical studies of scientific activity, the growth of scientific disciplines, communication in science, and cognitive organization are used to explore the relationship of science, scientific communities, and society. Provides an overview of the literature and the directions of new research in the field. Prerequisites: upper-division standing; satisfactory completion of the lower-division writing requirement. *Sociology majors have first consideration for enrollment.*

154 Medical Sociology (4). Current problems in the United States health-care system and proposals for reform. Considers financial barriers to access, the problem of patient dumping, underinsurance affecting the middle class, prenatal and perinatal care, child services, preventative care and needs of the elderly, minorities, low-income people, and the undocumented. Prerequisite: upper-division standing. *Sociology majors have first consideration for enrollment.*

155B Baseball and Society (4). An examination of baseball's role in American social life over the last 150 years. Issues of fraternal organizations, national development, capitalism, rationalization, race and ethnicity, gender, economic organization, labor relations, and politics are discussed. Prerequisite: satisfactory completion of the lower-division writing requirement. *Sociology majors have first consideration for enrollment.*

156 Deviance (4). Perspectives on deviance and criminality in behavior, institution, community, and myth. The suitability of contemporary theories of deviant behavior. Same as Psychology 177D and Criminology, Law and Society C107. *Sociology majors have first consideration for enrollment.*

158C Money, Work, and Social Life (4). Sociological perspective on issues related to money and work. Consumption practices and lifestyles, jobs and organizations, issues of money in intimate relations, marriage, and households, illegal work, discrimination, economic globalization are discussed. Prerequisite: when offered for upper-division writing, satisfactory completion of the lower-division writing requirement. *Sociology majors have first consideration for enrollment.*

159 Special Topics: Social Institutions and Culture (4). Prerequisites vary. May be repeated for credit as topic varies. *Sociology majors have first consideration for enrollment.*

SOCIAL INEQUALITY MODULE

161 Sociology of Gender (4). Explores the complex processes contributing to the social construction of gender and sexuality in the U.S. with particular attention to the intersection of gender, race, ethnicity, sexuality, and class; and evaluates how men and women are differentially constituted in the family, education, work, politics, media, and language. Prerequisite when offered for upper-division writing: satisfactory completion of the lower-division writing requirement. (VII)

163A Sociology of Sexual Assault (4). Examines the causes and consequences of sexual assault including rape, incest, and child molestation, and efforts to eliminate sexual assault. Explores the impact of gender, media, and "rape culture." Analyzes the effects of assault on victims and paths to recovery. *Sociology majors have first consideration for enrollment.*

164 Sociology of Age (4). Introduction to sociology of age, aging, and the aged. Problems posed by aging population. Life course transitions. How social organizations influence the life course. Work, health, family in later life. Prerequisite: upper-division standing. *Sociology majors have first consideration for enrollment.*

165A Social Inequality: Sociological Perspectives (4). Concrete sociological studies from across the world, including the United States, are compared to give perspectives on social status, power, economic differences, race, ethnicity, and gender. Prerequisites: one course in Anthropology, Economics, Political Science, or Sociology and satisfactory completion of the lower-division writing requirement. (VIII)

166 Immigration, Ethnicity, and Inequality (4). Explores immigration, ethnicity, and inequality as interconnected social forces. International migration, propelled by global inequalities, plays a central role in the formation of multinational societies, shapes intergroup relations and patterns of ethnic inequality, and transforms the immigrants themselves.

167A Racial and Ethnic Relations in the United States (4). Examines central questions and issues in the field of race and ethnicity; the emergence, maintenance, and consequences of the ethnic and racial stratification system in the United States; the future of racial and ethnic relations; and relevant public policy issues. Prerequisite: satisfactory completion of the lower-division writing requirement. Same as Chicano/Latino Studies 148. *Sociology majors have first consideration for enrollment.*

168 Sexism and Power (4). Sexism may be seen as a particular form of socially constructed power which creates and maintains gender differences as relations and practices of structured inequalities. Males and females are objects constructed in a powered language dominated and controlled by males to their positional and distributional advantage. Prerequisites: upper-division standing and satisfactory completion of the lower-division writing requirement. Same as Political Science 134J. *Sociology majors have first consideration for enrollment.*

169 Special Topics: Age, Gender, Race, and Ethnicity (4). Prerequisites vary. May be repeated for credit as topic varies. *Sociology majors have first consideration for enrollment.*

SOCIETIES AND SOCIAL INEQUALITY

170A Vietnam War (4). Examines social structures and social changes in Vietnamese and U.S. societies through the study of the Vietnam War. (VIII)

170B U.S. War on Terrorism (4). Analyzes the United States war on terrorism by focusing on terrorism, the U.S. wars in Afghanistan and Iraq, and changes in police powers throughout the Patriot Act, as well as the political leadership which directs the war. (VIII)

170C African American Protest Movements (4). Examines the work of major African American Marxist individuals and organizations in the twentieth century. Their theories of racism, capitalism, and their developed practices are covered. (VII)

171 Environmental Sociology (4). Examines society's changing relationship to the natural world. Delineates different models of "nature" and then explores their institutional roots, the social responses they have generated, and their implications for social inequality. *Sociology majors have first consideration for enrollment.*

173 Social Stratification (4). Sources, functions, and dynamics of the unequal distribution of wealth, prestige, knowledge, and power in American and other societies. *Sociology majors have first consideration for enrollment.*

174 Social Movements and Collective Behavior (4). A survey of models of collective action drawn from sociology, economics, psychology, and political science. Focus on areas such as social movements, strikes, crowd psychology, cults, fads, fashions, public opinion, and symbolic and mythical elements in collective culture. Prerequisite: Economics 1, Political Science 6A, or Sociology 1. Same as Political Science 156D. *Sociology majors have first consideration for enrollment.*

175A Korean Society and Culture (4). Introductory background to the social and cultural forces that affect the lives of the Koreans, including those in the United States. Considers traditional values and contemporary issues within a historical framework. Same as Anthropology 163K and East Asian Languages and Literatures 130. (VIII)

175B Comparative Societies: China (4). Chinese society from 1949 to present. Social change in the context of political control and ideological considerations. Focus on the power structure, political decision processes, and ideological legitimation, and interplay with the Chinese community and culture. (VIII)

175D Comparative International Migration (4). Examines the migration patterns to the three largest nations that receive immigrants (i.e., permanent settlers)—Australia, Canada, and the United States. Same as Asian American Studies 171A. (VIII)

176 Social Policy (4). Comparison of theoretical perspectives on the role of the state in contemporary society and an examination of the gender, racial-ethnic, and class dimensions of social policy. Particular focus on social welfare, labor, health policies, and policies on sexual violence. *Sociology majors have first consideration for enrollment.*

177 Immigration and Social Policy (4). Explains how people decide to migrate and how they are incorporated into a host society (both historically and currently), examines the effects of immigration on the U.S., analyzes how the framing of immigration shapes the discourse about the issue. Prerequisite: satisfactory completion of the lower-division writing requirement. *Sociology majors have first consideration for enrollment.*

179 Special Topics: Societies and Social Inequality (4). Prerequisites vary. May be repeated for credit as topic varies. *Sociology majors have first consideration for enrollment.*

RESEARCH AND HONORS

NOTE: Students are reminded that each quarter of a sequential course (i.e., Sociology 180A-B, H188A-B) must be taken in order.

180A-B Sociology Majors Seminar (4-4). Students learn sociology by doing it. A modest-sized research project is planned and implemented by each student. Prerequisites: Sociology 110 and satisfactory completion of the lower-division writing requirement. Limited to Sociology majors only.

182 Sociology Issues Seminar (2). Drawing on experts from campus and community, explores various sociological questions, findings, approaches through lectures and discussion. Students select seminar topics, prepare opening remarks, lead discussion with faculty member, guest lecturer. May be taken for credit four times as topics vary.

H188A-B Honors Research and Thesis (4-4). Focuses on the design and implementation of individual research projects undertaken by senior Sociology majors. Writing projects consist of a proposal and paper on some empirical research. Prerequisites: consent of instructor and honors status; satisfactory completion of the lower-division writing requirement.

189 Special Topics: Honors Sequence (4). Prerequisites vary. May be repeated for credit as topic varies. *Sociology majors have first consideration for enrollment.*

197 Field Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

198 Directed Group Study (4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

199 Independent Study (1 to 4). Prerequisite: consent of instructor. May be repeated for credit as topic varies.

GRADUATE

202A Proseminar I in Sociology (1). Introduces first-year graduate students in Sociology to the current research interests of Sociology faculty, as well as to other aspects of graduate life at UCI and to the profession of sociology more generally. Prerequisites: graduate standing, consent of instructor.

202B Proseminar II in Sociology (4). Focus is on second-year research projects, design, development, data gathering, analysis, and preparing both oral and written presentations of the results. Students learn new analytic and writing skills, gain experience with the research process, and become socialized about professional standards, customs, and institutions. Prerequisites: graduate standing, consent of instructor.

210A Classical Social Theory (4). Examines the development of classical sociological theory through the writings of Karl Marx, Emile Durkheim, Max Weber, Georg Simmel, and George Herbert Mead. Prerequisites: graduate standing; consent of instructor. Same as Social Science 253N.

210B Contemporary Social Theory (4). Familiarizes students with twentieth-century developments in social thought that have influenced sociological research, suggesting “what is living and what is dead” in the “classics” and offering an overview of the main outlines of recent sociological theorizing. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253R.

211A Sociology of Gender (4). An introduction to the sociology of gender in the U.S. and globally. The social construction of gender and sexuality; theoretical perspectives and feminist frameworks. Theories of economy, patriarchy, and race, and the social positions of women and men. Prerequisites: graduate standing, consent of instructor.

212 Network Theory (4). An introduction to theoretical work in the field of social networks. Topics include baseline models, homophily, and propinquity, exchange and power, balance theory, diffusion and social influence, equivalence, and cohesion. Deductive use of theory to make novel predictions is emphasized. Prerequisite: graduate standing.

219 Special Topics: Theory (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

220A Research Design (4). Data collection, organization, and analysis in ethnographic or quasi-experimental settings, including interviewing, participant observations, behavior observations, and questionnaires. Research design issues include sampling, longitudinal research, and comparative research. Emphasis on the integration of qualitative and quantitative data. Prerequisite: graduate standing or consent of instructor. Sociology 220A and Sociology 265 may not both be taken for credit.

221A-B-C Graduate Statistics I, II, III (4-4-4). Statistics with emphasis on applications in sociology and anthropology. Examines exploratory uses of statistical tools in these fields as well as univariate, bivariate, and multivariate applications in the context of the general linear model. Prerequisites: graduate standing, consent of instructor.

222A Comparative and Historical Methods (4). Topics include the logic of comparative and historical analysis techniques and the examination of exemplar works in representative problem areas. Prerequisites: graduate standing, consent of instructor.

223 Advanced Qualitative Methods: Analyzing Qualitative Data (4). Introduces students to the theory and practice of analyzing qualitative data. Students must have already learned about data collection and research design for qualitative research and they must have qualitative data they can analyze in the course. Prerequisite: graduate standing or consent of instructor. Same as Political Science 273A and Planning, Policy, and Design 213.

224A Survey Research Methods I: Designing Surveys (4). Trains students to design and administer studies involving interviewing or self-administered questionnaires. Focuses on developing survey projects and designing instruments. Prerequisite: graduate standing.

224B Survey Research Methods II: Conducting Surveys (4). Trains students to design and administer studies involving interviewing or self-administered questionnaires. Focuses on the principles and practices of collecting survey data. Prerequisites: Sociology 224A and graduate standing.

226A Methods of Demographic Analysis (4) S. Introduces basic demographic methods used in social science and public health research. Topics include sources and limitations of demographic data; components of population growth; measures of nuptiality, fertility, mortality, and population mobility projection methods; and demographic models. Prerequisite: graduate standing or consent of instructor.

227A-B Seminar in Ethnographic and Qualitative Field Methods (4-4). Comprehensive and critical discussion of the traditions of qualitative fieldwork; detailed examination of the collection, coding, analysis, and presentation of ethnographic/qualitative field data; and close mentoring of student projects culminating in an original research paper. In-Progress grading. Prerequisite: graduate standing.

229 Special Topics: Methods (1 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

230A Race and Ethnicity (4). An examination of central questions and issues in the field of race and ethnicity through a critical analysis and discussion of the principal theoretical perspectives and paradigms that have framed much of the scholarship in the area. Prerequisites: graduate standing, consent of instructor.

232 Inequality (4). Theoretical and empirical approaches to the study of social and economic inequality, with special attention to race/ethnicity, class, and gender. Prerequisite: graduate standing.

233 Immigration and the New Second Generation (4). Investigates how the children of today’s immigrants incorporate into the United States social structure. Covers topics such as assimilation, immigrant families and communities, education, language, racial and ethnic identities, gender, education, and the changing U.S. racial structure.

234 Theory of Ethnicity (4). Examines critically the meaning and measurement of ethnicity, race, and nation in sociological theory and research. Theories of ethnicity are explored, along with empirical studies of the construction of ethnic and pan-ethnic identities in historical and contemporary contexts. Prerequisite: graduate standing.

235 Planning and Poverty Alleviation in Developing Countries (4). Critically examines competing conceptualizations, methods of measurement, and poverty alleviation strategies widely used in developing countries. Focuses on poverty conceptualized as economic deprivation, well-being, vulnerability, and social exclusion. Same as Planning, Policy, and Design 251.

236 Immigrant Incorporation (4). Focuses on the conceptual and theoretical ideas on immigrant adaptation and identity to a new country; frameworks that emphasize incorporation as a melting pot; synthesizing the theoretical and empirical literature on incorporation in order to develop better models. Prerequisite: graduate standing.

237 Educational Inequality (4). Focuses on macro-level explanations of inequality of schooling, particularly in the U.S. context. Explores traditional models, such as conflict, functionalism, status-attainment, cultural reproduction, and newer synthetic accounts. Emphasis on higher education access and the intersection of education and work. Prerequisite: graduate standing.

239 Special Topics: Social Inequality (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

240A Social Movements (4). A survey of the field of Social Movements, oriented around critical themes in the major theoretical traditions and contemporary exemplars. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253J.

241A Political Sociology (4). Begins with an examination of the three major orientations to the State (Pluralist, Elitist, and Class). Next considers current topics in political sociology including the Welfare State, the New Deal, political behavior, social movements, participation, and democracy. Prerequisites: graduate standing, consent of instructor. Same as Social Science 253I.

241D Norms in International Relations (4). Evaluates various theoretical and empirical approaches to understanding the emergence, diffusion, and effects of international norms. Prerequisite: graduate standing or consent of instructor.

242 Sociology of Culture (4). Major perspectives in the sociology of culture. Topics include the role of cultural dynamics in the reproduction of inequality, collective action, political and organizational decision making, emotional experience, and the social impacts of new technologies.

249 Special Topics: Political Sociology and Social Movements (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

252A Global Urbanization (4). Examines the spread of cities worldwide in the twentieth century. What are the political and economic causes of this process? What are the social-cultural, political, economic effects? How is contemporary urbanization linked to global restructuring of other kinds? Prerequisites: graduate standing, consent of instructor. Same as Social Science 254J and Planning, Policy, and Design 273.

259 Special Topics: Global Studies and Comparative Development (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

260A Family and Households (4). Families and households as a fundamental unit of social organization. Concepts and controversies. U.S. demographic trends and global changes in marriage, divorce, fertility, living arrangements. Housework and paid work. Gender and generational inequalities. How families reproduce stratification systems. Prerequisites: graduate standing, consent of instructor.

261A Age, Generations, and the Life Course (4). Age is a central organizing principle of individual lives, social institutions, and human populations. Considers how age is socially defined and how developmental transitions between ages (i.e., growing up and growing older) are accomplished. Prerequisites: graduate standing, consent of instructor.

262A Populations (4). Introduces the interrelationships between population and social organization. Considers measurement and explanation of historical and contemporary trends in birth rates, death rates, migration, and marriage and divorce. Case material is drawn primarily from the U.S. and other industrialized nations. Prerequisite: graduate standing or consent of instructor. Same as Social Sciences 253F.

263 The Sociology and Demography of Health and Illness (4). Health from a population perspective. Topics include pandemics; the "McKeown debate" (standard of living vs. public health vs. medicine); long-term health changes in developed countries; health and socio-economic status; immigrant health. Not a course in medical sociology as such.

264 Immigrant America (4). The study of the causes and consequences of international migration has become one of the most vital fields of sociological theory and research. Examines principal theoretical perspectives and empirical research on contemporary immigration flows and the processes of incorporation. Prerequisite: graduate standing.

265 Demographic and Social Analysis (DASA) (4). Data collection, organization, and analysis in population studies and demography. Research design issues include sampling, longitudinal research, and comparative research. Prerequisites: graduate standing, consent of instructor, and enrollment in DASA program. Sociology 265 and Sociology 220A may not both be taken for credit.

266 Immigration and Globalization (4). Examines immigration to three leading immigrant-receiving nations: the United States, Canada, and Australia, as both cause and consequence of globalization. Specific attention to Asian migration, as well as assimilation and its relationship to multiculturalism. Prerequisite: graduate standing. Same as Asian American Studies 202.

269 Special Topics: Social Demography (2 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

271 Theories of Power and Empowerment (4). Studies different ways of thinking about power and its uses. Explores theories of power that inform various notions of empowerment, including resistance, participatory democracy, and workplace empowerment. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 279 and Political Science 223A.

272A Work and Industrial Relations (4). Explores the nature, causes, and results of workplace conflict in American Society. Considers topics such as "American Exceptionalism," sex segregation in the workplace, strikes and the role of unions in American society. Prerequisites: graduate standing, consent of instructor.

279 Special Topics: Social Organizations and Institutions (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

280 Analysis of Social Network Data (4). Overview and application of methods for analyzing social network data. Topics include: data structures, visualization, graph theory, centrality, subgroups, positions, blockmodels, local properties, and statistical models. Social network analysis software is used to analyze a range of examples. Prerequisite: graduate standing.

289 Special Topics (2 to 4). Prerequisites: graduate standing, consent of instructor. May be repeated for credit as topics vary.

290 Dissertation Research (1 to 12). Prerequisites: graduate standing, consent of instructor. May be repeated for credit.

299 Independent Study (1 to 12). Prerequisites: graduate standing, consent of instructor. May be repeated for credit.

GRADUATE PROGRAM IN SOCIAL SCIENCE

In addition to the departmental graduate programs, the School offers the M.A. degree in Social Science with a concentration in Demographic and Social Analysis, and the Ph.D. degree in Social Science with a concentration in Mathematical Behavioral Sciences. Each program is administered by a different group of faculty.

Graduate Concentration in Demographic and Social Analysis

Participating Faculty

Hoda Anton-Culver: Epidemiology and preventive medicine
 M. Victoria Basolo: Urban politics, regionalism, public choice, interorganizational relationships
 Frank Bean: Migration and immigration, immigrants' welfare and demographic behavior
 Marlon G. Boarnet: Urban economics, urban planning, urban economic development
 Susan K. Brown: International migration, urban sociology, and educational inequality
 Michael Burton: Economic anthropology, ecological anthropology, gender
 Kitty C. Calavita: Sociology of law, criminology, social deviance, immigration, and inequality
 Leo R. Chavez: International migration, Latin American immigrants, medical anthropology
 Kenneth S. Chew: Social and historical demography
 Philip Cohen: Social demography, inequality, race, and work
 C. David Dooley: Community psychology, epidemiology, economic change
 Katherine Faust: Social networks, research methods
 Susan Greenhalgh: Political economy, feminism/gender, politics of reproduction, critical demography
 Bernard N. Grofman: Mathematical models of collective decision making, formal democracy theory, politics of small groups
 Matt L. Huffman: Organizations, work, gender inequality
 Jennifer Lee: Migration and immigration, race/ethnic/minority relations, urban sociology
 John M. Liu: Race/ethnic/minority relations; economy and society
 Richard Matthew: International relations, environmental policy, ethics
 Richard McCleary: Criminal justice, research methodology, statistics
 Robert Newcomb: Social statistics, methodology
 Gary Richardson: Economic history, immigration in historical perspective
 Rubén G. Rumbaut: International migration, the "1.5" Generation, comparative race and ethnic relations, structural inequality; identity, health, and mental health
 David A. Smith: Urban sociology, comparative sociology, political sociology
 William C. Thompson: Psychology and law, criminal justice, human judgment and decision making
 George Tita: Criminology, community context of violence, urban youth gangs, homicide studies
 Judith Treas: Population studies, sociology of aging, sociology of family
 Wang Feng: Demography, social change, economy and society
 Douglas L. White: Cross-cultural research, mathematical anthropology, social networks

The M.A. in Social Science with a concentration in Demographic and Social Analysis offers specialized training in the research skills to address practical problems confronting society, business, government, and the nonprofit sector. The concentration emphasizes the Pacific Rim and issues defining Southern California's population, such as immigration, changing household and family structure, racial and economic inequalities, and the impact of local and regional population growth. Informed by the interdisciplinary field of demography, the program draws on faculty and courses in the Schools of Social Sciences and Social Ecology.

ADMISSION

Students are admitted to the program in the fall quarter. Students must hold a B.A. or B.S., normally in a social science or related field, and should have had at least four units of undergraduate statistics or equivalent mathematics courses. Students must meet the general admission requirements for graduate studies, which include official transcripts of all college course work, Graduate Record Examination scores for tests taken within the past five years, and three letters of recommendation. Applicants whose first language is not English must also take the Internet-based Test of English as a Foreign Language (TOEFL) and achieve a score of at least 80 out of 120. The International English Language Testing System (IELTS) examination may be used instead, in which case a minimum overall score of 7 out of 10 is required, with a score of no less than 6 out of 10 on any individual module.

REQUIREMENTS

The M.A. requires 36 units of study and an oral exit examination. All students must complete 20 units of required courses which include one course in research design, one in demographic methods, one in populations, and two in statistics. In addition, students must complete 16 units of elective courses in population issues or research methods. No more than four units may be internship, independent study, directed readings, or thesis courses (to prepare for the oral examination). One or two electives may be upper-division undergraduate courses, with the remainder being graduate courses. All courses must be completed with a grade of B or better.

The M.A. in Social Science with a concentration in Demographic and Social Analysis may also be awarded to Ph.D. students who complete the necessary requirements.

Graduate Concentration in Mathematical Behavioral Sciences

Participating Faculty

Pierre F. Baldi: Bioinformatics/computational biology; probabilistic modeling/machine learning
 Jeffrey Barrett: Philosophy of science, philosophy of physics
 William Batchelder: Mathematical models, measurement, and cognitive processes
 John P. Boyd: Mathematical anthropology and systems theory
 William A. Branch: Macroeconomics, economic theory
 Myron Braunstein: Visual perception and computer applications
 David Brownstone: Econometrics and industrial organization
 Jan K. Brueckner: Urban economics, public economics, industrial organization, and housing finance
 Michael Burton: Economic anthropology; gender, family, and households; cognitive anthropology; Africa, Oceania
 Carter Butts: Computational and mathematical organization theory, games and economic behavior
 Yen-Sheng Chiang: Social networks, rational choice theory (trust, norms and collective action)
 Charles F. Chubb: Visual perception, psychophysics
 Linda R. Cohen: Political economy, public choice, and governmental regulation of business
 Rui J. P. de Figueiredo: Mathematical foundations of neural networks, contextual feedback models for automated image understanding
 Barbara Doshier: Memory, information processing, perception
 Michael D'Zmura: Vision research, virtual reality
 David Eppstein: Computational geometry and geometric optimization, triangulation and mesh generation, graph drawing and information visualization, data depth and robust statistics, analysis of exponential-time algorithms
 Jean-Claude Falmagne: Mathematical psychology
 Katherine Faust: Social networks, research methods
 Steven A. Frank: Complex phenotypes; quantitative dynamics of genetical, biochemical, and cellular mechanisms

Linton C. Freeman: Network models of social structure
 Michelle Garfinkel: Macroeconomic and monetary theory
 Amihai Glazer: Public choice, especially concerning commitment problems
 Bernard N. Grofman: Mathematical models of collective decision making, formal democratic theory, sequential decision making, politics of small groups
 Donald Hoffman: Artificial intelligence approaches to human and machine vision, recovery of three-dimensional structure from image motion, visual recognition of objects by their shape
 Geoffrey Iverson: Cognitive science and mathematical models
 Marek Kaminski: Mathematical modeling and biology, virus dynamics, cancer modeling
 L. Robin Keller: Decision analysis, risk analysis, problem structuring, management science
 Natalia L. Komarova: Mathematical modeling of biology and language; nonlinear waves
 Igor Kopylov: Microeconomic theory, decision theory and game theory
 Michael Lee: Mathematical and computational models of stimulus representation, categorization, memory, decision-making and problem-solving
 R. Duncan Luce: Mathematical behavioral science
 Penelope Maddy: Philosophy of mathematics, philosophy of logic
 Michael McBride: Microeconomics, game theory, and political economy
 Anthony McGann: Party systems, democratic theory, formal models of political systems, European government
 Louis Narens: Measurement, logic, and metacognition
 Andrew Nozmer: Population, social networks, mathematical models, demography of health and mortality, historical demography
 Dale Poirier: Econometrics, both theoretical and empirical, specializing in Bayesian econometrics
 A. Kimball Romney: Experimental and psychological anthropology
 Donald G. Saari: Mathematics and application of dynamical systems to social sciences
 Stergios Skaperdas: Economic theory, political economy
 Brian Skyrms: Philosophy of science, metaphysics
 Kenneth A. Small: Urban economics, transportation economics, discrete-choice econometrics, energy
 Padhraic Smyth: Statistical pattern recognition, probabilistic learning, information theory
 George Sperling: Vision, perception, information processing
 Ramesh Srinivasan: Perception, development and cortical dynamics
 Hal Stern: Bayesian methods, model diagnostics, statistical computing
 Mark Steyvers: Computational models of memory, reasoning, and perceptions
 Rein Taagepera: Quantitatively predictive models, electoral and party systems, Finno-Ugric area studies
 Carole J. Uhlaner: Comparative political participation, formal models of political behavior
 Christian Werner: Mathematical geography
 Douglas White: Social networks, longitudinal social demography
 Charles E. Wright: Skill acquisition and generalization, human motor behavior, visual attention, Virtual Reality Laboratory
 Jack Xin: Partial differential equations (PDE), asymptotic analysis, scientific computation, and their applications in fluid dynamics, voice signal processing, biology, nonlinear optics and geoscience
 John I. Yellott: Mathematical psychology and vision perception
 Hong-Kai Zhao: Applied mathematics in physics, engineering, imaging science, and computer vision

The concentration in Mathematical Behavioral Sciences offers a program of interdisciplinary and mathematical approaches to the study of human behavior, providing high levels of training in current mathematical modeling and in mathematics and software use and programming. The program is administered by an interdisciplinary group of faculty. Within the concentration, two optional emphases are available: Social Networks; and Games, Decisions, and Dynamical Systems. Specific requirements are detailed below.

ADMISSION

Admission to the concentration in Mathematical Behavioral Sciences requires evidence of appreciable mathematical skill and knowledge. As an absolute minimum, a candidate should have taken one full year of calculus, including calculus of several variables, and one course in linear algebra, and should also provide

evidence of additional mathematical depth. This depth can be manifested in a number of different ways including, but not restricted to, an undergraduate degree in mathematics or physical science, a high score on the quantitative section of the GRE general test, or a strong undergraduate minor in mathematics. In addition, students should have some exposure to a behavioral science field. Especially useful is some experience with behavioral science modeling.

Those students interested in either the emphasis in Social Networks or the emphasis in Games, Decisions, and Dynamical Systems should make this clear in their application. A student is free at any time after admission to move into or out of either emphasis, but will be subject to the requirements in effect at the time of original admission to the concentration in Mathematical Behavioral Sciences.

GENERAL REQUIREMENTS

Four major classes of requirements must be fulfilled. Since a number of options are available, the student will, in consultation with an advisor, develop a plan of study.

Quantitative/Mathematical. To be completed by the end of the third year: (1) one course each in analysis beyond calculus, abstract algebra beyond linear algebra, and logic; and (2) two quarters of mathematical statistics, with calculus as a prerequisite and covering the fundamentals of probability and random variables.

A list of courses eligible for satisfying the Quantitative/Mathematical requirement is available online at <http://www.imbs.uci.edu/NEWphdprogram.html>.

Language/Computer. All students must be sufficiently familiar with various computer programs and languages to be able to conduct serious research in their field of interest and must submit either proposed courses or some demonstration of competency as part of their plan of study. In addition, students must either (1) attain proficiency in reading social science technical publications in one foreign language with a substantial relevant technical literature or (2) demonstrate proficiency in computer programming considerably beyond that of the standard computer requirement. Because of the continually changing nature of computer languages and software, the conditions for fulfilling this additional computer expertise requirement is left to the judgment of the faculty subcommittee on computers of the Ph.D. program.

Substantive Minor. Students are expected to develop considerable expertise in some substantive field and in the application of models to it. This requires the completion of three courses at the upper-division or graduate level that do not necessarily entail extensive modeling, and three courses or seminars in which the primary thrust is mathematical modeling.

Research Papers and Colloquia. At the end of the second year, a 10–20-page paper reporting original research or a penetrating analysis of some subtopic of Mathematical Behavioral Science (or either Social Networks, or Games, Decisions, and Dynamical Systems with a formal or mathematical component) is expected. An oral presentation will be given to faculty and graduate students. Two faculty members are assigned to read and evaluate the paper and talk.

Students are required to take for credit four quarters of the Mathematical Behavioral Sciences Colloquium, Social Science 211A-B-C, during their first three years. Although not a formal requirement, students are expected to attend the Colloquium on a regular basis whenever in residence.

Time to Degree. Students must advance to candidacy in their fourth year. The normative time for completion of the Ph.D. is six years. The maximum time permitted is seven years.

Emphasis in Social Networks

The requirements for the emphasis in Social Networks are the same as the general requirements noted above, with the following exceptions:

Students may choose to complete the first part of the Quantitative/Mathematical requirement with one course each in discrete mathematics, graph theory, and logic.

Social Networks students are required to attend about 75 percent of the Mathematical Behavioral Sciences Colloquia, including all that are designated as Social Networks colloquia, and also must attend occasional colloquia, usually of local faculty and graduate students, which are separate from the general Mathematical Behavioral Sciences Colloquia.

Emphasis in Games, Decisions, and Dynamical Systems

The requirements for the emphasis in Games, Decisions, and Dynamical Systems are the same as the general requirements noted above, with the following exceptions:

Students must complete eight graduate courses emphasizing game theory, decision theory, or dynamical systems. Examples of such courses are Economics 243A (Game Theory); Economics 270A-B-C (Seminar in Public Choice I, II, III); Social Science 241B (Network Theories of Social Structure); Anthropology 289A (Networks and Social Evolution); Anthropology 289B (Cognition, Technology, and Genes); and Anthropology 289C (Dynamical Processes). These courses will count toward the Substantive Minor requirement.

Students are required to attend about 75 percent of the Mathematical Behavioral Sciences Colloquia, including all that are designated as Games, Decisions, and Dynamical Systems colloquia, and must also attend occasional colloquia, usually of local faculty and graduate students, which are separate from the general Mathematical Behavioral Sciences Colloquia.

Master of Arts Degree

The M.A. degree is awarded to UCI Ph.D. students who complete necessary requirements or to students currently enrolled in a Ph.D. program (or equivalent) at another institution who are directly admitted for graduate study leading only to the master's degree at UCI. Such applicants must provide evidence that their Ph.D. program agrees to this one-year arrangement. Requirements include the submission of a petition to the Graduate Committee along with a proposed plan of study consisting of 36 units of relevant Mathematical Behavioral Science courses, normally including the core requirement in mathematical statistics, and the satisfactory completion of a comprehensive examination.

Graduate Courses in Social Science

(Schedule of Classes designation: Soc Sci)

SOCIAL SCIENCES

201D Introduction to Biostatistics (2). An introduction to the principles and methods of biostatistics with application to the health sciences. Statistical concepts, terminology, and techniques employed in health science research to analyze data and report such analysis. Articles from health science research literature are used for illustration. Prerequisite: graduate standing or consent of instructor.

209A-Z Special Topics in Mathematical Social Science (4). Current research in Mathematical Social Science. Topics vary.

211A-B-C Mathematical Behavioral Sciences Colloquium (2-2-2). Weekly reports and colloquia by faculty, students, and visitors. Satisfactory/Unsatisfactory only. May be repeated for credit.

SOCIAL NETWORKS

240A-B-C Seminar in Social Networks (1.3-1.3-1.4). A seminar drawing on visiting scholars and local faculty designed to keep students abreast of current developments in Social Networks research. May be taken for credit twice.

249A Special Topics in Social Networks (4) F, W, S. Current research in Social Networks. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

SOCIOLOGY AND SOCIAL RELATIONS**FAMILY AND GENDER**

253A Family and Life History (4). Interdisciplinary and comparative work in family and life history. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 221A.

253F Populations (4). Introduces the interrelationships between population and social organization. Considers measurement and explanation of historical and contemporary trends in birth rates, death rates, migration, and marriage and divorce. Case material is drawn primarily from the U.S. and other industrialized nations. Prerequisites: graduate standing, consent of instructor. Same as Sociology 262A.

SOCIAL STRUCTURE, SOCIAL ORGANIZATIONS, AND SOCIAL NETWORKS

253I Political Sociology (4). Begins with an examination of the three major orientations to the State (Pluralist, Elitist, and Class). Next considers current topics in political sociology including the Welfare State, the New Deal, political behavior, social movements, participation, and democracy. Prerequisites: graduate standing, consent of instructor. Same as Sociology 241A.

253J Social Movements (4). A survey of the field of Social Movements, oriented around critical themes in the major theoretical traditions and contemporary exemplars. Prerequisites: graduate standing, consent of instructor. Same as Sociology 240A.

253N Classical Social Theory (4). Examines the development of classical sociological theory through the writings of Karl Marx, Emile Durkheim, Max Weber, Georg Simmel, and George Herbert Mead. Prerequisites: graduate standing; consent of instructor. Same as Sociology 210A.

253R Contemporary Social Theory (4). Familiarizes students with twentieth-century developments in social thought that have influenced sociological research, suggesting “what is living and what is dead” in the “classics” and offering an overview of the main outlines of recent sociological theorizing. Prerequisites: graduate standing, consent of instructor. Same as Sociology 210B.

THIRD WORLD DEVELOPMENT AND SOCIAL CHANGE

254A Transnational Migration (4). The immigrant experience will be examined in order to explore how specific theoretical issues are examined empirically. These issues include ethnic enclave formation, gendered differences in migration and settlement, class differences, the migration of indigenous groups, identity formation, and issues of representation. Same as Anthropology 235A.

254H Seminar in Political Anthropology (4). Explores anthropological approaches to politics. Covers a range of issues and topics including: theories of culture, power, and hegemony; approaches to colonial and post-colonial relations of global inequality; and ethnographic approaches to the modern state. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 245A.

254J Global Urbanization (4). Examines the spread of cities worldwide in the twentieth century. What are the political and economic causes of this process? What are the social-cultural, political, economic effects? How is contemporary urbanization linked to global restructuring of other kinds? Prerequisites: graduate standing, consent of instructor. Same as Planning, Policy, and Design 273 and Sociology 252A.

254L Approaches to Globalization (4). Historical and contemporary approaches to the world economy, emphasizing anthropological questions of culture, power, identity, inequality. Examines “neo-imperialism,” “late capitalism,” accumulation, global markets, urban space, the state, business and policy globalization discourse, “local” responses to and instantiations of the “global.” Prerequisite: graduate standing or consent of instructor. Same as Anthropology 248A.

METHODS AND STATISTICS

255C Grant and Proposal Writing (4). Focuses on production, critique, and revision of student research proposals. A practical seminar designed to improve student proposals, help students through the application processes, and increase students’ chances of obtaining support for their research. Prerequisite: graduate standing or consent of instructor. Same as Anthropology 225A.

255M-N-P Graduate Statistics I, II, III (4-4-4). Statistics with emphasis on applications in sociology and anthropology. Examines exploratory uses of statistical tools in these fields as well as univariate, bivariate, and multivariate applications in the context of the general linear model. Prerequisites: graduate standing, consent of instructor.

SPECIAL TOPICS IN SOCIAL RELATIONS

259A Special Topics in Social Relations (1 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

MULTICULTURAL /INTERNATIONAL

272A Origin and Evolution of Marxist Social Thought (4). Focuses on the genesis and evolution of Marxist social thought. The “systemic” method of Marx and Engles to questions of economic production and reproduction is compared and contrasted with modern world-system grand visions, feminist-theoretic approaches, and postmodern critiques. Prerequisites: undergraduate course in political theory or equivalent; graduate standing or consent of instructor.

289 Special Topics in Social Science (4) F, W, S. Current research in Social Science. Topics vary. May be repeated for credit.

SPECIAL COURSES IN SOCIAL SCIENCE

290 Dissertation Research (4 to 12) F, W, S. May be repeated for credit. Prerequisite: consent of instructor.

298 Self-Directed Study (1 to 12) Summer. May not be applied toward residency requirements or toward total units required for a degree. May be repeated for credit. Prerequisite: graduate standing.

299 Independent Study (1 to 12) F, W, S. May be repeated for credit.

399 University Teaching (4-4-4) F, W, S. Limited to Teaching Assistants.

COLLEGE OF HEALTH SCIENCES

OVERVIEW

The UCI College of Health Sciences is comprised of the School of Medicine; the Program in Nursing Science; the Department of Pharmaceutical Sciences; and the Program in Public Health, which includes the Department of Population Health and Disease Prevention. Housed within one of the nation's top research universities, the College of Health Sciences brings together faculty, students, researchers, clinicians, and health care professions and aims to create new opportunities at the scientific frontier of many research fields to enhance the quality of education and research.

In addition to the information presented here, online information is available at <http://www.cohs.uci.edu/>.

DEGREES

Biomedical Sciences	M.S., Ph.D.
Environmental Toxicology	M.S., Ph.D.
Genetic Counseling	M.S.
Medicine	M.D.
Nursing Science	B.S., M.S.
Pharmaceutical Sciences	B.S.
Pharmacology and Toxicology	M.S., Ph.D.
Public Health	M.P.H.
Public Health Policy	B.A.
Public Health Sciences	B.S.

The School of Medicine's basic medical science departments of Anatomy and Neurobiology, Biological Chemistry, Microbiology and Molecular Genetics, Pathology and Laboratory Medicine, and Physiology and Biophysics offer graduate instruction leading to the M.S. and Ph.D. degrees in Biomedical Sciences.

The School of Medicine also offers the Medical Scientist Training Program (M.D./Ph.D.), the Program in Medical Education for the Latino Community (PRIME-LC), an M.D./M.B.A. program in cooperation with The Paul Merage School of Business, medical residency programs, and continuing medical education for physicians and other health care professionals.

PROGRAM IN NURSING SCIENCE

252 Berk Hall; (949) 824-1514

E-mail: nssao@uci.edu

Ellen F. Olshansky, **Director of the Program in Nursing Science**

Faculty

Jill P. Berg, Ph.D. University of Pittsburgh, *Associate Professor, Program in Nursing Science*

Sarah Choi, Ph.D. University of California, San Francisco, *Assistant Professor, Program in Nursing Science*

Karen Deck, M.S.N. California State University, Long Beach, *Health Sciences Assistant Clinical Professor, Program in Nursing Science*

Lorraine Evangelista, Ph.D. University of California, Los Angeles, *Associate Professor, Program in Nursing Science*

Camille Fitzpatrick, M.S.N. California State University, Long Beach, *Health Sciences Clinical Professor, Program in Nursing Science*

Beth Haney, D.N.P. University of Colorado, *Health Sciences Assistant Clinical Professor, Program in Nursing Science*

E. Alison Holman, Ph.D. University of California, Irvine, *Assistant Professor, Program in Nursing Science*

Jung-Ah Lee, Ph.D. University of Washington, *Assistant Professor, Program in Nursing Science*

Maureen Movius, M.N. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Program in Nursing Science*

Ruth Mulnard, D.N.Sc. University of California, San Diego, *Associate Professor, Program in Nursing Science*

Ellen F. Olshansky, D.N.Sc. University of California, San Francisco, *Director of the Program in Nursing Science and Professor, Program in Nursing Science*

Susanne J. Phillips, F.N.P. California State University, Long Beach, *Health Sciences Associate Clinical Professor, Program in Nursing Science*

Julie Rousseau, Ph.D. Columbia University, *Health Sciences Assistant Clinical Professor, Program in Nursing Science*

Kathleen Saunders, M.S.N. California State University, Dominguez Hills, *Health Sciences Associate Clinical Professor, Program in Nursing Science*

Susan Tiso, M.S.N. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Program in Nursing Science*

Undergraduate Program

Nurse professionals are members of interdisciplinary teams who work with people of all ages, cultural backgrounds, and lifestyles to help them achieve the highest level of wellness possible. The Bachelor of Science degree program in Nursing Science prepares graduates to function as generalists in professional nursing practice and to collaborate with other health care providers in clinics, hospitals, and community health settings. The undergraduate curriculum is designed to provide theory and research-based clinical practice focusing on critical thinking, human caring, and clinical expertise. Students who successfully complete the B.S. degree in Nursing Science are eligible to take the licensure examination to become a registered nurse. The Nursing Science major is approved by the Board of Registered Nursing and the Commission on Collegiate Nursing Education (CCNE).

Most of the courses required for the major require completion of prerequisites. The sample program shown is a preferred sequence that accounts for all prerequisites. Most required courses are offered in sequence and only once a year. New, transfer, and change-of-major students, therefore, ordinarily are admitted to the program once a year prior to the fall quarter. Full-time enrollment is required.

All students interested in the Nursing Science major should be aware that they will be required to do the following: (1) meet the physical and mental requirements necessary to perform nursing practice functions as outlined in Chapter 6, Article 2, Item 2725 of the *Business and Professions Code of California* (<http://www.rn.ca.gov/regulations/bpc.shtml#2725>); (2) complete a criminal background check prior to entering the clinical portion of the major in the junior year as required by health care facilities in which students will have clinical experiences; (3) purchase uniforms and other required equipment such as stethoscopes; (4) have access to transportation for off-campus clinical experiences beginning in the junior year.

Admission to the Major

Meeting the UCI admission criteria does not guarantee admission into the major. The admission process is competitive due to limited enrollment. In addition to meeting the UCI admissions criteria, all eligible applicants are required to submit a supplemental application that includes a personal statement, a résumé detailing experiences in health care, and letters of recommendation. A proctored essay and personal interview may also be required.

Freshmen: Preference will be given to those who rank the highest using the selection criteria as stated in the Admissions section of the *Catalogue*.

Transfer students: Admission to the major is limited and selective. Junior-level applicants with the highest grades overall and who satisfactorily complete course prerequisites will be given preference for admission to the Nursing Science major. All applicants

must complete the following with grades of B or better: one year of general chemistry with laboratory equivalent to UCI's Chemistry 1A-B-C, 1LC-LD; one quarter/semester of organic chemistry equivalent to UCI's Chemistry 51A; one quarter/semester of DNA equivalent to UCI's Biological Sciences 93; one quarter/semester of genetics equivalent to UCI's Biological Sciences 97; one quarter/semester of biochemistry equivalent to UCI's Biological Sciences 98; one quarter/semester of human physiology equivalent to UCI's Biological Sciences E109; one quarter/semester of microbiology equivalent to UCI's Biological Sciences M122; one quarter/semester of statistics equivalent to UCI's Statistics 7 or 8; one quarter/semester of psychology equivalent to UCI's Psychology 7A/Psychology and Social Behavior 9; one quarter/semester of sociology equivalent to UCI's Sociology 1; one quarter/semester of philosophy equivalent to UCI's Philosophy 4 or 5; one quarter/semester of public health equivalent to UCI's Public Health 1; and, one quarter/semester of human anatomy with laboratory equivalent to UCI's Nursing Science 100, 100L. Applicants must have a cumulative GPA of 3.0 or higher to be considered.

Change of Major: Due to strict limits on the number of students who can be admitted to the program and rigid sequencing of much of the upper-division curriculum, change-of-major students need to apply in the month of November for fall quarter admission for the following year. Students should contact the Nursing Science Student Affairs Office for information regarding admission to the major. Change-of-major students who are intending to apply to the Program in Nursing Science should be aware that the Program in Nursing Science cannot waive course prerequisites for any School of Biological Sciences or School of Physical Sciences courses. As such, change-of-major students must adhere to the course prerequisites that these Schools have established and have published in the course descriptions that appear in the *Catalogue*. Change-of-major information is also available at <http://www.changeofmajor.uci.edu>.

HONORS AT GRADUATION

Honors at graduation, e.g., *cum laude*, *magna cum laude*, *summa cum laude*, are awarded to approximately the top 12 percent of the graduating seniors. To be eligible for honors, a general criterion is that students must have completed at least 72 units in residence at a University of California campus. Other important factors are considered (See "Honors Recognition" in the Honors Opportunities information in the Division of Undergraduate Education section).

REQUIREMENTS FOR THE B.S. DEGREE IN NURSING SCIENCE

NOTE: The following degree requirements are effective for students entering the program in fall 2011. Students should be aware that some of the required courses listed here are not yet available and will be phased in over the next four years. Consult the Nursing Science Student Affairs Office for more information.

University Requirements: See pages 54–61.

Major Requirements

Chemistry 1A-B-C, 1LC-LD, and 51A; Biological Sciences 93, 97, 98, E109, and M122; Statistics 7 or 8 or equivalent; Public Health 1; Psychology 120D; and Nursing Science 100, 100L, 110, 112LA-LB, 114A, 114B, 118A, 118B, 120, 120L, 125, 130, 130L, 132, 132L, 135, 140, 140L, 150, 150L, 160, 160L, 170, 170L, 175L, 179A, and 179B.

In addition to the courses offered by the Program in Nursing Science, the following courses are included in the required minimum grade point average for continuation in and graduation from the Nursing Science major: Biological Sciences 93, 97, 98, E109, M122; Chemistry 1A-B-C, 1LC-LD, 51A; Philosophy 4 or 5, Psychology 7A/Psychology and Social Behavior 9; Public Health 1; Sociology 1; Statistics 7 or 8.

Graduate Program

MASTER OF SCIENCE IN NURSING SCIENCE

The Master of Science (M.S.) in Nursing Science at the University of California, Irvine is a professional degree program which will prepare Registered Nurses in selected specialties and in research so they may assume roles as research-based advanced practice clinicians, administrators, or educators. The program course work is designed to prepare nurses with (1) expertise in a specialized area of advanced nursing practice; (2) role preparation as a nurse practitioner, nurse educator, or nurse administrator; (3) leadership and health policy skills; and (4) research skills. The M.S. degree will also prepare students for future doctoral work.

ADMISSION

Applicants must have earned a bachelor's degree in nursing from an accredited program, currently be licensed as a Registered Nurse in the State of California, and provide proof of licensure by the California Board of Registered Nursing (BRN). In addition, eligible candidates must have a 3.0 cumulative grade point average, have completed a descriptive and inferential statistics course and an upper-division nursing research course at the undergraduate level, and have at least one year direct clinical experience in patient care upon entering the program.

Applicants must meet the general admission requirements of the UCI Graduate Division and the Program in Nursing Science admission requirements, and submit both the Application for Graduate Admission and the Nursing Science Supplemental Application in order to be considered for admission. The GRE is not required. Students are admitted every fall quarter.

M.S. SPECIALIZATION AREAS

Students applying to the M.S. program must select an area of specialization, either the Family Nurse Practitioner track (FNP) or the Adult/Geriatric Nurse Practitioner track (A/GNP). Graduates of the nurse practitioner (NP) tracks will also be eligible for certification by the California Board of Registered Nursing (BRN).

REQUIREMENTS

Students enrolled in the FNP track will complete 72 units. Students enrolled in the A/GNP track will complete 72 units. Students will complete 720 hours of clinical practice with populations in their area of specialization to be eligible for certification. There is no foreign language requirement; proficiency in a language other than English is desirable but not required.

Required and Elective Courses for Both Tracks

Nursing Science 200, 210, 215, 225A, 225B, 230, 230L, 245A-B, 250, 260A, 281, 282, 283, 284, 285, 286, 287, 289.

Required for FNP Track only: Nursing Science 255, 270.

Required for A/GNP Track only: Nursing Science 260B, 280.

There are no qualifying examinations. Successful completion of required course work will advance students to candidacy the quarter prior to scheduled completion of the master's degree program. Instead of a thesis, students complete a Scholarly Concentration in an area of interest over the final two quarters of the program and prepare a major paper. The comprehensive examination will serve as a final examination which will also prepare graduates for certification examinations. Full-time students are expected to complete the program within two years or three years for part-time students.

Courses in Nursing Science

(Schedule of Classes designation: Nur Sci)

NOTE: Students entering the Nursing Science program in fall 2011 should consult the Nursing Science Student Affairs Office for information about courses that will be phased in over the next four years.

LOWER-DIVISION

40 Introduction to Nursing and Health Care (2). Lecture, two hours. Introduction to roles and responsibilities of health care professionals, health care regulations, professional licensure, legal issues, ethics, and cultural competence in health care. Beginning competence in interviewing, communication, and selected physical examination skills. Emphasis on professional role development.

UPPER-DIVISION

100 Human Anatomy (4). Lecture, four hours. Human microscopic and gross anatomy emphasizing anatomical structure and basic structure-function relationship. Corequisite: Nursing Science 100L. Prerequisite: Biological Sciences 99.

100L Human Anatomy Laboratory (2). Laboratory, six hours. Human microscopic and gross anatomy laboratory emphasizing anatomical structure and basic structure-function relationships. Corequisite: Nursing Science 100.

110 Frameworks for Professional Nursing Practice (4). Lecture, four hours. Conceptual frameworks for professional practice. Scope of professional nursing, jurisprudence and ethics, professional interpersonal relationships, and health care delivery systems in the context of the social, political, and economic environments. Socialization of the student for professional roles in nursing.

112LA-LB Foundations of Professional Practice (2-2). Lecture, two hours; laboratory, six hours. Development of skills in communication, interviewing, functional and physical health assessment across the life span, the art and science of human care, and clinical judgment. Prerequisites: Nursing Science 100; Biological Sciences E109 (may be taken concurrently with Nursing Science 112LA).

114 Applied Pharmacology (4). Lecture, four hours. Principles of pharmacology applied to intervention in pathophysiologic states across the life span. Discussion of major drug groups with implications for monitoring, drug administration, toxicity, and patient education. Prerequisites: Nursing Science 100, Biological Sciences E109.

118 Human Health and Disease (4). Lecture, four hours. Pathologic alterations in physiologic processes in cells, tissues, organs, and systems across the life span. Emphasis on critical thinking, application of concepts to clinical practice, and related research. Prerequisites: Nursing Science 100, Biological Sciences E109.

120 Adult Health Care (4). Lecture, four hours. Restorative, perioperative, and supportive care of adults with acute or chronic alterations in oxygenation, regulation, immune response, elimination, metabolism, mobility, cognition, and/or substance abuse. Emphasis on critical thinking, related research, sociocultural influences, and ethics. Corequisite: Nursing Science 120L. Prerequisites: Nursing Science 112LB, 114, 118, 125.

120L Adult Health Care Practicum (4). Discussion, one hour; laboratory, 11 hours. Supervised clinical synthesis of knowledge and nursing skill related to adult health. The practicum occurs in hospital inpatient units, surgical and perioperative units, and outpatient clinics in which adults receive restorative, perioperative, or supportive care. Corequisite: Nursing Science 120.

125 Research Methods and Applications in Health Care (4). Lecture, four hours. Foundational concepts of research in health care. Emphasizes critical evaluation and interpretation of research for application in practice. Prerequisite: basic statistics course.

130 Family and Child Health Care (5). Lecture, five hours. Biopsychosocial and cultural aspects of normal and high-risk antepartum, intrapartum, and postpartum care of women, families, and their newborns. Restorative, perioperative, and supportive care of infants and children and their families in health, acute illness, chronic illness, and disability. Corequisite: Nursing Science 130L. Prerequisite: Nursing Science 120.

130L Family and Child Health Care Practicum (5). Discussion, one hour; laboratory, 14 hours. Supervised clinical synthesis of knowledge and nursing skill related to family and child health care. The practicum occurs in maternity and pediatric hospital inpatient units, surgical and perioperative units, and outpatient prenatal and pediatric clinics. Corequisite: Nursing Science 130.

135 Older Adult Health Care (2). Lecture, two hours. Theories of aging and application of principles of gerontology in health maintenance of older adults. Concepts and principles of rehabilitation and palliative care. Prerequisite: Nursing Science 120.

140 Human Behavior and Mental Health Care (4). Lecture, four hours. Biopsychosocial and cultural influences on the promotion and restoration of mental health in adults and adolescents. Affects of acute and chronic substance/drug abuse. Assessment, classification, and restorative/supportive care of adults and adolescents with acute and chronic mental health problems. Corequisite: Nursing Science 140L. Prerequisite: Nursing Science 112LB.

140L Human Behavior and Mental Health Care Practicum (4). Discussion, one hour; laboratory, 11 hours. Supervised clinical synthesis of knowledge and nursing skill related to human behavior and mental health care. The practicum occurs in adult and adolescent outpatient mental health clinics and inpatient psychiatric units. Corequisite: Nursing Science 140.

150 Critical and Speciality Health Care (2). Lecture, two hours. Interventions for restorative and supportive care of individuals with life-threatening alterations in health status. Discussion of technology and pharmacology for life support. Includes biological, psychological, and sociocultural aspects of critical illness and injury. Corequisite: Nursing Science 150L. Prerequisite: Nursing Science 120.

150L Critical and Speciality Health Care Practicum (2). Discussion, one hour; laboratory, five hours. Supervised clinical synthesis of knowledge and nursing skill related to critical and specialty health care. The practicum occurs in hospital emergency rooms and critical care units as well as surgical and perioperative units. Corequisite: Nursing Science 150.

160 Leadership and Management in Health Care (4). Lecture, four hours. Principles, concepts, and theories related to organizations, management, leadership, change, decision-making, and group process applied to the delivery of health care and role of professional nurse as leader and manager of a health team. Corequisite: Nursing Science 160L. Prerequisite: Nursing Science 150.

160L Leadership and Management in Health Care Practicum (4). Discussion, one hour; laboratory, 11 hours. Principles, concepts, and theories related to organizations, management, leadership, change, decision-making, and group process applied to the delivery of health care and role of professional nurse as leader and manager of a health team. Corequisite: Nursing Science 160.

170 Community-based Health Care (4). Lecture, four hours. Epidemiology, primary health care, disease prevention, and health promotion applied to nursing care of individuals, families, groups, aggregates, and communities. Sociocultural, political, economic, and environmental influences. Concepts and methods of assessing populations and communities. Corequisite: Nursing Science 170L. Prerequisite: Nursing Science 160.

170L Community-based Health Care Practicum (4). Discussion, one hour; laboratory, 11 hours. Supervised clinical synthesis of knowledge and nursing skill in a variety of community-based settings. Opportunities for analysis of sociocultural, political, economic, and environmental influences on community-based health care and development of community health/action programs. Corequisite: Nursing Science 170.

175LA-LB Clinical Preceptorship (2-2). Laboratory, six hours. Independent study focusing on in-depth clinical nursing practice in a selected area of interest to the student. Students are mentored by a preceptor who is an expert clinician in the area. Prerequisite: Nursing Science 150.

179A Scholarly Concentration I (2). Research, six hours. Independent study focusing on the research process to provide the evidence basis for a nursing protocol in an area of interest to the student. Prerequisite: Nursing Science 150.

179B Scholarly Concentration II (4). Lecture, one hour; seminar, one hour; research, six hours. Continuation of independent research with emphasis on preparation of a paper detailing the research process and findings. Prerequisites: Nursing Science 179A; satisfactory completion of the lower-division writing requirement.

GRADUATE

200 Research Methods and Evaluation for Evidence-Based Practice (3). Lecture, three hours. Clinical research methods and evaluation procedures relevant to evidence-based advanced nursing practice. Prerequisite: undergraduate statistics course; undergraduate nursing research course.

210 Advanced Pathophysiology (3). Lecture, three hours. Principles of normal body functioning and pathophysiologic changes that occur as a result of compensatory mechanisms and disease. Physical and psychological aspects of altered health are explored from the cellular to the level of the total body system.

215 Health Promotion/Disease Prevention (3). Lecture, three hours. Covers the evidence-based national clinical preventive services guidelines for health promotion and disease prevention. Emphasizes counseling about personal health behaviors, screening tests for the early detection of risk factors and disease, immunizations and chemo-prophylaxis.

225A-B Advanced Pharmacology (2-3). Lecture, three hours. Principles of pharmacology that serve as a foundation for the pharmacotherapeutic management of patients evaluated and treated by advanced practice nurses. Emphasis includes the application of pharmacokinetic and pharmacodynamic principles.

230 Advanced Health and Physical Assessment (3). Lecture, three hours. Application of theoretical concepts related to comprehensive health assessment of patients across the life span. Analysis, synthesis, and application of comprehensive health assessment data. Corequisite: Nursing Science 230L.

230L Advanced Health and Physical Assessment Laboratory (1). Laboratory, one hour. Clinical laboratory course for the application of concepts related to comprehensive health assessment of patients across the life span. Corequisite: Nursing Science 230.

245A-B Primary Care (3-3). Lecture, three hours. Assessment and management of acute or episodic problems affecting patients and families across the life span. Diagnostics, pharmacology, pathophysiology, and therapeutics are integrated. Prerequisites: Nursing Science 210 and 230.

250 Primary Care Women's Health (3). Lecture, three hours. Primary health care needs of women including adolescent, adult, and aging adults. Emphasizes assessment, diagnosis, prevention, management, and education of common gynecologic and family planning health care needs. Prerequisites: Nursing Science 210 and 230.

255 Primary Care Obstetrics (3). Lecture, three hours. Assessment and management of women during pregnancy. Diagnostics, pharmacology, pathophysiology, and therapeutics are integrated. Includes assessment, differential diagnosis, management, patient/family education, and counseling related to normal pregnancy care. Prerequisites: Nursing Science 210, 230, 230L, and 245A.

260A-B Primary Care Adult/Geriatrics (3-3). Lecture, three hours. Assessment and management of acute or episodic problems affecting adult and geriatric patients and their families. Diagnostics, pharmacology, pathophysiology, and therapeutics are integrated. Prerequisite: Nursing Science 245B. Formerly Nursing Science 260.

270 Primary Care Pediatrics (3). Lecture, three hours. Assessment and management of acute or episodic problems affecting pediatric patients and their families. Diagnostics, pharmacology, pathophysiology, and therapeutics are integrated. Prerequisites: Nursing Science 210, 230, 230L, and 245A.

280 Aging and Chronic Illness (3). Lecture, three hours. Assessment and management of the geriatric patient. Diagnostics, pharmacology, pathophysiology, and therapeutics are integrated. Includes assessment, differential diagnosis, management, patient/family education, and counseling related to aging. Prerequisite: Nursing Science 260.

281 Frameworks for Advanced Professional Practice in Nursing (3). Lecture, three hours. Provides an orientation to the scope and standards of advanced professional nursing practice. Principles of jurisprudence, ethics, and advocacy are introduced along with conceptual frameworks for nursing practice.

282 Human Behavior and Mental Health Care for Advanced Practice (3). Lecture, three hours. Focuses on theory and research related to the psychiatric illness and sociocultural factors such as race, ethnicity, gender, and class which may impact patients across their life span. Emphasis includes assessment, diagnosis, management, patient/family education, lifestyle modification, and counseling strategies.

283 Primary Care Procedures (3). Lecture, two hours; laboratory, one hour. Introduces the theoretical basis for common procedures performed in primary care clinical practice. Focus includes EKG interpretation, x-ray interpretation, minor surgery, and orthopaedic procedures. Prerequisite: Nursing Science 245B.

284 Advanced Practice Scholarly Concentration (3). Lecture, three hours. Independent study focusing on critique, analysis, and synthesis of research evidence as a basis for advanced practice nursing in an area of interest to the student. Prerequisite: Nursing Science 200.

285 Advanced Practice Nursing Clinical Practicum I (3). Laboratory, nine hours. Clinical application of theory and research related to the advanced assessment and health promotion of patients across the life span. Prerequisites: Nursing Science 210 and 230. Satisfactory/Unsatisfactory only.

286 Advanced Practice Nursing Clinical Practicum II (4). Laboratory, 12 hours. Clinical field study applying theory, research, and developing clinical skills related to the provision of care to patients and their families in increasingly complex clinical situations. Prerequisite: Nursing Science 285. Satisfactory/Unsatisfactory only.

287 Advanced Practice Nursing Clinical Practicum III (5). Laboratory, 15 hours. Clinical application of theory and research through clinical experiences in selected primary care settings designed to provide students with competencies in the assessment, diagnosis, management, and education/counseling in selected populations. Prerequisite: Nursing Science 286. Satisfactory/Unsatisfactory only.

288 Advanced Practice Nursing Clinical Practicum IV (6). Laboratory, 18 hours. Continued clinical application of theory and research through clinical experiences in selected primary care settings designed to provide students with competencies in the assessment, diagnosis, management, and education/counseling in selected populations. Prerequisite: Nursing Science 287. Satisfactory/Unsatisfactory only.

289 Advanced Practice Nursing Clinical Practicum V (6). Laboratory, 18 hours. Culminating clinical experience serves as a transition from the student role to that of the advanced practice nurse. Prerequisite: Nursing Science 288. Satisfactory/Unsatisfactory only.

295 Directed Study in Latino Health Care (2 to 4). Independent study in Latino health care. Prerequisite: Nursing Science 286; Spanish language skills.

DEPARTMENT OF PHARMACEUTICAL SCIENCES

147 BSA; (949) 824-1239

<http://www.pharmsci.uci.edu>

A. Richard Chamberlin, **Department Chair**

Faculty

Rommie Amaro, Ph.D. University of Illinois at Urbana-Champaign, *Assistant Professor of Pharmaceutical Sciences and Chemistry*

Bruce Blumberg, Ph.D. University of California, Los Angeles, *Professor of Developmental and Cell Biology, Biomedical Engineering, and Pharmaceutical Sciences*

A. Richard Chamberlin, Ph.D. University of California, San Diego, *Department Chair and Professor of Pharmaceutical Sciences, and Professor of Chemistry and Pharmacology*

Olivier Civelli, Ph.D. Swiss Federal Institute of Technology, *Professor of Pharmacology and Pharmaceutical Sciences, and Eric L. and Lila D. Nelson Chair in Neuropharmacology*

John P. Fruehauf, Ph.D. Rush University, *Associate Professor of Clinical Medicine, Pharmaceutical Sciences, Biomedical Engineering, and Biological Chemistry*

Celia Goulding, Ph.D. King's College London, *Assistant Professor of Molecular Biology and Biochemistry and of Pharmaceutical Sciences*

Stephen Hanessian, Ph.D. Ohio State University, *Director of the Graduate Gateway Program in Medicinal Chemistry and Pharmacology and Professor of Pharmaceutical Sciences, Chemistry, and Pharmacology*

Mahtab Jafari, Pharm.D. University of California, San Francisco, *Associate Professor of Pharmaceutical Sciences, Ecology and Evolutionary Biology, and Pharmacology*

Young Jik Kwon, Ph.D. University of Southern California, *Assistant Professor of Pharmaceutical Sciences, Chemical Engineering and Materials Science, and Biomedical Engineering*

Andrej Luptak, Ph.D. Yale University, *Assistant Professor of Pharmaceutical Sciences, Chemistry, and Molecular Biology and Biochemistry*

Thomas L. Poulos, Ph.D. University of California, San Diego, *UCI Chancellor's Professor, Departments of Molecular Biology and Biochemistry, Pharmaceutical Sciences, Physiology and Biophysics, and Chemistry*

Rainer K. Reinscheid, Ph.D. Center for Molecular Neurobiology, *Associate Professor of Pharmaceutical Sciences, Pharmacology, and Molecular Biology and Biochemistry*

Paolo Sassone-Corsi, Ph.D. University of Naples, *Department Chair of Pharmacology, Donald Bren Professor, and UCI Distinguished Professor, Departments of Pharmacology, Microbiology and Molecular Genetics, and Pharmaceutical Sciences*

Shiou-Chuan (Sheryl) Tsai, Ph.D. University of California, Berkeley, *UCI Chancellor's Fellow and Associate Professor of Molecular Biology and Biochemistry, Chemistry, and Pharmaceutical Sciences*

Sun (Coco) Yang, Pharm.D. Chinese Academy of Medical Science & Peking Union Medical College, *Assistant Adjunct Professor of Pharmaceutical Sciences*

Xiaolin Zi, Ph.D. Shanghai Medical University, *Associate Professor, Departments of Urology and Pharmaceutical Sciences*

The Department of Pharmaceutical Sciences offers a curriculum focusing on the preparation of students for professional positions in the pharmaceutical production, control, and development sectors of the pharmaceutical and biotechnology industry or for graduate studies in pharmaceuticals, medicinal chemistry, pharmacology, analytical chemistry, medicine, and pharmacy. Collaborative interdisciplinary research will be supported by joint faculty appointments shared with other UCI departments.

Undergraduate Program

The B.S. degree program in Pharmaceutical Sciences trains students in a multidisciplinary approach so that they can contribute to

the advancement of new pharmaceutical technologies such as accelerated chemical synthesis, molecular-based assays using cloned enzymes and cloned metabolizing enzymes, combinatorial chemistry, *in vitro* biopharmaceutical techniques, and gene therapies. Pharmaceutical scientists are rapidly changing the field of drug discovery and development. The graduates of this program may seek employment in public and private sectors or choose to pursue graduate degrees such as a Ph.D., M.D., or Pharm.D.

Undergraduate Honors. Honors at graduation, e.g., *cum laude*, *magna cum laude*, *summa cum laude*, are awarded to approximately the top 12 percent of the graduating seniors. To be eligible for honors, a general criterion is that students must have completed at least 72 units in residence at a University of California campus. Other important factors are considered (See "Honors Recognition" in the Honors Opportunities information in the Division of Undergraduate Education section).

Admission to the Major

Students may be admitted to the Pharmaceutical Sciences major upon entering the University as freshmen, via change of major, and as transfer students from other colleges and universities.

Information about change-of-major policies is available in the Department of Pharmaceutical Sciences office and at <http://www.changeofmajor.uci.edu>.

Transfer Students: All applicants must have completed the following required courses with a grade of B- or better in all courses: one year of general chemistry courses with laboratory and/or one year of biology courses with laboratory equivalent to UCI's Biological Sciences 93 and 94. In addition, all applicants must have a cumulative GPA of 3.0 or better. Additional courses that are recommended, but not required: one year of calculus, or a combination of calculus and statistics; one year of calculus-based physics with laboratory; and one year of organic chemistry with laboratory.

REQUIREMENTS FOR THE B.S. DEGREE IN PHARMACEUTICAL SCIENCES

University Requirements: See pages 54–61.

Major Requirements

A. *Lower-Division Requirements:*

1. Chemistry 1A-B-C or H2A-B-C, and 1LC-LD or H2LB-LC or M2LB-LC; Chemistry 51A-B-C, 51LA-LB or H52A-B-C, H52LA-LB.
2. Mathematics 2A-B and one course selected from Statistics 7, 8, Mathematics 2D, or 2J.
3. Physics 3A-B-C, 3LB-LC.
4. Biological Sciences 93, 94, 97, 98, 99.

B. *Upper-Division Requirements:* Biological Sciences 100, 194S, Pharmaceutical Sciences 120 or Biological Sciences E109, Pharmaceutical Sciences 170A, 170B, 171, 172, 173, 174, 174L, 176, 177, 177L.

C. *Upper-Division Electives (11 units):*

1. One course to be selected from upper-division laboratories: Biological Sciences D111L, E112L, M114L, M116L, M118L, M122L, M124L, N113L, Chemistry 128L, 138, 151L, 156, 160, 170, 170L.

2. One course, for students who choose electives that have these courses as prerequisites, selected from Biological Sciences D103, D104, N110.
3. The remaining elective units may be selected from Biological Sciences D111L, D126, D129, D136, D137, D145, D148, D151, D153, E112L, E136, E137, E141, E142, E189, M114, M114L, M116L, M118L, M120, M121, M122, M122L, M123, M124A, M124B, M124L, M125, M128, M137, M143, M144, N113L, N153, N154, N171, Chemistry 107, 107L, 125, 128, 128L, 138, 151, 151L, 156, 160, and 170, Public Health 121. (Course may not be used to satisfy more than one requirement.)

Upper-Division Writing Requirement: Pharmaceutical Sciences majors satisfy the upper-division writing requirement by completing Biological Sciences 100 with a grade of C or better, followed by the completion of Pharmaceutical Sciences 174L and 177L. Students must earn a grade of C or better in each of these laboratory courses.

NOTE: Students may not double major in Pharmaceutical Sciences and Public Health Sciences, or with any of the School of Biological Sciences majors.

Sample Program — Pharmaceutical Sciences

FALL	WINTER	SPRING
Freshman		
Bio. Sci. 93 Chemistry 1A WR 39B or Hum. 1A Gen. Ed.	Bio. Sci. 94 Chemistry 1B WR 39C or Hum. 1B Gen. Ed.	Chemistry 1C, 1LC Math. 2A Gen. Ed. or Hum. 1C Gen. Ed.

NOTE: Chemistry 51LA to be offered 2011–12 only.

Graduate Program

The Gateway Program in Medicinal Chemistry and Pharmacology (MCP) was established through the joint efforts of the Departments of Chemistry, Pharmacology, Molecular Biology and Biochemistry, and Pharmaceutical Sciences. Students in this interdisciplinary program benefit from the participation of the highly reputed faculty within each of the participating departments. Active research programs in Chemistry include the synthesis of organic molecules and macromolecules of therapeutic significance that cover a large cross-section of chemical and biological space. Faculty in Pharmacology have research programs in areas relevant to drug discovery and development. Molecular Biology and Biochemistry faculty enjoy active research in structural biology, drug design, and target discovery. Participating faculty in Pharmaceutical Sciences have interests in a variety of programs with a direct impact on health sciences.

The MCP program provides students with state-of-the-art practical and theoretical training in their specific field of interest, while also providing a broader exposure to fundamentals of each of the other core disciplines. This dual goal is accomplished through a one-year initial interdisciplinary program of course work and lab rotations, followed by the transition into one of the participating department's Ph.D. programs for in-depth specialization and research work. The integrated curriculum offered in this program gives students a breadth of expertise that is not easily achievable in any single, individual department.

In consultation with their advisors, MCP students create a program tailored to their own interests. Individualized programs are designed to fulfill the MCP requirements as well as to provide students with the preparation necessary for transition into their eventual home department. Students who successfully complete this one-year gateway program and who achieve an advisory relationship with a faculty member affiliated with one of the participating departments will transition into their home department to complete the remaining degree requirements. Following successful completion of all departmental requirements, students receive their degree from the department of their chosen advisor, and earn a Ph.D. in either Chemistry, Biological Sciences, or Pharmacology and Toxicology. A Ph.D. degree in Pharmaceutical Sciences is not currently offered.

The Medicinal Chemistry and Pharmacology Gateway Program offers a unique opportunity to graduate students who wish to pursue careers in all aspects of the molecular life sciences, including drug discovery and development in academia and the pharmaceutical and biotech industries.

Courses in Pharmaceutical Sciences

(Schedule of Classes designation: PhrmSci)

LOWER-DIVISION

1 Introduction to Pharmaceutical Sciences (1) S. Lecture, one hour. Introduction to the scientific disciplines that comprise the multidisciplinary field of pharmaceutical sciences. Students gain an appreciation of basic concepts in the relevant physical, biological, and clinical sciences and how they fit together in the search for new medicines. Pass/Not Pass only.

UPPER-DIVISION

120 Human Physiology (4) F. Lecture, three hours; discussion, one hour. Focuses on anatomy and physiology—organism structure and function, respectively—as they relate to human diseases and their treatment. Prepares students for more advanced studies in pharmacology, medicinal chemistry, biopharmaceutics, and other disciplines encompassing pharmaceutical sciences. Prerequisite: Biological Sciences 99. Pharmaceutical Sciences 120 and Biological Sciences E109 may not both be taken for credit.

170A Molecular Pharmacology I (4) W. Lecture, three hours; discussion, one hour. Molecular basis of drug-receptor action at the molecular and cellular levels. Structure-function of drug targets emphasizing enzymes, ion channels, and membrane transport proteins. Understanding how the drugs' mechanisms of action contribute to the development of more efficacious and safer drugs. Corequisite or prerequisite: Chemistry 51C or H52C. Prerequisite: Pharmaceutical Sciences 120 or Biological Sciences E109. Formerly Pharmaceutical Sciences M170A.

170B Molecular Pharmacology II (4) S. Lecture, three hours; discussion, one hour. Mechanism-based overview of pharmacology and therapeutic drugs in the fields of autonomic nervous system, central nervous system, and antimicrobials. Prerequisite: Pharmaceutical Sciences 170A. Formerly Pharmaceutical Sciences M170B.

171 Physical Biochemistry (4) F. Lecture, three hours; discussion, one hour. Thermodynamics and kinetic fundamentals as applied to problems relevant to pharmaceutical sciences such as receptor/enzyme-ligand interactions. Fundamentals of biophysical methods used in the pharmaceutical sciences including structure determination and biomolecular spectroscopy. Prerequisites: Mathematics 2B, Physics 3C, Chemistry 1C or H2C, and Biological Sciences 99. Formerly Pharmaceutical Sciences M171.

172 Topics in Pharmaceutical Sciences (2) F. Lecture, two hours. Presents information about various fields of research, study, careers, and graduate school opportunities in pharmaceutical sciences. Taught by guest lecturers from various disciplines including 199 research course faculty. Helps Pharmaceutical Sciences students select electives appropriate to their future goals. Corequisite or prerequisite: Chemistry 51C or H52C. Prerequisite: Biological Sciences 99. Pass/Not Pass only. Formerly Pharmaceutical Sciences M172.

173 Pharmacotherapy (4) S. Lecture, three hours; discussion, one hour. An exploration of the clinical application of medications to selected disease states. Focus is on an understanding of underlying principles of pharmacology and how this knowledge can be applied to treatment of diseases. Corequisite or prerequisite: Pharmaceutical Sciences 170B. Formerly Pharmaceutical Sciences M173.

174 Biopharmaceutics (4) F. Lecture, three hours; discussion, one hour. Introduces theories and tools of new drug formulations. Particularly new novel therapeutics based on biological materials, pathological characteristics utilized to achieve the maximum efficacy and specificity, and drug delivery systems are extensively discussed. Prerequisite: Pharmaceutical Sciences 170B or consent of instructor. Formerly Pharmaceutical Sciences M174.

174L Biopharmaceutics Lab (3) F. Laboratory, five hours; discussion, one hour. Introduction to cancer drug screening using cellular models and confirmation of comprehensive therapeutic efficacy using a live animal model. Includes basic cell culture, cytotoxicity assays, cell analysis, drug circulation test, and tumor eradication and imaging experiments. Prerequisites: Pharmaceutical Sciences 170B or consent of instructor; Biological Sciences 100. Formerly Pharmaceutical Sciences M174L.

176 Ethical Conduct of Research (2) S. Lecture, two hours. Covers the ethical responsibilities of biomedical scientists. Topics include, as discussions and case studies, the high standards of science, the responsible conduct of research, animal experimentation, and clinical trials as they relate to the pharmaceutical sciences. Formerly Pharmaceutical Sciences M176.

177 Medicinal Chemistry (4) W. Lecture, three hours; discussion, one hour. An introduction of the basics of drug activity and mechanisms. Strategies used to identify lead compounds such as natural product chemistry, combinatorial chemistry, molecular modeling, and high-throughput screening. Relationship of molecular structure to pharmacological activity. Prerequisites: Chemistry 51A-B-C or equivalent, and Biological Sciences 98 or Chemistry 128. Same as Chemistry 177.

177L Medicinal Chemistry Laboratory (2) W. Laboratory, four hours. Laboratory accompanying Pharmaceutical Sciences 177. Corequisite: Pharmaceutical Sciences 177. Prerequisites: Chemistry 51A-B-C or equivalent, and Biological Science 98 or Chemistry 128; Biological Sciences 100. Same as Chemistry 177L.

199 Undergraduate Research (1 to 4) F, W, S, Summer. Research, 4–12 hours. Original research in the laboratory of Pharmaceutical Sciences faculty. Attendance at regular research group meetings is also generally expected, and a quarterly written report is required. Strongly recommended for students considering research careers and/or graduate degree programs. Prerequisite: consent of faculty sponsor. May be repeated for credit as topics vary.

GRADUATE

223 Biological Macromolecules (4). Introduction to nucleic acid and protein structure, dynamics, and function. Topics include analytical methods, molecular evolution, folding, and catalysis. Same as Chemistry 223.

250A-B-C Current Topics in Pharmaceutical Sciences (1-1-1) F, W, S. Intended to expose students to the primary literature and current research in the field of Pharmaceutical Sciences. Students analyze and present information for discussion. Guest speakers from academia and industry may participate throughout the quarter. Prerequisite: enrollment in the MCP Gateway Program or consent of instructor. Satisfactory/Unsatisfactory only.

277 Medicinal Chemistry (4). Fundamentals of medicinal chemistry covering diverse aspects of drug design, discovery, synthesis, and development. Molecular basis of drug action with an emphasis on the structure-to-function continuum.

280 Graduate Research (1 to 12) F, W, S. Supervised original research or investigation under the direction of an individual faculty member. Prerequisite: consent of instructor.

399 University Teaching (1 to 4) F, W, S. Limited to Teaching Assistants. Satisfactory/Unsatisfactory only. May be repeated for credit.

PROGRAM IN PUBLIC HEALTH

The Program in Public Health was established in 2003 to provide institutional focus for existing academic strengths in various sub-disciplines of public health and to facilitate well-grounded education and innovative research in emerging cross-disciplinary topics in the field. Undergraduate degree programs in public health began enrolling students in 2006, and the Department of Population Health and Disease Prevention was established in 2007 to advance the collaborative interdisciplinary mission of public health research and education. The Department offers a B.S. in Public Health Sciences, a B.A. in Public Health Policy, a minor in Public Health, and a Master of Public Health (M.P.H.) in three emphases: Environmental Health, Epidemiology, and Sociocultural Diversity and Health. Information regarding the Program in Public Health's future plans is available at <http://publichealth.uci.edu/>.

DEPARTMENT OF POPULATION HEALTH AND DISEASE PREVENTION

<http://publichealth.uci.edu/>

Oladele Ogunseitan, **Department Chair**

Faculty

Alpesh Amin, M.D., M.B.A. Northwestern University, *Chair, Department of Medicine; Executive Director, Hospitalist Program; Chief, Division of General Internal Medicine; Professor of Clinical Medicine, Department of Medicine (Hospitalist Program and General Internal Medicine), and Professor of Public Health and Management*

Scott M. Bartell, Ph.D. University of California, Davis, *Assistant Professor of Public Health*

Hans-Ulrich Bernard, Ph.D. University Göttingen, *Professor of Molecular Biology and Biochemistry and of Public Health*

Zuzana Bic, Dr.P.H. Loma Linda University, *Lecturer with Security of Employment, Public Health*

Tim-Allen Bruckner, Ph.D. University of California, Berkeley, *Assistant Professor of Public Health and of Planning, Policy, and Design*

Ralph W. Cygan, M.D. State University of New York Downstate Medical Center, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine) and Program in Public Health*

Rufus Edwards, Ph.D. University of Medicine and Dentistry of New Jersey and Rutgers, The State University of New Jersey, *Associate Professor of Public Health*

Chad P. Garner, Ph.D. Oxford University, *Associate Professor in Residence, Department of Epidemiology*

Lisa Grant Ludwig, Ph.D. California Institute of Technology, *Associate Professor of Public Health*

F. Allan Hubbell, M.D., M.S.P.H. Baylor University College of Medicine, *Senior Associate Dean for Academic Affairs, School of Medicine, and Professor, Department of Medicine (General Internal Medicine) and Program in Public Health*

Cynthia Lakon, Ph.D. University of North Carolina, Chapel Hill, *Assistant Professor of Public Health*

Shahram Lotfipour, M.D. University of Iowa, *Associate Dean for Clinical Science and Health Sciences Clinical Professor, Department of Emergency Medicine and Program in Public Health*

- Frank L. Meyskens, Jr., M.D. University of California, San Francisco, *Director of the Chao Family Comprehensive Cancer Center; Professor, Departments of Medicine (Hematology/Oncology), Biological Chemistry, and Program in Public Health; and Daniel G. Aldrich, Jr. Endowed Chair*
- Michael J. Montoya, Ph.D. Stanford University, *Associate Professor of Anthropology, Chicano/Latino Studies, and Public Health*
- Andrew Noymer, Ph.D. University of California, Berkeley, *Assistant Professor of Sociology and Public Health*
- Oladele Ogunseitan, Ph.D. University of Tennessee, *Department Chair of Population Health and Disease Prevention and Professor of Public Health and Social Ecology*
- Sharon Stern, Ph.D. University of Utah, *Senior Lecturer with Security of Employment, Public Health*
- Daniel Stokols, Ph.D. University of North Carolina, *UCI Chancellor's Professor of Planning, Policy, and Design; Psychology and Social Behavior; and Public Health*
- David Timberlake, Ph.D. University of California, San Diego, *Assistant Professor of Public Health and Epidemiology*
- Lari Wenzel, Ph.D. Arizona State University, *Professor of Medicine (General Internal Medicine) and Public Health*
- Jun Wu, Ph.D. University of California, Los Angeles, *Assistant Professor of Public Health and Epidemiology*
- Guiyun Yan, Ph.D. University of Vermont, *Professor of Public Health and of Ecology and Evolutionary Biology*

The mission of the Department of Population Health and Disease Prevention is to use interdisciplinary approaches in research, education, and community outreach for creating, integrating, and translating population-based knowledge into preventive strategies to reduce the societal burden of human disease and disability. This is a forward-thinking mission that acknowledges and complements, but does not compete with, traditional discipline-based research and training in public health. It is a specific mission that is increasingly recognized by eminent organizations such as the Institute of Medicine's Board on Population Health and Public Health Practice (formerly known as the Board on Health Promotion and Disease Prevention [HPDP]), by research and education funding institutions such as the Robert Wood Johnson Foundation's Health & Society Scholars Program, and by distinguished Schools of Public Health.

New sources of funding for research and education are emerging, including the translational science initiative of the National Institutes of Health, to support this ecological model of public health. The societal challenges facing health care and the burden of diseases at the national and international levels have increased the demand for experts capable of researching, developing, and implementing programs to prevent disease and to improve population health. The Department aims to host activities that bridge disciplinary perspectives, methods, and practices to nurture new leaders in public health.

Degrees

Public Health Policy	B.A.
Public Health Sciences	B.S.
Public Health	M.P.H.
(with emphases in Environmental Health; Epidemiology; and Sociocultural Diversity and Health)	

HONORS

Honors at graduation, e.g., *cum laude*, *magna cum laude*, *summa cum laude*, are awarded to about 12 percent of the graduating seniors. Eligibility for such honors will be on the basis of grade point average (GPA). A minimum overall GPA of 3.5 is required for consideration. Students must have completed at least 72 units in residence at a University of California campus by the end of the final quarter prior to graduation. The student's cumulative record at the end of the final quarter is the basis for consideration for awarding Latin honors. Other important factors are considered (See "Honors Recognition" in the Honors Opportunities information in the Division of Undergraduate Education section).

Undergraduate Program

The B.S. in Public Health Sciences and the B.A. in Public Health Policy degree programs train students in multidisciplinary approaches to public health practice and research. The degrees explore both quantitative and qualitative aspects of public health at all levels of analysis. Graduates will advance, through selective employment or further education, to become the new generation of public health professionals prepared to face the emerging challenges to human health from a population perspective using cutting-edge prevention approaches.

Students who are interested in pursuing a premedical program should note that additional courses will be needed beyond the requirements of the public health degrees to fulfill requirements for medical school.

Students considering the public health degrees should carefully evaluate their academic preparation and career goals before enrolling in either the B.S. or B.A. degree program. Changing from one degree program to the other is possible, but will require completion of the required lower- and upper-division courses specified for each program. It is also possible for a student to enroll in both the B.S. and B.A. degree programs (double major), provided the student completes all the requirements outlined under each degree.

The Department also offers an undergraduate minor.

CAREERS FOR THE MAJORS

For graduates with bachelor's degrees who wish to enter the job market directly, there is a plethora of opportunities in private agencies and public organizations for entry-level personnel in public health. These include statewide and regional health care agencies (e.g., the Orange County Health Care Agency), community clinics focusing on preventive health, water and air quality management districts, biomedical companies, health-education institutions, and activist non-governmental organizations. The National Association of County and City Health Officials (<http://www.naccho.org>) has produced a compendium of public health career paths, many of which have become even more compelling for graduates at the bachelor's level.

In addition to supplying practitioners for the entry-level workforce in public health, the undergraduate degrees will also prepare students to enter graduate programs in public health. Information about public health careers can be obtained through the Council on Education for Public Health (<http://www.ceph.org>) and the Association of Schools of Public Health (<http://www.whatispublichealth.org>).

PRACTICUM

A major part of the undergraduate curriculum in Public Health is its practicum requirement. Practicum is designed to facilitate hands-on experience for public health majors at agencies and/or laboratories dedicated to public health practice while also linking tutorials on the development of excellent writing and communication skills on contemporary public health topics. Students select an approved practicum placement site on- or off- campus, depending on their declared concentration area. Unlisted or inappropriate placements, as well as those that could give the appearance of nepotism or preferential treatment, will not be approved. Approval for practicum will be determined by the Practicum Director.

Practicum is open only to upper-division Public Health students who are in good academic standing and have completed all prerequisite course work. Practicum must be taken for a letter grade. Further information, including practicum sign-up procedures and prerequisites can be obtained at <http://publichealth.uci.edu/>.

ADMISSION TO THE MAJORS

Freshmen: There are no specific requirements for admission at the freshman level, however completion of a college preparatory high school curriculum including two years of high school biology, a combination of natural science courses including one year each of mathematics and chemistry, and courses in health science and social sciences will be helpful. Grades of B or better are recommended in all these preparatory courses.

Transfer students: Junior-level applicants with the highest grades overall and who satisfactorily complete lower-division requirements will be given preference for admission to the Public Health majors. All applicants to the B.S. degree in Public Health Sciences must have a minimum overall GPA of 3.0 and a minimum GPA of 3.0 in required courses, one year of general chemistry with laboratory, and one year of courses equivalent to UCI's Biological Sciences 93 and 94. All applicants to the B.A. degree in Public Health Policy must have a minimum overall GPA of 3.0 and a minimum GPA of 3.0 in required courses, and complete one year of social science courses in any combination of the following topics: anthropology, economics, sociology, and/or psychology.

Change of major. Students who wish to change their major to Public Health Sciences or Public Health Policy should contact the Public Health Student Services office for information about change-of-major requirements, procedures, and policies. Information is also available at <http://www.changeofmajor.uci.edu>.

REQUIREMENTS FOR THE B.S. DEGREE IN PUBLIC HEALTH SCIENCES

University Requirements: See pages 54–61.

School Requirements: None

Major Requirements

A. Lower-Division Requirements: Public Health 1 and 2; Chemistry 1A-B-C and 1LC-LD (1C and 1LC are corequisites. Series change effective for new students beginning fall 2011), Chemistry 51A-B-C and 51LB-LC (Series change effective beginning fall 2012. Chemistry 1LD will be a prerequisite for 51LB); Biological Sciences 93, 94, 97, 98, 99; Mathematics 2A-B plus Statistics 7 or 8; three Social and Behavioral Science courses, with at least two in the same discipline selected from the following:

Psychology: Psychology and Social Behavior 9
Sociology 1, 2, 3
Economics 1, 13, 20A, 20B
Anthropology 2A, 2B, 2C
Political Science 6C, 31A, 51A
Social Ecology E8

B. Upper-Division Requirements: Public Health 101; two courses from Biological Sciences D103, D104, E109, N110; five additional upper-division courses with at least one course chosen from each of the three topic areas:

Epidemiology, Genetics, and Health Informatics: Biological Sciences D137, D148*, D153*, D187*, E106, M123*, M137; Engineering CBEMS116; Public Health 102–119.

Environmental and Global Health Sciences: Anthropology 125B, 128B; Biological Sciences E189, 191A-B*, 191C*; Chemistry 125; Social Ecology E127; Earth System Science 112*; Public Health 160–179.

*Note additional prerequisites.

Infectious and Chronic Diseases: Public Health 180–189; Biological Sciences 124, D125, D143, E136*, E176, M114, M114L*, M116*, M116L*, M118L*, M121*, M121L*, M122, M122L*, M124A-B*, M125, M137.

*Note additional prerequisites.

Upon petition. Public Health 100 may also be taken to fulfill upper-division course work in specific topic areas, depending on course content.

C. Practicum Requirement: Public Health 195 (8 units), taken for upper-division writing credit.

NOTE: Students may not double major in Public Health Sciences and Pharmaceutical Sciences, or with any of the School of Biological Sciences majors or minors.

REQUIREMENTS FOR THE B.A. DEGREE IN PUBLIC HEALTH POLICY

University Requirements: See pages 54–61.

School Requirements: None

Major Requirements

A. Lower-Division Requirements: Public Health 1 and 2; three courses from Biological Sciences 9A, 9D, 9J, 10, 12B, 12D, 25, 30, 36, 37, 45, 50, 93, 94; Mathematics 2A-B plus Statistics 7 or 8; three Social and Behavioral Science courses, with at least two in the same discipline selected from the following:

Psychology: Psychology and Social Behavior 9
Sociology 1, 2, 3
Economics 1, 13, 20A, 20B
Anthropology 2A, 2B, 2C
Political Science 6C, 31A, 51A
Social Ecology E8

B. Upper-Division Requirements: Public Health 101, 122, and 144; seven additional upper-division courses with at least two courses in each topic area selected from the following:

Health Policy and Management: Criminology, Law and Society C121, C126, C148; Economics 123A-B-C*, 124A*; Management 101*, 107**, 160*; Planning, Policy, and Design 102, 111, 133*, 137, 167, 168, 169*, Political Science 171A*; Public Health 120–139.

Social and Behavioral Health Sciences: Anthropology 133A, 134A, 134D, 134E; Planning, Policy, and Design 112, 151; Psychology and Social Behavior 103H, 135H, 136H, 137H, 141H, 183S*; Public Health 140–159.

*Note additional prerequisites.

**Open only to students enrolled in the Management minor or with consent of instructor.

Upon petition. Public Health 100 may also be taken to fulfill upper-division course work in specific topic areas, depending on course content.

C. Practicum Requirement: Public Health 195 (8 units), taken for upper-division writing credit.

MINOR IN PUBLIC HEALTH

The minor in Public Health provides students with the fundamental knowledge of principles, applications, and skills needed to develop a firm appreciation of health and disease prevention at the population level, and to use this special knowledge to transform the experience of their major education into innovative approaches for solving problems in health care and assessment.

Teaching and learning. Public Health education demands interdisciplinary engagement. The minor curriculum is intended to engage students from majors across the campus by introducing them to the

main concepts and branches of public health, while also giving them the skills and values needed to translate their major education into meaningful projects in population health assessment and disease prevention. In concert with the major degrees in public health, the minor emphasizes learning through the ecological model of public health where the linkages and relationships among multiple determinants affecting health are examined to identify critical nodes of opportunities to improve the health of populations at various scales of analysis.

Research. Public Health education is most firmly embedded in knowledge systems through research and practice. The minor curriculum requires a period of directed or special studies where students have the opportunity to translate their didactic knowledge into tangible projects within the rubric of public health practice.

Service. Public Health education also demands community engagement. All students of Public Health are encouraged to incorporate public health impacts and benefit assessments into societal functions that ground their understanding of public problems. Experience in public health service may be acquired through participation in learning opportunities and by reflecting critically on those experiences under the auspices of vigorous campus organizations such as the Public Health Association (<http://pha.zotters.org/>).

Requirements for the Minor

Nine courses are required (36 units), no more than two of which may be taken on a Pass/Not Pass basis, distributed as follows:

- A. Public Health 1 and 2.
- B. Six upper-division courses in Public Health with at least one from each of four subject-cluster areas as follows:
 - Epidemiology, Genetics, and Health Informatics (Public Health 101–119)
 - Health Policy and Management (Public Health 120–139)
 - Social and Behavioral Health Science (Public Health 140–159)
 - Environmental and Global Health Science (Public Health 160–179)
 - Infectious and Chronic Diseases (Public Health 180–189)
- C. Four units of Public Health 198 (Directed Studies) or Public Health 199 (Special Studies) or equivalent, working on topics demonstrably related to public health research and/or practice.

The courses selected to fulfill this requirement must have Public Health number designations. Petitions to use alternative courses will be considered on a case-by-case basis.

No more than two courses may overlap between the student's major degree and the minor in Public Health.

Residence Requirement: A minimum of six courses required for the minor must be completed at UCI. Approved courses taken in the Education Abroad Program are considered to be in-residence courses.

Graduate Program

MASTER OF PUBLIC HEALTH

The distinctive mission of the UCI M.P.H. program is to create a motivated cadre of public health professionals who are prepared to implement effective strategies for reducing the burden of disease and disability in culturally diverse communities, and who are primed to draw from their broad training in the global dimensions of public health principles to lead and work collaboratively on precise assessments of health-risk factors and on the management of evidence-based prevention strategies.

In addition to meeting all the training requirements in the core competency subjects recommended by the Association of Schools of Public Health (ASPH), students enrolled in the UCI M.P.H. program will have the opportunity for in-depth pursuit of one out of three emphasis areas: Environmental Health, Epidemiology, or Sociocultural Diversity and Health. The M.P.H. is a 60-unit program. A full-time student must enroll in at least 12 units per quarter. Part-time enrollment is also allowed. To maintain residency, part-time students must enroll in four to eight units per quarter. All students are required to complete 240 hours of fieldwork at an approved public health practicum site.

Further information may be obtained from the Public Health Web site, <http://publichealth.uci.edu/>, by calling (949) 824-7095 or by sending e-mail to suiga@uci.edu.

CAREER INFORMATION

Graduates of the UCI M.P.H. program will find employment in both public and private agencies committed to preventing disease and promoting health in all aspects of society. Earning a graduate degree gives new professionals a competitive edge over students who complete their education at the bachelor's degree level. In particular, the curriculum of the M.P.H. program at UCI is specifically designed to create students who can combine knowledge of the five core disciplines in public health with leadership, communication, and problem-solving skills to meet the needs of culturally diverse communities. Earning an M.P.H. degree will allow graduates to pursue supervisory positions and career advancement opportunities that may be unattainable without an advanced degree. Students may also wish to combine an M.P.H. with a clinical degree in the health professions to increase opportunities for employment.

Course work in the M.P.H. program can also prepare a student to pursue doctoral programs in public health. The Ph.D. is a research-based degree that prepares the candidate for research and teaching positions in institutions of higher education. The Dr.P.H. is a professional degree that prepares candidates for careers as practitioners in high-level administration or teaching. UCI does not currently offer these degrees, but a proposal for a Ph.D. program is under review. More information about careers and graduate school in public health can be obtained through the Association of Schools of Public Health (<http://www.whatispublichealth.org>) and the Council of Education for Public Health (<http://www.ceph.org>).

GENERAL ADMISSION REQUIREMENTS

The M.P.H. program accepts students for the fall quarter only. Students are encouraged to begin the application process early to facilitate the timely submission of the application. The deadline for receipt of all application materials for the M.P.H. program is January 15. There are no specific course prerequisites needed to enroll, and the program is open to students with bachelor's degrees in a variety of disciplines. Individuals from diverse cultural, geographic, and socioeconomic backgrounds are encouraged to apply.

To be eligible to apply for the M.P.H. program, applicants must meet certain minimum academic requirements. Applicants must hold a bachelor's degree from an accredited academic institution, have earned a minimum grade point average of 3.0 (B average) in undergraduate course work, and possess strong verbal and quantitative skills as reflected by Graduate Record Examination (GRE) General Test scores. Applicants may also submit standardized test scores from the MCAT, GMAT, or LSAT in lieu of the GRE. If the applicant has, from a UC-equivalent university, a Ph.D. in a health-related field, a medical degree, or is currently enrolled in medical

school, a test score must be submitted, but the test score's date does not need to be within the validity period. Evaluations of applicant files for admission to the M.P.H. program will consist of an assessment of transcripts of previous academic work, standardized graduate admission test scores, statement of purpose, letters of recommendation, and other relevant qualifications. Applicants must choose one of the three available emphases at the time of application. For more information on admissions, visit <http://publichealth.uci.edu/> or contact suiga@uci.edu.

PROGRAM REQUIREMENTS

The M.P.H. is a 60-unit degree program consisting of fourteen courses taken over five quarters. Eight courses must be taken by all students. In addition, students choose three courses in their emphasis and three elective courses. The introductory course in the foundations of public health and the five core competency courses must be taken for a letter grade. Any foundation or core competency courses in which a minimum grade of B is not achieved must be re-taken.

Required Courses. All students begin the program with a four-unit introductory course in the foundations of public health. The five core competency courses, each of which is four units, are Public Health Statistics, Environmental Health Science, Epidemiology, Health Policy and Management, and Health Behavior Theory. Students must also complete at least two quarters of the Graduate Seminar for two units each quarter, and the Graduate Practicum in Public Health (eight units).

Emphasis Courses. Three courses (four units each) in one of the three emphases are required. Students choose their emphasis at the time of application and select courses with the help of a faculty mentor in that emphasis.

Elective Courses. Three elective courses (four units each) are required. Students select electives in light of their educational and career goals.

Practicum. Students are required to complete a supervised internship of 240 hours while registered in the Graduate Practicum in Public Health (PubHlth 295). The practicum experience follows the first three academic quarters of study in public health, the completion of all core competency courses, and advancement to candidacy. A compendium of approved practicum sites is available online to enrolled M.P.H. students. The student's work at the practicum site is expected to culminate in a comprehensive written report.

Comprehensive Examination. A two-part comprehensive examination will be administered by the faculty of the student's area of emphasis in the spring quarter. The normative time to take the exam is in the fall quarter, but it is also offered in the spring by special request. Part one consists of a multiple choice proctored examination on the core competency areas and the cross-disciplinary themes of public health. Part two consists of an analysis of case studies in the student's area of emphasis. Students must pass both parts of the examination before they can be advanced to candidacy for the M.P.H. degree.

For students enrolled full-time, the normative time for completion of the M.P.H. degree is six quarters, and the maximum time permitted is nine quarters. For students enrolled part-time, the normative time is nine quarters, and the maximum is fifteen quarters. Students admitted with advanced standing due to prior graduate-level training may receive credit for up to one-fifth of the total units required toward the M.P.H. degree, upon petition and demonstration of competency associated with those courses. Such credits are not applicable to the graduate practicum and graduate seminar.

Courses in Public Health

(Schedule of Classes designation: PubHlth)

LOWER-DIVISION

1 Principles of Public Health (4). Lecture, three hours. Introduces the major concepts and principles of public health and the determinants of health status in communities. Emphasizes the ecological model that focuses on the linkages and relationships among multiple natural and social determinants affecting health. *Public Health Sciences, Public Health Policy, and Nursing Science majors have first consideration for enrollment.*

2 Case Studies in Public Health Practice (4). Lecture, three hours. Presents case studies in various themes of public health practice to demonstrate how the principles of public health were established and continue to evolve. Prerequisite: Public Health 1. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

30 Human Environments (4). Lecture, three hours. Study of natural and physical components of earth's environmental problems due to human activities. Topics include global air, water, soil, biodiversity, rainforests, energy, demographics, agriculture, and urbanization. Theme is sustainability. Integrated into the science are social, legal, and economic considerations. (II)

60 Environmental Quality and Health (4). Lecture, three hours. A survey of how pollution in the natural and physical environment affects human health. Topics are toxicology, epidemiology, risk assessment, water, food, air, radiation, pesticides, solid and hazardous waste. Included are interdisciplinary elements of environmental regulations, environmental education, consumer protection. (II)

80 AIDS Fundamentals (4). Lecture, three hours; discussion, one hour. Considers the biological and sociological bases of the AIDS epidemic. Topics include the history of AIDS, current medical knowledge, transmission, risk reduction, and how the community can respond. Same as Biological Sciences 45. (II)

90 Natural Disasters (4). Lecture, three hours. Natural disasters are natural processes that adversely affect humans. By examining these processes students develop a basic understanding of Earth's physical environment. Topics include: tectonics, earthquakes, volcanoes, landslides, severe weather, flooding, climate change, mass extinctions and impacts with space objects. (II)

UPPER-DIVISION

100 Special Topics in Public Health (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisites: Public Health 1 and in some cases, consent of the instructor. May be repeated for credit as topics vary.

EPIDEMIOLOGY, GENETICS, AND HEALTH INFORMATICS

101 Introduction to Epidemiology (4). Lecture, three hours; laboratory, one hour. The distribution of disease and injury across time, space, and populations. Covers basic concepts and methods of descriptive epidemiology including the natural history of disease, demography, public health interventions, models, measurement, sources of data, and indices of health. Prerequisite: Mathematics 7, Statistics 7, or Statistics 8, or equivalent. Formerly Public Health 101A. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

102 Social Epidemiology (4). Lecture, three hours. Overviews evidence linking environmental factors to mental and physical disorders including such variables as socioeconomic status, income inequality, work stress, job loss, social capital, location, and other demographic characteristics. Considers measurement and research design issues of both the individual and aggregate levels. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; Social Ecology 10; Social Ecology 13 or equivalent. Same as Psychology and Social Behavior 183S. *Public Health Sciences, Public Health Policy, and Psychology and Social Behavior majors have first consideration for enrollment.*

103 Introduction to Genetic Epidemiology (4). Lecture, three hours. Examines the methodological approaches for studying the importance of genetic factors and gene-environment interactions in human diseases. Topics include: genetic and epidemiological concepts, population studies, family studies, and applications in medicine and public health. Prerequisite: Public Health 101. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

104 Analytic and Applied Epidemiology (4). Lecture, three hours; laboratory, one hour. Covers basic concepts of analytic epidemiology and applications, including experimental and observational designs, prevention, screening, treatment and rehabilitation, infectious disease, and injury prevention. Prerequisite: Public Health 101. Formerly Public Health 101B. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

119 Special Topics in Epidemiology and Genetics (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisites: Public Health 1 and in some cases, consent of the instructor. May be repeated for credit as topics vary.

HEALTH POLICY AND ADMINISTRATION

120 Nutrition and Global Health (4). Lecture, three hours. Global issues related to nutrition and public health. Evaluation of nutritional risk factors associated with the development of chronic diseases and the role of nutritional medicine in prevention. Topics include food safety, communicable diseases, supplements, and regulatory issues. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

121 Introduction to Complementary and Alternative Medicine (4). Lecture, three hours. Examines health and disease in contemporary American culture and society with definitions, models, and practices of what has come to be known as “orthodox” or “conventional” medicine. Selected “alternative” or “complementary” modes of promoting health and well-being including homeopathy, herbology, and chiropractic. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

122 Health Policy (4). Lecture, three hours. Considers social and economic aspects of health and disease in the United States. What are the proper roles of the individual, community, and government in improving health and health care? International comparisons will be made wherever possible. Same as Planning, Policy, and Design 170. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

123 Public Issues in Biotechnology (4). Lecture, three hours. An assessment of developments in biotechnology potentially affecting various facets of human society, or warranting significant public debate. Covers the implications of genetic engineering and other biotechnological developments for public health, environment, agriculture, legislation, research ethics, public policy, and commerce. Prerequisites: Public Health 1 and 2 or consent of instructor. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

124 Environmental and Public Health Policy (4). Lecture, three hours. Examines factors involved in shaping public health and environmental policy. Topics include the role of science in public health policy, the function of governmental regulatory agencies, citizen participation, and economic and sociopolitical aspects of controlling infectious diseases and regulating carcinogens. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

134 Asian American Community Public Health (4). Lecture, three hours. Focuses on major issues and concepts of community health and their application to public health programs for Asian American populations. Analyzes individual, institutional, community, and policy factors that influence a person’s health status within a larger environmental context. Same as Asian American Studies 134. (VII)

139 Special Topics in Health Policy and Administration (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisites: Public Health 1 and in some cases, consent of the instructor. May be repeated for credit as topics vary. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

SOCIAL AND BEHAVIORAL HEALTH SCIENCE

140 Beliefs, Attitudes, and Health Behaviors (4). Lecture, three hours. Examines health-relevant beliefs, attitudes, and behaviors from a social psychological perspective. Topics include: self-control; obesity; sexual behavior; medication errors, stress, perceived control and social support; happiness and well-being; changing health attitudes and behaviors; self-disclosure and health. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Psychology and Social Behavior 181S. *Public Health Sciences, Public Health Policy, and Psychology and Social Behavior majors have first consideration for enrollment.*

141 Clinical Health Psychology (4). Lecture, three hours. Role of behavior in etiology, treatment, and prevention of certain diseases. Behavioral intervention including biofeedback, stress-, pain-management, health habit counseling, and other skills to assist patients make cognitive, emotional, and behavioral changes needed to cope with disease or achieve better health. Prerequisite: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent. Same as Psychology and Social Behavior 141H. *Public Health Sciences, Public Health Policy, and Psychology and Social Behavior majors have first consideration for enrollment.*

142 The Human Pain Experience (4). Lecture, three hours. Examines the physiological and sociocultural correlates of human pain perception. Emphasis on laboratory and clinical methods of measuring acute and chronic pain; social influences on the experience and communication of pain; biopsychosocial approaches to pain control. Prerequisites: Psychology and Social Behavior 9 or 11C, or Psychology 7A or 9C, or equivalent; and any upper-division course from the Health or Pre-clinical Psychology areas. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

143 Social Ecology of Health Promotion (4). Lecture, three hours. Core themes of Social Ecology are examined as they apply to major areas of health promotion research and practice. Students attend lectures and work collaboratively on team projects conducted in university and community settings. Prerequisite: consent of instructor. Same as Social Ecology 131. *Public Health Sciences, Public Health Policy, and Social Ecology majors have first consideration for enrollment.*

144 Health Behavior Theory (4). Lecture, three hours. Introduces theoretical perspectives from the social sciences to understand health behavior from the vantage point of individuals, their interpersonal contacts, communities, and ecological contexts. Application of theory to public health problems is a central focus. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

145 Gender, Biology, and Environmental Ethics (4). What is “nature” and how do we know and represent it? Introduces students to the history of “nature” produced within scientific knowledge, as well as historical developments. Previous lower-division course work in Women’s Studies is recommended, but not required. Same as Women’s Studies 165A. *Public Health Sciences, Public Health Policy, and Women’s Studies majors have first consideration for enrollment.*

147 Drug Abuse and Its Prevention (4). Lecture, three hours. Theoretical and practical underpinnings of drug abuse and its prevention at the individual and population levels. Students practice developing drug abuse prevention schemes for specific populations. Recent developments in pharmacological and biobehavioral theories of drug dependence are explored. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

148 Public Health Communication (4). Lecture, three hours. Theoretical underpinnings and practical applications of communication sciences in public health practice. Techniques of effective communication, including fear appeal and deterrence; social marketing; public-private partnerships; health service delivery; and outreach in rural and urban settings, and for international health strategies. Prerequisites: Public Health 1 and 2. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

151 Environmental Psychology (4). Lecture, three hours. Impact of the physical environment on individual and group behavior. Three basic concerns examined: (a) environmental determinants of behavior at the individual and interpersonal level; (b) social planning and urban design; and (c) methodological approaches to the study of environmental issues. Prerequisites: Social Ecology E8 or 10, or Planning, Policy, and Design 4. Same as Planning, Policy, and Design 151 and Psychology and Social Behavior 171S. *Public Health Sciences, Public Health Policy, and Psychology and Social Behavior majors have first consideration for enrollment.*

159 Special Topics in Social and Behavioral Health Science (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisites: Public Health 1 and in some cases, consent of the instructor. May be repeated for credit as topics vary.

ENVIRONMENTAL AND GLOBAL HEALTH SCIENCE

160 Environmental Pollution and Remediation (4). Lecture, three hours. The study of pollution—its identification, risks, and remediation. Analysis of sources of natural and anthropogenic environmental pollutants using ecological concepts, chemical fate and transport, engineering technologies, economics, and policy to provide understanding and solutions to these problems. Prerequisite: upper-division standing or consent of instructor. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

161 Environmental Geology (4). Lecture, three hours; discussion, one hour. Introduction to geologic principles and applications to environmental problems. Topics include: tectonic processes, earth materials, soils, river processes, groundwater, the coastal environment, slope failures, seismic hazards, mineral resources, and land-use evaluation based on geologic conditions. Examples from case studies. Prerequisite: Social Ecology E8. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

162 Human Ecology of Health (4). Lecture, three hours. Many human health problems are directly associated with ethnicity, sex, and age. Course integrates the science of these issues with anthropology, geography, economics to understand the relationship, management, treatment. Involves lectures and discussions to probe these factors. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

163 Environmental Health Science (4). Lecture, three hours. Focuses on processes of exposure to environmental toxins/agents and their impact to human health and the environment. Media transport, exposure assessment, susceptibility, behavior, and health effect of several toxins are discussed. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

164 Toxic Chemicals in the Environment (4). Lecture, three hours. Explores the sources, transformation, and sinks of toxic chemicals in the environment, and their effects on public health. Covers regulatory issues and design-for-the-environment initiatives to reduce or eliminate the adverse effects of toxic chemicals. Prerequisites: Public Health 1 and 2 or consent of instructor. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

164L Toxic Chemicals in the Environment Laboratory (4). Laboratory, three hours. Covers field sampling techniques and laboratory analysis methods for assessing the occurrence and effects of toxic chemicals in environmental compartments, including water, soils, sediments, air, and food resources. Prerequisite or corequisite: Public Health 164. Prerequisites: Public Health 1 and 2 or consent of instructor. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

165 Issues in Potable Water Reuse (4). Lecture, three hours. Provides an in-depth study of the treatment and subsequent reuse of wastewater for drinking. Analyzes existing regulations for both drinking water and reuse situations, microbial and chemical contaminants, health concerns and risk assessment. Prerequisite: Social Ecology E8. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

166 Geographic Information Systems (4). Lecture, one and one half hours; laboratory, one and one half hours. Basic geographic, cartographic, and GIS concepts including computer representation of physical, political, statistical, and social aspects of space using vector and grid-based maps. Experience with extensive geographic base map files and databases through use of GIS software (ArcView 3.x). Same as Criminology, Law and Society C148. *Public Health Sciences, Public Health Policy, and Criminology, Law and Society majors have first consideration for enrollment.*

167 Air Pollution, Climate, and Health (4). Lecture, three hours. Introduction to how air pollutants are emitted into the atmosphere, how people are most exposed to air pollutants in developed and developing areas, physical and meteorological processes that affect transport, and the influence of air pollutants on global warming. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

168 Nuclear Environments (4). Lecture, three hours. Understanding the impact of the nuclear age on the environment and human health through the interrelated developments of nuclear power and nuclear weapons. The early years of weapon development, catastrophic environmental pollution, perils of nuclear power in the U.S. and Russia. Same as Social Ecology E127 and International Studies 122. (VIII)

169 Human Exposure Modeling (4). Lecture, three hours. Indirect methods in estimating human exposure to environmental agents. Topics include air, noise, dermal and ingestion exposure assessment, time-activity and micro-environmental approach, uncertainty and variability analysis, and the use of GIS and remote sensing in exposure assessment. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

171 Human Exposure to Environmental Contaminants (4). Lecture, three hours. Introduces origins of human's realization that chemicals in the environment may adversely affect health. Introduces the theory and principles of exposure assessment. Covers estimation of exposure, variability of measures, the way exposure assessment is incorporated into the risk-assessment paradigm.

173 Health and Global Environmental Change (4). Lecture, three hours. Overview of scientific underpinnings of global environmental change and human health consequences. Provides students with an understanding of the fundamental dependency of human health on global environmental integrity. Encourages disciplinary cross-fertilization through interaction of students in environmental, health, and policy sciences. Prerequisite: at least one upper-division course in environmental science, public health, environmental policy, and/or environmental management, or consent of instructor. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

175 Environmental Modeling and Risk Assessment (4). Lecture, three hours; laboratory, one hour. Surveys the general principles, basic mathematical methods, and practices of environmental modeling and human health risk assessment. Topics include advection-dispersion models, risk management, and risk perception. Students conduct an original risk assessment as a final group project. Prerequisites: Mathematics 2A; Statistics 7 or equivalent introductory statistics course. Concurrent with Public Health 275 and Environmental Toxicology 275.

179 Special Topics in Environmental and Global Health Science (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisites: Public Health 1 and in some cases, consent of the instructor. May be repeated for credit as topics vary.

INFECTIOUS AND CHRONIC DISEASES

180 Epidemiology of Infectious Disease (4). Lecture, three hours. Examines the distribution of infectious disease and the health and disease risk among human populations. Introduces basic methods for infectious disease epidemiology. Case studies of important diseases, including HIV and malaria, are conducted. Prerequisite: Public Health 1.

189 Special Topics in Infectious Diseases (4). Lecture, three hours. Special topics courses are offered from time to time. Course content varies with interest of the instructor. Prerequisites: Public Health 1 and in some cases, consent of the instructor. May be repeated for credit as topics vary. *Public Health Sciences and Public Health Policy majors have first consideration for enrollment.*

GENERAL TOPICS

195 Public Health Practicum (8). Lecture, three hours; discussion, one hour; fieldwork, 10 hours. Provides direct opportunities for Public Health majors to observe and participate in public health activities and/or research; and to cultivate skills for verbal and written communication of contemporary public health topics. Prerequisites: Public Health 1 and 2; satisfactory completion of the lower-division writing requirement; upper-division Public Health majors only.

198 Directed Studies (1 to 4). Prerequisite: Public Health 1. May be repeated for credit as topics vary.

199 Special Studies (1 to 4). Prerequisites: consent of instructor and upper-division standing. May be repeated for credit as topics vary.

GRADUATE

200 Foundations of Public Health (4). Presents the overarching framework, principles, and core responsibilities of public health research and practice from a multidisciplinary perspective. Provides necessary foundation for further studies toward advanced cross-cutting approaches essential for public health practice. Prerequisite: graduate standing or consent of instructor.

201 Cancer Epidemiology (4). Concentrates on understanding how epidemiology plays a role in the search for cancer etiology, prevention, control, and treatment; gives an overview of cancer research with an appreciation of the multidisciplinary nature of the field. Prerequisites: Public Health 203 or 206; graduate standing or consent of instructor. Same as Epidemiology 201.

202 Genetic Epidemiology (4). Concentrates on the role of genetic factors in the etiology of disease in human populations with an objective of disease control and prevention, and the role of interactions of genetic factors and environmental exposures in the occurrence of disease. Prerequisites: Public Health 203 or 206; graduate standing or consent of instructor. Same as Epidemiology 202.

203 Epidemiology (4). Presents descriptive and experimental approaches to the recognition of the causal association of disease in the general population, as these approaches apply to populations using different student designs and models from the literature. Same as Epidemiology 203.

204 Biostatistics (4). Designed to help students develop an appreciation for the statistician's view of the research process, emphasizing biomedical research. Instills an understanding of how statistical models are used to yield insights about the data that form evidence-based understanding of the world around us. Same as Epidemiology 204.

205 Advanced Epidemiologic Methods (4). Advanced topics in the design and statistical analysis of epidemiologic studies. Topics include simulation methods, counter-matching and multiphase study designs, missing data, and Bayesian analysis. Published simulation studies are discussed and replicated using the R software package. Prerequisite: Public Health 101B or Statistics 111 or Statistics 211 or consent of instructor. Same as Epidemiology 217.

206 Graduate Epidemiology in Public Health (4). Presents descriptive and experimental approaches to the recognition of the causal association of disease in the general populations, as these approaches apply to populations using different student designs and models from the literature. Prerequisite: graduate standing or consent of instructor.

207 Public Health Statistics (4). Surveys statistical methods for public health. Topics include descriptive statistics, probability models, likelihood functions, estimation, and hypothesis testing for categorical and continuous data. Student learn to use statistical software to perform epidemiologic data analysis. Prerequisites: Public Health 203 or similar introductory epidemiology course and Mathematics 2A or similar introductory calculus course; graduate standing or consent of instructor.

220 Public Health Cost-Effectiveness Analysis (4). Examines using cost-effectiveness information to allocate limited resources to maximize health benefits to a population; defining and measuring cost, survival, and health-related quality of life; and how to calculate cost-effectiveness using decision trees and Markov simulation models. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 226 and Psychology and Social Behavior P228.

221 Health Promotion and Planning (4). Focuses on health and health care in the United States, but discussion of global health issues and/or international comparisons will be made whenever possible. Considers both the social and economic aspects of health and disease. Prerequisite: graduate standing or consent of instructor. Same as Planning, Policy, and Design 241.

222 Health Policy and Management (4). Multidisciplinary inquiry into theory and practice concerned with delivery, quantity, costs of health care for individuals and populations. Explores managerial and policy concerns regarding structure, process, outcomes of health services including the costs, financing, organization, outcomes, and accessibility of care. Prerequisite: graduate standing. Same as Planning, Policy, and Design 243.

240 Topics in Environmental Health Promotion and Education (4). Focuses on design of intervention strategies dependent on the environmental agent, exposure to assessment, SES, health effects, stakeholders, and support base. Programmatic design includes media selection, communication/education, and pre/post surveys. Analysis of transborder and local environmental health promotion programs. Prerequisite: graduate standing or consent of instructor.

241 Environmental Policy and Global Sustainability (4). Seminar organized around four transcendent questions: does the world value sustainability, what challenges must be met to move toward it, what are the roots of inequality, and is capitalism compatible with sustainability. Prerequisite: graduate standing or consent of instructor. Same as Social Ecology 250.

242 Theories of Health Communication (4). Explores the concepts, constructs, and theories of communication in health and risk contexts. Examines interpersonal, family, organizational, and mediated communicative processes about health care and conditions from a global perspective. Prerequisite: graduate standing.

244 Health Behavior Theory (4). Introduces the field of Health Behavior and then segues into major theoretical perspectives. Focus on health behavior change from the vantage point of individual health behavior and theoretical abstraction. Explores how to relate theory to behavior-change intervention programs. Prerequisite: graduate standing.

245 Health Promotion Planning (4). Introduces strategic planning integral to intervention planning in public health practice and research, emphasizing the fundamental domains of social and behavioral health science and practices. Students develop an intervention plan for a specific health problem, health behavior, and target population. Prerequisite: graduate standing.

246 Social Research Methods (4). An interactive graduate seminar covering topics related to the research process and study design. Begins with conceptualizing research questions, hypotheses, and then turns to topics in measurement and concludes with experimental, quasi-experimental, and observational study designs. Prerequisite: graduate standing.

259 Special Topics in Social and Behavioral Health Sciences (4). Current research in Social and Behavioral Health Sciences. Topics vary from quarter to quarter. May be repeated for credit as topics vary. Prerequisite: graduate standing or consent of instructor.

260 Coastal Ecosystem Health (4). Examines the causes of coastal ecosystem degradation and strategies to restore the ecosystem balance or to prevent further coastal ecosystem health degradation. Prerequisite: graduate standing or consent of instructor. Same as Ecology and Evolutionary Biology 275.

261 Environmental Hydrology (4). Provides an overview of the occurrence, distribution, and movement of water in the environment. Quantitative methods are introduced for analyzing hydrologic processes. Human impacts on water distribution and quality are considered. Prerequisite: graduate standing or consent of instructor.

262 Earthquakes and Seismic Hazard (4). Provides an overview of earthquakes and introduction to seismic hazard. Topics include characteristics and effects of earthquakes, sources of earthquakes, seismic hazard assessment, introduction to earthquake loss estimation and mitigation. California examples are emphasized. Prerequisite: graduate standing or consent of instructor.

263 Seminar in Paleoseismology (4). Provides an introduction to paleoseismology and its applications. Topics include data collection methods, data analysis, earthquakes in different tectonic environments, and applications to seismic hazard assessment and fault characterization. Prerequisite: graduate standing or consent of instructor.

264 Introduction to Environmental Health Science (4). Convergence of agents (chemical, physical, biological, or psychosocial) in the environment can emerge as diseases influenced by social, political, and economic factors, allowing them to become rooted in society. How these agents from various spheres come together and impact human health. Prerequisite: graduate standing. Same as Epidemiology 264 and Environmental Toxicology 264.

265 Advanced Environmental Health Science (4). Explores the complex relationships among exposure processes and adverse health effects of environmental toxins focusing on specific chemicals, sources, transport media, exposure pathways, and human behaviors. Techniques of environmental sampling for exposure assessment are discussed. Prerequisite: graduate standing. Same as Epidemiology 265.

269 Air Pollution, Climate, and Health (4). Emission of air pollutants into the atmosphere, physical and meteorological processes that affect transport, and influence on global warming. Concepts of how and where people are most exposed, and how exposures and health effects differ in developed and developing regions. Same as Epidemiology 269 and Environmental Toxicology 269.

270 Human Exposure to Environmental Contaminants (4). Introduces founders of conceptual thought that environmental contaminants can impact health. Theory and principles of exposure assessment, the continuum from emissions of a contaminant into the environment to evidence of health effects in a population. Same as Epidemiology 270 and Environmental Toxicology 270.

271 Health Impacts of Environmental Change (4). Seminar on health impacts of environmental change at various scales of analysis. Uses numerical models such as "MIASMA" and "TARGETS" to analyze alternative outcomes of environmental-change scenarios. Presentations from experts are featured. Prerequisite: graduate standing or consent of instructor.

272 Environmental Health and Quality (4). Concepts and principles of environmental health. Focuses on industrial hygiene, water and air quality, noise pollution, and environmental carcinogens. Discusses theory and implementation practices through review of legislative measures and enforcement procedures. Examines social and biological interactions surrounding each topic. Prerequisite: graduate standing or consent of instructor.

273 Seminar in Environmental Health, Science, and Policy (2). Topics relevant to the field of environmental health, science, and policy are covered in depth. Included are: hazardous and biological pollutants in soil, water, air; remediation technologies; water conflicts; and regulations pertaining to contaminants. Prerequisite: graduate standing or consent of instructor.

275 Environmental Modeling and Risk Assessment (4). Surveys the general principles, basic mathematical methods, and practices of environmental modeling and human health risk assessment. Topics include advection-dispersion models, risk management, and risk perception. Students conduct an original risk assessment as a final group project. Prerequisites: Mathematics 2A; Statistics 7 or equivalent introductory statistics course. Same as Environmental Toxicology 275. Concurrent with Public Health 175.

276 Toxic Chemicals in the Environment (4). Industrial ecology of toxicants and their impacts on environmental quality and human health. Explores theoretical basis of toxicity thresholds and regulatory issues. Uses classic and contemporary research articles to understand the legacy of traditional toxicants, and to identify emerging threats. Prerequisite: graduate standing or consent of instructor. Same as Epidemiology 244.

280 Global Burden of Disease (4). Introduces composite measures of disease burden, including Disability Adjusted Life Years and their use in prioritizing disease burden at local, regional, and global levels. Focuses on WHO's landmark assessments and introduces DISMOD software for specific analyses. Prerequisite: graduate standing or consent of instructor.

281 Infectious Disease Epidemiology (4). Covers geographical distribution of infectious diseases and the health and disease risk in diverse human populations. Introduces basic methods for infectious disease epidemiology and case studies of important diseases. Includes surveillance, outbreak investigation, emerging pathogens, traditional and molecular epidemiology. Prerequisite: graduate standing or consent of instructor.

290 Special Topics in Public Health (4). Varying topics in the field of Public Health. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

291A-B-C Graduate Seminar: Advances and Challenges in Public Health (2-2-2). Forum for exploring recent advances and challenges in all disciplines of public health research and practice. Features case studies exemplifying the integration of core competencies with cross-cutting interdisciplinary themes of public health. Prerequisite: graduate standing or consent of instructor. Satisfactory/Unsatisfactory only.

292 Ethics and Responsible Conduct of Research in Public Health (4). Covers issues of scientific integrity and satisfies the requirements for training in public health ethics. Includes guidelines for responsible conduct of research, federal and international codes, administrative review and approval, conflict of interest, and privacy and safety of research participants. Prerequisite: graduate standing or consent of instructor.

295 Graduate Practicum in Public Health (8). Provides opportunities for hands-on experience for graduate students at agencies or organizations engaged in public health practice. Students are matched with placement sites based on academic preparation and students' career goals. The practicum experience culminates in a comprehensive written report. Prerequisites: Public Health 200 and 290. Satisfactory/Unsatisfactory only.

298 Directed Studies in Public Health (2 to 4). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

299 Independent Study in Public Health (2 to 8). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

399 University Teaching (2 to 4). Limited to teaching assistants. Satisfactory/Unsatisfactory only. May be repeated for credit.

SCHOOL OF MEDICINE

Ralph V. Clayman, M.D., **Dean**

Irvine Hall

Admissions and Outreach: (949) 824-5388

<http://www.som.uci.edu/>

Faculty

Amir Abolhoda, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Surgery*

Ruslan D. Afasizhev, Ph.D. Russian Academy of Sciences, *Associate Professor, Department of Microbiology and Molecular Genetics*

Behnoosh Afghani, M.D. University of Southern California, *Health Sciences Clinical Professor, Department of Pediatrics*

Phyllis F. Agran, M.D. University of California, Irvine, M.P.H. Harvard University, *Professor Emeritus of Pediatrics (Gastroenterology)*

Anshu Agrawal, Ph.D. Lucknow University, *Associate Adjunct Professor, Department of Medicine (Immunology)*

Thomas Ahlering, M.D. Saint Louis University, *Professor, Department of Urology*

Jane C. Ahn, M.D. Mt. Sinai School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*

Gregory Albers, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Department of Medicine (Gastroenterology)*

Muthana Al-Ghazi, Ph.D. University of Manitoba, *Health Sciences Clinical Professor, Department of Radiation Oncology*

Lama Al-Khoury, M.D. American University of Beirut, *Health Sciences Assistant Clinical Professor, Department of Neurology*

Michael Alkire, M.D. University of California, Los Angeles, *Associate Professor in Residence, Department of Anesthesiology and Perioperative Care*

Byron J. Allen, M.D. University of California, Los Angeles, *Health Sciences Clinical Professor, Department of Medicine (Cardiology)*

Al Aly, M.D. Georgetown University School of Medicine, *Health Sciences Clinical Professor, Division of Plastic Surgery, Department of Surgery*

Alpesh Amin, M.D., M.B.A. Northwestern University, *Chair, Department of Medicine; Executive Director, Hospitalist Program; Chief, Division of General Internal Medicine; Professor of Clinical Medicine, Department of Medicine (Hospitalist Program and General Internal Medicine), and Professor of Public Health and Management*

Arash Anavim, M.D. Tehran University, *Acting Vice Chair and Health Sciences Associate Clinical Professor, Department of Radiological Sciences*

Bogi Andersen, M.D. University of Iceland, *Professor, Department of Medicine (Endocrinology) and Biological Chemistry*

Aileen J. Anderson, Ph.D. University of California, Irvine, *Director of the Christopher Reeve Foundation Spinal Cord Injury Core Facility and Associate Professor, Departments of Physical Medicine and Rehabilitation and of Anatomy and Neurobiology*

Cynthia T. Anderson, M.D. University of Tennessee, *Associate Director of Graduate Education for Anesthesiology and Perioperative Care, Vice Chair for Academic Affairs for Anesthesiology and Perioperative Care, and Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*

Brian S. Andrews, M.B., B.S. University of Sydney, *Professor Emeritus, Department of Medicine (Rheumatology)*

Hoda Anton-Culver, Ph.D. St. Andrews University, *Director of the Center for Cancer Genetics Research and Prevention; Director of the Genetic Epidemiology Research Institute (GERI); Department Chair and Professor of Epidemiology; and Professor of Planning, Policy, and Design and of Environmental Health, Science, and Policy*

Stuart M. Arfin, Ph.D. Albert Einstein College of Medicine, *Professor Emeritus, Department of Biological Chemistry*

Steven A. Armentrout, M.D. University of Chicago, *Professor Emeritus, Department of Medicine (Hematology)*

William B. Armstrong, M.D. University of Washington, *Department Chair and Professor of Clinical Otolaryngology - Head and Neck Surgery*

George Baerveldt, M.D. University of Pretoria, *Professor of Clinical Ophthalmology*

Dean Bradford Baker, M.D. University of California, San Diego; M.P.H.

University of California, Berkeley; *Chief, Division of Occupational and Environmental Medicine, Director of the UCI Center for Occupational and Environmental Health, and Professor of Clinical Medicine, Epidemiology, and Environmental Health, Science, and Policy*

Pierre Baldi, Ph.D. California Institute of Technology, *Director of the Institute for Genomics and Bioinformatics and UCI Chancellor's Professor of Computer Science, Biomedical Engineering, Developmental and Cell Biology, and Biological Chemistry*

Kenneth M. Baldwin, Ph.D. University of Iowa, *Professor, Department of Physiology and Biophysics*

Michael T. Banchi, M.D. University of Southern California, *Health Sciences Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*

Fayez Bany-Mohammed, M.B.B.S. University of Jordan, *Health Sciences Associate Clinical Professor, Department of Pediatrics (Neonatology)*

Tallie Z. Baram, M.D. University of Miami, Ph.D. Weizmann Institute of Science, *Professor, Departments of Pediatrics, Neurology, and Anatomy and Neurobiology, and Danette (Dee Dee) Shepard Chair in Neurological Studies*

Alan G. Barbour, M.D. Tufts University School of Medicine, *Professor, Departments of Microbiology and Molecular Genetics, Medicine (Infectious Diseases), and Ecology and Evolutionary Biology*

Steven J. Barker, M.D. University of Miami, Ph.D. California Institute of Technology, *Professor Emeritus, Department of Anesthesiology and Perioperative Care*

Ronald J. Barr, M.D. Johns Hopkins Medical School, *Professor Emeritus, Department of Dermatology*

Cristobal Barrios, M.D. University of Miami School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Surgery (Trauma and Critical Care/Burns)*

Cyril H. Barton, M.D. University of Colorado School of Medicine, *Associate Professor, Department of Medicine (Nephrology-Renal)*

Andrius Baskys, M.D. Vilnius University, Ph.D. Moscow University, *Associate Professor in Residence, Department of Psychiatry and Human Behavior*

Anjan Batra, M.D. Ohio State University, *Associate Professor of Clinical Pediatrics (Cardiology)*

Romilla Batra, M.D. Government Medical College, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*

S. Samuel Bederman, M.D., Ph.D. University of Toronto, *Health Sciences Assistant Clinical Professor, Department of Orthopaedic Surgery*

James D. Belluzzi, Ph.D. University of Chicago, *Adjunct Professor Recalled, Department of Pharmacology*

Lbakhir BenMohamed, Ph.D. Pasteur Institute, *Associate Professor in Residence, Department of Ophthalmology*

Rimal B. Bera, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Psychiatry*

Pam Berkson, M.S.N. California State University Long Beach, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*

Daniel Berlau, Ph.D. University of California, Irvine, *Assistant Adjunct Professor, Department of Neurology*

Michael L. Berman, M.D. George Washington School of Medicine, *Professor Emeritus, Department of Obstetrics and Gynecology (Gynecologic Oncology)*

Stephen Berman, M.D. New York Medical College, Ph.D. University of California, Davis, *Health Sciences Clinical Professor, Department of Medicine (Infectious Diseases)*

Nicole P. Bernal, M.D. Case Western Reserve University, *Health Sciences Assistant Clinical Professor, Division of Critical Care Surgery ER Medicine/Critical Care Surgery, Department of Surgery*

Michael W. Berns, Ph.D. Cornell University, *Professor, Departments of Surgery, Developmental and Cell Biology, and Biomedical Engineering, and Arnold and Mabel Beckman Chair in Laser Biomedicine*

Deepak K. Bhalla, Ph.D. Howard University, *Professor Emeritus, Department of Medicine*

- Naveen Bhandarkar, M.D. Ohio State University, *Health Sciences Assistant Clinical Professor, Department of Otolaryngology - Head and Neck Surgery*
- Nitin Bhatia, M.D. Baylor College of Medicine, *Assistant Professor of Clinical Orthopaedic Surgery*
- John Billimek, Ph.D. University of California, Irvine, *Assistant Adjunct Professor, Department of Medicine (General Internal Medicine)*
- Robert H. Blanks, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Anatomy and Neurobiology*
- Maureen E. Bocian, M.D. University of Illinois, *Professor of Clinical Pediatrics (Genetics) and of Obstetrics and Gynecology*
- Stephen C. Bondy, Ph.D. University of Birmingham, *Professor, Departments of Medicine (Occupational and Environmental Medicine) and Pharmacology*
- Emiliana Borrelli, Ph.D. University of Naples, *Professor, Departments of Microbiology and Molecular Genetics and of Pharmacology*
- Swaraj Bose, M.B.B.S. All India Institute of Medical Sciences, *Health Sciences Associate Clinical Professor, Departments of Ophthalmology and Neurology*
- Daniela Bota, M.D., Ph.D. Carol Davila University of Medicine and Pharmacy, *Assistant Professor, Departments of Neurology and Neurological Surgery*
- Elliot Botvinick, Ph.D. University of California, San Diego, *Assistant Professor, Departments of Biomedical Engineering and Surgery (Beckman Laser Institute)*
- Ralph Bradshaw, Ph.D. Duke University, *Professor Emeritus, Department of Physiology and Biophysics*
- Peter Breen, M.D. University of Manitoba, *Associate Professor, Department of Anesthesiology and Perioperative Care*
- Matthew Brenner, M.D. University of California, San Diego, *Chief of Pulmonary and Critical Care and Professor, Department of Medicine (Pulmonary and Critical Care)*
- Robert E. Bristow, M.D., M.B.A. University of Southern California, *Director of the Division of Gynecologic Oncology, Professor, Department of Obstetrics and Gynecology (Gynecologic Oncology), and Philip J. DiSaia Chair in Gynecologic Oncology*
- Donald J. Brown, Ph.D. University of Colorado, *Associate Professor in Residence, Department of Ophthalmology*
- Michael J. Buchmeier, Ph.D. McMaster University, *Professor of Medicine (Infectious Disease) and of Molecular Biology and Biochemistry*
- Monte S. Buchsbaum, M.D. University of California, San Francisco, *Professor Emeritus, Department of Psychiatry and Human Behavior*
- Diep Ngoc Bui, M.D. Saigon Medical School, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hematology/Oncology)*
- Lynette Bui, D.O. Midwestern University/Chicago College of Osteopathic Medicine, *Health Sciences Assistant Clinical Professor, Department of Family Medicine*
- William E. Bunney, Jr., M.D. University of Pennsylvania, *UCI Distinguished Professor, Department of Psychiatry and Human Behavior, and Della Martin Chair in Psychiatry*
- Kerry P. Burnight, Ph.D. University of Southern California, *Health Sciences Associate Clinical Professor, Department of Family Medicine, Program in Geriatrics*
- Joseph Burns, Ph.D., M.D. McGill University Faculty of Medicine, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*
- Michael J. Burns, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Emergency Medicine*
- John A. Butler, M.D. Loyola Stritch School of Medicine, *Chief of Oncologic Surgery and Professor, Department of Surgery*
- Matthew J. Butteri, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine, Hospitalist Program)*
- William J. L. Cable, M.D. Otago University, *Health Sciences Clinical Professor, Department of Neurology*
- Michael D. Cahalan, Ph.D. University of Washington, *Department Chair and Professor, Department of Physiology and Biophysics*
- Vincent J. Caiozzo, Ph.D. University of California, Irvine, *Professor in Residence, Departments of Orthopaedic Surgery and of Physiology and Biophysics*
- Justin D. Call, M.D. University of Utah College of Medicine, *Professor Emeritus, Department of Psychiatry and Human Behavior*
- Anne L. Calof, Ph.D. University of California, San Francisco, *Professor, Department of Anatomy and Neurobiology*
- José A. Camacho, M.D., Ph.D. Universidad Central del Caribe, *Assistant Professor, Department of Pediatrics (Human Genetics and Birth Defects)*
- Joan Campbell, M.D. University of California, San Diego, *Director of Women's Imaging and Health Sciences Clinical Professor, Department of Radiological Sciences*
- Maxime Cannesson, M.D., Ph.D. René Descartes University, *Associate Professor of Clinical Anesthesiology, Department of Anesthesiology and Perioperative Care*
- Joseph C. Carmichael, M.D. University of Missouri, Columbia, *Health Sciences Assistant Clinical Professor, Division of Colon and Rectal Surgery, Department of Surgery*
- Philip M. Carpenter, M.D. Southwestern Medical School, *Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*
- Paolo Casali, M.D. University of Milan, *Senior Associate Dean for Research and Graduate Studies, Director of the Center for Immunology, and Donald Bren Professor, Department of Medicine (Immunology)*
- Thomas C. Cesario, M.D. University of Wisconsin Medical School, *Professor Emeritus, Department of Medicine (Infectious Disease)*
- Barry F. Chaitin, M.D. New York University, *Department Chair and Health Sciences Clinical Professor, Department of Psychiatry and Human Behavior*
- Bharath Chakravarthy, M.D. Boston University, *Health Sciences Assistant Clinical Professor and Residency Program Director, Department of Emergency Medicine*
- Jefferson Y. Chan, M.D., Ph.D. University of California, San Francisco, *Associate Professor, Department of Pathology and Laboratory Medicine*
- Maria Chandler, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Pediatrics*
- P. Anthony Chandraratna, M.B.B.S. University of Ceylon, *Professor in Residence, Department of Medicine (Cardiology)*
- K. George Chandry, Ph.D. University of Birmingham, M.B.B.S. Christian Medical College, University of Madras, *Professor, Departments of Physiology and Biophysics, and of Microbiology and Molecular Genetics*
- Jae Chang, M.D. Seoul National University, *Health Sciences Clinical Professor, Department of Medicine (Hematology/Oncology)*
- Kenneth J. Chang, M.D. Brown University, *Chief, Division of Gastroenterology and Professor of Clinical Medicine, Department of Medicine (Gastroenterology)*
- Wayne Chang, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*
- Constance Chen, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Medicine (Endocrinology)*
- Dongbao Chen, Ph.D. Beijing Agricultural University, *Associate Professor, Departments of Obstetrics and Gynecology (Maternal-Fetal Medicine) and of Pathology and Laboratory Medicine*
- Phang-Lang Chen, Ph.D. University of California, San Diego, *Associate Professor, Department of Biological Chemistry*
- Kota Chetty, M.B.B.S. Guntur Medical College, *Health Sciences Clinical Professor, Department of Medicine (Pulmonary and Critical Care Medicine)*
- Aleksandra Chicz-Demet, Ph.D. Illinois Institute of Technology, *Associate Adjunct Professor, Department of Psychiatry*
- Robert R. Chilcote, M.D. University of Rochester, *Professor Emeritus in Residence, Department of Pediatrics*
- Zang-Hee Cho, Ph.D. Uppsala University, *Professor Emeritus, Department of Radiological Sciences*
- Bernard Choi, Ph.D. University of Texas at Austin, *Assistant Professor in Residence, Departments of Biomedical Engineering and Surgery (Beckman Laser Institute)*
- Byung H. (Ben) Choi, M.D. Severance Union Medical College, Ph.D. Yonsei University, *Professor Emeritus, Department of Pathology and Laboratory Medicine*
- Ho Joon Choi, M.D. Seoul National University, *Director of Obstetric Anesthesia/Analgesia and Health Sciences Clinical Professor, Departments of Anesthesiology and Perioperative Care and of Obstetrics and Gynecology*
- Yung-In Choi, M.D. Yonsei University, *Health Sciences Clinical Professor, Department of Medicine (Endocrinology)*
- Emily Chow, M.D. University of Illinois, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*

- Luis Chui, M.D. University of San Marcos, *Health Sciences Clinical Professor, Department of Neurology*
- Judith H. Chung, M.D. University of Pennsylvania School of Medicine, *Assistant Professor of Clinical Obstetrics and Gynecology, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine) and PRIME-LC Program*
- Marianne Cinat, M.D. University of Michigan Medical School, *Director of the UCI Burn Center and Acute and Resuscitative Care and Professor of Clinical Surgery*
- Olivier Civelli, Ph.D. Swiss Federal Institute of Technology, *Professor, Departments of Pharmacology and Pharmaceutical Sciences, and Eric L. and Lila D. Nelson Chair in Neuropharmacology*
- Ralph V. Clayman, M.D. University of California, San Diego, *Dean of the School of Medicine and Professor, Department of Urology*
- Melitta Cobham-Browne, M.D. Panama University, *Chief, Division of General Pediatrics and Health Sciences Associate Clinical Professor, Department of Pediatrics*
- Allen J. Cohen, M.D. University of Miami School of Medicine, Ph.D. Massachusetts Institute of Technology, *Health Sciences Clinical Professor, Department of Radiological Sciences*
- Felicia G. Cohn, Ph.D. University of Virginia, *Adjunct Professor, Department of Medicine (General Internal Medicine-Medical Ethics)*
- Rebecca J. Coleman, M.D. University of California, San Francisco, *Health Sciences Assistant Clinical Professor, Department of Pediatrics (Neonatology)*
- Martin Colman, M.B., Ch.B., M.M.Ed. (Rad. T.), D.M.R.T. University of Witwatersrand, *Professor Emeritus, Department of Radiation Oncology*
- Henri G. Colt, M.D. University of Nice, School of Medicine, *Professor of Clinical Medicine (Pulmonary and Critical Care)*
- John E. Connolly, M.D. Harvard Medical School, *Professor Emeritus, Department of Surgery (Vascular)*
- Daniel Cooper, M.D. University of California, San Francisco, *Associate Dean of Clinical Translational Science and Professor, Department of Pediatrics and Biomedical Engineering*
- Maria A. Corrada-Bravo, Ph.D. Johns Hopkins School of Medicine, *Associate Adjunct Professor, Department of Neurology*
- Carl W. Cotman, Ph.D. Indiana University, *Professor, Departments of Neurology, Neurobiology and Behavior, and Biomedical Engineering*
- Steven C. Cramer, M.D. University of Southern California, *Associate Professor, Departments of Neurology and of Anatomy and Neurobiology*
- David Cribbs, Ph.D. West Virginia University, *Professor in Residence, Department of Neurology*
- Francis M. Crinella, Ph.D. Louisiana State University, *Health Sciences Clinical Professor, Departments of Pediatrics (Child Development) and of Physical Medicine and Rehabilitation*
- R. Wade Crow, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*
- Roger L. Crumley, M.D. University of Iowa, *Professor Emeritus of Otolaryngology - Head and Neck Surgery*
- Brian Cummings, Ph.D. University of California, Irvine, *Associate Professor, Department of Physical Medicine and Rehabilitation*
- Dennis D. Cunningham, Ph.D. University of Chicago, *Senior Associate Dean for Academic Affairs, School of Medicine, and Professor Emeritus, Department of Microbiology and Molecular Genetics*
- Ralph W. Cygan, M.D. State University of New York Downstate Medical Center, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine) and Program in Public Health*
- Dvora Cyrлак, M.D. Yale University, *Health Sciences Clinical Professor, Department of Radiological Sciences*
- Xing Dai, Ph.D. University of Chicago, *Associate Professor, Department of Biological Chemistry*
- Amish Dangodara, M.D. University of Miami, *Health Sciences Clinical Professor, Department of Medicine (Hospitalist Program and General Internal Medicine)*
- Atreya Dash, M.D. University of Vermont, *Assistant Professor of Clinical Urology, Department of Urology*
- Carrie E. Davis, M.D. Rosalind Franklin University, *Health Sciences Assistant Clinical Professor, Department of Emergency Medicine*
- Earle A. Davis, Ph.D. University of Illinois, *Senior Lecturer with Security of Employment Emeritus, Anatomy and Neurobiology*
- Elysia P. Davis, Ph.D. University of Minnesota, *Assistant Professor in Residence, Department of Psychiatry and Human Behavior*
- Israel De Alba, M.D., M.P.H. Universidad de Guadalajara, *Associate Professor of Clinical Medicine, Department of Medicine (General Internal Medicine)*
- Luis M. de la Maza, M.D. Facultad de Medicina; Ph.D. University of Minnesota, *Professor, Department of Pathology and Laboratory Medicine*
- Ralph Delfino, M.D. University of Chicago; Ph.D. McGill University, *Vice Chair of the Department of Epidemiology and Associate Professor in Residence, Departments of Epidemiology and Pediatrics*
- Michael Demetriou, M.D., Ph.D. University of Toronto, *Associate Professor, Departments of Neurology and of Microbiology and Molecular Genetics*
- Sheetal Desai, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Medicine (Rheumatology)*
- Robert Detrano, M.D., Ph.D. University of Rome, *Health Sciences Clinical Professor, Department of Radiological Sciences*
- Catherine Diamond, M.D. Albany Medical Center, *Associate Professor of Clinical Medicine (Infectious Diseases)*
- Andrew Dimitrijevic, Ph.D. University of Toronto, *Assistant Adjunct Professor, Department of Neurology*
- Philip J. DiSaia, M.D. Tufts University School of Medicine, *Professor Emeritus, Department of Obstetrics and Gynecology (Gynecologic Oncology)*
- Hamid Djalilian, M.D. University of Minnesota, *Associate Professor of Clinical Otolaryngology, Department of Otolaryngology - Head and Neck Surgery*
- Matthew Dolich, M.D. State University of New York at Stony Brook, *Health Sciences Associate Clinical Professor, Department of Surgery*
- Joseph H. Donnelly, M.D. Georgetown University, *Health Sciences Clinical Professor, Department of Pediatrics (Neurology)*
- Peter J. Donovan, Ph.D. University College London, *Professor, Departments of Developmental and Cell Biology and of Biological Chemistry*
- Emily Dow, M.D. University of Cincinnati, *Health Sciences Clinical Professor, Department of Family Medicine*
- Michael V. Drake, M.D. University of California, San Francisco, *Chancellor and Professor, Department of Ophthalmology*
- Sue Piper Duckles, Ph.D. University of California, San Francisco, *Professor Emerita, Professor Recalled, Department of Pharmacology*
- Kenneth W. Dumars, M.D. University of Colorado School of Medicine, *Professor Emeritus, Department of Pediatrics*
- Dang Duong, M.D. University of Washington, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine and Hospitalist Program)*
- Anthony Durkin, Ph.D. University of Texas, *Assistant Professor in Residence, Department of Surgery (Beckman Laser Institute)*
- Emily A. Ebert, M.D. University of Arizona, M.P.H. University of Texas, *Health Sciences Clinical Professor, Department of Family Medicine*
- Robert Edwards, M.D., Ph.D. Baylor College of Medicine, *Assistant Professor in Residence, Department of Pathology and Laboratory Medicine*
- Frederick J. Ehlert, Ph.D. University of California, Irvine, *Professor, Department of Pharmacology*
- Alan N. Elias, M.B., B.S. University of Calcutta, *Professor Emeritus, Department of Medicine (Endocrinology)*
- Scott A. Engwall, M.D. University of Florida, *Clinical Director of Anesthesiology Services and Health Sciences Associate Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Gregory Evans, M.D. University of Southern California, *Chief of Plastic Surgery and Professor, Departments of Surgery (Plastic) and Biomedical Engineering*
- James T. Evans, M.D. University of California, San Diego, *Health Sciences Clinical Professor, Department of Family Medicine*
- Marc-Eivind Evensen, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Physical Medicine and Rehabilitation*
- Ana Fajtlowicz, M.D. Sao Paulo Medical School, *Health Sciences Associate Clinical Professor, Department of Medicine (Hematology/Oncology)*
- James H. Fallon, Ph.D. University of Illinois, *Professor Emeritus, Department of Anatomy and Neurobiology*
- Marjan Farid, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*
- Pete J. Farrell, D.O. Western College of Health Science, *Health Sciences Associate Clinical Professor, Department of Psychiatry and Human Behavior*

- M. Joseph Fedoruk, M.D. University of Alberta, *Health Sciences Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*
- Stephen Feig, M.D. New York University School of Medicine, *Division Director of Mammography and Professor of Clinical Radiological Sciences, Department of Radiological Sciences*
- Philip Felgner, Ph.D. Michigan State University, *Adjunct Professor, Department of Medicine (Infectious Diseases)*
- Gail Fernandez, M.D. Creighton University, *Director of Child Psychiatry Fellowship and Health Sciences Associate Clinical Professor, Department of Psychiatry and Human Behavior*
- Laura Findeiss, M.D. University of Pittsburgh, *Division Director of Interventional Radiology and Health Sciences Associate Clinical Professor, Department of Radiological Sciences*
- Mark Fisher, M.D. University of Cincinnati, *Professor, Departments of Neurology, Anatomy and Neurobiology, and Pathology and Laboratory Medicine*
- Sheila T. Fitzgibbons, M.P.A. California State University, Long Beach, *Health Sciences Associate Clinical Professor, Department of Medicine (Infectious Disease)*
- Lisa Flanagan-Monuki, Ph.D. University of California, San Diego, *Assistant Adjunct Professor, Department of Pathology and Laboratory Medicine*
- Pamela Flodman, M.S. University of California, Irvine, *Associate Adjunct Professor, Department of Pediatrics (Human Genetics and Birth Defects)*
- Cecilia A. Florio, M.D., M.P.H. University of California, San Francisco, *Health Sciences Associate Clinical Professor, Department of Family Medicine*
- Eldon L. Foltz, M.D. University of Michigan, Medical School, *Professor Emeritus, Department of Neurological Surgery*
- Donald N. Forthal, M.D. University of California, Irvine, *Division Chief of Infectious Disease and Associate Professor, Department of Medicine (Infectious Disease)*
- Michelle A. Fortier, Ph.D. University of Nebraska, *Assistant Adjunct Professor, Department of Anesthesiology and Perioperative Care*
- Clarence Foster III, M.D. The Johns Hopkins University, *Division Chief of Transplantation and Health Sciences Associate Clinical Professor, Department of Surgery*
- John C. Fox, M.D. Tufts University School of Medicine, *Director of Emergency Ultrasound, Director of Emergency Medicine Clerkship, and Associate Professor of Clinical Emergency Medicine, Department of Emergency Medicine*
- David Franklin, Psy.D. Alliant International University, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*
- Kathryn Steinhaus French, M.S. University of Colorado, *Health Sciences Clinical Professor, Departments of Pediatrics (Human Genetics and Birth Defects) and of Obstetrics and Gynecology*
- Richard M. Friedenber, M.D. State University of New York, *Professor Emeritus, Department of Radiological Sciences*
- John P. Fruehauf, M.D. Rush University, *Associate Professor of Clinical Medicine (Hematology/Oncology), Pharmaceutical Sciences, Biological Chemistry, and Biomedical Engineering*
- Roy M. Fujitani, M.D. University of Hawaii, *Chief of Vascular Surgery and Professor of Clinical Surgery (Vascular)*
- David W. Furnas, M.D. University of California, San Francisco, *Professor Emeritus, Department of Surgery (Plastic)*
- Pietro R. Galassetti, M.D. University of Rome, Ph.D. Vanderbilt University, *Associate Professor in Residence, Department of Pediatrics*
- Christine M. Gall, Ph.D. University of California, Irvine, *Professor, Departments of Anatomy and Neurobiology and of Neurobiology and Behavior*
- Anand Ganesan, M.D, Ph.D. Medical College of Wisconsin, *Assistant Professor, Departments of Dermatology and Biological Chemistry*
- Sumit Garg, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*
- John Jay Gargus, M.D., Ph.D. Yale University, *Professor, Departments of Physiology and Biophysics and of Pediatrics*
- Thomas J. Garite, M.D. University of California, Irvine, *Professor Emeritus, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- Chad P. Garner, Ph.D. Oxford University, *Associate Professor in Residence, Department of Epidemiology*
- Ronald N. Gaster, M.D. University of California, Los Angeles, *Adjunct Professor, Department of Ophthalmology*
- Alan B. Gazzaniga, M.D. Harvard Medical School, *Professor Emeritus, Department of Surgery (Thoracic)*
- Kelvin W. Gee, Ph.D. University of California, Davis, *Professor, Department of Pharmacology*
- Jean Gehricke, Ph.D. Free University of Berlin, *Assistant Adjunct Professor, Department of Psychiatry and Human Behavior*
- Samer S. Ghostine, M.D., M.S. Georgetown University School of Medicine, *Co-Director of Comprehensive Spine Program, Director of Neurosurgery Spine Service, and Assistant Professor of Clinical Neurological Surgery, Department of Neurological Surgery*
- Liliane Gibbs, M.D. Lebanese University Faculty of Medical Sciences, *Division Director of Pediatric Radiology and Health Sciences Associate Clinical Professor, Department of Radiological Sciences*
- Lisa M. Gibbs, M.D. Stanford University, *Health Sciences Associate Clinical Professor, Department of Family Medicine, Program in Geriatrics*
- Stuart Gilman, M.D. Rush Medical College, M.P.H. University of California, Los Angeles, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*
- Kimberly Marie Gimenez, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Roland A. Giolli, Ph.D. University of California, Berkeley, *Professor Emeritus, Department of Anatomy and Neurobiology*
- Gordon G. Globus, M.D. Tufts University School of Medicine, *Professor Emeritus, Department of Psychiatry and Human Behavior*
- Alan L. Goldin, M.D., Ph.D. University of Michigan, *Associate Dean for Graduate Studies, School of Medicine and Professor, Departments of Microbiology and Molecular Genetics, Physiology and Biophysics, and Anatomy and Neurobiology*
- Sidney H. Golub, Ph.D. Temple University, *Professor Emeritus, Department of Microbiology and Molecular Genetics*
- Deborah L. Goodman-Gruen, M.D. Rosalind Franklin University/Chicago Medical School, *Associate Adjunct Professor, Department of Epidemiology*
- Scott C. Goodwin, M.D. Harvard University, *Professor of Clinical Radiological Sciences, Department of Radiological Sciences, and Hasso Brothers Endowed Chair in Radiological Sciences*
- Ian L. Gordon, M.D., Ph.D. University of Southern California, *Health Sciences Clinical Professor, Department of Surgery*
- Sergei Grando, M.D. Kiev Medical Institute, Ph.D. Post Graduate Institute for Physicians, Kiev, *Professor, Departments of Dermatology and of Biological Chemistry*
- Stuart Green, M.D. New York Medical College, *Health Sciences Clinical Professor, Department of Orthopaedic Surgery*
- Sheldon Greenfield, M.D. University of Cincinnati, *Executive Co-Director of the Center for Health Policy Research, and Donald Bren Professor, Department of Medicine (General Internal Medicine)*
- Fred S. Greensite, M.D. University of California, San Diego, *Professor, Department of Radiological Sciences*
- Mai Gu, M.D. Beijing Medical University; Ph.D. University of Manitoba, *Health Sciences Clinical Professor, Department of Pathology and Laboratory Medicine*
- Gultekin Gulsen, Ph.D. Bogazici University, *Associate Professor in Residence, Departments of Radiological Sciences, Physics and Astronomy, and Biomedical Engineering*
- Geeta K. Gupta, M.D. Harvard University, *Health Sciences Clinical Professor, Department of Medicine (Infectious Diseases)*
- Ranjan Gupta, M.D. Albany Medical College, *Department Chair and Professor, Orthopaedic Surgery, and Professor, Departments of Anatomy and Neurobiology and of Biomedical Engineering*
- Sudhir Gupta, M.B., B.S., Ph.D. King George's Medical College, Lucknow University, *Chief of Basic and Clinical Immunology and Professor, Departments of Medicine (Basic and Clinical Immunology) and of Microbiology and Molecular Genetics*
- George A. Gutman, Ph.D. Stanford University, *Professor Emeritus, Department of Microbiology and Molecular Genetics*
- Grant Gwinup, M.D. University of Colorado School of Medicine, *Professor Emeritus, Department of Medicine (Endocrinology)*
- Richard J. Haier, Ph.D. The Johns Hopkins University, *Professor in Residence Emeritus, Department of Pediatrics*
- Harry T. Haigler, Ph.D. Vanderbilt University, *Associate Dean for Basic Science Medical Education and Professor, Department of Physiology and Biophysics*

- James E. Hall, Ph.D. University of California, Riverside, *Professor, Department of Physiology and Biophysics*
- Afshan B. Hameed, M.D., F.A.C.C., King Edward Medical College, *Health Sciences Assistant Clinical Professor, Departments of Obstetrics and Gynecology (Maternal-Fetal Medicine) and of Cardiology*
- Tabetha Harken, M.D., M.P.H. University of Colorado, *Health Sciences Assistant Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*
- Anna Harris, M.D. Loma Linda University, *Health Sciences Associate Clinical Professor, Department of Anesthesiology and Perioperative Care and Co-Director of Department Performance Improvement/Quality Assurance*
- Ronald M. Harris, M.D. University of California, San Francisco; M.B.A. University of Colorado, *Director of the Dermatopathology Lab and Health Sciences Clinical Professor, Department of Dermatology*
- Anton N. Hasso, M.D. Loma Linda University, *Director of Neuroimaging Research and Development and Professor, Department of Radiological Sciences*
- Morris Hasson, M.D. University of Illinois, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*
- Justin T. Hata, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*
- G. Wesley Hatfield, Ph.D. Purdue University, *Professor Emeritus, Department of Microbiology and Molecular Genetics*
- Josiah Seth Hawkins, M.D. McGill University Faculty of Medicine, *Assistant Professor in Residence, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- Leif A. Havton, M.D., Ph.D. Umeå University, *Vice Chair of Research and Professor, Department of Anesthesiology and Perioperative Care*
- Rebecca Hedrick, M.D. University of Louisville, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*
- Mohammad Helmy, M.D. University of California, Irvine, *Division Director of Ultrasound and Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*
- Walter L. Henry, M.D. Stanford University School of Medicine, *Professor Emeritus, Department of Medicine (Cardiology)*
- June M. Herman, M.D. University of North Dakota, *Health Sciences Associate Clinical Professor, Department of Radiological Sciences*
- Neal Hermanowicz, M.D. Temple University, *Health Sciences Clinical Professor, Department of Neurology*
- Klemens J. Hertel, Ph.D. University of Colorado, *Associate Professor, Department of Microbiology and Molecular Genetics*
- John A. Heydt, M.D. Temple University School of Medicine, *Senior Associate Dean for Clinical Affairs, School of Medicine, and Health Sciences Clinical Professor, Department of Family Medicine (Family Medicine and Sports Medicine)*
- Elsie Hidalgo, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Department of Pediatrics (General Pediatrics)*
- Richard A. Hill, M.D. Northwestern University, *Professor Emeritus, Department of Ophthalmology*
- Dan-Phuong (Esther) Ho, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Department of Family Medicine (Family Medicine and Hospitalist Program)*
- Bang Hoang, M.D. University of California, Los Angeles, *Associate Professor, Department of Orthopaedic Surgery*
- John C. Hoefs, M.D. George Washington University, *Professor Emeritus, Department of Medicine (Gastroenterology)*
- M. Mark Hoffer, M.D. Chicago School of Medicine, *Professor Emeritus, Department of Orthopaedic Surgery*
- Christine Hollister, M.D. Dartmouth College, *Health Sciences Associate Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Todd C. Holmes, Ph.D. Massachusetts Institute of Technology, *Associate Professor, Department of Physiology and Biophysics*
- Chang-Zern (John) Hong, M.D. National Taiwan University, *Health Sciences Clinical Professor, Department of Physical Medicine and Rehabilitation*
- Susan Hopp, M.D. University of Guadalajara, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Naoto Hoshi, M.D., Ph.D. Kanazawa University School of Medicine, *Assistant Professor, Departments of Pharmacology and of Physiology and Biophysics*
- David Hoyt, M.D. Case Western Reserve University, *Professor Emeritus, Department of Surgery*
- David Hsiang, M.D. Jefferson Medical College, *Associate Professor of Clinical Surgery, Department of Surgery (Oncology)*
- An-Fu Hsiao, M.D. Boston University, Ph.D. University of California, Los Angeles, *Assistant Professor in Residence, Department of Medicine (General Internal Medicine)*
- Lanny Hsieh, M.D. New York University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Infectious Disease and Hospitalist Program)*
- Ke-Qin Hu, M.D. Tongji Medical University, *Professor of Clinical Medicine (Gastroenterology)*
- Lan Huang, Ph.D. University of Florida, *Associate Professor, Departments of Physiology and Biophysics, Developmental and Cell Biology, and Biological Chemistry*
- Susan Huang, M.D. Johns Hopkins University, *Assistant Professor and Assistant Professor in Residence, Department of Medicine (Infectious Disease)*
- Taosheng Huang, M.D. Fujian Medical College, Ph.D. Mt. Sinai Medical School, *Associate Professor, Departments of Pediatrics (Human Genetics and Birth Defects) and of Developmental and Cell Biology*
- F. Allan Hubbell, M.D., M.S.P.H. Baylor University College of Medicine, *Senior Associate Dean for Academic Affairs, School of Medicine and Professor, Department of Medicine (General Internal Medicine)*
- Marcel Hungs, M.D. University of Aachen Medical School, *Health Sciences Assistant Clinical Professor, Department of Neurology*
- Lynn E. Hunt, M.D. University of California, Los Angeles, *Health Sciences Clinical Professor, Department of Pediatrics (General Pediatrics)*
- Kenneth H. Ibsen, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Biological Chemistry*
- Hirochito Ichii, M.D. Kobe University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Surgery*
- David Imagawa, M.D., Ph.D. The Johns Hopkins University, *Professor of Clinical Surgery*
- Leslie Israel, D.O. University of Health Sciences, Missouri, *Health Sciences Associate Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*
- Padmini Iyer, M.D. Andhra University, *Health Sciences Clinical Professor, Department of Medicine (Hematology/Oncology)*
- Sonali Iyer, M.D. Rosalind Franklin University/Chicago Medical School, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine, Hospitalist Program)*
- Daniel C. Jaffurs, M.D., Ph.D. University of Pittsburgh, *Health Sciences Assistant Clinical Professor, Department of Surgery (Plastic)*
- Vivek Jain, M.D. Memorial University, *Health Sciences Assistant Clinical Professor, Department of Neurology*
- James Jakowatz, M.D. University of Kansas, *Health Sciences Clinical Professor, Department of Surgery*
- Mehrdad Jalili, M.D. University of Isfahan, *Health Sciences Clinical Professor, Department of Pediatrics*
- M. Mazen Jamal, M.D. Damascus University, M.P.H. University of New Mexico, *Health Sciences Clinical Professor, Department of Medicine (Gastroenterology)*
- Anthony A. James, Ph.D. University of California, Irvine, *UCI Distinguished Professor of Microbiology and Molecular Genetics and of Molecular Biology and Biochemistry*
- Larry Jamner, Ph.D. State University of New York at Stony Brook, *Professor of Psychology and Social Behavior and of Pharmacology*
- Rolland Jenkins, M.D. Southwestern University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Dennis C. Jerome, M.D. Wayne State University, *Health Sciences Clinical Professor, Department of Medicine (Basic/Clinical Immunology)*
- James V. Jester, Ph.D. University of Southern California, *Professor in Residence, Departments of Ophthalmology and Biomedical Engineering, and Jack H. Skirball Endowed Chair*
- Anna Jin, M.D. Tufts University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Nephrology)*
- Jennifer Johnson, M.D. University of Muenster, *Professor in Residence Emeritus, Department of Pediatrics*
- Joie P. Jones, Ph.D. Brown University, *Professor, Department of Radiological Sciences*
- Neil F. Jones, M.D. Oxford University, *Director of the UCI Hand Center and Professor, Department of Orthopaedic Surgery*
- Lisa M. Judge, M.D. University of Michigan Medical School, *Clinical Scheduler and Health Sciences Associate Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Tibor Juhasz, Ph.D. JATE University of Szeged, *Professor, Departments of Ophthalmology and Biomedical Engineering*

- Kwang Mook Jung, Ph.D. Chung-Ang University, *Assistant Adjunct Professor, Department of Pharmacology*
- Frances Jurnak, Ph.D. University of California, Berkeley, *Professor, Department of Physiology and Biophysics*
- Christopher A. Kahn, M.D. Medical College of Wisconsin, *Assistant Professor of Clinical Emergency Medicine*
- Tatiana Kain, M.D. Ben Gurion School of Medicine, *Division Director of Nuclear Medicine and Health Sciences Associate Clinical Professor, Department of Radiological Sciences*
- Zeev N. Kain, M.D., M.B.A. Ben Gurion School of Medicine, *Associate Dean for Clinical Research, School of Medicine, and Chair and Professor, Department of Anesthesiology and Perioperative Care*
- Peter Kaiser, Ph.D. University of Innsbruck, *Associate Professor, Department of Biological Chemistry*
- Grace Kao, M.D. Taiwan University, *Health Sciences Associate Clinical Professor, Department of Neurology*
- Robert Kaplan, M.D. Harvard University, *Health Sciences Associate Clinical Professor, Department of Medicine (Infectious Diseases)*
- Sherrie Kaplan, Ph.D. University of California, Los Angeles, *Assistant Vice Chancellor, Quality Measurement/Outcomes, Executive Co-Director of the Center for Health Policy Research, and Professor, Department of Medicine (General Internal Medicine)*
- Moti L. Kashyap, M.B., B.S. King Edward VII College, *Professor in Residence Emeritus, Department of Medicine (General Internal Medicine)*
- David Katz, M.D. Western Reserve University, *Professor Emeritus, Department of Radiological Sciences*
- Claudia Kawas, M.D. University of Louisville, *Professor, Departments of Neurology and of Neurobiology and Behavior, and Nichols Clinical Neuroscience Chair*
- Kirk A. Keegan, Jr., M.D. University of Maryland, *Professor Emeritus, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- Hans S. Keirstead, Ph.D. University of British Columbia, *Co-Director of the Sue and Bill Gross Stem Cell Research Center and Associate Professor, Department of Anatomy and Neurobiology*
- Kristen Kelly, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Department of Dermatology*
- M. Cristina Kenney, M.D. University of California, Los Angeles, Ph.D. University of Arizona, *Professor, Department of Ophthalmology*
- Morton Kern, M.D. Mount Sinai School of Medicine, *Health Sciences Clinical Professor, Department of Medicine (Cardiology)*
- Joyce H. Keyak, Ph.D. University of California, San Francisco, *Associate Professor in Residence, Departments of Radiological Sciences, Mechanical and Aerospace Engineering, and Biomedical Engineering*
- Aaron Kheriaty, M.D. Georgetown University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*
- Antoine Khoury, M.D. Ain Shams University, *Chief of Pediatric Urology and Professor, Department of Urology, and Walter R. Schmid Chair in Pediatric Urology*
- Shahira Khoury, M.D. Ain Shams University, *Health Sciences Associate Clinical Professor, Department of Physical Medicine and Rehabilitation*
- Nafiz Kiciman, M.D. Hacettepe University, *Health Sciences Associate Clinical Professor, Department of Pediatrics (Cardiology and Neonatology)*
- Jayashri Kidao, M.D. Christian Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (Gastroenterology)*
- P. Douglas Kiester, M.D. Indiana University, Ph.D. University of Utah, *Health Sciences Clinical Professor, Department of Orthopaedic Surgery*
- Yutaka Kikkawa, M.D. University of Tokyo, *Professor Emeritus, Department of Pathology and Laboratory Medicine*
- David B. Kilgore, M.D. University of Southern California, *Health Sciences Clinical Professor, Department of Family Medicine*
- Herbert P. Killackey, Ph.D. Duke University, *Vice Provost for Academic Personnel and Professor of Neurobiology and Behavior and of Anatomy and Neurobiology*
- Howard Kim, M.D. Northwestern University, *Health Sciences Associate Clinical Professor, Department of Neurology*
- Jason Kim, M.D. New York University, *Health Sciences Associate Clinical Professor, Department of Otolaryngology - Head and Neck Surgery*
- Jin Kim, M.D., Ph.D. University of Rochester, *Assistant Professor of Medicine, Assistant Professor in Residence, Department of Medicine (Cardiology)*
- Moon Kim, M.D. Yonsei University, *Health Sciences Clinical Professor Emeritus, Department of Obstetrics and Gynecology (Reproductive Endocrinology and Infertility)*
- Nam Kim, M.D. Loma Linda University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine and Hospitalist Program)*
- Ronald C. Kim, M.D. Jefferson Medical College, *Health Sciences Clinical Professor, Departments of Pathology and Laboratory Medicine and of Neurology*
- Suzy Kim, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Orthopaedic Surgery and the Reeve-Irvine Research Center*
- Virginia Kimonis, M.D. Southampton Medical School, *Chief of the Division of Genetics and Metabolism and Professor, Department of Pediatrics*
- Leonard M. Kitzes, Ph.D. University of California, Irvine, *Professor Emeritus, Department of Anatomy and Neurobiology*
- Henry John Klassen, M.D., Ph.D. University of Pittsburgh, *Assistant Professor in Residence, Department of Ophthalmology*
- Michael T. Kleinman, Ph.D. New York University, *Adjunct Professor, Departments of Medicine (Occupational and Environmental Medicine) and of Environmental Health, Science, and Policy*
- Kristin Kleppe, Psy.D. Phillips Graduate Institute, *Health Sciences Assistant Clinical Professor, Department of Family Medicine (Behavioral Science)*
- Mark Kobayashi, M.D. Tulane University, *Health Sciences Associate Clinical Professor, Department of Surgery (Plastic Surgery)*
- Kristi L. Koenig, M.D. Mount Sinai School of Medicine, *Director of the Center for Disaster Medical Sciences and Professor of Clinical Emergency Medicine, Department of Emergency Medicine*
- Allen Kong, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Division of Trauma/Critical Care, Department of Surgery*
- Elliott Kornhauser, M.D. University of Toronto, *Health Sciences Associate Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*
- Diana N. Krause, Ph.D. University of California, Los Angeles, *Adjunct Professor, Department of Pharmacology*
- Mayil Krishnam, M.D. Stanley Medical College, *Division Director of Cardiovascular and Thoracic Imaging and Associate Professor of Clinical Radiological Sciences, Department of Radiological Sciences*
- Subramaniam Krishnan, M.B.B.S. Kilpaik Medical College, *Health Sciences Associate Clinical Professor, Department of Medicine (Cardiology)*
- John Krolewski, M.D., Ph.D. New York University, *Professor, Department of Pathology and Laboratory Medicine*
- David W. Kruse, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Orthopaedic Surgery (Family Medicine and Sports Medicine)*
- Jeffrey V. Kuo, M.D. Jefferson Medical College, *Health Sciences Associate Clinical Professor, Department of Radiation Oncology*
- Baruch D. Kuppermann, M.D. University of Miami, Ph.D. California Institute of Technology, *Professor, Departments of Ophthalmology and Biomedical Engineering*
- Ronald M. Kurtz, M.D. University of California, San Diego, *Health Sciences Clinical Professor, Department of Ophthalmology*
- John A. Kusske, M.D. University of California, San Francisco, *Interim Chair and Professor Emeritus, Department of Neurological Surgery, and Physician Advisor for the Transfer Center*
- Kenneth T. Kwon, M.D. Columbia University, *Health Sciences Associate Clinical Professor, Department of Emergency Medicine*
- Kimberley Lakes, Ph.D. University of Wisconsin, *Assistant Professor in Residence, Department of Pediatrics*
- Jonathan Lakey, Ph.D. University of Alberta, *Acting Associate Professor, Department of Surgery (Islet Cell Transplantation)*
- Chandana (Sandy) Lall, M.D. University College of Medical Sciences, *Vice Chair, Division Director of Abdominal Imaging, and Health Sciences Associate Clinical Professor, Department of Radiological Sciences*
- Arthur D. Lander, M.D., Ph.D. University of California, San Francisco, *Director, Center for Complex Biological Systems and Professor of Developmental and Cell Biology and of Biomedical Engineering*
- Jaime Landman, M.D. Columbia College of Physicians and Surgeons, *Department Chair and Health Sciences Clinical Professor, Department of Urology*
- Felicia Lane, M.D. Georgetown University, *Health Sciences Associate Clinical Professor, Department of Obstetrics and Gynecology (Urogynecology)*
- John S. Lane III, M.D. University of California, Los Angeles, *Associate Professor of Clinical Surgery, Department of Surgery*
- Karen Todd Lane, M.D. University of California, Los Angeles, *Associate Professor of Clinical Surgery, Department of Surgery*

- Mark I. Langdorf, M.D. University of California, San Diego, *Department Chair of Emergency Medicine and Professor of Clinical Emergency Medicine*
- David Lanum, M.D. University of Washington, *Health Sciences Associate Clinical Professor, Department of Family Medicine*
- Janos K. Lanyi, Ph.D. Harvard University, *Professor, Departments of Physiology and Biophysics and of Microbiology and Molecular Genetics*
- Kathryn M. Larsen, M.D. University of Washington, *Health Sciences Clinical Professor, Department of Family Medicine*
- Nimitta Lathiya, D.O. Midwestern University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- George Lawry, M.D. Johns Hopkins University, *Chief, Division of Rheumatology and Health Sciences Clinical Professor, Department of Medicine (Rheumatology)*
- Chinh D. Le, M.D. University of Medicine and Pharmacy of Hochiminh City, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine and Geriatrics)*
- Khanh-Van Le-Bucklin, M.D. University of California, San Francisco, *Pediatric Residency Director and Health Sciences Associate Clinical Professor, Department of Pediatrics (Hospitalist Program)*
- Eva Y.-H. P. Lee, Ph.D. University of California, Berkeley, *UCI Chancellor's Professor, Departments of Developmental and Cell Biology and of Biological Chemistry*
- Jenny Lee, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- John G. Lee, M.D. University of Miami, *Professor of Clinical Medicine, Department of Medicine (Gastroenterology)*
- Robert Lee, M.D. University of Michigan, *Health Sciences Assistant Clinical Professor, Department of Medicine (Gastroenterology)*
- Se-Young Lee, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Thay Q. Lee, Ph.D. Gothenburg University, *Professor in Residence, Departments of Orthopaedic Surgery and Biomedical Engineering*
- Wen-Hwa Lee, Ph.D. University of California, Berkeley, *Donald Bren Professor of Biomedicine, Departments of Biological Chemistry and Pharmacology*
- Michael Lekawa, M.D. Jefferson Medical College, *Chief of Trauma and Critical Care and Health Sciences Clinical Professor, Department of Surgery*
- Jay Lentzner, M.D. Albany Medical College, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*
- Robert Leonard, Ph.D. University of Minnesota, *Adjunct Professor of Anatomy and Neurobiology*
- Marc A. Lerner, M.D. Mount Sinai School of Medicine, *Chief, Developmental/Behavioral Pediatrics and Health Sciences Clinical Professor, Department of Pediatrics*
- Lawrence Lerno, M.D. University of Pittsburgh, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Frances M. Leslie, Ph.D. Aberdeen University, *Dean of the Graduate Division and Professor, Departments of Pharmacology and of Anatomy and Neurobiology*
- Ellis Levin, M.D. Jefferson Medical College, *Vice Chair for Academic Affairs, Department of Medicine, Chief of Endocrinology, and Professor in Residence, Departments of Medicine (Endocrinology), Pharmacology, and Biological Chemistry*
- Mark Levinstein, M.D. Northwestern University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Solomon Liao, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Medicine (Hospitalist Program, General Internal Medicine, and Geriatrics)*
- Li-Chang Lien, M.D. Taipei University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*
- Richard Light, M.D. Johns Hopkins University, *Professor in Residence Emeritus, Department of Medicine (Pulmonary and Critical Care)*
- E. Michael Lilly, M.D. Loma Linda University, *Professor of Clinical Medicine, Department of Medicine (Hematology/Oncology)*
- Charles L. Limoli, Ph.D. University of California, San Diego, *Associate Professor, Department of Radiation Oncology*
- Fritz Lin, M.D. Medical College of Virginia, *Interim Chair and Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*
- Jack Lin, M.D. Rush Medical College, *Health Sciences Assistant Clinical Professor, Department of Neurology*
- Sharon Liu Lin, M.D. Vanderbilt University School of Medicine, *Director of Medical Education Simulation Center and Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Kenneth G. Linden, M.D. University of California, Irvine, Ph.D. University of California, Davis, *Health Sciences Associate Clinical Professor, Department of Dermatology*
- Robert Lingua, M.D. University of Southern California, *Health Sciences Clinical Professor, Department of Ophthalmology*
- Mark E. Linskey, M.D. Columbia University College of Physicians and Surgeons, *Surgical Director, Neuro-Oncology Program and Associate Professor, Department of Neurological Surgery*
- Linda Lipka, M.D. Columbia University, *Health Sciences Clinical Professor, Department of Ophthalmology*
- Haoping Liu, Ph.D. Cornell University, *Professor, Department of Biological Chemistry*
- Leslie Lock, Ph.D. University of California, San Francisco, *Assistant Professor, Departments of Biological Chemistry and of Developmental and Cell Biology*
- Dawn Lombardo, D.O. Chicago College of Osteopathic Medicine, *Health Sciences Assistant Clinical Professor (Cardiology)*
- John Longhurst, M.D., Ph.D. University of California, Davis, *Associate Dean, School of Medicine; Director of the Susan Samueli Center for Integrative Medicine; Professor, Department of Medicine (Cardiology), Physiology and Biophysics, Pharmacology, and Biomedical Engineering; Lawrence K. Dodge Endowed Chair in Integrative Biology; and Susan Samueli Chair in Integrative Medicine*
- Kenneth J. Longmuir, Ph.D. University of Oregon, *Associate Professor, Department of Physiology and Biophysics*
- Shahram Lotfipour, M.D. University of Iowa, *Associate Dean for Clinical Science and Health Sciences Clinical Professor, Department of Emergency Medicine and Program in Public Health*
- Ira T. Lott, M.D. The Ohio State University, *Associate Dean of Clinical Neurosciences, School of Medicine, Chief of Child Neurology, and Professor, Departments of Pediatrics and Neurology*
- Michael Ken Louie, M.D. Ohio State University, *Health Sciences Assistant Clinical Professor, Department of Urology*
- Stephanie Lu, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*
- Ulrike Luderer, M.D., Ph.D. Northwestern University; M.P.H. University of Washington, *Associate Professor, Department of Medicine (Occupational and Environmental Medicine)*
- Hartmut Luecke, Ph.D. Rice University, *Professor of Molecular Biology and Biochemistry and of Physiology and Biophysics*
- Z. David Luo, M.D. Guangzhou Medical College, Ph.D. University of New York, *Assistant Professor, Department of Anesthesiology and Perioperative Care*
- Gary S. Lynch, Ph.D. Princeton University, *Professor, Departments of Psychiatry and Human Behavior, Cognitive Sciences, and Anatomy and Neurobiology*
- David C. Lyon, Ph.D. Vanderbilt University, *Assistant Professor, Departments of Anatomy and Neurobiology and of Cognitive Sciences*
- Gerald Maguire, M.D. St. Louis University, *Associate Dean, School of Medicine, Director of Residency Training, Associate Professor of Clinical Psychiatry and Human Behavior, and Kirkup Chair in Psychiatry and Human Behavior for the Medical Treatment of Stuttering*
- Carol A. Major, M.D. Case Western Reserve University, *Health Sciences Clinical Professor, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- Shaista Malik, M.D. University of California, Irvine, *Assistant Professor and Assistant Professor in Residence, Department of Medicine (Cardiology)*
- Fred M. Malkin, M.D. University of Miami, *Health Sciences Associate Clinical Professor, Department of Pediatrics (General Pediatrics)*
- Alberto Manetta, M.D. University of Buenos Aires, *Professor Emeritus, Department of Obstetrics and Gynecology (Gynecologic Oncology)*
- Margaret Mann, M.D. Washington University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Dermatology*
- William Mantulin, Ph.D. Northeastern University, *Adjunct Professor, Department of Surgery (Beckman Laser Institute)*
- Donald C. Martin, M.D. University of British Columbia, *Professor Emeritus, Department of Surgery (Urology)*
- G. Robert Mason, M.D. University of Chicago, Ph.D. Stanford University, *Professor Emeritus, Department of Surgery*
- Farhad Mazdisnian, M.D. Jefferson Medical College, *Health Sciences Assistant Clinical Professor, Department of Medicine (Pulmonary and Critical Care Medicine)*
- Christopher Eric McCoy, M.D. University of California, San Francisco, *Director of Simulation Education and Health Sciences Assistant Clinical Professor, Department of Emergency Medicine*

- Jerry L. McCullough, Ph.D. Yale University, *Professor Emeritus, Department of Dermatology*
- Elsbeth M. McDougall, M.D. University of Calgary, *Professor, Department of Urology*
- Christine E. McLaren, Ph.D. Case Western Reserve, *Director of Biostatistics, Chao Family Comprehensive Cancer Center and Vice Chair and Professor, Department of Epidemiology*
- Gordon McLaren, M.D. Stanford University, *Adjunct Professor, Department of Medicine (Hematology/Oncology)*
- Calvin S. McLaughlin, Ph.D. Massachusetts Institute of Technology, *Professor Emeritus, Department of Biological Chemistry*
- Rita Mehta, M.D., M.G.M. Medical College, *Health Sciences Associate Clinical Professor, Department of Medicine (Hematology/Oncology)*
- Daniel B. Menzel, Ph.D. University of California, Berkeley, *Professor Emeritus, Department of Medicine*
- Dan Mercola, M.D. Southampton University; Ph.D. University of California, Los Angeles, *Professor, Department of Pathology and Laboratory Medicine*
- Hooshang Meshkinpour, M.D. Tehran University, School of Medicine, *Professor Emeritus, Department of Medicine (Gastroenterology)*
- Brandie J. Metz, M.D. Northwestern University, *Health Sciences Assistant Clinical Professor, Department of Dermatology*
- Frank L. Meyskens, Jr., M.D. University of California, San Francisco, *Director of the Chao Family Comprehensive Cancer Center; Professor, Departments of Medicine (Hematology/Oncology), Biological Chemistry, and Program in Public Health; and Daniel G. Aldrich, Jr. Endowed Chair*
- John C. Middlebrooks, Ph.D. University of California, San Francisco, *Professor, Departments of Otolaryngology - Head and Neck Surgery, Neurobiology and Behavior, and Cognitive Sciences*
- Don R. Miller, M.D. University of Kansas Medical School, *Professor Emeritus, Department of Surgery (Thoracic)*
- Ronald B. Miller, M.D. College of Physicians and Surgeons, Columbia University, *Health Sciences Clinical Professor of Medicine Emeritus, Founding Chief of the Renal Division and Founding Director of the Program in Medical Ethics, and Chair of the UCI Emeritae/i Association*
- Jeffrey Milliken, M.D. University of Michigan, *Chief of Thoracic Surgery and Health Sciences Clinical Professor, Department of Surgery*
- Steven D. Mills, M.D. New York Medical College, *Chief of Colon and Rectal Surgery and Health Sciences Assistant Clinical Professor, Department of Surgery*
- Eric N. C. Milne, M.B., Ch.B., F.R.C.R. University of Edinburgh, *Professor Emeritus, Department of Radiological Sciences*
- Don S. Minckler, M.D. University of Oregon Medical School, *Professor of Clinical Ophthalmology and of Pathology and Laboratory Medicine*
- Sabee Molloy, Ph.D. University of Wisconsin, *Professor, Departments of Radiological Sciences, Electrical Engineering and Computer Science, and Biomedical Engineering*
- Edwin S. Monuki, M.D., Ph.D. University of California, San Diego, *Associate Professor, Department of Pathology and Laboratory Medicine*
- Hamid Moradi, M.D. Oregon Health & Science University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Nephrology)*
- Edgar M. Moran, M.D. University of Bucharest, *Professor in Residence Emeritus, Department of Medicine (Hematology/Oncology)*
- Beverly C. Morgan, M.D. Duke University, *Professor Emerita, Department of Pediatrics (Cardiology)*
- Timothy R. Morgan, M.D. Emory University, *Professor in Residence, Department of Medicine (Gastroenterology)*
- David K. Morohashi, M.D. University of Washington, *Health Sciences Clinical Professor of Family Medicine*
- Debra Morrison, M.D. Northwestern University, *Director of Pediatric Anesthesia Services, Director of Preoperative Clinic, and Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Sameh Mosaed, M.D. New York Medical College, *Health Sciences Associate Clinical Professor, Department of Ophthalmology*
- H. David Mosier, M.D. The Johns Hopkins University School of Medicine, *Professor Emeritus, Department of Pediatrics (Endocrinology)*
- Laura Mosqueda, M.D. University of Southern California, *Interim Chair, Department of Family Medicine, Director of the Program in Geriatrics, Professor of Clinical Family Medicine (Family Medicine and Geriatrics), and Ronald W. Reagan Endowed Chair in Geriatrics*
- Robert K. Moyzis, Ph.D. The Johns Hopkins University, *Professor Emeritus, Department of Biological Chemistry*
- Tahseen Mozaffar, M.D. Aga Kahn University, *Associate Professor of Clinical Neurology*
- Dana Mukamel, Ph.D. University of Rochester, *Professor, Department of Medicine (General Internal Medicine)*
- Jogeshwar Mukherjee, Ph.D. Jodhpur University, *Professor in Residence, Departments of Psychiatry and Human Behavior and of Physiology and Biophysics*
- J. Dennis Mull, M.D. Medical College of Virginia, *Professor Emeritus, Department of Family Medicine*
- Maury Mulligan, M.D. Mt. Sinai University, New York, *Professor in Residence Emeritus, Department of Medicine (Infectious Disease)*
- Penny Murata, M.D. Medical College of Pennsylvania, *Health Sciences Clinical Professor, Department of Pediatrics (General Pediatrics)*
- Septimiu Murgu, M.D. Carol Davila University of Medicine and Pharmacy, *Health Sciences Assistant Clinical Professor, Department of Medicine (Pulmonary and Critical Care)*
- Cynthia T. Murphy, M.D. University of South Dakota, *Health Sciences Associate Clinical Professor, Department of Physical Medicine and Rehabilitation*
- Sandra Murray, M.D. University of California, San Diego, *Health Sciences Associate Clinical Professor, Department of Pediatrics (General Pediatrics)*
- Venkataraman Raman Muthusamy, M.D. University of Washington, *Health Sciences Associate Clinical Professor, Department of Medicine (Gastroenterology)*
- Robert Myers, Ph.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*
- Bavani Nadeswaran, M.D. University of West Indies, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*
- Ajanta Naidu, M.B.B.S. Christian Medical College, *Health Sciences Associate Clinical Professor, Department of Pediatrics (Endocrinology)*
- Wadie I. Najm, M.D., M.S.Ed. Brussels University, *Health Sciences Clinical Professor, Department of Family Medicine*
- Orhan Nalcioğlu, Ph.D. University of Oregon, *Director, John Tu and Thomas Yuen Center for Functional Onco-Imaging and Professor, Departments of Radiological Sciences, Electrical Engineering and Computer Science, and Physics and Astronomy*
- Dwight M. Nance, Ph.D. Oklahoma State University, *Adjunct Professor, Department of Physical Medicine and Rehabilitation, Susan Samuelli Center for Integrative Medicine*
- Jagat Narula, M.D. University of Rajasthan, Ph.D. All India Institute of Medical Sciences, *Chief of Cardiology and Professor, Department of Medicine (Cardiology)*
- Navneet Narula, M.D. Lady Harding Medical School, *Health Sciences Associate Clinical Professor, Department of Pathology and Laboratory Medicine*
- Edward Nelson, M.D. Oregon Health Sciences University, *Associate Professor, Departments of Medicine (Hematology/Oncology) and of Molecular Biology and Biochemistry*
- J. Stuart Nelson, M.D. University of Southern California, Ph.D. University of California, Irvine, *Professor, Departments of Surgery (Beckman Laser Institute) and Biomedical Engineering*
- Thomas L. Nelson, M.D. University of California, San Francisco, *Professor Emeritus, Department of Pediatrics*
- Anthony B. Nesburn, M.D. Harvard Medical School, *Adjunct Professor, Department of Ophthalmology*
- Richard S. Newman, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Pathology and Laboratory Medicine*
- Hien Thao Nghiem, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Department of Family Medicine*
- Lan Thi-Xuan Nguyen, M.D. University of California, San Diego, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*
- Ninh T. Nguyen, M.D. University of Texas, *Chief of Gastrointestinal Surgery and Professor, Department of Surgery*
- Tan Q.V. Nguyen, M.D. Michigan State University College of Human Medicine, *Health Sciences Assistant Clinical Professor, Department of Family Medicine*
- Thanh Nguyen, M.D. University of Iowa, *Health Sciences Associate Clinical Professor, Department of Radiological Sciences*
- Thanh-Tam Nguyen, M.D. Loyola Stritch University, *Health Sciences Associate Clinical Professor, Department of Pediatrics (General Pediatrics)*
- Thong (Tom) Nguyen, M.D. University of Iowa, *Health Sciences Clinical Professor, Department of Radiological Sciences*

- Karen Noblett, M.D. University of California, Irvine, *Director of the Division of Urogynecology and Health Sciences Associate Clinical Professor, Department of Obstetrics and Gynecology (Urogynecology)*
- Masayasu Nomura, Ph.D. University of Tokyo, *Professor of Biological Chemistry and of Microbiology and Molecular Genetics, and Grace Beekhuis Bell Chair in Biological Chemistry*
- Diane O'Dowd, Ph.D. University of California, San Diego, *Professor of Developmental and Cell Biology and of Anatomy and Neurobiology*
- Marc Ofstein, M.D. Georgetown University; M.P.H. University of California, Los Angeles, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*
- Leticia Oliveros, M.D. University of Iowa, *Health Sciences Associate Clinical Professor, Department of Pediatrics (General Pediatrics)*
- Harold G. Olson, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Medicine (Cardiology)*
- Jennifer Oman, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Department of Emergency Medicine*
- Robin Onishi, M.D. University of Washington, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*
- Michael O'Reilly, M.D., M.S. University of Vermont College of Medicine, *Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Kathryn E. Osann, Ph.D. University of California, Berkeley, *Adjunct Professor, Department of Medicine (Hematology/Oncology)*
- Donald R. Ostergard, M.D. University of California, San Francisco, *Professor Emeritus, Department of Obstetrics and Gynecology (Urogynecology)*
- Sai-Hong Ignatius Ou, M.D., Ph.D. University of Texas, *Health Sciences Associate Clinical Professor, Departments of Medicine (Hematology/Oncology) and Epidemiology*
- Andre Ouellette, Ph.D. Indiana University, *Professor Emeritus, Department of Pathology and Laboratory Medicine*
- Madeleine V. Pahl, M.D. University of California, Irvine, *Associate Professor, Department of Medicine (Nephrology/Renal)*
- Marilyn J. Pais, M.D. Medical College of Pennsylvania, *Senior Lecturer with Security of Employment Emerita, Department of Radiological Sciences*
- Laura S. Paré, M.D. University of Chicago, Pritzker Medical School, *Medical Director of Neurosurgery Clinic and Health Sciences Associate Clinical Professor, Department of Neurological Surgery*
- Nimisha Parekh, M.D., M.P.H. Tulane University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Gastroenterology)*
- Steven Park, M.D., Ph.D. New York University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Infectious Disease)*
- Ian Parker, Ph.D. University College, London, *Professor of Neurobiology and Behavior and of Physiology and Biophysics*
- Victor Passy, M.D. University of California, Irvine, *Senior Lecturer with Security of Employment Emeritus, Department of Otolaryngology - Head and Neck Surgery*
- Pranav Patel, M.D. St. Louis University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Cardiology)*
- Keyianoosh Z. Paydar, M.D. University of Tennessee, *Health Sciences Assistant Clinical Professor, Department of Surgery (Plastic)*
- Daniel Pelot, M.D. Howard University School of Medicine, *Senior Lecturer with Security of Employment Emeritus, Medicine (Gastroenterology)*
- Danielle Perret Karimi, M.D. UMDNJ-Robert Wood Johnson Medical School, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Ellena Peterson, Ph.D. Georgetown University, *Associate Dean of Admissions and Outreach, School of Medicine, and Professor, Department of Pathology and Laboratory Medicine*
- Robert F. Phalen, Ph.D. University of Rochester, *Professor, Department of Medicine (Occupational and Environmental Medicine)*
- Son (Jason) Phan, M.D. University of Vermont College of Medicine, *Health Sciences Assistant Clinical Professor, Department of Radiological Sciences*
- Daniele Piomelli, Ph.D. Columbia University, *Professor, Departments of Pharmacology and Biological Chemistry, and Louise Turner Arnold Chair in the Neurosciences*
- Hubert C. Pirkle, M.D. Indiana University, *Professor Emeritus, Department of Pathology and Laboratory Medicine*
- Avery Tyler Pittluck, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Department of Neurology*
- Robert W. Porter, M.D., Ph.D. Northwestern University Medical School, *Professor in Residence Emeritus, Department of Surgery (Neurological)*
- Manuel Porto, M.D. Rutgers College of Medicine, *Chair of the Department of Obstetrics and Gynecology, Professor of Clinical Obstetrics and Gynecology (Maternal-Fetal Medicine), and The Edward J. Quilligan Chair in Maternal-Fetal Medicine*
- Steven G. Potkin, M.D. Washington University, *Director of the Brain Imaging Center, Professor, Department of Psychiatry and Human Behavior, and Robert R. Sprague Chair in Brain Imaging*
- Thomas L. Poulos, Ph.D. University of California, San Diego, *UCI Chancellor's Professor, Departments of Molecular Biology and Biochemistry, Pharmaceutical Sciences, Physiology and Biophysics, and Chemistry*
- Adrian Preda, M.D. Carol Davila University of Medicine, *Health Sciences Associate Clinical Professor, Department of Psychiatry and Human Behavior*
- Pamela E. Prete, M.D. Hahnemann Medical College, *Professor in Residence Emerita, Department of Medicine (Rheumatology)*
- Henry W. Pribram, M.B.B.S. Cambridge University, *Professor Emeritus, Department of Radiological Sciences*
- Michael D. Prislun, M.D. Georgetown University, *Associate Dean for Clinical Affairs, School of Medicine, Department Vice Chair of Family Medicine, and Professor of Clinical Family Medicine*
- Ralph E. Purdy, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Pharmacology*
- Toni Pusateri, M.D. University of Nevada, *Health Sciences Assistant Clinical Professor, Department of Psychiatry and Human Behavior*
- Lisa Quane, M.D. University of Illinois, *Health Sciences Associate Clinical Professor, Department of Radiological Sciences*
- Edward J. Quilligan, M.D. Ohio State University, *Professor Emeritus, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- W. Leslie Quinlivan, M.B.B.S. University of London, *Professor Emeritus, Department of Obstetrics and Gynecology (Reproductive Endocrinology and Infertility)*
- Manuela Raffatellu, M.D. University of Sassari, *Assistant Professor, Department of Microbiology and Molecular Genetics*
- Gregory Rafiqah, M.D. Universal Hospital Services/The Chicago Medical School, *Health Sciences Assistant Clinical Professor, Department of Orthopaedic Surgery*
- Nilam S. Ramsinghani, M.B.B.S. Grant Medical College, *Department Chair and Health Sciences Clinical Professor, Department of Radiation Oncology*
- Ibrahim Ramzy, M.D. Cairo University, *Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*
- Leslie Randall, M.D. University of Louisville, *Assistant Professor of Clinical Obstetrics and Gynecology, Department of Obstetrics and Gynecology (Gynecology Oncology)*
- Jody M. Rawles, M.D. Albany Medical College, Union University, *Health Sciences Assistant Clinical Professor, Department of Psychiatry*
- Kristyn L. Rawson, M.S., C.G.C. University of Colorado, *Health Sciences Assistant Clinical Professor, Department of Pediatrics, Division of Genetics and Metabolism*
- Virgil Raymundo, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*
- Kevin Reavis, M.D. Vanderbilt University, *Health Sciences Assistant Clinical Professor, Department of Surgery*
- Louis Recher, M.D. University of Basel, *Professor in Residence Emeritus, Department of Pathology and Laboratory Medicine*
- Sanjay Reddy, M.D. Northwestern University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Varalakshmi Reddy, M.B.B.S. Osmania Medical College, *Health Sciences Associate Clinical Professor, Department of Pediatrics (General Pediatrics)*
- J. Leslie Redpath, Ph.D. University of Newcastle, *Professor, Departments of Radiation Oncology and Medicine*
- Andrew Reikes, M.D. University of California, San Diego, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine and Endocrinology)*
- Sherif Rezk, M.D. Alexandria University Faculty of Medicine, *Assistant Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*
- Charles E. Ribak, Ph.D. Boston University, *Professor Emeritus, Department of Anatomy and Neurobiology*
- James Rick, M.D., Ph.D. University of Illinois, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Cameron Ricks, M.D. American University of the Caribbean School of Medicine, *Health Sciences Assistant Clinical Professor and Operations Officer, Department of Anesthesiology and Perioperative Care*

- Joseph B. Rinehart, M.D. Creighton University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Dante Roa, Ph.D. Florida State University, *Health Sciences Associate Clinical Professor, Department of Radiation Oncology*
- Richard T. Robertson, Ph.D. University of California, Irvine, *Professor, Department of Anatomy and Neurobiology*
- W. Edward Robinson, Jr., M.D., Ph.D. Vanderbilt University, *Director, Combined Graduate Program in Cellular and Molecular Biosciences and Professor in Residence, Departments of Pathology and Laboratory Medicine and of Microbiology and Molecular Genetics*
- Leland Ronningen, M.D. University of the Health Sciences Uniformed Services, *Health Sciences Associate Clinical Professor, Department of Urology*
- Irwin A. Rose, Ph.D. University of Chicago, *UCI Distinguished Professor Emeritus, Department of Physiology and Biophysics*
- Abraham Rosenbaum, M.D. The Technion Institute, *Assistant Professor of Clinical Anesthesiology, Department of Anesthesiology and Perioperative Care*
- Steven Ross, M.D. University of Southern California, *Health Sciences Clinical Professor, Department of Orthopaedic Surgery*
- Lloyd Rucker, M.D. University of Kentucky, *Vice Chair for Educational Affairs, Department of Medicine; Director, Internal Medicine Residency Program; and Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine)*
- Scott Rudkin, M.D. University of California, Irvine, *Assistant Dean of Continuing Medical Education, and Vice Chair and Health Sciences Associate Clinical Professor, Department of Emergency Medicine*
- Naghme Salamat Saberi, M.D. New York Medical College, *Health Sciences Assistant Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*
- Terra Safer, M.D. University of California, Los Angeles, *Health Sciences Associate Clinical Professor, Departments of Medicine and Pediatrics (General Internal Medicine)*
- Hamid M. Said, Ph.D. University of Aston, *Professor, Departments of Medicine (Gastroenterology, Nephrology) and of Physiology and Biophysics*
- Curt A. Sandman, Ph.D. Louisiana State University, *Professor in Residence of Psychiatry and Human Behavior*
- Suzanne B. Sandmeyer, Ph.D. University of Washington, *Professor, Departments of Biological Chemistry and of Microbiology and Molecular Genetics*
- Zsuzsanna Sandor, M.D. Semmelweis Medical School, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*
- Rozanne M. Sandri-Goldin, Ph.D. The Johns Hopkins University, *Department Chair and Professor, Department of Microbiology and Molecular Genetics*
- Farhood Saremi, M.D. Tehran University, *Health Sciences Clinical Professor, Department of Radiological Sciences*
- I. James Sarfeh, M.D. Albany Medical College, *Professor Emeritus, Department of Surgery (General)*
- Jon Sassin, M.D. St. Louis University, *Professor Emeritus, Department of Neurology*
- Paolo Sassone-Corsi, Ph.D. University of Naples, *Department Chair of Pharmacology, Donald Bren Professor, and UCI Distinguished Professor, Departments of Pharmacology, Microbiology and Molecular Genetics, and Pharmaceutical Sciences*
- Catherine S. Sassoon, M.D. Gadjah Mada University School of Medicine, *Professor in Residence, Department of Medicine (Pulmonary and Critical Care)*
- Peter L. Schnall, M.D. Stanford University, M.P.H. Columbia University, *Health Sciences Clinical Professor, Department of Medicine (Occupational and Environmental Medicine)*
- Steven S. Schreiber, M.D. Albany Medical College, *Interim Department Chair of Neurology and Professor in Residence, Departments of Neurology and of Anatomy and Neurobiology*
- Sabrina E. Schuck, Ph.D. University of California, Riverside, *Health Sciences Assistant Clinical Professor, Department of Pediatrics, Child Development Center*
- Carl Schultz, M.D. University of California, Irvine, *Professor of Clinical Emergency Medicine and Director of Disaster Medical Services, Department of Emergency Medicine*
- Christina Schwindt, M.D. St. Louis University, *Health Sciences Associate Clinical Professor of Pediatrics (Allergy/Immunology)*
- Tara Seery, M.D. University College Dublin, *Health Sciences Assistant Clinical Professor, Department of Medicine (Hematology/Oncology)*
- Gary Segal, M.D. University of Pennsylvania, *Health Sciences Clinical Professor, Department of Medicine (Infectious Diseases)*
- Sonia Sehgal, M.D. St. George's University, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine and Geriatrics)*
- Varun Sehgal, Ph.D. University of Florida, *Health Sciences Associate Clinical Professor, Department of Radiation Oncology*
- Michael E. Selsted, M.D., Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Pathology and Laboratory Medicine*
- Bert L. Semler, Ph.D. University of California, San Diego, *Director of the Center for Virus Research and Professor, Department of Microbiology and Molecular Genetics*
- Leonard Sender, M.B.B.S. University of Witwatersrand, *Director of Clinical Oncology Services, Chief of Pediatric Oncology, and Health Sciences Clinical Professor, Departments of Medicine (Hematology/Oncology) and Epidemiology*
- Partho Sengupta, M.B.B.S. Government Medical College, India, *Health Sciences Associate Clinical Professor, Department of Medicine (Cardiology)*
- Stefano Sensi, M.D., Ph.D. University D'Annunzio, *Associate Adjunct Professor, Department of Neurology*
- Arnold Seto, M.D. Harvard-MIT Health Sciences and Technology, *Health Sciences Assistant Clinical Professor, Department of Medicine (Cardiology)*
- Gaurang Shah, M.D. The Maharaja Sayajirao University of Baroda, *Health Sciences Clinical Professor, Department of Medicine (Nephrology)*
- Ronald C. Shank, Ph.D. Massachusetts Institute of Technology, *Professor, Department of Medicine (Occupational and Environmental Medicine) and Director of the Environmental Toxicology Graduate Program*
- Deane H. Shapiro, Jr., Ph.D. Stanford University, *Professor in Residence Emeritus, Department of Psychiatry and Human Behavior*
- Johanna F. Shapiro, Ph.D. Stanford University, *Director of the Program in Medical Humanities and Arts and Professor, Department of Family Medicine*
- Yongsheng Shi, Ph.D. Syracuse University *Assistant Professor, Department of Microbiology and Molecular Genetics*
- Maria E. Shier, M.D. Albany Medical College, *VALBHS Medical Student Education Coordinator and Health Sciences Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Khalil K. Shirazi, M.D. University of Meshed, *Health Sciences Clinical Professor, Department of Radiological Sciences*
- Cynthia H. Sholly, M.D. University of Utah, *Health Sciences Clinical Professor, Department of Pediatrics (Primary Care)*
- Jack Sills, M.D. Northwestern University, *Health Sciences Clinical Professor, Department of Pediatric Neonatology*
- Anne Simoneau, M.D. Baylor College, *Health Sciences Associate Clinical Professor, Department of Urology*
- Jennifer Simpson, M.D. University of Michigan, *Health Sciences Associate Clinical Professor, Department of Ophthalmology*
- Harry Skinner, M.D. University of South Carolina, Ph.D. University of California, Berkeley, *Professor Emeritus, Department of Orthopaedic Surgery*
- Lewis M. Slater, M.D. University of Vermont Medical School, *Professor Emeritus, Department of Medicine (Hematology/Oncology)*
- Brian R. Smith, M.D. Universidad Autónoma de Guadalajara, *Health Sciences Assistant Clinical Professor, Department of Surgery*
- Clyde W. Smith, M.D. University of Minnesota, *Health Sciences Clinical Professor, Department of Radiological Sciences*
- Janellen Smith, M.D. University of Iowa, *Health Sciences Clinical Professor, Department of Dermatology*
- Martin A. Smith, Ph.D. University of Newcastle Upon Tyne, *Professor, Department of Anatomy and Neurobiology*
- Moyra Smith, M.D. University of Pretoria, Ph.D. University College London, *Professor Emerita, Department of Pediatrics (Human Genetics and Birth Defects)*
- Lisa Snider, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Pediatrics (Neurology and Developmental Pediatrics)*
- Ana Solodkin, Ph.D. National Polytechnic Institute, *Associate Professor of Anatomy and Neurobiology*
- Ivan Soltesz, Ph.D. L. Eötvös University, *Department Chair and Professor, Department of Anatomy and Neurobiology, and Professor, Departments of Physiology and Biophysics and of Neurobiology and Behavior*
- Charles Sondhaus, Ph.D. University of California, Berkeley, *Professor Emeritus, Department of Radiological Sciences*

- Dara Sorkin, Ph.D. University of California, Irvine, *Assistant Adjunct Professor, Department of Medicine (General Internal Medicine)*
- Martha Sosa-Johnson, M.D. University of California, San Diego, *Health Sciences Associate Clinical Professor, Department of Medicine (General Internal Medicine)*
- Jennifer Soung, M.D. Albert Einstein College of Medicine, *Health Sciences Assistant Clinical Professor, Department of Dermatology*
- Gerald S. Spear, M.D. The Johns Hopkins University, *Professor Emeritus, Department of Pathology and Laboratory Medicine*
- M. Anne Spence, Ph.D. University of Hawaii, *Professor Emerita, Department of Pediatrics (Human Genetics and Birth Defects)*
- Donald R. Sperling, M.D. Yale School of Medicine, *Professor Emeritus, Department of Pediatrics*
- Lawrence D. Sporty, M.D. State University of New York, Downstate, *Senior Lecturer with Security of Employment, Psychiatry and Human Behavior and Neurology*
- Michael J. Stamos, M.D. Case Western Reserve University, *Department Chair of Surgery and Professor of Clinical Surgery*
- Eric J. Stanbridge, Ph.D. Stanford University, *UCI Distinguished Professor Emeritus, Department of Microbiology and Molecular Genetics*
- Arnold Starr, M.D. New York University School of Medicine, *Research Professor, Department of Neurology*
- Robert E. Steele, Ph.D. Yale University, *Interim Department Chair and Professor of Biological Chemistry*
- Joan S. Steffan, Ph.D. University of California, San Diego, *Assistant Professor in Residence, Department of Psychiatry and Human Behavior*
- Larry Stein, Ph.D. University of Iowa, *Professor Emeritus, Department of Pharmacology*
- Robin Steinberg-Epstein, M.D. University of California, Irvine, *Health Sciences Associate Clinical Professor, Departments of Pediatrics and Developmental Pediatrics (General Pediatrics)*
- Roger F. Steinert, M.D. Harvard Medical School, *Department Chair of Ophthalmology, Professor of Clinical Ophthalmology and Biomedical Engineering, and Irving H. Leopold Chair in Ophthalmology*
- Oswald Steward, Ph.D. University of California, Irvine, *Professor, Departments of Anatomy and Neurobiology, Neurobiology and Behavior, and Neurosurgery, and Reeve-Irvine Chair in Spinal Cord Injury Research*
- Suzanne Strom, M.D. University of Texas Medical School at Houston, *Director of Medical Student Stimulation, Residency Program Associate Director, and Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Min-Ying (Lydia) Su, Ph.D. University of California, Irvine, *Professor and Professor in Residence, Departments of Radiological Sciences and of Physics and Astronomy*
- Jeffrey Suchard, M.D. University of California, Los Angeles, *Director of Medical Toxicology and Professor of Clinical Emergency Medicine, Department of Emergency Medicine*
- Shuichi Suzuki, M.D. Kitasato University School of Medicine, *Division Director of Neurointerventional Radiology and Associate Professor of Clinical Radiological Sciences, Department of Radiological Sciences*
- James M. Swanson, Ph.D. The Ohio State University, *Professor Emeritus, Department of Pediatrics*
- Bindhu Swaroop, M.D. St. George's University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- John E. Swett, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Anatomy and Neurobiology*
- Paul S. Sypherd, Ph.D. Yale University, *Professor Emeritus, Department of Microbiology and Molecular Genetics*
- Sandor Szabo, M.D. University of Belgrade Medical School; Ph.D. University of Montreal; M.P.H. Harvard University School of Public Health; *Chief of Diagnostic and Molecular Medicine Health Care Group and Professor in Residence, Departments of Pathology and Laboratory Medicine and of Pharmacology*
- Steven Tam, M.D. University of California, San Diego, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine, Program in Geriatrics)*
- Ming Tan, M.D. The Johns Hopkins University, *Associate Professor, Departments of Microbiology and Molecular Genetics and of Medicine (Infectious Disease)*
- Siu Wa Tang, M.B., B.S. University of Hong Kong; Ph.D. University of Toronto, *Professor Emeritus, Department of Psychiatry and Human Behavior*
- Jeremiah Tao, M.D. University of South Carolina, *Health Sciences Assistant Clinical Professor, Department of Ophthalmology*
- Andrzej S. Tarnawski, M.D., D.Sc. University Medical School, *Professor, Department of Medicine (Gastroenterology)*
- Jamshid Tehranzadeh, M.D. Pahlavi University Medical School, *Professor Emeritus, Department of Radiological Sciences*
- Krishnansu Sujata Tewari, M.D. University of California, Irvine, *Associate Professor of Clinical Obstetrics and Gynecology, Department of Obstetrics and Gynecology (Gynecology Oncology)*
- Gaby Thai, M.D. Tufts University, *Health Sciences Associate Clinical Professor, Department of Neurology*
- Trung Thai, M.D. University of Illinois, *Health Sciences Associate Clinical Professor, Department of Psychiatry and Human Behavior*
- Tejal Thakkar, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Medicine (Rheumatology)*
- Leslie M. Thompson, Ph.D. University of California, Irvine, *Professor, Departments of Psychiatry and Human Behavior, Biological Chemistry, and Neurobiology and Behavior*
- Lauri D. Thrupp, M.D. University of Washington School of Medicine, *Professor Emeritus, Department of Medicine (Infectious Diseases)*
- Jeremiah G. Tilles, M.D. Harvard Medical School, *Professor Emeritus, Department of Medicine (Infectious Diseases)*
- Kate Tobin, M.D. Loyola University Stritch School of Medicine, *Clinical Director of Outpatient Surgical Suites and Health Sciences Assistant Clinical Professor, Department of Anesthesia and Perioperative Care*
- Jerome S. Tobis, M.D. Chicago Medical School, *Professor Emeritus, Department of Physical Medicine and Rehabilitation*
- Irina Todorov, M.D. Medical University of Sofia, *Health Sciences Assistant Clinical Professor, Department of Family Medicine*
- Francesco Tombola, Ph.D. University of Padua, *Assistant Professor, Department of Physiology and Biophysics*
- Julianne S. Toohey, M.D. University of California, Irvine, *Health Sciences Clinical Professor, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- Simin Torabzadeh, M.D. Universidad Central del Este, *Health Sciences Clinical Professor, Department of Medicine (General Internal Medicine and Geriatrics)*
- Paul E. Touchette, Ed.D. Harvard University, *Adjunct Professor Recalled, Departments of Pediatrics (Neurology) and of Psychiatry and Human Behavior*
- Anne E. Tournay, M.B.B.S. University College London, *Health Sciences Associate Clinical Professor, Department of Pediatrics (Neurology)*
- Bich-Van Tran, M.D. Georgetown University School of Medicine, *Health Sciences Assistant Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*
- Huy T. Tran, D. O. College of Osteopathic Medicine, Pomona, *Health Sciences Clinical Professor, Department of Family Medicine*
- Minh-Ha Tran, D.O. Western University of Health Sciences, *Health Sciences Assistant Clinical Professor, Department of Pathology and Laboratory Medicine*
- Bruce Tromberg, Ph.D. University of Tennessee, *Director of the Beckman Laser Institute and Professor, Departments of Surgery, Biomedical Engineering, and Physiology and Biophysics*
- Fong Tsai, M.D. Taipei Medical College, *Professor of Clinical Radiological Sciences and Neurological Surgery, Department of Radiological Sciences*
- Elizabeth Turner, M.D. Wake Forest University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Pulmonary and Critical Care)*
- Martin C. Tynan, M.B.B.C.H. Trinity College Dublin, *Health Sciences Clinical Professor, Department of Orthopaedic Surgery*
- Cherry Uy, M.D. Far Eastern University, *Health Sciences Associate Clinical Professor of Pediatrics (Neonatology/Perinatal Medicine)*
- Duane J. Vajgrt, M.D. University of California, San Francisco, *Health Sciences Clinical Professor of Radiological Sciences, Department of Radiological Sciences*
- Shermeen Vakharia, M.B.B.S. Aga Khan University Medical College, *Director of Cardiac Anesthesiology Services and Health Sciences Associate Clinical Professor, Department of Anesthesiology and Perioperative Care*
- Nosratola D. Vaziri, M.D. Tehran University Medical School, *Chief of Nephrology and Professor, Departments of Medicine (Nephrology/Renal Diseases) and of Physiology and Biophysics*
- Charles P. Vega, M.D. University of Wisconsin, *Director of the Family Medicine Residency Program, Director of the UC Irvine Program in Medical Education for the Latino Community (PRIME-LC), and Health Sciences Associate Clinical Professor, Department of Family Medicine*

- Sunil Verma, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Otolaryngology - Head and Neck Surgery*
- Larry E. Vickery, Ph.D. University of California, Santa Barbara, *Professor, Department of Physiology and Biophysics*
- Anthony Vo, M.D. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Trung Vu, M.D., M.S. University of California, Irvine, *Health Sciences Assistant Clinical Professor, Department of Anesthesiology and Perioperative Care*
- K. Mark Vuchinich, M.D., FACOG, University of California, San Diego, *Director of the Division of General Obstetrics and Gynecology and Health Sciences Associate Clinical Professor, Department of Obstetrics and Gynecology (General Obstetrics and Gynecology)*
- Pathik Wadhwa, Ph.D. University of California, Irvine, *Professor, Department of Psychiatry and Human Behavior*
- Feizal Waffarn, M.B.B.S. Madras Medical College, *Department Chair and Associate Professor of Clinical Pediatrics (Neonatology)*
- Howard B. Waitzkin, M.D., Ph.D. Harvard University, *Professor Emeritus, Department of Medicine (General Internal Medicine and Primary Care)*
- Akio Wakabayashi, M.D. University of Tokyo Medical School, *Professor Emeritus, Department of Surgery (Thoracic)*
- James Wallis, M.D. Harvard University, *Health Sciences Assistant Clinical Professor, Department of Medicine (Cardiology)*
- Roger N. Walsh, M.B.B.S., Ph.D. University of Queensland, *Professor, Department of Psychiatry and Human Behavior*
- Annabel Wang, M.D. McGill University, *Health Sciences Associate Clinical Professor, Department of Neurology*
- Ping H. Wang, M.D. Kaoshing University, *Professor, Departments of Medicine (Endocrinology) and of Physiology and Biophysics*
- Shu-Ming Wang, M.D. University of Medicine and Dentistry of New Jersey, *Professor of Clinical Anesthesiology, Department of Anesthesiology and Perioperative Care*
- Rooba Wardeh, M.D. University of Aleppo, *Health Sciences Assistant Clinical Professor, Department of Pathology and Laboratory Medicine*
- Marian L. Waterman, Ph.D. University of California, San Diego, *Department Vice Chair and Professor, Department of Microbiology and Molecular Genetics*
- David Webb, M.D. Tufts University, *Health Sciences Clinical Professor, Department of Medicine (Infectious Diseases)*
- Steven L. Wechsler, Ph.D. University of North Carolina, *Professor, Departments of Ophthalmology and of Microbiology and Molecular Genetics*
- Gerald D. Weinstein, M.D. University of Pennsylvania School of Medicine, *Professor Emeritus, Department of Dermatology*
- John H. Weiss, M.D., Ph.D. Stanford University, *Professor, Departments of Neurology and of Anatomy and Neurobiology*
- Li Wen, M.D. West China University of Medical Sciences, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Lari Wenzel, Ph.D. Arizona State University, *Professor, Department of Medicine (General Internal Medicine) and Program in Public Health*
- Stephen H. White, Ph.D. University of Washington, *Professor, Department of Physiology and Biophysics*
- Sharon Wigal, Ph.D. State University of New York, *Health Sciences Clinical Professor, Department of Pediatrics, Child Development Center*
- Tim Wigal, Ph.D. University of Texas, Austin, *Adjunct Professor, Department of Pediatrics, Child Development Center*
- Aileen Wiglesworth, Ph.D. University of Kentucky, *Health Sciences Associate Clinical Professor, Department of Family Medicine, Program in Geriatrics*
- Petra Wilder-Smith, Ph.D. Bern University; D.D.S. Guys Hospital, *Associate Professor in Residence, Department of Surgery*
- James H. Williams, Jr., M.D. Harvard University, *Adjunct Professor, Department of Medicine (Hospitalist Program and Pulmonary and Critical Care)*
- Russell A. Williams, M.B.B.S. University of Sydney, *Associate Dean of Graduate Medical Education, Director of Surgery Medical Student Education, and Professor, Department of Surgery*
- Archie F. Wilson, M.D. University of California, San Francisco, Ph.D. University of California, Los Angeles, *Professor Emeritus, Department of Medicine (Pulmonary and Critical Care)*
- Samuel Eric Wilson, M.D. Wayne State University, *Associate Dean of Affiliated Institutions and Professor, Department of Surgery*
- Deborah Wing, M.D. Tulane University, *Director of the Division of Maternal-Fetal Medicine and Professor of Clinical Obstetrics and Gynecology, Department of Obstetrics and Gynecology (Maternal-Fetal Medicine)*
- Garrett A. Wirth, M.D. Albany Medical College, *Health Sciences Associate Clinical Professor, Department of Surgery (Plastic)*
- Brian Wong, M.D. The Johns Hopkins University, *Professor, Departments of Otolaryngology and Biomedical Engineering*
- Edward K. Wong, Jr., M.D. University of Southern California, *Associate Professor, Department of Ophthalmology*
- Jason Jun-Hang Wong, M.D. Queen's University, *Health Sciences Assistant Clinical Professor, Department of Radiation Oncology*
- Nathan D. Wong, Ph.D. Yale University, *Adjunct Professor, Departments of Medicine (Cardiology) and Epidemiology*
- Joseph Chong-Sang Wu, M.D. University of California, Irvine, *Associate Professor in Residence, Department of Psychiatry and Human Behavior*
- Mark Wu, M.D. University of Wisconsin, *Associate Professor of Clinical Pathology, Department of Pathology and Laboratory Medicine*
- Sing-Yung Wu, M.D. The Johns Hopkins University, Ph.D. University of Washington, *Professor in Residence, Department of Radiological Sciences*
- Frederic Wyle, M.D. University of Pennsylvania, *Professor in Residence Emeritus, Department of Medicine (Infectious Diseases)*
- Xiangmin Xu, Ph.D. Vanderbilt University, *Assistant Professor, Department of Anatomy and Neurobiology*
- Rebecca Yamarik, M.D. Northwestern University, *Health Sciences Assistant Clinical Professor, Department of Medicine (General Internal Medicine)*
- Daniel S. Yanni, M.D. University of California, San Diego, *Surgical Director, Neuro-Intensive Care Unit and Assistant Professor of Clinical Neurological Surgery, Department of Neurological Surgery*
- Leman Yel, M.D. Hacettepe University, *Associate Professor of Clinical Medicine (Basic/Clinical Immunology)*
- Kyoko Yokomori, Ph.D. University of Southern California; Ph.D. of Agriculture (Veterinary Medicine) University of Tokyo, *Professor, Department of Biological Chemistry*
- Hiroshi Yoshioka, M.D., Ph.D. University of Tsukuba, *Professor in Residence, Department of Radiological Sciences*
- Robert R. Young, M.D. Harvard University, *Professor in Residence Emeritus, Department of Neurology*
- Ronald F. Young, M.D. State University of New York, *Professor Emeritus, Department of Neurological Surgery*
- Jen Yu, M.D. National Taiwan University, Ph.D. University of Pennsylvania, *Department Chair and Professor, Department of Physical Medicine and Rehabilitation*
- Christopher Zachary, M.B.B.S. Royal Free Hospital, University of London, *Department Chair and Health Sciences Clinical Professor, Department of Dermatology*
- David P. Zamorano, M.D. University of Southern California, *Health Sciences Assistant Clinical Professor, Department of Orthopaedic Surgery*
- Michael V. Zaragoza, M.D. Case Western Reserve University, *Health Sciences Assistant Clinical Professor, Department of Pediatrics, Division of Genetics and Metabolism*
- Jason Zell, D.O. Nova Southeastern University, *Assistant Professor, Department of Medicine and Assistant Adjunct Professor, Department of Epidemiology*
- Fan-Gang (Frank) Zeng, Ph.D. Syracuse University, *Director of the Hearing and Speech Laboratory and Professor, Departments of Otolaryngology, Biomedical Engineering, and Anatomy and Neurobiology*
- Xiaohui Zhao, M.D. Nanjing Medical University; Ph.D. University of Illinois, *Health Sciences Associate Clinical Professor, Department of Pathology and Laboratory Medicine*
- Qun-Yong Zhou, Ph.D. Oregon Health Sciences University, *Professor, Department of Pharmacology*
- Yi-Hong Zhou, Ph.D. Dalhousie University, *Assistant Professor and Assistant Professor in Residence, Departments of Neurological Surgery and Biological Chemistry*
- Xiaolin Zi, Ph.D. Shanghai Medical University, *Associate Professor, Departments of Urology and Pharmaceutical Sciences*
- Argyrios Ziogas, Ph.D. University of Southern California, *Associate Adjunct Professor, Department of Epidemiology*
- Albert Zlotnik, Ph.D. University of Colorado, *Professor, Department of Physiology and Biophysics*

SCHOOL OF MEDICINE OVERVIEW

The UCI School of Medicine became part of the University of California in 1965. Prior to this time it was known as the California College of Medicine which traces its roots to a private institution founded in 1896.

Mission Statement

The mission of the University of California, Irvine, School of Medicine is to promote biomedical sciences and medicine in Orange County, California, and beyond, through excellence in research, patient care, education, and community service. This mission is achieved through programs of excellence in the following:

Education: The School of Medicine is committed to provide educational programs of the highest quality to medical students, M.D./Ph.D. and M.D./M.B.A. students, residents, fellows, allied health, graduate academic students, practicing physicians and other health care professionals. Educational programs are offered along the continuum of medical education with programs in undergraduate, graduate, and continuing medical education. These programs emphasize the most current knowledge in the health sciences and reflect the changing practice of medicine. Further, the School of Medicine's educational programs are designed to stimulate lifelong self-learning and critical inquiry and to exemplify those human values necessary to fulfill the professional commitments of a career in the health sciences.

Research: Excellence in research is an essential feature of the School of Medicine. Therefore, the School is committed to develop and maintain research programs in the health sciences which seek to advance basic scientific knowledge and the prevention, diagnosis, and treatment of human illness.

Clinical Care: Recognizing its responsibility to meet the educational needs of students and the diverse needs of the patient community, the School of Medicine is committed to programs of clinical excellence across the spectrum of patient care disciplines.

Service to the Public: As a publicly assisted institution, the School of Medicine is committed to serve the community as a vital resource of expertise and knowledge. The School further serves the public through the training of health professionals whose backgrounds reflect California's ethnic and cultural diversity and whose professional careers address California's health care needs.

Vision Statement

The University of California, Irvine, School of Medicine will achieve preeminence through the creation, application, and dissemination of new knowledge in the biomedical sciences and medicine. This will be accomplished through international leadership in biomedical research, development of new therapies, delivery of state-of-the-art medical care, and innovative biomedical education.

Health Sciences Complex

The Health Sciences Complex is a 121-acre site that houses UCI's medical school facilities. Twenty-nine acres have been developed to provide space for teaching, research, and patient care as well as offices for departmental administration.

The School's basic science instructional programs are located in modern, well-equipped, medical sciences buildings. These units provide space for first- and second-year classes, lecture halls (including the Dr. S. Jerome and Judith D. Tamkin Student Lecture Hall), offices and laboratories for various basic and clinical departments. Other buildings house the School's administration, laboratories, and study center (located in J. Edward Berk Hall).

The new Medical Education building symbolizes the University's ongoing commitment to high-quality medical education and innovation. The \$40-million, 65,000-square-foot building serves as the hub for nearly all non-hospital related educational activities for UC Irvine medical students, and incorporates the latest technology to help prepare tomorrow's doctors for healthcare in the digital age. The School of Medicine Educational Affairs Office is located in the Medical Education building, as well as the innovative Program in Medical Education for the Latino Community (PRIME-LC), an acclaimed program to improve healthcare for the Latino community by training medical students to care for this underserved population in a linguistically competent, culturally sensitive way.

The Medical Education building's telemedicine center includes a 60-seat interactive video auditorium where students watch UC Irvine physicians provide expert care over the Internet to patients in rural or other remote locations. Located on the second floor, the Clinical Skills Center is a cutting-edge facility for teaching and assessment of clinical skills, communication, and professionalism. The Center includes 17 fully equipped patient exam rooms, a central control room for exam administration and recording of all activities, and a computer software system that focuses on the capture, debriefing, and assessment of medical training. The building also features an advanced simulation learning center. The Simulation Lab is a four-suite lab that utilizes high-fidelity human patient simulators with physiologically accurate responses to stimuli to enhance learning and assess competency. The lab is equipped with a fully operational anesthesia suite, a trauma suite, and a general ward environment. The Simulation Lab has two debriefing rooms for immediate feedback on performance as well as a large central control room for all simulation activities.

In addition, the 40,000-square-foot Plumwood House is devoted to basic research in the fields of neurological disorders, diagnostic systems and reagents, and industrial bioreactors. In this facility, faculty from the Department of Biological Chemistry share laboratory space with corporate researchers.

Outpatient services are available on campus through the Louis A. and Helen C. Gottschalk Medical Plaza and the Beckman Laser Institute. The Plaza capitalizes upon the broad range of diagnostic and therapeutic programs of the School as well as the extensive clinical expertise of the faculty. The facility offers primary care and specialty services. Special programs in diabetes, multiple sclerosis, Alzheimer's disease, and inflammatory bowel diseases also are offered. The Plaza also houses UC Irvine Corporate Health Services and the Gavin Herbert Eye Institute, which offers the latest in diagnostic health care for eye diseases, including computerized refraction analysis, glaucoma diagnosis, and ultrasound analysis of eye disorders.

Housing one of the world's leading programs in medical laser technology, the Beckman Laser Institute offers state-of-the-art treatment for cancer and dermatological conditions. The Institute specializes in the development and application of laser and other optical technologies for the diagnosis and treatment of disease.

BIOMEDICAL RESEARCH CENTER

UCI's Biomedical Research Center (BRC) is a landmark public-private collaboration between UCI and businesses involved in biomedical, biotechnological, and healthcare services. The Center enables UCI researchers and participating companies to work alongside one another, combining basic science, clinical study, and product development to find new approaches to the diagnosis and treatment of disease. The William J. Gillespie Neuroscience Research Facility, the first of several BRC buildings, is the home of a core group of prominent scientists investigating the causes and cures for neurological disorders, including Alzheimer's disease,

Parkinson's disease, schizophrenia, and spinal cord injury. The second building is the Robert R. Sprague Family Foundation Hall, where scientists work to reveal the role of genetics in cancer treatment and prevention. The third building, the Dottie and George Hewitt Research Hall, is home to a state-of-the-art General Clinical Research Center and internationally recognized investigators studying infectious diseases, molecular medicine, immunology, and complementary and alternative medicine. The Sue and Bill Gross Stem Cell Research Center is the fourth building in UCI's Biomedical Research Center. Opened in 2010, this state-of-the-art research and clinical building fosters a multi-pronged approach to neurodegenerative repair and basic stem cell biology by supporting basic research, regenerative medicine, and drug-development programs.

CHAO FAMILY COMPREHENSIVE CANCER CENTER

The Chao Family Comprehensive Cancer Center is the only National Cancer Institute-designated facility in Orange County and one of only 40 such centers in the country. Overall, more than 100 faculty members at the Cancer Center are involved in several major research programs, encompassing everything from basic research that looks at how cancer cells grow to bone marrow transplantation. Located at the UC Irvine Medical Center in Orange, the 56,000-square-foot facility provides an ideal setting for the practice of all the basic and clinical subspecialties involved in adult and pediatric oncology, including the application of the latest techniques for diagnosis and management of patients with cancer.

UNIVERSITY OF CALIFORNIA, IRVINE HEALTHCARE

UC Irvine Healthcare, the clinical entity of UC Irvine, is committed to providing the highest quality healthcare to Orange County and surrounding communities through UC Irvine Medical Center, the county's only university hospital in Orange County.

UC Irvine Medical Center, located in the City of Orange, is a 422-bed, comprehensive medical care center. It is the principal clinical facility of the School of Medicine operated by the University. The medical faculty of the School of Medicine together with the medical resident-physician staff, provide the professional care. A full scope of acute- and general-care services are offered at UC Irvine Medical Center including cancer, cardiology, digestive disease, dermatology, obstetrics and gynecology, neonatology, psychiatry, family medicine, pathology, radiology, physical medicine and rehabilitation, ophthalmology, neurology, anesthesiology, orthopaedics, geriatrics, oncology, neurosurgery, otolaryngology, and urology.

UC Irvine Medical Center also has cardiac, neonatal, burn, medical, surgery, and neurosciences intensive care units, and more than 90 specialty outpatient services. It is Orange County's only Level I trauma center—the most comprehensive designation for the treatment of life-threatening injuries. The UC Irvine Douglas Hospital opened at UC Irvine Medical Center in March 2009. The seven-story hospital has 236 beds, 19 operating rooms, and interventional procedure rooms. Private patient rooms offer patients optimal comfort and healing and accommodate family members who wish to stay overnight. More information about UC Irvine Healthcare is available online at <http://www.ucihealth.com>.

UCI FAMILY HEALTH CENTER-SANTA ANA

The UCI Family Health Center-Santa Ana is a state-of-the-art primary care facility, conveniently located near the Santa Ana Civic Center. The Center has two missions—healthcare delivery and medical education.

As a community clinic, the Family Health Center's multilingual physicians and staff are committed to providing quality health care to patients, including the medically underserved. It provides primary care services to people of all ages including family medicine, preventive care for children and adults, and specialty care in pediatrics and obstetrics and gynecology.

As an integral part of the UCI School of Medicine, the Family Health Center provides educational and training opportunities for medical and nurse practitioner students, including the UCI Family Medicine and Obstetrics and Gynecology residency training programs.

UCI FAMILY HEALTH CENTER-ANAHEIM

The UCI Family Health Center-Anaheim provides care for more than 20,000 outpatient visits annually and training programs for resident physicians in primary care, general internal medicine, and general and adolescent pediatrics. There are additional programs in gynecology, dermatology, general surgery, podiatry, neurology, ophthalmology, optometry, orthopedics, psychiatry, and multispecialty faculty practice. The Center provides training for medical students in their primary care, general pediatric, adolescent medicine, and geriatric medicine rotations and electives.

AFFILIATED HOSPITALS AND CLINICS

Additional major teaching and research programs of the School of Medicine are conducted at the Veterans Affairs Long Beach Healthcare System, Children's Hospital of Orange County (CHOC), and Long Beach Memorial Medical Center. Other academic programs are conducted in affiliation with San Bernardino County Medical Center, Fairview Developmental Center (Costa Mesa), Kaiser Foundation Hospital (Anaheim, Bellflower, and Riverside), Children's Hospital of Los Angeles, Metropolitan State Hospital (Norwalk), The City of Hope Medical Center (Duarte), Western Medical Center (Tustin/Santa Ana), the Kern Medical Center (Bakersfield), Clínica Sierra Vista (Lamont), Presbyterian (Newport Beach), Fountain Valley Hospital and Medical Center, and the Orange County Health Care Agency/Public Health Clinic.

School of Medicine Alumni Relations

The UCI School of Medicine is an outgrowth of what began in 1896 as the Pacific College of Osteopathy (PSO). Some years later it became the College of Osteopathic Physicians and Surgeons, which then evolved into the California College of Medicine in 1962 and subsequently joined the UC system in 1965. The Office of Alumni Relations provides programs and services for nearly 4,000 alumni of the School as well as for students. From financial support to Honor's Night awards, mentorship to reunions, the Office of Alumni Relations seeks to provide a cornerstone from which students and alumni can benefit from their relationships to one another and in so doing, strengthen the School of Medicine.

THE M.D. PROGRAM

Admissions

All inquiries regarding the UCI School of Medicine's admission programs and procedures should be directed to:

**University of California, Irvine
School of Medicine
Office of Admissions and Outreach
Medical Education Building
Irvine, CA 92697-4089**

**(949) 824-5388 or (800) UCI-5388
<http://www.meded.edu/admissions/>**

The UCI School of Medicine is a member of the American Medical College Application Service (AMCAS). All students who seek entrance to the UCI School of Medicine must complete the AMCAS application. AMCAS application information is available at <http://www.aamc.org/students/amcas/start.htm>. Applications must be submitted between June 1 and November 1 of the year preceding anticipated admission.

SELECTION FACTORS

The UCI School of Medicine seeks to admit students who are highly qualified to be trained in the practice of medicine and whose backgrounds, talents, and experiences contribute to a diverse student body. The Admissions Committee carefully reviews all applicants whose academic record and MCAT scores indicate that they will be able to handle the rigorous medical school curriculum. In addition to scholastic achievement, attributes deemed desirable in prospective students include leadership ability and participation in extracurricular activities such as clinical and/or medically related research experience, as well as community service. Careful consideration is given to applicants from disadvantaged backgrounds.

Information provided by the AMCAS application is used for preliminary screening. Based on decisions reached by the Admissions Committee, applicants may be sent a secondary application. Applicants receiving a secondary application are requested to submit additional materials which include a minimum of three letters of recommendation, supplemental information forms, and a non-refundable application fee of \$80. Upon further review by the Admissions Committee, approximately 500 of those applicants receiving a secondary application will be interviewed. Regional interviews are not available. Preference is given to California residents and applicants who are either United States citizens or permanent residents. The UCI School of Medicine does not accept transfer students.

REQUIREMENTS FOR ADMISSION

Students can be considered for admission to the School of Medicine if they meet the following requirements:

1. A minimum of three years (90 semester units) of undergraduate course work is required, including a minimum of one full-time year at an accredited U.S. college or university. A baccalaureate degree is strongly recommended but not required. Candidates for admission may submit community college credit only to the extent granted on transfer to a four-year college or university. For purposes of evaluation, letter or numerical grades are preferred for course work, particularly for the required subjects listed below. Final enrollment into the first-year class at the School of Medicine is contingent upon evidence of satisfactory completion of all requirements with a grade of C or higher and of all courses listed as in progress at the time of application. Failure to meet the requirements or falsification of information are grounds for rejection or dismissal.
2. Completion of the following college course requirements prior to matriculation:

Subject	Comments	Semester Units
Biology	Courses must include a minimum of one semester or two quarters of upper-division biology, excluding botany.	12
Chemistry	Courses must include inorganic, organic, and biochemistry	16
Physics		8
Math	Courses must include calculus and statistics	6
English Writing/Composition		3

Applicants are strongly encouraged to have completed their basic science requirements at the time of application. No specific major is required, however, demonstrated ability in the sciences is of great importance. In addition, applicants are advised to take advantage of the intellectual maturation afforded by a

well-rounded liberal arts education. English, the humanities, and the social and behavioral sciences are considered particularly important. The following courses are also recommended but not required: molecular biology, cell biology, genetics, vertebrate embryology, psychology, and Spanish.

3. The Medical College Admission Test (MCAT), <http://www.aamc.org/students/mcat/start.htm>, is required. The MCAT must be taken within three years of application, no later than September of the year prior to matriculation.
4. A criminal background check is conducted on all accepted applicants.
5. All students matriculating to the UCI School of Medicine must be able to meet the Technical Standards available for viewing at <http://www.meded.uci.edu/Admissions/TechnicalStandards.html>.

OUTREACH

Outreach efforts coordinated by this office are designed to introduce students to the medical profession during their high school and undergraduate education. An additional goal of this office is to build a pipeline of potential candidates for medical school and recruit students from socio-economically disadvantaged groups who have a desire to serve in the medically underserved communities in California. To reach these goals, programs are developed and implemented for students in high school, community colleges, and four-year undergraduate institutions. Examples of these activities include a Postbaccalaureate Program, Premedical Conferences, and Summer Outreach Programs. Outreach staff conduct academic advising related to the medical school admissions process and develop liaisons with UCI undergraduate academic programs and pre-health advisors.

Medical Student Advisor System

The School of Medicine provides a comprehensive academic advising and assistance program that spans the full duration of the students' educational program.

Academic Skills Assessment

All entering students undergo an academic skills assessment during the new student orientation. Students then meet individually with the associate dean for student affairs, the academic skills coordinator, and the School of Medicine psychologist to discuss study skills, early performance, and overall adjustment to medical school. Additional services are provided on an as-needed basis by the academic skills coordinator and the SOM psychologist.

Academic Advisors

Michael Prislín, M.D., Associate Dean Student Affairs (949) 824-8358

Student academic performance during the first two years is monitored on a monthly basis by the Educational Support Committee. The committee develops specific action plans for each student experiencing academic difficulty. All students are also assigned a faculty advisor beginning early in their first year. This faculty advisor serves as the student's Clinical Foundations course small-group leader during years one and two. For years three and four, academic advisement occurs primarily via continuing interactions with the student's faculty advisor and the associate dean for student affairs. Also during years three and four, the Educational Support Committee consisting of the Clinical Clerkship Directors periodically reviews student performance. The faculty advisor provides semi-annual reviews and formative feedback regarding student performance as well as general counseling relating to emerging career preferences and year-four scheduling. Students also have access to a group of faculty from various departments who have agreed to provide specialty-specific academic advice in their disciplines. Several workshops are conducted during the second half of year

three and early in year four to prepare students for the residency application process. All students also meet individually with the associate dean for student affairs to review their Medical Student Performance Evaluation (dean's letter) and discuss individual residency application strategies. Additional resources are involved on an as-needed basis by the associate dean for student affairs.

Peer Review and Peer Counseling Program

Michael Prislin, M.D., Chair (949) 824-8358
Associate Dean Student Affairs

The School of Medicine has an informal peer review process, aimed at early detection and assistance for medical students who are experiencing difficulty such as professional conduct problems, suspected impairment, violation of the honor code, or violation of any University policy, regulation, or rule. The Peer Review Committee is comprised of two representatives from each class, the student body co-presidents, and two advisory faculty members. The committee operates within guidelines set jointly by the School of Medicine administration and the student body. Cases involving serious professional misconduct are referred to the Dean's Office. The Peer Review Committee conducts hearings and may impose sanctions or provide assistance to the student.

Medical Scientist Training Program (M.D./Ph.D.)

Alan Goldin, M.D., Ph.D., Chair (949) 824-5264

Exceptionally well-qualified students interested in careers in academic medicine and with demonstrated research accomplishments may be considered for admission to the Medical Scientist Training Program (MSTP). Students in this program pursue a combined curriculum for an M.D. degree from the School of Medicine and a Ph.D. degree from any of the graduate programs at UCI. The normative time for completion of the program is eight years, and students holding either degree are not eligible for MSTP. The maximum time for completion of the program is 10 years. Additional information is available from the MSTP Coordinator's Office, (949) 824-5264; mstp@uci.edu; <http://www.mstp.uci.edu/>.

Applicants must submit a supplementary application (available from the School of Medicine Office of Admissions) to the Medical Scientist Training Program when they are submitting their secondary application information to the School of Medicine. Students accepted into the program have the option of pursuing graduate study in any of the graduate programs at UCI. Although a specific graduate department need not be chosen at the time of admission, students are expected to have selected a field for their graduate studies. Financial support in the form of a fellowship, which includes a stipend as well as tuition and fees, is provided. Applicants not accepted into MSTP may be considered separately for admission to the School of Medicine.

M.D./M.B.A. Degree Program

Maria Chandler, M.D./M.B.A., Faculty Advisor (949) 824-7133

The M.D./M.B.A. program requires five or six years for completion. It is aimed at individuals who are exceptional in ability and motivation and who seek a career as physicians with major responsibility for administration and management in health care organizations and institutions. Students in this program pursue a combined curriculum for an M.D. degree from the School of Medicine and an M.B.A. degree from The Paul Merage School of Business.

Students must be currently enrolled in the M.D. program in order to apply to the combined M.D./M.B.A. program. During their second or third year of medical school, interested students submit an application to The Paul Merage School of Business Admissions

Committee, after review by the School of Medicine. Final acceptance to the program is granted by The Paul Merage School of Business, and M.B.A. course work begins following completion of the student's third year of medical school. Students should be aware that enrollment in the M.D. program does not guarantee acceptance into the M.B.A. program.

The MCAT, along with the completion of three years of medical school training in good standing and passage of USMLE Step 1, currently serve as a waiver for the GMAT entrance examination usually required for application to the M.B.A. program. The total number of units required to graduate from each program separately are satisfied in the M.D./M.B.A. program.

Program in Medical Education for the Latino Community (PRIME-LC)

Charles Vega, M.D., Director (949) 824-7136

A carefully selected group of students from diverse backgrounds and with superior academic credentials, proven commitment to service, and solid conversational Spanish will be considered for acceptance to the Program in Medical Education for the Latino Community (PRIME-LC) at the UCI School of Medicine. PRIME-LC responds to the increasing demand for physician-leaders who are culturally and linguistically competent to address the health care delivery, research, and policy needs of underserved Latino communities in California. The program spans all three components of medical training: undergraduate (medical school), graduate (residency program), and continuing medical education (post-residency). Students in PRIME-LC complete additional value-added curriculum in addition to their medical training in order to reach their goals of leading communities, and they also complete a Master's degree program of their choice. The first residency positions in any UC PRIME opened in the UCI Family Medicine program in 2010.

The PRIME-LC supplemental application is part of the UCI School of Medicine secondary application and must be completed to be considered for acceptance. Applicants selected for faculty and student interviews are required to undertake a third interview in Spanish to evaluate conversational skills and commitment to service. All interested applicants, including those who are not currently California residents, are encouraged to complete the PRIME-LC application. Financial support is available in the form of scholarships, loans, and loan repayment programs. Applicants not accepted into PRIME-LC may be considered separately for admission to the regular School of Medicine M.D. program. For more information contact (949) 824-7136; primelc@uci.edu; <http://www.meded.uci.edu/PRIMELC>.

The M.D. Curriculum

The UCI medical curriculum continues to meet the changing needs of medical education within all four years of instruction. Indeed, the School of Medicine faculty views curriculum development as a continual process and feels that medical education and teaching innovations must be encouraged and supported. The curriculum is designed to encourage medical students to become participants in their education process, to be active rather than passive learners, to become lifelong learners, and to use cooperative and team-learning principles.

UCI is dedicated to the nurturing of humanistic, caring physicians with top-notch clinical expertise and skills. The School strives for this through a curriculum that is not only anchored in the science of medicine but also provides meaningful experiences in the humanistic dimensions of medicine. In this context, the faculty endeavors to provide students with experiences in areas such as communications and empathy, ethics and professionalism; diversity

awareness; and cultural sensitivity and medical humanities. The faculty also feels that the curriculum should strive to integrate basic and clinical sciences by bringing substantial clinical material into the early phases of medical education.

The School has achieved vertical integration of the curriculum with the development of a series of “Clinical Foundations” courses. The courses are longitudinal multidisciplinary experiences broadly designed to prepare students for their future careers in medicine through the application of experiential and self-directed learning principles. First- and second-year students begin to prepare for their clerkships through clinical exposures featuring standardized patients and clinical tag-along experiences. These courses also utilize small group learning sessions to reinforce core concepts of patient-physician interactions and introductory clinical reasoning skill development. During the Clinical Foundations IV course (years three and four) students explore many of the crucial issues first presented during the introductory courses. During this segment greater emphasis is placed on advanced skill acquisition and more mature professional role development.

To satisfy the requirement for the M.D. degree, each medical student must successfully complete the full curriculum. Students must also pass both Step 1 and Step 2 of the United States Medical Licensing Examination (USMLE) and successfully pass a Clinical Practice Examination (CPX) prior to graduation.

An ongoing academic monitoring program is coordinated by the Office of Student Affairs, which identifies students early who might be experiencing academic difficulty and provides them with resources to successfully complete their course work. Faculty advisors are assigned to students during their first and second years. Students have advisory sessions with M.D. faculty prior to the scheduling of their fourth-year course work. A Learning Resources Program is available to provide tutorial assistance and study skills training. USMLE reviews are also provided.

CURRICULAR POLICIES

The curricular policies of the School of Medicine are the responsibility of the faculty committees on Curriculum and Educational Policy and on Promotions and Honors. A listing of these policies, as well as information regarding registration, rules and regulations, grading procedures, and requirements for academic advancement, are contained in the *School of Medicine Handbook*, which is available at <http://www.meded.uci.edu/Students>.

First and Second Years:

Basic Science and Preclinical Course Work

First Year	Second Year
Clinical Foundations I	Clinical Foundations II
Anatomy and Embryology	Medical Microbiology
Neuroscience	General and Systemic Pathology
Histology	Clinical Pathology
Medical Genetics	Medical Pharmacology
Medical Biochemistry and Molecular Biology	
Physiology/Pathophysiology	
Immunology	

Third- and Fourth-Year Requirements¹

Clinical Foundations III	Clinical Foundations IV
Family Medicine	Emergency Medicine
Inpatient Medicine	Intensive Care Unit
Ambulatory Medicine	Neuroscience
Obstetrics and Gynecology	Radiology
Pediatrics	Senior Subinternship ²
Psychiatry	Electives
Surgery	

¹ The sequence of third and fourth years varies.

² Prerequisite: Inpatient and Ambulatory Medicine.

Curricular Description

FIRST-YEAR CURRICULUM

Clinical Foundations I

Clinical Foundations I, first of the four-part Clinical Foundations series, serves as the introductory clinical medicine course for first-year medical students. Participating students learn core skills in physician-patient communication, medical interviewing, physical examination, and health promotion. The course is horizontally integrated with the basic science curriculum. The series includes a variety of small and large group sessions taught by three types of faculty: core teachers, content theme coordinators, and community preceptors. Students complete multiple medical interviews, physical examinations, and patient write-ups for which they receive feedback designed to improve proficiency. (*Med Ed 554A-B-C*)

Anatomy and Embryology

The structure of the human body is taught in Anatomy and Embryology. Emphasis is placed on normal structure as it relates to function, with consideration of abnormal structures that may be revealed in a clinical setting. Anatomy is taught through a regional approach, with an emphasis on laboratory dissections and demonstrations, augmented by lectures, radiographic films, discussions, and clinical correlate material. The course includes a detailed consideration of the embryologic aspects of human development. (*Med Ed 500A-B*)

Neuroscience

The objective of this course is to provide students with the fundamental concepts, vocabulary, and learning strategies to attain a level of proficiency in basic integrative neurosciences so that they will develop an understanding in the clinical neurosciences throughout their careers as physicians. The course is integrative in the sense that the underlying knowledge of molecular, cellular, physiological, developmental, and neuroanatomical organization of the nervous system is brought together in each lecture block with clinical themes and examples in lectures, and which is further reinforced by clinical correlates given by clinicians. The course emphasizes knowledge of the nervous system using lessons from clinical neuroanatomy, systems neurosciences, and regional and developmental neuroanatomy. The course uses the Blumenfeld text, Haines atlas, wet lab handouts, and the Neurosyllabus CD, which are all geared toward mastering this multiple strategy to the study of the human nervous system. (*Med Ed 502A*)

Histology

Histology is designed to provide students with knowledge of the major features of the structural organization of cells, tissues and organs, and how that organization is related to function. Course material consists of lectures, clinical correlate discussions, and group/independent study of images. Emphasis is placed on normal structure and function, with consideration of abnormalities in clinical cases. (*Med Ed 503A-B*)

Medical Genetics

Medical Genetics reviews the basic principles of human genetics related to disease. Assessment of patterns of genetic risk, screening for genetics diseases, and cytogenetics and biochemical diagnosis are presented. Utilization of the human gene map and DNA sequence information for molecular genetic diagnosis are discussed. Students are introduced to the use of genetic databases and bioinformatics. Approaches to treatment of genetic diseases are presented. Legal, ethical, and social aspects of diagnosis and management of genetic disease are discussed. (*Med Ed 511*)

Medical Biochemistry and Molecular Biology

Covers the following topics from a biomedical perspective: protein and nucleic acid biochemistry, carbohydrates, lipids, amino acids, purines and pyrimidines, genome structure, molecular mechanisms of development, and signal transduction. (*Med Ed 522*)

Physiology/Pathophysiology

This course consists of lectures, clinical correlates, hands-on workshops, small group discussions, and exercises in the simulation center covering the classical concepts of medical physiology. Specific topics include hemostasis, blood, neurophysiology, cardiovascular, respiratory, renal, gastrointestinal, endocrine, exercise, temperature regulation, and sexual physiology. Prerequisite: Medical Biochemistry and Molecular Biology. (*Med Ed 543A-B*)

Immunology

Immunology covers the cellular and molecular basis of immune responsiveness and the roles of the immune system in both health and disease. The material is presented in lectures and clinical correlates, as well as in a set of printed core notes. Also included are a number of Patient-Oriented Problem Solving (POPS) sessions in which participation is required. (*Med Ed 544*)

SECOND-YEAR CURRICULUM

Clinical Foundations II

Clinical Foundations II, second of the Clinical Foundations series, builds second-year medical students' clinical skills. Students learn advanced skills in history-taking, physical diagnosis, and clinical reasoning. Clinical didactics sessions synthesize learning in the clinical and basic sciences. The course is comprised mostly of small-group sessions taught primarily by three types of faculty: core clinical teachers, community clinical teachers, and content theme coordinators. With these faculty, students work on focused, guided practice of clinical skills that integrates basic science course work. About a third of the course is in the form of large group clinical didactic and interactive sessions to synthesize clinical and basic sciences. (*Med Ed 555A-B*)

Medical Microbiology

This course covers the biology of infectious agents, including viruses, bacteria, fungi, and parasites, to provide the foundation in microbiology for the subsequent study of infectious diseases. Lectures, small group sessions with clinicians, and laboratory sessions are used to teach the molecular bases of microbial pathogenesis, diagnostic testing, antimicrobial therapy, and prevention strategies. Prerequisite: first-year curriculum. Graduate students must have approval of the course director and enroll through the Department of Microbiology and Molecular Genetics. (*Med Ed 507A, B*)

General and Systemic Pathology

This course deals with basic causes, mechanisms, and consequences of disease processes and with some applications of these considerations to clinical medicine. After an introduction to general types of disease processes, these processes are studied further as they affect specific organs and organ systems. Prerequisite: first-year curriculum. (*Med Ed 508A-B-C*)

Clinical Pathology

This course consists of lectures and laboratories covering the areas of hematology, blood bank, clinical chemistry, and microbiology. It provides students with a foundation for understanding the pathogenesis of a variety of disease states, as well as a foundation for the proper use of the laboratory for diagnosis and optimum patient management. Prerequisite: first-year curriculum. (*Med Ed 509A-B*)

Medical Pharmacology

This course covers the various classes of drugs that are used in medicine, particularly those used in specific or symptomatic treatment of disease states. Drugs of abuse are also covered. Emphasis is on the mechanisms of action of drugs at the organ and system level and on their use in medicine. The course includes lectures that illustrate pharmacologic principles, supplemented by small group problem-solving sessions. Prerequisites: Biochemistry and Physiology. (*Med Ed 517A-B-C*)

THIRD- AND FOURTH-YEAR CURRICULUM

Clinical Foundations III

The final part of the Clinical Foundations series is a one-month, full-time block rotation at the beginning of the third year in which all students participate five days per week. Taught by the Clinical Foundations core teachers and selected full-time faculty volunteers, Clinical Foundations III provides comprehensive preparation for third-year clinical rotations. Every morning and afternoon, students participate in hands-on exercises and labs addressing (1) course overview, medical professionalism (large-group session); (2) advanced clinical skills (small groups); and (3) hands-on technical skills (small groups). (*Med Ed 550*)

Obstetrics and Gynecology Clerkship

During this eight-week clerkship, students are taught an introduction to reproductive physiology and clinical obstetrics and gynecology. Practical experience is obtained throughout the rotations of labor and delivery, gynecology, and the outpatient clinic. In addition, students have an elective choice between gynecologic oncology, high-risk obstetrics, and gynecologic surgery. Required third-year rotation. (*Med Ed 524*)

General Surgery Clerkship

The General Surgery clerkship provides students, as members of the surgical team, with an opportunity to study surgical patients in outpatient and hospital settings. Students acquire surgical knowledge, as well as develop skills in taking surgical histories and conducting physical examinations. Emphasis is placed on the clinical evaluation, pathogenesis, diagnosis, and treatment of surgical diseases. Students spend six weeks on general surgery (three weeks each at UC Irvine Medical Center and Veterans Affairs Long Beach Healthcare System) and one week on one of the subspecialties (urology, ENT, orthopaedics, or plastic surgery). (*Med Ed 526*)

Inpatient and Ambulatory Medicine Clerkship

The clerkship occurs in a highly structured clinical environment in both in-patient and ambulatory settings. Students gradually assume responsibility for the care of patients, thereby enhancing their clinical, diagnostic, and procedural skills. Clinical vignettes and bedside teaching serve to round out the experience. Required third-year rotation. (*Med Ed 527A, 527B*)

Pediatrics Clerkship

The pediatrics clerkship serves as an introduction to general pediatrics. Students rotate on the pediatric inpatient service, pediatric ambulatory settings, and the newborn nursery. During the clerkship, students develop their knowledge and skills in conducting age-appropriate patient histories and physical examinations and developing differential diagnoses and management plans. (*Med Ed 528*)

Psychiatry Clerkship

This six-week clinical clerkship provides an opportunity for hands-on experience in the process of recognizing, diagnosing, and treating mental illness using the latest neuropharmacological advances in brain research as well as more traditional psychotherapeutic approaches. Each student participates fully in patient care, clinical

teaching, and conferences. There are several choices of clinical settings for the rotation, including adult inpatient psychiatry, adolescent inpatient psychiatry, consultation and emergency psychiatry, adolescent partial hospitalization program, and a variety of substance abuse and ambulatory experiences. The sites include UC Irvine Medical Center and Veterans Affairs Long Beach Healthcare System. A required lecture series is presented on Wednesday afternoons at UC Irvine Medical Center, as well as problem-based learning cases on Friday afternoons. (*Med Ed 529*)

Neuroscience Clerkship

UCI students are required to take a four-week neuroscience clerkship during either their third or fourth year. Students are encouraged to do this in the third year as it will be useful for the USMLE Step 2 examination. Extramural students may take the course as an elective if a slot is available. This clerkship emphasizes the development of skills in taking a neurological history and performing a neurological examination, formulating a differential diagnosis, and proposing a course of management for neurological disorders. (*Med Ed 532*)

Radiology Clerkship

This core clerkship consists of daily clinical film conferences, didactic lectures, and Web-based laboratory. Radiology conferences inter-relate general medicine, surgery, and radiology. Emphasis is given to correlate clinical findings and use the imaging modalities for problem-solving and diagnosis and treatment, including an understanding of risk/cost/benefit ratio involved in daily clinical practice. (*Med Ed 533*)

Clinical Foundations IV

This is a two-week required course that all fourth-year students take during the month of March. The students prepare presentations for their peers and faculty that integrate basic science and clinical science. The course also prepares the students for residency and provides them with an opportunity to obtain ACLS certification. (*Med Ed 535*)

Senior Subinternship

Students spend four weeks as subinterns during which time they carry the full ward responsibility of an intern on one-half the number of patients usually carried by an intern. The subinternship is designed to improve clinical competence and to prepare the students for the challenges and demands of the internship. Students may choose between subinternships in medicine, surgery, or pediatrics. (*Med Ed 536, 537, 538, or 539*)

Family Medicine Clerkship

This clerkship matches students with a family physician for a four-week block. Students are assigned to a UCI-affiliated clinic where the principles of family medicine and primary care are taught. Emphasis is placed upon exposing students to the 25 most common health care problems seen in family medicine. Students are exposed to the principles of community health and epidemiology, as practically applied in an ambulatory care setting. Students develop an awareness of the current health care delivery environment, including issues such as health care costs and the lifestyle of a family physician. Special tracks are available for interested students in geriatrics, integrative medicine, and underserved care. Special teaching sessions on family centered maternity care, health maintenance and nutrition, and musculoskeletal joint exams are part of the experience. A curriculum in ophthalmology is also part of the clerkship. Prerequisites: successful completion of the first- and second-year curriculum. (*Med Ed 597*)

Intensive Care Unit

This is a four-week rotation offered at UC Irvine Medical Center and Veterans Affairs Long Beach Healthcare System. ICU is offered in medicine, surgery, and anesthesiology. Students function as subinterns, becoming integral members of the ICU team, and serve as primary caregivers under supervision. (*Med Ed 605B, 630K, 633M, or 685U*)

Emergency Medicine

The objectives of the Emergency Medicine clerkship are to introduce students to principles of acute care medicine while caring for acutely ill and injured patients. Students have the opportunity to evaluate patients, expand their directed history and physical making skills, create a broad differential diagnosis, and formulate effective testing and treatment strategies. Active participation in patient care through refinement of procedural skills is largely emphasized and encouraged. The course consists of experiences in direct patient care, assigned readings from emergency medicine references, weekly conferences, and an end-of-rotation final examination. (*Med Ed 630D*)

ELECTIVES

Depending upon their particular interests, needs, and goals, students may take a variety of elective courses consisting of at least 30 contact-hours per week during the third and fourth years. Electives must be approved by the clinical faculty advisor. Students may take up to 20 weeks of their fourth-year course work (core/electives) at institutions other than UCI.

A listing of elective courses and descriptions can be found online at <http://www.meded.uci.edu/elective>.

All questions regarding the curriculum, electives, or matters of records should be directed to:

**University of California, Irvine
School of Medicine
Office of Educational Affairs
Medical Education Building
Irvine, CA 92697-4089**

General information/records: (949) 824-6138; scheduling: (714) 456-8462; curriculum: (949) 824-4609.

Office of Educational Affairs

Gerald A. Maguire, M.D., Senior Associate Dean (949) 824-5798

The Senior Associate Dean for Educational Affairs, in cooperation with the Academic Senate faculty, has responsibility for administrative oversight of the educational program leading to the M.D. degree, the postgraduate residency programs, and continuing medical education programs provided for practicing physicians and allied health personnel. The Senior Associate Dean also has administrative oversight responsibility for the Office of Admissions and Outreach. The Office of Undergraduate Medical Education provides services for the M.D. program which include curriculum development, implementation, management, and evaluation. The Office of Student Affairs provides student support services which include academic advisement, learning skills counseling, psychological counseling, career counseling, and student records, and coordinates additional services offered through general University offices which include housing, student health, and disabled student services.

Student Affairs

Michael Prislín, M.D., Associate Dean (949) 824-8358
 Barbara Lutz, Registrar, Director (949) 824-5283
 Marianne Ross, Ph.D., Counseling Psychologist (949) 824-4621
 Geraldine Codd, Academic Skills Coordinator (949) 824-3415

The mission of the Office of Student Affairs is to create an environment within the School of Medicine community that fosters student attainment of the School of Medicine educational objectives. This is accomplished through assuring that student participation in the educational program occurs in a manner consistent with School of Medicine policies and regulations, and through the provision of support services that facilitate optimal student participation in the educational program. To accomplish the educational assurance mission, the Office of Student Affairs disseminates information regarding academic policies and regulations, provides administrative and executive support for the faculty Committee on Promotions and Honors, and facilitates the institutional recognition of student achievement through the conduct of various School of Medicine events. To accomplish the educational support mission, the Office of Student Affairs provides academic, personal, psychological, career, and financial counseling; academic skills assessment and learning resources support, student wellness programs, student facilities support, initiatives to enhance the learning environment, and support for a variety of student organizations and informal activities.

Financial Aid

Luis Medina, Director (949) 824-6476

The UCI School of Medicine Financial Aid Office provides financial assistance and financial counseling services to entering and continuing medical students. The office secures, manages, and provides funds in the form of scholarships, grants, and loans to assist in meeting students' educational expenses.

The office coordinates financial aid application materials; tracks documents needed to complete an application; reviews and evaluates information provided by applicants; awards financial aid programs; and conducts research to determine basic educational expense budgets. It also provides students with information on policies and procedures, cost of attendance, and eligibility criteria.

In providing counseling services, the office advises students, reviews their individual circumstances, and provides financial assistance within financial aid program guidelines. It presents financial aid workshops for prospective and enrolled students to enhance their knowledge about financial aid programs and the application process, provides debt management counseling, and conducts entrance and exit interviews.

Curricular Affairs

Shahram Lotfipour, M.D., M.P.H., Associate Dean, (949) 824-6138
 Clinical Science Education
 Harry T. Haigler, Ph.D., Associate Dean, (949) 824-6304
 Basic Science Education

This office provides support related to curricular issues for the School of Medicine, departments, faculty, and students; initiates curriculum review and innovation to meet the challenges of contemporary medical education; establishes and reviews the objectives of the School of Medicine and ensures individual courses are teaching to meet the objectives; serves as facilitators of new programs and curriculum and supports working committees during curriculum development; facilitates and monitors curriculum content theme integration; and maintains records on course materials and grading policies. This office is responsible for curriculum documentation for review by the Curriculum and Educational Policies committee; the collection of course evaluations by students; maintaining accurate information on core and elective curriculum; and assessing the success of the current programs.

Instructional Technology Group

Warren Wiechmann, M.D., Faculty Director (949) 824-6138
 Armando Gauna, MACC Director (949) 824-1215

The Medical Academic Computing Center (MACC) was established for the instructional use of computing and to further educational objectives by providing medical instructional software that is integrated into the curriculum for numerous courses, including Histology, Pathology, Medical Genetics, Neurosciences, and Anatomy. The Center, which has extended evening and weekend hours, provides students access to Internet resources and productivity applications. Students benefit by utilizing anatomical visualization software, self-administered practice examinations, as well as by having access to e-mail and many online medical information resources. Students complete much of their course write-ups in the Center, where they have access to word processing programs and printers. MACC offers audiovisual support for course material and Scantron grading services in addition to managing and supporting the computer systems in the Student Training Center.

Continuing Medical Education

Bonnie Carroll, Director (949) 824-9163
 Elena Gilliam, Regularly Scheduled Conference Manager (949) 824-4220

The Office of Continuing Medical Education provides educational activities to physicians and other health care professionals to reinforce basic medical knowledge, improve competency, and enhance performance-in-practice and outcomes of patient care. Additionally, these activities impart updated information on clinical practice and health care delivery; introduce new ideas, skills, and technology; and disseminate pertinent research findings. The program encompasses a broad and comprehensive range of topics based on identified gaps in the needs of the communities served. As an academic center of excellence that includes the UC Irvine Medical Center, emphasis is placed on the identification of areas for improvement through the system's Quality Improvement Department for which CME is a change-agent.

Graduate Medical Education

Russell Williams, M.D., Associate Dean (714) 456-3526
 Nancy Koehring, Director, (714) 456-3526
 Postgraduate Medical Education and Community Programs

The UCI School of Medicine Graduate Medical Education Training Programs attract medical students from prestigious medical schools nationwide. UCI offers 42 ACGME-approved residency and fellowship training programs. There are approximately 600 residents and fellows in these training programs. UC Irvine Medical Center, Veterans Affairs Long Beach Healthcare System, and Long Beach Memorial Medical Center are the integrated training sites for the residency programs. Other affiliations such as Kaiser Anaheim, Kaiser Riverside, Western Medical Center, City of Hope, Children's Hospital of Orange County, and Children's Hospital Los Angeles offer additional residents training in specialized fields.

POSTGRADUATE EDUCATIONAL PROGRAMS

Residency Programs

The School of Medicine and its affiliated hospitals offer approximately 650 residency positions in almost all areas of medicine. Training levels range from first-year residencies through seventh-year-level subspecialty fellowships. Inquiries about specific programs should be directed to the Program Director as listed in the *Directory of Residency Training Programs*, published each year by the American Medical Association, or to the chair of the appropriate School of Medicine department.

All residency programs meet the formal standards of the Accreditation Council for Graduate Medical Education and the appropriate specialty boards. UCI adheres to the Health Professions Educational Assistance Act of 1976, P.L. 94-484, Section 709, regarding shared-schedule residency training positions.

Residents in all programs rotate to UC Irvine Medical Center at some time. Residents in anesthesiology, dermatology, diagnostic radiology, medicine, neurology, ophthalmology, pathology, surgery, physical medicine and rehabilitation, radiation oncology, family medicine subspecialties of medicine, orthopaedics, otolaryngology, urology, and psychiatry also rotate to the Veterans Affairs Long Beach Healthcare System. Residents in medicine, medicine subspecialties, anesthesiology, radiation oncology, psychiatry, obstetrics and gynecology, pathology, pediatrics, physical medicine and rehabilitation, plastic surgery, and surgery also rotate to the Memorial Hospital Medical Center/Miller Children's Hospital in Long Beach. In 2009, UCI established an affiliation with the Children's Hospital of Orange County (CHOC), which will be a major training site for a combined program in pediatrics. Residents may also spend periods of time at other affiliated hospitals and clinics.

ANESTHESIOLOGY

The Anesthesiology Residency Program is a five-year accredited categorical program. It offers training for residents at the postgraduate PG-1 to PG-4 levels. The residents spend a PGY-1/Clinical Base Year in intensive medical/surgical training at Long Beach Memorial Medical Center, Veterans Affairs Long Beach Healthcare System, and UC Irvine Medical Center. The PGY-2 through PGY-4 years involve broad clinical training at the UC Irvine Medical Center as well as rotations in affiliates at Children's Hospital of Los Angeles (two months), Cedars-Sinai Medical Center (two months), Long Beach Memorial (two months) and the Veterans Affairs Long Beach Healthcare System (two months). Training is offered in general anesthesia, regional anesthesia, cardiac anesthesia, pediatric anesthesia, trauma anesthesia, neurosurgical anesthesia, ambulatory anesthesia, obstetric anesthesia, intensive care, and pain management. Electives in subspecialty training in obstetrical anesthesia, critical care medicine, pediatric anesthesia, pain management, cardiac anesthesia, or research are offered as part of the PGY-4 year.

DERMATOLOGY

The Department of Dermatology offers a three-year accredited residency which has fifteen residents, five for each of three postgraduate years. Residents rotate through clinics at UC Irvine, the Veteran Affairs Long Beach Healthcare System, and Kaiser Permanente and receive extensive training in medical and surgical dermatology and are active in research projects. Residents rotate through specialty clinics which see patients with immunobullous disease, pigmentary disorders, venous disease, vascular birthmarks, pediatric disorders, and melanoma. Residents receive extensive training in Mohs surgery, laser techniques, excisional surgery, performance of flaps and grafts, and administration of cosmetic agents. Residents present at local, national, and international meetings.

EMERGENCY MEDICINE

The Emergency Medicine residency was established in 1988 and has full accreditation by the Residency Review Committee. The program has 18 residents, six for each of three postgraduate years. The UC Irvine Medical Center Emergency Department is a high-acuity, Level I Trauma Center, treating over 39,000 patients annually. Thirteen board-certified emergency medicine faculty provide 24-hour patient care and supervision of residents and medical students. The Department of Emergency Medicine is active in disaster preparedness and response, emergency uses of ultrasound imaging, public affairs, community service, and research in the areas of prehospital care, instructional methods, trauma, health policy, and infectious disease, among others.

FAMILY MEDICINE

The mission of the Family Medicine Residency Program is to train family physicians to succeed in a contemporary practice environment and to deliver high-quality medical care to a culturally and socioeconomically diverse patient population. This fully accredited program boasts 27 residents and offers training in a variety of settings. The residents' continuity clinic is located in the largest community clinic in Orange County, and residents participate in a number of community outreach activities. The world-class faculty act as teachers and mentors to the residents and teach them important principles to help them succeed as professionals. The residency program is a leader in a variety of curricular endeavors including school outreach, training residents how to teach, the business of medicine, sports medicine, and much more. The hundreds of successful residency graduates in the local area are a testament to the program's ongoing efforts to train outstanding family doctors.

GERIATRICS

The Geriatrics Fellowship is a comprehensive one-year training program that has been accredited since 1991, providing eligibility for Geriatric Medicine specialization for Internal Medicine and Family Medicine physicians. Fellows receive training at UC Irvine Medical Center as well as affiliated sites, including Veterans Affairs Long Beach Healthcare System, and alternative community care environments for seniors. Fellows have longitudinal experiences in high-quality skilled nursing facilities, assisted living facilities, a comprehensive, multidisciplinary assessment program, and primary care practices. Clinical training in geropsychiatry is provided in a 17-bed geropsychiatry unit located at UC Irvine Medical Center, as well as in an outpatient setting.

INTERNAL MEDICINE

The internal medicine residency program is a traditional three-year training program and also sponsors a one-year preliminary program. The program focuses on core educational skills of the internist and offers pathways for primary care, hospitalist medicine, and research. Residents rotate through UC Irvine Medical Center, the Veterans Affairs Long Beach Healthcare System, and Long Beach Memorial Medical Center. Core program faculty have a special interest in academic internal medicine and education. Subspecialty fellowships are offered in basic and clinical immunology, cardiology, endocrinology and metabolic diseases, gastroenterology, hematology/oncology, infectious diseases, nephrology, pulmonary/critical care diseases, and rheumatology.

INTERVENTIONAL RADIOLOGY

The Department of Radiological Sciences offers a one-year, clinically oriented fellowship in Interventional Radiology. Training in this discipline involves a broad range of vascular and interventional radiology procedures including interventional CT and Ultrasound. The fellow will also have the opportunity and option to participate in neuroradiological procedures including neurovascular intervention. The fellow is encouraged to participate in ongoing research projects and publications. The Vascular and Interventional Fellowship Program at UCI is ACGME accredited.

MEDICAL GENETICS

UCI offers two Medical Genetics residency training programs. The first is a two-year categorical Medical Genetics residency that is straight Medical Genetics and requires prior satisfactory completion of 24 months of the ACGME-accredited residency training in a specialty other than Medical Genetics. At the end of the program a trainee should be eligible to take the American Board of Medical Genetics (ABMG) examinations. The second program is a five-year combined Pediatrics/Medical Genetics training program that devotes two and one-half years each to Pediatrics and to Medical Genetics. Usually, the first year is all Pediatrics, the last year is all Medical Genetics, and the middle three years alternate between Pediatrics and Medical Genetics for periods of three-six months each. After successful completion of the program the trainee will be eligible to take both the Pediatrics boards and the Medical Genetics boards. The number and content of genetics rotations that the combined Pediatrics/Genetics residents do are identical to those of the categorical genetics residents except that there is an additional six months of genetics time that is expected to be devoted to research or to training in a specialized area of genetics in which the resident intends to

devote his or her career. This extra is flexible but must be spent in academic pursuit. Training utilizes three teaching hospitals: UC Irvine Medical Center, Children's Hospital of Orange County, and Long Beach Memorial Medical Center/Miller Children's Hospital. Research offices and laboratories are on the UCI main campus.

NEONATAL-PERINATAL MEDICINE

UCI offers a three-year fellowship in Neonatal-Perinatal Medicine, accredited by the Accreditation Council for Graduate Medical Education (ACGME). The program provides a well-rounded curriculum that balances between clinical experiences, teaching opportunities, and academic and scientific activities. The program offers variety and depth due to the diversity of the two major training sites—UC Irvine Medical Center and Long Beach Memorial Medical Center/Miller Children's Hospital. The care of newborns seen through the two hospitals represents a cross-section of racial, cultural, and socioeconomic groups from a local population of more than 2.5 million. These two sites represent a broad-spectrum of neonatal practice and offer excellent opportunities to learn and teach. Clinical and basic science research conducted by the faculty in the section gives the fellow the ability to gain skills in scientific investigation. The program's superb physical environment, extraordinary clinical services, and varied research interests permit the faculty to carry out the mission of preparing neonatal fellows for a career in clinical or academic neonatology. In addition, the program collaborates clinically and through research with a superb fellowship training in Maternal-Fetal Medicine that is also based at the two institutions. The Neonatal-Perinatal Medicine Fellowship training consists of 14 months of direct patient care responsibilities, 19 months of research training, and three months of vacation.

NEUROLOGY

Neurology residency training focuses on the development of strong clinical skills to competently evaluate and treat the large number of disorders that afflict the nervous system. During three years of training at UCI, residents have the opportunity to see a wide variety of neurological conditions and receive progressively more responsibility. The program provides a rich, intellectually stimulating environment in which to learn. UCI Neurology faculty all have broad experience caring for neurological disorders and have special expertise in different neurological disciplines. Residents have opportunities to work in many different subspecialty areas with the faculty. The neurology residency program is big enough to provide a rich environment to learn about neurological disorders, yet remains small enough for residents to work closely with each faculty member. Residents are encouraged to learn at every opportunity: from patients, peers, the faculty, and visiting experts. There are many formats in which to learn, from bedside discussions, tutorials, to specially prepared lectures. To further stimulate intellectual growth, residents are actively encouraged to pursue research in any topic of their choosing, with the guidance of the faculty.

NEUROSURGERY

The UCI Residency Program in Neurosurgery is a rigorous training program designed to develop academic neurosurgeons. There are ample opportunities for both clinical and basic research within the Department and in collaboration with other laboratories or departments at UCI. Applicants are expected to have a strong academic record with a strong commitment to neurosurgery. One candidate is selected for each program year. Exact order of clinical rotations may vary slightly subject to the trainee's previous experience and needs as well as the training program circumstances, however, the rotation generally proceeds as follows: the PGY-1 year is a nine-month general surgery rotation with three-months of neurology; PGY-2 is one year of training at UC Irvine Medical Center; PGY-3 is a six-month rotation at Kaiser Permanente, Anaheim, followed by three-months of neuropathology and three-months of neuroradiology at UC Irvine Medical Center; PGY-4 is a six-month rotation at Children's Hospital of Orange County (CHOC) and a six-month rotation at Kaiser Permanente, Anaheim; PGY-5 is a research year; PGY-6 is a three-month rotation at Hoag Memorial Presbyterian Gamma Knife Center for stereotactic radiosurgery and a three-month elective (Interventional Radiology or Spine) at UC Irvine Medical Center and a six-month rotation at CHOC; PGY-7 is the chief resident year and will be at UC Irvine Medical Center. Invitations to interview for these positions are based on the candidate's academic record, National Board scores, publications, letters of recommendation, and a personal statement.

OBSTETRICS AND GYNECOLOGY

This four-year program provides a solid foundation in Obstetrics and Gynecology with emphasis in the reproductive pathophysiology in the many different areas of women's health care. Based on this foundation, training continues with progressive resident responsibility for operative and medical management and surgical techniques. While predominantly clinical in scope, the program is strongly flavored by academic and research exposure. Training is provided in general obstetrics and gynecology with rotations in the subspecialties of perinatology, urogynecology, family planning, gynecologic oncology, and reproductive endocrinology. There are six resident positions available each year in this four-year training program.

OPHTHALMOLOGY

The three-year Ophthalmology Residency Program provides extensive clinical and surgical experience coupled to an excellent weekly didactic curriculum. The program provides a broad spectrum of ophthalmic disease management with extensive exposure and surgical experience in the full range of ophthalmology subspecialties. Residents have rotations in cornea and refractive surgery, vitreoretinal surgery, oculoplastic and orbital surgery, glaucoma, pediatric ophthalmology and strabismus, ophthalmic pathology, and neuro-ophthalmology, in addition to comprehensive ophthalmology clinics. Residents also receive instruction and practical application in the newest laser surgical techniques as well as the use of state-of-the-art diagnostic equipment.

ORTHOPAEDIC SURGERY

The Department of Orthopaedic Surgery Residency Program is a four-year training program which follows an internship year in the Department of General Surgery. The program is designed to provide intense exposure and experience in all areas of orthopaedics including trauma, reconstructive and joint replacement surgeries, pediatric orthopaedics, spine surgery, sports medicine, foot surgery, and rehabilitation. It is structured for maximum resident participation with an emphasis on personalized mentorship. The program's teaching hospitals include UC Irvine Medical Center, Veterans Affairs Long Beach Healthcare System, Children's Hospital of Orange County, and Kaiser Permanente Medical Center in Anaheim. There are four resident positions available each year.

OTOLARYNGOLOGY—HEAD AND NECK SURGERY

The Department of Otolaryngology—Head and Neck Surgery offers a five-year residency program providing comprehensive training in otolaryngology to prepare trainees to sit for the American Board of Otolaryngology Examinations. The five-year program provides a breadth of training in otological surgery, head and neck surgery, facial plastic surgery, pediatric otolaryngology, and nasal and paranasal sinus surgery. Residents receive an extensive clinical experience at UC Irvine Medical Center, Children's Hospital of Orange County, Veterans Affairs Long Beach Healthcare System, and Kaiser Foundation Hospital-Anaheim. Acceptance is through application and successful matching through the National Residency Matching Program. The program follows requirements set by the Accreditation Council for Graduate Medical Education.

PAIN MEDICINE

The Fellowship Training Program in Pain Medicine at the UC Irvine Medical Center is an intensive one-year ACGME-accredited multidisciplinary training program sponsored by the Department of Anesthesiology and Perioperative Care. The fellowship boasts a multidisciplinary faculty with both Anesthesiology and Physical Medicine and Rehabilitation leadership. The program trains fellows who have completed a residency training program in Anesthesiology, Physical Medicine and Rehabilitation, Neurology or Psychiatry, although applicants from other fields may also apply. Truly interdisciplinary, the fellowship teaches interventional pain management, opioid and adjunctive medication management, as well as non-interventional pain management. Personalized physical and occupational therapy, off-loading therapy, electroacupuncture, electrodiagnostics, psychologic and cognitive therapies, and regional anesthesia are common treatment modalities at UCI that are also taught during the fellowship. The fellows also rotate through rehabilitation medicine, anesthesiology, neuroradiology, palliative care, neurology, and psychiatry.

PATHOLOGY

The Department of Pathology and Laboratory Medicine offers a residency training program covering all areas of anatomic and clinical pathology. The program is affiliated with Long Beach Memorial Medical Center and Veterans Affairs Long Beach Healthcare System. The training for the combined anatomic and clinical pathology program consists of four years of training in both anatomic and clinical pathology. The first three years consist of a core program providing exposure to each of the subspecialty areas of clinical pathology as well as surgical pathology, autopsy pathology, and cytopathology. Ample opportunities for research and teaching exist for individuals planning on an academic career. Excellent preparation is also provided for individuals planning on a career in forensic pathology or private practice in a community hospital.

PEDIATRICS

The Pediatric Residency Program emphasizes the interrelationship of patient care, didactic teaching, and research in the training of the pediatric resident physician. The focus is on the total care of the child from birth through young adulthood. A strong clinical and educational foundation is provided through experiences in a broad spectrum of disease and/or injury as well as training in biosocial pediatrics, preventive health care, and community resources.

The program offers variety and depth due to the diversity of the Department's major teaching hospitals—Children's Hospital of Orange County, Miller Children's Hospital (located at Long Beach Memorial Medical Center), and UC Irvine Medical Center. The faculty at these institutions provides a comprehensive teaching program in general pediatrics and cover the full range of pediatric subspecialties. The care of children seen through the two hospitals represents a cross-section of racial, cultural, and socioeconomic groups from a local population of more than 2.5 million. Thus, pediatric residents are exposed to a wide range of problems presented in settings ranging from intensive care to supervised office-based practice.

PHYSICAL MEDICINE AND REHABILITATION

The Department of Physical Medicine and Rehabilitation offers a three-year residency for applicants who have completed a one year internship. The focus is on the diagnosis and comprehensive treatment and care of patients with neuromusculoskeletal or cardiopulmonary disabilities, from newborns to the elderly. Residents are also involved in research and medical student teaching.

PLASTIC SURGERY

The Aesthetic and Plastic Surgery Institute of UCI has a fully integrated residency program. The program currently accepts two residents for a six-year educational training experience in Plastic Surgery. The goals and objectives of this program are to educate plastic surgeons who are analytical and scholarly in their approach to surgical problem solving, broadly experienced in all fields of the specialty, safe in their application of judgment and technique, and ultimately self-educating in a lifelong continuing medical education process. The goals and teaching philosophy are based on the graduate school model, which emphasizes analytic problem solving, scholarly use of the knowledge base and scientific resources of the field, development of judgment skills, and identification of educational tools that produce the ability to self-direct one's lifelong professional education in a scholarly manner. At the successful completion of this program, candidates will be able to sit for their boards in Plastic Surgery.

PREVENTIVE MEDICINE

This residency program is offered by the Division of Occupational Medicine, Department of Medicine. It is intended for physicians who are seeking certification by the Board of Preventive Medicine. A prerequisite to participation is a minimum of one year of postgraduate clinical training in a primary care discipline. The objective of the program is the training of physicians in the fields of occupational medicine and industrial medical care. The resident is provided an academic foundation in occupational medicine, industrial hygiene, environmental toxicology, and epidemiology, in addition to practical experience in preventive medicine as it is applied to employed persons. This two-year program includes didactic training and clinical and field experience in occupational health and safety. Upon completion of training, the resident is qualified to enter the specialty practice of occupational medicine in an industrial setting, in private practice, in a government agency, or in an academic institution.

PSYCHIATRY

The Psychiatry Residency Training Program is a four-year program that fosters academic excellence and broad clinical experience in general psychiatry. Residents receive extensive supervised training in both psychotherapy and psychopharmacology. The core curriculum includes didactic seminars and supervised clinical experiences in the following areas: adult inpatient and outpatient psychiatry, child psychiatry, geriatric psychiatry, primary care, neurology, emergency psychiatry, consultation and liaison psychiatry, forensic psychiatry, and substance abuse. Residents rotate at the UC Irvine Medical Center, the Veterans Affairs Long Beach Healthcare System, and Orange County Behavioral Health. Elective rotations are also available at the UC Irvine Outreach Clinics, Kaiser Permanente, the Orange County Rescue Mission, and Long Beach Memorial Medical Center. The flexible curriculum allows residents to pursue elective interests in research, teaching, and administrative psychiatry. The program includes a broad array of full-time, part-time, and volunteer clinical and research faculty, and maintains a teaching affiliation with the New Center for Psychoanalysis.

RADIOLOGICAL SCIENCES (DIAGNOSTIC RADIOLOGY)

The Department of Radiological Sciences has an ACGME-approved four-year residency program based at UC Irvine Medical Center and integrated with Veterans Affairs Long Beach Healthcare System. There is also a month-long Pediatric Radiology rotation at Children's Hospital of Los Angeles. The objectives of the program are (1) to train competent radiologists with a solid background in all modalities of imaging and interventional procedures, (2) to provide a conducive atmosphere and to encourage opportunities for residents to participate in translational and basic science research, and (3) to provide elective periods in which residents have the opportunity to increase their clinical radiology expertise or to work on research projects during their residency training. The residency program includes sub-specialized training in interventional, cardiothoracic, abdominal, pediatric, musculoskeletal radiology, as well as breast imaging, neuroradiology, and molecular imaging. Residents are exposed to a variety of modalities including radiography, fluoroscopy, computed tomography (CT), magnetic resonance imaging (MRI), ultrasonography, mammography, nuclear medicine, and spectroscopy. All residents participate in scholarly activities and are encouraged to complete at least one major research project during the program. The program provides a month-long research time. Candidates are accepted for six positions at the PGY-2 level for the four-year program. Fellowships are available for an additional year in specialized areas following the successful completion of the residency. The newest technologies in the field of radiological sciences are available at UC Irvine Medical Center and affiliated institutions.

RADIATION ONCOLOGY

The Residency Training Program in Radiation Oncology is designed to prepare suitably qualified applicants for academic and clinical practice careers in radiation oncology. Candidates enter a four-year program which includes clinical experience, didactic lectures and integrated research experience. Unique opportunities exist for training in the use of interstitial and intracavitary treatment using radionuclides and specially designed applicators as well as a variety of high-dose external beam technologies such as IMRT, radiosurgery, and VMAT/IMAT. The program includes rotations at three participating hospitals: UC Irvine Medical Center, Veterans Affairs Long Beach Healthcare System, and Long Beach Memorial Medical Center.

SURGERY

The philosophy underlying all aspects of surgical training is that surgery is best learned, taught, and practiced as applied clinical physiology. Operative techniques and applied anatomy receive appropriate attention. Major portions of clinical experience, teaching, conferences, research, and patient care are oriented toward understanding and correcting disordered human biology. The surgical specialty involves more years of training than other medical disciplines due to the breadth of diseases and complexity of pathophysiology involved in surgery. The Department offers residencies in general surgery, plastic surgery, and urology.

UROLOGY

The Department of Urology Residency Program is a six-year training program that includes a one-year internship in the Department of Surgery and five years of Urology training. The residency program provides training in all aspects of adult and pediatric urologic diseases. The residents receive extensive training in open and endoscopic procedures, laparoscopy and other minimally invasive techniques, urologic pathology, uro-radiology, and management of non-operative urologic conditions. The program's training hospitals include UC Irvine Medical Center, Veterans Affairs Long Beach Healthcare System, Kaiser Permanente Anaheim, and Children's Hospital of Orange County. The Urology Department encourages and supports both clinical and basic science research.

GRADUATE ACADEMIC PROGRAMS

The School of Medicine's basic medical science departments of Anatomy and Neurobiology, Biological Chemistry, Microbiology and Molecular Genetics, Pathology and Laboratory Medicine, and Physiology and Biophysics offer graduate instruction leading to the M.S. and Ph.D. degrees in Biomedical Sciences. The Department of Medicine and the Department of Pharmacology offer M.S. and Ph.D. programs. The Department of Pediatrics offers an M.S. degree in Genetic Counseling. The Department of Epidemiology participates with the School of Social Ecology in offering a concentration in Epidemiology and Public Health, within the Ph.D. degree in Social Ecology.

Application materials may be obtained by contacting the individual graduate programs or:

Graduate Courses in Medicine

(Schedule of Classes designation: Med)

209A Introduction to Medical Statistics (4). Provides understanding of medical statistics for clinicians and clinical researchers to read and interpret literature.

210A Introduction to Clinical Epidemiology (4). Introduces principles and practice of clinical epidemiology and the population-based approach to health and disease. Prerequisites: Medicine 209A or Statistics 250.

232 Design and Analysis of Clinical Trials (4). Presents history, organization and planning, rationale for methods, limits, and ethics in conducting clinical trials. Prerequisites: Medicine 209A or Statistics 250.

296 Ethics in Clinical Research (4). Covers major frameworks and concepts of ethics in public health research as well as human subject protection issues.

Anatomy and Neurobiology

364 Medical Surge II; (949) 824-6050
 anatomy@uci.edu; <http://www.ucihs.uci.edu/anatomy/index.html>
 Ivan Soltesz, **Department Chair**

Faculty

Aileen J. Anderson: Interactions of transplanted stem cells within the injured niche; role of inflammatory mechanisms in degeneration and regeneration in the injured CNS

Tallie Z. Baram: Mechanisms and consequences of epilepsy and stress; learning/memory, epigenetics

Robert H. Blanks (*Emeritus*): Vestibular physiology and anatomy

Anne L. Calof: Stem cells in neural development, regeneration, and human genetic disease

Steven C. Cramer: Mapping and treating neurorecovery in humans

Brian Cummings: Human neural stem cells, regeneration and repair, and neurotrauma (spinal cord injury and traumatic brain injury)

James H. Fallon (*Emeritus*): Human and molecular brain imaging, growth factors and adult stem cells in injured brain

Mark Fisher: Mechanisms of stroke

Christine M. Gall: Neurotrophic factors, integrins, and synaptic plasticity

Roland A. Giolli (*Emeritus*): Experimental neuroanatomy; visual system

Alan L. Goldin: Ion channels and CNS disease

Ranjan Gupta: Peripheral nerve injury

Hans S. Keirstead: Axon and myelin regeneration following spinal cord injury

Herbert P. Killackey: Developmental neuroanatomy; somatosensory system

Leonard M. Kitzes (*Emeritus*): Auditory system physiology and development

Robert Leonard: Clinical anatomy education

Frances M. Leslie: Effects of drugs of abuse on central nervous system development

Gary Lynch: Cytoskeletal remodeling; synaptic plasticity, and learning

David C. Lyon: Anatomy and physiology of visual cortex; animal models of autism

Diane K. O'Dowd: Regulation of neuronal excitability; development of functional synaptic connections

David Reinkensmeyer: Motor control and learning; robot-assisted movement rehabilitation after neurologic injury

Charles E. Ribak (*Emeritus*): Changes in neural circuitry in the epileptic brain

Richard T. Robertson: Developmental neurobiology

Steven S. Schreiber: Mechanisms of neuronal degeneration in CNS after injury and therapeutic applications

Martin A. Smith: Mechanisms of neuronal excitability and synaptic plasticity

Ana Solodkin: Brain networks associated with neurological illnesses

Ivan Soltesz: Modulation of CNS inhibition

Oswald Steward: Mechanisms of recovery from injury

John E. Swett (*Emeritus*): Peripheral nervous system, spinal cord, pain mechanisms

John H. Weiss: Mechanisms of neural degeneration

Xiangmin Xu: Local cortical circuits

Fan-Gang Zeng: Auditory prostheses

Research programs in the Department of Anatomy and Neurobiology in the School of Medicine focus on the neurosciences. Faculty interests range across all areas of basic and clinical research including cellular and molecular neurobiology, mechanisms of development, ion channel physiology, experimental neuroanatomy, structure and function of sensory and motor systems, response to injury and regeneration. The Department maintains facilities for electron microscopy, laser confocal microscopy, and computer-based imaging and informatics. Students performing graduate work in the Department are encouraged to become proficient in multiple areas of study using interdisciplinary techniques.

The Department offers graduate training under the auspices of the School of Medicine in conjunction with the Interdepartmental Neuroscience Program (INP). Students are eligible to enter the Department program only after meeting the specific requirements of the INP gateway curriculum. The Department program leads to a Ph.D. degree in Biomedical Sciences, awarded after successful completion of all requirements.

In concert with other departments, a combined neuroscience core curriculum has been developed which includes offerings in systems neurobiology, neurophysiology, and cellular, molecular, and developmental neurobiology that may be taken as complete or partial fulfillment of the requirements of the INP. Students admitted into the INP who subsequently select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year. Students may take additional elective courses at their own option, but are strongly encouraged to attend departmental seminars and participate in the Journal Club and an annual "Grad Day" symposium. The research topic for a student's dissertation is chosen by the student in consultation with the research advisor. Students are expected to advance to candidacy by the end of the third year by presenting and defending a proposal for their research dissertation. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Anatomy and Neurobiology

(Schedule of Classes designation: Anatomy)

200 Research in Anatomy (2 to 12) F, W, S, Summer. Individual research supervised by a particular faculty member. Prerequisite: consent of instructor. May be repeated for credit.

200R Research in Anatomy and Neurobiology for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Anatomy and Neurobiology for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

201 Human Gross Anatomy (8) F, W, S. Lecture, three hours; laboratory, nine hours. Study and dissection of the human body, including muscular, skeletal, nervous, and cardiovascular systems. Emphasis on both normal and abnormal structure and function. Prerequisites: graduate standing, consent of instructor.

202B Human Neuroscience (4) S. Lecture, three hours; discussion, one hour; laboratory, one hour. Study of the human nervous system at the systems level including the physiology and anatomy of sensory, motor, and integrative functions. Prerequisite: Anatomy 202A and consent of Department.

203A-B Human Microscopic Anatomy (3-3) F, W. Lecture, two hours; laboratory, three hours. Lecture and laboratory course on human microscopic anatomy. Emphasis is on functional implications of structure of cells and tissues. Prerequisites: graduate standing, consent of instructor.

206 Tutorial in Anatomy. Tutorial, three hours. Series of tutorials on advanced topics in anatomy. Each may be repeated for credit.

206A Surgical Anatomy (3) F. Exploration of topics in gross anatomy. Dissection/library work required. Prerequisites: Anatomy 201A-B.

206B Neuroanatomy (3) W. Exploration of special topics in neuroanatomy. Primarily library work, but study of prepared slides also included. Prerequisite: Anatomy 202.

206C Microanatomy (3) S. Special topics in microanatomy. Primarily library work, but study of prepared histological slides and photographs included. Prerequisites: Anatomy 203A-B.

207 Auditory System: Information Processing and Neurobiology (4). Seminar, four hours. Focuses on the neurobiology of the auditory system. Topics include signal processing, anatomy, physiology, plasticity, development, cochlear prosthetics, psychoacoustics, pathology, and speech. Publications related to hearing are presented and discussed. May be repeated for credit as topics vary.

210A-B Systems Neuroscience (5-5) F, W. Study of the mammalian nervous system at the systems level. Anatomy and physiology of sensory, motor, and integrative functions. Prerequisite: Neurobiology and Behavior graduate student or consent of instructor. May be taken for credit twice. Same as Neurobiology and Behavior 208A-B.

215 Epilepsy as a Window to Mechanisms of Neuronal Plasticity (4) W. Lecture, one hour; seminar, one hour. Understanding the mechanisms of brain disorders provides novel insights into the normal function of neurons and circuits. Discusses approaches to studying mechanisms of brain function ranging from imaging, the use of models, and others to study epilepsy. Satisfactory/Unsatisfactory only.

227A-B-C Current Topics in Neuroscience (1 to 4) F, W, S. Focuses on critical reading, presentation, and discussion of current literature in neuroscience research. Prerequisites: graduate standing and consent of instructor.

230A Molecular, Cellular, and Developmental Neurobiology (4) F. Lecture, three hours. Molecular aspects of the structure and function of neurons and glia including neurotransmission, synaptic modulation, and channels. Neural development at the cellular and molecular level including neurogenesis, pattern formation, trophic factors, axonal growth, and synaptic rearrangement. Prerequisite: consent of instructor. Formerly Developmental and Cell Biology 231D.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

400E Spinal Cord Injury Research Techniques (4) Summer. Intensive four-week training course in experimental approaches to spinal cord injury. Laboratory techniques cover pathophysiology, experimental models used, and accepted outcome measures (both functional and anatomical). Lectures and seminars by invited speakers and distinguished scholars-in-residence. Prerequisites: Anatomy and Neurobiology graduate student and consent of instructor. Satisfactory/Unsatisfactory only. Same as Neurobiology and Behavior 400E.

Biological Chemistry

Building D, Room 240, Medical Sciences I; (949) 824-6051
Robert E. Steele, **Interim Department Chair**

Faculty

Bogi Andersen: Transcriptional regulation in epithelial tissues
Pierre Baldi: Computation biology, bioinformatics, probabilistic modeling, machine learning
Phang-Lang Chen: Signal transduction in response to DNA damage and tumor genesis
Xing Dai: Transcriptional/chromatin control of epithelial stem cells
Peter Donovan: The mechanisms by which pluripotent stem cells are formed in the embryo and the uses of such stem cells for transplantation therapy of human disease
John P. Fruehauf: Regulatory elements in cancer-related angiogenesis: prognosis and therapeutic targeting
Anand Ganesan: Disorders of pigmentation and melanoma
Sergei Grando: Non-neuronal cholinergic system
Peter Kaiser: Cell cycle regulation by ubiquitin
Eva Y.-H. P. Lee: Breast cancer etiology and DNA damage checkpoint control
Wen-Hwa Lee: Molecular cancer genetics, mainly the mechanism of tumor suppressor gene functions, cancer progression and novel therapy
Ellis R. Levin: The plasma membrane estrogen receptor (ER) and its effects on the biology of estrogen action
Haoping Liu: Signal transduction, cell cycle regulation, hypha development in yeast
Leslie Lock: Mammalian embryonic stem cells in studies of development and human disease
Frank Meyskens: Carcinogenesis and molecular biology of melanoma and chemoprevention of human cancer
Masayasu Nomura: RNA polymerase I, the nucleolus, and ribosome synthesis in yeast
Daniele Piomelli: Biochemistry and pharmacology of the endogenous cannabinoids and other lipid signaling systems
Suzanne B. Sandmeyer: Retrovirus-like elements in yeast
Robert E. Steele: Evolution of multicellular animals and their genomes
Leslie M. Thompson: Molecular/biochemical analysis of multiple myeloma and Huntington's disease
Kyoko Yokomori: Chromosome structure organization and its role in genome function and stability
Yi-Hong Zhou: Tumor suppression pathways and molecular prognosis of brain tumors

Faculty research interests in the Department of Biological Chemistry are in the structure and function of chromosomes, signal transduction and its role in cell growth and differentiation control, regulation of gene expression (transcription, protein synthesis, and protein localization), and the molecular basis of development. Genome sequencing projects are making it possible for faculty to exploit information learned about gene function in model organisms for understanding human disease processes. Students are exposed to technical expertise in all facets of current research in molecular biochemistry from protein chemistry to genetic engineering and gene mapping. A newly established atomic force microscopy facility is available for structure research. Researchers

in the Department are also using DNA microarray technology, next-generation sequencing, and bioinformatics to understand global changes in gene expression in response to the environment.

The Department offers graduate study under the auspices of the School of Medicine and in conjunction with the program in Cellular and Molecular Biosciences (CMB), which is described in the School of Biological Sciences section. Students admitted into the combined program who select a research advisor in the Department begin thesis research in the second year. Students are required to attend and participate in the departmental research seminars. In addition, students are required to complete three advanced-level graduate courses subsequent to entering the Department's Ph.D. concentration. In the third year, students take the advancement-to-candidacy examination for the Ph.D. degree by presenting and defending a proposal for specific dissertation research. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Biological Chemistry

(*Schedule of Classes* designation: **Biochem**)

200A, B, C Research in Biological Chemistry (2 to 12) F, W, S. Individual research under the supervision of a professor. May be repeated for credit.

200R Research in Biological Chemistry for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Biological Chemistry for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

202A, B, C Laboratory Seminar Series (1, 1, 1) F, W, S. Study within a laboratory group including research and journal presentations. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

207 Advanced Molecular Genetics (4) S. Lecture, two hours; quiz, two hours. Teaching genetics and genomics approaches in yeast. Covers cell-type determination, MAPK signaling, cell cycle, ubiquitin, genomics, transposons. Prerequisite: consent of instructor. May be taken for credit two times.

210A Medical Biochemistry and Molecular Biology (12) F. Covers the following topics from a biomedical perspective: protein and nucleic acid biochemistry, carbohydrates, lipids, amino acids, purines and pyrimidines, genome structure, molecular mechanisms of development, and signal transduction.

212 Signal Transduction and Growth Control (4) S. Lecture, two hours; discussion, two hours. Covers various eukaryotic signaling pathways (tyrosine kinase, ras-raf-MAPK, TGF- β , wnt, JAK-STAT, and FAS) with an emphasis on the experimental underpinnings. The material is covered in lectures and discussions of pertinent papers. Prerequisite: consent of instructor. Same as Pathology 212. *Offered every other year.*

215 Mouse Developmental Genetics (4) S. Lecture, three hours. Introduction to the use of the mouse in contemporary biomedical research. The biology and development of the laboratory mouse, methods for manipulation of the mouse genome and embryos, and examples of application of these methods to understanding mammalian development and homeostasis. Prerequisite: graduate standing, advanced undergraduate standing, or consent of instructor. Same as Developmental and Cell Biology 207.

217 Human Evolution and Behavior (4) S. Lecture, three hours. Covers theories and empirical research concerning the evolutionary origins of human behaviors and their variations. An interdisciplinary course emphasizing both evolutionary psychology (e.g., mating strategies, kinship, and parenting) and molecular evolution (i.e., evolution of genes for various behaviors). Same as Psychology and Social Behavior P271. *Offered every other year.*

225 Chromatin Structure and Function (4) W. Lecture, three hours. Focuses on the role of chromatin/nuclear structure organization in eukaryotic genome regulation. The effects of histone and DNA modification, chromatin remodeling, higher order chromatin structure and nuclear organization on gene regulation, and DNA replication and repair are discussed. Prerequisites: graduate standing and Molecular Biology and Biochemistry 203 and 204, or consent of instructor. *Offered every other year.*

291 Research Seminar (2) F, W, S. Student research-based colloquium covering current topics in gene organization and expression, cell cycle and differentiation, DNA repair, checkpoint control, and the physical, chemical, and biological properties of macromolecules. Students are encouraged to read critically and analyze recent literature. Prerequisite: graduate standing, advanced undergraduate standing, or consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

299 Independent Study (2 to 12). Independent research in biological chemistry. Open only to students pursuing the Ph.D. degree in the Department of Biological Chemistry. Satisfactory/Unsatisfactory only.

Environmental Toxicology

10 Faculty Research Facility; (949) 824-8642
<http://www.medicine.uci.edu/occupational/graduate.asp>
 Alpesh Amin, **Chair, Department of Medicine**

Faculty

Dean B. Baker: *Chief, Division of Occupational and Environmental Medicine;*

Environmental medicine and clinical toxicology; epidemiology; clinical effects of heavy metals, pesticides, and hazardous waste

Scott M. Bartell: Probabilistic models and statistical methods for exposure

assessment, environmental epidemiology, and risk/decision analysis

Stephen C. Bondy: Neurotoxicology; biochemical changes in membranes resulting from toxic exposures

Vincent J. Caiozzo: Structure and function of muscle with emphasis on exercise physiology; special interest in the role of environmental toxicants in modulating physiological responses in human muscle

Jefferson Y. Chan: Chemical pathology of tissue injury with focus on the oxidative stress response in cells exposed to toxic xenobiotics

Ralph J. Delfino: Air pollution health effects and air pollution exposure assessment; environmental epidemiology; gene-environment interactions

Derek Dunn-Rankin: Laser and optical diagnostics in practical systems, optical particle sizing; droplet formation and vaporization and application to human exposures

Rufus D. Edwards: Air pollution, particles, VOC, the developing world, greenhouse gases, European cities, Exopolis, and environmental epidemiology

Chenyang (Sunny) Jiang: Application of molecular techniques to detect human pathogenic bacteria and viruses in aquatic environments; coastal water quality microbiology

Michael T. Kleinman: Uptake and distribution of inhaled toxic agents in the respiratory tract; effects of air pollutants on cardiopulmonary function

Ulrike Luderer: *Graduate Program Co-Director;* Reproductive and developmental toxicology; roles of oxidative stress in ovarian toxicity, ovarian aging, and ovarian cancer

Charles Limoli: Mechanisms by which cells perpetuate genomic instability in response to radiation and environmental toxicants and the role of oxidative stress in these processes; how DNA damage and oxidative stress might drive the progression of normal multipotent cells in the CNS to brain tumor stem cell

Oladele Ogunseitan: *Chair, Department of Population Health and Disease Prevention;* Microbial diversity and ecology; environmental pollution; industrial ecology; health and development

Betty H. Olson: Environmental microbiology and water chemistry; public policy issues in environmental toxicology

Kathryn E. Osann: Cancer epidemiology; applied biostatistics

Robert F. Phalen: Biophysics, aerosol science, and inhalation toxicology; toxicity of mixtures of particles and gases, lung defenses, and particle deposition in airways

J. Leslie Redpath: Studies on the chemical and physical modification of radiation damage aimed at basic research in carcinogenesis

Ronald C. Shank: *Graduate Program Director;* Biochemical mechanisms in toxic tissue injury with emphasis on chemical carcinogenesis; application of tools of molecular biology to study cytotoxicity

Jun Wu: Air pollution exposure assessment and air pollution epidemiology

The Division of Occupational and Environmental Medicine in the Department of Medicine provides graduate training in environmental toxicology and offers the M.S. and Ph.D. degrees in Environmental Toxicology. The Program offers tracks in Environmental Toxicology and in Exposure Sciences and Risk Assessment. The program in Environmental Toxicology provides students with the knowledge and skills necessary and appropriate to teach and/or conduct basic and applied research programs in inhalation/pulmonary toxicology, biochemical neurotoxicology, reproductive and developmental toxicology, chemical pathology, toxicokinetics, radiation toxicology, exposure sciences, and risk assessment.

Toxicology involves scientific study of the entry, distribution, biotransformation, excretion, and mechanism of action of chemical agents harmful to the body. The program interprets environmental toxicology as the study of the exposures to, the effects of, and the mechanisms of action of hazardous chemicals in food, air, water, and soil, in the home, workplace, and community, and considers experimentally and theoretically such diverse research problems as (1) new scientific approaches to toxicological evaluation of environmental chemicals such as air and water pollutants, food additives, industrial wastes, and agricultural adjuvants at the molecular, cellular, and organism levels; (2) new approaches to the evaluation of human exposures to environmental chemicals; (3) mechanisms of action in chemical toxicity; (4) the molecular pathology of tissue injury in acute toxicity; and (5) scientific principles involved in evaluating risks to human health from environmental exposures.

Students entering the program have varied backgrounds, including chemistry, biology, and physiology. The curriculum is based on a foundation of basic and health sciences with applications of scientific principles to environmental exposures and their potential health effects. Formal course work is enriched by a strong commitment to student-professor interaction throughout the program. An important and integral part of the learning process is an early and intensive involvement of the student in ongoing original research projects in environmental toxicology, especially inhalation/pulmonary toxicology, reproductive and developmental toxicology, biochemical toxicology, chemical pathology, neurotoxicology, exposure sciences, and risk assessment.

In addition to meeting the general admission requirements set by the Graduate Division, applicants must be admitted by an Admissions Committee composed of faculty members of the program. Candidates are selected on the basis of a balanced evaluation of the following criteria: (1) prior scholastic performance, including a consideration of grade point average, course load, nature of courses taken, and college attended; (2) recommendations by professors and others; (3) scores on the Graduate Record Examination; the Subject Test in either Biology or Chemistry is strongly recommended; (4) an interview by the Admissions Committee, when feasible; and (5) experience in undergraduate research. The applicant must have received a bachelor's degree in a biological, public health, or physical science, in a premedical curriculum, or have an acceptable equivalent. Applicants with a bachelor's degree in engineering may qualify for admission into the program if they have had sufficient training in biology, chemistry, and physical sciences.

Undergraduate preparation of applicants should include six quarter units in general biology, zoology, bacteriology, or anatomy; 12 quarter units in mathematics, including calculus through vector analysis and differential equations; 12 quarter units of chemistry, including four quarter units of organic chemistry; 12 quarter units of physics; and four quarter units in molecular biology or biochemistry. Outstanding applicants who lack one or two of these prerequisites may be given an opportunity to take the required course(s)

either before admission or during the first year in the graduate program; in such circumstances, none of these undergraduate courses may be used to satisfy the program elective or core course requirements. Upper-division or graduate science courses may be considered as substitutes for the above prerequisites by the Admissions Committee.

The graduate core curriculum for the Ph.D. degree includes Environmental Toxicology 206A-B, 270, 298A-B-C, Statistics 201, and Epidemiology 200. The core curriculum for the Ph.D. degree track in Environmental Toxicology further includes Environmental Toxicology 201 and 207, and 16 units from an approved elective pool. This pool includes Environmental Toxicology 202, 204, 212, 220; Physiology 206A-B; Anatomy 203A-B; Molecular Biology and Biochemistry 203, 204; and Developmental and Cell Biology 231B, Public Health 276. The core curriculum for the track in Exposure Sciences and Risk Assessment further includes Statistics 202, 203, Environmental Toxicology 275; one of Policy, Planning, and Design 235 or Criminology, Law and Society 248; and eight units from an approved elective pool. This pool includes Environmental Toxicology 269, Epidemiology 205 and 285, Public Health 276, 264, 265. Ph.D. students must also fulfill comprehensive examination, qualifying examination, teaching, and research dissertation requirements. The normative time for advancement to candidacy is three years. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Requirements for the M.S. degree may be satisfied in one of two ways. Under Plan I, students complete the core program (including Environmental Toxicology 206A-B, 270, 298A-B-C, 299A-B-C, Statistics 201, and Epidemiology 200) and eight units from the approved elective pool with an average grade of B or better, and, under the direction of a faculty advisor, prepare a thesis that is acceptable to the thesis committee. Under Plan II, students complete the core program (including Environmental Toxicology 206A-B, 270, 298A-B-C, 299A-B-C, Statistics 201, Epidemiology 200, and eight units from the approved elective pool) with an average grade of B or better, prepare a scholarly paper based on individual study in an area of toxicology under the supervision of a faculty member, and pass the written comprehensive examination.

Opportunities for individual training and independent research experience exist in inhalation and pulmonary toxicology, atmospheric chemistry and aerosol science, neurochemistry and neurotoxicology, reproductive and developmental toxicology, toxicology of naturally occurring compounds, exposure sciences, risk assessment, chemical pathology, environmental microbiology, and environmental chemistry. Research grants and contracts are available to support qualified doctoral students as research assistants.

GRADUATE COURSES IN ENVIRONMENTAL TOXICOLOGY

(Schedule of Classes designation: Tox)

201 Principles of Toxicology (4) S. Problem solving to demonstrate principles of toxicology; quantitative dose-response relationship; toxicant-target (receptor) interaction emphasizing interspecies differences in Ah receptor and dioxins; complete *in vivo* metabolism of xenobiotics by mammalian systems; integration of organ responses to toxic agents.

202 Environmental Toxicology (4) F. Analysis of real problems involving toxic chemicals and the human food, air, and water supplies, occupational exposures, and life styles. Formal problems will be considered by small groups of students and discussed by the class. Prerequisite: Environmental Toxicology 201.

204 Neurotoxicology (4) F, odd years. The effects of various harmful chemicals upon nervous system function. Emphasis given to the molecular events underlying neurological damage and to the relation of such processes to basic mechanisms of neurobiology.

206A-B Target Organ Toxicity (6-6) F, W. Analysis of responses occurring in twelve organ systems of humans exposed to environmental chemicals at toxic levels; distinctive cellular and tissue structure and physiological function; toxicological responses discussed in terms of phenomena, mechanisms of action, and methods of study.

207 Experimental Design and Interpretation of Toxicology Studies (2) W. Introduction to methods of structuring toxicology experiments and analyzing data including experimental design, data distributions, sample sizes, hypothesis testing, linear regression, analysis of variance, multiple comparison testing, and non-parametric tests.

212 Inhalation Toxicology (4) S, odd years. The principles and practice of laboratory inhalation toxicology. Topics include aerosols, gases, respiratory tract structure and function, lung defenses, aerosol deposition exposure techniques, characterization of exposure atmospheres, experimental designs, animal models, and regulations and guidelines.

220 Industrial Toxicology (4) S. Analysis of responsibilities toxicologists have in industry, including product safety, generating material safety data sheets, animal testing, ecotoxicological testing, risk/hazard communication, and assisting industrial hygienists and occupational physicians; emphasis on interdisciplinary nature of industrial toxicology and communication skills. Prerequisites: Environmental Toxicology 206A-B.

264 Introduction to Environmental Health Science (4). Convergence of agents (chemical, physical, biological, or psychosocial) in the environment can emerge as diseases influenced by social, political, and economic factors, allowing them to become rooted in society. How these agents from various spheres come together and impact human health. Prerequisite: graduate standing. Same as Public Health 264 and Epidemiology 264.

269 Air Pollution, Climate, and Health (4). Emission of air pollutants into the atmosphere, physical and meteorological processes that affect transport, and influence on global warming. Concepts of how and where people are most exposed, and how exposures and health effects differ in developed and developing regions. Same as Epidemiology 269 and Public Health 269.

270 Human Exposure to Environmental Contaminants (4). Introduces founders of conceptual thought that environmental contaminants can impact health. Theory and principles of exposure assessment, the continuum from emissions of a contaminant into the environment to evidence of health effects in a population. Same as Epidemiology 270 and Public Health 270.

275 Environmental Modeling and Risk Assessment (4). Surveys the general principles, basic mathematical methods, and practices of environmental modeling and human health risk assessment. Topics include advection-dispersion models, risk management, and risk perception. Students conduct an original risk assessment as a final group project. Prerequisites: Mathematics 2A; Statistics 7 or equivalent introductory statistics course. Same as Public Health 275. Concurrent with Public Health 175.

290 Independent Study in Environmental Toxicology (4) F, W, S. With consent from a faculty member who will supervise the program, a student may receive credit for individual study in some area of toxicology, culminating in the completion of a scholarly paper on the subject. May be repeated for credit as the topics vary.

297 Advanced Topics in Occupational Toxicology (2) F, W, S. Discussions with clinical and research faculty in environmental toxicology and occupational medicine on current toxicology problems in the workplace and critical review of current publications in the field. Journal club/seminar format.

298A-B-C Environmental Toxicology Seminar (2) F, W, S. Presentation and discussion of current research problems and issues by students, postdoctoral fellows, faculty, and guests, covering the broad research and policy areas of environmental toxicology. Open to Environmental Toxicology graduate students only.

299 Research Problems (1 to 12) F, W, S. Research work for the M.S. thesis or Ph.D. dissertation.

Epidemiology

Irvine Hall, Room 224; (949) 824-7401

<http://www.epi.uci.edu>; EpiGrad@uci.edu

Hoda Anton-Culver, **Department Chair**

Ralph J. Delfino, **Vice Chair for Research and Graduate Studies**

Christine E. McLaren, **Vice Chair for Academic Affairs**

Faculty

Hoda Anton-Culver: Genetic and cancer epidemiology; information systems facilitating the exchange of human cancer genetics information and resources, especially Cancer Registry Programs internationally, children's health and community research

Dean B. Baker: Environmental and occupational epidemiology; occupational medicine; toxicology; children's health; developmental toxicity; exposure, study design; occupational stress; asthma; pesticides; hazardous waste; environmental science; biological markers

Scott M. Bartell: Environmental and occupational epidemiology; probabilistic models and statistical methods, exposure assessment, risk assessment, and decision analysis

B. Dwight Culver (*Emeritus*): Environmental epidemiology; environmental exposure to chemical and physical agents

Ralph J. Delfino: Environmental epidemiology; effects of community air pollutants on respiratory health and disease, especially asthmas and cardiovascular disease

Catherine Diamond: Clinical epidemiology and infectious diseases; antiretroviral therapy and AIDS-related NHL; HIV, AIDS, Kaposi's sarcoma, Herpes, American Indian, Youth, risky behavior, lipids

Rufus D. Edwards: Environmental epidemiology; health effects of air pollution, particles, VOC, developing world changes, greenhouse gas, European cities, Expolis project

Philip L. Felgner: Infectious disease epidemiology, protein microarray technology, biophysics, vaccines, gene therapy, drug delivery, and liposomes

Chad P. Garner: Biostatistics; theoretical and statistical methods for studying genetic and environmental determinants of common, complex human traits

Daniel L. Gillen: Biostatistics; survival analysis, longitudinal data analysis, clinical trials, sequential testing, and epidemiologic methods

Deborah L. Goodman-Gruen: Cancer and genetic epidemiology, chronic disease prevention, gynecologic oncology, endogenous sex hormones and cardiovascular diseases, replacement therapies

Christine E. McLaren: Biostatistics; analysis of hereditary hemochromatosis

Ignatius Ou: Nasopharyngeal carcinoma, head and neck cancer, thoracic malignancies, esophageal carcinoma, targeted therapy

Leonard S. Sender: Cancer and genetic epidemiology, pediatric and adult hematology/oncology

Daniel S. Stokols: Design and evaluation of community and worksite health promotion; health and behavioral impacts of environmental stressors; application of environmental design research

James M. Swanson: Biochemical and genetic factors related to hyperactivity (ADHD), attention deficit disorders (ADD), and conduct disorder in children

David S. Timberlake: Genetic epidemiology; genetic basis for the use and misuse of licit and illicit substances and the study of genetic predisposition to behavioral disorders, such as antisocial personality disorder

Pathik D. Wadhwa: Behavioral perinatology; biobehavioral processes; stress; pregnancy; fetal development; prematurity; fetal programming of health and disease; psychoneuroendocrinology; psychoneuroimmunology

Nathan D. Wong: Chronic disease epidemiology, coronary calcium, metabolic syndrome, cardiovascular diseases and health prevention

Jun Wu: Environmental epidemiology; air pollution exposure assessment and air pollution epidemiology, maternal, perinatal and infant health

Jason A. Zell: Cancer epidemiology and prevention; focus on gastrointestinal cancers (colon, rectum, and pancreas)

Argyros Ziogas: Biostatistics; development of statistical methodology of doing family studies related to genetic (family-based) data, ascertainment bias, and gene-environment and gene-gene interactions related to cancer etiology

OVERVIEW

The Department of Epidemiology faculty researches the genetic and environmental factors affecting the distribution of health and illness in large human populations. This serves as a cornerstone of

the graduate program and the medical research program by utilizing highly evidence-based biostatistical methodologies to determine the risk factors leading to disease and optimal treatment approaches for clinical practice and medical interventions essential to preventative medicine and public health. In addition to the medical sciences, the epidemiologist faculty has diverse research interest and rely on a number of other basic science disciplines including biological sciences (to understand the disease process), biostatistics (to evaluate large population data and develop research methods), geographic information science (to map disease patterns), and social science (to understand proximate and distal risk factors). The Department maintains facilities for research that include genetic, molecular, and biochemical techniques. The Department's excellent faculty in the School of Medicine has strong, peer-reviewed research portfolios and the extramural resources needed to support the Department's long-standing post-doctoral and doctoral training and education programs.

The Department of Epidemiology in the School of Medicine participates with the School of Social Ecology in offering a concentration in Epidemiology and Public Health, within the Ph.D. degree in Social Ecology. Students admitted into this program select a research advisor, typically in the Department of Epidemiology, and begin following the departmental requirements for the Ph.D. including approximately two years of course work dependant on their prior educational background. Students participate in the Epidemiology Journal Club, the departmental seminar series, and guest speaker seminars affiliated with the campus's Genetic Epidemiology Research Institute. In the fall of their third year, students are expected to have taken advancement-to-candidacy examinations in epidemiology and biostatistics and be prepared to present and defend a proposal describing their specific dissertation research. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years. Students who are interested in this concentration should apply to the Ph.D. degree program in Social Ecology. Additional details are available from the Department of Epidemiology Web site or by contacting the Department at EpiGrad@uci.edu or (949) 824-7325.

The Department does not offer a program of study leading to a M.S. degree nor an undergraduate degree, but does offer undergraduates the opportunity to gain research experience in epidemiology through the Department's 199 undergraduate research course in epidemiology. This course is available to all upper-division undergraduates irrespective of the individual major they have declared on campus.

COURSES IN EPIDEMIOLOGY

(*Schedule of Classes* designation: **Epidem**)

UNDERGRADUATE

199 Undergraduate Research in Epidemiology (2 to 4). Provides disciplinary research participation. Original or existing research options provide undergraduates the opportunity for faculty/mentor interactions including access to appropriate facilities. Medical Epidemiology research areas: Cancer, Genetic/Molecular, Environmental, Occupational, Biostatistics, and Infectious Disease. Prerequisite: upper-division standing or consent of instructor. May be repeated for credit.

GRADUATE

200 Principles of Epidemiology (4). Fundamental principles of epidemiology, biostatistics, and epidemiological research. Topics include research methods of measuring health problems in populations, disease control and prevention in populations, how epidemiology contributes to knowledge of disease etiology, and biostatistical analysis and interpretation of epidemiologic data. Prerequisite: graduate standing or consent of instructor.

201 Cancer Epidemiology (4). Concentrates on understanding how epidemiology plays a role in the search for cancer etiology, prevention, control, and treatment; gives an overview of cancer research with an appreciation of the multidisciplinary nature of the field. Prerequisites: Epidemiology 203 or Public Health 206; graduate standing or consent of instructor. Same as Public Health 201.

202 Genetic Epidemiology (4). Concentrates on the role of genetic factors in the etiology of disease in human populations with an objective of disease control and prevention, and the role of interactions of genetic factors and environmental exposures in the occurrence of disease. Prerequisites: Epidemiology 203 or Public Health 206; graduate standing or consent of instructor. Same as Public Health 202.

203 Epidemiology (4). Presents descriptive and experimental approaches to the recognition of the causal association of disease in the general population, as these approaches apply to populations using different student designs and models from the literature. Same as Public Health 203.

204 Biostatistics (4). Designed to help students develop an appreciation for the statistician's view of the research process, emphasizing biomedical research. Instills an understanding of how statistical models are used to yield insights about the data that form evidence-based understanding of the world around us. Same as Public Health 204.

205 Environmental Epidemiology (4). Concentrates on epidemiological approaches to the assessment of community environmental hazards; issues involved in environmental exposure estimation; interdisciplinary approaches to environmental epidemiology, including the use of biomarkers of exposures and susceptibility; epidemiological studies within the context of risk assessment. Prerequisites: Epidemiology 200 and 204.

215 Introduction to Statistical Genetics (4). Provides students with knowledge of the basic principles, concepts, and methods used in statistical genetic research. Topics include principles of population genetics, and statistical methods for family- and population-based studies. Prerequisites: two quarters of upper-division or graduate training in statistical methods. Same as Statistics 257.

217 Advanced Epidemiologic Methods (4). Advanced topics in the design and statistical analysis of epidemiologic studies. Topics include simulation methods, counter-matching and multiphase study designs, missing data, and Bayesian analysis. Published simulation studies are discussed and replicated using the R software package. Prerequisite: Public Health 101B or Statistics 111 or Statistics 211 or consent of instructor. Same as Public Health 205.

232 Chronic Disease Epidemiology and Prevention (4). Epidemiological aspects of chronic human diseases. Topics include methodologies for quantifying aspects of prevalent chronic diseases including risk factors, identification of susceptible groups, societal burdens, promising future research; and the intervention, prevention, and control of diseases in populations. Prerequisite: graduate standing or consent of instructor.

244 Toxic Chemicals in the Environment (4). Industrial ecology of toxicants and their impacts on environmental quality and human health. Explores theoretical basis of toxicity thresholds and regulatory issues. Uses classic and contemporary research articles to understand the legacy of traditional toxicants, and to identify emerging threats. Prerequisite: graduate standing or consent of instructor. Same as Public Health 276.

264 Introduction to Environmental Health Science (4). Convergence of agents (chemical, physical, biological, or psychosocial) in the environment can emerge as diseases influenced by social, political, and economic factors, allowing them to become rooted in society. How these agents from various spheres come together and impact human health. Prerequisite: graduate standing. Same as Public Health 264 and Environmental Toxicology 264.

265 Advanced Environmental Health Science (4). Explores the complex relationships among exposure processes and adverse health effects of environmental toxins focusing on specific chemicals, sources, transport media, exposure pathways, and human behaviors. Techniques of environmental sampling for exposure assessment are discussed. Prerequisite: graduate standing. Same as Public Health 265.

269 Air Pollution, Climate, and Health (4). Emission of air pollutants into the atmosphere, physical and meteorological processes that affect transport, and influence on global warming. Concepts of how and where people are most exposed, and how exposures and health effects differ in developed and developing regions. Same as Environmental Toxicology 269 and Public Health 269.

270 Human Exposure to Environmental Contaminants (4). Introduces founders of conceptual thought that environmental contaminants can impact health. Theory and principles of exposure assessment, the continuum from emissions of a contaminant into the environment to evidence of health effects in a population. Same as Public Health 270 and Environmental Toxicology 270.

275 Special Topics in Epidemiology (1 to 4). Presents various topics and latest research in the broad field of epidemiology. Prerequisite: graduate standing or consent of instructor. May be repeated for credit as topics vary.

290 Introduction to Biostatistics and Epidemiology for Medical Fellows (4). Designed to prepare medical fellows and other physicians for rotations in research programs. Understanding of basic biostatistics and study design, and interdependencies between the two. Application of principles in evaluation of medical literature for guidance on patient care and public health policy. Prerequisites: medical degree and consent of instructor.

298 Directed Study in Epidemiology (2 to 4). Prerequisite: graduate standing or consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit.

299 Independent Study in Epidemiology (2 to 8). Prerequisite: graduate standing or consent of instructor. May be repeated for credit.

Genetic Counseling

City Tower, Suite 800, UC Irvine Medical Center; (714) 456-5789

Pamela Flodman, **Acting Graduate Program Director**

Faculty

Maureen Bocian: Heterogeneity and variability in genetic diseases; characterization of new syndromes; neurofibromatosis; skeletal dysplasias
 José A. Camacho: Genetic metabolic diseases
 Pamela Flodman: Genetic epidemiology; human genome informatics; genetic counseling and risk perception
 Kathryn Steinhaus French: Prenatal genetic diagnosis
 John Jay Gargus: Genetic metabolic diseases; molecular genetics of cell membrane disorders
 Taosheng Huang: Genetics of cardiovascular malformations; Holt-Oram syndrome
 Virginia Kimonis: Characterization of disorders due to mutations in VCP and related myopathies associated with Paget disease of bone and dementia; natural history of Prader Willi and early onset morbid obesity syndrome; genotype-phenotype correlation in craniosynostosis
 Robert Moyzis: Chromosome structure and gene expression; human telomere and centromere organization and function
 Moyra Smith: Gene linkage and mapping in neurogenetic disorders including autism; mutation analysis and genotype-phenotype correlation in tuberous sclerosis
 M. Anne Spence: Genetic epidemiology, quantitative genetics; linkage and mapping
 Michael V. Zaragoza: Genetics of cardiomyopathies in humans and mice

The Division of Human Genetics in the School of Medicine's Department of Pediatrics offers a Master of Science degree program in Genetic Counseling. Most graduates of the program join academic or hospital-based genetics teams providing clinical services, teaching, and research. Others work for local, state, or federal genetics programs, for commercial genetics laboratories, on genetic research studies, or in education. The graduate program is fully accredited by the American Board of Genetic Counseling.

Division faculty and staff are engaged in teaching, research, and patient service. Clinical activities center on diagnostic evaluation, management, and genetic counseling for genetic disorders, including birth defects, developmentally disabling conditions, and hereditary cancers. Faculty research interests include gene mapping and linkage analysis using molecular and quantitative methods; characterization and management of malformation and chromosomal syndromes; counseling for late-onset genetic conditions—including familial cancers and neurogenetic disorders; factors causing chromosome abnormalities and congenital malformations; cancer

genetics and cytogenetics; psychosocial and cultural issues associated with genetic conditions, birth defects, prenatal diagnosis, genetic screening and testing, and genetic services delivery; and ethical and public policy issues in genetics.

During the six to eight academic quarters of the program, students complete a sequence of core courses covering medical, quantitative, biochemical, molecular, and cancer genetics; teratology, embryology, and development; cytogenetics; counseling theory and application; research methods; ethical issues; and community resources. All courses are taught by Division faculty specifically for students in the program. Experiential professional training occurs concurrently with formal course work in a variety of clinics at UC Irvine Medical Center and satellite facilities, in the prenatal diagnosis program, in the cytogenetics and molecular genetics laboratories, and in various community agencies. Students participate in these and other divisional and departmental professional and educational activities such as lectures, seminars, journal club, Pediatrics and Obstetrics and Oncology Grand Rounds, cytogenetics conferences, and various research, counseling, and patient management conferences throughout the program. While not required, some students choose to arrange optional clinical rotations at other academic, private, or commercial genetics units.

Degree requirements include a minimum of 75 quarter units, completion of a research thesis that should be publishable, and demonstration of appropriate professional skills in genetic counseling. The program director serves as faculty advisor to students. Teaching and supervision of professional experiential training are shared by all Division faculty and staff, who frequently review student progress. In the second year, development of professional skills can be individualized according to the trainee's needs and interests. Successful completion of the program fulfills the curricular and clinical training requirements for eligibility to sit for examination by the American Board of Genetic Counseling.

Recommended undergraduate preparation includes course work in the biological and behavioral sciences—particularly in genetics, biochemistry, molecular biology, psychology, and human development. Course work in statistics is desirable. Fluency in Spanish or a Southeast Asian language confers a considerable advantage. Extracurricular or employment experiences that provide evidence of the student's maturity, interpersonal skills, and promise as a genetic counselor figure prominently in the admissions decision. References should speak to these qualities as well as to the academic qualifications of the applicant. The GRE General Test and Writing Assessment are required. Subject Test scores in any area will also be considered if they are available. Since there is no GRE code for the Department of Pediatrics, applicants should use the UCI institution code: R4859.

Applications are accepted for the fall quarter only and must be complete by February 1. Because of keen competition for places in the program, a two-stage admissions process is employed. Following initial review of applications by the faculty admissions committee, approximately one-fifth of applicants are invited for interviews, which are usually conducted during March and April. If invited, it is greatly to the candidate's advantage to have an on-site interview, although in difficult circumstances it may be possible to arrange an out-of-town interview with a program graduate or a traveling faculty member. Any candidate planning to be in the Southern California area in March or April is encouraged to inquire in advance regarding the likelihood of an interview. Final selection from the interviewed candidates occurs in late April or early May. Five or six students are usually admitted each year.

GRADUATE COURSES IN PEDIATRICS GENETICS*(Schedule of Classes designation: Ped Gen)*

200A Introduction to Medical Genetics and Cytogenetics (4) F. Lecture, three hours. Covers current concepts regarding mitosis, meiosis, the cell cycle, and chromosome ultrastructure and function. Clinical disorders caused by chromosomal aneuploidy, duplication, and deletion, and principles of Mendelian, chromosomal, and multifactorial and nontraditional inheritance are presented and illustrated.

200B Genetic Screening, Prenatal Development, and Human Teratology (4) W. Lecture, three hours. Principles and techniques of prenatal, neonatal, and carrier screening. Infertility, pregnancy, and delivery. Normal and abnormal prenatal growth and development. Reproductive and fetal effects of drugs, radiation, infections, and other environmental factors. Prerequisite: Pediatrics Genetics 200A.

200C Human Genetic Disorders (4) S. Lecture, three hours. Inheritance, diagnosis, natural history, management, and counseling considerations for commonly encountered genetic diseases, birth defects, and dysmorphic syndromes. Prerequisites: Pediatrics Genetics 200A and 200B.

200D Disorders Due to Inborn Errors of Metabolism (4) F (even years). Lecture, three hours. Aspects of biochemistry and metabolism are reviewed with special emphasis on genetic abnormalities which lead to inborn errors of metabolism. Diagnostic procedures, heterozygote detection, treatment, counseling issues, and prenatal diagnosis are reviewed. Prerequisite: Pediatrics Genetics 200A or consent of instructor.

200E Molecular Genetics (4) S. Lecture, three hours. The derivation of different types of DNA probes and DNA libraries, restriction endonuclease polymorphisms, assignment of genes to chromosomes, and genetic linkage. Particular emphasis is placed on the use of recombinant DNA technologies and genetic linkage analysis for diagnosis of human genetic disease. Prerequisite: Pediatrics Genetics 200A, 200D, or consent of instructor.

200F Quantitative Genetics (2) S. Lecture, one and a half hours. Quantitative aspects of human genetics, including population studies, segregation analysis, linkage, mapping, and genetic risk determination. Corequisite or prerequisite: Pediatrics Genetics 200A.

200G Hereditary Cancer Counseling (4) W (odd years). Lecture, three hours. Issues in genetic counseling for cancer. Cancer biology; genetic mechanisms and environmental influences in carcinogenesis; tumor pathology; cancer gene mapping; epidemiology. Features natural history, diagnosis, prevention, surveillance, and management of hereditary cancers. Psychosocial, ethical, legal aspects of cancer risk assessment. Prerequisites: Pediatrics Genetics 200A, 200B.

200H Genetic Counseling Research Design (4) S. Seminar, three hours. Quantitative and qualitative methods for genetic counseling research. Reference management; statistic: sample size, power, and data analysis; reliability and validity; surveys, questionnaires, interviews, and focus groups; quality of life and genetic epidemiology research; designing a research protocol; IRB issues; grant writing.

200L Cytogenetics Laboratory (4) F. Laboratory, 10 hours/week. A practicum introducing methods of specimen collection, short-term lymphocyte and bone marrow culture, long-term fibroblast and amniocyte culture, harvesting and slide preparation, chromosome staining, microphotography, and darkroom techniques. Microscopic chromosome analysis, photographic karyotyping, and the appropriate use of cytogenetic nomenclature are emphasized. Open only to Genetic Counseling students.

201A Introduction to Genetic Counseling (4) F. Through directed readings, observing patient evaluations, role-playing, and conducting intake interviews, students are introduced to the process of diagnosis, management, and counseling for genetic disease. Psychosocial issues, interviewing techniques, pedigree construction, clinical photography, and various other skills are addressed. Open only to Genetic Counseling students.

201B Clinical Rotation I (4) W. Tutorial and fieldwork. Provides extensive supervised experience in history taking, interviewing, and psychosocial assessment in the clinical genetics setting. Students independently perform telephone, office, and home-visit intake interviews, participate in counseling, and present cases at patient management conferences. Open only to Genetic Counseling students.

201C Clinical Rotation II (4) S. Tutorial and fieldwork. Provides further supervised experience in genetic counseling, case management, clinic administration and organization, and the use of community resources. Emphasis is on sharpening counseling skills and on developing a professional identity and code of ethics. Open only to Genetic Counseling students.

201D Prenatal Diagnosis Counseling (4) F. Tutorial and fieldwork. A practicum with extensive supervised experience in prenatal diagnosis counseling which provides the student with the opportunity to conduct genetic counseling sessions semi-independently and to further develop clinical skills. Open only to Genetic Counseling students. Prerequisites: Pediatrics Genetics 200A, 200B, and 200C.

202A Counseling in Human Genetics: Theory and Methods (3) S. Lecture and discussion, two hours. Theoretical approaches, counseling models and methods, and bio-psychosocial assessment strategies are examined in the context of genetic counseling. Contract-setting, working alliance, the use of self and evaluation methods. Beginning counseling and peer supervision skills are practiced in class. Open only to Genetic Counseling students.

202B Community Resources (2) F. Seminar and activity, two hours. Lectures, guest speakers, and community visits acquaint the genetic counselor with public and private health care and funding agencies, parent support and advocacy groups, and other resources available to assist individuals and families confronted with genetic disorders, developmental disabilities, and birth defects. Open only to Genetic Counseling students.

202C Ethical Issues in Human Genetics (2) S (odd years). Lecture and discussion, two hours. Explores major social, legal, and ethical issues in genetic counseling including those arising in genetic screening, prenatal diagnosis, informed consent, privacy and confidentiality, rights of the disabled, new genetic and reproductive technologies, treatment, and access to services. Prerequisite: consent of instructor.

203A Counseling in Human Genetics: Putting Thought to Practice (4) F. Seminar, three hours. Builds upon the skills learned in previous courses emphasizing advanced counseling methods such as listening, empathy, and collaboration. The counselor's own self-awareness, ethical behaviors, and limits are explored. Individual, team, and group exercises are performed. Prerequisite: Pediatrics Genetics 202A. Open only to Genetic Counseling students.

204A, B, C Professional Skills Development (4, 4, 4) F, W, S. Hones and augments existing competencies in genetic counseling through ongoing clinical experiences. Students develop skills in use of computers for genetics applications, provision of community and professional education, and clinic administration. Further experience in genetics laboratories or specialty clinics may be elected by students. Open only to Genetic Counseling students.

295 Master's Thesis Research and Writing (4 to 8) F, W, S. Tutorial. Under the supervision of one or more faculty members, the student designs and conducts a research project or completes a case report. A problem in the cytogenetics, biochemical, clinical, psychosocial, or behavioral areas of medical genetics may be investigated. Prerequisite: consent of instructor.

Microbiology and Molecular Genetics

Building B, Room 240, Medical Sciences I; (949) 824-5261

Rozanne M. Sandri-Goldin, **Department Chair**Marian L. Waterman, **Department Vice Chair****Faculty**

Ruslan D. Afasizhev: Molecular biology of trypanosomes; mitochondrial RNA editing

Alan G. Barbour: Molecular pathogenesis and immunology of vector-borne infections

Emiliana Borrelli: Dopaminergic system and glial cells in CNS development

K. George Chandy (*Joint*): Role of potassium channels in lymphocyte function and diseaseMichael Demetriou (*Joint*): The molecular biology and glycobiology of T cell dysfunction in organ-specific autoimmunity

Alan L. Goldin: Molecular analysis of ion channel function and its roles in human diseases

Klemens J. Hertel: Regulation of gene expression by alternative splicing

Anthony A. James: Methods for controlling the transmission of vector-borne diseases, specifically malaria and dengue fever

Janos K. Lanyi (*Joint*): Bacteriorhodopsin; halorhodopsin; light-driven ion pumps
 Masayasu Nomura (*Joint*): RNA Polymerase I; nucleolus; nuclear transport and function
 Manuela Raffatellu: Mechanisms of *Salmonella* interaction with the intestinal mucosa; mucosal barrier function during *Salmonella* infection
 W. Edward Robinson, Jr. (*Joint*): Molecular pathogenesis of lentivirus infection and drug discovery against HIV
 Suzanne B. Sandmeyer (*Joint*): Molecular genetics of a position-specific yeast retrovirus-like element
 Rozanne M. Sandri-Goldin: Structural and functional analysis of a multifunctional herpes virus regulatory protein
 Paolo Sassone-Corsi (*Joint*): Signal transduction, gene expression, oncogenesis, circadian clock
 Bert L. Semler: Replication and translation of picornaviruses; RNA-protein and protein-protein interactions
 Yongsheng Shi: Post-transcriptional gene regulation and its role in human diseases
 Ming Tan: Bacterial pathogenesis; gene regulation in Chlamydia
 Marian L. Waterman: Wnt signaling in cancer and lymphocytes

The Department of Microbiology and Molecular Genetics provides advanced training to individuals interested in the regulation of gene expression and the structural and functional properties of proteins encoded by these genes. The research in the Department covers a wide range of topics with special emphasis on bacterial gene expression and pathogenesis; viral gene expression and host interactions; trypanosome molecular biology; vector-borne malaria and dengue fever transmission; nuclear-cytoplasmic transport and intracellular signaling; eukaryotic gene expression; mRNA splicing, editing, and processing; cancer genetics and tumor suppressors; ion channel expression and function; genomics and bioinformatics.

The Department offers graduate study under the auspices of the School of Medicine and in conjunction with the program in Cellular and Molecular Biosciences (CMB) and the program in Mathematical and Computational Biology (MCB), which are described in the School of Biological Sciences section. Students admitted into the CMB program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year.

Participation in the Department's seminar series and completion of at least one advanced topics course per year for three years are expected of all students. In their third year, students take the advancement-to-candidacy examination for the Ph.D. degree by presenting and defending an original proposal for specific dissertation research. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Microbiology and Molecular Genetics

(*Schedule of Classes* designation: M&MG)

200A-B-C Research in Microbiology and Molecular Genetics (2 to 12 per quarter) F, W, S. Individual research supervised by a particular professor. Prerequisite: consent of instructor. May be repeated for credit.

200R Research in Microbiology and Molecular Genetics for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Microbiology and Molecular Genetics for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

201A-B-C Research Topics in Microbiology and Molecular Genetics (1-1-1) F, W, S. Lecture and seminar. Seminars presented by graduate students and faculty of the Department which explore research topics in specialized areas of microbiology and molecular genetics. Opportunity for students to gain experience in the organization, critical evaluation, and oral presentation of current research developments. Prerequisite: consent of instructor. May be repeated for credit. Satisfactory/Unsatisfactory only.

203A-B-C Advanced Studies in Microbiology and Molecular Genetics (1-1-1) F, W, S. Organized within each laboratory group, one to four hours. Advanced study in areas related to faculty research interests. Involves small group study based on readings, discussions, and guest speakers. May be conducted as journal clubs. Satisfactory/Unsatisfactory only. May be repeated for credit.

205A-B-C Basic Immunology Core Lectures (1-1-1) F, W, S. Basic concepts in human immunology including development of the immune system, innate immunity, immunoglobulin structure and genetics, antigen-antibody reactions, the major histocompatibility complex and antigen presentation, T cell and B cell development, initiation of the immune response, effector mechanisms. Prerequisite: consent of instructor.

206 Regulation of Gene Expression (4). Lecture, three hours. Aspects of gene expression including the organization of the eukaryotic nucleus in terms of protein-nucleic acid interaction (i.e., chromatin and chromosome structure); comparisons between prokaryotic and eukaryotic gene expression, the enzymology and regulation of RNA transcription in *E. Coli* and other prokaryotes. Enzymology of transcription in eukaryotes. (Coordinator, Klemens J. Hertel)

210A Medical Microbiology (4 to 6). Lecture, five hours; laboratory, three hours. The biology of infectious agents, including viruses, bacteria, fungi, and parasites, to provide the foundation in microbiology for the subsequent study of infectious diseases. Lectures, small group sessions with clinicians, and laboratory sessions are used to teach the molecular bases of microbial pathogenesis, diagnostic testing, antimicrobial therapy, and prevention strategies. Prerequisites: first-year curriculum. Graduate students must have approval of the course director and enroll through the Department of Microbiology and Molecular Genetics. (*Medicine 507A-B*).

210B Medical Immunology (6) Lecture, five hours; laboratory, three hours. Covers the cellular and molecular basis of immune responsiveness and the roles of the immune system in both maintaining health and contributing to disease. Material is presented in lectures, clinical correlates, and printed core notes. Includes three required Patient-Oriented Problem Solving (POPS) sessions. Prerequisite: UCI medical students only. Graduate students require consent of course director and must enroll through the Department.

215 Integrative Immunology (4). Lecture and discussion, four hours. Lectures and student presentations of primary literature. The main goal is to achieve a basic understanding of the cellular and molecular basis of innate and adaptive immunity, and how immune function is coordinated at a systems level. Same as Molecular Biology and Biochemistry 215.

216 Pathogenic Microbiology (4) F. Lecture, four hours. Biochemical and genetic properties of infectious agents; identification and behavior of pathogens; activities of toxins; the chemotherapy, biochemistry, and genetics of drug resistance; and epidemiology of infectious diseases. Prerequisite: consent of instructor.

219 Medical Virology (4) F. Lecture, four hours. Animal viruses as disease causing agents, including mechanisms of infection at both the cellular and organismic levels. Topics include comparative studies of different groups of viruses, viral transformation, and mechanisms of viral gene expression. Prerequisite: consent of instructor.

221 Immunopathogenic Mechanisms of Disease (3) S. Lecture, one and one-half hours; seminar, one and one-half hours. Examination of the mechanisms underlying disease states mediated by immune dysregulation. Topics include innate and adaptive immunity, autoimmunity, immunodeficiency, inflammatory disorders, and certain infectious diseases. Emphasis on biological basis of immunopathologies taught from reports in the original scientific literature. Prerequisite: Microbiology and Molecular Genetics 215. Same as Pathology 221.

222 Molecular Pathogenesis of Viral Infections (4) S. Features lectures by faculty on the molecular aspects of viral pathogenesis, highlighting both viral and cellular functions. Students give oral presentations and write a research proposal on a selected topic. Prerequisite: Molecular Biology and Biochemistry 205.

225 Molecular Mechanisms of Human Disease (3) S. Provides an overview of the molecular mechanisms of human diseases, including neurologic, hematologic, neoplastic, and infectious diseases. Students gain an understanding of these mechanisms, as well as models of human diseases. Same as Pathology 225.

227 Immunology Journal Club (2) F, W, S. Seminar and discussion, one hour. Advanced topics in immunology as related to an understanding of human disease. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.

230 Ethical and Political Issues of Embryonic Stem Cell Policy (4) S. Science policy and how it is created in the U.S.A. Focuses on human embryonic stem cell policy politics and ethics. Designed for graduate students in the sciences.

235 Viruses and Cells (4) W. Covers the molecular mechanisms by which animal and human viruses infect cells and details the host response to infection. Also covers prevention and treatment.

240 M.D./Ph.D. Tutorial (1) F, W, S. Explores a variety of topics that impact careers of medical scientists (M.D./Ph.D. students). Topics range from scientific, such as recent advances in particular research areas, to ethical problems brought on by increased technology and intervention in the disease process. May be repeated for credit.

250 Responsible Conduct of Research (2) S. Each session includes a formal presentation by faculty/invited speaker followed by a discussion of case studies related to the topic under consideration. Satisfactory/Unsatisfactory only.

280 Tutorial in Microbiology and Molecular Genetics (2) S. Tutorial, two hours. Tutorial in Microbiology and Molecular Genetics. Presented by the department chair; relates current laboratory research to the literature. May be repeated for credit as topics vary.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

298 Independent Study (1 to 12) F, W, S. Provided for MSTP students to synthesize the basic science information learned during the basic science years of medical school and learn how to apply that knowledge toward graduate research directed at understanding the basis of human disease. May be repeated for credit as topics vary.

299 Dissertation—Microbiology and Molecular Genetics (1 to 12) Summer. Course provided for Ph.D. students to prepare and complete the dissertation required for a Ph.D. degree. May be repeated for credit.

Experimental Pathology

Building D, Room D440, Medical Sciences I; (949) 824-6574
Fritz Lin, **Interim Department Chair**

Experimental Pathology Faculty

Jefferson Y. Chan: Regulation of genes associated with oxidative stress

K. George Chandy: Molecular biology and structure of ion channels; novel therapeutic agents

Luis M. de la Maza: Chlamydia trachomatis vaccines and sexually transmitted diseases

Robert A. Edwards: Mucosal immunology, inflammatory bowel disease, G-proteins, prostaglandins, and chemokines

Mark Fisher: Mechanisms of stroke, vascular neurobiology, blood-brain barrier

Lisa Flanagan-Monuki: Regulation of neural stem cells

Taosheng Huang: Molecular basis of genetic diseases in humans

Anthony A. James: Malaria parasite development; genetic manipulation of insect vectors

John J. Krolewski: Signal transduction pathways regulating the growth and death of normal and neoplastic cells

J. Lawrence Marsh: Regulation of growth factor signaling in patterning, regeneration and oncogenesis

Dan Mercola: Translational cancer biology

Edwin S. Monuki: Cerebral cortex development and disease

Andre J. Ouellette: Mechanisms and regulation of innate immunity in mammalian epithelia

Ellena M. Peterson: Chlamydia vaccine development

W. Edward Robinson: Pathogenesis of retrovirus infections; molecular mechanisms of integration

Sandor Szabo: Pathogenesis of gastrointestinal ulceration, duodenal ulcer
Andrea J. Tenner: Innate immunity; the roles of complement and phagocytes in health and disease

Ping H. Wang: Molecular hormone actions in the normal and diseased heart

The Department of Pathology and Laboratory Medicine offers a Ph.D. in Biomedical Sciences with a concentration in Experimental Pathology. The graduate program emphasizes experimental approaches to better understand the molecular and cellular mechanisms of disease. Students work in laboratories studying topics ranging from infectious processes such as malaria and the acquired immune deficiency syndrome to innate immunity, including studies on granulocytes and antimicrobial peptides. The principal areas of research investigated by faculty in the Experimental Pathology concentration range from developmental neurobiology to cancer, including prostate cancer.

The Department offers graduate study under the auspices of the School of Medicine and in conjunction with the program in Cellular and Molecular Biosciences (CMB), which is described in the School of Biological Sciences section. Students admitted into the combined program who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the start of their second year.

Experimental pathology makes extensive use of both animal models of human disease and studies on human tissues from human subjects. Therefore, the curriculum is heavily weighted on experimental models, including animal models, of human disease. The didactic teaching components of the track are supplemented by a twice-monthly Pathology research conference, in which postdoctoral fellows and graduate students present “research in progress” seminars. This seminar series allows trainees the opportunity to gain invaluable experience in presenting their research to other scientists and provides a mentoring process through which students gain insights from diverse scientific viewpoints.

Students must advance to candidacy during their third year. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Pathology

(Schedule of Classes designation: Path)

200A-B-C Research in Experimental Pathology (2 to 12) F, W, S. Independent research for the Ph.D. program within the laboratories of graduate training faculty in the Department of Pathology and Laboratory Medicine. Corequisite: Pathology 203A-B-C. May be repeated for credit as topics vary.

200R Research in Experimental Pathology for First-Year Students (2 to 12) F, W, S. Independent research within the laboratories of graduate training faculty in the Department of Pathology and Laboratory Medicine for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.

203A-B-C Advanced Studies in Experimental Pathology (1-1-1) F, W, S. A tutorial course for Ph.D. students in the Department of Pathology entailing attendance at Departmental seminars and critical reading of the scientific literature. Corequisite: Pathology 200A-B-C. May be repeated for credit.

204A, B, C Experimental Pathology Research Seminar (1, 1, 1) F, W, S. Seminar series for graduate students in Experimental Pathology. Students attend seminars and, beginning in their third year of graduate study, present one formal seminar on their graduate research. May be repeated for credit as topics vary.

212 Signal Transduction and Growth Control (4) S. Covers various eukaryotic signaling pathways (tyrosine kinase, ras-raf-MAPK, TGF- β , wnt, JAK-STAT, and FAS) with an emphasis on the experimental underpinnings. The material is covered in lectures and discussions of pertinent papers. Prerequisite: consent of instructor. Same as Biological Chemistry 212. Offered every other year.

221 Immunopathogenic Mechanisms of Disease (3) S. Lecture, one and one-half hours; seminar, one and one-half hours. Examination of the mechanisms underlying disease states mediated by immune dysregulation. Topics include innate and adaptive immunity, autoimmunity, immunodeficiency, inflammatory disorders, and certain infectious diseases. Emphasis on biological basis of immunopathologies taught from reports in the original scientific literature. Prerequisite: Microbiology and Molecular Genetics 215. Same as Microbiology and Molecular Genetics 221.

225 Molecular Mechanisms of Human Disease (3) S. Provides an overview of the molecular mechanisms of human diseases, including neurologic, hematologic, neoplastic, and infectious diseases. Students gain an understanding of these mechanisms, as well as models of human diseases. Same as Microbiology and Molecular Genetics 225.

226 Topics in Experimental Pathology (4) W. Select topics related to principles of experimental pathology including normal host responses to disease are presented. Animal models of human disease are emphasized. Material includes both lectures and critical review of the primary literature.

230D Principles of Experimental Pathology (4) F. Introduces graduate students to the general pathologic processes that mediate disease. Topics include cell injury and repair, inflammation, immunopathology, neoplasia, and genetic diseases. Combines lecture, small group discussion, and oral presentations.

231A Pathology of Cardiovascular Diseases (2) F. For graduate students interested in human cardiovascular disease. Students receive training in physiology, anatomy, and pathologic processes of the heart and blood vessels. Experimental approaches to study such processes are emphasized.

232A Pathology of Pulmonary Diseases (1.5) F. For graduate students interested in pulmonary disease. Students receive training in physiology, anatomy, and pathologic processes of the lungs and airways. Experimental approaches to study such processes are emphasized.

233A Pathology of Renal Diseases (1) F. For graduate students interested in renal disease. Students receive training in physiology, anatomy, and pathologic processes of the kidneys. Experimental approaches to study such processes are emphasized.

234A-B Pathology of Gastrointestinal Diseases (0-2) F, W. For graduate students interested in gastrointestinal disease. Students receive training in physiology, anatomy, and pathologic processes of the gastrointestinal tract. Experimental approaches to study such processes are emphasized. In-progress grading.

235A-B Pathology of Genitourinary Tract Diseases (0-2) F, W. For graduate students interested in genitourinary tract or breast disease. Students receive training in physiology, anatomy, and pathologic processes of the breast and genitourinary tract. Experimental approaches to study such processes are emphasized. In-progress grading.

236B Graduate Neuropathology (1.5) W. For graduate students interested in diseases of the nervous system. Students receive training in physiology, anatomy, and pathologic processes of the central and peripheral nervous system. Experimental approaches to study such processes are emphasized.

292A-B-C Scientific Communication (2-2-2) F, W, S. Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.

299 Dissertation in Experimental Pathology (1 to 12). Provided for the preparation and completion of the dissertation required for the Ph.D. degree. Prerequisite: consent of instructor.

Pharmacology and Toxicology

360 Medical Surge II; (949) 824-7651

Paolo Sassone-Corsi, **Department Chair**

Olivier Civelli, **Graduate Program Director/Advisor**

Graduate Program Faculty

James D. Belluzzi: Brain substrates and pharmacology of reward; characterization and development modulation of nicotine and cocaine reinforcement; abuse potential of tobacco smoke constituents
 Emiliana Borrelli (*Joint*): Dopamine signaling and drugs of addiction; mouse models of neurodegenerative diseases
 Olivier Civelli: Molecular biology of G protein-coupled receptors; search for novel neurotransmitters and neuropeptides; pharmacological and behavioral characterizations of the novel neurotransmitters and neuropeptides
 Sue Piper Duckles: Pharmacology and physiology of vascular smooth muscle; regulation of cerebral circulation, impact of gender and gonadal steroids on vascular function
 Frederick J. Ehler: Muscarinic receptor coupling mechanisms; functional role of muscarinic receptor subtypes; pharmacological methods of analysis; analysis of drug receptor interactions
 Pietro R. Galassetti (*Joint*): Physiological and altered adaptive responses to stress in healthy and dysmetabolic children and adults; non-invasive monitoring of metabolic variables through analysis of exhaled gases
 Kelvin W. Gee: Pharmacology of allosteric modulators of the GABA_A receptor, selective modulation of GABA_A receptor subtypes; novel molecular targets for neuropharmacological agents and drug discovery
 Naoto Hoshi: Physiological role and regulation of the M-channel, molecular biology, electrophysiology and live cell FRET imaging
 Mahtab Jafari (*Joint*): Anti-aging effects of botanicals and pharmaceutical compounds; the impact of botanical extracts on mitochondrial bioenergetics, oxidative stress, and other pathways of aging using cell culture and *Drosophila*
 Diana N. Krause: Cerebrovascular regulation and pharmacology; vascular effects of gonadal hormones; melatonin receptors
 Frances M. Leslie: Addiction, drugs of abuse and brain development
 Z. David Luo (*Joint*): Molecular mechanisms of pain and transduction; study gene regulation and signaling pathways in chronic pain processing using animal models, and molecular biology techniques
 Daniele Piomelli: Biochemistry and pharmacology of the endogenous cannabinoid and other lipid derived messengers
 Rainer K. Reinscheid (*Joint*): Neuropharmacology of peptide transmitters involved in stress, sleep and memory using cellular and transgenic animal models
 Paolo Sassone-Corsi: Signal transduction and gene expression; chromatin remodeling and epigenetics; germ cell differentiation; circadian clock and rhythms

Graduate program joint faculty are from Microbiology and Molecular Genetics, Pediatrics, Pharmaceutical Sciences, and Anesthesiology.

The Department of Pharmacology offers the Ph.D degree in Pharmacology and Toxicology. The Department is engaged in a broad scope of research activity. The Ph.D. program prepares students for careers in academia, research institutions, and the pharmaceutical industry by providing a foundation in all aspects of pharmacology, from molecular mechanisms through behavior. Faculty research interests include molecular and cellular pharmacology, neurosciences, gene regulation, circadian rhythms, epigenetic modifications, neuropharmacology, psychopharmacology, and cardiovascular pharmacology. Emphasis is placed on providing an integrated understanding of drug receptors: their structure, location, and function; molecular aspects of drug action; receptor signaling mechanisms; structure-activity relationships and drug design; and the role of receptors and drugs in development and aging, plasticity, reinforcement and drug abuse, neural disorders, and cardiovascular physiology and disease.

Prerequisites for admission include a background in the physical and biological sciences which includes courses in mathematics, physics, chemistry, and biochemistry, including laboratory experience. The Graduate Record Examination (GRE) and Subject Test in Biology or Chemistry are highly recommended.

The graduate core program includes Pharmacology 241A-B, 252, 254, 255, 256, 257, Biochemistry 210A, and Physiology 206A-B, quarterly participation in Pharmacology 298-299, and any additional elective courses assigned by faculty advisors. (Ph.D. students may receive the M.S. degree after completion of appropriate requirements.) The major additional requirement for the Ph.D. is the satisfactory completion and oral defense of a dissertation based on original research carried out under the guidance of a faculty member. All candidates for the Ph.D. degree are required to engage in research activities throughout the course of their academic programs. This requirement applies to all students whether or not they are compensated for such services. An appointment as a graduate student researcher is awarded on the basis of scholarship and not as compensation for services rendered. Before advancing to candidacy each student must pass a written qualifying examination to determine the student's competence in pharmacology or pharmacology and toxicology. The full-time student is expected to pass the written qualifying examination by the eighth quarter and the oral qualifying examination for the Ph.D. by the eleventh quarter. The normative time for advancement to candidacy is three years. All requirements for the Ph.D. degree should be completed within five years, and the maximum time permitted is seven years. For more information, contact the Graduate Program Director/Advisor, Department of Pharmacology.

Graduate Gateway Program in Medicinal Chemistry and Pharmacology (MCP). The one-year graduate MCP Gateway Program is designed to function in concert with selected department programs, including the Ph.D. in Pharmacology and Toxicology. Upon successful completion of the MCP curriculum at the end of their first year, students choose a faculty advisor who is affiliated with one of the participating departments, and transition into their "home" department to complete the remaining degree requirements. They will receive their Ph.D. degree from the department of their chosen advisor. Detailed information is available in the Department of Pharmacology section and at <http://www.pharmacology.uci.edu>.

The Department also participates in the **Interdepartmental Neuroscience Gateway Program**, described in the School of Biological Sciences section of the *Catalogue*. Students who select a focus in Neuroscience and a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year and will receive their Ph.D. from the department of their chosen advisor. Detailed information is available at http://www.inp.uci.edu/research/facsort_dept_list.cfm?department=15.

GRADUATE COURSES IN PHARMACOLOGY AND TOXICOLOGY

(*Schedule of Classes* designation: Pharm)

210 Chemical Neuroanatomy (4). Lecture, two hours; seminar, two hours. Organization of the nervous system, especially with respect to chemical identity of elements, for students of pharmacology. Major cell types, methods of study, ultrastructure, synaptic organization of functionally defined systems, localization of chemically defined cells and receptors, and brain development.

241A-B Medical Pharmacology and Therapeutics (6-6) F, W. Lecture and seminar, eight hours. Principles of pharmacology and in-depth study of drug action. Pharmacokinetics and pharmacodynamics: absorption, distribution and metabolism, general principles of action and receptor concepts. Discussion of major drug classes: molecular mechanism of action, physiological consequences of administration, and clinical use. Prerequisites: Physiology and Biophysics 206A-B and Molecular Biology and Biochemistry 210A.

252 Neurotransmitter and Drug Receptors (6) W. Lecture, three hours; seminar, three hours. Ligand gated ion channels, G protein linked receptors, receptor tyrosine kinases, ligand regulated transcription factors, their signaling mechanisms, trafficking and physiological responses. Analysis of receptor properties by pharmacological methods, radioligand binding, and molecular biology.

254 Methods in Pharmacology (4) F. Lecture, four hours; laboratory, eight hours. Receptor analysis: bioassay measuring contraction, calcium mobilization, second messenger responses; operant conditioning; whole animal, single neuron; radioligand binding; quantitative autoradiography; immunocytochemistry; in situ hybridization for analysis of mRNA; Western and Northern analysis; transgenic mouse knock in and knock out techniques. Prerequisite: consent of instructor.

255 Chemical Transmission (4) S. Lecture, two hours; seminar, two hours. Mechanisms underlying chemical signaling processes in the brain and periphery. Molecular biology, signal transduction, transmitter synthesis and inactivation, pharmacology of integrative function and behavior. Prerequisite: consent of instructor.

256 Experimental Design for Pharmacologists (1) F, W, S. Lecture, one hour; discussion, one hour; laboratory, one hour. Population and sample statistics, hypothesis testing, analysis of variance, nonparametric statistics, experimental design, power, and the use of statistical computer software. Prerequisite: Pharmacology 252 or consent of instructor.

257 Ethics in Research (1) F, W, S. Lecture, one hour; discussion, one hour. Ethical conduct in research including data handling, authorship, conflict of interest, animal rights, handling of misconduct. Prerequisite: Pharmacology 299 or consent of instructor. May be taken for credit two times.

298 Seminar (2) F, W, S. Presentation and discussion of current problems and methods in teaching and research in pharmacology, toxicology, and therapeutics.

299 Research (1 to 12) F, W, S

Physiology and Biophysics

Building D, Room D340, Medical Sciences I; (949) 824-5863
Michael D. Cahalan, **Department Chair**

Faculty

Kenneth M. Baldwin: Developmental, hormonal, and exercise factors regulating striated muscle gene expression
Ralph A. Bradshaw (*Emeritus*): Structure and function of polypeptide growth factors and their receptors; mechanisms of protein turnover
Michael D. Cahalan: Ion channels and Ca²⁺ signaling in the immune system
Vincent J. Caiozzo: Cellular and molecular mechanisms regulating the mechanical properties of skeletal muscle
K. George Chandy: Molecular biology of ion channels and their role in immune cells
John Jay Gargus: Molecular analysis of membrane signaling proteins
Alan L. Goldin: Molecular biology of neural channels and receptors
Harry T. Haigler: Structure, function, and topography of annexin calcium binding proteins on membranes
James E. Hall: Biophysics of membrane channels, gap junctions and water channels
Todd C. Holmes: Ion channels, cellular physiology, neural circuits and behavior; circadian and visual circuits
Lan Huang: Developing and employing mass spectrometry-based proteomic approaches for study of signal transduction networks, identification of protein complexes and characterization of their post-translational modifications

- Frances A. Jurnak: Macromolecular crystallography; biochemical and structural studies of a model G protein; EF-Tu; structure/function of plant virulence factors
- Janos K. Lanyi: Transport, structure, and energy coupling in bacteriorhodopsin and halorhodopsin
- John A. Longhurst: Integrative biology and sensory signaling systems important in cardiovascular regulation; central neural regulation of autonomic outflow inactivation of cardiac afferents and the influence of electroacupuncture
- Kenneth J. Longmuir: Intracellular metabolism, sorting, and transport of lipid in mammalian cells; membrane fusion
- Hartmut Luecke: Protein crystallography; structure and function of membrane-associated proteins
- Jogeshwar Mukherjee: Non-invasive imaging for precise assessment of islet cell mass in human diabetes
- Ian Parker: Intracellular calcium and cell signaling
- Thomas L. Poulos: Protein crystallography; protein engineering; heme enzyme structure and function
- Hamid M. Said: Cellular and molecular mechanisms and regulation of intestinal and renal vitamin transporters
- Ivan Soltesz: Plasticity and modulation of inhibitory synaptic neurotransmission
- Francesco Tombola: Electrical and chemical sensing in excitable cells, VSD-containing ion channels and enzymes
- Bruce J. Tromberg: Optical spectroscopy of tissues and cells
- Nosratola D. Vaziri: Vascular biology and role of nitric oxide and reactive oxygen species in regulation of blood pressure; molecular basis of lipid disorders
- Larry E. Vickery: Molecular chaperones and protein folding; protein engineering
- Ping H. Wang: Molecular actions of insulin-like growth factor I (IGF) in cardiac muscle; complications of diabetes
- Stephen H. White: Protein folding in membranes; peptide-bilayer interactions; membrane structure
- Albert Zlotnik: Chemokines, cancer metastasis, gene array analysis of human diseases and bioinformatics in immunology

The Department of Physiology and Biophysics offers research opportunities in the molecular biophysics of membranes and proteins, ion channels and signal transduction, endocrinology, molecular and cell biology, developmental neurobiology, and exercise physiology.

The Department offers graduate study under the auspices of the School of Medicine and in conjunction with the graduate program in Cellular and Molecular Biosciences (CMB) and the Interdepartmental Neuroscience Program (INP), which are described in the School of Biological Sciences section. Students admitted into these combined programs who select a research advisor in the Department begin following the departmental requirements for the Ph.D. at the beginning of their second year.

The faculty conducts quarterly reviews of all continuing students to ensure that they are maintaining satisfactory progress within their particular academic program. Students participate in a literature review course designed to strengthen research techniques and presentation skills, and attend the weekly Department colloquium. Students advance to candidacy during the third year; each student presents a seminar on a topic assigned by the formal candidacy committee. Following the seminar, the committee examines the student's qualifications for the successful conduct of doctoral dissertation research. Each student must submit a written dissertation on an original research project and successfully defend this dissertation in an oral examination. Interdisciplinary dissertation research involving more than one faculty member is encouraged. The normative time for completion of the Ph.D. is five years, and the maximum time permitted is seven years.

Courses in Physiology and Biophysics

(*Schedule of Classes* designation: **Physio**)

- 200 Research in Physiology and Biophysics (2 to 12 per quarter) F, W, S.** Individual research directed toward doctoral dissertation and supervised by a particular professor. Prerequisite: consent of instructor. May be repeated for credit.
- 200R Research in Physiology and Biophysics for First-Year Students (2 to 12) F, W, S.** Independent research within the laboratories of graduate training faculty in the Department of Physiology and Biophysics for first-year Ph.D. students. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be taken for credit three times.
- 201 Introduction to Physiology Research (1 to 4 per quarter) F, W, S.** Introduction to research in physiology and related sciences. Students concentrate on techniques emphasized in the various laboratories of the Department. Prerequisite: consent of instructor. May be repeated for credit.
- 204 Concepts of Biophysics (3) S.** Lecture, two hours; laboratory, one hour. Principles of crystallography; introduction to time-resolved absorption and fluorescence spectroscopy; the concepts of kinetic order and kinetic rate theory. Prerequisites: graduate standing in Biological Sciences and consent of instructor. *Offered only if sufficient demand exists.*
- 205 Electronics for Biologists (4) W.** Lecture, three hours; laboratory four hours. Basic principles of electricity; properties and use of discrete components and integrated circuits; circuit analysis and design. Intended for advanced students in the life sciences. Same as Neurobiology and Behavior 249.
- 206A-B Introduction to Medical Physiology (5-6) W, S.** Lecture, six hours; discussion, two hours; other, two hours. Vertebrate physiology with emphasis on humans and on the relationship between the function of normal tissues and the processes of disease. Fundamental principles of physiology and the interrelationships which control organ function. Prerequisites: Physiology 202 and consent of Department.
- 232 Physiology of Ion Channels (4) S.** Lecture, two hours; discussion, two hours. Discusses how ion channels work (molecular/structural biophysics level) and what ion channels do in diverse cell types (cell physiology level).
- 252 Introduction to Proteomics (4) W.** Introduces students to concepts and methods of proteomics including protein identification, expression proteomics, and protein-protein interactions. Prerequisite: consent of instructor. May be taken for credit twice.
- 290 Topics in Physiology (3) F, W, S.** Seminar, two hours; colloquium, one hour. Contemporary research problems in physiology. Students review papers in the current literature and present ideas contained therein to other students. Students present results of their own research and attend presentations given by other students and departmental researchers. Prerequisite: consent of instructor. Satisfactory/Unsatisfactory only. May be repeated for credit as topics vary.
- 292A-B-C Scientific Communication (2-2-2) F, W, S.** Seminar, two hours. Small group meetings for graduate students to practice scientific writing, debate, and presentation skills. Satisfactory/Unsatisfactory only. May be repeated for credit.
- 299 Dissertation in Physiology and Biophysics (2 to 12 per quarter) F, W, S, Summer.** Preparation and completion of the dissertation required for the Ph.D. or Master of Science degree. Prerequisite: consent of instructor. May be repeated for credit.

APPENDIX

University Administration

Under the State constitution, governance of the University is entrusted to The Board of Regents. The Regents appoint the President of the University, and with the President's advice, the officers of the University. Authority in academic matters is delegated by The Regents to the Academic Senate, which consists of faculty and certain administrative officers. The Academic Senate determines academic policy for the University as a whole, sets conditions for admission and the granting of degrees, authorizes and supervises courses and curricula, and advises the University administration on faculty appointments, promotions, and budgets. Additionally, each campus has a divisional Academic Senate.

The President is executive head of the total institution. Each campus has a Chancellor as its chief administrative officer. Students participate in policy-making at both the campus and Universitywide levels.

THE REGENTS OF THE UNIVERSITY OF CALIFORNIA

Regents Ex Officio

Governor of California and President of The Regents: Jerry Brown
Lieutenant Governor of California: Gavin Newsom
Speaker of the Assembly: John Pérez
State Superintendent of Public Instruction: Tom Torlakson
President of the Alumni Associations of the University of California:
Bruce Hallett
Vice President of the Alumni Associations of the University of California:
Lori S. Richardson Pelliccioni
President of the University: Mark G. Yudof

Appointed Regents¹

Richard C. Blum (2014)
David Crane (2022)
William C. De La Peña (2018)
Russell S. Gould (2017)
Eddie Island (2017)
Odessa P. Johnson (2012)
George Kieffer (2021)
Sherry L. Lansing (2022)
Monica C. Lozano (2013)
Hadi Makarechian (2020)
George M. Marcus (2012)
Norman J. Pattiz (2014)
Bonnie Reiss (2020)
Frederick Ruiz (2016)
Leslie Tang Schilling (2013)
Bruce D. Varner (2018)
Paul Wachter (2016)
Charlene Zettel (2021)
Alfredo Mireles, Jr. (July 1, 2011–June 30, 2012)

Regents-Designate²

to be announced
to be announced

¹ Regents, except ex-officio Regents and the student Regent, are appointed by the Governor to 12-year terms commencing on March 1. Ex-officio Regents serve by virtue of their elected or appointed positions; the student Regent is appointed by the Regents to a one-year term commencing on July 1.

² One-year terms expiring June 30.

Faculty Representatives to The Regents

Robert Anderson
to be announced

Staff Advisors to The Regents

to be announced
to be announced

Principal Officers of The Regents

General Counsel and Vice President–Legal Affairs: Charles F. Robinson
Treasurer (Acting) of The Regents and Chief Investment Officer and Vice President–Investments: Marie N. Berggren
Secretary and Chief of Staff of The Regents: Diane M. Griffiths
Senior Vice President–Chief Compliance and Audit Officer: Sheryl Vacca

OFFICE OF THE PRESIDENT

President of the University: Mark G. Yudof
Vice President–Laboratory Management: Bruce B. Darling
Executive Vice President–Business Operations: Nathan Brostrom
Provost and Executive Vice President–Academic Affairs: Lawrence Pitts
Executive Vice President–Chief Financial Officer: Peter J. Taylor
Senior Vice President–Health Sciences and Services: John D. Stobo
Senior Vice President–External Relations: Daniel M. Dooley

Refer to <http://www.ucop.edu/busops/orgchart.html> for a complete list of administrators.

CHANCELLORS

Chancellor at Berkeley: Robert J. Birgeneau
Chancellor at Davis: Linda Katehi
Chancellor at Irvine: Michael V. Drake
Chancellor at Los Angeles: Gene D. Block
Chancellor at Merced: Sung-Mo (Steve) Kang
Chancellor at Riverside: Timothy P. White
Chancellor at San Diego: Marye Anne Fox
Chancellor at San Francisco: Susan Desmond-Hellmann
Chancellor at Santa Barbara: Henry T. Y. Yang
Chancellor at Santa Cruz: George R. Blumenthal

UCI OFFICERS

Chancellor: Michael V. Drake
Executive Vice Chancellor and Provost: Michael R. Gottfredson
Vice Chancellor, Administrative and Business Services: Wendell C. Brase
Vice Chancellor, Planning and Budget: Meredith Michaels
Vice Chancellor, Research: John C. Hemminger
Interim Vice Chancellor, Student Affairs: Thomas A. Parham
Interim Vice Chancellor, University Advancement: Daniel G. Aldrich, III
Chief Executive Officer, Medical Center and Associate Vice Chancellor,
Medical Center Affairs: Terry A. Belmont

UCI DEANS AND CHAIRS OF INDEPENDENT ACADEMIC UNITS

Dean, Claire Trevor School of the Arts: Joseph S. Lewis III
Dean, School of Biological Sciences: Albert F. Bennett
Dean, The Paul Merage School of Business: Andrew J. Policano
Interim Dean, The Henry Samueli School of Engineering: Dimitri Papamoschou
Dean, School of Humanities: Vicki L. Ruiz
Dean, Donald Bren School of Information and Computer Sciences: Hal S. Stern
Dean, School of Law: Erwin Chemerinsky
Dean, School of Physical Sciences: Kenneth C. Janda
Dean, School of Social Ecology: Valerie Jenness
Dean, School of Social Sciences: Barbara A. Doshier
Dean, School of Medicine: Ralph V. Clayman
Dean, Continuing Education, Distance Learning, and Summer Session:
Gary W. Matkin
Dean, Graduate Division: Frances M. Leslie
Dean, Division of Undergraduate Education: Sharon V. Salinger
Chair, Department of Education: Deborah Lowe Vandell
Director, Program in Nursing Science: Ellen F. Olshansky
Chair, Department of Pharmaceutical Sciences: A. Richard Chamberlin
Chair, Department of Population Health and Disease Prevention: Oladele Ogunseitan

UCI ADMINISTRATORS

Associate Chancellor: Ramona Agrela
 Associate Vice Chancellor, Strategic Communications: *open*
 Director, Intercollegiate Athletics: Michael Izzi
 Vice Provost, Academic Personnel: Herbert P. Killackey
 Assistant Vice Chancellor: Patricia L. Price
 Director, Academic Personnel: Joan Tenma
 Vice Provost, Academic Planning: Michael P. Clark
 Associate Executive Vice Chancellor: Michael R. Arias
 Assistant Executive Vice Chancellor, Director of the Office of Equal Opportunity and Diversity, and Title IX/ Sexual Harassment Officer: Kirsten Quanbeck
 Assistant Vice Chancellor, Office of Information Technology and Chief Information Officer: Dana F. Roode
 Interim University Librarian: Lorelei Tanji
 University Ombudsman: J. Michael Chennault
 Chief Executive Officer, Medical Center and Associate Vice Chancellor, Medical Center Affairs: Terry A. Belmont
 Assistant Vice Chancellor, Healthcare Measurement and Evaluation: Sherrie Kaplan
 Associate Vice Chancellor, Administrative and Business Services: Paige L. Macias
 Associate Vice Chancellor and Campus Architect: Rebekah Gladson
 Assistant Vice Chancellor/Controller: Richard A. Andrews
 Interim Assistant Vice Chancellor, Facilities Management and Environmental Health: Marc Gomez
 Interim Assistant Vice Chancellor, Human Resources: Paige Macias
 Associate Vice Chancellor, Budget: Richard Lynch
 Associate Dean, Graduate Division: Susan Bibler Coutin
 Associate Vice Chancellor, Administration: Mark W. Warner
 Associate Vice Chancellor, Research: James W. Hicks
 Assistant Vice Chancellor, Research Development: Jacob Levin
 Assistant Vice Chancellor, Administrative Operations and Planning: Sinqi Musto
 Assistant Vice Chancellor, Research Administration: Bruce Morgan
 Assistant Vice Chancellor, Technology Alliances: Ronnie Hanecak
 Associate Vice Chancellor, Student Affairs: Daniel J. Doors
 Interim Assistant Vice Chancellor, Counseling and Health Services: Alice Wong
 Assistant Vice Chancellor, Enrollment Services: Brent Yunek
 Assistant Vice Chancellor and Dean of Students: Rameen Talesh
 Interim Assistant Vice Chancellor, Campus Development: Donna L. Mumford
 Assistant Vice Chancellor, Alumni Relations, and Executive Director, UCI Alumni Association: Jorge Ancona
 Assistant Vice Chancellor, Community and Government Relations: Elizabeth A. Toomey
 Assistant Vice Chancellor, Resource Planning and Administration of University Advancement: Lynn Rahn
 Senior Executive Director of Development, "Shaping the Future Campaign": Christopher Redo
 Interim Assistant Vice Chancellor, Academic Health Centers: Susan Totten
 Refer to <http://www.nacs.uci.edu/telephone/principal.html> for a complete list of UCI administrators.

University Professors

One of the highest honors that can be bestowed on UC faculty, the title "University Professor" is reserved for scholars of international distinction who are recognized and respected as teachers of exceptional ability. The purpose of the University Professorship is to recognize the special talents of outstanding scholars and teachers.

Francisco J. Ayala, UCI
 J. Michael Bishop, UCSF
 E. Margaret Burbidge, *Emerita*, UCSD
 Shu Chien, UCSD
 Alexandre J. Chorin, UCB
 Marvin L. Cohen, UCB
 Michael Cole, UCSD
 Robert B. Edgerton, UCLA
 Sandra M. Faber, UCSC
 Arturo Gómez-Pompa, *Emeritus*, UCR

M. Frederick Hawthorne, *Emeritus*, UCLA
 Richard M. Karp, UCB
 Yuan T. Lee, *Emeritus*, UCB
 Roger Reynolds, UCSD
 Robert Rosenthal, UCR
 Frank H. Shu, UCSD
 S. Jonathan Singer, *Emeritus*, UCSD
 Neil J. Smelser, *Emeritus*, UCB
 Gabor A. Somorjai, UCB
 Charles H. Townes, *Emeritus*, UCB
 Ming T. Tsuang, UCSD
 John R. Whinnery, *Emeritus*, UCB
 Hayden V. White, *Emeritus*, UCSC

UCI Faculty Distinctions

The **2007 Nobel Peace Prize** was awarded to the Intergovernmental Panel on Climate Change (IPCC) and former Vice President Al Gore. Several UC Irvine climate scientists have played a part in writing, reviewing, and editing IPCC climate change reports over the last decade, including Michael Prather, *Professor of Earth System Science and Fred Kavli Chair in Earth System Science*; Donald R. Blake, *Professor of Chemistry and Earth System Science*; Michael L. Goulden, *Associate Professor of Earth System Science and of Ecology and Evolutionary Biology*; Gudrun Magnusdottir, *Professor of Earth System Science*; James T. Randerson, *Associate Professor of Earth System Science*; Soroosh Sorooshian, *Director of the Center for Hydrometeorology and Remote Sensing (CHRS)*, and *UCI Distinguished Professor of Civil and Environmental Engineering and of Earth System Science*; Susan E. Trumbore, *Professor of Earth System Science*; Stanley C. Tyler, *Researcher, Department of Earth System Science*; Jin-Yi Yu, *Associate Professor of Earth System Science*; and Charles S. Zender, *Associate Professor of Earth System Science*.

UCI NOBEL LAUREATES

Nobel Prize in Chemistry, 2004

Irwin Rose, *UCI Distinguished Professor Emeritus, Department of Physiology and Biophysics*

Nobel Prize in Chemistry, 1995

F. Sherwood Rowland, *Research Professor Emeritus of Chemistry and Earth System Science, and Bren Chair*

Nobel Prize in Physics, 1995

Frederick Reines, *UCI Distinguished Professor Emeritus of Physics* (d. 1998)

TEMPLETON PRIZE, 2010

Francisco J. Ayala, *University Professor and Donald Bren Professor of Biological Sciences*

UCI ENDOWED CHAIRS

Daniel G. Aldrich, Jr. Endowed Chair

Frank L. Meyskens, Jr., *Director of the Chao Family Comprehensive Cancer Center and Professor, Departments of Medicine (Hematology/Oncology), Biological Chemistry, and Program in Public Health*

Louise Turner Arnold Chair in the Neurosciences

Daniele Piomelli, *Professor, Departments of Pharmacology and Biological Chemistry*

Howard Baskerville Professor in the History of Iran and the Persianate World

Touraj Daryaee, *Associate Director of the Dr. Samuel M. Jordan Center for Persian Studies and Culture and Professor of History*

Arnold and Mabel Beckman Chair in Laser Biomedicine

Michael W. Berns, *Professor of Surgery, Developmental and Cell Biology, and Biomedical Engineering*

Grace Beekhuis Bell Chair in Biological Chemistry

Masayasu Nomura, *Professor of Biological Chemistry and of Microbiology and Molecular Genetics*

Donald Bren Professors, The Donald L. Bren Endowment

Francisco J. Ayala, *University Professor of Biological Sciences*
 Thomas J. Carew, *Department Chair and Professor of Neurobiology and Behavior, and Professor of Education*
 Michael Carey, *Professor of Computer Science*

Paolo Casali, *School of Medicine Senior Associate Dean for Research and Graduate Studies, Director of the Center for Immunology, and Professor, Departments of Medicine (Immunology) and of Molecular Biology and Biochemistry*

Michael T. Clegg, *Professor of Biological Sciences and of Ecology and Evolutionary Biology*

Sheldon Greenfield, *Executive Co-Director of the Center for Health Policy Research and Professor of Medicine (General Internal Medicine)*

Wilson Ho, *Professor of Physics and Chemistry*

Ramesh C. Jain, *Professor of Information and Computer Sciences*

Wen-Hwa Lee, *Professor of Biomedicine, Biological Chemistry, and Pharmacology*

Gary Olson, *Professor of Informatics*

Judy Olson, *Professor of Informatics and Management*

F. Sherwood Rowland, *Research Professor Emeritus of Chemistry and Earth System Science*

Paolo Sassone-Corsi, *Department Chair of Pharmacology and UCI Distinguished Professor, Departments of Pharmacology, Microbiology and Molecular Genetics, and Pharmaceutical Sciences*

Conexant-Broadcom Endowed Chair in the Center for Pervasive Communications and Computing

Ender Ayanoglu, *Director of the Center for Pervasive Communications and Computing and Professor of Electrical Engineering and Computer Science*

Edward A. Dickson Emerti Professor

Robert Folkenflik, *Professor Emeritus of English*

Endowed Chair and Director of the Center for Diversity in Engineering Education

Martha L. McCartney, *Professor of Chemical Engineering and Materials Science*

Philip J. DiSaia Chair in Gynecologic Oncology

Robert E. Bristow, *Director of the Division of Gynecologic Oncology and Professor, Department of Obstetrics and Gynecology (Gynecologic Oncology)*

Lawrence K. Dodge Endowed Chair in Integrative Biology

John Longhurst, *Associate Dean, School of Medicine; Director of the Susan Samuelli Center for Integrative Medicine; Professor of Medicine (Cardiology), Physiology and Biophysics, Pharmacology, and Biomedical Engineering; and Susan Samuelli Chair in Integrative Medicine*

Edwards Lifesciences Chair

Steven C. George, *Director of the Edwards Lifesciences Center for Advanced Cardiovascular Technology and Professor of Biomedical Engineering and of Chemical Engineering and Materials Science*

Robert Gumbiner Chair in Health Care Management

Paul J. Feldstein, *Director of the Center for Health Care Management and Policy and Professor of Management, Planning, Policy, and Design, and Economics*

Hasso Brothers Endowed Chair in Radiological Sciences

Scott C. Goodwin, *Professor of Clinical Radiological Sciences*

Roger W. and Janice M. Johnson Chair in Civic Governance and Public Management

Martha Feldman, *Professor of Planning, Policy, and Design, Management, Political Science, and Sociology*

Fred Kavli Chair in Earth System Science

Michael Prather, *Director of the UCI Environment Institute and Professor of Earth System Science*

Kirkup Chair in Psychiatry and Human Behavior for the Medical Treatment of Stuttering

Gerald Maguire, *Associate Dean, School of Medicine, Director of Residency Training, and Associate Professor of Clinical Psychiatry and Human Behavior*

Irving H. Leopold Chair in Ophthalmology

Roger F. Steinert, *Department Chair of Ophthalmology and Professor of Clinical Ophthalmology and Biomedical Engineering*

William J. Link Chair in Biomedical Engineering

Abraham Lee, *Department Chair and Professor of Biomedical Engineering and Professor of Mechanical and Aerospace Engineering*

John D. and Catherine T. MacArthur Foundation Chair in Digital Media and Learning

Mizuko “Mimi” Ito, *Professor in Residence of Anthropology and Informatics*

Della Martin Chair in Psychiatry

William E. Bunney, Jr., *UCI Distinguished Professor of Psychiatry and Human Behavior*

Maseeh Chair in Persian Studies and Culture

Nasrin Rahimieh, *Director of the Dr. Samuel M. Jordan Center for Persian Studies and Culture and Professor of Comparative Literature*

Maseeh Professor in Persian Performing Arts

Hossein Omoumi, *Professor of Music and of Persian Performing Arts*

Gary McCue Administrative Term Chair in Cosmology

James Bullock, *Associate Professor of Physics*

James L. McGaugh Chair in the Neurobiology of Learning and Memory

John F. Guzowski, *Associate Professor of Neurobiology and Behavior*

Abraham I. Melden Chair in Moral Philosophy

Margaret Gilbert, *Professor of Philosophy*

Merage Chair in Business Growth

David A. Hirshleifer, *Professor of Management and Economics*

Eric L. and Lila D. Nelson Chair in Neuropharmacology

Olivier Civelli, *Professor, Departments of Pharmacology and Pharmaceutical Sciences*

Nichols Clinical Neuroscience Chair

Claudia Kawas, *Professor of Neurology and of Neurobiology and Behavior*

Jack W. Peltason Endowed Chair

Bernard N. Grofman, *Director of the Center for the Study of Democracy and Professor of Political Science and Economics*

The Edward J. Quilligan Chair in Maternal-Fetal Medicine

Manuel Porto, *Department Chair of Obstetrics and Gynecology and Professor of Clinical Obstetrics and Gynecology (Maternal-Fetal Medicine)*

The Robert and Marjorie Rawlins Chair in Music

David Brodbeck, *Department Chair and Professor of Music*

Ronald W. Reagan Endowed Chair in Geriatrics

Laura Mosqueda, *Interim Department Chair of Family Medicine, Director of the Program in Geriatrics, and Professor of Clinical Family Medicine (Family Medicine and Geriatrics)*

Reeve-Irvine Chair in Spinal Cord Injury Research

Oswald Steward, *Professor, Departments of Anatomy and Neurobiology, Neurobiology and Behavior, and Neurosurgery*

Henry Samuelli Endowed Chairs

G. Scott Samuelsen, *Director of the National Fuel Cell Research Center, Director of the Advanced Power and Energy Program, and Professor of Mechanical and Aerospace Engineering*

William A. Sirignano, *Professor of Mechanical and Aerospace Engineering*

H. Kumar Wickramasinghe, *Professor of Electrical Engineering and Computer Science, Biomedical Engineering, and Chemical Engineering and Materials Science*

The Henry Samuelli Endowed Chair in Engineering in the Center for Engineering Science in Design

J. Michael McCarthy, *Director of the Center for Engineering Science in Design (CESD) and Professor of Mechanical and Aerospace Engineering*

The Henry Samuelli “Turing” Chair in Computer Systems Design

Daniel D. Gajski, *Director of the Center for Embedded Computer Systems and Professor of Electrical Engineering and Computer Science and of Computer Science*

Walter R. Schmid Chair in Pediatric Urology

Antoine Khoury, *Chief of Pediatric Urology and Professor, Department of Urology*

Susan Samuelli Chair in Integrative Medicine

John Longhurst, *Associate Dean, School of Medicine; Director of the Susan Samuelli Center for Integrative Medicine; Professor of Medicine (Cardiology), Physiology and Biophysics, Pharmacology, and Biomedical Engineering; and Lawrence K. Dodge Endowed Chair in Integrative Medicine*

Danette (Dee Dee) Shepard Chair in Neurological Studies

Tallie Z. Baram, *Professor, Departments of Pediatrics, Neurology, and Anatomy and Neurobiology*

Jack H. Skirball Endowed Chair

James V. Jester, *Professor in Residence, Departments of Ophthalmology and Biomedical Engineering*

Ted and Janice Smith Family Foundation Endowed Chair in Information and Computer Science

Hal S. Stern, *Dean of the Donald Bren School of Information and Computer Sciences and Professor of Statistics*

Robert R. Sprague Chair in Brain Imaging

Steven G. Potkin, *Director of the Brain Imaging Center and Professor of Psychiatry and Human Behavior*

Taco Bell Chair in Information Technology Management

Vijay Gurbaxani, *Director of the Center for Research on Information Technology and Organizations and Professor of Management*

Edward and Vivian Thorp Chair in Mathematics

Karl C. Rubin, *Professor of Mathematics*

Thomas T. and Elizabeth C. Tierney Chair in Global Peace and Conflict Studies

Patrick Morgan, *Professor of Political Science*

Claire Trevor Dean's Endowed Chair, Claire Trevor School of the Arts

Joseph S. Lewis III, *Dean of the Claire Trevor School of the Arts and Professor of Studio Art*

Claire Trevor Professors in the Arts

Robert Cohen, *Professor of Drama*

Yvonne Rainer, *UCI Distinguished Professor of Studio Art*

UCI Excellence in Teaching Endowed Chair in Mathematics

Gunther Uhlmann, *Professor of Mathematics*

UC Presidential Chair

Peter M. Rentzepis, *Professor of Chemistry and of Electrical Engineering and Computer Science*

Drew, Chace, and Erin Warmington Chair in the Social Ecology of Peace and International Cooperation

Scott A. Bollens, *Professor of Planning, Policy, and Design*

UCI CHANCELLOR'S FELLOWS

Jonathan Alexander, *Campus Writing Coordinator and Professor of English and Education*

Jeffrey A. Barrett, *Department Chair and Professor of Logic and Philosophy of Science*

Christine M. Beckman, *Associate Professor of Management and Sociology*

Sven Bernecker, *Department Chair and Professor of Philosophy*

Gilberto Q. Conchas, *Associate Professor of Education*

Thomas E. Lane, *Professor of Molecular Biology and Biochemistry*

Shiou-Chuan (Sheryl) Tsai, *Associate Professor of Molecular Biology and Biochemistry, Chemistry, and Pharmaceutical Sciences*

Christopher D. Vanderwal, *Assistant Professor of Chemistry*

UCI CHANCELLOR'S PROFESSORS

Kei Akagi, *UCI Chancellor's Professor of Music*

Pierre Baldi, *Director of the Institute for Genomics and Bioinformatics and UCI Chancellor's Professor of Computer Science, Biomedical Engineering, Developmental and Cell Biology, and Biological Chemistry*

Frank D. Bean, *UCI Chancellor's Professor of Sociology and Economics*

Dan L. Burk, *UCI Chancellor's Professor of Law*

Imran S. Currim, *UCI Chancellor's Professor of Management*

Nikil Dutt, *UCI Chancellor's Professor of Computer Science and of Electrical Engineering and Computer Science*

Catherine Fisk, *UCI Chancellor's Professor of Law*

Michael T. Goodrich, *Associate Dean for Faculty Development for the Donald Bren School of Information and Computer Sciences and UCI Chancellor's Professor of Computer Science*

Hamid Jafarkhani, *Director of Networked Systems and UCI Chancellor's Professor of Electrical Engineering and Computer Science*

Philippe Jorion, *UCI Chancellor's Professor of Management and Economics*

Frank LaFerla, *Director of the Institute for Memory Impairments and Neurological Disorders and UCI Chancellor's Professor of Neurobiology and Behavior*

Eva Y.-H. P. Lee, *UCI Chancellor's Professor of Developmental and Cell Biology and of Biological Chemistry*

Peter Li, *UCI Chancellor's Professor of Mathematics*

John S. Lowengrub, *Department of Mathematics Vice Chair of Graduate Studies and UCI Chancellor's Professor of Mathematics, Chemical Engineering and Materials Science, and Biomedical Engineering*

Marc J. Madou, *UCI Chancellor's Professor of Mechanical and Aerospace Engineering, Biomedical Engineering, and Chemical Engineering and Materials Science*

George E. Marcus, *UCI Chancellor's Professor of Anthropology*

Carrie Menkel-Meadow, *UCI Chancellor's Professor of Law*

Shaul Mukamel, *UCI Chancellor's Professor of Chemistry*

Margot Norris, *UCI Chancellor's Professor of English and Comparative Literature*

Kenneth L. Pomeranz, *UCI Chancellor's Professor of History*

Thomas L. Poulos, *UCI Chancellor's Professor of Molecular Biology and Biochemistry, Pharmaceutical Sciences, Physiology and Biophysics, and Chemistry*

R. Radhakrishnan, *UCI Chancellor's Professor of English and Comparative Literature*

R. Anthony Reese, *UCI Chancellor's Professor of Law*

Gabriele Schwab, *UCI Chancellor's Professor of Comparative Literature and English*

David A. Snow, *UCI Chancellor's Professor of Sociology*

Etel Solingen, *UCI Chancellor's Professor of Political Science*

Daniel Stokols, *UCI Chancellor's Professor of Planning, Policy, and Design; Psychology and Social Behavior; Public Health; and Environmental Health, Science, and Policy*

Richard Taylor, *Director of the Institute for Software Research and UCI Chancellor's Professor of Informatics*

Brook Thomas, *UCI Chancellor's Professor of English*

Christopher Tomlins, *UCI Chancellor's Professor of Law*

Chen S. Tsai, *UCI Chancellor's Professor of Electrical Engineering and Computer Science*

UCI DISTINGUISHED PROFESSORS

Satya N. Atluri, *UCI Distinguished Professor of Mechanical and Aerospace Engineering*

John C. Avise, *UCI Distinguished Professor of Ecology and Evolutionary Biology*

William E. Bunney, Jr., *UCI Distinguished Professor of Psychiatry and Human Behavior and Della Martin Chair in Psychiatry*

Erwin Chemerinsky, *Dean of the School of Law and UCI Distinguished Professor of Law and Political Science*

Greg Duncan, *UCI Distinguished Professor of Education, Economics, and Psychology and Social Behavior*

David Easton, *UCI Distinguished Research Professor of Political Science*

Barbara J. Finlayson-Pitts, *UCI Distinguished Professor of Chemistry*

Zachary Fisk, *UCI Distinguished Professor of Physics*

Anthony A. James, *UCI Distinguished Professor of Microbiology and Molecular Genetics and of Molecular Biology and Biochemistry*

Daniel D. Joseph, *UCI Distinguished Adjunct Professor of Mechanical and Aerospace Engineering*

Elizabeth F. Loftus, *UCI Distinguished Professor of Psychology and Social Behavior; Criminology, Law and Society; Cognitive Sciences; and Law*

R. Duncan Luce, *UCI Distinguished Professor Emeritus of Cognitive Sciences and Economics*

Penelope Maddy, *UCI Distinguished Professor of Logic and Philosophy of Science and of Mathematics*

David B. Malament, *UCI Distinguished Professor of Logic and Philosophy of Science*

Ricardo Mileti, *UCI Distinguished Research Professor of Neurobiology and Behavior*

Jack Miles, *UCI Distinguished Professor of English*

J. Hillis Miller, *UCI Distinguished Research Professor of English and Comparative Literature*

Ngugi wa Thiong'o, *UCI Distinguished Professor of English and Comparative Literature*

Larry E. Overman, *UCI Distinguished Professor of Chemistry*

Yvonne Rainer, *UCI Distinguished Professor and Claire Trevor Professor of Studio Art*

Irwin Rose, *UCI Distinguished Professor Emeritus, Department of Physiology and Biophysics*

Donald G. Saari, *Director of the Institute for Mathematical Behavioral Sciences and UCI Distinguished Professor of Economics and Mathematics*

Henry Samueli, *UCI Distinguished Adjunct Professor of Electrical Engineering and Computer Science*

Paolo Sassone-Corsi, *Department Chair of Pharmacology, Donald Bren Professor, and UCI Distinguished Professor of Pharmacology, Microbiology and Molecular Genetics, and Pharmaceutical Sciences*

Masanobu Shinozuka, *UCI Distinguished Professor of Civil and Environmental Engineering and of Electrical Engineering and Computer Science*

Brian Skyrms, *UCI Distinguished Professor of Logic and Philosophy of Science and of Economics, and Director of the Minor in the History and Philosophy of Science*

Soroosh Sorooshian, *UCI Distinguished Professor of Civil and Environmental Engineering and of Earth System Science*

George Sperling, *UCI Distinguished Professor of Cognitive Sciences and of Neurobiology and Behavior*

Eric J. Stanbridge, *UCI Distinguished Professor Emeritus of Microbiology and Molecular Genetics*

UCI FACULTY MEMBERSHIP IN MAJOR U.S. LEARNED SOCIETIES

American Academy of Arts and Sciences: 37

American Association for the Advancement of Science: 128

American Philosophical Society: 8

American Physical Society: 44

National Academy of Engineering: 11

National Academy of Sciences: 26

National Academy of Sciences–Institute of Medicine: 5

Principles of Community

UCI is a multicultural community of people from diverse backgrounds. Our activities, programs, classes, workshops, lectures, and everyday interactions are enriched by our acceptance of one another, and we strive to learn from each other in an atmosphere of positive engagement and mutual respect.

Our legacy for an increasingly multicultural academic community and for a learning climate free from expressions of bigotry is drawn from the United States and California Constitutions, and from the charter of the University of California which protects diversity and reaffirms our commitment to the protection of lawful free speech. Affirmation of that freedom is an effective way of ensuring that acts of bigotry and abusive behavior will not go unchallenged within the University. Tolerance, civility, and mutual respect for diversity of background, gender, ethnicity, race, and religion are as crucial within our campus community as are tolerance, civility, and mutual respect for diversity of political beliefs, sexual orientation, and physical abilities. Education and clear, rational, and vigorous challenges are positive responses to prejudice and acts of bigotry.

The University's nondiscrimination policy, in compliance with applicable federal and state law, covers treatment in University programs and activities as well as admission and employment. UCI expects all those affiliated with it to adhere to the letter and the spirit of University nondiscrimination policies and related federal and state laws. Information concerning these policies is available on the World Wide Web at <http://www.ucop.edu/>.

Allegations of physical abuse, threats of violence, or conduct that threatens the health or safety of any person on University property or in connection with official University functions will be investigated promptly and, where found to exist, appropriate actions will be taken in accordance with University policy.

All who work, live, study, and teach at UCI are here by choice and, as part of that choice, should be committed to these Principles of Community which are an integral part of the guidelines by which the University community can successfully conduct its affairs.

Student Conduct and Discipline

Students enrolling in the University are expected to assume an obligation to conduct themselves in a manner compatible with the University's function as an educational institution. A handbook is available which sets forth standards of conduct expected of UCI students. *University of California Policies Applying to Campus Activities, Organizations, and Students* lists rules concerning conduct and related matters, as established by the policies of the Regents and the President of the University and also incorporates campus regulations. These policies are available at http://www.dos.uci.edu/conduct/uci_policy.php.

Academic Honesty

The UCI Academic Senate Policies on Academic Honesty were approved by the Irvine Division on June 2, 1988, and most recently revised on June 5, 2008.

A. PREAMBLE

The University is an institution of learning, research, and scholarship predicated on the existence of an environment of honesty and integrity. As members of the academic community, faculty, students, and administrative officials share responsibility for maintaining this environment. It is essential that all members of the academic community subscribe to the ideal of academic honesty and integrity and accept individual responsibility for their work. Academic dishonesty is unacceptable and will not be tolerated at the University of California, Irvine. Cheating, forgery, dishonest conduct, plagiarism, and collusion in dishonest activities erode the University's educational, research, and social roles. They devalue the learning experience and its legitimacy not only for the perpetrators but for the entire community.

B. RESPONSIBILITIES

All members of the academic community have a responsibility to ensure that scholastic honesty is maintained.

Faculty have primary responsibility for:

1. Upholding and enforcing universitywide principles of academic honesty and integrity and explaining clearly these principles including any qualifications which may be operative in the classes they are teaching.
2. Minimizing opportunities for academic misconduct in their courses.
3. Confronting students suspected of academic dishonesty in a way that respects student privacy.
4. Affording students accused of academic misconduct the right to appeal any resulting disputes to disinterested parties for hearing and resolution.
5. Assigning an appropriate grade to a student who engages in academic dishonesty.
6. Reporting all instances of academic dishonesty to appropriate Associate Deans.
7. Protecting the anonymity of any student reporting an incident of academic dishonesty to the extent permitted by due process required for the accused and other legal requirements.

Students have responsibility for:

1. Refraining from cheating and plagiarism.
2. Refusing to aid or abet any form of academic dishonesty.
3. Notifying professors and/or appropriate administrative officials about observed incidents of academic misconduct. The anonymity of a student reporting an incident of academic dishonesty will be protected.

C. WHAT IS ACADEMIC DISHONESTY?

Academic dishonesty applies equally to electronic media and print, and involves text, images, and ideas. It includes but is not limited to the following examples:

Cheating

1. Copying from others during an examination.
2. Communicating exam answers with other students during an examination.
3. Offering another person's work as one's own.
4. Taking an examination for another student or having someone take an examination for oneself.
5. Sharing answers for a take-home examination or assignment unless specifically authorized by the instructor.
6. Tampering with an examination after it has been corrected, then returning it for more credit.
7. Using unauthorized materials, prepared answers, written notes or information concealed in a blue book or elsewhere during an examination.
8. Allowing others to do the research and writing of an assigned paper (including use of the services of a commercial term-paper company).

Dishonest Conduct

1. Stealing or attempting to steal an examination or answer key from the instructor.
2. Changing or attempting to change academic records without proper sanction.

3. Submitting substantial portions of the same work for credit in more than one course without consulting all instructors involved.
4. Forging add/drop/change cards and other enrollment documents, or altering such documents after signatures have been obtained.
5. Intentionally disrupting the educational process in any manner.
6. Allowing another student to copy off of one's own work during a test.

Plagiarism

Plagiarism is intellectual theft. It means use of the intellectual creations of another without proper attribution. Plagiarism may take two main forms, which are clearly related:

1. To steal or pass off as one's own the ideas or words, images, or other creative works of another.
2. To use a creative production without crediting the source, even if only minimal information is available to identify it for citation.

Credit must be given for every direct quotation, for paraphrasing or summarizing a work (in whole, or in part, in one's own words), and for information which is not common knowledge.

Collusion

Any student who knowingly or intentionally helps another student perform any of the above acts of cheating or plagiarism is subject to discipline for academic dishonesty.

D. PROCEDURES FOR DEALING WITH INCIDENTS OF ACADEMIC DISHONESTY

Many, perhaps most, incidents of academic dishonesty involve accusations which are based on clear evidence and which are not contested by the accused student. In such cases, if the infraction is relatively minor and there is no indication that the accused student has previously been involved in such incidents, it is most appropriate that the matter be resolved between the student and the faculty member. When this occurs, it is nevertheless important that a written report of the incident be filed to ensure that penalties assessed are commensurate with the offense and that repeated infractions be detected and dealt with appropriately.

More serious incidents and repeat offenses which call for stronger disciplinary action, may result in campuswide sanctions, in addition to the actions imposed by a faculty member. In such cases, these sanctions, as described in Section 105.00 of the *Policies Applying to Campus Activities, Organizations, and Students*, will be administered by the Academic Associate Deans or the Office of the Dean of the Division of Undergraduate Education or the Graduate Division.

Finally, whenever an accusation of academic dishonesty or a grade given by a faculty member is contested by an accused student, the student has recourse for mediation of the dispute. Processes for mediation, assistance with conflict resolution, and/or an informal inquiry may be requested by the student or the Associate (Undergraduate or Graduate) Dean of the faculty member's school through the Office of the Ombudsman. In incidents where a campuswide sanction has been imposed, the student can request a hearing with the appropriate Hearing Panel on Academic Honesty which will be convened by the Office of either the Dean of the Division of Undergraduate Education or the Dean of the Graduate Division, depending on the status of the accused student.

The procedures outlined here are designed to institute a system that recognizes that many cases of academic misconduct are best resolved between the student and faculty member involved, while it provides for appropriate record keeping and handling of serious and repeated offenses and guarantees a fair hearing to a student who has received a campuswide sanction.

Authority of Faculty Members

When a faculty member has evidence of student academic dishonesty, the faculty member must present the evidence to the student in a private meeting or communicate with the student by some other means. The faculty member must initiate this communication with the student within 15 calendar days of discovering evidence of academic dishonesty and evaluating the relevant work. The faculty member then may follow up with one or more of only the following actions:

1. To issue a reprimand to the student with letter of explanation to the student's file.
2. To require repetition of the questionable work or examination with letter of explanation to the student's file.

3. To reduce the grade to an 'F' or zero, if appropriate, on the questionable work or examination with written notification to the student and a letter of explanation to the student's file.
4. To assign the student a failing grade in the course or otherwise lower the grade in the course with a letter of explanation to the student's file.

It is essential that any such action be reported in writing to the student in a letter from the faculty member. Copies of this letter must also be sent to (a) the Associate Dean of the faculty member's school, (b) the Associate Dean of the student's school, who will maintain a file of cases of academic misconduct involving students enrolled in that school, and (c) the Office of the Dean of the Division of Undergraduate Education or Dean of the Graduate Division, as appropriate. The faculty member is strongly encouraged to consult with the Associate (Undergraduate or Graduate) Dean of his or her school before the letter is drafted. Reference to (or a copy of) the UCI Academic Senate Policies on Academic Honesty should be included in the letter. If action (4) is taken, the faculty member is responsible for making certain that the failure is recorded by the Registrar on the student's permanent academic record. Careful documentation of the incident must be maintained by the faculty member in the event that his or her actions in the case should later be subject to review.

Responsibilities of the Academic Associate Deans

1. The Associate (Graduate or Undergraduate) Dean of either the accused student's school or of the faculty member's school may impose campuswide sanctions. Sanctions imposed by Associate Deans are final unless the student requests a hearing within 15 calendar days of notification. The 15-day period starts from the time the Associate Dean has notified the student of the discipline or has notified the student of the hearing and appeal process by providing a copy of this policy, whichever comes later. It is recommended that each case be brought to a final resolution within 90 days of instruction.
2. The Associate Dean (or equivalent official) of each school is responsible for maintaining confidential records concerning academic dishonesty of students enrolled in that school. All letters reporting faculty-imposed academic penalties for academic misconduct will be included in these files.
3. The Associate Dean of the accused student's school will be responsible for identifying all incidents which represent repeated offenses by a student and may impose a campuswide sanction because of repeat offenses.
4. Associate Deans are required to notify the student of the hearing and appeal process and provide the student a copy of this policy or explicitly refer the student to it. If an Associate Dean suspects grounds for a grievance involving discrimination, the student should be referred to Appendix II of *The Manual of the Irvine Division of the Academic Senate*, "Student Academic Grievance Procedures Relating to Non-Discrimination" (which is limited to allegations of discrimination).
5. In those classes where academic dishonesty continues to be a problem and the faculty member or another university official has already been approached by the student(s) from the class, the Associate Dean will consult with the appropriate faculty member to address the problem.
6. Students who have on file recorded acts of academic dishonesty, as defined by the *Policies Applying to Campus Activities, Organizations, and Students*, may be excluded by the Associate Deans from consideration for academic honors at graduation. Another consequence could be that in admission to a major, for students who wish to change majors, individual majors may take into account the commission of an act of dishonesty. Exclusion from consideration for honors and exclusion from major change is not for the purposes of this policy to be considered a campuswide sanction. Students excluded from such consideration under this policy therefore are not eligible to request a formal hearing.
7. In those situations where a campuswide sanction is imposed and the student requests a hearing, the Associate Dean will forward to the Hearing Panel on Academic Honesty the materials which led him or her to impose the sanction. In addition, the Associate Dean will appear before the Hearing Panel to discuss the case upon request of the Hearing Panel.

Student Hearings

It should be understood that all grades are ultimately the responsibility of faculty. However, if a student accused of academic dishonesty wishes to contest an action by a faculty member, the student may, within a 15-day period, request assistance by writing to the Associate Dean of the faculty member. The period is 15 calendar days and starts from the time the Associate Dean

has notified the student of the discipline or has notified the student of the hearing and appeal process by providing a copy of this policy, whichever comes later.

When a campuswide sanction is imposed, the affected student may, within 15 days of notification, request a hearing before a Hearing Panel on Academic Honesty. Students considering a hearing in response to campuswide sanctions for alleged academic misconduct are urged to contact the Associate Dean of their academic school and/or the University Ombudsman concerning possible sources of advice and assistance. Students should be advised regarding the grounds for appeal as specified in section 103.11 of the *Policies Applying to Campus Activities, Organizations, and Students*.

Role of the Ombudsman

The services of the Ombudsman may be requested at any time by the student, the faculty member, or the Associate Dean. The role of the Ombudsman is to assist in conflict resolution, mediate the dispute, perform an informal inquiry of the case, and clarify policies and procedures for anyone involved.

In those incidents where imposition of a campuswide sanction is a consideration and the student has requested a hearing before the Panel on Academic Honesty, the case may be referred to the Office of the Ombudsman by the Dean of the Division of Undergraduate Education or the Dean of the Graduate Division. An informal inquiry may be conducted by the Ombudsman who will then confer with the Associate Dean and the accused student. However, the findings of the Ombudsman will not be forwarded to the Hearing Panel on Academic Honesty. The case may be referred by the student to either the Dean of the Division of Undergraduate Education or the Dean of the Graduate Division, as appropriate, who will be responsible for convening the Hearing Panel on Academic Honesty.

Students should always be informed by the Associate Dean of their school of their right to secure the assistance of the Ombudsman in understanding and addressing the problem or issue.

Role of the Deans of Undergraduate Education and the Graduate Division

Whenever an incident of academic misconduct is referred to the Office of the Dean of the Division of Undergraduate Education or the Dean of the Graduate Division by the student, a representative of the appropriate offices will meet with the student and, if requested, explain the process and arrange the time and place of a hearing before the appropriate (Undergraduate or Graduate) Hearing Panel on Academic Honesty. The appropriate Dean will maintain a record of all cases of academic dishonesty reported by the respective Associate Deans.

Formal resolution by the appropriate Hearing Panel on Academic Honesty may result in the imposition by the Dean of the Division of Undergraduate Education or the Dean of the Graduate Division of one or more of the sanctions described in section 105.00 of the *Policies Applying to Campus Activities, Organizations, and Students*, including suspension or dismissal from the University.

E. HEARING PANELS ON ACADEMIC HONESTY

1. Jurisdiction of the Hearing Panels on Academic Honesty

There will be two types of Hearing Panels on Academic Honesty. One type of Hearing Panel will hear cases of campuswide sanctions on undergraduate students while the other will hear graduate student cases. The Hearing Panels can reduce, affirm, or increase sanctions.

2. Composition of the Hearing Panels on Academic Honesty

An undergraduate Hearing Panel on Academic Honesty will be convened for each case submitted throughout the year. The pool from which each Undergraduate Hearing Panel on Academic Honesty shall be drawn consists of all appointed faculty and ex officio faculty on the Council of Student Experience, selected student Peer Academic Advisors nominated by the academic units (one per unit), and a representative from the Office of the Dean of the Division of Undergraduate Education, appointed by the Dean of the Division of Undergraduate Education. These groups will be trained in the Academic Honesty policy and procedures by a representative of the Dean of the Division of Undergraduate Education so that there will be a ready pool of qualified participants available on short notice when a hearing is called. For each

hearing involving an Undergraduate Hearing Panel on Academic Honesty, two faculty appointed by the Council on Student Experience Chair, two student Peer Academic Advisors and one representative from the Office of the Dean of the Division of Undergraduate Education appointed by the Dean of the Division of Undergraduate Education shall form an Undergraduate Hearing Panel on Academic Honesty to hear the student appeal. The hearing will be scheduled by the Office of the Dean of the Division of Undergraduate Education.

The Graduate Hearing Panel on Academic Honesty will be a standing administrative committee composed of two faculty, two students, and a representative of the Dean of the Graduate Division. Terms of faculty members will be two years. One faculty member will be appointed annually by the Dean of the Graduate Division. To ensure continuity, terms will be staggered; during the first year of operation only, one faculty member will be appointed for a one-year term. One additional faculty member will be appointed by the Dean of the Graduate Division to serve as an alternate to the Graduate Hearing Panel. The two students shall serve for one year and will be appointed by AGS. One additional student member will be appointed by AGS to serve as an alternate.

3. Role of the Associate Dean

The Associate Dean will forward to each Hearing Panel the evidence which led to his or her decision to impose the campuswide sanction. In addition, the Associate Dean will appear before the Hearing Panel to comment on the case if the Hearing Panel wishes.

4. Hearings

- If the student requests a hearing, the Office of the Dean of the Division of Undergraduate Education or the Dean of the Graduate Division shall schedule a hearing of the case before the appropriate Hearing Panel. Written notice must be given to the parties involved regarding the date, time, and place of the hearing.
- The chair will be elected by the membership of the Hearing Panel. The chair will rule on all questions of procedure, the admission or exclusion of evidence, and the need to call witnesses for additional testimony. Hearings shall be held in accordance with generally accepted standards of procedural due process.
- Hearings will be closed unless the parties involved agree to an open hearing. Every effort must be made by all parties to maintain confidentiality during the process.
- Hearings shall be held following the provisions in sections 103.11. (5, 6, and 8) of the Policy on Student Conduct and Discipline in the *Policies Applying to Campus Activities, Organizations, and Students*, except that the role of the Dean of Students shall be filled by the Dean of the Division of Undergraduate Education or the Graduate Division, depending on the status of the student.

5. Report of the Hearing Panel on Academic Honesty

After a hearing, a Hearing Panel shall arrive at a decision. When a decision is reached, the student and the appropriate Academic Associate Dean will be informed of the judgment.

6. Final Appeal

If the campuswide sanction is upheld by a Hearing Panel, the report of the Hearing Panel and all supporting evidence may be sent for a final level of review at the request of the student. If the accused student is an undergraduate, the case will be reviewed by the Dean of the Graduate Division. If the accused student is a graduate student, the case will be reviewed by the Dean of the Division of Undergraduate Education. This final review process can only result in decreasing the sanctions imposed on the student or leaving them unchanged. There are no further appeals or processes.

7. Implementation

Once the judgment has been rendered the Dean of the Division of Undergraduate Education or the Graduate Division will implement the judgment in the form of a letter to the student as well as initiate any other necessary administrative actions.

F. MAINTENANCE OF DISCIPLINARY RECORDS

Records relating to academic dishonesty will be maintained by the Associate Deans and the Offices of the Deans of the Division of Undergraduate Education and the Graduate Division to promote consistency of penalties for a given offense and to ensure appropriate action against repeat offenders. Records will normally be destroyed after five years, unless the Associate Dean determines in any particular case that there is good reason to extend the period of retention. In order to ensure that minor and nonrecurring infractions do not negatively impact a student's career beyond UCI, any student may petition to the Associate Dean of his or her academic school to have relevant academic disciplinary records expunged after the record is two years old or upon graduation, whichever comes first. The Associate Dean has sole authority to consider and to grant or deny such petitions. The University will release a student's disciplinary records to potential employers, governmental agencies, other educational institutions, or other organizations or individuals only if authorized to do so by the student in question or if compelled by law. Any record expunged by the Associate Dean will also be erased in the Dean of the Division of Undergraduate Education or the Graduate Division Offices.

ADDITIONAL INFORMATION

This policy is intended to focus solely on issues related to academic dishonesty. Certain details of the implementation of procedures specified here can be found in the UCI publication *Policies Applying to Campus Activities, Organizations, and Students*, available free of charge from the Office of the Ombudsman, located in University Tower, Suite 650-A; the Office of the Dean of Students, located in the UCI Student Center; and on the World Wide Web at http://www.dos.uci.edu/conduct/uci_policy.php.

Anti-Hazing Compliance

The State of California and the University of California have expressly and repeatedly asserted their opposition to hazing and preinitiation activities which do not contribute to the positive development and welfare of the individuals involved.

In February 2006, the Education Code of the State of California was repealed and amended to codify within the Penal Code a new definition of hazing. In accordance with the revised Education Code and Penal Code, students are advised of the following:

Education Code 32052

Any person who participates in the hazing of another, or any corporation or association which knowingly permits hazing to be conducted by its members or by others subject to its direction or control, shall forfeit any entitlement to State funds, scholarships, or awards which are enjoyed by him, by her, or by it, and shall be deprived of any sanction or approval granted by any public educational institution or agency.

Penal Code 245.6

Section 245.6 of the Penal Code reads:

- (a) It shall be unlawful to engage in hazing, as defined in this section.
- (b) "Hazing" means any method of initiation or preinitiation into a student organization or student body, whether or not the organization or body is officially recognized by an educational institution, which is likely to cause serious bodily injury to any former, current, or prospective student of any school, community college, college, university, or other educational institution in this state. The term "hazing" does not include customary athletic events or school-sanctioned events.
- (c) A violation of this section that does not result in serious bodily injury is a misdemeanor, punishable by a fine of not less than one hundred dollars (\$100), nor more than five thousand dollars (\$5,000), or imprisonment in the county jail for not more than one year, or both.
- (d) Any person who personally engages in hazing that results in death or serious bodily injury as defined in paragraph (4) of subdivision (f) of Section 243 of the Penal Code, is guilty of either a misdemeanor or a felony, and shall be punished by imprisonment in county jail not exceeding one year, or by imprisonment in the state prison.

(e) The person against whom the hazing is directed may commence a civil action for injury or damages. The action may be brought against any participants in the hazing, or any organization to which the student is seeking membership whose agents, directors, trustees, managers, or officers authorized, requested, commanded, participated in, or ratified the hazing.

(f) Prosecution under this section shall not prohibit prosecution under any other provision of law.

Campus Safety and Security

The UCI Police Department (UCIPD) is responsible for the safety and security of the UCI campus as well as properties owned, controlled, or occupied by the University. UCIPD and UCI administration make continual efforts to reduce crime on campus and at the Medical Center. The following information is excerpted from the *Crime Awareness Bulletin*, which is published annually in September and distributed to new and continuing students, as well as to faculty and staff, at both the campus and the Medical Center.

CRIME PREVENTION

The UCI Police Department's Crime Prevention Unit offers ongoing educational programs and presentations to the campus community. With the assistance of the Community Service Officers and Patrol Division, the Crime Prevention Unit teaches prevention and awareness about drugs and alcohol, domestic violence, sexual assault, identity theft, property and auto theft, workplace violence, and personal safety including the RAD (Rape Aggression Defense) Program for women and radKIDS (Resisting Aggression Defensively) for children. For more information or to schedule a presentation, call (949) 824-7181 or visit <http://www.police.uci.edu>. Monthly crime prevention tips are also available on the Web site.

SAFETY TIPS

Day and night, no matter where you go, you should be aware of your surroundings, should exercise good common sense, and should use safety precautions as you would elsewhere. Theft is the most common security problem. Property theft is preventable if you keep your personal belongings (backpack, laptop computer, cellular phone) in sight, within arm's length, or secured in a locked place. Students living on campus should keep their doors locked at all times. Faculty and staff should keep valuables locked up while they are in their workplace. The last person to leave a laboratory or building should lock the doors. Report the presence of unknown visitors or suspicious persons to the UCI Police Department or UCI Medical Center Security as soon as possible.

Use the UCI Safety Escort Service (949-824-SAFE) if you are out at night, don't walk alone—walk in pairs, and learn the location of the Emergency Call Boxes (Blue Light Phones).

EMERGENCY CALL BOXES (BLUE LIGHT PHONES)

Both the campus and the Medical Center have emergency call boxes (Blue Light Phones). Use them to report emergencies, crimes, suspicious persons or activities, accidents, safety hazards, and to call for a Safety Escort.

The campus has 125 Blue Light Phones scattered around the ring mall and in parking structures and lots. (See the campus map for locations.) The blue light on the box easily identifies them, and the boxes detect all sounds within a 15-foot radius. To use the phone, just push the button located on the front of the call box. You are then automatically connected to the UCI Police Department. The Medical Center has 21 emergency call boxes located throughout the complex and in the southeast corner of the Manchester parking lot. These phones are connected to the UCIPD dispatcher.

SUBSTANCE ABUSE POLICIES

UCI is designated a drug-free environment, and only under certain conditions is the consumption of alcohol permitted. The sale, manufacture, distribution, or possession of any controlled substance is illegal under both state and federal laws. Such laws are strictly enforced by UCIPD. All members of the UCI community—students, faculty, and staff—who violate these laws are subject to disciplinary action, criminal prosecution, fines, and imprisonment.

Sales, consumption, and the furnishing of alcohol on the UCI campus are restricted by UCI's Alcohol Policy and California State law and are controlled by the California Department of Alcohol and Beverage Control (ABC). However, ABC and UCIPD share enforcement of alcohol laws on campus. It is unlawful to sell, furnish, or give alcohol to a person under the age of 21 years (this includes the Anthill Pub & Grille). The possession of

alcohol by anyone under 21 in a public place, or in a place open to the public, is illegal. It is also a violation of UCI's Alcohol Policy for anyone under the age of 21 to consume or possess alcohol in any public or private housing area on campus. Students and employees found violating alcohol/substance policies or laws could be subject to sanctions by the University.

WEAPONS POLICY

It is a serious violation of the law to possess a firearm on University property. Section 626.9 of the California Penal Code makes it a felony to bring or to possess a firearm on the grounds, or within buildings (including private residences) of the University of California, without the written permission of the Chancellor or the Chancellor's designee.

Please report to the UCI Police Department anyone who has stated that they have a gun on campus or who has made a threat to use a firearm on campus. You can ask to be anonymous when reporting.

TO REPORT AN INCIDENT

UCIPD needs your help to build and maintain a safe community. If you become suspicious about unknown visitors or someone's actions appearing unusual for the time and place, call UCIPD. They will assess the situation and take the appropriate action. Please report crimes; you can ask to be anonymous.

On campus, dial 9-1-1 or (949) 824-5222 for a police, medical, or fire emergency. For non-emergency police services dial (949) 824-5223. The UCI Police Department's campus office is open 24 hours a day and is located on the ground floor of the Public Services Building, at the corner of East Peltason and Pereira Drives.

At the Medical Center, dial 9-1-1 or (714) 456-5222 for a police emergency, (714) 456-6123 for a fire or medical situation. The Medical Center Security office is located in Building 2 adjacent to the Emergency Department's ambulance ramp.

Crimes occurring off campus should be reported immediately to the city/state law enforcement agency where the crime occurred.

UCI CRIME STATISTICS

Pursuant to the Federal Jeanne Clery Disclosure of Campus Security Policy and Campus Crime Statistics Act of 1999, the University of California, Irvine annually makes available to all students, faculty, and staff statistics on the reported occurrences of criminal activity on and off campus and at the UCI Medical Center.

The University of California, Irvine's annual security report includes statistics for the previous three years concerning reported crime that occurred on campus, in certain off-campus buildings controlled by UCI, at the UCI Medical Center, and on public property within or immediately adjacent to and accessible from the campus and Medical Center. The annual security report also includes institutional policies concerning alcohol and drug use, crime prevention, the reporting of crimes, sexual assault, and other matters. The fire safety report includes statistics concerning fires that occurred in on campus student housing facilities. To obtain a copy of these reports go to the UCI Police Department Web site at <http://www.police.uci.edu/awareness/jca.html> or visit the Department in person.

Computer- and Network-Use Policy

The University of California, Irvine (UCI) provides computing resources and worldwide network access to members of the UCI electronic community for legitimate academic and administrative pursuits to communicate, access knowledge, and retrieve and disseminate information. All members of the UCI community (faculty, staff, students, and authorized guests) sharing these resources also share the rights and responsibilities for their use.

Rights and Responsibilities

Worldwide, open-access electronic communication is a privilege and continued access requires that users act responsibly. Users should be able to trust that the products of their intellectual efforts will be safe from violation,

destruction, theft, or other abuse. Users sharing computing resources must respect and value the rights and privacy of others, respect the integrity of the systems and related physical resources, and observe all relevant laws, regulations, and contractual obligations. Users are responsible for refraining from acts that waste resources, prevent others from using them, harm resources or information, or abuse other people. To help protect files, users are responsible for setting passwords appropriately and for keeping passwords confidential by not giving them to another person.

Most UCI-owned computers are under the control of a system administrator or lab manager. These administrators are expected to respect the privacy of computer system users. However, UCI computer system administrators may access user files or suspend services on the systems they manage without notice as required to protect the integrity of computer systems or to examine accounts that are suspected of unauthorized use, misuse, or have been corrupted or damaged. This includes temporarily locking vulnerable accounts, removing hung jobs, reprioritizing resource intensive jobs, and such.

Many UCI departments have their own computing and networking resources and policies. When accessing computing resources, users are responsible for obeying both the policies described here and the policies of other departments. Student responsibilities are also described in the *University of California Policies Applying to Campus Activities, Organizations, and Students*. In addition, all users are responsible for obeying policies of off-campus network services accessed using UCI resources.

Examples of Misuse

Examples of misuse include, but are not limited to:

- Knowingly running or installing on any computer system or network, or giving to another user, a program intended solely for the purpose of damaging or placing excessive load on a computer system or network. This includes, but is not limited to, computer viruses, Trojan horses, worms, bots, flash programs, or password cracking programs.
- Attempting to circumvent data protection schemes or uncover security loopholes without prior written consent of the system administrator. This includes creating and/or running programs that are designed to identify security loopholes and/or intentionally decrypt secure data.
- Using computers or electronic mail to act abusively toward others or to provoke a violent reaction, such as stalking, acts of bigotry, threats of violence, or other hostile or intimidating "fighting words." Such words include those terms widely recognized to victimize or stigmatize individuals on the basis of race, ethnicity, religion, sex, sexual orientation, disability, and other protected characteristics.
- Posting on electronic bulletin boards or Web pages materials that violate the University's codes of conduct (faculty, student). This includes posting information that is slanderous or defamatory in nature or displaying graphically disturbing or sexually harassing images or text in a public computer facility or location that are in view of other individuals.
- Attempting to monitor or tamper with another user's electronic communications or reading, copying, changing, or deleting another user's files or software without the explicit agreement of the owner.
- Violating terms of applicable software licensing agreements or copyright laws.
- Using campus networks to gain, or attempt to gain, unauthorized access to any computer system.
- Using a computer account or obtaining a password without appropriate authorization.
- Facilitating or allowing use of a computer account and/or password by an unauthorized person.
- Employing, either directly or by implication, a false identity when using an account or other electronic resources. This includes sending unauthorized mail that appears to come from someone else.
- Performing an act without authorization that will interfere with the normal operation of computers, terminals, peripherals, networks, or will interfere with others' ability to make use of the resources.
- Using an account for any activity that is commercial in nature not related to work at UCI, such as consulting services, typing services, developing software for sale, advertising products, and/or other commercial enterprises for personal financial gain.

- Deliberately wasting computing resources, such as playing games (for example, MUDS or IRC) while someone else is waiting to use the computer for UCI-related work, sending chain letters, spamming, treating printers like copy machines, storing or moving large files that could compromise system integrity or preclude other users' right of access to disk storage, and the like.

Consequences of Misuse

Misuse of computing, networking, or information is unacceptable, and users will be held accountable for their conduct. Serious infractions can result in temporary or permanent loss of computing and/or network privileges and/or Federal or State legal prosecution. Appropriate corrective action or discipline may be taken in conformance with applicable personnel policies, student policies, collective bargaining agreements, and procedures established by the Academic Senate. California Penal Code, Section 502 makes certain computer abuses a crime, (such as illegal reproduction of software protected by U. S. copyright law) and penalties can include a fine and/or imprisonment. Files may be subject to search under proper authorization.

Minor infractions of this policy, such as poorly chosen passwords, overloading systems, excessive disk space consumption, are typically handled internally to the department in an informal manner. More serious infractions such as abusive behavior, account invasion or destruction, attempting to circumvent system security, and the like are handled formally through the Office of the Dean of Students or by other appropriate officials.

Contact Information

For additional information, contact the Office of Information Technology (242 Multipurpose Science and Technology Building) by calling (949) 824-2222, or by sending e-mail to oit@uci.edu.

Subject Abbreviations

The following abbreviations are used in the *Schedule of Classes* and on student transcripts to indicate course designations.

Prefix	Long Name
AFAM	African American Studies
ANATOMY	Anatomy and Neurobiology
ANTHRO	Anthropology

Inactive Degree Programs

Although UCI is authorized to grant the following degrees, admission to these programs is not available: Applied Ecology, B.S.; Arts Interdisciplinary, B.A.; Business Administration, M.B.P.A.; Comparative Culture, B.A.; Educational Administration (joint program with UCLA), Ed.D.; Educational Technology Leadership, M.A.; Environmental Analysis and Design, B.A.; Environmental Health Science and Policy, M.S., Ph.D.; Fine Arts, M.F.A.; Geography, B.A.; Health Psychology, Ph.D.; Human Development, Ph.D.; Humanities, B.A.; Linguistics, B.A.; Public Administration, M.B.P.A., M.P.A.; Radiological Sciences, M.S., Ph.D.; Russian, B.A.; Spanish, M.A.T.; Urban and Regional Planning, Ph.D.

Privacy and Student Records

The University of California campuses maintain various types of records pertaining to students; some are maintained for academic purposes; others, such as hospital and employment records, are maintained for other specific purposes. Student records—that is, those pertaining to students in their capacity as students—include but are not limited to academic evaluations, transcripts, test scores and other academic records, general counseling and advising records, disciplinary records, and financial aid records. At UCI, an “applicant” becomes a “student” at the time of submission of their Statement of Intent to Register form.

The disclosure of information from student records is governed in large measure by the Federal Family Educational Rights and Privacy Act of 1974 (FERPA), by the State of California Education Code, and by University policy and procedures implementing these laws which protect the student’s right of privacy, provide safeguards for the confidentiality of student records, and permit students access to their own records.

Pursuant to the Federal Family Educational Rights and Privacy Act of 1974 and the University of California Policies Applying to the Disclosure of Information from Student Records, students at the University have the following five rights:

1. To inspect and review records pertaining to themselves in their capacity as students
2. To inspect records maintained by the campus of disclosure of personally identifiable information from their student records
3. To seek correction of their student records through a request to amend the records or a request for a hearing
4. To file complaints regarding alleged violation of the rights accorded students by the Federal Act with the Family Policy Compliance Office, U.S. Department of Education, 400 Maryland Avenue S.W., Washington, D.C. 20202-5920; <http://www.ed.gov/policy/gen/guid/fpco/index.html>
5. To have withheld from disclosure, in the absence of their prior consent for release, personally identifiable information from their student records, with exceptions as noted in the University student records policies

There are instances in which information can be disclosed without prior written consent of the student. University officials may require access to student records in the course of the performance of their assigned duties. Further, confidential information can be disclosed without prior written consent of the student (a) in connection with conditions of certain financial aid awards; (b) when the campus is complying with a judicial order or subpoena; and (c) when authorized federal or State officials are conducting an audit or evaluation of federally supported educational programs. There are also other situations in which the University is required to disclose information. See *University of California Policies Applying to Campus Activities, Organizations, and Students, Part B, Section 130.721* for a list of exceptions.

Normally, the campus will release the following as personally identifiable information which can be made public:

- student’s name
- date and place of birth
- address (local and/or permanent)
- campus e-mail address
- telephone numbers
- dates of attendance
- major field of study
- grade level
- degrees and honors received
- number of course units in which enrolled
- enrollment status, (e.g., undergraduate or graduate, full-time or part-time)
- most recent previous educational institution attended
- participation in officially recognized activities, including intercollegiate athletics
- name, weight, and height of participants on intercollegiate University athletic teams
- photo

However, students have the right to refuse to permit any or all of these categories to be designated public information with respect to themselves. Students should view the UCI Student Information Release Matrix on the Registrar’s Web site at <http://www.reg.uci.edu> to see what information is available for release, and what groups may have access to that information.

Students wishing to restrict release of public information should contact the Registrar’s Office for instructions on how to do so.

If a student requests that information from his or her records not be regarded as public information, then the information will not be released to anyone without the written consent of the student. The student should be aware of the important implications of exercising this right. For example, if a request is made to withhold from disclosure a student’s name and degrees and honors received, the campus cannot release for publication information on any honors received by the student, such as election to Phi Beta Kappa, and cannot include the student’s name and degree earned in the campus commencement program without the written consent of the student. Similarly, if a request is made to withhold from disclosure a student’s name and dates of attendance, a student’s status as a student cannot be verified for potential employers without the written consent of the student. Further, if a student’s last instruction to the campus was to withhold from disclosure the degree granted to that student and the date on which the degree was conferred, that information cannot be confirmed for a third party in connection with the appointment of that graduate to a new position or in connection with an honor that individual received without the written consent of the student.

It is extremely important for each student to keep the Registrar’s Office currently informed as personal data changes occur to assure that accurate and complete records are maintained.

Students are informed annually of their rights under the University’s student records policies and FERPA. Copies of the FERPA and University and campus policies are available for review in the Reference Room, Langson Library. In addition, University policies are published in *University of California Policies Applying to Campus Activities, Organizations, and Students*, available online at http://www.students.uci.edu/conduct/uci_policy.php#130.00.

Complaints regarding alleged violation of the rights accorded students by FERPA may be filed with the University Registrar. A complaint must be made within 180 days of when the alleged violation was discovered (not necessarily when the alleged violation may have occurred). Additionally, a student may file a complaint with the U.S. Department of Education’s Family Policy Compliance Office (<http://www2.ed.gov/policy/gen/guid/fpco/index.html>).

Types and locations of major student records maintained by the campus are listed in the following table; consult the UCI Web site at <http://www.uci.edu> or the Campus Directory or building directories for room numbers.

Type of Record	Location of Record	Responsible Official
School, department, or program	Administrative office for particular unit	Dean, Chair, or Director
Academic Testing Center	Student Services II	Director, Testing Center
Admissions—Undergraduate	Aldrich Hall	Director, Admissions and Relations with Schools
Admissions—Graduate	Aldrich Hall	Dean, Graduate Division
Admissions—School of Medicine	Med. Sci. I	Director, Admissions
Career Center	Student Services I	Director, Career Center

Student Conduct	Student Center	Dean of Students
Student Health	Student Health Center	Director, Student Health
Summer Session	University Extension	Director, Summer Session
Undergraduate Education	Aldrich Hall	Dean, Undergraduate Education
University Extension	University Extension	Dean, Continuing Education
Veterans	Student Center	Coordinator, Veterans Student Services
Incidental Records (minutes of various committees, copies of correspondence in offices not listed above, and other records not listed)	Aldrich Hall	Vice Chancellor Student Affairs, or other Student Affairs officials (for conduct issues, could be Dean of Students, Dean of Undergraduate Education, or Dean of the Graduate Division)

NOTE: Pursuant to the Federal Family Educational Rights and Privacy Act of 1974 (FERPA), individual institutions may implement disclosure policies that exceed those outlined in the Act. It should be noted that University of California policies are more restrictive than those outlined in FERPA. The disclosure policies for the UC campuses are outlined in the *University of California Policies Applying to the Disclosure of Information from Student Records, sections 130.00-134.00*.

Nondiscrimination Policy Statements

Student-Related Matters. The University of California, in accordance with the applicable Federal and State law and University policy, does not discriminate on the basis of race, color, national origin, religion, sex, gender identity, pregnancy,¹ physical or mental disability, medical condition (cancer-related or genetic characteristics), genetic information (including family medical history), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services.² The University also prohibits sexual harassment. This nondiscrimination policy covers admission, access, and treatment in University programs and activities.

Employment Practices. The University of California prohibits discrimination against or harassment of any person employed by or seeking employment with the University on the basis of race, color, national origin, religion, sex, gender identity, pregnancy,¹ physical or mental disability, medical condition (cancer-related or genetic characteristics), ancestry, marital status, age, sexual orientation, citizenship, or service in the uniformed services (as defined by the Uniformed Services Employment and Reemployment Rights Act of 1994).²

University policy also prohibits retaliation against any employee or person seeking employment for bringing a complaint of discrimination or harassment pursuant to this policy or against a person who assists someone with a complaint of discrimination or harassment, or who participates in any manner in an investigation or resolution of a complaint of discrimination or harassment.

The University of California is an affirmative action/equal opportunity employer. The University undertakes affirmative action to assure equal employment opportunity for minorities and women, for persons with disabilities, and for covered veterans.³

University policy is intended to be consistent with the provisions of applicable State and Federal laws. Inquiries regarding the University's nondiscrimination policy may be directed to: Kirsten Quanbeck, Assistant Executive Vice Chancellor, Director/Title IX Officer, UCI Office of Equal Opportunity and Diversity, 103 Multipurpose Science and Technology Building, Irvine, CA 92697-1130; oead@uci.edu; telephone (949) 824-5594 (voice), 824-7593 (TDD).

¹ Pregnancy includes pregnancy, childbirth, and medical conditions related to pregnancy or childbirth.

² Service in the uniformed services includes membership, application for membership, performance of service, application for service, or obligation for service in the uniformed services.

³ Covered veterans includes veterans with disabilities, recently separated veterans, Vietnam-era veterans, veterans who served on active duty in the U. S. Military, Ground, Naval or Air Service during a war or in a campaign or expedition for which a campaign badge has been authorized, or Armed Forces service medal veterans.

Sexual Harassment and Consensual Relationships Policies

Adapted from the full text of the UC Policy on Sexual Harassment

The University of California is committed to creating and maintaining a community where all persons who participate in University programs and activities can work and learn together in an atmosphere free of all forms of harassment, exploitation, or intimidation. The University is strongly opposed to sexual harassment, and such behavior is prohibited both by law and by University policy. Any member of the University community may report conduct that may constitute sexual harassment under this policy. The University will respond promptly and effectively to reports of sexual harassment, and will take appropriate action to prevent, to correct, and if necessary, to discipline behavior that violates this policy. This policy also prohibits retaliation against a person who reports sexual harassment, assists someone with a report of sexual harassment, or participates in an investigation or resolution of a sexual harassment report. Consensual sexual or romantic relationships between members of the University community are subject to other University policies, including the Faculty Code of Conduct and the UCI Policy on Conflicts of Interest Created by Consensual Relationships.

Questions or reports regarding the UC Policy on Sexual Harassment or the consensual relationships policies may be directed to Kirsten K. Quanbeck, Sexual Harassment/Title IX Officer and Assistant Executive Vice Chancellor/Director of the Office of Equal Opportunity and Diversity at (949) 824-5594 or oead@uci.edu.

Links to the full text of the UC Policy on Sexual Harassment, the Faculty Code of Conduct, and the UCI Policy on Conflicts of Interest Created by Consensual Relationships are available at <http://www.oead.uci.edu/sho/shpolicies.html>.

Help Central Line (949) 824-0440

This campus service is a one-stop shop for questions about available resources on-campus and in the community. Counselors are prepared to discuss a wide range of concerns such as general campus resources, locating employment, housing issues, finding medical insurance/medical care, opportunities to get involved, financial aid or income concerns, and counseling/mental health services. Help Central counselors may also be reached via e-mail at helpline@uci.edu and via IM on the Web site at <http://helpcentral.uci.edu>.
